

**Titulo.** Relación entre alteraciones posturales y mal oclusiones observadas en pacientes entre 10 a 16 años de edad que asistieron a la clínica de odontología de la Universidad Mayor Real y Pontificia de San Francisco Xavier de Chuquisaca.

**Tipo de trabajo:** Proyecto de grado en opción a especialista en ortodoncia

**Nombre del autor:** Lic. Elizabeth Susana Chávez Oña

**Abstract**

The problem of this research was to determine how they influence the postural changes in malocclusion; we have started from the hypothesis that altered postural balance cephalic committed attitude and position of the mandible

As a result it is considered that there is a close relationship between posture and mandibular / maxillary individual's position had altered the position of the hips may be an etiology of malocclusion, sagittal and transverse disturbances related to postural changes and in patients with skeletal relationship have a cervical kyphotic attitude in a very high percentage

Finally, we have arrived at a proposal for an interdisciplinary program addressing viable and feasible malocclusions between institutions such as the School of Dentistry, the SEDUCA, SEDES which are institutions that are involved in the subject within the oral health program developed by the SEDES.

**Keywords:** malocclusion, interdisciplinary program, altered postural attitude, head equilibrium position of the mandible.
