**Tipo de trabajo:** Trabajo de grado en opción a especialista en ortodoncia

**Nombre del autor:** Lic. Paola Barriga Gordillo

### **Abstract**

At present the facial analysis is used as an essential diagnostic analysis throughout orthodontic aid of photography, which is an important tool in the dental profession, for documenting orthodontic or orthognathic treatment, before and after treatment.

Most analyzes tend to describe a similar facial model for different populations and this may be a misconception; many of the studies are of foreign origin, in patients with a different phenotype to our idiosyncrasy. Most values were based on studies conducted in Caucasians type; data should not be applied in our reality as this is of great ethnic diversity.

It is very important for all treatments take place in Sucre residents will have a facial analysis is given in our region, to determine the exact diagnosis of orthodontic pathologies.

**Keywords:** facial analysis, phenotype, orthodontic pathologies
