Existen muchas clasificaciones de incentivos económicos y no económicos hoy en día, que parten de la visión con que un autor, empresario, administrador tiene al respecto. R. Wayne Mondy / Robert M. Noe dividen las compensaciones en 2 rubros: Financiera y No Financiera. Dentro de las Financieras se encuentran la Directa como Salarios, Sueldos, Comisiones, *Bonificaciones*; y la Indirecta como los Planes de seguros, de vida, médicos, quirúrgicos, dental, de accidentes, etc. Prestaciones de ayuda social: Jubilación, seguridad social, indemnizaciones a los trabajadores, ayuda educativa, servicios a empleados, permisos con sueldo, vacaciones, días festivos etc. Dentro de la No financiera se encuentra El puesto, tareas interesantes, desafío, responsabilidad, oportunidad de reconocimiento, sensación de haber logrado algo, oportunidades de ascenso; y el entorno del puesto, como las políticas sólidas, supervisión competente, compañeros agradables, símbolos apropiados de estatus, condiciones cómodas de trabajo, horario flexible, semana laboral comprimida, participación en el puesto, compensación de cafetería, teletrabajo. Sentar las bases del diseño de la estructura de incentivos y recompensas es esencial para la empresa ya que es parte del ambiente organizacional, y de acuerdo a dicha motivación que el empleado percibe de la empresa, determinará desde las primeras nociones, su condición a ser motivado y los alcances que dicha estructura tendrá sobre él.

La presentación de los incentivos y recompensas al empleado debe ser tal que haga posible que el empleado se identifique con ellas de manera inmediata y ejerza un efecto positivo en éste, logrando así el objetivo de dirigir sus esfuerzos hacia las metas o planes establecidos. De las 500 compañías de *Fortune* en 1991, 35% tenían alguna forma de pago por desempeño para los empleados (incentivos). A su vez hace referencia dentro de esta teoría de la igualdad a los planes de *pago a destajo*, *planes de incentivos salariales*, *participación de utilidades*, y *bonificaciones de un pago único*, son todos ejemplos de opciones de pago-por-desempeño. (Robbins 1994)

Pago A Destajo

Vale la pena ahondar en este punto refiriéndonos en forma directa al tema que aborda Robbins con respecto a *el pago a destajo* ya que dicha medida podría ser la productividad individual, la productividad de un grupo de trabajo, o del departamento, la rentabilidad unitaria, o el desempeño global de la organización en sus utilidades. Se puede explicar la creciente popularidad del pago por desempeño en términos tanto de motivación como de control de costos. Desde una perspectiva motivacional, el hacer que alguna parte o todo el pago de un trabajador esté condicionado a alguna medición de desempeño, enfoca su atención y esfuerzo hacia esa medida, luego refuerza la continuación del esfuerzo con una recompensa. Las bonificaciones con base en el desempeño y otras remuneraciones evitan el gasto fijo de

aumentos permanentes en los salarios, y así ahorran dinero; y si disminuye el desempeño del empleado o de la organización, así también lo hace la recompensa.

Bono Anual. Planes diseñados a corto plazo de los gerentes que se relacionan con la rentabilidad de la compañía. Este plan es muy común en las empresas que desean motivar a sus empleados de confianza tales como gerentes, directores, ejecutivos etc. Programas de acumulación de capital y opción de acciones. Para este estudio se vería como no aplicables para impulsar la calidad o al menos difícilmente se tendría forma de ligar la calidad del servicio directamente con trabajadores de piso o empleados directos, no de confianza. **Teoría de las expectativas.** Victor H Vroom(1964), afirmaba que al hacer las cosas para cumplir con un objetivo si creen en la validez de éste y si consideran que lo que van a hacer servirá para cumplirlo. Fuerza es igual a la valencia por expectativa. Fuerza será el vigor de la motivación, Valencia representa el vigor de su preferencia por el resultado, y la *expectativa* es la probabilidad de que una acción determinada conduzca al resultado deseado. Koontz O'Donnell – Weihrich (1987) lo describe diciendo al respecto; “Cuando una persona le es indiferente el cumplimiento de cierto resultado, el valor de la valencia es cero; cuando una persona prefiere no cumplir la meta, entonces la valencia llega a adquirir un valor negativo. El resultado en ambos casos va a ser una falta de motivación. De modo similar, una persona no tendrá ninguna motivación para cumplir con cierto objetivo si su expectativa es nula (cero) o negativa. La fuerza que se ejerce para cumplir con determinado objetivo depende tanto de la valencia como de la expectativa. Es más, el motivo para llevar a cabo cierta acción puede estar determinado por un deseo por realizar otra cosa.”

Otras Teorías; la teoría de los Refuerzos del psicólogo B.F. Skinner, donde se compensan de manera constante las conductas que conduzcan a lograr las metas de la empresa. La teoría de la motivación con base en las necesidades, de McClelland (1953), donde se segmentan por la Necesidad de poder, Necesidad de pertenencia y la necesidad de logro. Otras técnicas son la participación que sirve como reconocimiento ya que se consulta al empleado sobre algo en específico. No hay nadie mejor que ellos (empleados) para aportar la solución. Incentivos y Calidad Uno de los factores motivacionales en los que este estudio se enfoca son los incentivos de calidad, entonces se habrá de investigar la relación que los incentivos al personal tienen con respecto a la calidad del servicio. De los planes establecidos dentro de las organizaciones es lograr la calidad requerida y hoy por hoy la necesidad va más allá tratando de satisfacer al cliente al punto de que quede no solo satisfecho sino encantado. Así lo manifiesta Kotler (1994) cuando habla del esfuerzo que las compañías están haciendo con la finalidad de crear un cliente no solo un consumidor. La calidad es el punto de referencia donde más se han enfocado las corporaciones en las últimas décadas. Evans y William (2005) lo traducen de la siguiente manera diciendo que las verdaderas necesidades y expectativas del cliente se conocen como Calidad esperada.

“Los clientes van a evaluar la calidad y a desarrollar percepciones (calidad Percibida) comparando sus expectativas (Calidad esperada) con lo que reciben (calidad real). Si la calidad esperada es mas alta que la real, es posible que el cliente se sienta insatisfecho. Por otra parte, si la calidad real supera las expectativas, el cliente se sentirá satisfecho e incluso sorpresivamente deleitado... Para entender estas mediciones es necesario un sistema de medición de la satisfacción de los clientes, así como la capacidad de utilizar su retroalimentación para mejorar... Este esfuerzo requiere que los productores vean los procesos a través de los ojos del cliente, no de la organización.” (Evans y William,2005). Incentivos de Calidad en la práctica Como ya describimos anteriormente incentivar a una persona no solo se hace de manera extrínseca pero también intrínseca. La calidad esta siendo eje principal en la relación de una empresa con sus clientes, por lo mismo a veces no basta con que una organización se enfoque en esto sino que también lo hagan sus proveedores y prestadores de servicio que se encuentran indirectamente involucrados en el proceso de servicio.

Los incentivos correctos para los empleados correctos Ramsey desarrolló diversos niveles de incentivos. El primero pudo ser reconocimiento, el segundo también verbal con un certificado, la tercera mercancía

de la compañía, el cuarto más directamente monetario. Niveles más altos dieron lugar a recompensas más valiosas. Pero, en desarrollar esta estructura general, él preguntó a sus empleados qué clase de incentivos sería significativa a ellos. “Puede sonar absurdo, pero para alguna gente venir a trabajar tarde, irse temprano, o tiempos de almuerzo más largos es más importante que otras cosas.”

METODOLOGÍA

El método elegido para nuestra investigación es el cuantitativo / longitudinal, ya que las variables estudiar como la calidad Obtenida a través del tiempo de un incentivo financiero y permitirán ver datos duros que se ejemplifican mediante una operación de proceso preestablecido. La primera (calidad) será dependiente de la segunda (Incentivo financiero). A su vez este estudio será correlacional ya que pretendemos determinar cómo se relacionan o vinculan la dependencia de la calidad obtenida con respecto al incentivo financiero dentro del proceso. Esto será analizado también en su origen de manera descriptiva para recolección de datos y análisis posterior de la dependencia entre variables. Se ha definido como correlacional ya que nuestra pregunta de investigación delimita la interacción de estas dos variables de la siguiente manera:

¿Los incentivos financieros otorgados a los empleados de la Empresa X estimulan de manera directa la búsqueda de la calidad en el servicio? Para ello requerimos obtener datos del proceso que arrojen el incremento de calidad a través del incentivo financiero. Dichos datos se tomarán en varias instancias en un periodo definido de tiempo con el cual permitirá saber si existe una alta dependencia o no de dichas variables incluyendo varias personas dentro del mismo sistema de pago de incentivos. Por lo tanto será un método cuantitativo Longitudinal – no experimental ya que los datos ya existen dentro de un ambiente ya pre-establecido dentro de una empresa y se analizarán a través de un tiempo establecido.

Selección de la muestra

En nuestra investigación será necesario determinar una muestra representativa para demostrar nuestra hipótesis. La muestra se determina de la siguiente manera:

$N = 110$ empleados

$se =$ Error estándar = 0.05

$p = 0.95$

$n =$ tamaño de la muestra = 16 empleados

Sin embargo debido a que la rotación, cambios en el volumen de producción, transferencias, bajas, enfermedades hacen que algunos empleados desaparezcan del proceso de producción por espacios mayores a un mes, entonces, la investigación tomará en cuenta solo a los empleados que hayan estado bajo el mismo sistema de incentivos a lo largo de un periodo de un año, los cuales fueron 28, tomándose como muestra total.

Técnica de recopilación de datos

La Empresa X mantiene el esquema de incentivos adicionales de calidad al de producción de la siguiente manera: El incentivo A incrementa un 16% el pago del servicio otorgado cuando este obtiene un índice de 99.8% a 100% de calidad. El incentivo B incrementa un 7% el pago del servicio otorgado cuando este obtiene un índice de 99.6 a 99.79% de calidad.

El incentivo C no incrementa el valor inicial de la transacción (0%) y se paga a un nivel estándar o mínimo. La técnica de recopilación de datos que se utilizará en esta investigación utilizará informes estadísticos que se llevan a cabo dentro de la empresa tales como: número de errores encontrados por

transacción por persona, número de transacciones inspeccionadas, calidad obtenida e incentivo pagado. A su vez podremos acudir a la elaboración de gráficas de Pareto, Histogramas, y matrices de incidencias en cada una de las posibles variables que se intercalan al momento de procesar. De esta manera podremos determinar:

- a) Descriptivos (una tabla con las estadísticas fundamentales de todas y cada una de las variables de la matriz, columnas o ítems).
- b) Frecuencias (tablas de frecuencias, estadísticas básicas y gráficas). Se ponderará las frecuencias con que una persona persigue los niveles de incentivo financiero que se otorgan cuando se obtiene cierta calidad.

Validación

La validación de esta investigación se basa en:

Su instrumentación: La consistencia del proceso de producción del servicio mantiene sus características básicas durante el periodo observado. El proceso de auditoría de los ítems observados es consistente también al no haber variabilidad en su estructura o diseño durante el periodo de observación. (Hernández Sampieri, 2010) Selección del grupo. El grupo a quién se le audita tiene en común las siguientes características:

- Son parte de un mismo departamento.
- Han estado expuestos a los mismos cambios o variables externas a lo largo del periodo observado.
- Todos recibieron el mismo entrenamiento.
- Todos están bajo el mismo sistema de pago durante el periodo observado.
- Ninguno de los individuos en esta investigación está en función de la misma pues ésta se concreta en base a los resultados obtenidos sin que los individuos hayan tenido conocimiento de dicha investigación durante el periodo observado.

Proceso de auditoría 10% El sistema de auditoría citado anteriormente consiste en lo siguiente:

1. El estándar o índice de calidad mínimo para estar en cumplimiento con los servicios contractuales es de 99%. Para efectos internos y aseguramiento de la calidad se pide un 99.5%.
2. El sistema de procesamiento arroja un reporte por empleado dando aleatoriamente un total de batches o ítems procesadas igual a 10% de su producción por día.
3. El auditor accede al sistema de revisión y lectura del batch y hace anotaciones en una hoja de Excel con respecto a las incidencias de calidad obtenidas como los errores y los aciertos.

Esto se traduce en un cálculo automático calidades por empleado mediante la fórmula
(Errores diarios / items diarias auditadas)

ID	10/23/09	10/26/09	10/27/09	10/28/09	10/29/09	GranTotal
30062997	99.71%	99.59%	99.63%	99.43%	99.61%	99.47%
30046385	99.82%	99.28%	100.00%	99.47%	100.00%	99.72%
30046353	100.00%		99.64%	99.44%	100.00%	99.72%
30031633	100.00%	100.00%	100.00%	100.00%	98.73%	99.81%

- El total de items auditadas representan el 100% y el índice de error será de acuerdo al número de items que se indexaron de manera errónea. Cada imagen tiene el mismo peso y por lo tanto la conversión de número de errores entre número de items nos dará el índice de calidad obtenido.
- Una vez que se capturan todos los batches (lotes) y sus incidencias en el archivo Excel, se procede a tabular en gráficas, los resultados obtenidos para el cliente y los resultados obtenidos por empleado para aplicar el promedio obtenido en un día de trabajo al total de transacciones hechas por el empleado.

De tal manera que si por ejemplo: El empleado A indexa 1000 items a una calidad C de 99.5% recibirá un pago de 100 pesos, pero si el empleado B produce 2000 a una calidad B de 99.8% no solo recibirá 200 pesos por la producción si no que habrá un excedente de 32 pesos (16% más) por la calidad obtenida. Los resultados obtenidos para cada empleado se pasan directamente mediante un sistema electrónico de captura al sistema de nómina el cual el empleado tiene acceso a verificar en forma diaria que sus totales a pagar sean precisos.

RESULTADOS

Los resultados obtenidos de la muestra de 28 trabajadores que laboraron continuamente de Noviembre de 2009 a Octubre de 2010 en la empresa X fueron los siguientes:

Porcentaje de trabajadores	Estatus	% promedio de cambio	Porcentaje de trabajadores	Estatus
3.57%	No modifíco su calidad	0%	71.43%	Conservo su misma categoría
28.57%	Incremento su calidad	.06%	7.14%	Incremento su categoría
67.86%	Decremento en calidad	-.14%	21.43%	Bajo su categoría

En cuanto al % de calidad que obtuvo la muestra es la siguiente:

Categoría	Porcentaje incremento de salario base	de en el	Rango	Promedio calidad inicial	Promedio calidad anual final	% de trabajadores en cada categoría
A	16%		99.80% - 100%	99.83	99.82%	14%
B	7%		99.60% - 99.79%	99.71%	99.70%	32%
C	0%		99.59 - 99.00%	99.45%	99.56%	54%
General			99% - 100%	99.63%	99.56%	100%

Gráficas de correlación y de las variables calidad e incentivos financieros

Correlación de Pearson

Categorías	Correlación	Error estándar	Nivel de confianza
A, B y C	.66378	.0010573	95%
A Y B	.7707		
C	.6660		

Se obtuvo una correlación entre la variable calidad y los incentivos del .6638 con un error estándar de .0010573, Y con un nivel de confianza del 95%, por lo que si existe una correlación significativa entre ambas variables.

CONCLUSIONES

Existe una correlación significativa entre la variable Calidad en relación a los Incentivos Financieros, sin embargo los incentivos financieros mantienen la calidad actual, pero no logran incrementarla, ya que el 71.43% mantuvo su nivel de calidad y solo el 7.14% la incremento, El 14% de los empleados obtuvo una calidad superior al 99.80% , el 32% una calidad superior de 99.50% pero menor de 99.80% y el 54 % tuvo una calidad promedio anual menor al 99.50%, los incentivos financieros son importantes para conservar la calidad, pero no para incrementarla, y llegar a niveles de la satisfacción óptima del cliente , se tendrá que realizar un estudio de costo-beneficio para implementar un programa de incentivos que realmente logre la calidad deseada. Se recomienda realizar un estudio de incentivos financieros y no financieros para poder incrementar la calidad y poder ser mas competitivos, en dicho estudio se deberá comprender el impacto del costo beneficio establecido en las diferentes categorías A, B y C., ya que es necesaria una reestructuración de las mismas.

LOS PROCESOS DE TRANSFORMACIÓN UNIVERSITARIA COMO RESPUESTA A LA DEMANDA DE LA SOCIEDAD DEL CONOCIMIENTO: UNA PERSPECTIVA COMPARATIVA EN LAS UNIVERSIDADES DE NORTE AMÉRICA, EUROPA Y AMÉRICA LATINA

Maritza Rengifo Millán, Universidad de Montreal

RESUMEN

Una temática importante en el campo de la enseñanza superior de los últimos quince años ha sido, y es, la transformación de la universidad. El modelo de universidad emergente conserva rasgos del modelo tradicional, pero presenta un perfil particular al deber responder a las exigencias y oportunidades de una sociedad basada sobre el conocimiento dentro del marco de la globalización. Dado los desafíos actuales, en el presente documento se pretende describir y analizar de manera crítica el perfil de la "universidad transformada" o en vía de transformación basándose en los estudios recientes sobre la transformación de la universidad. Este documento presenta a modo introductorio, el contexto de la globalización en el que está inmersa la sociedad y el papel protagónico de la universidad en el avance hacia la transformación, como actor primordial del conocimiento. Para continuar, se muestran algunos de los principales ejes del proceso de transformación universitaria en el mundo. El desarrollo contempla también la descripción y análisis desde una perspectiva comparativa de éste proceso en las universidades de los países de Norte América, Europa, América Latina y finalmente se expondrán las conclusiones.

PALABRAS CLAVE: Enseñanza superior, globalización, sociedad del conocimiento, transformación universitaria, cambio y reformas.

UNIVERSITY TRANSFORMATION PROCESSES AND THE KNOWLEDGE SOCIETY: A COMPARATIVE PERSPECTIVE OF AMERICAN, EUROPEAN, AND LATIN AMERICAN UNIVERSITIES

ABSTRACT

For the past fifteen years, university transformation has become a key issue in the field of higher education. Although the emergent university model still keeps some traditional features, it also exhibits innovating traits, as it must respond to the challenges and opportunities set forth by a knowledge-driven society in a globalized world. Based on recent studies on university transformation, this paper seeks to describe and critically analyze the profile of the Transformed or Changing University. First, the globalized social context in which today's universities are immersed and the leading role of university as knowledge generator per se in its quest for transformation is presented. Second, some of the main pillars of the world university transformation process are given. Third, a comparative description and analysis of this process in American, European, and Latin American universities is provided. Finally, some conclusions are offered.

INTRODUCCIÓN

Las transformaciones que vive hoy el mundo, como el producto de los adelantos alcanzados en el ámbito científico, en el tecnológico y el vertiginoso avance del conocimiento constituyen algunos de los retos más trascendentales para las instituciones de educación Superior (IES), las cuales están llamadas a responder, de manera integral, tanto a estos avances, como a la responsabilidad que su desarrollo genera para el bienestar de las sociedades Tünnermann y Souza (2003). De acuerdo con Delgado (2003) el proceso de integración protagónica de la Educación Superior en los escenarios emergentes de la contemporaneidad, tiene como referente fundamental su papel en la producción de conocimientos. Este proceso está imponiendo cambios sustanciales en las instituciones de Educación Superior que se expresan en cambio en sus paradigmas, estructura académica y administrativa y en su relación con la sociedad, el estado y el sector productivo. La universidad enfrenta el dinamismo del proceso globalizador, en su papel fundamental dentro de la sociedad del conocimiento o del saber.

Referida por Crespo (1.999) como el paso de una sociedad basada en la producción de bienes materiales a una sociedad de la era de la información en la que predomina la adquisición, el tratamiento, el intercambio y la producción de nuevos conocimientos. En el desarrollo del presente documento se plantean algunas de las principales características de la universidad en el proceso de transformación y los principales ejes de incidencia o cambio. Lo anterior en base a una revisión teórica y estudios empíricos de diferentes autores y mediante la utilización del método descriptivo y de análisis. Para luego comparar las similitudes y diferencias del proceso de cambio en la educación superior. Finalmente se elaboran unas consideraciones a manera de conclusiones sobre este proceso de transformación en las universidades de América del Norte, Europa y América Latina.

REVISIÓN DE LITERATURA

Diversos autores hacen referencia a los cambios interrelacionados en los ámbitos económico, político, tecnológico y cultural de la sociedad contemporánea, (Carnoy y Castells, 2001; López Segrera, 2003 y 2006; Didrikson, 2008) revelan que la universidad ha sido considerada cada día más el motor del desarrollo económico. Por lo cual las instituciones que imparten la enseñanza superior se han visto sometidas a una serie de exigencias en sus relaciones con la sociedad, el estado y los sectores productivos.

Para entrar en el análisis es necesario plantease la pregunta: ¿Qué se entiende por transformación universitaria?. Los Autores ya referidos sostienen que la transformación se refiere a los cambios que afectan a la universidad y que buscan su adaptación a un medio inestable, cambiante, en el que se debe responder a las necesidades y expectativas del medio externo. En tanto la universidad se ve forzada a desarrollar estrategias para tomar decisiones, al mismo tiempo que responde a las exigencias del cambio, para ello la universidad establece regulaciones, variación en su estructura, en su modelo académico, en su gestión y mecanismos para mejorar la calidad y esto lo hace generalmente a través de reformas. Por lo antes expuesto, las instituciones universitarias han requerido de una transformación como respuesta a los desafíos y retos que se derivan de los escenarios emergentes de la contemporaneidad, a través de la denominada “reforma universitaria”, la cual ha sido considerada la vía más expedita para asumir estas transformaciones. Según Delgado (2.003) la reforma universitaria, es un proceso en el que la Universidad reformula y actualiza sus procesos académicos y administrativos, su organización y su marco legal adecuándose a los nuevos escenarios que constituyen su entorno, desde la escala global hasta la local. En esta forma desarrolla un conjunto de procesos, estrategias, actividades en la búsqueda planificada de la transformación institucional. Otra pregunta importante a plantearse es ¿Cuál es o debe ser el perfil

requerido por la universidad transformada y cuáles son los ejes, de la reforma necesaria en este proceso de cambio en la universidad, para cumplir con las demandas de la sociedad del conocimiento?.

Dando respuesta a este interrogante, al respecto (Clark, 2000; Balán, 2006; Crespo y Favé -Bonnet, 2003) sostienen que la universidad requiere de un perfil con múltiples miradas en su transformación. Por lo que este nuevo perfil debe corresponder al de una universidad vinculada al entorno productivo, con diversificación de fuentes de financiamiento, desarrollo de la investigación, nuevos sistemas de información y comunicación y un eficaz sistema de gobierno y gestión.

Se requiere adecuar la propia concepción de la universidad a su entorno sin olvidar las misiones esenciales de la universidad. Al respecto López Segrera (2003) sostiene que la docencia, la investigación y extensión, conforman las misiones esenciales de la universidad, no se puede perder de vista que la razón de ser de la universidad, es la transformación de la sociedad y para ello debe participar en la solución de los principales problemas de orden local, regional, nacional y universal. Para lograr complementar el perfil requerido por la nueva universidad, se abordan los denominados “ejes de incidencia o de cambio”, sobre los cuales se ha centrado la transformación universitaria, que plantean diferentes autores y organismos como el BM, BID y la UNESCO, teniendo en cuenta el nuevo escenario de la universidad. Como principales ejes de cambio identificados en la revisión teórica, entre otros se identificaron: Misión de la universidad, pertinencia, calidad académica, evaluación, presupuesto, la tecnología e innovación y el currículo. Otros como el financiamiento universitario, el gobierno y gestión universitaria, la internacionalización, el acceso y expansión de la matrícula.

METODOLOGÍA

En el presente documento se incluye la primera parte de un estudio de investigación descriptiva, en el que se ha elaborado una lectura de documentos y registros, para obtener un análisis e interpretación de condiciones existentes en los últimos quince años en la educación universitaria. Lo anterior implicó, la comparación y contraste de la información encontrada. El objetivo de la investigación concernía, en recoger los datos sobre una base teórica, confrontar con estudios empíricos, para luego exponer, resumir y analizar los resultados, a fin de extraer generalidades significativas que contribuyan al avance del conocimiento sobre la transformación universitaria. El marco de análisis ha correspondido a los países de Europa, América del Norte y América Latina.

RESULTADOS

Aplicando la metodología ya explicada se elaboraron dos cuadros para el análisis de las similitudes y diferencias encontradas en la literatura y en los casos empíricos examinados en los procesos de transformación universitaria en los países ya referidos en la metodología. La tabla 1 muestra los resultados de las similitudes en el proceso de transformación, en aspectos como la privatización, financiamiento, cooperación internacional, movilidad estudiantil y el carácter del proceso de cambio universitario. La tabla 2 presenta las diferencias en el proceso de transformación, situando como principales aspectos diferenciadores, el acceso a la matrícula, la investigación e innovación universitaria. Las formas de gobierno y estructura institucional así como el presupuesto y financiamiento en la educación superior.

Tabla 1: Similitudes en el Proceso de Transformación Universitaria

América del Norte y Europa	América Latina
La privatización de la educación superior se ha incrementado aceleradamente en América del Norte y en los países del este de Europa	Se ha producido un incremento de la matrícula privada en América del sur y en el Caribe
Sólo en las regiones de Europa Occidental sigue predominando la educación superior pública financiada casi en su totalidad	Se busca el financiamiento mediante servicios de consultorías y asesorías con el sector estatal y el privado
Disolución de fronteras nacionales, cooperación internacional y amplia movilización de estudiantes en Europa y desde allí hacia América del Norte (Estados unidos y Canadá).	Relevancia en los procesos de internacionalización, movilización de estudiantes y profesores hacia las universidades de países avanzados
En Europa especialmente el proceso de reforma no logró ser homogéneo.	Los procesos de reforma han sido heterogéneos entre los países de la misma región.

Esta tabla es una elaboración propia y presenta un análisis comparativo de las principales similitudes obtenidas en el análisis teórico y empírico en el proceso de transformación de las universidades en los países de Europa, América del norte y América Latina.

Tabla 2: Diferencias en el Proceso de Transformación Universitaria

América del Norte y Europa	América Latina
Las reformas universitarias han impactado ampliamente en el acceso y en el financiamiento a los estudiantes de educación superior en Europa y Norteamérica.	El acceso educativo a la educación superior ha estado muy por debajo comparado con las de los países avanzados, y ha sido especialmente en la matrícula privada
Se ha trabajado con más fuerza en el gobierno y estructura institucional de las universidades	No se ha trabajado ampliamente en los procesos de gobierno
Los países avanzados articulan con grandes redes de innovación y pertenecen a los nodos más dinámicos de la economía mundial	No se logra articular con grandes redes de la innovación, solo algunas universidades de investigación
El presupuesto en Estados Unidos oscila en el 3% y en los países Europeos entre un 2 al 1.8 % del total del PIB (OCDE 2010).	El presupuesto promedio para la ES en AL es inferior al 1.5% del PIB, lo que es claramente insuficiente para un sistema en desarrollo.

Esta tabla es una elaboración propia y presenta un análisis comparativo de las diferencias más significativas encontradas en el análisis teórico y empírico en el proceso de transformación de las universidades en los países de Europa, América del norte y América Latina.

CONCLUSIONES

La transformación universitaria en casi todos los países del mundo, ha sido de carácter regulador de parte del estado, a través de las denominadas reformas educativas, con carácter de leyes y reformas. Estas se han centrado en aspectos tales como: el aseguramiento de los sistemas de calidad, el presupuesto, financiamiento educativo y el acceso e incremento en la matriculación estudiantil y en la gobernanza institucional. Se observa la necesidad, que las reformas se forjen al interior de las universidades, pues es desde allí que se deben generar los cambios, con las necesidades sentidas y la participación de toda la comunidad académica. En los países europeos se está dando el debate sobre la gobernanza institucional, fomentando la capacidad de autorregulación, mediante un cambio de paradigma de los profesores y convirtiendo los procesos de reformas en incluyentes con la participación de toda la comunidad académica. Es necesario indicar que el proceso de reforma aunque no ha sido igual en todos los países, ni en las instituciones universitarias, sí presenta unos ejes comunes sobre los cuales se producen los cambios. La universidad ha estado intervenida y condicionada por las políticas del Estado-Nación y por las tendencias globales del mundo capitalista y por la desigualdad que este fenómeno ha producido entre los países y sociedades. Parece ser que las influencias del entorno sobre la universidad son mucho más poderosas que los cambios y transformaciones que se producen al interior de las instituciones y en la sociedad donde se radican.

Tal vez por esto se produce una cierta frustración, al ver que los impactos de las políticas regulatorias con ansias transformadoras no han tenido la intensidad esperada, especialmente en los países de América Latina. Para liderar este proceso de cambio y de innovación, la universidad latinoamericana necesita de una reforma permanente. Para esto se requiere de una voluntad política de cambio, un proyecto institucional sólido comenzando por redefinir la misión y visión, a fin de incorporar en ellas claramente su compromiso educativo y en especial con las necesidades propias de los países de la región. Sin embargo, visión, compromiso y el deseo de cambio no son suficientes, será también necesario un aumento

del nivel de inversión pública y privada, ensanchando la relación universidad- estado-empresa. La universidad es llamada a cambiar no sólo en la dirección de reforma interna, sino también siendo receptora de las expectativas del mundo, participando en los procesos de desarrollo e internacionalización. Esta actuación debe buscar el equilibrio entre lo local y lo internacional.

ANÁLISIS DEL CAPITAL SOCIAL EN UNA PYME DE LA INDUSTRIA METALMECÁNICA DE LA REGIÓN CENTRO DE COAHUILA

Nidia Hernández Castro, Universidad Autónoma de Coahuila

Zóchitl Araiza Garza, Universidad Autónoma de Coahuila

Astrid Ortiz Lugo, Universidad Autónoma de Coahuila

RESUMEN

Este artículo muestra el nivel de desarrollo alcanzado en el capital social en una empresa de la industria metalmeccánica de la región centro del Estado de Coahuila; el capital social, es considerado como la capacidad de un colectivo humano para generar procesos de interacción social que faciliten la coordinación y la cooperación para obtener beneficios mutuos que contribuyan al desarrollo económico-social. El análisis del estudio, permitió identificar los elementos más fuertes y débiles de la organización relacionados con su capital social, basándose en 8 indicadores: Nivel de información y comunicación, Nivel de confianza, Cooperación, Participación, Cantidad de relaciones, Calidad de relaciones, Frecuencia de relaciones personales y Frecuencia de relaciones no personales. La metodología empleada fue de enfoque cuantitativo, aplicándose un cuestionario estructurado basado en escala múltiple o medición por índices, encuestándose a 32 sujetos que representan al total de los trabajadores de la empresa en estudio. Entre los resultados se encontró que el capital social es limitado en cuanto a las relaciones externas de la empresa, sin embargo hacia el interior se encontró que su desarrollo es bastante fuerte.

PALABRAS CLAVES: Capital social, PYMES, redes.

ANALYSIS OF SOCIAL CAPITAL IN A PYME (SMEs) OF THE METALWORKING INDUSTRY OF THE CENTRAL REGION OF COAHUILA

ABSTRACT

This article explains the development achieved on the social capital of a metal working industry in the central region of Coahuila State; social capital is considered as the capacity of a group of humans to generate social interaction processes that may facilitate coordination and cooperation leading to mutual benefit. The analysis of the studio allowed to identify the strongest and weakest elements in the organization related to its social capital, this was based on the following 8 indicators: Level of information and communication, Level of trust, Level of Cooperation, Active Participation, Amount of Relations, Quality of the Relationships, Frequency of the personal Relations and the frequency of the non-personal relations. The methodology used was based on a quantitative focus, applying a structured questionnaire based on a multiple scale and index measurements, the survey was applied to 32 persons that represent the total amount of the workers of the business studied. Among the results found regarding the social capital it is limited to the external relations of the company surveyed, although towards the interior focus it was found there that their development is quite strong.

INTRODUCCIÓN

Desde hace aproximadamente tres décadas, el concepto de capital social ha surgido como una dimensión alternativa para los diferentes fenómenos económicos y organizacionales, ya que se le considera como otra forma de capital, el cual ayuda al crecimiento, bienestar y desarrollo económico de quien lo genera y potencia. Kliksberg (2000), presenta argumentos contundentes que no dejan dudas acerca del potencial del capital social y de los efectos positivos que se logran al darle la oportunidad de contribuir al desarrollo, debido a que las personas, las familias y los grupos son capital social por esencia, los cuales son portadores de actitudes, cooperación, valores y tradiciones. Si esto es ignorado o deteriorado, se anularán importantes capacidades aplicables al desarrollo. Si por el contrario, se reconoce, explora, valora y potencia, su aporte puede ser muy relevante y puede propiciar círculos virtuosos del desarrollo.

El tema central de esta investigación es identificar y analizar el capital social que se desarrolla en una empresa de la industria metalmeccánica de la región centro de Coahuila, y se concentra en el análisis de los 8 indicadores, los cuales aportan información relevante sobre los elementos más fuertes y débiles de la empresa relacionados con su capital social. Lo anterior, permitirá a los responsables de la PYMES, diseñar un plan de actuación para la mejora de su capital social y, así, crear valor en su empresa. A continuación se presenta la revisión de literatura efectuada sobre el tema, seguido para la presentación de la metodología utilizada en el estudio y finalmente se presentan los resultados, las conclusiones y recomendación para futuras investigaciones.

REVISIÓN LITERARIA

Adler y Kwon (2002:17) apuntan que, el capital social es un concepto que ha sido definido de una manera amplia, lo cual hace necesario que su análisis requiera de una definición o delimitación precisa tomando como punto de partida la teoría de redes sociales, la cual aporta una perspectiva innovadora que es la relacional, donde los vínculos o las relaciones son unidades básicas entre los individuos. En ese sentido, para comprender la relevancia del tema propuesto en esta investigación, tomaremos la definición de Mujika et al. (2010), quienes señalan que el capital social es la capacidad que posee un conjunto de personas para generar relaciones sociales, que pueden facilitar la coordinación y la cooperación, basadas en la confianza y en la reciprocidad para coadyuvar positivamente en el bienestar, el desarrollo económico y social de una comunidad. Así mismo, con el propósito de relacionar los indicadores propuestos en este estudio, con la literatura, se incorporan tres dimensiones del capital social plantados por Nahapiet y Ghoshal (1998): una dimensión cognitiva, una dimensión relacional y una dimensión estructural.

Dimensión cognitiva: Deriva de los procesos mentales y de ideas reforzadas por la cultura que poseen los miembros de una organización generando normas compartidas, valores, actitudes, creencias y confianza. Así, cuando los miembros de una organización comparten dichos elementos, la transferencia de ideas y conocimientos entre los miembros de una organización será más efectiva. *Dimensión relacional:* Esta dimensión refleja cómo las relaciones, en el sentido de interacciones, se caracterizan por el nivel de confianza, la reciprocidad y la intensidad emocional en los miembros integrantes de una organización. Generalmente, las organizaciones con un alto nivel de capital social muestran altos niveles de confianza generalizada, cuanto mayor es el nivel de confianza, más recursos se intercambian (Leana y Pil, 2006) y hay mayor cooperación (Coleman, 1990). *Dimensión estructural:* Muestra la medida en que los individuos de una organización están conectados entre sí y pueden acceder al capital social de otros. Este aspecto del capital social se refiere al papel que juegan las redes entre los miembros de una organización; esto es, con quién y con qué frecuencia los miembros de una organización comparten información y recursos (Coleman, 1990; Moran, 2005).

¿Cómo Se Mide El Capital Social?

Según Saz (2007:62) la tarea de medir el capital social resulta compleja, puesto que al no ser un elemento tangible, no existen claros elementos identificativos para disponer de una medida exacta. En el momento de proceder a su cuantificación se utilizan variables aproximativas, al igual que se hace con el capital humano, pero en este caso todavía no existe unanimidad sobre cuál, o cuales son las variables más adecuadas para recoger el posible efecto del capital social sobre el crecimiento económico.

Por su parte, Villagómez (2010) señala que se han realizado diversos estudios que buscan medir el capital social y determinar qué variables influyen en el acervo que de este elemento puedan tener las comunidades, debido a que se ha demostrado que puede ayudar a elevar el crecimiento y desarrollo económico de un país por su impacto en la eficiencia de los mercados. Dichos beneficios se logran: reduciendo costos de transacción, solucionando problemas de acción colectiva y haciendo más eficiente la toma de decisiones. El capital social fomenta la creación y fortalecimiento de los niveles de confianza y participación que conllevan al logro de objetivos empresariales y de desarrollo económico de la sociedad en la zona geográfica de influencia.

Por lo que la medición del capital social puede ser difícil más no imposible. Numerosos y excelentes estudios han identificado útiles variables numéricas de capital social mediante el uso de distintos tipos y combinaciones de metodologías de investigaciones cualitativas, comparativas y cuantitativas, como es el caso de Morán (2010), quien evalúa el impacto del capital social en la ciudad de Guayaquil especialmente en términos de desarrollo; con información provenientes de encuestas, donde establece índices que explican los principales niveles de los factores del capital social, mediante técnicas multivariantes de análisis de componentes y análisis de correlación; entre los resultados obtenidos se destacan, los bajos niveles de vida asociativa, espacios de sociabilidad, redes de ayuda mutua, y convivencia social, así como el reducido nivel de conformación en sus redes. Concluyendo que en Guayaquil se brinda mayor importancia a prestar o recibir ayuda en temas de dinero, empleo, enfermedad o problemas personales, que a la cooperación entre personas, además se da una menor importancia a la formación de relaciones personales en la red como enfoque al desarrollo del capital social. O como la investigación que presenta Ablanado *et al.* (2008) a través de la Encuesta Nacional sobre Filantropía y Sociedad Civil (ENAFI): Capital Social en México. Donde según los resultados, entre otros, de la ENAFI, menos del 15% de los mexicanos cree que se puede confiar en la mayoría de las personas, el 23% de los mexicanos creen que la mayoría de las personas tratarían de ser justas, mientras que 68% creen que la mayoría de las personas se aprovecharían si pudieran. Entre otras investigaciones.

METODOLOGÍA

Para la realización de esta investigación se adoptó un estudio de tipo descriptivo y transversal, se buscó analizar cómo se manifiesta el capital social en una empresa de la industria metalmeccánica de la región centro del estado de Coahuila. Para esto, se utilizó un cuestionario estructurado basado en escala múltiple o medición por índices, desarrollado por el Instituto Vasco de Competitividad, Fundación Deusto en el 2010. Para contrastar la fiabilidad del instrumento, éste ha sido pretestado en organizaciones de distinta naturaleza (empresa, administración pública, entidad público-privada).

Para la aplicación del cuestionario y de acuerdo a las recomendaciones del propio Instituto, dicho instrumento fue adaptado a las necesidades y al contexto regional, encuestándose a principios del año 2012 a 32 sujetos que representan al total de los trabajadores de la empresa en estudio. Los datos cuantitativos obtenidos, se procesaron a través del paquete estadístico SPSS, para identificar los elementos más fuertes y débiles de la organización relacionados con su capital social a través de 8 indicadores. La primera interacción estudiada fue el indicador *nivel de información y comunicación*, el *nivel de confianza*, el nivel de participación con dos indicadores: *cooperación y participación*, y por

último el nivel de redes con cuatro indicadores: *cantidad de relaciones*, *calidad de relaciones*, *frecuencia de relaciones personales* y *frecuencia de relaciones no personales*, los cuales permitieron mostrar el nivel de desarrollo alcanzado en el capital social en la empresa.

RESULTADOS

Al procesar las encuestas sobre los indicadores del capital social, se generaron los siguientes resultados. La Tabla 1, muestra un bajo nivel de información y comunicación, la explicación se debe principalmente a que no se tiene información y/o comunicación y a la falta de credibilidad de la persona responsable de la comunicación entre la empresa y las organizaciones relacionadas. Por tanto, sería conveniente desarrollar acciones dirigidas a mejorar la comunicación y la credibilidad de la persona responsable de la comunicación externa o, en su caso, sustituir a esta persona por otra que goce de mayor credibilidad. Así mismo se observa a un importante grupo de individuos que se muestran indiferentes a esta cuestión.

En cuanto al indicador de nivel de confianza, considerada como una de las relaciones fundamentales del capital social, se aprecia una cantidad importante de trabajadores que están bastante de acuerdo con este nivel. Esto se debe a que tiene confianza en las personas de la empresa, tanto con como sin cargo directivo. Y como en la cuestión anterior, existe a un importante grupo de individuos que se muestran indiferentes. Por el contrario en los indicadores de cooperación y participación se observa, que los trabajadores están dispuestos a cooperar y participar con las personas de la empresa, lo cual en su opinión permitiría mejorar la competitividad, pero algunos no están dispuestos a cooperar con otras organizaciones. El responsable de esta empresa debería aprovechar esta actitud favorable hacia la cooperación y tratar de promocionar proyectos de colaboración con las organizaciones que está relacionada.

Tabla 1: Resultados de los Indicadores Nivel de Información y Comunicación (11 ítems), Nivel de Confianza (4 ítems), Cooperación (8 ítems) y Participación (8 ítems).

Indicadores.	Totalmente en desacuerdo	Bastante en desacuerdo	Ni de acuerdo ni en desacuerdo	Bastante de acuerdo	Totalmente de acuerdo
Nivel de Información y Comunicación.	24.2%	21.6%	23.4%	18.6%	12.3%
Nivel de Confianza.	11.3%	9.6%	34.2%	33.2%	11.9%
Cooperación	13.5%	16.8%	23.9%	39.3%	6.7%
Participación	5.5%	13.3%	34.0%	37.8%	9.5%

Esta tabla muestra el nivel de desacuerdo y acuerdo que los trabajadores muestran hacia los indicadores, nivel de información y comunicación, nivel de confianza, cooperación y participación del capital social.

En cuanto a la cantidad de relaciones, en la Tabla 2, se observa una disparidad entre “ninguna relación y más de 10 personas”. La explicación de esta diferencia se encuentra asociada a la cantidad de relaciones con y sin cargo directivo de otras instituciones y otros grupos en la que manifiestan que no tienen ninguna relación. Por el contrario manifiestan tener relaciones con numerosas personas sin cargo directivo (relaciones horizontales), así como con familiares y amigos.

Tabla 2: Resultados del Indicador Cantidad de Relaciones (7 ítems).

Indicador.	No tengo ninguna relación	Menos de 2 personas	Entre 3 y 5 personas	Entre 6 y 10 personas	Más de 10 personas
Cantidad de Relaciones	28.6%	8.1%	17.6%	17.5%	28.1%

Esta tabla presenta la cantidad de relaciones que disfrutaron los trabajadores de la empresa en los ámbitos laborales, sociales y personales.

La calidad de las relaciones formales e informales (ver Tabla 3) se pueden considera alta, sin embargo en esta cuestión también existe un importante grupo de trabajadores que se muestran indiferentes. Por lo que es importante que el representante de esta empresa diseñe acciones que permitan mejorar, sobre todo las relaciones verticales (relaciones con cargos directivos).

Tabla 3: Resultados del Indicador Calidad de las Relaciones (6 ítems).

Indicador.	Muy baja	Bastante baja	Ni alta ni baja	Bastante alta	Muy alta
Calidad de las Relaciones	24.2%	0.9%	32.1%	31.9%	10.9%

Esta tabla presenta la calidad de las relaciones que disfrutaron los trabajadores de la empresa en los ámbitos laborales, sociales y personales.

En cuanto a la frecuencia de las relaciones personales, en la Tabla 4, se observa que es buena. Sin embargo, deberían impulsarse las relaciones formales verticales tanto internas como externas. El responsable de esta empresa debería identificar las buenas prácticas en las relaciones formales horizontales y extender su uso a las relaciones formales verticales. También debería promoverse con mucho énfasis, la frecuencia de las relaciones no personales de carácter formal y vertical tanto internas como externas. Los resultados indican que las relaciones personales son más o menos adecuadas, y quizá sería suficiente. Sin embargo, se podría actuar en este frente para mejorar las relaciones.

Tabla 4: Resultados del Indicador Frecuencia de Relaciones Personales (7 ítems) y Frecuencia de relaciones no Personales (7 ítems).

Indicador.	Nunca	Casi nunca	Con poca frecuencia	Con bastante frecuencia	Con mucha frecuencia
Frecuencia de Relaciones Personales	29.0%	9.5%	19.8%	31.9%	9.8%
Frecuencia de Relaciones no Personales	40.8%	9.4%	19.1%	26.5%	4.2%

Esta tabla presenta la frecuencia de relaciones personales y no personales que disfrutaron los trabajadores de la empresa en los ámbitos laborales, sociales y personales.

CONCLUSIONES

Lo importante del capital social para las personas y los grupos que lo poseen es la potencialidad que les otorga y de la que carece el individuo aislado. Es decir, lo esencial del capital social es que es una capacidad. Representa la capacidad de obtener beneficios a partir del aprovechamiento de redes sociales. Por ello la necesidad de medir y fomentar el desarrollo del capital social en las empresas, en este caso, una de la industria metalmecánica de la región centro de Coahuila.

Como conclusión de los resultados obtenidos de los 8 indicadores se puede decir que, los elementos identificados más fuertes del capital social en la empresa citada son: el de cooperación, participación, frecuencia de relaciones y con cierta reserva, el elemento de calidad en las relaciones; por otra parte los elementos más débiles son: nivel de información y comunicación y el de frecuencia de relaciones no personales. Por lo que se puede considerar en términos generales la existencia de un desarrollo bastante fuerte del capital social hacia el interior de la empresa. Sin embargo, es importante resaltar el caso de las relaciones con otras instituciones u organizaciones relacionadas con la empresa, donde se encontró que el capital social es limitado. Por lo que una medida necesaria para el fomento del capital social es participar con instituciones que gocen de una buena moral institucional y credibilidad, específicamente hablando de instituciones gubernamentales, ya que si no funcionan adecuadamente habrá pocos incentivos para establecer contratos y ceder derechos, lo que afectaría negativamente a la confianza para establecer vínculos. El presente estudio y la información recabada producto de las encuestas deben servir de base para estudios más profundos y específicos sobre la realidad no sólo de esta empresa, sino que a través de ésta inferir a la realidad de otras ciudades y a la realidad nacional.

BETA PARA MERCADOS EMERGENTES

Juan Benjamín Duarte Duarte, Universidad Industrial de Santander-Col
Juan Manuel Mascareñas Pérez-Íñigo, Universidad Complutense de Madrid-Esp.
Juan Felipe Arenas Vásquez, Universidad Industrial de Santander- Col

RESUMEN

En el presente documento se presenta un procedimiento que permite estimar el coeficiente de riesgo sistemático (beta) para sectores, industrias y empresas que coticen o no en mercados financieros de países emergentes. La metodología presentada es una combinación del Capital Asset Pricing Model (CAPM), y Valoración Relativa. El aporte principal de este trabajo, sugiere el uso de procedimientos, los cuales surgen como una alternativa de solución al problema de endogeneidad que puede darse al usar el modelo tradicional (market model) al estimar el coeficiente Beta de un país emergente.

PALABRAS CLAVES: Riesgo sistemático, valoración de empresas, ajuste inter-bursátil, CAPM, beta país.

BETA FOR EMERGENTES MARKETS

ABSTRACT

In this document are proposed a procedure to estimate the systematic risk coefficient (beta) for sectors, industries and companies listed or not in financial markets in emerging countries. The exposed methodology is a combination of the Capital Asset Pricing Model (CAPM) and the relative valuation. The main contribution of this paper, suggests the use of order procedures sectorial and individual, arising as an alternative solution to the endogeneity problem that can occur when using the traditional model (market model) to estimate the Beta coefficient in an emerging country.

JEL: G14

KEYWORDS: Systematic risk, company valuation, inter-market adjustment, CAPM, country beta

INTRODUCCIÓN

El aumento cada vez más latente del número de participantes en el mercado de capitales en todo el mundo, ha suscitado el interés de muchos investigadores por reconocer y verificar si los modelos financieros existentes son consistentes tanto en mercados desarrollados como en emergentes, sin importar su clasificación y naturaleza. En ese sentido, la estimación del riesgo sistemático ha sido una de las tareas más complejas y por tal motivo, existen diversas metodologías, las cuales se basan generalmente en modelos de regresión que seleccionan diferentes variables y que pueden afectar de una u otra forma el riesgo para cada empresa en particular, dependiendo del mercado en el cual participe.

Teorías como las de Markowitz (1959) y Sharpe (1964) han merecido muchas investigaciones tanto en países desarrollados como emergentes. Por otra parte el gran paso a la estimación del riesgo sistemático a partir de una relación inter-bursátil lo da Lessard (1996), quien propone la existencia de un beta país como parámetro, cuya función es ajustar el beta de un sector, industria ó empresa de un mercado desarrollado para poder utilizarlo como parámetro en el CAPM de un proyecto para mercado emergente. En este mismo sentido Pereiro (2010) demuestra empíricamente que casi el 80% de los “industry betas” no son equivalentes entre los mercados emergentes y Estados Unidos (mercado desarrollado), por tal motivo, aplicar directamente las betas de industrias y sectores estadounidenses a países emergentes, no es lo más confiable. Desde este punto de vista, se ve justificado un *ajuste inter-bursátil*. El presente trabajo

presenta dos formas de determinar el beta de un país emergente partiendo de la premisa planteada por Lessard y los hallazgos de Pereiro, entre otros.

Datos

Los datos requeridos para la estimación del coeficiente sistemático, están dados por las cotizaciones de los índices generales del país emergente y del desarrollado, así como también de los precios de las acciones, niveles de apalancamiento y tasas de impuestos al interior de los mismos. Además se debe contar con ratios financieros, múltiplos, estados de resultados y balances generales de distintas las empresas objeto de análisis, información que generalmente se encuentra en bases de datos como Bloomberg, Google Finance, Finance Yahoo y para el caso de Colombia en la Bolsa de Valores de Colombia y la Superintendencia de Valores de Colombia. Al definir la periodicidad y horizonte de tiempo de los datos, se debe tener en cuenta factores como el volumen de activos que se negocian en los mercados y el horizonte de la valoración para la cual se requiere el beta, respectivamente.

METODOLOGÍA

Lessard (1996), sugiere que el beta de un proyecto ejecutado en un país emergente es el producto de dos dimensiones:

$$\text{Offshore Project beta} = \text{country beta} * \text{beta of comparable home country project}$$

Donde el beta país viene dado por una adaptación del CAPM a la relación de un mercado emergente con uno desarrollado como Estados Unidos. En el caso del beta comparable se propone estimarlo por dos procedimientos diferentes, uno por *segmentación del mercado ó sectorial*, y otro más específico, basado en *Relative Valuation*.

RESULTADOS

Con el fin de ilustrar la metodología usada, en la Tabla 1 se presentan las estimaciones de coeficientes sistemáticos para el sector e industrias de *Materiales Básicos (Basic Materials)* en Colombia por el procedimiento de *segmentación del mercado ó sectorial*, el cual consiste en determinar el sector ó industria del país desarrollado que sea comparable con el sector o industrial del país emergente donde se requiere determinar el riesgo sistemático, para tomar de allí el beta promedio y ajustarlo con el riesgo país del mercado emergente.

Tabla 1: Betas ajustados del sector Basic Materials.

SECTOR / Industria	Beta comparable USA		Betas ajustados (Col)		
	β_u	$\beta_{u 1 \text{ año}}$	$\beta_{u 2 \text{ años}}$	$\beta_{u 3 \text{ años}}$	$\beta_{u 5 \text{ años}}$
BASIC MATERIALS	0,95	0,56	0,78	0,76	0,83
Chemical Manufacturing	0,76	0,45	0,63	0,61	0,67
Chemicals – Plastics & Rubber	1,18	0,70	0,97	0,95	1,03
Containers & Packaging	0,76	0,45	0,62	0,61	0,66
Fabricated Plastic & Rubber	1,18	0,70	0,97	0,95	1,03
Forestry & Wood Products	0,75	0,45	0,62	0,60	0,66
Gold & Silver	0,74	0,44	0,60	0,59	0,65
Iron & Steel	1,22	0,73	1,00	0,98	1,07
Metal Mining	1,49	0,88	1,22	1,20	1,30
Misc. Fabricated Products	1,10	0,65	0,90	0,88	0,96
Non-Metallic Mining	0,82	0,49	0,67	0,66	0,72
Paper & Paper Products	1,18	0,70	0,97	0,95	1,03

Betas ajustados para Colombia del sector Basic Materials por el procedimiento sectorial.

Igualmente, en la Tabla 2 se presenta un ejemplo de la estimación del riesgo sistemático para empresas que cotizan en Colombia por el procedimiento *Relative Valuation*, que consiste en estimar el beta de empresa(s) comparable(s) del país desarrollado y ajustarlas al país emergente mediante el beta riesgo país.

Tabla 2: Riesgo Sistemático para empresas en Colombia

Company name	Sector	Industry	Empresa Comparable	B _U Comp	B _U Ajus	D/E (%)	Tax (%)	B _L
Bancolombia.	Financional	Regional Banks	Bancolombia S.A (ADR)	0,55	0,44	147,3	24,9	0,93

Pacific Rubiales	Energy	Oil & Gas Ops	CNOOC Limited (ADR)	1,15	0,92	13,30	36,5	1,00
TABLEMAC	Basic Materias	Forestry & Wood Products	Pope Resources L.P	0,60	0,48	17,15	30,1	0,54

Betas ajustados para empresas que cotizan en el índice general de la bolsa de valores de Colombia por el procedimiento Relative Valuation.

CONCLUSIONES

En el trabajo se presentan y aplican a Colombia dos metodologías, que sin apartarse totalmente del CAPM, permiten obtener estimaciones del riesgo sistemático a partir de un *ajuste inter-bursátil* tomando como parámetro de comparación los betas de un mercado desarrollado como Estados Unidos por dos procedimientos: *Sectorial e Individual*. La metodología logra apartar los problemas de endogeneidad presentes en el uso del modelo tradicional (de regresión lineal) al estimar el riesgo sistemático para países emergentes, a partir de mercados desarrollados.

RESUMEN

En México, el desarrollo de las empresas del sector agropecuario ha presentado un lento crecimiento en comparación con los sectores industrial, comercial y de servicios, esto debido a las características que presenta como son: su estructura y organización poca o no definida; riesgo e incertidumbre que se presenta al trabajar con seres vivos, un clima variable o un mercado inestable, y en la mayoría de los casos una falta de gestión administrativa. De lo anterior, se desprende la importancia de la administración en las empresas agropecuarias, que busca en forma directa, la obtención de resultados de máxima eficiencia con un manejo adecuado de los recursos que servirán en el proceso de toma de decisiones. El presente artículo, muestra una investigación orientada a analizar el entorno competitivo en el que se desarrollan las empresas agrícolas del valle de San Quintín, utilizando la Matriz FODA (Fortalezas, Oportunidades, Debilidades y Amenazas) como una herramienta administrativa, en la dirección de las empresas. La necesidad de utilizar este instrumento, tiene su base en el hecho que una estrategia tiene que lograr un equilibrio o ajuste entre la capacidad interna de la organización y su situación de carácter externo; es decir, las oportunidades y amenazas.” (Thomson 2003).

STRATEGIC MANAGEMENT IN AGRIBUSINESS OF SAN QUINTIN VALLEY, BAJA CALIFORNIA, MEXICO

ABSTRACT

In Mexico, the development of farming operations has presented a slow growth compared to the industrial, commercial and services, this due to the characteristics presented as: organizational structure and little or no definite, risk and uncertainty that occurs when working with living things, a climate variable or unstable market, and in most cases a lack of management. From the above, shows the importance of management in agricultural enterprises, which aims directly, obtaining maximum efficiency results with proper management of resources to serve in the decision making process. This article shows a research aimed to analyze the competitive environment in which they develop agricultural enterprises in the valley of San Quintin, using the SWOT matrix (Strengths, Weaknesses, Opportunities and Threats) as a management tool in the direction of the companies. The need for this instrument is based on the fact that a strategy has to strike a balance or fit between the internal capacity of the organization and its external character situation, opportunities and threats. (Thomson 2003).

INTRODUCCION

La administración es un factor determinante para que una empresa fracase o sea exitosa. Su finalidad conlleva al uso eficiente de los recursos naturales, humanos y financieros, para la toma de decisiones. En las empresas agropecuarias este proceso de toma de decisiones se desarrolla en un ambiente de riesgo e incertidumbre al trabajar en un entorno físico y biológico. Por lo que se requiere recopilar la información interna y externa de la empresa y mantenerla actualizada, debido a los cambios que el medio ambiente produce en las condiciones en que se desarrollan estas empresas y son administradas. Por lo anterior es indispensable no solo la administración en las empresas agropecuarias sino una administración estratégica, que formule, implemente y evalúe las decisiones a través de las funciones gerenciales, de mercadotecnia, finanzas, de producción, sistemas de información, de investigación y mercado que permitan a una empresa lograr con éxito sus objetivos.

REVISION LITERARIA

La administración estratégica es la función de la administración de la cúpula, pues se aborda en un nivel institucional de la empresa que analiza, desarrolla y modifica los procesos internos y externos de la empresa para que sea eficiente y eficaz en condiciones constantemente variables. Formula e implementa la estrategia empresarial como un conjunto de decisiones unificado, amplio e integrado que intenta conseguir los objetivos de la empresa. (Chiavenato 2001:128) El proceso de la administración estratégica consta de 5 etapas: (1) Selección de la misión y las principales metas corporativas; (2) análisis del ambiente competitivo externo de la organización para identificar las oportunidades y amenazas; (3) análisis del ambiente operativo interno de la empresa agropecuaria para identificar las fortalezas y debilidades; (4) selección de estrategias, (5) implementación y evaluación de la estrategia.

Figura 1: Proceso Básico de Administración Estratégica

Esta figura muestra el enfoque tradicional del proceso de la administración estratégica, el cual comienza con la selección de la misión y sus principales metas, seguida del análisis externo e interno, la selección de la estrategia, finalizando con el diseño de la estructura y los sistemas de control necesarios (evaluación) para implementar la estrategia.

El Análisis Ambiental Fundamento De La Administración Estratégica

El definir y diseñar una estrategia que sea exitosa para una empresa agropecuaria, requiere necesariamente del estudio del medio ambiente interno y externo de la organización y esta información se obtiene al realizar un análisis FODA (Fortalezas, Oportunidades, Debilidades y Amenazas). La Matriz

FODA es una herramienta que ayuda a las empresas a crear cuatro tipos de estrategias: estrategias de fortalezas y oportunidades (FO), estrategias de debilidades y amenazas (DA). Las oportunidades y las amenazas externas se refieren a las tendencias y sucesos económicos, sociales, culturales, demográficos, ambientales, políticos, legales, gubernamentales, tecnológicos y competitivos que pudieran beneficiar o dañar en forma significativa a una empresa en el futuro. Son elementos que están más allá del control de una empresa. Las fortalezas y debilidades internas son las actividades que la empresa puede controlar y cuyo desempeño se califica como excelente o deficiente. Se inician en las actividades de dirección, de mercadotecnia, de recursos humanos, de finanzas, de investigación y desarrollo, de producción de sistemas de información. Las empresas deben seguir estrategias fundamentadas en las áreas funcionales de las empresas agropecuarias para así aprovechar sus fortalezas y eliminar sus debilidades.

El análisis estratégico FODA es una de las herramientas que más se utiliza por su sencillez y practicidad en la administración estratégica de las empresas. Para garantizar que todos estos instrumentos proporcionen información real y oportuna se requiere además de procesos racionales y objetivos, la participación de la gerencia y de todas las personas que participan directa e indirectamente en la toma de decisiones. Busca determinar donde ha estado recientemente la empresa o producto, donde está en el presente y hacia donde se dirige, así como los factores y las tendencias externas que lo afectan.

METODOLOGIA

La investigación se llevó a cabo en el Valle de San Quintín cuyo municipio es Ensenada, Baja California, México. El estudio está dirigido a empresas agrícolas de la región. La muestra consistió en 60 empresas del sector agropecuario establecidas en el valle. Se diseñó un cuestionario como instrumento de medición, el cual consistía en 30 preguntas que indicaran si las empresas agrícolas realizaban un análisis del entorno interno y externo en el diseño, implementación y evaluación de estrategias. Para lograr los objetivos planteados, se realizó un análisis al entorno por medio de una herramienta de análisis estratégico denominada matriz FODA (Fortalezas, debilidades, oportunidades y amenazas).

RESULTADOS

Al analizar el ambiente interno significativo para las empresas estudiadas, fijar con exactitud las fortalezas y debilidades de la organización. Ya que el análisis comprendía la identificación de la cantidad y calidad de los recursos naturales, humanos y financieros con que contaban. Estas fortalezas y debilidades se determinaron en relación con los competidores, consumidor final y el mercado en el que se encuentran actualmente. El estudio del ambiente externo involucra una evaluación de la estructura organizacional. La revolución tecnológica, las nuevas formas de producción, la hidroponía, la agricultura orgánica, la biotecnología, la genética, los empaques reciclables, la aprobación de nuevas leyes, los cambios en los valores y actitudes laborales, y la competencia creciente de empresas extranjeras son algunos resultados de oportunidades y amenazas de las empresas agrícolas.

CONCLUSIONES

Una adecuada aplicación de la administración estratégica sugiere que las empresas agropecuarias requieren diseñar estrategias para aprovechar las oportunidades externas, ya sea reduciendo o evitando el impacto de las amenazas externas para poder lograr el éxito. Mientras que los factores que influyen en el ambiente interno, son perfectamente controlables para la empresa y pueden llegar a convertirse en ventajas competitivas, con lo cual las empresas pueden conseguir diferenciarse de sus competidores.

AJUSTE DE MODELOS ECONOMETRICOS AL MERCADO BURSÁTIL COLOMBIANO

Juan Benjamín Duarte Duarte, Universidad Industrial de Santander-COL
Juan Manuel Mascareñas Pérez-Iñigo, Universidad Complutense de Madrid-ESP
Katherine Julieth Sierra Suárez, Universidad Industrial de Santander-COL

RESUMEN

En el presente trabajo se ajustan modelos ARIMA y GARCH, a las principales series financieras del mercado bursátil colombiano, hasta obtener aquellos que no presenten autocorrelaciones significativas en sus residuos. Ésto, con el objetivo de permitir el uso de herramientas de verificación de comportamiento caótico en mercados de renta variable, lo cual implica la no linealidad en los precios y la dependencia en el corto plazo respecto a sus valores históricos; permitiendo la predicción, basada en información endógena. La metodología consiste en probar, en primera instancia, la estacionariedad en los retornos de las series bursátiles, mediante el test de Dickey-Fuller Aumentado. Después, utilizando pruebas Q_{LB} y Bartlett determinar si las series presentan autocorrelaciones significativas en algunos de sus rezagos; justificando así el uso de la metodología de Box-Jenkins, para generar ajustes ARIMA y/o GARCH; con el objetivo de obtener modelos con residuos no autocorrelacionados. Por último, se elige el mejor ajuste para cada uno de los activos bursátiles, usando el criterio de Akaike. Todo lo anterior como preámbulo para probar la hipótesis de comportamiento caótico en las series financieras colombianas.

ECONOMETRIC MODELS ADJUSTMENT TO COLOMBIAN STOCK MARKET

ABSTRACT

In this paper it fits ARIMA and GARCH models, for the major financial series Colombian stock market, until those which do not exhibit significant autocorrelation in the residuals. This, in order to allow the use of verification tools chaotic behavior in stock markets, which implies non-linearity in prices and dependence in the short term compared to its historical values, allowing the prediction, based in endogenous information. The methodology is to test in the first instance, the stationarity in the returns of the stock series, using the Aumentged Dickey-Fuller. Then, using tests such as Q_{LB} and Bartlett determine whether the series exhibit significant autocorrelations in some of its lags, thus justifying the use of the methodology of Box-Jenkins to generate ARIMA and / or GARCH adjustments, to obtain models with residuals not autocorrelated. Finally, we choose the best fit for each stock assets, using the Akaike criterion. This as a preamble to test the hypothesis of chaotic behavior in the Colombian financial series.

INTRODUCCIÓN

El modelamiento y análisis de mercados financieros surge con Bachelier (1900), quien fue pionero en el estudio de la martingala. Posteriormente otros autores como Cowles & Jones (1937) Alexander (1961) y Fama (1970), trabajan sobre la hipótesis de mercados eficientes, la cual ha sido base de muchos estudios que buscan comprobar comportamiento aleatorio en los retornos financieros. Sin embargo, varios autores han encontrado evidencia de que los mercados accionarios violan los supuestos de la hipótesis de comportamiento aleatorio, en cuanto a independencia y distribución normal. En contra de la hipótesis de mercado eficiente, se ha buscado indicios comportamiento caótico en las series financieras desde la década de los 80, partiendo del trabajo de Lorenz (1963) Takens (1981) y Mandelbrot (1982), entre otros. Desde entonces se han realizado diversos estudios en la búsqueda de comportamiento caótico en las series financieras y económicas (Di Matteo, Aste, & Dacorogna, 2005; Los, 2004; Espinosa, Parisi, & Parisi, 2007). La importancia de hallar comportamiento caótico en determinado activo financiero radica en que permite hacer previsiones para evitar riesgos innecesarios o tener la oportunidad de beneficios extras que la mayoría de inversores no puede aprovechar.

Algunas herramientas que permiten probar la existencia de un comportamiento caótico en las series de tiempo son sensibles a los procesos estocásticos en los cuales existen dependencias entre las variables. Por ello es necesario realizar un filtro para eliminar dichas dependencias, el cual se logra por medio de modelos tipo ARIMA (Box & Jenkins, 1970) y GARCH (Bollerslev, 1986), generando residuos no correlacionados. Por lo tanto, si el sistema es caótico, la serie de residuos tiene las mismas características del sistema original, en tanto que, si es estocástico los residuos no son más que ruido blanco. En este documento, inicialmente se estudian los datos con el fin de evaluar la normalidad de las series mediante estadísticas básicas, en seguida, se describe la metodología usada para ajustar modelos a los retornos de los activos financieros colombianos, por último, se presentan los modelos que mejor se aproximan al comportamiento de los datos.

Datos Y Características De Los Retornos De Series Financieras Colombianas.

Los datos de las series de tiempo seleccionadas corresponden al valor de cierre diario del Índice General de la Bolsa de Valores de Colombia (IGBC) y de sus principales empresas, que representan aproximadamente el 60% de la composición del índice.

Tabla 1: Activos Financieros Seleccionados

activo	nemotécnico	n	fecha inicial	fecha final
Indice General de la Bolsa de Valores de Colombia	IGBC	2,469	02/01/2002	09/02/2012
Pacific Rubiales Energy Corporation	PREC	506	22/01/2010	09/02/2012
Ecopetrol	ECOPETROL	1,005	02/01/2008	09/02/2012
Preferencial Bancolombia	PFBCOLOM	2,041	01/10/2003	09/02/2012
Grupo de Inversiones Suramericana	GRUPOSURA	660	01/06/2009	09/02/2012
Bancolombia	BCOLOMBIA	2,041	01/10/2003	09/02/2012
Cementos Argos	CEMARGOS	1,207	01/03/2007	09/02/2012

Esta tabla presenta los Activos seleccionados, sus nemotécnicos oficiales, el número de datos, y el periodo de estudio. Fuente: Elaboración Propia.

Se toma como fecha de inicio la entrada de cada activo al mercado bursátil omitiendo su período de estabilización. Se omiten los días en los que la Bolsa no operó y los que presentan valores nulos. La fuente de información fue la Bolsa de Valores de Colombia. Del análisis estadístico preliminar se

encuentra que las distribuciones de los diferentes activos financieros no son normales (Jarque-Bera), presentan leptocurtosis y en su mayoría son asimétricas negativas, con máximos y mínimos extremos.

METODOLOGÍA

Los modelos ARIMA, se construyen en base a la presencia de autocorrelación. Sin embargo, la no estacionariedad puede causar correlación serial, por esta razón, inicialmente se comprueba si las series son estacionarias. Generalmente se acepta una estacionariedad débil, es decir, que sus dos primeros momentos son finitos e invariantes en el tiempo. En la literatura generalmente se asume que los retornos son estacionarios. Sin embargo, este supuesto debe ser probado empíricamente, mediante el Test de Dickey and Fuller Aumentado (DFA), el cual contrasta la Hipótesis Nula de que la serie es generada por un proceso de raíz unitaria, contra la hipótesis alternativa de estacionariedad. En seguida, se procede a detectar correlación serial entre las rentabilidades r_t y r_{t-l} ($l = 1, 2 \dots m$), construyendo así la Función de Autocorrelación, denotada comúnmente por ρ_l , el cual bajo el supuesto de estacionariedad es una función de l .

$$\rho_l = \frac{\text{Cov}(r_t, r_{t-l})}{\sqrt{\text{Var}(r_t)\text{Var}(r_{t-l})}} = \frac{\text{Cov}(r_t, r_{t-l})}{\text{Var}(r_t)} = \frac{\gamma_l}{\gamma_0} \quad (1)$$

Una serie estacionaria no presenta autocorrelación si y solo si $\rho_l = 0$ para todo $l > 0$. Con el promedio de los retornos \bar{r} . La autocorrelación muestral $\hat{\rho}_l$, dada por la ecuación 2, es consistente para estimar ρ_l .

$$\hat{\rho}_l = \frac{\sum_{t=2}^T (r_t - \bar{r})(r_{t-l} - \bar{r})}{\sum_{t=1}^T (r_t - \bar{r})^2} \quad (2)$$

Para probar la autocorrelación individual de los rezagos, se usa el intervalo de confianza ($\pm 1,96/\sqrt{T}$) de Bartlett (1946). Por otro lado para detectar la correlación colectiva, se utiliza el Estadístico Q de Ljung-Box (1978), el cual se describe como:

$$Q(m) = T(T+2) \sum_{l=1}^m \frac{\hat{\rho}_l^2}{T-l} \quad (3)$$

Donde T es el número total de datos, m el número total de rezagos y $\hat{\rho}_l$ la auto-correlación del rezago l . Se rechaza la hipótesis de no autocorrelación, si el P-valor es menor o igual al nivel de significancia. La selección del m puede afectar el estadístico Q. En el estudio se tienen en cuenta los últimos diez rezagos basado en lo sugerido por Tsay (2005), y teniendo en cuenta que un horizonte máximo de dos semanas es apropiado para la toma de decisiones por parte de los inversionistas.

Modelos ARIMA

Las autocorrelaciones se estiman suponiendo que siguen alguna estructura, ya sea de tipo autorregresivo AR, de media móvil MA o mixta tipo ARMA, representadas en las ecuaciones 4, 5 y 6 respectivamente.

$$r_t = \alpha_1 r_{t-1} + \alpha_2 r_{t-2} + \dots + \alpha_p r_{t-p} + u_t \quad (4)$$

$$r_t = \beta_1 u_{t-1} + \beta_2 u_{t-2} + \dots + \beta_q u_{t-q} + \mu_t \quad (5)$$

$$r_t = \alpha_1 r_{t-1} + \alpha_2 r_{t-2} + \dots + \alpha_p r_{t-p} + \beta_1 u_{t-1} + \beta_2 u_{t-2} + \dots + \beta_q u_{t-q} + \mu_t \quad (6)$$

La serie de retornos ya ha sido integrada una vez, por tanto un modelo ARIMA(p,d,q) de los precios, donde d es igual a 1; es equivalente a un modelo ARMA(p,q) para los retornos. Luego de comprobar que las series de retornos presentan autocorrelación, se usa la metodología Box Jenkins (1970), para encontrar modelos ARIMA. La cual consta de identificación, estimación, verificación y predicción. Sin embargo, el alcance de este trabajo no incluye pronósticos. Las herramientas principales en la **identificación**, son la función de autocorrelación (FAC), la función de autocorrelación parcial (FACP) y los correlogramas resultantes, que son los gráficos de la FAC y de la FACP respecto a la longitud del rezago. Con estas herramientas, se estiman los procesos estocásticos AR(p) y MA(q), siguiendo los criterios de identificación dados por Gujarati(2004). Al **estimar** los coeficientes AR y MA del modelo por mínimos cuadrados, se determina su significancia mediante el estadístico t-student y se **verifican** los residuos para determinar si presentan aleatoriedad o autocorrelación. Para evaluar las auto-correlaciones en los residuos se utiliza la prueba de Durbin-Watson presentada en la ecuación 7.

$$DW = \frac{\sum_{t=2}^T (\hat{\mu}_t - \hat{\mu}_{t-1})^2}{\sum_{t=1}^T \hat{\mu}_t^2} \quad (7)$$

Luego de evaluar varios modelos, se elige el mejor para cada serie de retornos tomando el de menor criterio de información de Akaike, el cual se estima usando el logaritmo de la función de verosimilitud l y el número de variables del modelo k , mediante la ecuación 8.

$$AIC = -2l/T + 2k/T \quad (8)$$

Una vez obtenidos, los mejores ajustes ARIMA, se evalúa la autocorrelación en sus residuos al cuadrado, mediante el test ARCH (Engle, 1982), presentado en la ecuación 9, con el fin de ajustarla a procesos de Heterocedasticidad Condicional Autorregresiva Generalizada GARCH(p,q).

$$u_t^2 = \gamma_1 + \gamma_2 u_{t-1}^2 + \gamma_3 u_{t-2}^2 + \dots + \gamma_{11} u_{t-p}^2 \quad (9)$$

Modelos GARCH

Estos procesos indican que el comportamiento de la varianza en un instante de tiempo, depende de valores pasados de los errores al cuadrado y de sus propios valores rezagados, lo cual es representado matemáticamente en la ecuación 10.

$$r_t = \gamma_1 + \gamma_2 u_{t-1}^2 + \gamma_3 u_{t-2}^2 + \dots + \delta_1 \sigma_{t-1} + \delta_2 \sigma_{t-2} + \dots + \gamma_{11} u_{t-p}^2 + \delta_q \sigma_{t-q} + \varepsilon_t \quad (10)$$

Utilizando los correlogramas de los residuos al cuadrado, y la metodología Box-Jenkins se determinan los mejores modelos GARCH.

RESULTADOS

En la tabla 2 se presentan los mejores ajustes ARIMA para cada activo financiero, los cuales sirven de base para la estimación de los modelos GARCH.

Tabla 2: Modelos ARMA(p,q)

MODELO	C	AR(p)			MA(q)			
		1	3	7	4	6	7	9
IGBVC	0.00105	0.148				-0.079		0.069
PREC		0.130						
ECOPETROL				0.708			-0.697	
PFBCOLOM	0.001012					-0.051	0.053	
GRUPOSURA			-0.078		-0.110			

Esta tabla muestra los modelos compuestos por coeficientes de los procesos autorregresivos y de media móvil identificados en la rentabilidad de los activos

Para los activos BCOLOMBIA y CEMARGOS no se encontraron modelos ARIMA, por no presentar autocorrelaciones significativas en los rezagos estimados. Sin embargo, para éstos se estima un ajuste GARCH, usando como residuos la desviación de cada observación respecto al promedio de los retornos. Los mejores modelos GARCH para cada uno de las series fueron: IGBC-GARCH(4,2); PREC-GARCH(3,5); ECOPETROL-GARCH(5,8); PFBCOLOM-GARCH(7,7); GRUPOSURA-GARCH(3,1); BCOLOMBIA-GARCH(3,7); CEMARGOS-GARCH(6,8).

CONCLUSIONES

A la luz de lo que se persigue con este estudio, se encuentra que las principales series bursátiles del mercado colombiano presentan comportamientos ARIMA-GARCH, excepto BCOLOMBIA y CEMARGOS, lo cual permitiría filtrar las series de residuos, para aplicar herramientas de comprobación de comportamiento caótico, tales como coeficiente de Hurst y exponente de Lyupanov.

GESTIÓN DEL CONOCIMIENTO EN GRUPOS DE INVESTIGACIÓN EN CIENCIAS SOCIALES. CASO UNIVERSIDAD JUÁREZ AUTÓNOMA DE TABASCO, MÉXICO

Deneb Elí Magaña Medina, Universidad Juárez Autónoma de Tabasco
Norma Aguilar Morales, Universidad Juárez Autónoma de Tabasco
Edith Georgina Surdez Pérez, Universidad Juárez Autónoma de Tabasco
Román Alberto Quijano García, Universidad Autónoma de Campeche

RESUMEN

La sustentabilidad de las organizaciones de este siglo estará basada fundamentalmente en sus conocimientos, en como usa lo que sabe y en su capacidad de aprender cosas nuevas. El objetivo de investigación fue determinar la percepción que los profesores de cuerpos académicos del área de ciencias sociales de la Universidad Juárez Autónoma de Tabasco, México tienen sobre los principales elementos que deben existir para la gestión del conocimiento en los grupos de trabajo de investigación. El diseño de la investigación es descriptivo no experimental, transeccional, en donde se realizó una encuesta entre los profesores de los cuerpos académicos de tres divisiones académicas. Los resultados señalan que uno de las principales limitantes es la Capacidad de Gestión de estos grupos. Se concluye que se requiere un mayor apoyo por parte de las autoridades institucionales para generar un acervo documental que permita la gestión y difusión de los productos académicos, aspecto esencial para una adecuada gestión y transferencia del conocimiento.

KNOWLEDGE MANAGEMENT IN SOCIAL SCIENCE RESEARCH GROUPS. CASE UNIVERSIDAD JUÁREZ AUTONOMA DE TABASCO, MÉXICO

ABSTRACT

The sustainability of the organizations of this century will be based fundamentally on its knowledge, in as it uses what know and in its capacity to learn new things. The study objective was to determine the perception that the professors of academic groups in the social sciences area of the Universidad Juarez Autónoma de Tabasco, México, have on the main elements that must exist for the management of the knowledge in the investigation work groups. The design of the investigation is descriptive nonexperimental, transeccional, in where a survey between the professors of the academic groups of three academic divisions was made. The results indicate that one of the main limitations is the Capacity of Management of these groups. One concludes that a greater support on the part of the institutional authorities is required to generate a heap documentary that allows to the management and diffusion of academic products, essential aspect for a suitable management and transference of the knowledge.

INTRODUCCIÓN

En América Latina el desarrollo de un esquema de ciencia y tecnología es prioritario, ya que las tendencias actuales de desarrollo tecnológico presentan grandes desafíos de los cuales se debe tener conciencia, particularmente si se desea lograr un desarrollo sustentable (Jiménez, 1994; Quintana, 1998; Magaña, 2006). Abello, Paez y Dacunha (2001) señalan que para conseguir este desarrollo deberán orientarse hacia la institucionalización de la ciencia y la tecnología como motor de desarrollo, tratando de crear un nuevo marco para diseminar este tipo de relaciones, sobre las bases de un acceso más libre y amplio de los conocimientos. Lamentablemente, México aún está lejos de ser un país que crezca con base al conocimiento que genera, pues la inversión en ciencia y la tecnología no ha logrado los niveles de crecimiento necesarios para poder alcanzar la sustentabilidad de sus ventajas comparativas; tan solo en el 2007 esta actividad solo logro conseguir una inversión del 0.66% sobre el PIB (Consejo Nacional de Ciencia y Tecnología [CONACYT], 2010, p. 16).

Este trabajo de investigación centra su atención en “los cuerpos académicos”, una figura desarrollada en México por las autoridades educativas nacionales para las Universidades Públicas. Una tarea fundamental de los Cuerpos Académicos es la producción de conocimiento y la aplicación del mismo a través de los procesos de investigación, desarrollo tecnológico y transferencia de resultados. Para algunos autores (López, 2005; López, Arechavala, y Teja, 2010) lo más adecuado es manejar el concepto de “comunidades académicas”, o “grupos académicos” al referirse a expertos que tienen como misión resolver una serie de problemas a través de la aplicación del conocimiento científico.

Partiendo de esta idea resulta interesante revisar los objetivos de la figura de Cuerpos Académicos, en particular los del área de ciencias sociales, pues existen diferentes visiones alternativas a las planteadas e impulsadas desde los organismos oficiales en México. En cuanto a la generación del conocimiento algunos autores manejan la idea de que los procesos de producción de conocimiento se han orientado en forma considerable hacia el mercado y que existe una marcada tendencia a que las actividades de investigación realizadas en espacios públicos como las universidades, están cada vez más determinadas por los valores del mercado y desarrolladas a través de mecanismos de comercialización, desplazando los imperativos académicos (Bajo y Martínez, 2006). Sin embargo es necesario que el conocimiento generado en estos espacios, aún el que no tiene un valor de mercado inmediato, como el que se generalmente se produce en las áreas sociales, sea documentado y difundido como parte de los objetivos de estas figuras que actualmente operan este proceso al interior de las universidades públicas, los cuerpos académicos.

Problemática De Estudio

La sustentabilidad de las organizaciones de este siglo estará basada fundamentalmente en sus conocimientos, en como usa lo que sabe y en su capacidad de aprender cosas nuevas (Drucker, 1988). La ventaja competitiva de las naciones, está en crear valor para los clientes a través de la diferenciación, pero para lograrla se requiere del sacrificio de una parte de la participación del mercado a fin de invertirlo en actividades costosas de investigación (Porter, 2000). No obstante, el conocimiento y la tecnología no pueden ser concebidas como se describe en la economía convencional como un conjunto de combinaciones conocidas como insumos o un acervo de conocimientos utilizables libremente y sin costo, ya que éste no es un bien libre y se convierte en un incentivo más de las empresas para innovar (Dosi, Pavitt y Soete, 1993). Nonaka y Takeuchi (1999), afirman que además del conocimiento, ciertas técnicas adquiridas empíricamente y debidamente documentadas para poder transferirlas a otros miembros permite generar nuevos conocimientos y materializarlos en productos, servicios y sistemas, lo cual constituye la clave de la innovación en las organizaciones y por lo tanto hace posible esa innovación en forma continua. Transferir a otros miembros permite generar nuevos conocimientos y materializarlos en productos, servicios y sistemas, lo cual constituye la clave de la innovación en las organizaciones y por lo tanto hace posible esa innovación en forma continua.

En los países desarrollados el vínculo entre las instituciones que generan investigación científica y las empresas es cada vez más fuerte, pues para competir en este ambiente, los países necesitan universidades de primera con investigación que responda a los requerimientos del sector productivo, de ahí que no puede existir una industria competitiva sin un moderno sistema de investigación, lo que implica universidades de excelencia (López, 2005). La tabla 1 muestra la distribución del Gasto Nacional en Ciencia y Tecnología (GNCyT) para México durante el año 2007, en el que se destinó 74,244.9 millones de pesos al desarrollo de actividades científicas y tecnológicas, cantidad que significó un incremento de 3.1 por ciento en términos reales respecto a la inversión realizada el año previo.

Tabla 16: Gasto Nacional en Ciencia y Tecnología, México 2007 (Millones de pesos corrientes)

Actividad	Sector público				IES	
	Sectores	Gasto federal CONACYT	Total	Estados ¹	Total Gobierno	
IDE	18,669.70	2,443.90	21,113.60	200.70	21,314.30	1,334.10
Posgrado	5,906.50	2,633.90	8,540.40	623.50	9,163.90	1,704.10
Servicios CyT	5,274.90	502.80	5,777.70	824.20	5,777.70	1,137.30
Total	29,851.00	5,580.70	35,431.70	0.01	36,255.90	4,175.50
	40.20%	7.50%	47.70%		48.80%	5.60%
Actividad	Sector Privado					
	Sector productivo	Sector Externo	Total Privado	Total	% del GNCYT	% del PIB
IDE	18,781.20	577.10	19,358.30	42,006.70	56.6%	0.37%
Posgrado	3,473.80		3,473.80	14,341.80	19.3%	0.13%
Servicios CyT	10,981.40		10,981.40	17,896.40	24.1%	0.16%
Total	33,236.40	577.10	33,813.50	74,244.90	100.0%	0.66%
	42.30%	0.80%	45.50%	100.00%		

p/ Estimación preliminar. 1/ Aportaciones de los Gobiernos Estatales a los Fondos Mixtos y Educación de Posgrado. Fuentes: INEGI, PIB para 2007 = 11,206.1 miles de millones de pesos (CONACYT, 2010, p.16)

Se puede apreciar que la mayor parte de los recursos, el 56.6 por ciento, fueron canalizados hacia actividades de investigación y desarrollo experimental (IDE), es decir, para financiar la investigación básica y aplicada, así como el desarrollo de tecnología. En segundo lugar se ubica el rubro de servicios científicos y tecnológicos con 24.1 por ciento de los recursos y en tercer lugar se ubica la educación de posgrado con 19.3 por ciento (CONACYT, 2010).

Es en este nuevo paradigma en donde se centra el nuevo rol del investigador y de los grupos de investigación, que se acomoda, hoy día, en la figura de los cuerpos académicos, responsables de la generación de conocimiento y desarrollo tecnológico en el sistema de Educación Superior en México (Suárez y López, 2006). Ante este panorama surge la pregunta que quita esta investigación: ¿Cuál es la percepción que los profesores de cuerpos académicos del área de ciencias sociales de la UJAT, tienen sobre los principales elementos que deben existir para la gestión de los conocimientos en los grupos de trabajo, concebidos por la Secretaría de Educación Pública en México como Cuerpos Académicos?

Para dar una perspectiva general, es imperativo conocer primero lo que se entiende por Cuerpo Académico. Los cuerpos académicos, son concebidos a través del discurso oficial del Programa de Mejoramiento al Profesorado (PROMEP) de la Secretaría de Educación Pública en México como: “grupos de profesores de tiempo completo que comparten objetivos y metas académicas, que se caracterizan principalmente porque: en las universidades públicas estatales comparten una o varias líneas de generación o aplicación innovadora del conocimiento, LGAC (investigación o estudio) en temas disciplinares o multidisciplinarios; en las universidades politécnicas comparten una o varias líneas innovadoras de investigación aplicada y desarrollo tecnológico (LIADT), las cuales se orientan principalmente a la asimilación, transferencia, creación y mejora de tecnologías; trabajan en proyectos que atienden necesidades concretas del sector productivo y participan en programas de asesoría y consultoría a dicho sector; en las universidades tecnológicas comparten una o varias líneas de

investigación aplicada y desarrollo tecnológico (LIADT), las cuales se orientan principalmente a la asimilación, transferencia y mejora de tecnologías existentes; trabajan en proyectos que atienden necesidades concretas del sector productivo y de servicios” (Secretaría de Educación Pública [SEP], (2010, p.3).

Objetivo General

Determinar la percepción que los profesores de cuerpos académicos del área de ciencias sociales y humanidades de la UJAT, tienen sobre los principales elementos que deben existir para la gestión del conocimiento en los grupos de trabajo.

Objetivos Específicos

- Determinar los profesores que pertenecen a cuerpos académicos en el área de ciencias sociales y humanidades de la UJAT
- Determinar los elementos teóricos para la gestión del conocimiento en equipos de trabajo
- Analizar las relaciones existentes entre las principales variables socio demográfico y los elementos definidos de la gestión del conocimiento en cuerpos académicos.

Justificación

La gestión del conocimiento se realiza con la finalidad de diseñar estrategias, generar ventajas para la organización, promover la innovación y generar nuevo conocimiento. En la sociedad basada en el conocimiento se incrementa cada vez más la necesidad de empresas y universidades de obtener beneficios del conocimiento generado y de su aplicación en situaciones de carácter práctico, por lo tanto, ha aumentado la relación entre el sector académico y productivo en la ejecución de proyectos de investigación y desarrollo. La nueva economía mundial se caracteriza por relacionar en mayor medida a la productividad con el conocimiento. En la sociedad basada en el conocimiento se incrementa cada vez más la necesidad de empresas y universidades de obtener beneficios del conocimiento generado y de su aplicación en situaciones de carácter práctico.

La inserción eficiente de la institución universitaria en la sociedad del conocimiento requiere un cambio en la concepción tradicional de esta organización, la cual debe convertirse tanto en una universidad social que participe directamente en el desarrollo regional y nacional como en una universidad que fomente la innovación educativa y el desarrollo de investigación aplicada, entre otros aspectos (García, 2004).

Los cuerpos académicos constituyen un sustento indispensable para la gestión del conocimiento y la formación de profesionales y expertos en las Universidades Públicas de México, sin embargo, para muchos investigadores esta figura surge como parte de una disposición oficial de la SEP y hay quienes los ven únicamente como parte de una política educativa y gubernamental. Otros de los factores que justifican la figura son: la consecución de fondos, la necesidad de una mejor planeación y distribución del trabajo académico y de investigación, y la transferencia de conocimiento.

Las universidades necesitan vincular los distintos desarrollos científicos y tecnológicos emanados de la investigación académica, con proyectos productivos reales que repercutan en el desarrollo de una localidad, región o país. La creación de conocimiento científico-técnico no es un proceso que se pueda planificar y controlar; por el contrario, a menudo la innovación es imprevisible. La creación de este nuevo conocimiento no es simplemente una cuestión de procesar una información subjetiva, sino más bien es una cuestión de saber aprovechar lo que se supone y a menudo muy percepciones, intuiciones y corazonadas de los miembros del equipo investigador (Nonaka y Takeuchi, 1999).

Las distintas estrategias que aplican las universidades en sus procesos de vinculación, dependen de las necesidades del entorno, de las áreas del conocimiento que dominan, de los recursos humanos con los que dispongan, de los recursos económicos y financieros a su alcance, de la normatividad existente, entre otros factores. En México, el reto es grande en materia de innovación tecnológica, lo cual significa un área amplia de oportunidad para la gestión del conocimiento. Sobre todo, porque existen diferencias muy marcadas entre los países en desarrollo y los países desarrollados, y porque algunos países en desarrollo están logrando avances importantes en materia de innovación (Aboites, 2008).

METODOLOGÍA

Diseño Del Estudio

El propósito de la investigación es descriptivo de acuerdo con la definición de Kerlinger y Lee (2002) de la estructura de la investigación y se concibe con el propósito de dar respuesta a las preguntas de investigación. El diseño del estudio en general es no experimental, transaccional (Hernández, Fernández, Baptista, 2010), ya que se pretende únicamente determinar la percepción que los profesores de Cuerpos Académicos del área de ciencias sociales y humanidades tienen sobre los principales elementos que deben existir para la Gestión del Conocimiento en los grupos de trabajo. Y es por ello que para el objetivo del estudio se emplea como método el análisis documental de fuentes secundarias publicadas sobre los cuerpos académicos y la base de datos del Programa de Mejoramiento al Profesorado (PROMEP) de la Secretaría de Educación Pública.

Población De Estudio

En virtud de que existen muchas clasificaciones para el área de Ciencias Sociales, se decidió considerar aquellas disciplinas que contiene el catalogo del Consejo Nacional de Ciencia y Tecnología (CONACYT) en México, para esta área, el cual se basa en la clasificación Barro Sierra (CONACYT, 2000). En relación al caso de estudio dichas disciplinas se encuentran en los cuerpos académicos de 3 de las 11 divisiones académicas que pertenecen a esta Universidad. El muestreo empleado fue el estratificado, tomando como estrato cada una de las divisiones académicas consideradas y el número de muestra de cada estrato se determinó de forma proporcional (Scheaffer, Mendenhall, Ott, 1981), con un error de estimación del 5% y una confiabilidad el 95%. Las divisiones académicas por motivos de confidencialidad serán denominadas como División Académica A, B o C a fin de poder señalar las comparaciones correspondientes (Tabla 2).

Tabla 17: Población y Muestra

División Académica	No. De Cuerpos Académicos	Total de Profesores	Muestra
División A	5	30	23
División B	5	31	25
División C	5	41	32
TOTAL	15	102	80

Diseño Del Instrumento

El cuestionario empleado fue una adaptación propia del instrumento diseñado por Molina y Marsal (2002) donde se evalúan 6 dimensiones de la variable gestión del conocimiento: Implicación de la Alta Dirección, Cultura Organizativa, Capacidad de Gestión, Tecnología, Procesos de la Gestión del Conocimiento e Indicadores. El cuestionario que se elaboró está conformado por 30 reactivos y adicionalmente se incluyeron tres reactivos socios demográficos: género, edad y antigüedad. Se estructuró en una escala tipo Lickert con cuatro opciones de respuesta: D= No, nunca; C= Poco, alguna vez; B=

Bastante, a menudo y A= Si, Siempre. Los reactivos se presentan de manera alternada en relación a las 6 dimensiones consideradas en el cuestionario. Se utilizó el coeficiente Alpha de Cronbach para determinar la confiabilidad, del cuestionario adaptado de Molina y Marsal (2002) el cual reportó un valor de 0.938, valor que se considera aceptable (Hernández, Fernández y Baptista 2010).

Recolección y análisis de datos

El cuestionario fue entregado personalmente a los profesores investigadores y fue contestado en el momento para aclarar posibles dudas acerca del mismo, con la finalidad de garantizar la confidencialidad de las respuestas. La etapa de aplicación se obtuvo durante dos meses. Para el análisis estadístico de resultados se empleó el programa estadístico Statistic Package for Social Science SPSS Versión 17.0 para Windows. Se realizó un análisis de estadística descriptiva y de frecuencias con la finalidad de describir el fenómeno bajo estudio en cada una de las dimensiones y en general. Con el análisis de fiabilidad se determinó el nivel de confiabilidad del cuestionario, posteriormente con un análisis de variabilidad ANOVA se determinó las diferencias presentes entre cada división académica, género, edad y antigüedad. Por último un análisis de correlación permitió determinar la relación existente entre la edad, antigüedad y las dimensiones del cuestionario.

RESULTADOS

Estadística Descriptiva

La variable gestión del conocimiento percibida por los grupos de investigación denominados cuerpos académicos del área de ciencias sociales reportó en el análisis de frecuencias de acuerdo a la escala una media de 73.29 y una desviación de 16.51. Se observa una distribución normal con un valor mínimo registrado de 30 y un valor máximo de 103, una curtosis de -.4327 y asimetría de .136. Con la finalidad de establecer categorías de análisis se decidió identificar los cuartiles de la distribución y se derivan las categorías presentadas en la tabla 3.

Tabla 18: Niveles de gestión del conocimiento, rango de valores de (30 - 120)

Nivel de percepción de los procesos de gestión del conocimiento en cuerpos académicos	Percentil	Rango	%
No se dan los procesos de gestión del conocimiento en los cuerpos académicos	25	Valores \leq 62	27.5
Se percibe que poco se realizan los procesos de gestión del conocimiento en los cuerpos académicos	50	63 - 71	25.0
Se percibe que de manera moderada con frecuencia se realizan los procesos de gestión del conocimiento en los cuerpos académicos	75	72 - 85	23.8
Se percibe que siempre se dan los procesos de gestión del conocimiento en los cuerpos académicos	100	Valores \geq 86	23.8

Se percibe por lo que se reporta en la tabla 3 que el mayor porcentaje (27.5%) se refleja en el primer cuartil, que corresponde a los profesores que perciben una ausencia sobre la existencia de los principales elementos que deben darse en la gestión del conocimiento al interior de los cuerpos académicos de las áreas de ciencias sociales dentro de la universidad. Si sumamos el porcentaje de profesores que reportan una presencia escasa en estos procesos, más de la mitad (52.5%) de la población que participó en el estudio percibe que no se están dando las condiciones requeridas para hacer continua y sustentable la generación del conocimiento en la organización. En la figura 1 se ilustra la distribución de frecuencias.

Figura 2: Distribución de frecuencias por cuartiles.

Con respecto a las dimensiones que conforman el cuestionario en la tabla 4 se presentan los valores descriptivos generales para cada una de las mismas.

Tabla 19: Estadísticas descriptivas con relación a la dimensión del cuestionario

Dimensión	N	Mínimo	Máximo	Media	DS
Implicación de la alta dirección	48	6.00	21.00	14.6875	3.70828
Cultura Organizativa	48	5.00	20.00	13.7083	3.16872
Capacidad de Gestión	48	5.00	20.00	11.1667	4.14284
Tecnología	48	5.00	19.00	14.5833	3.44460
Indicadores	48	5.00	20.00	12.3958	4.56042
Procesos de la Gestión del Conocimiento	47	4.00	16.00	9.8936	2.89102

Se puede apreciar en la tabla 4 que con respecto a la dimensión de implicación de la alta dirección, los profesores perciben que los directivos no están cumpliendo con la responsabilidad de impulsar programas y desarrollar estrategias hacia los Cuerpos Académicos pues la media reportada para esta dimensión es relativamente baja con respecto a su escala.

Las dimensiones sobre capacidad de gestión y procesos de la gestión del conocimiento, reportaron las medias más bajas de acuerdo a la escala de las mismas, lo que refleja de manera general que los cuerpos académicos perciben que esencialmente no se está gestionando el conocimiento al interior de los mismos. Cabe destacar que la tecnología se reporta como la dimensión mejor ponderada por los profesores, en virtud de que las áreas sociales requieren de poco equipamiento, sin embargo al interior de las preguntas, esta dimensión registró con el puntaje más bajo el cuestionamiento sobre una memoria organizacional de los productos generados por los cuerpos académicos. Para analizar las dimensiones del cuestionario relación a las variables socio demográficas se empleó el análisis de varianza ANOVA para la edad, la antigüedad y la división académica, y la prueba t para analizar el género (tabla 5), ya que permite comparar las medias para dos grupos de casos como variables independientes (Mendenhall, 1990).

Tabla 20: Comparación de las medias poblacionales de cada dimensión del cuestionario de gestión del conocimiento por género.

Dimensión	Género	N	Media	Desviación típica	t	Sig.
Implicación de la alta dirección	Hombre	44	15.45	3.494	1.407	.163
	Mujer	35	14.40	3.060		
Cultura Organizativa	Hombre	44	13.84	3.313	1.473	.145
	Mujer	35	12.80	2.857		
Capacidad de Gestión	Hombre	44	10.98	4.218	2.220	.029*
	Mujer	35	9.00	3.540		
Tecnología	Hombre	44	14.36	3.538	1.315	.192
	Mujer	35	13.37	3.049		
Indicadores	Hombre	44	10.12	3.194	3.282	.002*
	Mujer	35	8.03	2.203		
Procesos de la Gestión del Conocimiento	Hombre	44	12.95	4.404	1.940	.056
	Mujer	35	11.20	3.402		

* $p \leq .05$

Se puede apreciar que las dimensiones de capacidad de gestión e indicadores existen diferencias estadísticamente significativas siendo los varones los que reportan una mejor percepción de las dimensiones citadas. Con respecto a la edad no se reportaron diferencias significativas, sin embargo los años laborados si registran diferencias como se puede apreciar en la tabla 6.

Tabla 21: Comparación de las medias poblacionales de cada dimensión del cuestionario de gestión del conocimiento por rango de antigüedad.

Dimensión	Antigüedad	N	Media	Desviación típica	F	Sig.
Implicación de la alta dirección	7 a 13 años	14	16.43	4.201	4.650	.002*

	14 a 20 años	23	13.57	3.160		
	21 a 27 años	31	13.74	3.286		
	28 a 34 años	10	12.50	4.007		
	35 a 41 años	2	15.00	2.828		
Indicadores	7 a 13 años	14	11.07	3.772	2.335	.063
	14 a 20 años	23	8.87	2.668		
	21 a 27 años	30	8.80	2.696		
	28 a 34 años	10	7.90	2.331		
	35 a 41 años	2	10.50	2.121		
Procesos de la Gestión del Conocimiento	7 a 13 años	14	14.07	4.779	2.104	.089
	14 a 20 años	23	12.57	3.087		
	21 a 27 años	31	11.39	4.145		
	28 a 34 años	10	9.90	4.175		
	35 a 41 años	2	14.50	4.950		

* $p \leq .05$

Las dimensiones sobre la implicación de la alta dirección y la cultura organizativa son las que reportan las diferencias estadísticas en el análisis de varianza, siendo en ambos casos el rango entre 7 a 13 años el que mejor percepción reporta y el rango entre 28 a 34 años laborados los que registran el valor más bajo.

En la tabla 7 se presentan los valores comparativos de cada una de las tres divisiones académicas consideradas en el estudio y que pertenecen a la disciplina del área de ciencias sociales.

Tabla 22: Comparación de las medias poblacionales de cada dimensión del cuestionario de gestión del conocimiento por división académica.

Dimensión	División Académica	N	Media	Desviación típica	F	Sig.
Implicación de la alta dirección	División A	23	14.04	3.855	.941	.395
	División B	25	15.28	3.542		
	División C	32	15.16	3.081		
Cultura Organizativa	División A	23	13.30	2.991	1.155	.320
	División B	25	14.08	3.341		
	División C	32	12.81	3.053		
Capacidad de Gestión	División A	23	10.65	4.270	5.620	.005*
	División B	25	11.64	4.051		
	División C	32	8.34	3.279		
Tecnología	División A	23	13.09	3.302	8.257	.001*
	División B	25	15.96	3.020		
	División C	32	12.88	2.915		
Indicadores	División A	22	8.64	2.752	8.879	.000*
	División B	25	11.00	2.582		
	División C	32	8.06	2.747		
Procesos de la Gestión del Conocimiento	División A	23	10.83	4.086	3.800	.027*
	División B	25	13.84	4.571		
	División C	32	11.63	3.358		

*p ≤ .05

Con relación a las divisiones académicas, únicamente las dos primeras dimensiones no reportan diferencias. Todas las dimensiones que reportan diferencias señalan que la División Académica “B” es la que mejor percepción tiene sobre las mismas, mientras que los valores más bajos también de manera coincidente los refleja la división académica “C”. Por último en la tabla 8 se presenta un análisis de correlación de las dimensiones bajo estudio con relación a la edad y los años laborados en la institución.

Tabla 23: Correlación de las dimensiones del cuestionario con relación a la edad y antigüedad laboral.

Dimensión	Implicación de la alta dirección	Cultura organizativa	Capacidad gestión	Tecnología	Procesos de la gestión del conocimiento	Indicadores	Edad de la persona entrevistada que ha laborado en la organización	Años que ha laborado en la organización
Implicación de la alta dirección	1							
Cultura organizativa	.706**	1						
Capacidad gestión	.432**	.402**	1					
Tecnología	.413**	.589**	.450**	1				
Procesos de la gestión del conocimiento	.537**	.651**	.423**	.524**	1			
Indicadores	.602**	.608**	.475**	.559**	.722**	1		
Edad de la persona entrevistada	-.141	-.223	.161	-.058	-.115	-.129	1	
Años que ha laborado en la organización	-.352**	-.322**	.030	-.183	-.237*	-.251*	.718**	1

** La correlación es significativa al nivel 0,01 (bilateral). * La correlación es significativa al nivel 0,05 (bilateral).

Se puede apreciar que los años laborados guardan una correlación negativa altamente significativa con respecto a las dimensiones de implicación de la alta dirección y cultura organizativa, y una correlación

moderada siempre negativa con relación a los procesos de gestión del conocimiento y los indicadores. Es decir que a un mayor número de años laborado menor es la percepción sobre la dimensión señalada.

CONCLUSIONES

De manera general podemos señalar que más de la mitad de la población bajo estudio percibe que no se están dando los elementos necesarios para la gestión del conocimiento al interior de los cuerpos académicos. Entre los principales factores asociados, los investigadores perciben que la dedicación de los directivos respecto al apoyo que brindan los profesores es bajo, y este factor es decisivo para que a través de los diversos programas de apoyo a la investigación se puedan realizar los desarrollos requeridos por la sociedad, y de esta forma mejorar los indicadores de productividad de los propios Cuerpos Académicos.

En cuanto a la espiral del conocimiento se puede observar que existe la problemática de documentación y socialización, ya que la creación de conocimiento es una interacción continua de conocimiento tácito y conocimiento explícito. Por tanto, es necesario que se dé el proceso de socialización para compartir el conocimiento tácito. En cuanto a la tecnología, es una dimensión que de manera recurrente fue bien evaluada, sin embargo se reconoce que aún no es suficiente y que no se está generando una memoria organizacional que permita precisamente este proceso de socialización y por supuesto, tampoco la difusión y posible comercialización de los productos de investigación que han generado estos grupos de trabajo. Es pertinente señalar que si bien esta investigación se centró principalmente hacia el área de ciencias sociales, la línea de investigación que permita generar estrategias de gestión del conocimiento al interior de estos grupos colegiados, se hace pertinente para todas las ciencias, pues la función social de la entidad universitaria debe procurar la generación de los esquemas que le permitan ser pertinente y competitivo en esta sociedad del conocimiento.

EFECTOS DEL SISTEMA TRIBUTARIO, EN LAS MICROS, PEQUEÑAS Y MEDIANAS EMPRESAS

Plácido Valenciana Moreno, Universidad Autónoma de Baja California
Loreto María Bravo Zanoquera, Universidad Autónoma de Baja California
Esther Eduvigis Corral Quintero, Universidad Autónoma de Baja California

RESUMEN

Este proyecto tuvo como objetivo identificar los efectos integrales que el sistema tributario origina en las micros, pequeñas y medianas empresas de Baja California, por el periodo del 2008 al 2010. El método que se utilizó fue el descriptivo longitudinal, en la primera fase se obtuvo información de 88 empresas de Mexicali, generándose un diagnóstico cuyos principales resultados son: 1) El 47 % consideran al impuesto sobre la renta el más oneroso; 2) El 32% manifestó que los cambios en las tecnologías de la información en el sistema tributario originó una carga administrativa adicional; 3) 46% señalo que los cambios ocurridos en los tres últimos años generaron incertidumbre en su correcto cumplimiento 4) El 64% opinan que el gobierno debe establecer estrategias para reducir el gasto público y 30 % que se debe abatir la evasión fiscal. La principal conclusión es que las empresas siguen considerando que el pago de contribuciones sobre todo al gobierno federal, les afecta significativamente en los resultados financieros y administrativos de las mismas y en los últimos años esto se ve agravado como consecuencia de la obligación de tener que utilizar tecnologías de la información.

PALABRAS CLAVES: Sistema tributario mexicano y micros, pequeñas y medianas empresas (Mipymes).

EFFECTS OF THE TAX SYSTEM, IN THE MICRO, SMALL AND MEDIUM-SIZED ENTERPRISES.

SUMMARY

This project aimed to identify effects comprehensive tax system originates in the micros, small and medium-sized enterprises of Baja California, for the period of 2008 to 2010. The method that was used was the longitudinal descriptive, in the first phase information was obtained from 88 companies of Mexicali, generating a diagnosis the main results are: 1) 47% consider the most costly income tax; 2) 32% Said that changes in the technologies of the information in the tax system led to an additional administrative burden; 3) 46% would point out that the changes that have occurred in the past three years generated uncertainty in its correct performance 4) 64% think that the Government should establish strategies to reduce public spending and 30% which should reduce tax evasion. The main conclusion is that companies still consider that payment of contributions to the federal Government, affects them significantly in Financials and administration thereof and in recent years this is exacerbated as a result of the obligation of having to use information technologies.

KEY WORDS: Mexican tax system and micro, small and medium-sized enterprises.

INTRODUCCIÓN

A nivel internacional, las micro, pequeñas y medianas empresas (Mipymes) tienen una amplia participación en la economía mundial ya que representan el 95% de total de las empresas de acuerdo a datos de la Organización para la Cooperación y Desarrollo Económico (OCDE). A nivel Nacional la participación es similar ya que de acuerdo al Instituto Nacional de Estadística, Geografía e Informática

(INEGI) en base al censo económico 2004, el 99% de los establecimientos son micros, pequeños y medianos los cuales demandan acciones para impulsarlos y ser más competitivos ya que es indudable la participación de estas empresas en el Producto Interno Bruto (PIB) y en la generación de empleo. Por otra parte según un estudio reciente del Banco Interamericano de Desarrollo, sostiene que los sistemas tributarios complejos ocasionan una alta evasión fiscal y afectan el crecimiento económico en toda América Latina y el Caribe. Lo anterior incide en que la carga impositiva sea muy alta, asimismo reduce la inversión en tecnología y otras formas de mejorar su productividad, ya que con los impuestos altos, se reducen las utilidades que generan las inversiones.

En el actual escenario económico mundial en el cual los especialistas señalan que la incipiente recuperación que muestran algunos indicadores macroeconómicos no aseguran que se haya dejado atrás la crisis financiera y económica iniciada en el año 2008, ya que subsisten riesgos como las grandes deudas públicas de algunos países europeos, que los puede llevar a decretar moratorias de pago, otro de los riesgos que pueden disminuir las actividades económicas de los países, es el incremento en los precios del petróleo y los alimentos; en caso particular de México y en especial de Baja California la recuperación económica está ligada a la de los Estados Unidos de América.

Así como en el resto del país las micro, pequeñas y medianas empresas en Baja California son muy importantes para el desarrollo económico por lo cual es de relevancia evaluar el entorno tributario, con el propósito de plantear una serie de recomendaciones que les permitan minimizar el impacto negativo que pudiera tener el sistema tributario en sus actividades, sobre todo conociendo que en la normatividad legal y fiscal, se ofrecen a los contribuyentes diversas opciones de tributación, así como estímulos y facilidades fiscales.

REVISIÓN LITERARIA

La Constitución Política de los Estados Unidos Mexicanos (CPEUM) en su artículo 31 fracción IV establece la obligación de los mexicanos a contribuir con el gasto público, siendo este precepto constitucional el que da nacimiento al Sistema tributario en México. El Sistema Financiero (SF) en México está integrado principalmente por la Comisión Nacional Bancaria, la Comisión Nacional de Seguros y Fianzas, la Comisión Nacional de Valores y el Banco de México, a través de los cuales controlan y regulan las actividades de las instituciones gubernamentales. La Secretaría de Hacienda y Crédito Público (SHCP) es parte fundamental en la estructura del SF en México. La SHCP tiene a su cargo la actividad financiera del país administrando los ingresos y gastos públicos. Los antecedentes previos más importantes en materia tributaria datan del 2007, año en el cual se incorporaron cambios importantes destacando la introducción de los llamados impuestos de control, siendo el impuesto empresarial a tasa única (IETU) que se aplica a personas físicas con actividad empresarial, profesionistas y los dedicados al arrendamiento, así como a las personas morales y, el impuesto a los depósitos en efectivo (IDE), ambos impuestos iniciaron su vigencia en el año 2008.

A raíz de la reforma hacendaria mencionada, la SHCP publicó que en el 2008 la recaudación de los impuestos más relevantes relacionados con la renta fueron el impuesto sobre la renta (ISR), el IETU y el IDE, alcanzando un monto de 5.1 por ciento del PIB, considerándose el nivel máximo en los últimos 30 años. El siguiente cambio se dio en el año 2009, en el cual se aprobaron una serie de modificaciones fiscales más en el sentido de incremento de tasas impositivas tales como el IVA que incremento del 15 % a 16% y de 10% a 11% en la región fronteriza, modificando además las tasas marginales de los últimos tres tramos de la tarifa del ISR a personas físicas, ubicando la tasa máxima en 30% y la empresarial también fue modificada del 28% al 30%. Asimismo, se modificaron algunas tasas de los demás renglones de impuestos que integran los ingresos tributarios no petroleros. La SHCP considera que las anteriores modificaciones fiscales, dieron origen a que en el año 2010 se viera un incremento en la recaudación por ingresos tributarios no petroleros hasta en un 11.9%. Para el año 2011, el Ejecutivo Federal solo

considero introducir precisiones al marco tributario, destacando en la Ley de Ingresos de la Federación algunos aspectos en relación con los ingresos por intereses, en la forma de presentar las declaraciones, destacando lo relativo al ISR donde se promueve la creación de nuevos empleos a través de estímulos fiscales para los contribuyentes que contratan a personas de primera vez y el fomento de la producción teatral. En la política de ingresos para el ejercicio del 2012, el Ejecutivo Federal no considero pertinente proponer cambios a los ordenamientos legales en materia impositiva, proponiendo en cambio un mayor énfasis en el fortalecimiento de la recaudación, mejoras en la eficiencia de la administración tributaria y buscando una mayor simplificación de los trámites a seguir por los contribuyentes.

Es importante precisar que los contribuyentes son los sujetos pasivos de la relación tributaria, y están clasificados como personas físicas o personas morales y a su vez los sujetos activos de dicha relación son: la Federación, las Entidades Federativas y los Municipios los cuales les imponen diversos gravámenes y otras obligaciones a los primeros. Los impuestos referidos en México pueden ser federales, estatales y municipales. La mayor carga fiscal es generada por los impuestos federales, siendo los principales: el ISR, Impuesto al Valor Agregado (IVA), IETU, IDE, Impuesto sobre Automóviles Nuevos, Impuesto Especial sobre Producción y Servicios, Impuesto sobre Tenencia o Uso de Vehículos y la Ley Federal de Derechos, entre otros impuestos especiales. Entre los principales impuestos estatales y municipales se encuentran: impuestos al traspaso de la propiedad inmueble, impuesto predial, impuesto por la celebración de algunos eventos públicos y en algunos casos impuestos sobre nóminas. Como ya se menciono, la principal carga fiscal de los contribuyentes recae en los impuestos federales, siendo motivo de controversia desde su nacimiento y sus posteriores modificaciones. Es voz popular en foros de profesionistas, empresarios, políticos y funcionarios públicos, que México requiere de una reforma fiscal integral, la cual no ha sido adecuadamente sustentada ni defendida. Diversas publicaciones en periódicos y revistas, mencionan que la carga fiscal es un impedimento para un adecuado desarrollo en la economía del país, señalando que las mipymes son las empresas más vulnerables, siendo aproximadamente el 42% de sus ingresos lo que les representa cumplir con sus obligaciones fiscales principalmente las federales.

Planteamiento Del Problema

Para el cumplimiento de las obligaciones tributarias, se expiden una gran diversidad de normatividad entre leyes, reglamentos, decretos y resoluciones, en la mayoría de los casos de interpretación compleja y cambiante, lo que origina privar de recursos a los particulares o contribuyentes, no solo por el gravamen en sí, sino también por lo que se tiene que pagar de sueldos y honorarios, por empleados y asesores para poder cumplir con las mismas; en este entorno desarrollan sus actividades las Mipymes. Aunado a los riesgos y dificultades inherentes de la realización de una actividad empresarial, trae como consecuencia el cumplimiento erróneo o en algunos casos el franco incumplimiento de sus obligaciones tributarias, con el consecuente pago de multas u otros accesorios de las contribuciones, que ponen en riesgo la iniciativa empresarial de los particulares. La interrogante que se plantea es ¿el actual sistema tributario tiene efectos negativos en el desarrollo y permanencia de las mipymes establecidas en Baja California?

Objetivo

La presente investigación tiene como objetivo:

Identificar los efectos integrales que el sistema tributario origina en las micros, pequeñas y medianas empresas establecidas en Baja California.

METODOLOGÍA

El método que se utilizó en esta investigación fue el descriptivo longitudinal, ya que se recabó información de la situación que guardan las micros, pequeñas y medianas empresas en el Estado de

Baja California en relación con el sistema fiscal donde llevaron a cabo sus actividades en los tres años anteriores a la fecha de esta investigación, posteriormente se generó un diagnóstico de cuales han sido sus efectos o consecuencias integrales en dichas empresas. El presente proyecto se dirigió al análisis de las micro, pequeñas y medianas empresas del Estado de Baja California, así como la repercusión que sobre ellas ha generado el sistema tributario, principalmente en la administración y en sus finanzas, para lo cual se establecieron las siguientes estrategias en la investigación:

Primero: Se consideró el análisis a nivel estatal, generando redes de investigación con académicos de la DES de Ciencias Económico y Administrativas, integrados por la Facultad de Contaduría y Administración de Tijuana, la Facultad de Ciencias Administrativas de Mexicali, la Facultad de Ciencias Administrativas y Sociales de Ensenada; asimismo, se consideró importante la participación de los Colegios que agrupan a los Contadores Públicos en las tres ciudades anteriores y con el Centro de Capacitación de Estudios Fiscales y Finanzas Públicas del Gobierno de Baja California.

Segundo: La población de estudio se conformó por las micro, pequeñas y medianas empresas, establecidas en el Estado de Baja California seleccionándolas mediante muestreo probabilístico estratificado, para que la muestra este integrada por los diferentes sectores y estratos. Se trabajó a un nivel de confianza de 95%: (Hernández et al, 2010) Los pasos que se siguieron en este proyecto son:

- a) Lectura y análisis de la información que se generó en relación a este tema, emitida tanto por el Gobierno Federal a través de sus diversas instancias en el ámbito fiscal como por los analistas particulares de temas fiscales;
- b) Se identificó la base de datos de las micro, pequeñas y medianas empresas localizadas en Mexicali, Tijuana y Ensenada; determinando como la más confiable y completa el padrón del Sistema Empresarial Mexicano (SIEM) 2011, para seleccionar la muestra de empresas.
- d) Se diseñó y aplicó un cuestionario a la muestra seleccionada, para obtener información sobre el cumplimiento de las obligaciones tributarias y los efectos que este les originó;
- e) Se capturó la información obtenida en el programa estadístico SPSS;
- f) Con los datos obtenidos, se generó una lista de resultados estadísticos con apoyo de medios electrónicos;
- g) Se emitieron los resultados obtenidos, así como las conclusiones derivadas del análisis en cuestión.

RESULTADOS

Como parte de la metodología seguida para determinar el efecto que el sistema tributario, tiene sobre las micro, pequeñas y medianas empresas mexicanas; se aplicaron 88 encuestas de empresas ubicadas en Mexicali, Baja California, de las cuales se obtuvo la siguiente información:

Características Generales De Las Empresas Encuestadas:

En cuanto al sector al que pertenecen las 88 empresas encuestadas:

52 (59%) pertenecen al sector comercio,
12 (14%) al sector industrial y,
24 (27%) al sector servicios.

41(47%) están constituidas como personas morales y de estas:

37 (90%) son del régimen general y,
4 (10%) del simplificado.

47 (53%) son personas físicas, estando:

24 (51%) en el régimen general,
10 (21%) en el intermedio y,
13 (28%) en el pequeño.

En cuanto a la antigüedad de las empresas:

20 % de hasta 5 años,
30% de 5 a 10 años,
23 % de 10 a 15 años,
7% de 15 a 20 años y,
20% de 20 años en adelante.

En cuanto a la escolaridad del administrador o gerente general, se tiene que:

51 (59%) son profesionistas,
5 (1%) tienen estudios de posgrado,
22 (25%) cuentan con estudios de preparatoria o escuela técnica,
8 (9%) de secundaria y,
solo 1 (1%) de primaria.

De acuerdo al promedio de personal con el que cuentan las empresas al 2010,

50 (57%) con hasta 10 empleados,
21 (24%) de 11 a 50 empleados,
6 (7%) de 51 a 250 y,
10 (11%) contaban con más de 250 empleados.

B. Aspectos Financieros, Operacionales Y Administrativos De Las Empresas Encuestadas.

Al 2010, manifiestan ingresos anuales en los siguientes rangos:

45 (51%) ingresos anuales de hasta \$ 4.0 millones,
33 (38%) señalan de \$ 4.01 a \$ 100.0 millones, y,
10 (11%) en el rango de \$100.01 a \$ 250.0 millones.

Las actividades mercantiles las realizan en el mercado:

El 87% en el mercado local,
10% en el mercado nacional y,
3% realizan actividades de exportación.

De las empresas que realizan operaciones de exportación,

El 82% a Estados Unidos y,
18% al continente Asiático.

En cuanto a su crecimiento, manifestaron que en relación a los 3 años anteriores al 2010:

19 (22%) se encuentran iguales,
20 (23%) manifiestan que empeoraron y,
48 (55%) que mejoraron.

Relacionada con la pregunta anterior, se les cuestiono acerca del factor que consideran más importante en su crecimiento o decrecimiento, contestando que:

32 (36%) manifiestan que el factor más importante fue la crisis económica,
20 (23%) señalan la diversificación de productos y mercado,
13 (15%) tienen a la competencia como más importante,
9 (10%) se refieren a la situación financiera de la empresa,
7 (8%) a aspectos tecnológicos,
4 (5%) a situaciones laborales y familiares,
2 (2%) a cambios fiscales.

Al cuestionar acerca de los factores que consideran afectarán a su empresa a mediano plazo, responden que:

45% la competencia,
18% cambios en el sistema fiscal
17% Carencia de recursos financieros
15% desarrollo tecnológico y,
5% escasez de mercancías.

En cuanto a cómo perciben la situación económica de su empresa a mediano plazo:

50 (57%) piensan que mejorará,
34 (39%) creen que se mantendrá igual y,
4 (5%) que disminuirá.

La información contable es generada por:

44 (50%) departamento de contabilidad,
37 (42%) despacho contable externo y,
7 (8%) manifiestan no tener obligación de generar información contable.

b. Resultados obtenidos de las preguntas relacionadas con la situación tributaria de los contribuyentes encuestados:

Las contribuciones estatales a que están sujetos son, en 53 casos al impuesto sobre nómina, 4 a actividades mercantiles y 4 solo a tenencia vehicular.

Las contribuciones municipales a que están sujetos son:

53 (98%) al predial y,
1 (2%) a adquisición de inmuebles.

Sobre si les afecta o no la restricción bancaria de los depósitos en dólares:

38 (43%) opinan que si afecta a la operación de su empresa y,

50 (57%) manifestaron que no les afecta.

De los 38 que manifestaron que si les afecta a sus operaciones la restricción de los depósitos en dólares manifiestan que el efecto que tienen es:

14 (37%) casos inseguridad al tener que conservarlos en efectivo,
12 (32%) les generan altos costos administrativos por traslado de efectivo al extranjero y,
12 (32%) que les genera una disminución en los ingresos por no aceptar dólares.

Referidos a cual consideran que es la contribución más onerosa en los últimos 3 años, manifiestan que:

47% el pago del ISR
24% el pago del IETU
15% el IMSS e INFONAVIT,
5% el IVA y,
9% Otros.

Con respecto a la pregunta acerca de cómo les afecto en los últimos 3 años (a, los cambios en las tecnologías de la información del sistema tributario manifiestan que:

28 (32%) casos tuvieron una carga administrativa adicional al mismo personal,
19 (21%) requirieron de mayor inversión en equipo de cómputo,
17 (19%) les genero un aumento en el pago de honorarios,
16 (18%) tuvieron que capacitar al personal con el que ya contaban.
5 (6%) tuvieron que contratar más personal para su cumplimiento y,
3 (4%) manifiestan diversas causas.

En cuanto a la pregunta de cómo les impacto los cambios ocurridos en los tres últimos años en el sistema tributario, manifiestan:

41 (46%) les genero incertidumbre acerca del correcto cumplimiento de las obligaciones tributarias,
15 (17%) consideran que no tuvieron ninguna afectación,
12 (14%) les genero estrés laboral,
11 (13%) señalan molestias por problemas en los sitios en la web de las autoridades gubernamentales y,
9 (10%) manifiestan impotencia por cambios constantes en la normatividad fiscal
Referente a la pregunta del grado de afectación de los costos en sus resultados, derivado de la carga fiscal, manifiestan:

44 (50%) que es mucha la afectación,
42 (48%) manifiestan que es poca la afectación y,
2 (2%) que es nula dicha afectación.

Por la pregunta de si ha utilizado estrategias fiscales para atenuar los cambios en el sistema tributario:

55 (63%) señalan que no utilizan estrategias y,
33 (37%) manifiestan que si las utilizan.

En relación con la competitividad de la empresa y si el sistema fiscal vigente se la ha restado:

51 (58%) dicen no sentir afectación en su competitividad y,
37 (42%) señalan que si les ha afectado.

En el caso de los 37 que señalan que si les ha afectado, dicen que las causas son:

15 (41%) de ellos por la gran diversidad de leyes fiscales a cumplir,

9 (24%) dicen que por la complejidad de la normatividad vigente,
7 (19%) por los constantes cambios en la normatividad y,
6 (16%) por los costos adicionales.

Al cuestionarles acerca de la aplicación a algún estímulo o beneficio fiscal en los últimos años, responden que:

67 (76%) no han aplicado y,
21 (24%) que si han aplicado.

Por los 21 que si han aplicado estímulos y/o beneficios fiscales, señalan que:

3 (14%) fueron por decreto o estímulo a las maquiladoras,
6 (28%) que por créditos revolventes, acreditamiento, crédito diesel y;
6 (28%) fue por convenios, beneficio de reducción en pago estatal, proyecto de inversión, deducción inmediata, compra de activo fijo, remanente de pérdida fiscal, reembolso de impuestos sobre nómina, apoyos por el régimen, descuento en los impuestos por la contingencia del terremoto o por tenencias.
6 no contestaron.

En relación con los gastos y/o cargas administrativas adicionales, han sido originadas en:

30 (35%) casos por declaraciones informativas,
27 (32%) por facturación electrónica,
18 (21%) por dictámenes fiscales, y,
9 (11%) por atención de requerimientos fiscales.
4 (1%) por causas diversas.

Al preguntarles su opinión acerca de la estrategia que tiene que seguir el gobierno federal para financiar el gasto público del 2012, responden que:

55 (64%) que se debe reducir el gasto público,
26 (30%) se debe abatir la evasión fiscal y,
5 (6%) dan diversas propuestas.

CONCLUSIONES

Considerando que el objetivo de la presente investigación, en su primera fase, es identificar los efectos integrales que el sistema tributario origina en las micros, pequeñas y medianas empresas establecidas en Mexicali, Baja California, se concluye que:Primera: La mayoría de las empresas expresaron que como consecuencia de la utilización de las tecnologías de la información y en especial el uso del internet para el cumplimiento de sus obligaciones tributarias, les han ocasionado cargas financieras y administrativas adicionales, las cuales les afecta en su patrimonio y en sus resultados, lo que incrementa el efecto negativo de la carga fiscal. Esto queda evidenciado en el informe tributario y de gestión 2011 correspondiente al cuarto trimestre, publicado por el SAT donde indica que el 78 por ciento del total de operaciones realizadas por los contribuyentes, fue a través de internet y en caso de contribuyentes personas morales represento el 97 por ciento.

Segunda: Con respecto a los cambios ocurridos en los tres últimos años en el sistema tributario, un número significativo de contribuyentes expresaron que los mismos les generaron incertidumbre en cuanto al correcto cumplimiento, y además provoco otros efectos negativos en las empresas.Tercera: Un porcentaje relevante de los contribuyentes manifestaron que los resultados financieros en sus empresas se vieron afectados negativamente en diverso grado, por el pago de contribuciones. Esto se contrasta con el informe tributario y de gestión 2011, el cual indica que la recaudación proveniente del ISR-IETU-IDE se incremento en más del once por ciento en el 2001 respecto al año anterior.Cuarta: En cuanto a las

recomendaciones que expresaron los contribuyentes con respecto a la generación y manejo de los ingresos tributarios por parte del gobierno, la mayoría opino que se debe disminuir el gasto público, e incrementar las acciones de fiscalización para abatir la evasión y elusión fiscal.

En el informe tributario y de gestión 2011 el SAT indico que para diciembre de 2011 se alcanzo un total treinta y siete millones de contribuyentes activos, de los cuales tres y medio millones representa el incremento del 2011 con respecto al 2010; por lo que respecta a las labores de fiscalización de las autoridades estas mejoraron la efectividad de las auditorias, generando más de cien mil millones de pesos y de ese monto cerca del sesenta por ciento se origino por revisiones efectuadas a los grandes contribuyentes. Las autoridades fiscales en materia de juicios planteados por los contribuyentes, han obtenido sentencias favorables en cincuenta y cuatro por ciento de los casos, lo cual evidencia la mejora en la emisión de resoluciones por diferencias a cargo de los contribuyentes.

LA HIBRIDACIÓN DEL SPL: CASO EMBOTELLADORA EN BARRANQUILLA.

Erick Eduardo Orozco Acosta, Universidad Simón Bolívar

RESUMEN

La administración de las industrias manufactureras y de servicios, en los últimos años, ha adaptado los principios teóricos de la Distribución y el diseño de planta. En esta parte de la administración de operaciones, se encuentra la Planeación sistemática de Layout (SLP), que es una herramienta, que al adaptarse a las condiciones de la compañía donde se aplique, puede cambiar conservando su base conceptual. Esto, es conocido como la Hibridación de Herramientas de Toma de Decisiones. Es por esto, que cuando se asocia el SLP con simulaciones, análisis de decisiones, políticas corporativas, restricciones de mercado, variaciones de Truput, rendimiento por producto y variación en las utilidades, se convierte en un procedimiento dentro de las compañías para gerenciar eficientemente con tiempos de reacción rápidos. Lo anterior, se traduce en aumento del nivel de servicio y la optimización del proceso productivo para la empresa objetivo.

PALABRAS CLAVES: Truput, Distribución de Planta, Simulación de costos, Análisis de Decisiones.

HYBRIDIZATION OF THE SPL: CASE BOTTLING IN BARRANQUILLA

ABSTRACT

The management of manufacturing and service industries in last years has adapted the theory principles of the Distribution and plant design. In this part of operations management, is the systematic layout planning (SLP), a tool, to adapt to the conditions of the company where applicable, may change without losing its conceptual base. This is known as the hybridization of Decision Making Tools. That is why; when the SLP is associated with simulations, decision analysis, corporate policies, market restrictions, changes in throughput, performance by product and variation in profits, it becomes a process within companies to efficiently manage fast reaction times. This translates into increase fill rate and optimized production process for the target company.

INTRODUCCIÓN

En la actualidad, existe una tendencia muy marcada de las empresas manufactureras, que buscan configurar todo su proceso productivo de tal forma que se disminuya el desperdicio y que el producto terminado fluya en el instante al siguiente eslabón de la Cadena de Suministro. Esto, conlleva hacia un sistema de manufactura flexible usando la práctica del JIT (Just in Time; Justo a Tiempo) (Shingo & Dillon, 1989) (lo que en el hemisferio occidental se ha convertido en una práctica inalcanzable), de los nativos de oriente. En ese proceso de optimización continua del sistema productivo, es el escenario donde se divisa el alcance que posee la Gestión de las operaciones, ya que, los modelos y las teorías inmersos esta rama de la ingeniería, que fue desarrollada en la agonía de la Segunda Guerra Mundial (Hillier & Lieberman, 2006), dan un alto nivel de confiabilidad informativa lo que está pasando dentro de una proceso productivo.

Figura 1: Esquema del S.L.P. Tomado de: DIEGO-MÁS, J. A. Optimización de la distribución en planta de instalaciones industriales mediante algoritmos genéticos. Valencia , Comunidad Valenciana, España: Universidad Politecnica de Valencia

REVISION DE LITERATURA

Al ver un sistema de productivo unos puntos de gran cuidado como los son: la incertidumbre de la demanda y la oferta, que según Bernanke y Frank (2007), la genera una tendencia espontánea del mercado, tanto que se hace casi que imposible poder predecirla. Y, el perfecto balance entre aprovisionamiento-producción-almacenaje. Lo primero, no es independiente de lo segundo, porque las pautas de las 5W + 1H (Media Awareness Network, 2010) las pone el mercado y si las salidas de proceso son demasiadas crean un impacto en el comportamiento del consumidor. De ahí, su interdependencia.

Las naciones industrializadas han gastado mucho dinero en investigaciones que den como respuesta unos modelos integrales de planificación de labores como abastecimiento, producción y almacenamiento (Ballou, 2004), pero la lista de los que realmente han satisfecho estas necesidades es muy corta. Y se vuelve más pequeña, cuando ninguno de estos modelos ha podido predecir el comportamiento de la demanda con el fin de ajustar el proceso productivo a inventario cero. De llegarse a lograr esto, se llegaría a incrementar el margen de contribución operacional por producto y por ende se llegaría a tener una herramienta, que a la hora de ponerle cifras concretas en la ecuación de Competitividad, este índice crecería enormemente.

Siguiendo con el componente logístico, el almacenaje es un paso obligado en cualquier proceso productivo ya que, de este dependen aspectos tales como: tiempo de ciclo, nivel de servicio, punto de reorden, stock de seguridad, tamaño del lote, disciplinas de entradas y salidas, niveles de existencias, entre otros, que el final son determinantes en la satisfacción de la demanda.

De igual manera, los modelos de inventarios han sido muy influyentes en los modelos de planeación de la producción, porque existen modelos con demanda conocida y otras con demanda incierta (Nahmias, 2007). La pregunta es siendo el mundo real tan complejo ¿existirán demandas conocidas? O ¿Por qué estudiar los modelos de inventario con demanda conocida? Si lo que realmente se percibe son fenómenos microeconómicos con tendencias inciertas y poco medibles. En esta parte de la variación de la demanda es donde todos los modelos han perdido puntos en el nivel de confiabilidad o en su defecto han tenido que recibir información de un humano para poder acercarse a lo óptimo (Gaither & Frazier, 2000).

Por otro lado, si se observa el sistema productivo desde otra perspectiva, la pregunta que se están haciendo ahora las industrias es ¿Cómo se organiza el espacio físico para ser más productivo? Todos estos componentes de un sistema productivo tienen que estar dentro de un espacio geográfico. Este espacio geográfico, según Chase, Jacobs y Aquilano (2006), tiene que estar dispuesto de tal forma que las actividades interrelacionadas que se lleven a cabo en el sistema, sean óptimas, con el fin de que no afecten la productividad de la empresa. Es aquí, donde surge un término que inicialmente fue asociado a la disposición del espacio en las cubiertas de los portaaviones de la guerra del la mitad del siglo pasado, Layout.

A éste término, con el tiempo, fueron dándole la forma hasta convertirlo en lo que hoy se conoce como el diseño y la distribución de planta, cuyo principal aporte fue de Richard Muther con el Systematic Layout Planning (SLP)

Partiendo que el paradigma reinante es la globalización, donde según Societas (2008) las fronteras son cosa del pasado y donde libre flujo de capital, tecnología y información son el día a día de las industrias, es vital que éstas tengan una estructura interna operativa y física que las haga lo suficientemente flexible ante la demanda incierta de la actualidad, rentable y sostenible en el tiempo, todo esto encaminado a satisfacer a un mercado cada vez más dinámico.

Lo anterior es la causa para que sea común observar empresas compitiendo por precios, gamas de productos, tiempos de entregas, etc. todas estas variables se han convertido en indicadores de gestión de las empresas hasta llegar a que la mayoría trabaja en función de las mismas. Por esto, es que las industrias empiezan a buscar estrategias con el fin de hacer que las utilidades aumenten. Esto, no es más que aumentar la productividad dentro de una industria. Esto incluye revisar muy detenidamente el proceso de transformación de una materias primas, en donde entran a trabajar maquinas y hombres de una forma entrelazada, la disposición correcta de los recursos y maquinas, la estandarización de los procesos y demás aspectos internos del lugar de transformación (en este caso una línea de producción) asociados con la productividad que conllevan a que el aumento de la misma sea el norte de las empresas de la región y el mundo (Nebel, 1996).

Cuando la industria evalúa la parte interna del proceso productivo y del lugar donde se lleva a cabo el mismo, es donde ésta, cae en cuenta que la materia prima que adquiere de los proveedores no la emplea a un 100%, las horas-hombre no las usa de una manera correcta, los despachos de la producción son lentos, los inventarios son un caos, problemas de movilidad en planta, los tiempos entre una operación y otra son largos, el camino que tiene que recorrer un trabajador entre un lugar y otro es largo, los constantes accidentes laborales, las maquinas a la espera de material para procesar, los cuellos de botella, etc. son variables que llevan a unas erogaciones operativas adicionales que van en detrimento del patrimonio y de las utilidades. (Muñoz Cabanillas, 2004)

Para el caso de estudio, se nota que dentro de programa de producción de una línea de embotellado de bebidas (en su mayoría son carbonatadas) en la Ciudad de barranquilla, cuando se cambia entre un producto y otro, se pierden muchas horas y también se ve alterado el flujo de productos, lo que retrasa el proceso productivo dejando al descubierto cuellos de botella en lugares vitales dentro proceso. Esto lleva al empresario a cuestionarse ¿En qué agrega valor al producto estas pérdidas de tiempo y los cuellos de botella en el proceso? También, existe una segregación en los procesos de toma de decisiones en materia conceptual entre la ingeniería de procesos con la dirigencia de embotellado a la hora de tomar las decisiones de mejoramiento de Layout y muchas veces la responsabilidad se delega. Este proceso de decisiones, requiere el uso de herramientas como WinQsb, un potente simulador como Arena Rockwell, QFDesigners y Microsoft Office Excel, que procesan datos de las variables de salida (tiempos, costos, volúmenes de producción, capacidad ociosa, capacidad utilizada, entre otros.) que en conjunto con las experiencias y factores externos percibidos (Constante retroalimentación del Perfil de amenazas y oportunidades del medio y el perfil de capacidades internas que ambos generan el FODA) son los que fundamentan las directrices a tomar en la planta.

Solo por dar algunos datos, la distribución de planta es ampliamente reconocida por tener un gran impacto en los costos globales, la eficiencia y el funcionamiento de una instalación. Se dice que el 50% de los gastos totales de funcionamiento puede reducirse si se ha diseñado el Layout de la instalación de adecuadamente. (Ramakrishnan & Srihari, 2008)

En los Estados Unidos las instalaciones de fabricación se están esforzando por mejorar su distribución de la planta, lo que contribuye a por lo menos una reducción del 30% en costos netamente operacionales. (Aleisa, 2005)

Por las razones expuestas, es necesario la Aplicación de una metodología de distribución de planta, que inicie su proceso haciendo una relación entre dos aristas tales como: la voz del cliente (¿Que quiere el cliente?) y características técnicas actuales del proceso (Quality Function Deployment; Despliegue de la Función Calidad) (Revelle, Moran, & Cox, 1998). Seguidamente, aplicar los conceptos del S. L. P, pero en la etapa de selección y evaluación de las alternativas se debe tener como base los resultados que proporcionan los arboles de decisión, indicadores financieros con el fin de observar en el futuro el ROI (Retorno de la Inversión), las proyecciones de producción y la simulación de las alternativas. Aplicado de esta manera, el SLP (ver Figura 1) deber ser la principal herramienta de competitividad en el mundo de la industria de la presente época globalizada, ya que, esta es una de los medios para optimizar instalaciones y trae consigo reducciones de gastos generan una variación positiva en la utilidad de los estados financieros de la empresa, lo cual aumenta la productividad y la rentabilidad de la misma, siendo fiel al objetivo básico financiero, que según García (1999) es la base epistemológica de los negocios.

METODOLOGIA

El Tipo de Investigación a desarrollar en la presente propuesta es Explicativo–Descriptivo y Aplicado–Empírico, enmarcado en un paradigma Cuantitativo. Esto debido a que la propuesta busca encontrar las razones de mejora o no en los indicadores de productividad, a través de la optimización de los recursos buscados por la distribución en planta, y la consecución del pensamiento estratégico; por lo que obliga a realizar un diagnóstico de la situación actual del comportamiento de la línea de embotellado.

Luego se realizó una comparación con el Layout anterior, que permitió identificar y evaluar el modelo existente para así validar su implementación. Esta validación, se realizó a través de un método cuantitativo basado en el Systematic Layout Planning (SLP) y verificado finalmente por un panel de expertos.

Por otro lado, las Fuentes Primarias que se usaron en la elaboración de esta investigación se utilizaron la observación directa, aplicación de Listas de verificación, toma de datos en campo, y panel de expertos con profesionales que han trabajado en empresas diversas del sector industrial de la ciudad de Barranquilla. Y, las Fuentes Secundarias, se utilizaron consulta de libros, tesis, textos, Internet, base de datos, entre otros que ayuden a establecer las características del sistema de gestión a proponer. El tipo de información que suministran estas fuentes es de fácil acceso, por lo cual consultarlas resulta muy conveniente a la hora de desarrollar el proyecto.

La validación final, sale de un modelo de simulación que fue replicado durante 30 días en la Herramienta Arena Rockwell. El criterio para la toma de este número de replicas se debe a que este sistema al día 18 se estabilizaba y los resultados no presentaban diferencias significativas. Es decir, se convirtió en una curva asintótica. Y el balanceo de Línea, se tomaron unos datos estándares del proceso como el tiempo de ciclo y se balanceo la línea mediante el uso del software Winqsb.

RESULTADOS

Este trabajo, está enmarcado en la diferencia de las cifras que resultó de pasar de un Layout anterior a uno actual ó de Distribución anterior a una actual. Lógicamente, que el argumento para los cambios en la disposición de la maquinaria en la planta se aplicaron los conceptos de S.L.P en conjunto con las herramientas agregadas al inicio (QFD, entre otros) y en la fase de toma de decisiones y evaluación. A partir de esto, los resultados logrados fueron:

Partiendo del supuesto de que el SALBP (Simple Assembly Line Balancing Problem), en uno de sus casos como lo plantea Restrepo, J et al (2008), en donde se caracteriza por disponer de un tiempo de ciclo asignado (o tasa de producción) y desea minimizar el número de estaciones que se requiere para llevar a cabo el proceso. Es muy común que se dé cuando la demanda externa puede ser estimada y un nuevo sistema de montaje vaya a ser instalado. Y a su vez, valida un modelo matemático general de equilibrio de líneas que se muestra:

$$\begin{aligned}
 \min_{sa} Z &= \sum_{j=1}^{M_{max}} y_j \\
 \sum_{i=1}^N t_i \cdot x_{ij} &\leq C \cdot y_j \quad j = 1, \dots, M_{max} \\
 \sum_{j=1}^{M_{max}} x_{ij} &= 1 \quad i = 1, \dots, N \\
 \sum_{j=1}^{M_{max}} j \cdot x_{ij} &\leq \sum_{j=1}^{M_{max}} j \cdot x_{ij} \quad \forall k < i \\
 y_{j+1} &\leq y_j \quad j = 1, \dots, M_{max} - 1 \\
 x_{ij} &= \{0, 1\} \quad \forall (i, j); \quad y_j = \{0, 1\} \quad \forall j
 \end{aligned}$$

Donde:

x_{ij} : Si la tarea i se hace en la Estación j .

$y_j = 1$: Si existe la Estación j .

t_i : Tiempo de proceso de la tarea i

C : Tiempo de Ciclo

Al contrastar el modelo anterior, con el usado para procesar los datos, existen diferencias en la forma de las decisiones del uso de la Heurística, pero es una muy buena base general de solución de un problema de Balanceo de Línea. Al procesar los datos se encontró diferencia significativa entre el Layout actual y el Layout anterior. Esta diferencia, se deriva en una calificación más favorable en materia de costos, como por ejemplo la carga operacional de la línea, pasó de 7 a 5 operarios titulares (Ver Figura 2). Estos dos operarios pasaron a reforzar labores de calidad y calibración de instrumentos en las máquinas.

Figura 3: Tabla resumen del Balanceo de Línea de Embotellado Actual

Item	Result
Desired Cycle Time in minute	96
Number of Line Stations	5
Number of Required Operators	5
Total Available Time in minute	480
Total Task Time in minute	385,70
Total Idle Time in minute	94,30
Balance Delay (%)	19,65%
Optimal Solution has been obtained by	
Best Bud Search	

La capacidad ociosa de la línea que poseía el modelo anterior de 115 minutos paso a 94 minutos, en la actualidad (es decir se redujo de un 23% en un 19% de capacidad sin uso) como lo expresa la Figura 2.

Figura 4: Gráfica del Balanceo de la Línea

Sin embargo, antes de poner en marcha el nuevo layout, la simulación (ver Figura 4) que validó el modelo que se quería aplicar tenía una variación altamente significativa con el layout anterior en la parte de pasteurizado que estaba usada solo en un 90% y paso a un 96%, esto significa que la máquina que más energía consume aumentó su porcentaje de utilización y mismo ocurrió con la lavadora de botellas con un 3%.

En términos de tiempo, por procesos la simulación (Ver Figura 5) arrojaba que el tiempo de espera más crítico era de 5 horas en la pasteurizadora pero lo real es entre el 80 y 90%, que significa 3,5 y 4 horas en promedio que dura el tiempo de espera en esa operación y en el modelo anterior pasaba de las 5 horas.

Cabe notar que cuando se simula este tipo de sistemas en lenguaje SIMAN se usa la teoría clásica de la generación de los números aleatorios de la simulación Montecarlo. Para esto se debe ir desde la probabilidad de una variable continua (Walpole, 2000) así:

$$P(x_1 < X < x_2) = \int_{x_1}^{x_2} n(x; \mu, \sigma) dx = \frac{1}{\sqrt{2\pi}\sigma} \int_{x_1}^{x_2} e^{-(1/2)[(x-\mu)/\sigma]^2} dx$$

Hasta la funcion inversa de esta que genera una aleatoriedad de numeros que se le asignan a las variables con las cuales se dan las entidades.

Figura 5: Informe de Utilización por Operación

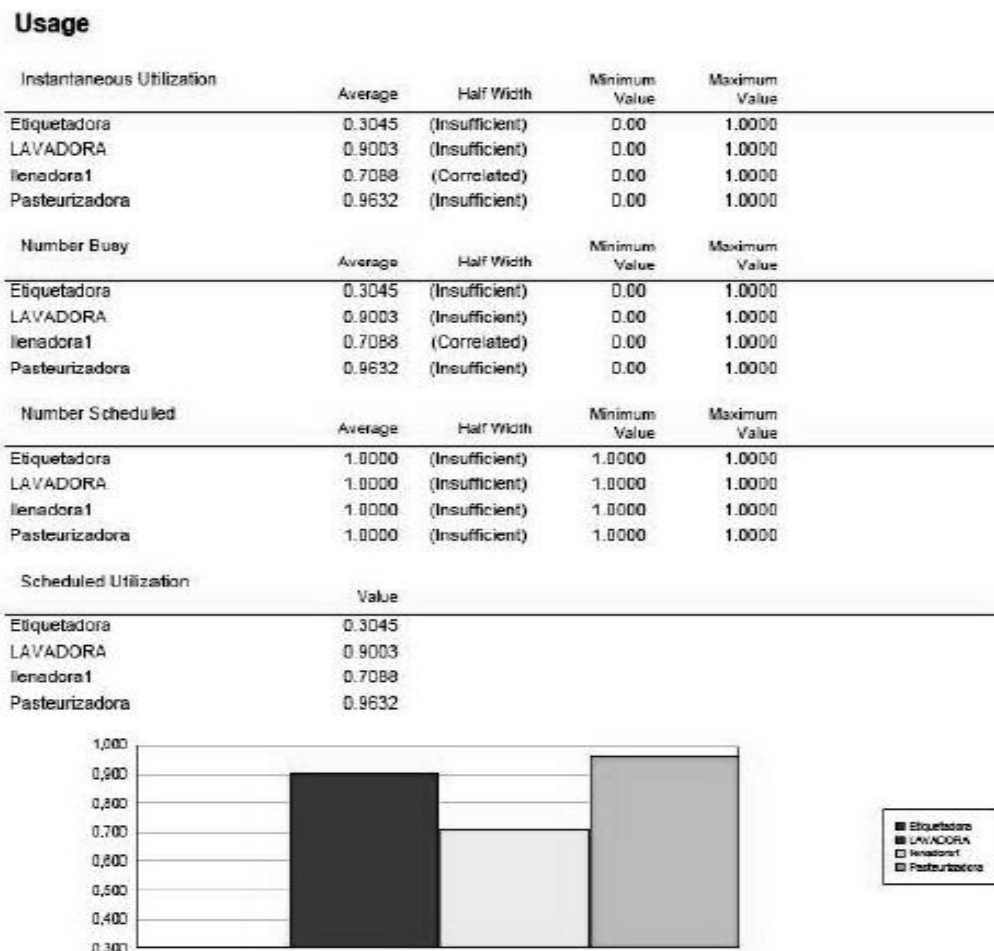

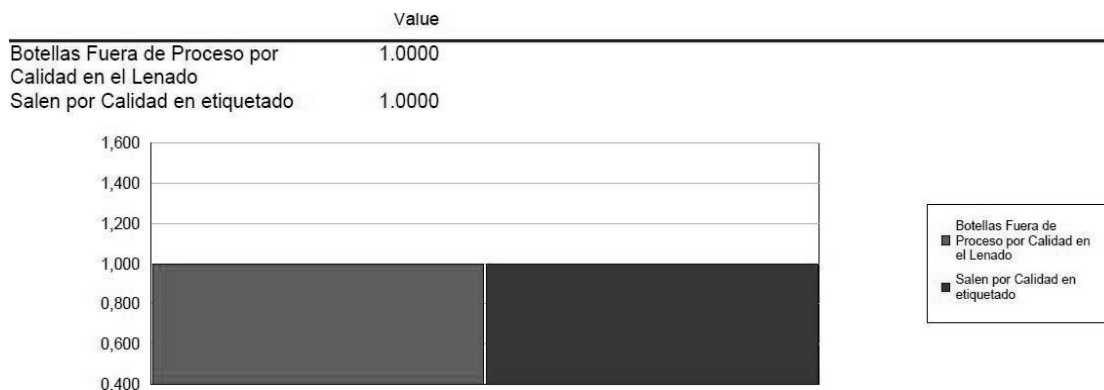

Figura 6: Informe de Tiempos de Espera por procesos

Los desperdicios al interior del proceso se disminuyeron en un 58,1% en vidrio y en un 12,4% en liquido, en comparación el layout anterior. Esto indica que en líquido se desechaban un promedio de 97 litros/turno, pasó a 85 litros/turno y en vidrio se quebraban un promedio de 35 Botellas/turno, cifra que en la actualidad está por debajo 20 botellas/turno.

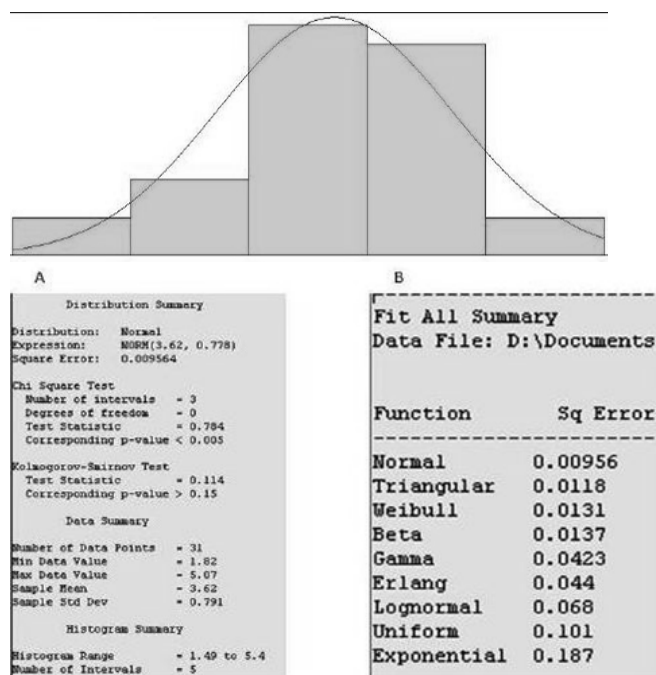

En términos de Capacidad de Proceso se mejoro en un porcentaje mucho mayor al esperado. Es decir, que la proporción de defectos pasó del 0,04% al 0,036%, en cifras concretas por cada lote de 50.000 botellas con una confiabilidad estadística del 95% paso de dar 20 a 16 unidades defectuosas. Esto trajo consigo el numero defectos por millón disminuyera y se diera un avance significativo hacia al seis sigma

Figura 7: Informe de No conformidades

En las no conformidades, la simulación arroja que se desechó 1 unidad del proceso que equivale con los porcentajes a 0,8 unidades, que dividido entre las 235 botellas que entraron en la réplica equivale al 0,034%, que es la proporción defectuosa. Tambien, Arena Rockwell nos proporciona una excelente herramienta denominada “Input Analyzer o Analizador de datos de Entrada” con el fin de probar el supuesto de normalidad (Ver Figura 7) para aplicar la teoría del control estadístico de procesos y seis sigma.

Figura 8: Análisis de datos para uno de los procesos (etiquetado).

Modelo ajustado con error mínimo

La línea quedó distribuida de tal forma que el espacio disponible en ella es aprovechado en un gran porcentaje, esto indica que aumento la capacidad usada y disminuyó la ociosa, conservando la capacidad de hacer cambios y de mantener la temperatura de trabajo adecuada para el personal. Es decir, se pasó de 40°C a 37°C de temperatura de trabajo y se trabaja para que esta cifra baje debido a que se pudo volver en un problema de higiene industrial y siendo fiel a uno de los principios fundamentales de la distribución de planta que es la flexibilidad en la puesta geográfica.

La Línea de producción 2 actual de la planta de embotellado, incremento sus niveles de productividad en un 12%, en lotes de 50.000 botellas por turno. En la toma de decisiones para la instalación del nuevo Layout se observó que se hizo con un comité reunido con una labor, formación e implicación distinta en la empresa. Se cambia el formato de que decisiones de esta envergadura las tomaran el gerente de embotellado, el ingeniero de procesos y el planeador, a formar un comité de operativo-administrativo en donde se encuentra: un representante de la gerencia de Mercadeo y publicidad de la compañía que es la que tiene claro que es lo que el cliente quiere, el ingeniero procesos que su función es optimizar el proceso tomando en cuenta todas las variables y verificando que desde el punto de vista de las operaciones unitarias sea viable la nueva distribución, el planeador que es quien simula los tiempos y se encarga del plan de producción que está directamente relacionado con la planeación agregada de la compañía, el ingeniero de producción que es el encargado de evaluar el impacto del nuevo modelo en las operaciones de la planta, un supervisor de almacenamiento con el fin de verificar como se va a ver alterado el flujo de productos a almacén para que exista espacio disponible y se respete la disciplina de los inventarios, un analista del Departamento Seguridad industrial y salud ocupacional que verifica ¿En qué varía las condiciones de higiene y seguridad de la Línea de embotellado? Y de ahí hacer las modificaciones en el panorama de riesgos de la compañía y reevaluar los subprogramas que hacen parte del PSO (Programa de Salud ocupacional), un operario de experiencia para que evalúe que tanto el impacto en el manejo de las máquinas y el gerente de embotellado que es el encargado de la moderación del grupo de trabajo y que a su vez es asesorado por la gerencia financiera de la compañía entorno a los estados financieros en tiempo real e indicadores como ROI, vitales para la puesta en marcha de proyectos en la compañía. En fin, ahora las decisiones de Layout se toman en una reunión donde ejercen una sinergia entre la mediana dirigencia y la ingeniería de planta con un proceso sistemático, aplicando lo que se conoce como la interdisciplinaria.

CONCLUSIONES

Para tomar decisiones que impacten positivamente en una compañía se deben de implementar unos enlaces entre metodologías que relacionen la parte operativa de la planta con el componente administrativo. Y sobre todo lo anterior, fortalecer el aspecto en que confluyen todos los procesos que es la comunicación y fomentar la interdisciplinaria en los procesos de toma de decisiones a nivel empresarial.

El SLP, es mucho más eficaz cuando: le antecede una actualizada matriz QFD, existe un planeación estratégica en el tiempo que muestre las necesidades de espacio conforme a las proyecciones de crecimiento de la compañía, las restricciones internas como externas, la simulación de las alternativas mediante el uso de simulaciones, la evaluación de las alternativas tomando en cuenta indicadores como la TIR que sale de un flujo de caja y también tener claro el ROI y una puesta en marcha del modelo que vaya acompañada de un trabajo en equipo con el personal operativo y administrativo de la compañía.

Si el Layout actual excede en la ponderación final al anterior es válido considerar que existe una diferencia significativa entre ambos. Esta diferencia se deriva en una calificación más favorable en materia de costos y reducción de operarios (ver Figura 9)

Las demoras que no tienen causa asignable en el Layout , se pueden superar implementando metodologias de reducion de tiempos en manufactura.

En la Hibridación del SLP, es donde mejora la eficiencia como herramienta de toma de decisiones porque, adquiere el rasgo para adaptarse a cualquier proceso manufacturero o de servicios, con el fin de optimizar los recursos existentes que cada vez son mas escasos.

HERRAMIENTA DIGITAL EN APOYO AL SISTEMA DE CALIDAD EN ORGANIZACIONES EDUCATIVAS

Esteban Pérez Flores, Universidad Autónoma de Baja California
Lourdes Leticia Chávez Álvarez, Universidad Autónoma de Baja California
Lorenzo Omar Martínez González, Universidad Autónoma de Baja California

RESUMEN

La aparición y uso creciente de las nuevas tecnologías de la información y las consecuencias que están teniendo en la sociedad y más directamente en el sector educativo, nos lleva a plantear como una cuestión de mejora, la implementación de una herramienta digital en los sistemas de calidad en el área educativa. Los sistemas de gestión de calidad son una serie de actividades que se llevan a cabo para lograr la calidad en los servicios que se ofrecen al usuario. Actualmente la Facultad de Derecho campus Mexicali, tiene implementado un sistema de gestión de calidad, los procedimientos que están definidos en el alcance del sistema, se realizan de manera manual y de la misma forma se genera y se resguarda toda evidencia documental. Es por ello que se plantea la sistematización de los procesos con el apoyo de una herramienta digital que automatiza las actividades definidas en los procedimientos que se llevan a cabo en el área de trabajo y permite de una manera eficiente y confiable la generación y resguardo de información optimizando tiempos.

TOOL DIGITAL QUALITY SUPPORT SYSTEM IN EDUCATIONAL ORGANIZATIONS

ABSTRACT

The emergence and growing use of new information technologies and the impact they are having on society and more directly in the education sector, leads us to consider as a matter of improving the implementation of a digital tool in the quality systems in education. The quality management systems are a series of activities carried out to achieve the quality of services offered to the user. Currently the Law School campus Mexicali, has implemented a quality management system, processes that are defined in the scope of the system, are performed manually and in the same way it generates and protects all documentary evidence. That is why there is the systematization of the processes supported by a digital tool that automates the activities defined in the procedures carried out in the work area and allows for an efficient and reliable generation and receipt of information optimizing time.

MODELO DE POLÍTICAS PÚBLICAS PARA ATENDER EL COMERCIO INFORMAL EN CIUDAD JUÁREZ, CHIHUAHUA, MÉXICO.

Antonio Salas Martínez, Universidad Autonoma De Chihuahua
Jesús Velázquez Valadez, Universidad Autonoma De Chihuahua
Armando Esquinca Moreno, Universidad Autonoma De Chihuahua
Mauro Conde Martínez, Universidad Autonoma De Chihuahua
José Luis Verdugo Hernández, Universidad Autonoma De Chihuahua

RESUMEN

El presente estudio muestra un análisis de las políticas públicas de los tres niveles de gobierno que atienden al comercio informal en Ciudad Juárez, con la finalidad de identificar sus debilidades y fortalezas y sus procesos de implementación. Realizando un análisis de las teorías y conceptos que existen de la informalidad, así como una descripción de fenómeno y su evolución a través de la historia, se trata de lograr una sensibilización del problema en los responsables de administrar las políticas públicas en el ámbito municipal. El análisis de las políticas públicas para atender el comercio informal, se realiza como un método de investigación que mira el qué y el cómo hacer del Estado, centrado básicamente en los resultados. Se trata del análisis de la actividad concreta de las autoridades públicas para atender ésta problemática.

INTRODUCCIÓN

El término informalidad se utiliza para referirse a actividades muy diversas, para algunos autores, la informalidad se refiere a empleados que no reciben los beneficios establecidos en la legislación laboral. Este grupo carece de todo tipo de prestaciones, seguridad social y planes de pensiones por jubilación. Unos más relacionan la informalidad con la evasión fiscal o con el no cumplimiento de las obligaciones regulatorias. Portes (1995), señala que: “El sector informal lleva a cabo actividades con ingresos-ganancias no reguladas por el Estado, en contextos donde actividades similares sí lo están” (p. 181). Otros asocian el término con los auto-empleados o cuentapropistas, que prestan un servicio personal independiente en unidades económicas informales. También se utiliza el concepto para referirse a microempresas, negocios familiares y organizaciones de baja productividad.

En México, el Instituto Nacional de Estadística, Geografía e Informática (INEGI) relaciona el término con lo expuesto en el párrafo anterior, ya que en la Encuesta Nacional de Ocupación y Empleo (ENOE), cuando se hace referencia a la tasa de ocupación en el sector informal se refiere a todas aquellas actividades económicas de mercado que operan a partir de los recursos de los hogares, pero sin constituirse como empresas con una situación independiente de esos hogares. La manera de establecer esto es que la actividad no lleva una contabilidad bajo las convenciones que permiten sea auditada. La informalidad es un término con el que se alude a todo un sector productivo, de gran importancia tanto en las economías desarrolladas como subdesarrolladas, que se caracteriza por no responder a las consideraciones de los mercados formales, por ello la necesidad de encontrar soluciones que permitan impulsar el comercio informal hacia la competitividad.

Actualmente en el Estado de Chihuahua, según los resultados de la ENOE, la tasa de ocupación en el sector informal es de 19.5 por ciento al tercer bimestre de 2010, lo que representa un incremento de dos puntos porcentuales en comparación con el mismo periodo de 2006. En el caso particular de Ciudad Juárez, por su vocación económica orientada a la industria maquiladora, se han sufrido las consecuencias de la crisis económica mundial, ya que debido a la caída de las exportaciones mexicanas, se ha presentado

el cierre y paros técnicos de más del 25 por ciento de las 330 plantas maquiladoras que existen en la ciudad, ocasionando el despido de miles de trabajadores que han recurrido al autoempleo y al trabajo subordinado informal, generándose puestos de trabajo precarios que ocasionan una elevada desigualdad y pobreza, coincidiendo por lo expuesto por Aguilar (2000), que señala que “El mercado laboral mexicano muestra una dinámica con una nítida capacidad de generación de puestos de trabajo precarios, teniendo como consecuencia una tasa de desocupación baja y elevada desigualdad y pobreza. La explicación de esta situación deriva de la existencia de un amplio sector informal en el país, el cual está al margen de las disposiciones legales” (p. 49).

Políticas Públicas Para Atención Al Comercio Informal.

El Plan Nacional de Desarrollo 2007-2012 del Gobierno Federal, en el Eje Rector de Economía Competitiva y Generadora de Empleos, menciona que: “La finalidad de la política económica de la presente Administración será lograr un crecimiento sostenido más acelerado y generar los empleos formales que permitan mejorar la calidad de vida de todos los mexicanos” (p. 83). El PND plantea que se debe llevar a cabo una simplificación administrativa y regulatoria para reducir los costos de transacción a los que se enfrentan las personas para llevar a cabo todas sus actividades, incluyendo avances adicionales en la facilidad de abrir un negocio. Uno de los objetivos que se persiguen en el PND es lograr la simplificación y estabilidad tributaria, ya que la complejidad para cumplir con las obligaciones fiscales coloca al país en seria desventaja con respecto a otras naciones. Asimismo, las modificaciones continuas en las disposiciones fiscales son una fuente importante de incertidumbre. Por tanto, es necesario establecer un régimen tributario competitivo, sencillo y estable.

Sin embargo, la estadística presentada por el INEGI, en la Encuesta Nacional de Ocupación y Empleo señala que al tercer trimestre del 2010 el 28.8 por ciento de la población económicamente activa (13.5 millones de personas) se encuentran en la informalidad. Esto significa un incremento de 1.11 por ciento respecto al mismo periodo del 2007 (520,000 personas), por lo que se considera como un alza considerable en el crecimiento de la informalidad. Por su parte la Organización Internacional del Trabajo (OIT) y la Comisión Económica para América Latina y el Caribe (CEPAL), argumentan en su boletín No. 3 de junio 2010, que: “Un procesamiento detallado de la información de cinco países de la región (Colombia, el Ecuador, México, Panamá y el Perú) indica que el empleo en el sector de las empresas informales ha aumentado del 37,9 por ciento al 38,7 por ciento de la ocupación urbana” (p. 4).

Lo que significa que más de 18 millones 200 mil mexicanos, sobreviven gracias a un empleo informal. En cuanto al gobierno estatal, en el Plan Estatal de Desarrollo 2004-2010 del Estado de Chihuahua, en el capítulo II, “Desarrollo económico y regional”, establece como algunas de sus estrategias el mejorar el entorno regulatorio e institucional, realizar un programa para brindar talleres informativos sobre los regímenes fiscales y de actualización fiscal, apoyar la creación de nuevas empresas comerciales y de servicios mediante la capacitación en planes de creación de empresa, desarrollar procesos de incubación de empresas comerciales y de servicios que coadyuve a contrarrestar las dificultades para registrar nuevas empresas y realizar los demás trámites. En las líneas de acción contempla coadyuvar a la eliminación de sesgos regulatorios y de funcionamiento de las instituciones contra las empresas de menor escala, contribuir a la simplificación de los trámites burocráticos en los diferentes órdenes de gobierno, coadyuvar en la modernización registral. Estas políticas públicas establecidas en el plan estatal de desarrollo refieren la creación de nuevas empresas bajo un marco regulatorio que las convierta en empresas formales, sin embargo, el INEGI señala que en el estado de Chihuahua 267 mil personas económicamente activas realizan sus actividades sin contratos, prestaciones ni el pago de impuestos federales, por lo que se les clasifica dentro del sector denominado informal. La cifra representa un 19.04 por ciento respecto del total de la PEA, que ascendía hasta septiembre de 2008, a un millón 474 mil ciudadanos. Lo anterior indica que la informalidad creció en más de 22 mil 511 personas, ya que al tercer trimestre del 2007 habían en el estado 244 mil y la tasa era del 18 por ciento.

El gobierno de la localidad, en el Plan Municipal de Desarrollo 2007-2010 de Ciudad Juárez, reconoce como uno de sus principales retos que el comercio informal genera pérdidas, de millones de dólares al año, en detrimento de la economía formal, además de ocasionar una mala imagen. El objetivo específico del Desarrollo Económico del PMD es: Fomentar el desarrollo económico sustentable, a través de programas de fomento, en coordinación con la Federación, el Estado y la participación de la iniciativa privada para fortalecer las empresas y desarrollo de nuevos proyectos. La quinta estrategia del Desarrollo Económico del plan se titula Economía Formal y consiste en promover la regularización de los comerciantes que operan en la economía informal, previa capacitación. Sus líneas de acción son:

*Fomentar la incorporación de los vendedores ambulantes al comercio formal para el acceso a apoyos gubernamentales.

*Involucrar al comercio informal en el rescate del Centro Histórico. Lo anterior se percibe como escueto, como una estrategia pobre y sin compromiso para inhibir la informalidad en la ciudad. Es muy poco lo que se menciona en el PMD referente a esta gran problemática que abate al municipio.

RESULTADOS PRELIMINARES

Coordinando un equipo de alumnos de la Facultad de Ciencias Políticas y Sociales de La Universidad Autónoma de Chihuahua y del Instituto de Ingeniería y Tecnología de la Universidad Autónoma de Ciudad Juárez, se llevó a cabo la aplicación de 1,400 encuestas entre comerciantes informales establecidos en diferentes tianguis y mercados de la ciudad, con la intención de conocer situaciones particulares referentes a las políticas públicas que existen en la localidad para atender este sector.

En la figura 1, encontramos que del total de los 1400 encuestados, solo 154 cuentan con licencia municipal, lo que representa un 11 por ciento, 250, que representan el 18 por ciento pagan una cuota mensual en el mercado, mientras que 996, equivalente al 71 por ciento, no cuentan con algún registro. Nadie cuenta con Registro Federal de Contribuyentes ante el Sistema de Administración Tributaria de la Secretaría de Hacienda y Crédito Público, organismo responsable de la recaudación fiscal necesaria para atender el presupuesto de egresos de la federación.

Figura 1: Unidades económicas con registro.

La figura 2 nos muestra los resultados de analizar las principales causas para no estar registrados como comerciantes formales. Los encuestados coincidieron que desconocen el procedimiento, siendo un 46 por ciento los que respondieron en este sentido, 28 por ciento cree que no es necesario contar con registro, inclusive piensa que el pagar una cuota mensual al mercado o tianguis es suficiente para considerarse dentro de la normatividad comercial, 10 por ciento no lo hace por el exceso de trámites necesarios para

registrarse. Solo un 7 por ciento considera que no se registra para no pagar impuestos, en el mismo porcentaje encontramos que no se registran por considerarlo caro.

Figura 2: Principales razones de no contar con registro.

Se considera como un falla en las políticas públicas federales el no promover a través de planes de capacitación el registro formal de este tipo de negocios, ya que se menciona que se trabajará en la simplificación administrativa, en la reducción de costos de transacción a los que se enfrentan los comerciantes y en la evolución de la regularización gubernamental, pero no se habla de algún plan de capacitación para poder llevar a cabo los trámites de registro necesarios. El gobierno del estado si considera en sus políticas públicas impartir talleres informativos sobre los regímenes fiscales existentes, así como la impartición de cursos de actualización fiscal. En el caso del gobierno municipal si se contempla promover la regularización de los comerciantes informales previa capacitación para llevarla a cabo. La figura 3, muestra que sin embargo los comerciantes informales no han recibido visitas por parte del gobierno municipal, estatal o federal para recibir alguna capacitación o algún tipo de apoyo, siendo un 78 por ciento los que se encuentran en esta situación, mientras que un 11 por ciento ha recibido visitas pero para la aplicación de alguna multa, 7 por ciento para que le realicen alguna inspección y el 4 por ciento por el decomiso de mercancías.

Figura 3: Visitas por alguna autoridad al negocio.

Existe incongruencia entre las políticas públicas y su implementación en lo expuesto en los planes de desarrollo del gobierno del estado y del gobierno municipal con la implementación de esas políticas

públicas para promover a través de la capacitación la regularización del comercio informal de la localidad.

CONCLUSIONES

En el análisis que presentamos hasta esta parte de la investigación podemos encontrar que si algunas políticas públicas están bien diseñadas para atender el comercio informal en Ciudad Juárez, se falla en su implementación. Los comerciantes han manifestado que quieren ser parte del desarrollo económico de la localidad con el compromiso de regularizar su situación, y asumen su responsabilidad de no contribuir con el gasto público mientras que otras unidades económicas dedicadas a actividades similares si lo hacen. Sin embargo mencionan que estar en esta situación ha sido el resultado de quedarse sin empleo y lo hacen por subsistencia y no por acumulación de riqueza.

Los organismos gubernamentales, las organizaciones de la sociedad civil (OSC), las cámaras de comercio, las universidades y los comerciantes informales, deben participar en el proceso de toma de decisiones y creación de políticas públicas efectivas para atender al comercio informal, asegurándose de que esas nuevas políticas están basadas en sólidas investigaciones y evidencias. Las OSC, los comerciantes informales y las universidades tendrán mayor capacidad para involucrarse si pudieran generar o acceder, según les corresponda, a investigaciones relevantes que proporcionen la evidencia necesaria para cumplir su función en la creación de políticas públicas enfocadas al sector informal. El trabajo con los políticos debe aportar ideas creativas y constructivas atendiendo el bien público. Se deben considerar dos dimensiones, el equilibrio y la confrontación, para mejorar el impacto de las políticas públicas para atender el comercio informal. Start y Hovland (2004) argumentan que:

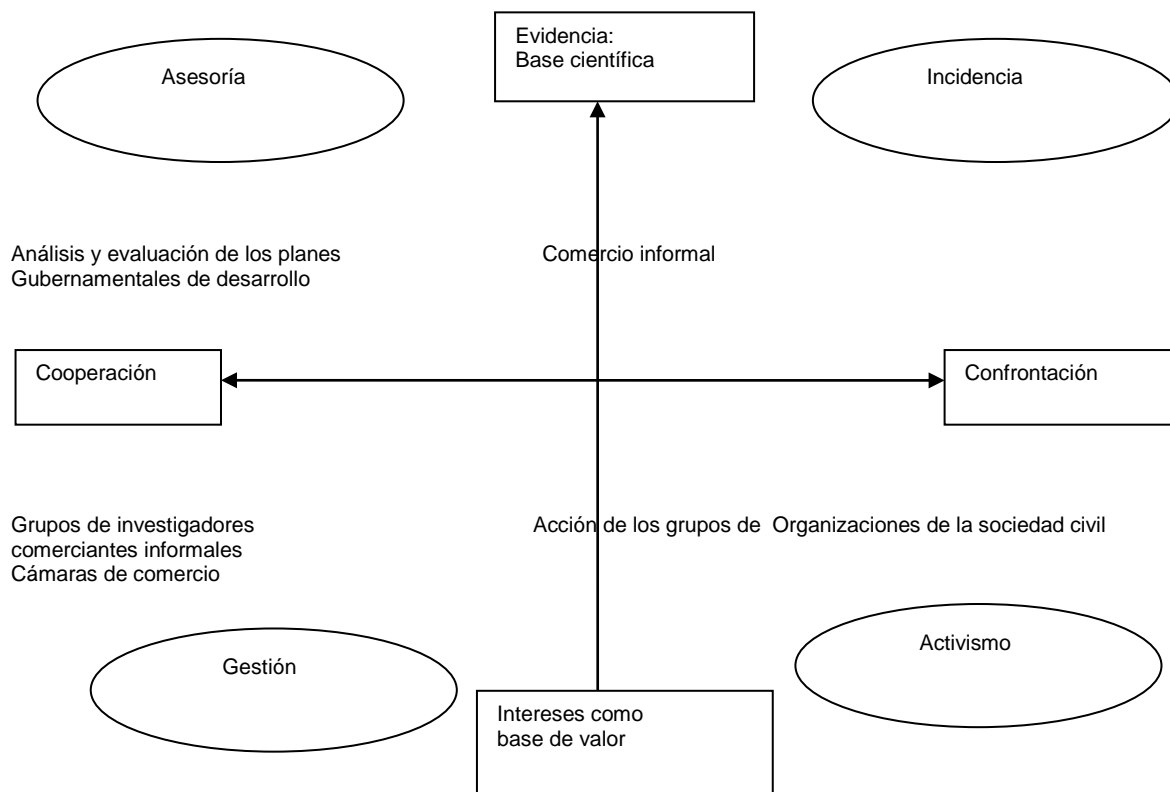

La confrontación es a menudo un método empleado por las estrategias de activismo. Se busca obtener el cambio vía presión y se centra más en denunciar los problemas que en proponer soluciones. Funciona desde afuera de las comunidades de políticas, en vez de hacerse camino desde dentro de ellas. La cooperación apunta a construir relaciones de trabajo positivas con los políticos para poder desarrollar una solución para problemas complejos. Ambos enfoques, confrontación y cooperación, resultan modos efectivos e importantes para generar un cambio en las políticas. (p. 5)

La otra dimensión es cuando se enfrentan la evidencia racional, que es la base científica, contra la discusión basada en intereses. A continuación se muestra un modelo para la creación, implementación y seguimiento de las políticas públicas para atender el comercio informal en Ciudad Juárez. La figura 1 presenta un esquema de cómo se debe integrar la colaboración de los actores involucrados en el proceso de formulación de estas políticas, a través de dos ejes de confrontación. El eje vertical enfrenta la evidencia contra los intereses, el eje horizontal la confrontación y la cooperación. La evidencia que se puede obtener a través de este tipo de trabajos de investigación debe ser la base científica de la formulación de las políticas para atender el comercio informal. Los resultados cuantitativos expuestos en las gráficas y tablas de la sección 3.6.2 deben confrontarse con los argumentos que sostengan las discusiones basadas en intereses como base de valor.

Esos resultados se obtuvieron a través de técnicas estadísticas, y muestran cuales son los principales motivos por los que los comerciantes informales no migran a la formalidad, así como la antigüedad de operación de la unidad económica, el tipo de administración que emplea, si conoce o ha recibido apoyos por parte de algún organismo gubernamental, el tipo de seguridad social con la que cuenta la persona que respondió el cuestionario, su activismo político, sus jornadas laborales y el monto de ingresos que percibe la unidad económica. Esa evidencia debe contrastarse con la postura de considerar que el análisis del comercio informal ocupa un lugar secundario a la hora de negociar con las fuerzas políticas, y esa contrastación debe realizarse por grupos de investigadores pertenecientes a las instituciones de educación

superior y a los colegios de la localidad. La figura muestra que la asesoría en la formulación de políticas públicas para atender el comercio informal, debe realizarse a través del análisis y evaluación de los planes gubernamentales de desarrollo, utilizando la evidencia generada por la investigación científica, y debe tender a la cooperación para construir relaciones de trabajo positivas con los políticos encargados de esas estrategias gubernamentales.

Figura 1: Integración de los actores en el diseño de políticas públicas para atender el comercio informal.

Los grupos de investigadores, las organizaciones de la sociedad civil y las cámaras de comercio deben realizar las estrategias de gestión entre el gobierno y los grupos de comerciantes informales, tendiendo a la cooperación, atrayendo las acciones de éstos integrantes de la economía no regulada. El reto es lograr esa sinergia consistente en generar una estrategia de activismo entre los comerciantes para alejarlos de la confrontación, que solo busca denunciar problemas fuera de la colectividad política en lugar de ser partícipes de ella. De esta forma se trata de contrarrestar la incidencia al comercio informal, a través de la adecuada formulación de estrategias y ejes de acción que atiendan de manera correcta esta problemática. El modelo propuesto debe mejorar los sistemas de comunicación e información para los actores participantes en el comercio informal y los involucrados en las propuestas para el diseño de políticas públicas. Las ideas que emanen en la interacción deben ser presentadas de manera clara, a través de canales que faciliten una adecuada comunicación. Canales como son foros de discusión, mesas de análisis, recepción de propuestas, etc., que deben ser cubiertos objetivamente por los medios informativos de la localidad, para que las propuestas en circulación obtengan una respuesta comprometida de los actores en el tiempo adecuado.

ESTRATEGIAS PARA LOGRAR LA COMPETITIVIDAD Y PRODUCTIVIDAD DE LAS MICRO, PEQUEÑAS Y MEDIANAS EMPRESAS (MIPYMES) EN EL ESTADO DE BAJA CALIFORNIA, MÉXICO

Tomas Cervantes Collado, Universidad Autónoma de Baja California

RESUMEN

La sustentabilidad de la economía de un país recae en más del 90% en las Micro, Pequeñas y Medianas Empresas (MIPYMES), y estas a su vez tienen en términos generales una vida aproximada de 2 a 3 años. La preocupación del estado de Baja California por fortalecer y ampliar tanto la vida de los negocios como su consolidación son algunos de los factores que detonaron la implementación de un programa de apoyo a estas empresas. Tomando conciencia de la importancia de su participación dentro de la comunidad y al mismo tiempo de buscar estrategias de participación activa, la “Universidad Autónoma de Baja California” busco el realizar una estrategia conjunta de participación empresa-gobierno-universidad creando un programa de servicio social denominado “Programa de Investigación, Asistencia y Docencia de la Micro y Pequeña Empresa”(PIADMYPE). El mencionado programa coordinado por la “Universidad Autónoma de Baja California, Facultad de Ciencias Administrativas” logra que los alumnos apliquen sus conocimientos y así obtener que las MIPYMES se consoliden.

PALABRAS CLAVES: Sustentabilidad, Micro, Pequeñas y Medianas Empresas (MIPYMES), Consolidación, Programa de Investigación, Asistencia y Docencia de la Micro y Pequeña Empresa (PIADMYPE), Productividad.

STRATEGIES TO ACHIEVE THE COMPETITIVENESS AND PRODUCTIVITY OF MICRO, SMALL AND MEDIUM-SIZED ENTERPRISES (MSMES) IN THE STATE OF BAJA CALIFORNIA, MEXICO

SUMMARY

The sustainability of a country's economy lies in more than 90% in Micro, Small and Medium-Sized Enterprises (MSMEs), and these have an approximate life of 2 to 3 years in general terms. The concern of the State of Baja California to strengthen and expand the enterprises life as its consolidation are some of the factors that detonated the implementation of a programme of support for these enterprises. Becoming aware of the importance of their participation within the community and at the same time seek active participation strategies, the “Universidad Autonoma de Baja California” seek to carry out a joint strategy of participation enterprise – government - university creating a program of social service called “Research Programme, Assistance and Teaching of the Micro and Small Enterprise” (PIADMYPE for its acronym in Spanish). This programme coordinated by the “Universidad Autonoma de Baja California, Facultad de Ciencias Administrativas” achieves that students apply their knowledge and get for MSMEs to consolidate.

JEL: M10, M21

KEYWORDS: Sustainability, Micro, Small and Medium-Sized Enterprises (MSMEs), Consolidation, Research Programme, Assistance and Teaching of the Micro and small enterprise (PIADMYPE *for its acronym in Spanish*), Productivity.

INTRODUCCIÓN

Para responder al reto de apoyar a las microempresas en el estado de Baja California, se ha diseñado un proyecto vinculante que integra diversas Unidades Académicas de los de la UABC, profesores y estudiantes adscritos a una diversidad de mecanismos curriculares como el servicio social I y II etapa, (SSI y SSII), las prácticas profesionales (PP), y los Proyectos de Vinculación con Valor en Créditos (PVCC), sustentados en la experiencia del PIADMYPE, proyecto que en el periodo 2001-2008 ha atendido 1815 microempresas con el apoyo de 1160 estudiantes. El PIADMYPE como programa universitario se inspira en los preceptos establecidos en el Modelo Educativo de la UABC que busca sembrar en sus estudiantes liderazgo fundado en las competencias académicas y profesionales, actitud emprendedora, creativa e innovadora, valoración del esfuerzo, la pluralidad, la libertad y el respeto entre todos sus miembros. (Asistencia microempresarial en apoyo al empleo en Baja California 2009).

De esta forma, el PIADMYPE ha buscado organizar el servicio social universitario establecido constitucionalmente en México, y otros instrumentos curriculares y de vinculación, para que estudiantes como extensionistas provean apoyo a microempresas de base social como parte de una política social, educativa y de fomento empresarial. Sus objetivos son; proveer servicios e información para el desarrollo de negocios en apoyo a microempresas, formar capital humano en emprendedores. constituirse en un modelo de enseñanza-aprendizaje y formación empresarial para estudiantes y empresarios con baja escolaridad, desarrollar investigación sobre microempresas, potenciar la política e infraestructura públicas en apoyo a este sector. (Asistencia microempresarial en apoyo al empleo en Baja California 2009).

REVISIÓN LITERARIA

Las MIPYMES tienen una importancia estratégica en el modelo de desarrollo empresarial de Baja California. Estas empresas representan el 99% de las unidades productivas, generan el 66.4% de la ocupación y contribuyen con el 39% del valor agregado en el Estado. El espíritu emprendedor local ha encontrado oportunidades para realizar diferentes actividades económicas en las que destacan una nutrida participación de las micro y pequeñas empresas. Si bien estas empresas poseen bajos niveles de valor agregado y productividad, han sido y están siendo muy importantes en términos de absorción de mano de obra que cada vez le cuesta más trabajo a la industria absorber, y sustentan su dinámica en las relaciones de trabajo al interior de la economía que han generado y del impulso que reciben de sus redes sociales, más que de mecanismos formales de apoyo. Por ello, este extenso sector de empresas constituye una oportunidad para la acción de la política pública tanto en materia industrial y social como educativa. (Gobierno del Estado de Baja California, Economía Competitiva 2012).

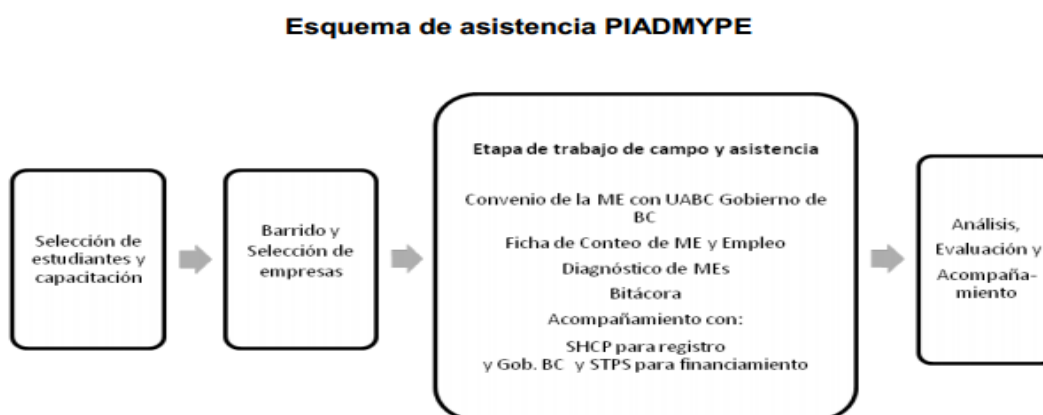

La política de apoyo a las MIPYMES considera el papel de una política industrial regional de promoción económica de estas empresas en torno a nichos de mercado que les permitan obtener más valor agregado para acelerar sus procesos de aprendizaje, inversión y crecimiento. Asimismo, permite que una actitud emprendedora se transforme en empresa; que ésta se transforme a empleos y éstos en bienestar. Del mismo modo, reconoce la necesidad de aprendizajes organizacionales y tecnológicos, y que las instituciones de educación superior juegan un papel central. En este sentido, las estrategias fundamentales para la atención de las MIPYMES son: 1) Desarrollo de emprendedores, 2) Formalización y desarrollo de microempresas y 3) Apoyo a cadenas productivas. En la construcción de una política local para el desarrollo de la MIPYMES, la experiencia de Baja California destaca en la vinculación entre gobierno instituciones de fomento a las pequeñas empresas y sector productivo. Esto permite atender nichos específicos de manera especializada y promover la cooperación empresarial, considerando como

elementos fundamentales de la política de atención a MIPYMES el fomento a la cultura emprendedora, la capacitación y asistencia técnica, el acceso al fi nacimiento y los encadenamientos productivos. Esta política de atención a las MIPYMES genera el fortalecimiento de la economía de Baja California, atiende a los sectores empresariales menos protegidos fomentando su desarrollo y mejora el bienestar social. Además de que provee mejores servicios para el desarrollo de negocios en apoyo a las MIPYMES y mejora el acceso al fi nacimiento tanto público como privado para generar capacidad de reinvertir y promover su crecimiento (Gobierno del Estado de Baja California, Economía Competitiva 2012).

METODOLOGÍA

EL Programa de Investigación, Asistencia y Docencia de la Micro y Pequeña Empresa” (PIADMYPE) consiste en varias etapas como lo es: reclutamiento de estudiantes y capacitación, barrido de campo y selección de microempresas, trabajo de campo y asistencia y análisis, evaluación y acompañamiento. (Figura 1)

Figura 1: Diagrama de Etapas del Programa PIADMYPE

Descripción de las etapas de asistencia PIADMYPE, (Centro de Investigación, Asistencia y Docencia de la Micro y Pequeña Empresa CIADMYPE)

La asistencia a una microempresa consiste en varias visitas en la semana por un espacio de un mes, en las cuales los estudiantes interactúan con el empresario. La asistencia in situ proporciona la oportunidad de transferir conocimientos sobre el manejo de negocios e información. En este proceso se ofrece además de la asistencia, el apoyo y acompañamiento en aspectos regulatorios y la posibilidad de vinculación con los apoyos financieros de programas gubernamentales. La fase de asistencia requiere el uso de un conjunto de instrumentos y herramientas (ver figuras 3,4 y 5 en parte de anexos) para formalizar la relación entre los empresarios y la Universidad, caracterizar el perfil de la empresa, sistematizar la recopilación de datos y generación de informes, y construir los indicadores para evaluar las unidades productivas, y para recopilar la valiosa información del trabajo de campo que los estudiantes están haciendo. (Figura 2)

RESULTADOS

Se espera que el proyecto genere beneficios importantes en los actores involucrados tales como microempresas, extensionistas, Unidades Académicas, y sociedad, además de una atención empresarial integral con cobertura. El esfuerzo del proyecto se orienta a la asistencia, promoción de la formalización y acompañamiento de 11,500 Microempresas, con el fin de reducir su nivel de marginación, mejorar su acceso a apoyos institucionales y mercados más dinámicos; y proveer formación empresarial a 3000 estudiantes que fungirán como extensionistas. El esfuerzo en asistencia y la meta establecida es posible

dado el potencial estimado de atención a empresa, el cual depende del número de estudiantes que es posible incorporar dado en la siguiente tabla (Tabla 1)

Figura 2: Instrumentos de la Asistencia

Instrumentos de la asistencia

Instrumento	Descripción
Convenio	Es un acuerdo firmado entre el Microempresario y la UABC, que destaca la participación del Gobierno del Estado, y formaliza la entrega del servicio, estableciendo los elementos más importantes de la colaboración y la asistencia, los agentes involucrados en el convenio, la participación de la microempresa, y la no responsabilidad legal de la empresa hacia el alumno.
Ficha de Cuento de Microempresas y Empleo	Incluye información preliminar sobre el microempresario y la empresa: datos de identificación y localización, información socioeconómica, datos laborales, y que tiene el objetivo de compilar información básica de las microempresas a las que se les a ofrecido el servicio ya manera de levantar un Censo.
Diagnóstico	Es un cuestionario aplicado por los estudiantes en la primera fase de la asistencia, que incluye datos sobre las operaciones de la empresa (ingresos, costos, acceso a capital, empleados, capital humano, información sobre mercado y comercialización, información técnica e institucional, entre otros datos. Es utilizado como instrumento para apoyar el trabajo de diagnóstico de la microempresa.
Bitácora	Es un registro de las operaciones de la empresa e indicadores empresariales diarios o semanales, como producción, ventas, insumos, costos, salarios, entre otras variables, lo que es utilizado para construir la base de datos para el análisis de la empresa y evaluación de la empresa. Es utilizado por los estudiantes e incluido en la capacitación de los empresarios.
Sistema de Asistencia Microempresarial (SAM®)	Software SAM es software especial con derechos de autor, hecho para manejar datos de la bitácora de manera electrónica y realizar análisis de manera rápida y cómoda. El software presenta los datos de manera organizada y ayuda a obtener reportes y estados financieros, económicos, e indicadores de evaluación económica.

CONCLUSIONES

Podemos concluir que los principales objetivos que se pretenden alcanzar implementado este programa son el proporcionar una asistencia con calidad, lograr transferir el aprendizaje por parte de los alumnos, fomentar la formalización del empleo micro empresarial, reforzamiento de la asistencia mediante acompañamiento, y vinculación con los programas de apoyo, con referencia en los alumnos se pretende lograr un reforzamiento de valores, fortalecimiento de la formación profesional, entrenamiento, estímulo al emprendimiento a través de programas de apoyo, incentivos en créditos académicos y apoyo económico. Por lo que respecta a las Unidades Académicas se busca formación integral de estudiantes en ambientes reales con énfasis la capacitación empresarial y el fortalecimiento de sus programas de emprendedores, así como el fortalecimiento de la vinculación con los sectores sociales y productivos, y con gobierno a partir de la participación activa en la política pública, mejoramiento de los indicadores de calidad con impacto en re-acreditaciones y gestión de recursos así como la atracción de fondos para apoyo y estímulo de docentes y estudiantes. Por ultimo ante la sociedad se pretende lograr el emprendedurismo en los jóvenes universitarios, fortalecer la vinculación entre Gobierno, Sociedad e Instituciones de Educación Superior, apoya el empleo microempresarial atenuando los efectos del desempleo de las grandes empresas, incorporar la empresarialidad en zonas marginadas, elevar el status del autoempleo y constituir un esfuerzo de fomento a la cultura de la legalidad.

SITUACIÓN MACROECONÓMICA D LAS MIPYME EN ESTADO DE MORELOS, MÉXICO

Angel Wilhelm Vázquez G., Universidad Autónoma del Estado de Morelos
José Alberto Hernández Aguilar, Universidad Autónoma del Estado de Morelos

RESUMEN

El presente trabajo se desprende de un proyecto de investigación en proceso, el cual busca identificar las principales estrategias de las micro y pequeñas empresas para lograr su competitividad, la delimitación del estudio es en el estado de Morelos, México. Para identificar tales estrategias, se describe la situación de las micro, pequeñas y medianas empresas a la luz del discurso gubernamental y los programas de apoyo que les ofrecen. Cobra relevancia este primer acercamiento académico ante la falta de disponibilidad de información alrededor de las empresas en Morelos. Lo cual es una muestra de la falta de congruencia para articular su información entre los niveles de gobierno -federal, estatal y municipal- que tendrían que compartirla para consolidar apoyos para lograr su competitividad. Con esta premisa, parte este texto, el cual se dividirá en dos grandes apartados. El primero expone la situación de las micro, pequeñas y medianas empresas en México. Se recopilan los datos de las unidades económicas y personal ocupado en Morelos. La segunda parte distingue cómo se reproduce el apoyo gubernamental para las Mipyme.

PALABRAS CLAVE: Micro y pequeñas empresas, estrategias, competitividad, México.

MACROECONOMIC SITUATION OF MICRO, SMALL AND MEDIUM-SIZED ENTERPRISES IN MORELOS, MÉXICO

ABSTRACT

The present work derives from a research project in progress, which is trying to identify main strategies of micro and small business to reach their competitiveness, the conceptual frame of this study is on the Morelos state, México. To identify such strategies, the situation of the micro, small and medium (MISME) size business is described at the government discours lighth and the support programs that they offerer to them. Takes relevance this first academic approach due the lack and availability of information about business in Morelos. This work shows a lack of concordance to articulate its information between government levels -federal, state and county- that should have to share it to consolidate support to achieve their competitiveness. With this premise, divides this text, which is divided in two large sections. The first one exposes the micro, small and medium size business in México, where data is gathered from economic units and occupied personnel in Morelos. Second part distinguish how is provided government support for MISME

KEYWORDS: Micro and small business, strategies, competitiveness, México.

INTRODUCCIÓN

La presente ponencia forma parte de un proyecto de investigación financiado por el Programa de Mejoramiento al Profesorado (PROMEP) de la Secretaría de Educación Pública (SEP) de México y el cual se encuentra en proceso. Si bien el tema de las pequeñas y medianas empresas (Pyme) durante los últimos años ha tomado un gran auge para lograr el impulso de las economías de los países emergentes donde su papel es protagónico como generador de empleo delineando algunas políticas públicas y programas gubernamentales para incrementar su capacidad de respuesta ante un escenario económico

turbulento e incierto. De la Pyme se ha gastado tinta y papel para escribir sobre ellas, se habla desde la consultoría como impulsarlas y se reitera una y otra vez que las Pyme son un motor económico importante para cada país; sin embargo poco se conocen sus particularidades. Sin duda, para la administración -como disciplina- es menester conocer aspectos que entrañan la práctica administrativa cotidiana, desde cómo se toman las decisiones, qué implica el éxito empresarial hasta distinguir bajo qué condiciones es posible lograr la tan anhelada competitividad. No hay que perder de vista que las prácticas administrativas que utilizan los corporativos transnacionales en muchos casos se convierten en modelos a seguir como patrón a replicar en este tipo de empresas y de pronto al efectuar un contraste existen disparidades.

El análisis académico ayuda a identificar el trazo fino de las estrategias de las Pyme ante escenarios globalizados y altamente fragmentados donde el avance de un modelo económico neoliberal presenta una serie de efectos en su forma de integración y sobrevivencia. En México es relativamente reciente el estudio de este tipo de empresas con esta perspectiva, de ahí la necesidad de reconocer e incorporar en el análisis la micro empresa como el punto central en las discusiones académicas (De la Rosa, 2004 y 2007; De la Rosa et al. 2010). Con esta perspectiva, las Micro, pequeñas y medianas empresas (Mipyme) vistas como un conjunto con cierta homogeneidad pero también con su propia heterogeneidad exigen conceptualizarse desde diversas perspectivas. Debido a la naturaleza de este objeto de estudio se tomó la decisión de centrarse en el comportamiento de las micro y pequeñas empresas en lo particular sin dejar de lado a las medianas como parte de este escenario macroeconómico.

Desde el punto de vista académico, ¿Se conocen todos y cada uno de los aspectos más importantes de las Pyme a nivel estatal? Evidentemente la primera respuesta es no. Identificar sus principales estrategias para lograr su competitividad, la delimitación del estudio es en el estado de Morelos, México es la primera aproximación. Para identificar tales estrategias, se describe la situación de las micro, pequeñas y medianas empresas a la luz del discurso gubernamental y los programas de apoyo que les ofrecen. Cobra relevancia este primer acercamiento académico ante la falta de disponibilidad de información alrededor de las empresas en Morelos. Lo cual es una muestra de la falta de congruencia para articular su información entre los niveles de gobierno -federal, estatal y municipal- que tendrían que compartirla para consolidar apoyos para lograr su competitividad. Con esta premisa, parte este texto, el cual se dividirá en dos grandes apartados: el primero expone la situación de las micro, pequeñas y medianas empresas en México. Se recopilan los datos de las unidades económicas y personal ocupado en Morelos. La segunda parte distingue cómo se reproduce el apoyo gubernamental para las Mipyme.

IMPORTANCIA DE CONOCER LA SITUACIÓN MACROECONÓMICA DE LAS MIPYME

Comprender la Mipyme requiere de estudios que nos permitan conocer las debilidades estructurales que pudieran afectar su supervivencia y su competitividad en un entorno en donde la globalización de los mercados ha producido la aceleración de cambios tecnológicos, sobre todo en los ámbitos de la información y la comunicación. De acuerdo a De la Rosa et al. (2010) la Mipyme enfrenta tres desafíos: el desarrollo tecnológico, la globalización de los mercados y la incertidumbre económica. De acuerdo a De la Rosa (2007) la productividad y competitividad son importantes, lo que realmente hace importante el estudio este sector empresarial es su desconocimiento ya que a pesar de acumular cierto tipo de conocimiento paradójicamente resulta insuficiente. Por otro lado, el estudio de las Mipyme se lleva a cabo siguiendo una metodología común, la cual se sitúa en el contexto de una dimensión intraempresarial desde la perspectiva del empresario, aunque también hace referencia a dimensiones sectorial o macroeconómicas.

Para el gobierno mexicano plasmado en el Diario Oficial de la Federación (DOF, 2009) en el 2009 contribuían a la generación de empleo con el 70 por ciento del trabajo formal, impactando al Producto Interno Bruto con el 52 por ciento, y representando además el 99 por ciento de las unidades económicas del país. lo cual hace que este tipo de organizaciones se hayan convertido en un punto de interés para el

sector gubernamental y por lo tanto también estén en la mira del sector financiero los cuales invierten tiempo y recursos en éstas. Por lo anterior, el tema de Mipymes cada vez es más estudiado por académicos e investigadores que en contacto con el sector financiero identifican en estas empresas fortalezas y debilidades. Los trabajos se enfocan en identificar las variables que permitan desarrollar y comprender mejor la función de estas empresas.

En México, para establecer categorías claras del tipo de empresas (tabla 1) la Federación emitió un acuerdo de catalogación con efectos para el artículo 3, fracción III de la Ley para el Desarrollo de la competitividad de la Micro, pequeña y mediana empresa, en donde el tamaño de la empresa se determina por la obtención de un puntaje generado mediante la suma del número de trabajadores multiplicado por el por 10 por ciento y el Monto de Ventas Anuales multiplicado por el 90 por ciento, cálculo que tiene topes máximos en cada categoría, llamado tope máximo combinado como puede verse en la siguiente tabla:

Tabla 1. Clasificación de las Mipymes en México

Estratificación	Tamaño	Sector	Rango de número de trabajadores	Rango de monto de ventas anuales (mdp)	Tope máximo combinado*
Micro	Todas		Hasta 10	Hasta \$4	4.6
Pequeña	Comercio		Desde 11 hasta 30	Desde \$4.01 hasta \$100	93
	Industria y Servicios		Desde 11 hasta 50	Desde \$4.01 hasta \$100	95
Mediana	Comercio		Desde 31 hasta 100	Desde \$100.01 hasta \$250	235
	Servicios		Desde 51 hasta 100		
	Industria		Desde 51 hasta 250	Desde \$100.01 hasta \$250	250

*Tope Máximo Combinado = (Trabajadores) X 10% + (Ventas Anuales) X 90%. Fuente: Diario Oficial de la Federación. 30/06/2009.

Estos datos son importantes para comprender la configuración de las MIPYMES, sin embargo podemos adentrarnos un poco más y realizar una segmentación más específica según la actividad económica de dichos entes económicos (Tabla 2). La figura 1 corresponde a la segmentación según personal ocupado, ésta nos muestra la situación actual de las Mipyme en México.

TABLA 2. Actividad Económica

	Cantidad	Porcentaje
Total	5144056	100.0
Comercio	2424249	47.1
Servicios privados no financieros*	2056437	40.0
Industrias manufactureras	581044	11.3

Pesca y acuicultura	19454	0.4
Construcción	19020	0.4
Transportes, correos y almacenamiento	18257	0.4
Minería	2957	0.1
Electricidad, Agua y gas	2589	0.1

Fuente: INEGI (2009).* Se incluyen los servicios de información en medios masivos; servicios inmobiliarios y de alquiler; Servicios profesionales, científicos y técnicos; corporativos; apoyo a los negocios y manejo de desechos; servicios educativos; Servicios de salud y asistencia social; Servicios de esparcimiento; Servicios de alojamiento y preparación de alimentos y Otros servicios, excepto gobierno.

Como se puede observar en la figura anterior la naturaleza de las unidades económicas en México es micro empresarial, esto decir que de 5,144,056 unidades económicas, 4,886,853 (95%) pertenecen al sector micro.

Las entidades federativas con mayor población son aquellas que poseen una cantidad mayor de empresas así como de personal ocupado, sin embargo cada una corresponde a diferentes sectores económicos, es decir, que debido a la región, al mercado, a la idiosincrasia de la población, y a la distribución por género se confuira su enfoque productivo. En la figura 2 se muestra el panorama general para el estudio de las

empresas en diversos estados de México, cabe señalar que nuestro caso de estudio es a nivel microeconómico en el estado de Morelos.

Figura. 1. Unidades económicas según estratos de personal ocupado. Fuente: INEGI (2009).

1. LAS MIPYME Y EL ESTADO DE MORELOS, MÉXICO

Considerando un análisis microeconómico, el estado de Morelos posee como otros estados, una naturaleza productiva característica, considerando la información mostrada en la figura anterior, el estado posee el 1.5% del personal ocupado, y del universo de 27,727,406 empleados, 415,912 habitan en esta entidad federativa; y un 2% de las unidades económicas equivalentes hasta el 2009 se establecieron en el estado de Morelos, entre las que se encuentran micro, pequeñas y medianas empresas. En la figura 3 se muestra el número de unidades económicas y el personal ocupado del estado de Morelos.

Algunos indicadores

De acuerdo los Anuarios estadísticos (2010) del estado de Morelos, aproximadamente 4 personas son ocupadas por cada unidad económica, sin embargo, el dato más representativo de la información que nos arrojan dichos anuarios es la segmentación por personal ocupado en el estado (tabla 3).

Para tener un panorama del crecimiento de la economía del estado, se realizó un estudio desde 1998 hasta 2008 con base en los anuarios estadísticos del estado de Morelos y que arrojo datos referentes a la Zona metropolitana de Cuernavaca, Morelos, la cual comprende a 7 municipios, mismos que se muestran en la tabla 4.

Elaboración propia a partir de los Anuarios Estadísticos del estado de Morelos, 1989-2010

En la tabla anterior, se aprecian los antecedentes de la economía de la principal zona metropolitana del estado, lo que nos permite enfocarnos en un sólo un municipio, el de Cuernavaca, esto debido a su representatividad poblacional y el número de unidades económicas.

Figura 4. Unidades censadas y personal ocupado en el municipio de Cuernavaca.

Fuente: Elaboración propia a partir de los Anuarios Estadísticos del estado de Morelos, 1989-2010

Según los Anuarios estadísticos (2010) del estado de Morelos, en primer lugar tenemos a Cuernavaca como uno de los municipios con más unidades económicas, y debido a esto, la mayor cantidad de personal ocupado, podemos observar un crecimiento, específico de las unidades económicas cada cuatro años, sin embargo, existen inconsistencias, esto debido a que los datos representados aquí poseen una fecha del año 2008, aunque el dato se obtuvo del anuario estadístico del año 2010, entonces; de ahí se observa que es importante la generación de información, y la producción de datos que sean relevantes para entender las Mipyme, esto por la necesidad de información para la comprensión de este sector importante y que aporta una buena parte del Producto Interno Bruto (PIB) del país (INEGI, 2009). En la gráficas anteriores podemos ver que el municipio de Cuernavaca ha ido absorbiendo parte de la población vecina como liderando en materia de competitividad.

Por otro lado, de acuerdo a (Dávila, 2011) los estados que más aportan al Producto Interno Bruto de México son: el Distrito Federal (17.3%), Estado de México (9.4%), Nuevo León (7.5%), Jalisco (6.3%), Campeche (5.2%) y Veracruz (4.7%). El estado de Morelos es un estado pequeño y sólo aporta el 1.1% del PIB.

Apoyo Gubernamental para la Mypime

En México existe el Fondo de Apoyo para la Micro, Pequeña y Mediana Empresa (FONDO PYME, 2012), el cual “Es un instrumento que busca apoyar a las empresas en particular a las de menor tamaño y a los emprendedores con el propósito de promover el desarrollo económico nacional, a través del otorgamiento de apoyos de carácter temporal a programas y proyectos que fomenten la creación, desarrollo, consolidación, viabilidad, productividad, competitividad y sustentabilidad de las micro, pequeñas y medianas empresas”.

El portal de este fondo puede ser consultado en <http://www.fondopyme.gob.mx/> en donde se encuentra el Plan Nacional de Desarrollo, el programa sectorial de Economía, las reglas de operación, el manual de procedimientos, la guía rápida y el portal de transparencia, así como navegar en las secciones de emprendedores, microempresas, Pymes, y los programas de empresas gacela y empresas tractoras. Desafortunadamente existe una barrera tecnológica para muchos microempresarios en México pues no se tiene la cultura informática para poder acceder a este fondo utilizando esta plataforma basada en el Internet.

Figura 5. Producto Interno Bruto por entidad federativa en México 2006-2010.

Fuente: (Dávila, 2011) Basado en datos del INEGI 2010.

Reflexiones finales

El presente avance de investigación muestra la falta de congruencia para articular la información entre los niveles de gobierno -federal, estatal y municipal- para consolidar apoyos para lograr la competitividad de las Mipyme. Si bien existen apoyos e incluso un portal para el apoyo de estas empresas, estos son subutilizados debido a trámites burocráticos excesivos y falta de confianza no solo en la tecnología sino en los procedimientos. Si bien el estado de Morelos es un estado pequeño que aporta el 1.1 del PIB de México, se le conoce como la capital del conocimiento, ya que tiene la mayor densidad de investigadores de alto nivel por km² en latinoamérica, lo que eventualmente podría significar una explosión de las mipyme en el estado. Podemos observar hasta ahora que el sector predominante no sólo en Morelos sino en México es el comercial, y que el estrato representativo de las unidades económicas tanto en la nación como en el estado son las microempresas, datos que nos llevan a comprender de alguna manera la importancia, y debido a la gran mitificación que se ha generado a lo largo de los años (De la Rosa, 2000) y su necesidad de estudio, aún sin analizar la información otorgada por el Instituto Morelense para el Financiamiento, podríamos arriesgarnos a decir que el panorama de estrato y de sector productivo es el mismo que ha venido presentándose, micro empresas dedicadas al comercio.

RESUMEN

El objetivo del presente trabajo consistió en aplicar la metodología de flujos de conocimiento, propuesta por el Dr. Oscar Mario Rodríguez Elías, investigador del Instituto Tecnológico de Hermosillo, al proceso de acreditación de los programas educativos del Centro de Estudios Superiores del Estado de Sonora, Unidad Académica Navojoa, en su fase inicial de modelado del proceso; el cual se representó a través de la adaptación de la gráfica rica para la categoría admisión de la variable estudiantes; teniendo como marco de referencia el documento de autoevaluación del Consejo de Acreditación de la Enseñanza de la Contaduría y Administración, A.C. y la experiencia de los responsables de integrar las carpetas de evidencias. Entre los principales resultados obtenidos en el modelado se pueden mencionar los roles identificados que fueron: el de jefe de carrera, el de secretario académico y el de responsable de registro y control escolar de la unidad. En cuanto al producto, este quedó integrado por al menos siete evidencias fundamentales, entre las que se pueden destacar el reglamento escolar, los resultados de centro de evaluación nacional y la secuencia didáctica de inducción al modelo educativo.

PALABRAS CLAVE. Flujos de conocimiento, acreditación de programas educativos, sistemas de administración de conocimiento.

APPLICATION OF THE METHODOLOGY K_oFI (FIRST PHASE), IN THE ACCREDITATION OF EDUCATIONAL PROGRAMS THE CENTRO DE ESTUDIOS SUPERIORES DEL ESTADO DE SONORA

ABSTRACT

The objective of this study was to apply the methodology of knowledge flows, proposed by Dr. Oscar Elías Mario Rodriguez, researcher of the Instituto Tecnológico de Hermosillo, the process of accreditation of educational programs of the Centro de Estudios Superiores del Estado de Sonora, Unidad Académica Navojoa, in the first phase of process modeling, which is represented through the adaptation of the graphic Rica for admission category of students variable, taking as a reference document self-assessment of the Consejo de Acreditación de la Enseñanza de la Contaduría y Administración, A.C. and experience of those responsible for integrating the evidence folders. The main results obtained in modeling were the identification the roles: the head of career, academic secretary and the person responsible for registration and school control of the unit. On the product side, this was composed of at least seven evidence: school rules, the results of national evaluation center and the sequence didactic of educational model.

INTRODUCCIÓN

Para asegurar la calidad de los programas educativos (PE) y rendir cuentas claras a la sociedad, las Instituciones de Educación Superior (IES) en México, han participado desde 1991 en procesos de evaluación diagnóstica a través de los Comités Interinstitucionales para la Evaluación de la Educación Superior (CIEES) y a partir de año 2000 en procesos de acreditación a través del Consejo para la Acreditación de la Educación Superior, A. C. (COPAES), (COPAES, 2012). El Centro de Estudios Superiores del Estado de Sonora (CESUES), no ajeno a esta situación, inicia a mediados del año 2004 sus procesos de evaluación, con la visita del Comité de Ciencias Agropecuarias para la carrera de Licenciado en Acuicultura (LA) y el Comité de Ciencias Sociales y Administrativas para la carrera de Licenciando en Sistemas Computacionales Administrativos (LSCA), alcanzando en ambos programas, un nivel dos. Posteriormente las licenciaturas se someten al proceso de acreditación, logrando su reconocimiento como programas de buena calidad en 2006 y 2007 por la Asociación Nacional de Profesionales del Mar (ANPROMAR) para LA y por el Consejo de Acreditación de la Enseñanza de la Contaduría y Administración, A.C. (CACECA) para LSCA.

Sin embargo tanto en el proceso de evaluación, como en el de acreditación se presentaron diversas dificultades entre las que se pueden destacar la insuficiencia de evidencias para fundamentar los criterios, desubicación de documentos (normatividad, convocatorias, ponencias, oficios), poca claridad sobre el responsable inmediato de generar la información, falta de homogeneización de los formatos utilizados para el registro de actividades y departamentos sin sistemas de información o con limitaciones en sus aplicaciones, entre otros. Para atender lo anterior se diseñó una propuesta de un sistema basado en conocimiento de indicadores académicos, no obstante y como resultado de un proyecto de investigación conjunto entre el CESUES y el Instituto Tecnológico de Hermosillo (ITH) y con base en la problemática presentada, se consideró oportuno fortalecer la propuesta inicial con un sustento en la metodología de Identificación de Flujos de Conocimiento (KoFI) por sus siglas en inglés.

Aún que en la propuesta de la metodología KoFI de Rodríguez (2007) se orienta a la obtención de información que apoye el diseño de sistemas de AC que dan soporte al flujo del conocimiento en el área de mantenimiento de software, su idea es que ésta se generalice a la solución de problemas específicos en áreas diferentes organizaciones, por lo cual el aporte del presente trabajo es aplicarla en su fase inicial en los procesos de acreditación de los programas educativos del CESUES. Finalmente el documento está estructurado de la siguiente manera: en primer lugar la sección de revisión literaria muestra información sobre la AC, el modelo de creación del conocimiento, el del ciclo del conocimiento y proceso de administración del conocimiento. En la sección de metodología se realiza una descripción de la metodología KoFI. En la sección de resultados se encuentra el modelado de procesos con enfoque en flujos de conocimiento de la categoría admisión de la variable estudiantes. En la sección de conclusiones se establecen éstas, las limitaciones del estudio, la contribución al cuerpo de la literatura e idea para investigación futura. En la sección de referencias se enumeran los artículos, libros y documentos utilizados en la presente investigación y en la biografía se describe en forma breve el perfil de cada autor.

REVISIÓN LITERARIA

En la actualidad no existe un consenso sobre el concepto de Administración del Conocimiento (AC) (Serenko & Bontis, 2004). No obstante Dalkir (2005) identifica tres enfoques principales: el primero

considerado a partir las actividades del negocio, el segundo definido a través de la ciencia del conocimiento y el tercero desde las tecnologías y procesos, como un conjunto de actividades y sistemas tecnológicos para facilitar el flujo del conocimiento hacia las personas en el momento que lo requieran.

Partiendo del tercer enfoque la AC puede ser definida como una disciplina sistemática y un conjunto de propuestas que apoyan en el crecimiento y flujo del conocimiento (Rao, 2005). Debido a que esta perspectiva atiende a la aplicación de la metodología KoFI, se entenderá por AC a la disciplina que provee de métodos, técnicas y herramientas encaminadas a apoyar las actividades necesarias para facilitar el flujo del conocimiento hacia donde se requiere, con el fin de realizar de la mejor manera el trabajo para completar procesos específicos en una organización (Rodríguez, 2007).

Por lo anterior y para darle sentido a esta definición será necesario identificar ¿qué es conocimiento?, ¿qué constituye el flujo del conocimiento? y ¿cuáles son las actividades involucradas en el flujo del conocimiento que forman parte del proceso de la administración del conocimiento? Davenport y Prusak (2000) consideran que para entender el concepto de conocimiento es necesario entender que son los datos y la información. Los datos, son definidos como hechos simples que pueden agruparse para crear información, pero que por sí solos carecen de significado y la información por su parte es considerada como un conjunto de datos que tienen un significado y su objetivo es informar a quien los recibe, con el fin de tener un efecto en su juicio o en la forma en que percibe algo.

El conocimiento es concebido como una mezcla de experiencias, valores, información contextual y pericia que provee de un marco para evaluar e incorporar nuevas experiencias e información. Esto se origina y es aplicado en la mente de quienes conocen. En las organizaciones, este se da no sólo en documentos o repositorios, sino también en rutinas, procesos, prácticas o normas de la organización.

No todo el conocimiento puede ser fácilmente representado como información o datos, así como el que existe en forma de documentos o bases de datos, existe otro que se encuentra en la mente de las personas. El primero que puede ser expresado de manera formal, fácilmente comunicado es denominado como conocimiento explícito, mientras que el tácito es aquel conocimiento personal utilizado para realizar las tareas y para obtener un entendimiento del medio ambiente. (Nonaka & Takeuchi, 1995).

Organizacionalmente, la importancia del conocimiento reside en su aplicación (Alavi & Tiwana, 2002), por lo que el principal objetivo de una estrategia o sistema de AC debe enfocarse en facilitar y mejorar el flujo del conocimiento (Borghoff & Pareschi, 1998). Para explicarlo existen varios modelos propuestos y se identifican principalmente tres enfoques: el primero que atiende a la forma en que el conocimiento transita entre sus estados tácito y explícito, conocido como el proceso de creación de conocimiento de Nonaka y Takeuchi (1995); el segundo que considera al conocimiento como un recurso que da la capacidad de utilizar información con un fin práctico como la toma de decisiones, denominado ciclo del conocimiento de Choo (1999) y el tercero que se refiere a las actividades que componen el proceso de AC identificado como proceso de administración del conocimiento del cual existen una amplia variedad de modelos, (Dalkir, 2005; Holsapple & Joshi, 1999; Nissen, 2002; Qureshi et. al., 2004), tabla 1.

Peachey (2005) basado en el modelo de AC Alavi y Leidner (2001), ha identificado que el principal enfoque de la AC está relacionado con los sistemas de información y está dirigido hacia la transferencia de conocimiento en cuanto a: almacenamiento, recuperación, aplicación y la creación de conocimiento.

Tabla 1: Modelos del Proceso Administración del Conocimiento

Modelo	Etapa 1	Etapa 2	Etapa 3	Etapa 4	Etapa 5	Etapa 6	Etapa 7
Wiig, 1993	Construir	Capturar	Transferir	Aplicar			
McElroy, 2000	Producir	Integrar	Difundir	Aplicar			
Alavi y Leidner, 2001	Crear	Almacenar/ Recuperar	Transferir	Aplicar			
Dalkir, 2005	Capturar/ Crear	Valorar	Compartir/ Diseminar	Contextualizar	Adquirir/ Aplicar	Actualizar	
Ward y Aurum, 2004	Crear	Adquirir	Identificar	Adaptar	Organizar	Distribuir	Aplicar
Rodríguez, 2007	Crear/ Adquirir	Externalizar	Almacenar	Transferir/ Compartir	Internalizar Recuperar	Interpretar/ Filtrar	Aplicar

La tabla muestra varias propuestas de modelos para el proceso de AC, en ella se observan las diferencias con respecto a las etapas que proponen cada uno de los autores; también se incluye el modelo de Rodríguez (2007) que es el que se utiliza para el presente trabajo.

METODOLOGÍA

Sin tratar de realizar una descripción muy exhaustiva de la metodología KoFI, propuesta por Rodríguez (2007), que se está aplicando al proceso de acreditación de programas educativos en su primera fase. A continuación se expone KoFI como una guía que ayuda a identificar y entender los flujos de conocimiento en procesos organizacionales, utilizando un enfoque de ingeniería de procesos. KoFI se orienta a la obtención de información que apoye el diseño de sistemas de AC que dan soporte al flujo del conocimiento. Aún que en la propuesta de Rodríguez, su aplicación se enfoca al mantenimiento de software, su idea es que ésta se generalice a la solución de problemas específicos en áreas diferentes.

Fases De La Metodología Kofi

1. Modelado del proceso con enfoque en el flujo del conocimiento. La representación gráfica es una de las principales técnicas para el modelado de procesos. KoFI propone dos enfoques, uno con la adaptación de la técnica de Gráfica Rica (Checkland & Scholes, 1999; Monk & Howard, 1998), para la primera etapa del modelado que identifica los procesos de manera general y el otro mediante una adaptación del Metamodelo para Procesos de Ingeniería de Software (SPEM) por sus siglas en inglés (OMG, 2002), para la segunda etapa de modelado y en el análisis detallado del proceso.
2. Análisis del flujo de conocimiento. Se centra principalmente en los flujos de conocimiento siguiendo un proceso compuesto de cuatro etapas de identificación de: fuentes de conocimiento, tipos de conocimiento, flujos de conocimiento y problemas en el flujo de conocimiento. Para lograr lo anterior se ha definido un metamodelo de fuentes y tipos de conocimiento que sirve de guía al definir relaciones entre los tipos y fuentes de conocimiento así como las actividades de un proceso.
3. Análisis de herramientas de soporte al flujo del conocimiento. La fase final de la metodología consiste en analizar el papel que juegan como habilitadoras del flujo del conocimiento, las herramientas que apoyan los procesos de trabajo, para lo cual se definió un Marco de Trabajo para el Análisis de Herramientas de AC, denominado (MAHAC), a partir de la revisión literaria de varios autores Borghoff y Pareschi (1998) y Alavi y Leidner (2001), por destacar algunos. MAHAC, integra una serie de pasos a seguir para identificar las características de las herramientas a estudiar, desde el punto de vista de su aporte al flujo del conocimiento durante el desarrollo del proceso, estos son: el dominio de aplicación de las herramientas, la estructura y formato del conocimiento manejado, las actividades, servicios o procesos de AC soportados y los aspectos técnicos que podrían ser considerados.

RESULTADOS

La metodología KoFI, propuesta por Ramírez (2007) y descrita en el apartado anterior está siendo aplicada al proceso de acreditación de programas educativos del CESUES, Unidad Académica Navojoa, en su fase inicial correspondiente al modelado de procesos con enfoque en el flujo de conocimiento. Para desarrollar el modelado de procesos, se trabajó con el documento de autoevaluación de CACECA que define los criterios y porcentajes mínimos para que los PE puedan acreditar y con las personas involucradas en fundamentar los criterios e integrar las evidencias correspondientes en las carpetas. El documento se organiza en ocho variables, 25 categorías y 138 criterios según se muestra en la tabla 2.

Tabla 2: Variables del Documento de Autoevaluación de CACECA

Variables	Núm. de Categorías por Variable	Núm. de Criterios por Variable
1. Profesores	5	24
2. Estudiantes	5	27
3. Programa de Licenciatura	6	31
4. Formación Integral	1	9
5. Recursos Financieros	3	13
6. Recursos-Eficiencia	3	18
7. Extensión-Investigación	1	10
8. Información Adicional	1	6
Total	25	138

Esta tabla presenta el número de categorías y criterios contenidos en cada una de las ocho variables del documento de autoevaluación del organismo acreditador CACECA, (CACECA 2010).

El documento más el apoyo de las personas involucradas en los procesos ha permitido que hasta estos momentos se hayan modelado a través de la adaptación de la gráfica rica, las primeras tres variables correspondientes a profesores, estudiantes y programa de licenciatura. Cabe destacar que para la presente ponencia, sólo presentaremos el modelado de procesos de la variable de estudiantes en su categoría admisión, según se observa en la tabla 3.

Tabla 3: Categoría Admisión y sus Criterios, de la Variable Estudiantes

Categoría	Descripción de los Criterios de Categoría
Admisión	<ul style="list-style-type: none"> ¿Se tiene en cuenta la calidad y el prestigio de la institución y personal docente de precedencia? ¿Existe una legislación y su reglamento que regule el proceso de admisión? ¿Se cumple estrictamente con la legislación universitaria vigente durante el proceso de selección? ¿Se tiene en cuenta el rendimiento académico en el nivel precedente a través de un promedio y desviación estándar? ¿Se efectúan entrevistas de admisión? ¿Se toma en cuenta el perfil del aspirante a ingresar y el estudio socioeconómico? ¿Existe un programa de inducción para estudiantes de nuevo ingreso y están inscritos el 100%? ¿El puntaje obtenido en la Prueba de Aptitudes Académicas (PAA) es de por lo menos de 100 puntos? ¿Existe una guía de estudio para aspirantes? ¿El puntaje obtenido en la prueba TOEFL o equivalente es de por lo menos 350 puntos?

La presente tabla muestra una descripción de cada uno de los criterios que evalúa CACECA, sobre la variable estudiante, para cada una de las categorías que la integran (CACECA 2010).

Como se mencionó con anterioridad para desarrollar los modelados de procesos (primera fase de KoFI) se utilizó una adaptación la gráfica rica (Checkland & Scholes, 1999; Monk & Howard, 1998), propuesta por Rodríguez (2007), debido a que a través de ella es posible representar situaciones problemáticas y en particular, problemas relacionados con las personas que participan en un proceso. La gráfica permite la representación general de los elementos involucrados en los procesos, sus relaciones principales y los aspectos sociales que podrían afectar a las personas que intervienen en él. Es importante destacar que no se dispone de una notación ni mecanismos formales para representar procesos por medio de una gráfica rica, (Checkland & Scholes, 1999). No obstante, existen algunas notaciones comúnmente usadas, las cuales son descritas a continuación.

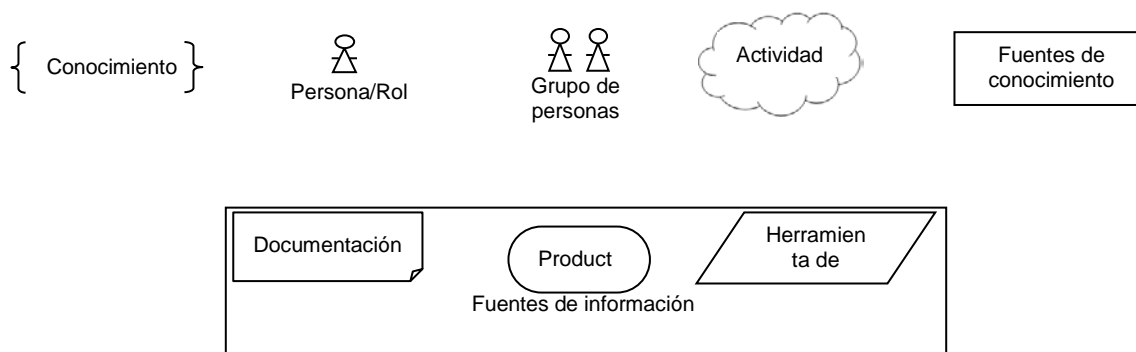

Descripción De La Técnica De Gráfica Rica Y Adaptaciones Propuestas Por Kofi A La Gráfica Rica

Una gráfica rica es esencialmente una representación de un proceso por medio de un dibujo que identifica a todos los involucrados, sus preocupaciones y algunas de las estructuras que definen el contexto de trabajo en el proceso (Monk & Howard, 1998). Normalmente, una gráfica rica contiene los siguientes elementos: actividades, roles, preocupaciones, conexiones y fuentes de información. Ramírez (2007) aprovechando la flexibilidad de la técnica de gráfica rica definió una serie de convenciones para el modelado de procesos que incluyen de manera explícita el conocimiento involucrado, éstas son mencionadas a continuación:

- Personas o roles. Representa a los actores del proceso, ya sea personas específicas o roles del proceso.
- Grupos de personas. Identifica a grupos de personas con necesidades de conocimiento común o que pueden aportar conocimiento que es requerido para las actividades.
- Actividades. Igual que en la nomenclatura clásica de la gráfica rica.
- Fuentes de conocimiento. Son similares a las fuentes de información en la nomenclatura clásica de la gráfica rica. En esta adaptación se proponen tres íconos para distinguir entre distintos tipos de fuentes: documentos, productos del proceso y herramientas que lo apoyan.
- Conocimiento. Es un texto encerrado entre dos llaves, cada enunciado corresponde a un área o tema.

En la figura 1 se muestra la simbología propuesta en el párrafo anterior.

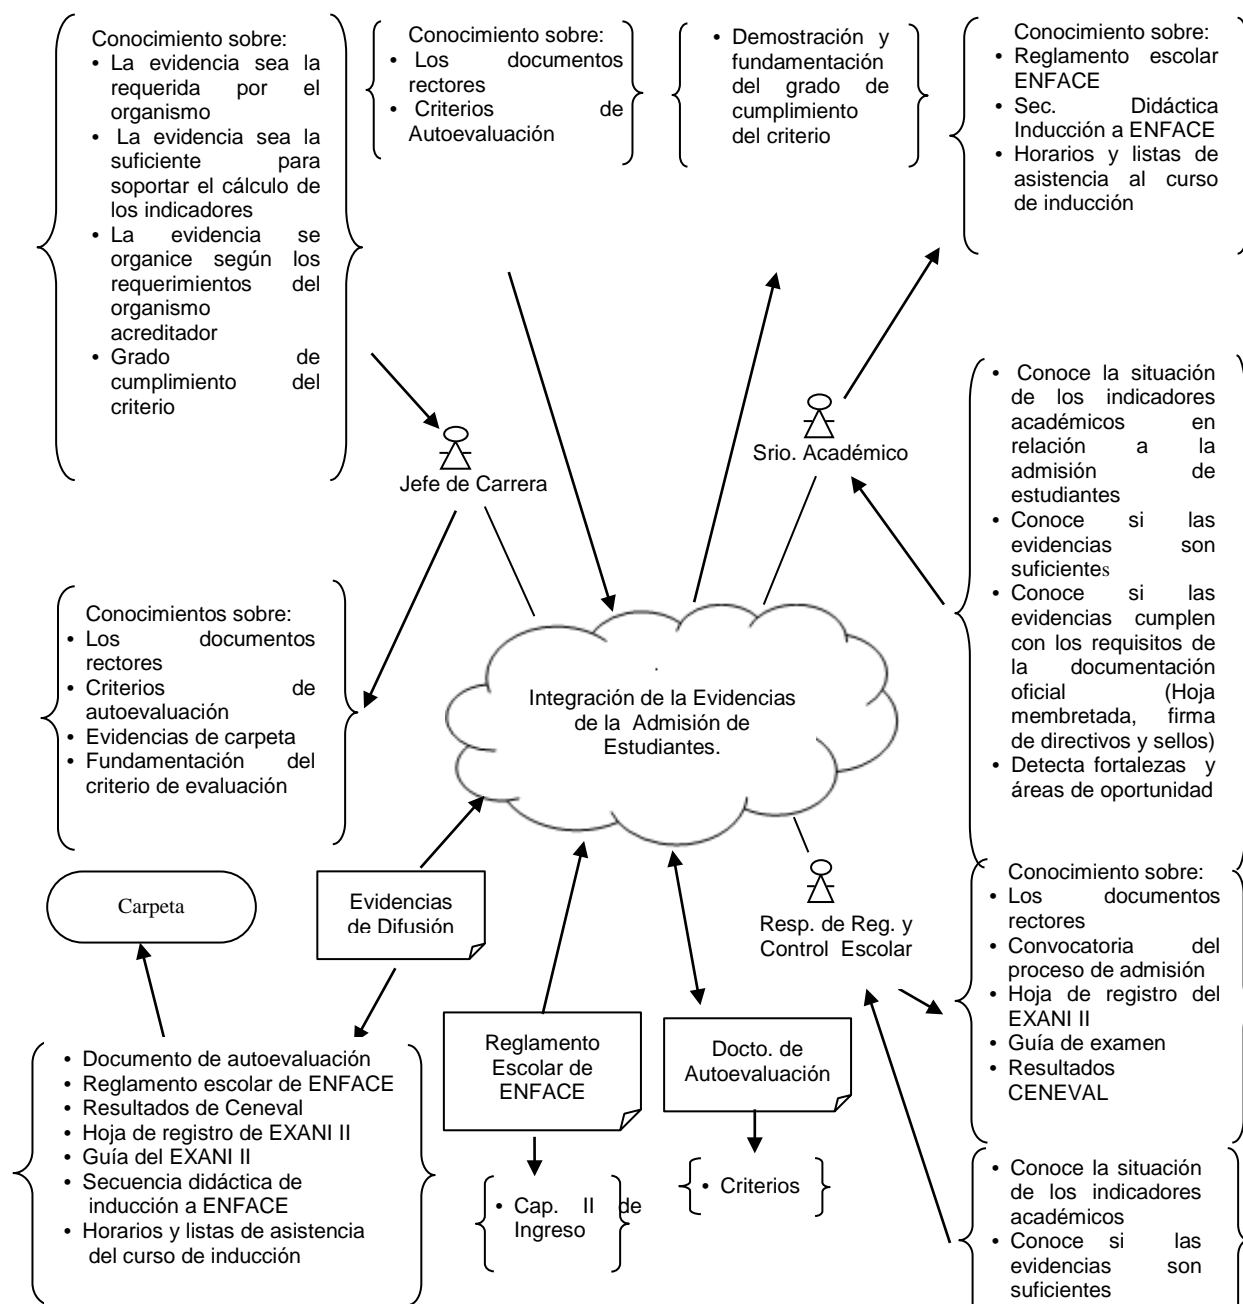

Figura 1: Simbología la Adaptación a la Gráfica Rica

Esta figura muestra la simbología utilizada para representar los elementos descritos en la gráfica rica adaptada para la metodología KoFI.

En atención a lo explicado, a continuación se muestra en la figura 2, el modelado de proceso utilizando la gráfica rica adaptada, para la categoría admisión de la variable estudiantes.

Figura 2: Modelo del Proceso Admisión de Estudiantes

La gráfica muestra el modelado de proceso de la categoría admisión de la variable estudiantes, como resultado de la aplicación de la metodología KoFI en su primera fase, utilizando la adaptación de la gráfica rica propuesta por Ramírez (2007).

CONCLUSIONES

1. Aún que la metodología KoFI, fue propuesta para el diseño de sistemas de AC, enfocado al mantenimiento de software; la principal aportación de este trabajo fue lograr aplicar la primera fase de la metodología al proceso de acreditación de PE del CESUES, Unidad Académica Navojoa, consistente en el modelado con enfoque en el flujo del conocimiento.

2. Una de las principales limitaciones del trabajo fue la falta de experiencia en el modelado de los procesos con el enfoque de flujo de conocimiento. Esto generó dificultades al momento de desarrollar los modelados debido a la falta de pericia para identificar la actividad relevante en torno a la cual se generaría la gráfica rica adaptada. Así entonces después de realizar varios intentos de modelados, considerando a las variables y criterios como actividades principales del proceso de acreditación, se decidió que la categoría o un conjunto de ellas, era la que mejor representaba el modelado.
3. Definidas las principales actividades del proceso de acreditación, se facilitó la identificación de los roles, los conocimientos, los flujos y las fuentes de información, fundamentales para el modelado.
4. Una vez concluida la metodología, se espera que todas las Unidades Académicas de CESUES y otras IES, dispongan del marco metodológico que proporciona KoFI, para apoyar sus procesos de acreditación, sustentados en la experiencia de aseguramiento de la calidad del CESUES y puedan desde el enfoque de flujos de conocimiento, proponer o mejorar sus estrategias o sistemas de AC.

RESUMEN

Existe insuficiente información acerca del comportamiento ético dentro de las organizaciones y las causas que derivan en comportamientos contrarios. En esta ponencia se combinan aspectos de la investigación cualitativa con lo cuantitativo. Se parte del problema clásico tantas veces analizado ¿qué motiva a las personas a comportarse de manera no ética dentro de las organizaciones? Para lograrlo se analizó el código de ética de veinticuatro empresas transnacionales, identificando sus políticas de integridad, sus valores asociados con los valores universales y por los antivalores que genera el comportamiento no ético dentro de las organizaciones; posteriormente incursionamos en un tipo de investigación descriptiva al buscar respuestas en dos diferentes segmentos: el primero con profesionales vinculados a temas de administración de programas de integridad que dan sus opiniones de acuerdo con su experiencia profesional y académica, el segundo con grupos de personas de reconocida solvencia ética y moral. Todas estas opiniones, codificadas en forma de respuestas, al procesarse estadísticamente con auxilio del paquete SPSS, dan una alta confiabilidad dado que alcanzan valores de Alfa de Cronbach superiores a 0,8. La validez se logra al comparar estas opiniones con las informaciones referenciadas en la bibliografía.

PALABRAS CLAVE: Ética, empresarial, organizaciones

THOUGHTS ON ETHICAL BEHAVIOR IN ORGANIZATIONS IN MEXICO

ABSTRACT

There is insufficient information about the ethical behavior within organizations and causes that result in anti-competitive behaviour. This paper combines aspects of qualitative research with the quantitative. Be part of the classical problem often analyzed what motivates people to behave ethically within organizations? To achieve this was analyzed the code of ethics of twenty-four transnational corporations, identifying their policies of integrity, values associated with universal values and by the possitive that generates the unethical behavior within organizations; later penetrated into a type of descriptive research to look for answers in two different segments: the first with professionals related to administration of integrity programmes that give their views in accordance with their professional and academic experience, the second with groups of people of recognized ethical and moral solvency. All these views, codified in the form of answers, statistically processing with help of the SPSS package, give a high reliability insofar as they reach higher than 0.8 Cronbach's alpha values. The validity is achieved to compare these views to the information referenced in the bibliography

JEL, M14

REVISION BIBLIOGRAFICA

Sólo el 30% de las empresas mexicanas ha establecido un proceso de integridad donde se fomenten aquellas conductas alineadas a los valores universales como medio de guía de comportamiento de las personas que interactúan en ella para fomentar un ambiente más productivo que conlleve al éxito de los objetivos de la misma empresa y de los individuos que con ella tienen relación. (Hayes, 2010). Robbins y Coulter definen al código de ética como “una declaración formal de los principales valores y normas éticas a los que la empresa espera que se adhieran sus empleados” (Pérez R., 2010), esto forma parte integrante del contrato a que se hace referencia en el párrafo anterior, y entendiendo que el mismo se basa en, que tanto la moral como su fundación, aparecen como necesidades de la racionalidad humana en general. (Gómez, 2002) Después del análisis realizado de la importancia del establecimiento de los contratos sociales de comportamiento ético entre organizaciones y los individuos que las conforman, no encontramos evidencia que las primeras cuenten con programas de cambio en el comportamiento no ético de los segundos diferentes a programas de difusión del propio código de ética que han establecido. Como base de información consultamos el Contrato Social (Código de Ética) de 14 corporaciones mexicanas y 10 empresas transnacionales con establecimientos permanentes en el país. En el proceso de análisis se identificaron 34 políticas de integridad implícitas en esos códigos de ética.

Posteriormente analizamos los valores universales que sustentaban dichas políticas encontrando que el 97% de las mismas contenían al menos un valor considerado en la declaración de los valores universales de la ONU considerados en la Reunión Regional de Implementación de Políticas Inclusivas en Latinoamérica celebrada en Santiago de Chile en 2009 auspiciada por la UNESCO (Cox, 2009). En nuestro análisis eliminamos la política de Pagos de Facilitación utilizada por ciertas empresas transnacionales y que se refiere a que es permitido sobornar a ciertos funcionarios de gobierno de nivel bajo para acelerar los trámites burocráticos por considerarla no ética. Posteriormente identificamos los antivalores asociados a los mismos para determinar causas de origen en el comportamiento no ético de los individuos en las organizaciones mexicanas o transnacionales con establecimiento permanente en el país.

También se consultó el estudio realizado y publicado por la American Management Association y que define las causas del comportamiento no ético de los individuos en las organizaciones en los Estados Unidos. (AMA / HRI, 2005) Este estudio revela que los drivers principales de este tipo de comportamiento por orden de importancia son: presión para cumplir con objetivos no realistas, crecimiento profesional, mantenimiento del estilo de vida, presión en el trabajo e ignorancia. En nuestra investigación se incluyeron las variables mencionadas del estudio de AMA, el cual incluye otras variables que a nuestro juicio no deberían ser incluidas por razones de tropicalización en México, y en base al análisis de los Contratos Sociales Estudiados, agregamos variables adicionales de comportamiento como falsedad en las comunicaciones, falta de liderazgo en las organizaciones, influencia de los medios de comunicación en los individuos y situaciones personales adversas para que fueran consideradas y evaluadas por los expertos seleccionados.

METODOLOGÍA

Se emplea el método de investigación descriptiva, basada en procedimientos científicos donde se recolectan datos básicos o de fuentes primarias y se procesan para luego ser interpretados dentro del marco de la estadística no paramétrica. A partir de la información que brindan, se logra obtener una matriz primaria de 11 causas del comportamiento no ético de los individuos en las organizaciones mexicanas, matriz que mediante rondas Delphi y métodos de procesamiento de la estadística no paramétrica, se va optimizando hasta finalmente alcanzar un valor de Alfa de Cronbach de 0,83 comprobando la confiabilidad de la misma. Se aplica además la Prueba de Friedman cuya hipótesis nula es que las 11 variables tienen la misma importancia. Si la significación es mayor que 0.05 se acepta la hipótesis con un 95% de confianza.

En caso contrario se rechaza la hipótesis. En el caso de la prueba de Friedman la significación es menor que 0.05 (0,034) por lo que se rechaza la hipótesis nula, es decir, las 11 variables no tienen la misma importancia por lo que se demuestra la validez de la realización del test Delphi. Se trabaja con expertos y con personas reconocidas por su solvencia ética y moral en las organizaciones que se desenvuelven en el país. El nivel de competencia se evalúa por el coeficiente de Kendall. La competencia de los expertos para poder opinar sobre estos temas se obtuvo por medio del coeficiente de competencia del experto (K) calculada de acuerdo con la opinión del candidato sobre su nivel de conocimiento del tema y con las fuentes que le permiten argumentar sus criterios calculando su nivel de expertise

RESULTADOS

Revisión de Antecedentes y Selección de Causas de Comportamiento no Ético. A partir de gran cantidad de artículos, estudios, investigaciones, análisis e interpretaciones acerca del comportamiento ético dentro de las organizaciones y las causas que derivan en comportamientos contrarios a la ética que se han discutido en innumerables foros y que se han publicado en diferentes medios e idiomas; así como el análisis de 24 Códigos de Ética, sus políticas de integridad, sus valores relacionados y por ende los antivalores de estos últimos, en la primera recopilación y procesamiento de la información obtenida mediante su revisión se identificaron de 14 Causas del Comportamiento no Ético de los Individuos en las Organizaciones en México, las cuales se fueron agrupando y reagrupando por ronda Delphi hasta reducirlas a 11 las cuales se presentan en la Tabla 1.

Tabla 1: Causas del Comportamiento no Ético de los Individuos en las Organizaciones en México.

Variable	Descripción
X1	Competencia por recursos escasos
X2	Crecimiento profesional
X3	Desconocimiento de consecuencias
X4	Deseo de protección de un estilo de vida
X5	Falsedad en la comunicación
X6	Falta de liderazgo en la empresa
X7	Ignorancia
X8	Influencia de los medios de comunicación
X9	Presión por cumplir objetivos no realistas
X10	Presión en el trabajo
X11	Situaciones personales adversas

Para efectos de este estudio, a estas once variables se les hace su definición conceptual. Una vez que se obtuvo respuesta de los encuestados se procedió a la selección de expertos mediante el cálculo del coeficiente de competencia del experto. El criterio de selección estableció que sólo aquellos encuestados con un coeficiente de competencia $K \geq 0.75$ sería seleccionado como experto. En base a ese criterio 25 personas (71.4%) del total fueron consideradas como expertos. En relación con la cantidad de expertos (Ramírez & Toledo, 2005), se ha demostrado que, si el número de expertos utilizados oscila entre 15 y 30 se comete un error de entre cinco. En base a las técnicas no paramétricas de Friedman (Conover, 1980) encontramos en la comparación entre medias de rangos que los resultados obtenidos en la autoevaluación de las personas encuestadas para determinar su grado de expertise en la materia a través del método de competencia del experto tuvo un nivel de significancia del 0.0001 con un 99.99% de confianza de que los resultados son aceptables, adicionalmente un 15.43% en el coeficiente de variación nos indica que existe confiabilidad en los datos; con ello al analizar el coeficiente de conocimiento o información (Kc) se encuentran diferencias significativas ($P < 0.0001$) entre la relación de atributos o características; hallando que el conocimiento (1) resultó en mayor prioridad de entre los 10, luego la experiencia (7), la actualización (9), la profesionalidad (5) y la capacidad de análisis (6).

	Tratamiento	Media	Resultado
1	Conocimiento	0.1548	A
7	Experiencia	0.1216	B
9	Actualización	0.1060	C
5	Profesionalismo	0.1052	C
6	Capacidad de análisis	0.1028	C
4	Creatividad	0.0800	D
2	Competitividad (Ranking)	0.0712	D
8	Intuición	0.0428	E
3	Disposición	0.0412	E
10	Capacidad de trabajo en equipo	0.0164	F

Kc

Nivel de significancia = 0.0001

Medias unidas con la misma letra son estadísticamente iguales

Al desarrollar la prueba factorial de Friedman de las fuentes de argumentación en los niveles alto-medio-bajo y viceversa (Tabla anterior); que establecen el grado de argumentación o fundamentación de sus criterios (Ka) se encontró una mayor calificación en el nivel “Alto” (superando a medio y bajo) en todas las fuentes de argumentación: análisis teóricos (1), experiencia que posee en estos temas (2), conocimiento de autores nacionales (3), conocimiento de autores internacionales (4), consultas bibliográficas (5) y cursos de actualización (6) con un 99.99% de confianza.

CONCLUSIONES

Las causas principales del comportamiento en ético en las organizaciones en México son en orden de importancia:

- 1) Presión por cumplir objetivos no realistas.
- 2) Situaciones personales adversas.
- 3) Competencia por recursos escasos.
- 4) Crecimiento profesional.
- 5) Presión en el trabajo.
- 6) Deseo de conservación de un estilo de vida.
- 7) Falsedad en la comunicación.
- 8) Falta de liderazgo en la empresa.
- 9) Ignorancia.
- 10) Influencia de los medios de comunicación.
- 11) Desconocimiento de las consecuencias.

La clasificación anterior con un nivel de significancia de 0.0001 con una confiabilidad superior al 99%. El comportamiento no ético en las organizaciones mexicanas no tiene fundamentos diferentes al comportamiento no ético en las organizaciones de Estados Unidos, la diferencia principal radica en la aceptación de ciertos hechos de corrupción que permiten a las organizaciones norteamericanas “agilizar” sus trámites de negocios en otros países, mismo que no es aceptado como ético por las organizaciones

mexicanas. En la mayoría de los casos los factores que influyen en el comportamiento no ético en las organizaciones están dados por factores humanos, organizativos, tecnológicos y materiales, siendo solubles por lo general. Después de analizar los resultados y compararlos con la información recopilada en los códigos de ética de las empresas fuente, no encontramos evidencia que las mismas cuenten con programas preventivos para evitar que las causas que originan el comportamiento no ético de los individuos que las conforman no se presente. Esta es un área de oportunidad a la mejora de la estabilidad de las empresas mexicanas que deberá analizarse y explotarse, misma que no forma parte de este trabajo de investigación. Si no se previenen las causas, será muy difícil y costoso el enfrentar las consecuencias de la conducta no ética en las organizaciones mexicanas.

RESUMEN

El presente trabajo propone un software en línea para la construcción del proyecto de vida de los estudiantes que cursan el segundo semestre, de la carrera de licenciado en sistemas computacionales administrativos en el Centro de Estudios Superiores del Estado de Sonora, haciendo incapie en el primer año de estancia, dado que es en este período en donde se observan los mayores índices de descerción escolar. Para el diseño del software se tomaron como base las seis sesiones programadas en el manual de tutorías y la metodología propuesta por el Dr. Luis Castañeda, en su libro titulado “Un plan de vida para jóvenes”, misma que proporciona las técnicas de planeación que permiten la construcción de la misión y la visión, hasta las acciones que las harán realidad. El software en línea propuesto, es una estrategia innovadora que reforzará las sesiones presenciales de tutorías y provocará cambios en las prácticas educativas al realizar las actividades tutoriales, ya que facilitará la elaboración del proyecto de vida al estudiante-tutorado, permitirá al facilitador-tutor retroalimentar el proyecto del estudiante-tutorado y al responsable del programa institucional de tutorías del la Unidad Académica, dar seguimiento a los proyectos de vida de los estudiantes-tutorados.

PALABRAS CLAVE: Programa institucional de tutorías, software en línea, proyecto de vida.

ONLINE SOFTWARE TO LIFE PROJECT, EDUCATIONAL INNOVATION TO ENFORCE THE INSTITUTIONAL PROGRAM TUTORING

ABSTRACT

This paper proposes an online software to build the life project of students in the second half of the race's degree in administrative systems computacionales of the Centro de Estudios Superiores del Estado de Sonora, by highlighting the first year of residence, as it is in this period where there are higher rates of school descerción. For the software design were taken the basis of six meetings scheduled in the manual tutorials and methodology proposed by Dr. Luis Castañeda, in his book entitled "A plan of life for young people", that provides the same planning techniques that allow the construction of the mission and vision, to the actions that come true. The proposed online software is an innovative strategy that will reinforce the tutoring sessions and cause changes in educational practices to carry out the activities tutoriales, as it will facilitate the elaboration of life project the student, will allow the facilitator-tutor feedback on the student-tutoring project and the responsible institutional tutoring program the Unidad Académica, to monitor the projects life-tutored-students.

KEY WORDS: Institutional tutoring program, online software, life project.

INTRODUCCIÓN

Cuando un individuo ingresa al sistema educativo superior, su vida y su personalidad pueden ser objeto de una transformación tan radical que obstaculice su proceso de integración a la vida académica y social, los estudiantes pueden no estar conscientes del riesgo que tienen de abandonar su carrera de elección, antes de ingresar a una institución de nivel superior, más bien toman conciencia de esta situación cuando sus propósitos, compromisos y expectativas se confrontan con un marco de experiencias totalmente desconocidas para ellos (Romo y Fresan, 2001).

Para la universidad, por lo tanto cualquier situación que impulse al alumnado a interrumpir sus estudios ha de ser valorada como un fracaso y considerado como un indicador de baja calidad, el cual es motivado por la falta de estrategias o mecanismos pertinentes para alcanzar la titulación esperada. (Cabrera et. al., 2006). La deserción escolar implica pérdida para el individuo, su familia, la institución y la sociedad en general, la inversión y las expectativas de logro se ven plenamente frustradas al perder el contacto definitivo y/o temporal con la institución escolarizada ya que esta es considerada como un medio o vía de movilidad social. (Tinto, 1992) Se ha detectado que las causas de abandono o deserción escolar a nivel universitario responden a una multiplicidad de factores principalmente durante el primer año posterior a su ingreso, a continuación se mencionan algunos: Las condiciones económicas desfavorables del estudiante, el deficiente nivel cultural de la familia a la que pertenece, el poco interés por los estudios en general, por la carrera y la institución. De acuerdo al informe de la ANUIES (2000), en su libro titulado "La Educación Superior del Siglo XXI". El promedio nacional de eficiencia terminal hacia el año 2000, se ubicaba en el 39%, cifra menor a la que tenía un poco más de una década atrás entre los ciclos 1981-1982 y 1993-1994 que era de 54%. Así también en el octavo informe sobre la eficiencia de las universidades mexicanas, se muestra el comportamiento del sistema educativo en 120 instituciones con resultados de 49%, 48% y 43% de la eficiencia terminal global para 2001, 2002, y 2003 respectivamente (SES, 2004). En relación a este mismo indicador el Centro de Estudios Superiores del Estado de Sonora (CESUES), Navojoa presenta un 20.16% en promedio durante los últimos 6 años de los cuales se resaltan como años más críticos el 2007 y 2008 con un 15% y 13% y los mejores años el 2010 y 2011 con 26% y 27% de eficiencia terminal respectivamente (PIFI, 2012-2013).

Pese a que es una realidad que las mayores proporciones de abandono escolar ocurren durante los primeros semestres de cada carrera, no se soslaya que, aun en semestres avanzados, también se encuentran elevados niveles de deserción, evidencia que constituye otro grave problema. Ante la primera de estas manifestaciones se subraya la urgencia y la importancia que tiene para las Instituciones de Educación Superior (IES) disponer de programas de apoyo a la integración de los alumnos que minimicen, al inicio de su formación, la ocurrencia de este fenómeno. (Romo y Fresan, 2001). Por lo cual uno de los focos de atención prioritaria será luchar contra el abandono. Ofrecer a los estudiantes una percepción realista de la vida universitaria debería ser un objetivo a lograr, si queremos aumentar las cifras de retención de los estudiantes (Cabrera, et. al. 2006).

Para el CESUES, así como para la mayoría de las IES, resulta muy importante el primer año de estancia; en los últimos 6 años la Unidad Académica Navojoa, ha presentado un promedio de deserción del primero al segundo año del 29% destacando el 2007 con el porcentaje más alto de un 39% y el más bajo con 23% en el 2010 (PIFI, 2012-2013). Merece la pena subrayar que al menos el 50% de nuestros estudiantes proviene de comunidades indígenas y llegan con serios problemas de autoestima, marcados por su origen socioeconómico y un clima cultural y familiar muy diferente al de la ciudad; con este bagaje cursaron su educación básica y media superior, desarrollando un conjunto de capacidades, habilidades y hábitos frecuentemente insuficientes para el trabajo en el nivel universitario, que requerirán ser diagnosticados y atendidos a fin de que logren superar las creencias que les impedirían concluir sus

estudios exitosamente. Es en este momento, donde la función tutorial adquiere un papel fundamental (Fresan, 2001).

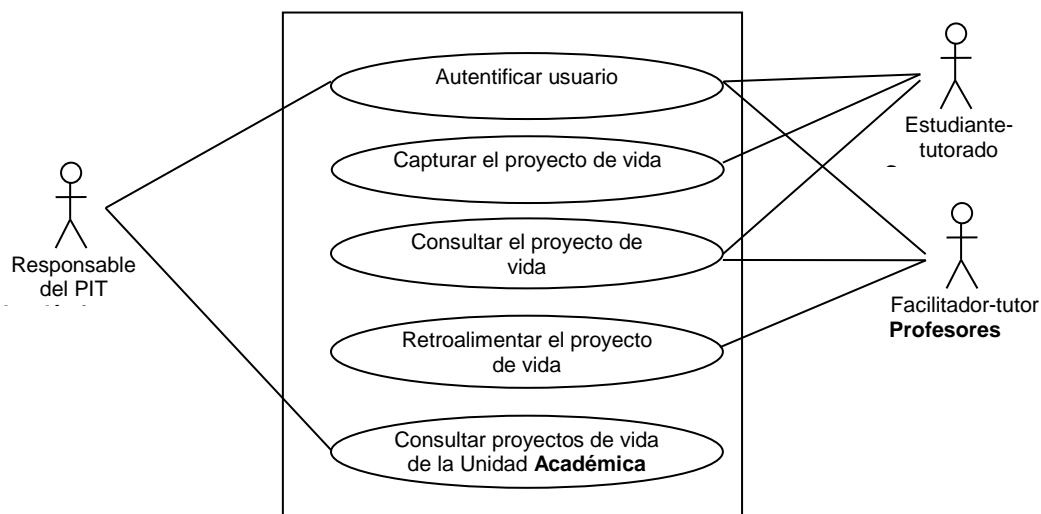

A continuación se describe brevemente la forma en que está organizada la presente investigación: En la sección de revisión literaria se presentan las diferentes perspectivas con respecto a las actividades tutoriales, que se consideran como un proceso integrador que permite el acompañamiento del estudiante durante su formación universitaria por un tutor responsable y comprometido; otro aspecto de la revisión es conocer que la formación integral del estudiante universitario constituye el centro de atención y preocupación de las universidades, además se incluye una descripción de las tipologías de innovación educativa, para comprender su significado y hacer un pronóstico sobre la viabilidad de su incorporación a la institución escolar o al aula. En la sección de metodología se describen las actividades que se realizaron en el proceso de diseño del software en línea, mismas que se resumen a continuación: primeramente se analizó el manual del tutor de CESUES, seleccionando las seis del segundo semestre que están programadas como sesiones supervisadas de tutorías, las cuales consideran una planeación estratégica para el diseño del “Proyecto de Vida”. También se consideró como guía el libro titulado “Un plan de vida para jóvenes” del Dr. Luis Catañeda.

Después se presenta el modelado del software, en donde se puede observar la funcionalidad e interacción usuario-aplicación mediante el diagrama de casos de uso y su descripción correspondiente, se muestran las pantallas diseñadas para que los estudiantes que utilizan el software en línea, puedan desarrollar el proyecto de vida, que el facilitador tutor supervise los avances de los proyectos de vida de sus tutorados y que el responsable del PIT de la Unidad Académica consulte los datos estadísticos sobre el total de proyectos asignados y concluidos. Posteriormente se realiza la codificación del programa, actualmente las pruebas se están realizando con los alumnos del segundo semestre de la carrera de Licenciado en Sistemas Computacionales Administrativos (LSCA) generación 2011, los resultados se conocerán al finalizar el período escolar 2012-01.

METODOLOGÍA

1. Para obtener los requisitos del proyecto titulado “software en línea para plan de vida, una innovación educativa para reforzar el programa institucional de tutorías”, primeramente se analizó el manual del tutor de CESUES, mismo que contiene una colección de fichas de trabajo diseñadas para desarrollarse en los diferentes semestres. Para el segundo están programadas seis sesiones de tutoría supervisadas, con temas relacionados con la planeación estratégica para el diseño del proyecto de vida, información que se muestra a continuación en la tabla 3.
2. También se consideró como guía para el diseño del software, el modelo propuesto por el Dr. Luis Catañeda, en su libro titulado “Un plan de vida para jóvenes”, que proporciona las técnicas de planeación que permiten la construcción de la misión y la visión, hasta las acciones que las harán realidad (Castañeda, 2006). Trabajo que se concluye con el siguiente Diagrama de Casos de Uso del Software para Elaborar el Proyecto de Vida que se presenta en la figura 1.

Figura 1: Diagrama de Casos de Uso del Software para Elaborar el Proyecto de Vida

En esta figura se presenta el modelado del software, en donde se puede observar la funcionalidad e interacción usuario-aplicación.

Tabla 1: Descripción de Casos de Uso del Software en Línea para Elaborar el Proyecto de Vida

Caso de Uso	Descripción
Autenticar usuario	El usuario captura su clave y su contraseña para ingresar al software.
Capturar el proyecto de vida	El usuario tiene acceso para capturar los diferentes aspectos que conforman su proyecto de vida, tales como: su visión en los próximos cinco años, su misión, sus fortalezas, debilidades, amenazas y oportunidades. Sus sueños con respecto a su entorno familiar, económico, ocupacional, social y de salud; sus valores, el conocimiento de sí mismo, sus metas, las estrategias que utilizará para alcanzarlas y las acciones que seguirá.
Consultar el proyecto de vida	El usuario tiene acceso para consultar los avances del proyecto de vida del estudiante-tutorado.
Retroalimentar el proyecto de vida	El usuario tiene acceso para hacer sugerencias, observaciones y/o validar el avance presentado.
Consultar proyectos de vida de la Unidad Académica	El usuario consulta información relativa a los proyectos de vida de los estudiantes-tutorados de la Unidad Académica Navojoa.

La tabla anterior se muestra una breve descripción describe cada uno de los casos de uso.

3. A continuación se muestran las pantallas creadas para el software de proyecto de vida para estudiantes.

Cabe destacar que el facilitador-tutor en sesiones presenciales, apoya al estudiante en la construcción de los diferentes aspectos que conforman su proyecto de vida, utilizando las fichas del segundo semestre disponibles en el manual del tutor, para que posteriormente el tutorado pueda hacer uso del software. Si la opción seleccionada en la forma de autenticación de usuario es tipo tutorado, el software muestra la pantalla que se representa en la figura 2, en la que se visualiza el menú de opciones.

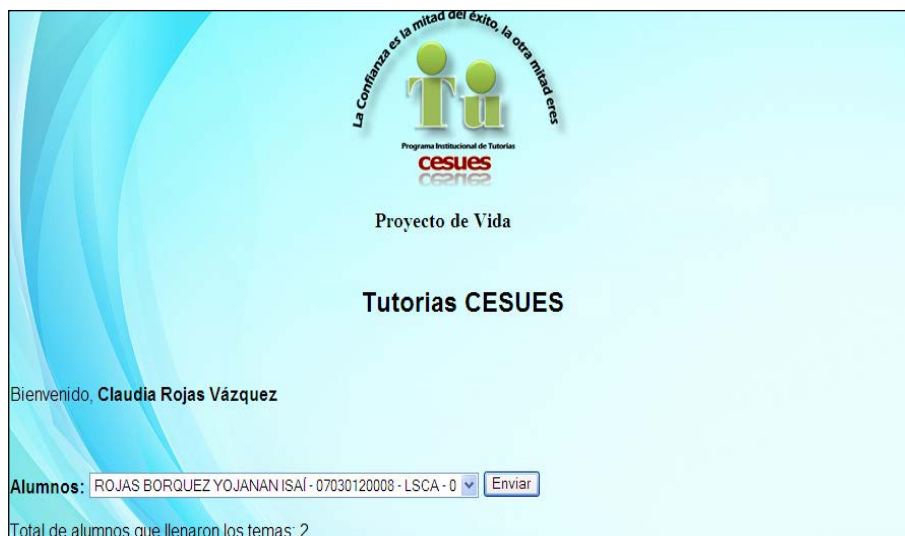

Figura 2: Pantalla de Opciones de Menú

La presente figura muestra las opciones de menú, el alumno selecciona la opción deseada, presentando el software después de esta interacción otra interfaz.

En relación al usuario tutor, el software mostrará la pantalla presentada en la figura 3 previa autenticación, en la cual podrá seleccionar de una lista, al estudiante-tutorado del que desea conocer el avance de su proyecto de vida.

Figura 3: Pantalla de Avance de Proyecto de Vida

Esta pantalla muestra la lista de tutorados asignados al tutor, a través de la cual se seleccionará al tutorado que tendrá seguimiento de su proyecto de vida.

Una vez que el usuario oprime el botón enviar presentado en la figura 4, el software muestra la información que el tutorado capturó, tal como lo representa la figura 5, en donde el tutor aprobará o retroalimentará al tutorado sobre la captura realizada. También se presenta la opción para imprimir el proyecto de vida de ser necesario.

Figura 4: Proyecto de Vida del Estudiante-Tutorado

Proyecto de Vida

Tus Valores	Responsabilidad, honestidad, puntualidad			
Tu Visión	Desempeñarme como líder de proyecto en un fabrica de software			

Imprimir

En esta figura se visualizan las capturas realizadas por el tutorado.

Finalmente el responsable del PIT de la Unidad Académica podrá consultar datos estadísticos tales como: el total de proyectos asignados y los concluidos, además podrá realizar consultas específicas como se muestra en la figura 5 (por carrera y tutorados sin conclusión de proyectos).

Figura 5: Consultas para el Responsable del PIT

Tutorados sin Proyecto 	Total: ___	

EL responsable del PIT seleccionada la opción deseada, y el software le presenta los datos resultados de la selección.

- En base al diseño anteriormente presentado, se realizó la codificación del software en el lenguaje asp.net, mismo que se instaló en un servidor web gratuito, las pruebas se están realizando con los alumnos del segundo semestre de LSCA generación 2011, los resultados se conocerán al finalizar el periodo escolar 2012-01.

RESULTADOS ESPERADOS

Actualmente se realiza la prueba piloto, para esto el software se ha instalado en un servidor gratuito, con dirección en la web www.proyecto-uan.somee.com. En el presente período escolar 2012-1 se ha seleccionado al grupo matutino del segundo semestre de LSCA de la generación 2011 para realizar la prueba, los resultados se conocerán al finalizar el semestre. No obstante se espera que el software propuesto como una estrategia de innovación de reforzamiento, le facilite la elaboración del proyecto de vida al estudiante-tutorado, con todos los beneficios que ello implica, le permita al facilitador-tutor dar seguimiento y retroalimentar el proyecto del estudiante-tutorado y al responsable del PIT dar seguimiento a los proyectos de vida de los estudiantes-tutorados.

CONCLUSIONES

Para los estudiantes universitarios un proyecto de vida establece un sistema de acciones individualizadas que se estructuran a partir de las necesidades educativas y sus potencialidades, atendiendo a las dimensiones de la vida universitaria, caracterizado por el papel protagónico del estudiante y la labor orientadora del tutor, con el propósito de encauzar y conducir su formación profesional, personal y social. Se resalta la importancia de la aplicación de las tecnologías de información para motivar a los estudiantes/tutorados y captar su atención, con base en lo anterior la presente innovación se justifica como un reforzamiento de las sesiones presenciales de proyecto de vida que es considerada una de las principales estrategias de tutoría promovidas por CESUES en razón de los altos índices de deserción estudiantil.

COMPROMISO ORGANIZACIONAL: UNA GARANTÍA PARA LA SUBSISTENCIA DE LAS PEQUEÑAS Y MEDIANAS EMPRESAS

Rosalinda Jiménez Hernández, Universidad Autónoma de Baja California
Gilberto Enrique Bustamante Valenzuela, Universidad Autónoma de Baja California
Ana Cecilia Bustamante Valenzuela, Universidad Autónoma de Baja California

RESUMEN

El actual ambiente globalizado y de competitividad en el que las pequeñas y medianas empresas se desarrollan, genera que en los niveles jerárquicos más altos de la organización emane la necesidad de encontrar el equilibrio entre los intereses de sus empleados y los de la misma entidad. Manejar una organización sin los conocimientos necesarios para llevar esto a cabo, trae como consecuencia que en los trabajadores se manifiesten determinados comportamientos como la rotación de personal, el absentismo, y la baja productividad, síntomas que indican el bajo nivel de compromiso de los empleados hacia la empresa, repercutiendo en un corto plazo que se inicie la decadencia de la organización y posteriormente su desaparición. La identificación de los individuos con la misión y visión de la empresa, la satisfacción con las actividades que desarrollan y su adhesión emocional hacia la misma, son características necesarias en los trabajadores para que el ambiente laboral sea benéfico y lograr los objetivos y por lo tanto la supervivencia de las empresas. Por tal razón, es necesario que propietarios y directivos conozcan las destrezas y habilidades necesarias para crear en sus empleados el sentido de permanencia y lealtad, esto quiere decir hacer crecer en ellos el Compromiso Organizacional.

PALABRAS CLAVES: Compromiso Organizacional, Competitividad, Pequeñas y Medianas Empresas.

ORGANIZATIONAL COMMITMENT: A GUARANTEE FOR THE SURVIVAL OF SMALL AND MEDIUM ENTERPRISES

ABSTRACT

The current global environment and competitiveness in small and medium-sized enterprises are developed, which generates higher hierarchical levels of the organization lodging the need to find a balance between the interests of its employees and those of the same entity. Manage an organization without the knowledge necessary to carry this out, has meant that workers manifest certain behaviors such as turnover, absenteeism and low productivity, symptoms that indicate the low level of employee commitment to the business, affecting the short term to start the decline of the organization and its eventual disappearance. The identification of individuals with the mission and vision of the company, satisfaction with their activities and their emotional attachment to it are necessary characteristics for workers in the workplace is beneficial and achieve the objectives and therefore survival of companies. For this reason, it is necessary that owners and managers know the skills and abilities needed to create in employees a sense of permanence and loyalty, say this means they grow on Organizational Commitment.

KEY WORDS: Organizational Commitment, Competitiveness, Small and Medium Enterprises.

INTRODUCCIÓN

El desarrollo de las pequeñas y medianas empresas en nuestros días, requiere de la integración de esfuerzos tanto de los administradores de las entidades como de los trabajadores que laboran en ellas, esto significa el involucramiento de los niveles inferiores, los niveles medios hasta los más altos mandos dentro de la organización, siempre respetando las líneas de autoridad y las actividades encomendadas a cada uno de ellos. Para Betanzos y Paz (2007) lograr la unificación de los individuos con la finalidad de alcanzar los objetivos del ente económico es de trascendental importancia, ya que al existir una relación de empleado-empresa se crean compromisos de correspondencia entre ambas partes, esto se refleja en la organización en una disminución del absentismo, la rotación y una adecuada postura de los empleados hacia la misión y la visión empresarial, mientras que para los trabajadores se generan sentimientos de estabilidad en el trabajo que repercuten en beneficios a corto y largo plazo, tales como alcanzar niveles jerárquicos superiores y procesos de jubilación entre otros.

El mundo actual en el que vivimos obliga a las organizaciones a prepararse para ser competentes ya que día a día las entidades de todas las magnitudes crecen y se desenvuelven en un ambiente de constante lucha entre unas y otras, dónde es lógico entender que aquellas que no están debidamente estructuradas e integradas terminan por desaparecer. Por todo lo anterior es de vital importancia que pequeñas y medianas empresas solidifiquen su estructura, se preparen para hacer frente a la globalización en que nos encontramos sumergidos, ya que de no ser así poco a poco su permanencia en el mercado se irá desvaneciendo, provocando con esto que la estabilidad económica de este sector vaya perdiendo fuerza, ya que por el número existente de este tipo de empresas llegan a ser parte de un gran porcentaje en relación a otro tipo de entidades. Dentro de este proceso se hace necesario analizar el medio en que se desenvuelven las empresas, verificar que alternativas de acción pueden llevar a cabo, clarificar prioridades, buscar e identificar estrategias y a su vez planificar programas de acción viables a corto, mediano y largo plazo. Esto trae como resultado formularse una visión a futuro, ubicar a la entidad en determinado panorama que nos permita plantear situaciones y a su vez proponer soluciones a las mismas, de tal manera que en caso de que tales situaciones se hicieran presentes, los encargados de la empresa estén preparados para responder y darles una solución óptima.

El tomar decisiones estratégicas debe estar basado en procesos de análisis tanto internos como externos. El análisis externo implica la recolección y evaluación de información económica, social, demográfica, política, gubernamental, tecnológica y competitiva, con el objeto de identificar las oportunidades y amenazas claves que afronta una organización. El análisis interno consiste en identificar y evaluar debilidades y fortalezas organizativas en las áreas funcionales de la empresa: gerencia, mercadeo, finanzas, producción, investigación y desarrollo. Por lo tanto es necesario conocer adecuadamente todos los elementos que se tienen a la mano para obtener un juicio debidamente sustentado, ya que una decisión tomada en base al criterio solo de los altos mandos, puede dar como resultado una opción equivocada, por lo que el proceso de planeación estratégica permite a las organizaciones el poder conjugar las opiniones de todos los integrantes de una entidad, obteniendo como resultado en primer lugar, la satisfacción de todos los integrantes por permitirles participar en este proceso y en segundo lugar tener una gama mayor de opciones para tomar en cuenta, es decir diferentes puntos de vista, que en determinado momento pueden ayudar a tomar las decisiones adecuadas y precisas para una situación inesperada.

REVISION LITERARIA

¿Qué Son Las Pequeñas Y Medianas Empresas?

La OIT (Organización Internacional del Trabajo) engloba dentro de este concepto, tanto a empresas modernas, con un máximo de 50 trabajadores, como a empresas familiares en la cual laboran tres o cuatro

de sus miembros. En México, cuándo se trata de reglamentar este tipo de entidades, usualmente se utilizan los montos anuales vendidos y/o el número de personas ocupadas o el valor de sus activos.

¿Cuáles Son Las Características De Las Pequeñas Y Medianas Empresas?

De acuerdo a Méndez (1996) las características generales de este tipo de empresas entre otras son que el capital es proporcionado por una o dos personas, los propios dueños dirigen la marcha de la empresa aplicando una administración de tipo empírico, el número de trabajadores empleados en el negocio va de 16 hasta 250 personas, dominan y abastecen un mercado amplio, aunque no necesariamente tiene que ser local o regional, ya que muchas veces llegan a producir para el mercado nacional e incluso para el mercado internacional.

¿Qué Son Los Planes Estratégicos?

Son los que establecen los lineamientos generales de la planeación, sirviendo de base a los demás planes (tácticos y operativos), son diseñados por los miembros de mayor jerarquía de la empresa y su función consiste en regir la obtención, uso y disposición de los medios necesarios para alcanzar los objetivos generales de la organización, son a largo plazo y comprenden a toda la empresa.

METODOLOGIA

Este estudio esta orientado a investigar hasta que punto llevan a cabo el proceso de planeación estratégica las pequeñas y medianas empresas, determinando los resultados obtenidos y analizando las causas por las que otras entidades similares no han implementado este sistema dentro de sus organizaciones.

La metodología que se ha seguido en el desarrollo de este estudio ha consistido en la recopilación y clasificación de información documental sobre estas entidades desde un ámbito internacional hasta llegar al plano local, ya que esto permite compilar resultados y obtener similitudes y diferencias entre las mismas. Así mismo, se han efectuado visitas a las diversas organizaciones en las que se ha observado directamente la manera en que es aplicada la administración y dentro de la misma la planeación, la fijación de objetivos a corto, mediano y largo plazo.

RESULTADOS

Cuándo una pequeña y mediana empresa ha desarrollado el proceso de planeación estratégica es interesante conocer que modificaciones ha efectuado en su estructura y en la forma de organizarse internamente, analizar de que manera se toman las decisiones después de aplicar el proceso y que cambios se han dado en el ambiente organizacional, consistente en verificar las actitudes de los integrantes de todos los niveles de la entidad, una vez que estos se sientan plenamente identificados con la misión y la visión de la empresa. Los resultados obtenidos de esta investigación servirán de propuesta, para que otras empresas similares adopten este tipo de proceso dentro de su organización. Se propondrá a los dueños, gerentes y directivos el establecimiento del proceso de planeación estratégica, así como su difusión en todos los niveles de la entidad, asegurando con esto beneficios a corto, mediano y largo plazo. El proceso de planeación estratégica da la oportunidad a las organizaciones de tener un mayor grado de pertenencia en el ambiente en que se desenvuelven, por lo que su implementación es de vital importancia para las mismas.

CONCLUSIONES

La globalización ha provocado que las pequeñas y medianas empresas se encuentren en un ambiente altamente competitivo, por lo que es necesario que los directivos busquen la manera de que todo el personal de sus organizaciones se comprometa con el logro de los objetivos y las metas fijadas a

diferentes plazos. El proceso de planeación estratégica permite que los integrantes de todos los niveles participen en la búsqueda de los mismos, ya que una vez que éstos se obtienen el sentido de pertenencia en el personal aumenta de tal manera que se produce un cambio benéfico para la organización completa. Lograr la implantación y desarrollo de este proceso significa una gran oportunidad de que las entidades logren los objetivos para lo cuál fueron creadas, coadyuvando a un mejoramiento del entorno económico en que se desenvuelven.

María del Carmen Ancona Alcocer, Universidad Juárez Autónoma de Tabasco
Olga Beatriz Sánchez Rosado, Universidad Juárez Autónoma de Tabasco

RESUMEN

La Universidad Juárez Autónoma de Tabasco (UJAT) tiene una gran tradición y compromiso con los problemas sociales de su entorno. El estudio tiene como objetivo realizar una descripción de la vinculación que se da en la División Académica de Ciencias Económico Administrativas (DACEA) de la Universidad Juárez Autónoma de Tabasco en México, a través de las prácticas profesionales y el servicio social como una estrategia importante de generar competencias profesionales en disciplinas que requieren de este aspecto para el desarrollo de la profesión. Se plantea un diseño no experimental descriptivo que empleó principalmente fuentes secundarias de información y como técnica la revisión documental sobre la temática expuesta. Este trabajo remarca la importancia de la vinculación en la práctica profesional de la UJAT en la DACEA, ya que a través del empleo de alumnos se proponen elementos de discusión como es la vinculación del alumno con las empresas, industria y sociedad.

ABSTRACT

Independent the Universidad Juárez Autónoma de Tabasco (UJAT) has a great tradition and commitment with the social problems of its surroundings. This study must like objective make a description of the entailment that occurs in the Academic Division of Ciencias Económico Administrativas (DACEA) of Independent the Juárez University of Tabasco in Mexico, through the professional practices and the social service like a strategy important to generate professional competitions in disciplines that they require of this aspect for the development of the profession. A descriptive nonexperimental design considers that mainly used secondary sources of information and like technique the exposed documentary revision on the thematic one. This work remarks the importance of entailment actually professional of UJAT in DACEA, since through use of students discussion elements set out as it is the entailment of the student with the companies, trains and society.

INTRODUCCIÓN

En los años noventa que se empieza a hablar e de la importancia de fomentar las interacciones dinámicas entre la universidad, sociedad y gobierno para acceder a la innovación y al desarrollo económico de las sociedades. Según Loaiza, Giugni y Monguet (2009), es evidente que el desarrollo científico y tecnológico es un factor potencial para el crecimiento económico y social de cualquier país. De manera que, el valor productivo que está inmerso se basa en el desarrollo de nuevos conocimientos e innovaciones, producto

de procesos de investigación orientados a incrementar la capacidad tecnológica. En este sentido, las universidades tienen un rol protagónico, al ser el centro de mayor concentración de potencial de investigación, por lo tanto, se convierten en medios de apoyo a la sociedad para impulsar su crecimiento económico. Según Gorostiaga (2000), la educación superior es más esencial que nunca para la formación de recursos humanos capaces de confrontar constructivamente una globalización dominada por la intensidad del conocimiento y la competitividad internacional.

REVISIÓN LITERARIA

Según Vilera (2004), las nuevas realidades culturales/sociales de hoy día dan cuenta de un nuevo proceso en las civilizaciones y generan la necesidad de cambiar los modos de pensar, de conocer, de vivir y, por consiguiente, de formarse profesionalmente. Esas situaciones tocan, inevitablemente, a todos los ámbitos profesionales y de formación universitaria. Para el caso específico del profesional de la docencia, hoy se debe reevaluar el tipo de misión y visión social que le ha caracterizado. En las universidades, tradicionalmente se ha mantenido una alta atención en cuanto a la formación integral del estudiante. Es así que los programas educativos se orientan a cubrir los requerimientos y expectativas sociales para formar profesionales y ciudadanos con cualidades de autocrítica, propositivos, emprendedores y responsables, motivo por el cual las disciplinas económico administrativas están obligadas a dar flexibilidad a los programas que operan en favor de una educación basada en competencias, mismas que pretende adquirir a través de la figura de la práctica profesional, de ahí que radique la importancia de este proceso como factor de transformación en el proceso de enseñanza aprendizaje de estas disciplinas.

El Concepto De Práctica Profesional

La Práctica Profesional, en la Universidad Juárez Autónoma de Tabasco (UJAT), es una estancia temporal, con carácter obligatorio, que permite al estudiante incorporarse profesionalmente a los sectores productivos de bienes y servicios a través del desarrollo de actividades que deberá cumplir con un programa de trabajo acorde al perfil de su Licenciatura, asesorado académicamente. Esta actividad es un medio de vinculación del conocimiento teórico con diversas experiencias prácticas proporcionándole al alumno una experiencia real con beneficios para él y la empresa (Universidad Juárez Autónoma de Tabasco [UJAT], 2006a). De acuerdo al artículo 34 del Reglamento de Servicio Social y Práctica Profesional de la UJAT (UJAT, 2006a), la práctica profesional, estancia industrial y estancia profesional, hacen referencia a las actividades que realiza el alumno fuera del aula, en el campo de trabajo propio de la profesión, que propician el desarrollo o adquisición de competencias profesionales. Se conciben como una demostración de competencias, habilidades, destrezas, conocimientos, aptitudes y actitudes en función del perfil del egresado, y se desarrollan sobre la base de un conjunto de experiencias de aprendizaje integradoras de carácter sistémico, progresivo y acumulativo que en su conjunto le permiten al sujeto en formación la intervención profesional de la realidad social, a fin de construir una praxis que consolide el perfil profesional del egresado.

En la UJAT, de acuerdo con los artículos 3, 5 y 6 del Reglamento de Servicio Social y Práctica Profesional (UJAT, 2006a) la práctica profesional es la realización temporal y obligatoria de actividades curriculares del Área de Formación Transversal, conforme lo contempla el Modelo Educativo Flexible, que llevan a cabo los alumnos inscritos en las licenciaturas de la Universidad, en beneficio e interés de la sociedad, mediante la aplicación de los conocimientos adquiridos, como uno de los requisitos para la obtención del título profesional, se llevará a cabo de conformidad con los programas que para tal fin aprueben los Consejos Divisionales, deberán estar estrechamente vinculadas con el plan de estudio de la licenciatura respectiva y ser acordes con el perfil profesional. Toda profesión o carrera es un fenómeno sociocultural formado por dos grandes componentes, según Gómez (1982, citado por Bedolla, 2009). El primero consiste en el conjunto de conocimientos y habilidades que objetiva y legítimamente pertenece a determinada disciplina o práctica profesional. El segundo es el conjunto de conocimientos, habilidades,

tradiciones, costumbres y prácticas que dependen del contexto económico, social y cultural en que surge y se desarrolla una profesión u oficio. Estos son componentes de carácter particular. Por consiguiente toda profesión y práctica profesional asume tanto características universales y necesarias, como particulares y relativas a su desarrollo histórico en una sociedad determinada.

La práctica profesional, según Vargas (2010), el o la estudiante tiene la oportunidad de confrontar la teoría con la práctica, al insertarse en un contexto empresarial. Durante esta etapa, el o la estudiante tiene la responsabilidad de cumplir con un horario establecido, elaborar y ejecutar un planeamiento didáctico para demostrar, en la práctica, conocimiento, apropiación metodológica, manejo de grupo e interacción armoniosa con los demás actores de la comunidad educativa y, todavía, trascender el espacio áulico mediante la realización de un taller de extensión dirigido a la comunidad educativa.

Otro enfoque lo proporciona Bedolla (2007), que conceptualiza la práctica profesional como un conjunto de actividades que son productivas determinadas y desarrolladas con cierto grado de especialidad en una rama de la producción, y está regida por el desarrollo de las fuerzas productivas, además de caracterizarse por un saber y hacer específicos, lo cual permite a los estudiantes formas de participación en su profesión de forma dinámica. Los cambios en las prácticas profesionales son el resultado de los cambios que desde hace mucho tiempo se han venido dando en los ya sea en los modelos tecnológicos y en los sistemas de producción, los cuales se expresan como modificaciones en las habilidades y destrezas que poseen los estudiantes que realizan esa práctica profesional y en los instrumentos necesarios para realizar su trabajo. La formación continua va acompañada de transformaciones de la identidad, y es mucho más que saber elegir con discernimiento entre varios catálogos. De aquí se desprenden las siguientes competencias necesarias para el que ejerce las prácticas: saber explicar sus prácticas, establecer un control de competencias y un programa personal de formación continua propios, negociar un proyecto de formación común con los compañeros, implicarse en las tareas a nivel general de la enseñanza o del sistema educativo, aceptar y participar en la formación de los compañeros (Ortega y Ortega, 2011, p. 293).

Las prácticas profesionales se caracterizan entonces por la prestación de servicios por parte de los estudiantes, intercambios y eventos, que contemplan convenios con los municipios de los estados, organismos gubernamentales y empresas privadas así como apoyo a las comunidades con muchas necesidades; estas prácticas forman parte de los planes y programas muchas las universidades, especialmente en el caso de la Universidad Juárez Autónoma de Tabasco debido a que forman parte de sus políticas organizacionales, gestionando ante todas las instancias en el seno de las instituciones para la integración, cooperación y apoyo al desarrollo social y económico de las entidades sobre todo en la capital y sus municipios para poder darle atención a necesidades de los individuos promoviendo la formación de buenos profesionistas ante empresarios, representantes de entes públicos o privados, representantes de gobierno. Para la UJAT, práctica profesional, estancia industrial y estancia profesional, hacen referencia a las actividades que realiza el alumno fuera del aula, en el campo de trabajo propio de la profesión, que propician el desarrollo o adquisición de competencias profesionales (UJAT, 2006a). Se conciben como una demostración de competencias, habilidades, destrezas, conocimientos, aptitudes, actitudes en función del perfil del egresado y se desarrollan sobre base de un conjunto de experiencias de aprendizaje, integradoras de carácter sistémico, progresivo y acumulativo, que en su conjunto le permiten al sujeto en formación la intervención profesional de la realidad social, a fin de construir una praxis, que consolide el perfil profesional del egresado.

La Práctica Profesional es más que un simple requisito para egresar de la carrera, ya que puede ser una gran oportunidad para trazar el camino profesional porque muchos de los estudiantes, que demuestran capacidad, entrega y profesionalismo, han logrado ser contratados en las empresas en las que iniciaron realizando sus prácticas. Por otra lado algunas organismos y/o empresas acostumbran a proporcionar una especie de “beca” a los practicantes lo cual constituye un importante estímulo para que los estudiantes tengan un mayor compromiso laboral. De igual manera es importante para los empresarios que los

jóvenes puedan dedicar de cuatro horas diarias o más a la citada actividad, realizando muchas veces media jornada laboral, lo cual les da la oportunidad a los practicantes de desarrollar actividades con mayor grado de responsabilidad.

Responsabilidad Social De La Universidad

La universidad tiene que enfrentar retos de una forma universitaria, evitando convertirse en un instrumento que reproduzca las causas y las condiciones de ingobernabilidad y de insostenibilidad del crecimiento económico, que al mismo tiempo alimenta las estructuras antidemocráticas de concentración y exclusión de la estructura política (Buarque, 1991). De acuerdo con Gorostiaga (2000). El proceso de globalización actual, irreversible aparentemente, ofrece un gran potencial de crecimiento económico para los que tienen capacidad competitiva, pero excluye en forma creciente a los que no la tienen. El determinante principal de la pobreza moderna no es la falta de recursos naturales, ni la marginalización geográfica, sino la capacidad del capital humano para generar valor agregado a través de la capacidad organizativa y la creatividad para atraer inversiones e incorporar tecnología. La relación de este tipo de desarrollo con la educación es más alarmante, puesto que la concentración y la centralización de los recursos educativos, de la calidad de la educación y de la tecnología es todavía mayor que las de los ingresos. Axel Didriksson, en "La universidad del conocimiento: una visión de futuro desde el 2010", apunta como eje reflexivo la posibilidades de construir un proyecto de futuro, necesario y urgente, ante la falta de un proyecto educativo y universitario de largo plazo, alternativo y que responda a las tendencias de cambio más importantes que están ocurriendo en el país; subraya la importancia de las funciones y responsabilidades de las instituciones sociales que tienen como meta formar generaciones en tiempos muy largos con una visión de anticipación que muestre un alto nivel de coherencia en la toma de decisiones relevantes, como las relativas a los aprendizajes, la currícula, los proyectos de investigación, el conocimiento, entre otros, contra la cultura de la inmediatez, de la urgencia que caracteriza las acciones de los actores políticos (Martínez y Padilla, 2010).

De acuerdo con Procint, (1993), citado por Perozo (2009) cabe destacar la importancia que tienen los desempeños de los actores sociales en atención a las actividades, acciones de cooperación y gestión orientadas al desarrollo social. Lo cual permite, dar respuestas institucionales y personales, a los requerimientos e intereses de los seres humanos que conforman un país, una región, una localidad, quienes buscan conformar alianzas estratégicas en procura de la construcción y soluciones de las comunidades, al atender y dar respuesta, condicionando los instrumentos y recursos con los que se cuenta en la institución educativa u otra comunidad, empresa, ente gubernamental e interesados, en los resultados de satisfacción social, atendiendo políticas organizacionales, en aras de una mejor calidad de vida y productividad. Dado que la universidad se encuentra inmersa en la sociedad, en relación dinámica con ésta, en un diálogo permanente y recíproco, cabe señalar que ésta cumple una función social; en consecuencia sostenemos que la actividad universitaria no puede centrarse exclusivamente a la práctica académica, sino que la gestión socialmente responsable de la universidad se traduce en una suma de esfuerzos colectivos, que implica la gestión de organización misma, de la formación académica, de la producción del saber y de la participación, orientada al desarrollo humano sostenible, en virtud de lo cual involucra diferentes actores sociales y matices tanto económicos, sociales, éticos y filosóficos (Castañeda, Ruiz, Vilorio, Castañeda y Quevedo, 2007).

De acuerdo con Perozo (2009, p. 248), la universidad a nivel mundial es considerada la más elevada estructura de la sociedad, teniendo como verdadero papel el nutrir o ayudar al medio social, con lo más nuevo y actual en áreas de conocimientos, al igual que el suministro de instrumentos más útiles a los actores de la comunidad. De este modo, ella actúa mejorando la calidad de vida de la población, permitiendo la ayuda mutua entre los hombres, lo cual está caracterizado como un componente esencial de estrategias de desarrollo e investigación, comportándose como elemento nucleador, para la atención de necesidades, generando nuevos patrones de productividad y competitividad, impuestos por los avances

tecnológicos y la disponibilidad de personal universitario calificado. El compromiso que tiene la universidad con el país encuentra en las actividades de extensión, una vía para construir un camino a través de la capacitación en participantes no regulares de la institución. Para ello se tienen que administrar talleres por toda la nación, para motivar y hacer alianzas, entre los actores sociales regionales y locales, a manera de estimular la participación colectiva y con esto mejorar la calidad de vida de la nación (Perozo2009).

Vinculación De La UJAT

Según el Plan de Desarrollo Institucional 2008-2012 vigente en la institución (UJAT, 2008), la vinculación en la Universidad Juárez Autónoma de Tabasco es concebida como una función de carácter estratégico, por representar un puente sólido entre el conocimiento y el desarrollo económico y social local, regional y nacional. La vinculación juega un papel preponderante ya que constituye una función articuladora entre el conocimiento generado por profesores investigadores y alumnos. Así, a través de la productividad de nuestra comunidad científica, la Universidad Juárez Autónoma de Tabasco contribuye con valiosas aportaciones para la solución de problemas y la propuesta de prácticas innovadoras de desarrollo. Uno de los propósitos fundamentales de vinculación se concreta en la colaboración de la comunidad universitaria para elevar la competitividad estatal, regional y nacional, a fin de cerrar las brechas existentes con sistemas de países desarrollados. Dicha vinculación deberá aportar elementos necesarios para la formación de generaciones preparadas con nuevas competencias y nuevos conocimientos e ideales, fomentará la realización de acuerdos de cooperación eficaces y alianzas estratégicas, que promuevan en todo momento el intercambio de conocimientos y la cooperación nacional e internacional entre diversas instancias, públicas, sociales o privadas, con énfasis en la innovación las necesidades externas y el conocimiento generado por profesores investigadores y alumnos a través de los programas de vinculación se generarán posibilidades de empleo para alumnos y egresados de la Universidad que repercutan en el bienestar de sus familias, brindando a los estudiantes la oportunidad de desarrollar plenamente sus propias capacidades con sentido de responsabilidad social.

La educación superior en México ha dado pruebas de viabilidad a lo largo de su existencia y de su capacidad de propiciar el cambio y el progreso de la sociedad, por lo que la vinculación tiene un papel preponderante al momento de constituirse como enlace entre la investigación, la ciencia, la tecnología y el desarrollo sostenible; generando sentido de pertinencia para la adecuación entre lo que la sociedad espera de las instituciones y lo que éstas realizan.

Perozo (2009) sostiene la importancia de realizar propuestas de proyectos de desarrollos locales entre Universidad-Gobierno-Industria, actividades y directrices para que se oriente a la gestión y cooperación, de modo que se puedan reforzar y cumplir con los objetivos de las personas, las comunidades e instituciones, con el apoyo empresarial del sector público y privado, utilizando para ello, las diversas posibilidades del Estado y los particulares, asumiendo la importancia de lo técnico-científico, orientados a bienes y servicios en aras de la búsqueda de mejoras en la calidad de vida y el fortalecimiento de áreas consideradas prioritarias por los actores sociales involucrados. El profesional debe ser capaz de funcionar tanto como un ser integrado como integrador. Para esto requiere una competencia que surge de un deliberado y mutuo engranaje de sus propios objetivos y capacidades de actuación, de modo que sus objetivos correspondan a sus competencias, a sus propios sentimientos y preferencias, siendo capaz de ajustar adecuadamente sus propios valores y normas, y su influencia sobre sus acciones y esfuerzos (Lobato, 2002). Otra parte importante de la vinculación en la UJAT, la constituyen los convenios de colaboración, ya que la importancia de mantener vínculos estrechos con otras Instituciones de Educación Superior, y organismos públicos o privados, resalta la cooperación mutua en materia educativa, científica y cultural en algunos casos, y en otros los apoyos directos tanto financieros como en especie, para fortalecer la formación del estudiante o contribuir al desarrollo de investigaciones, específicamente; de

ahí que el Sistema Institucional de Vinculación de la Universidad es un importante impulsor para lograr estimular las respuestas de la comunidad universitaria para la sociedad (UJAT, 2006b).

Universidad Y Mercado

La experiencia histórica indica que las universidades no pueden transformarse sólo ellas mismas para cumplir esta misión. Necesitan la innovación y la capacidad competitiva de los agentes sociales y del propio mercado para conseguir ser socialmente pertinentes. Esta relevancia y pertinencia social, por otro lado, puede crear el apoyo político y financiero por parte del Estado, de la sociedad civil y del mercado, al mismo tiempo que la universidad se convierte en un ejemplo social de transparencia y de la tan necesitada rendición de cuentas a la sociedad (*social accountability*). (Gorostiaga, 2000). La Universidad tiene que construir al país, a la sociedad, concertando con las partes involucradas, las internas y las externas, bajo la idea de responsabilidad como compromiso, identificando y comprendiendo los efectos de sus acciones, la noción de impactos; compromiso para concertar y responder con las partes interesadas, el diálogo; compromiso para rendir cuenta de las decisiones, la transparencia de las acciones y dar respuestas a los problemas que se presentan en la sociedad, cumpliendo con lo declarado y pactado en su misión y visión, consciente de que a diferencia de las empresas, el estudiante no es un cliente que compra un producto, sino que constituye el producto final (Castañeda et al., 2007). De acuerdo con Marín (2003), citado por Mújica, García, Marín, y Pérez (2006, p.164), en el contexto de la relación universidad - sector productivo, entendiéndose éste como todo tipo de actividades que se realizan fuera de la universidad, presenta un escenario pertinente para la transferencia, producción y capitalización del conocimiento, con la finalidad de ir creando una infraestructura de sustento que permita compartir capital intelectual como producto final de los procesos de relación interorganizacional. Por eso es importante que los universitarios estén preparados de la mejor manera, para que puedan insertarse fácilmente en el mercado laboral y una excelente oportunidad para lograrlo es a través de la realización de una buena práctica profesional.

METODOLOGÍA

El estudio tiene como objetivo realizar una descripción de la vinculación que se da en la División Académica de Ciencias Económico Administrativas (DACEA) de la Universidad Juárez Autónoma de Tabasco en México, a través de las prácticas profesionales y el servicio social como una estrategia importante de generar competencias profesionales en disciplinas que requieren de este aspecto para el desarrollo de la profesión. Se plantea un diseño no experimental descriptivo que empleó principalmente fuentes secundarias de información y como técnica la revisión documental sobre la temática expuesta.

RESULTADOS

Cada seis meses en la División Académica de Ciencias Económico Administrativas (DACEA) en promedio 286 estudiantes inician el proceso para realizar su práctica profesional. Sin embargo, tal vez por el poco tiempo que tiene la actividad dentro de la currícula, muchos estudiantes no han dimensionado la importancia y el significado de esta etapa en su preparación. La Práctica Profesional es pues más que un simple paso para egresar de la carrera, es más que cumplir un requisito de 480 horas en servicio. Por otra parte también algunas empresas acostumbran a proporcionar un pequeño apoyo económico a los practicantes lo cual es un importante estímulo para que los beneficiarios tengan un mayor compromiso laboral. Asimismo es interesante para los empresarios que los jóvenes puedan dedicar de cuatro y hasta ocho horas diarias a la citada actividad, realizando así una jornada laboral completa. Es decir como si fueran empleados de base lo cual les da la oportunidad de desarrollar actividades con mayor grado de responsabilidad. En la tabla 1 se presentan los resultados por programa educativo y el tipo de sector en que los estudiantes realizaron la práctica profesional para el año 2008.

Tabla 24: Estudiantes inscritos en prácticas profesionales 2008

Programa Educativo	Sector Productivo	Sector Educativo	Sector Público
Licenciatura en Administración	103	8	37
Licenciatura en Contaduría Pública	127	2	17
Licenciatura en Relaciones Comerciales	43	5	25
Licenciatura en Economía	4	1	24

Fuente: Elaboración propia tomado de la base de datos de prácticas profesionales de la DACEA-UJAT

Se puede apreciar que el mayor porcentaje en el sector productivo lo refleja la licenciatura en Contaduría Pública (41%), mientras que para el sector educativo (3%) y el público (34%) de manera coincidente es la licenciatura en Administración. De manera general el sector con mayor participación en este período fue el sector productivo. En la tabla 2 se presentan los resultados por programa educativo y el tipo de sector en que los estudiantes realizaron la práctica profesional para el año 2009.

Tabla 25: Estudiantes inscritos en prácticas profesionales 2009

Programa Educativo	Sector Productivo	Sector Educativo	Sector Público
Licenciatura en Administración	91	29	97
Licenciatura en Contaduría Pública	122	15	87
Licenciatura en Relaciones Comerciales	68	19	56
Licenciatura en Economía	15	13	38

Fuente: Elaboración propia tomado de la base de datos de prácticas profesionales de la DACEA-UJAT

Se puede apreciar que el mayor porcentaje en el sector productivo lo refleja la Licenciatura en Contaduría Pública (40%), mientras que en el sector educativo (9%) , el mayor porcentaje lo presenta la Licenciatura en Administración al igual que en el sector público (32%). Nuevamente en este año es el sector productivo quien refleja un mayor porcentaje de participación. En la tabla 3 se presentan los resultados por programa educativo y el tipo de sector en que los estudiantes realizaron la práctica profesional para el año 2010.

Tabla 26: Estudiantes inscritos en prácticas profesionales 2010

Programa Educativo	Sector Productivo	Sector Educativo	Sector Público
Licenciatura en Administración	49	62	130
Licenciatura en Contaduría Pública	65	23	109
Licenciatura en Relaciones Comerciales	28	14	81
Licenciatura en Economía	2	9	38

Fuente: Elaboración propia tomado de la base de datos de prácticas profesionales de la DACEA-UJAT

En la tabla 3 se observa que en el sector productivo se reporta el mayor porcentaje en la Licenciatura en Contaduría Pública (21%), mientras que en el sector educativo (20%) la licenciatura en Administración es la de mayor porcentaje al igual que en el sector público (42%). En este año es el sector público el que refleja una mayor participación de los estudiantes para la realización de prácticas profesionales. En la tabla 4 se presentan los resultados por programa educativo y el tipo de sector en que los estudiantes realizaron la práctica profesional para el año 2011.

Tabla 27: Estudiantes inscritos en prácticas profesionales 2011

Programa Educativo	Sector Productivo	Sector Educativo	Sector Público
Licenciatura en Administración	36	52	122
Licenciatura en Contaduría Pública	78	20	136
Licenciatura en Relaciones Comerciales	16	7	79
Licenciatura en Economía	14	23	82

Fuente: Elaboración propia tomado de la base de datos de prácticas profesionales de la DACEA-UJAT

En el año 2011 el sector productivo refleja mayor representatividad de la Licenciatura en Contaduría Pública (25%), en el sector educativo el mayor porcentaje es en la Licenciatura en Administración (17%), y nuevamente en el sector público es la Licenciatura en Contaduría Pública la que mayor presencia refleja (10%). En términos generales nuevamente se repite la tendencia del año anterior en donde el sector público refleja una mayor participación de los alumnos. Un análisis del crecimiento del programa es un indicador de la participación cada vez más activa de los estudiantes en el sector público, producto de la economía del estado basada cada vez menos en el sector empresarial (Ver tabla 5).

Tabla 28: Estudiantes inscritos en prácticas profesionales por sector de participación.

Sector de participación	2008	2009	2010	2011
Sector Público	169	278	358	419
Sector Educativo	16	68	108	102
Sector Privado	211	296	144	144

Fuente: Elaboración propia tomado de la base de datos de prácticas profesionales de la DACEA-UJAT

En la figura 1 se puede apreciar este crecimiento con mayor detalle.

Figura 11: Estudiantes inscritos en prácticas profesionales por sector de participación.

Fuente: Elaboración propia tomado de la base de datos de prácticas profesionales de la DACEA-UJAT

La gráfica ilustra de manera general cómo ha ido aumentando la participación de los estudiantes tanto en el sector público en el educativo, sin embargo el sector privado ha visto disminuida su participación por parte de los estudiantes. Es imperativo determinar las causas por las que los estudiantes han optado por el sector público como una opción de práctica en lugar del sector empresarial que podría brindarles la oportunidad de poner en práctica los conocimientos que se adquieren en las aulas, especialmente el área de contaduría pública que refleja los mayor porcentajes de participación tanto en el sector público como privado. El análisis por programa educativo, es solo un indicador de la matrícula que registra cada programa, sin embargo es relevante analizar el crecimiento que ha tenido cada programa por cada uno de los sectores (Tabla 6).

Tabla 29: Estudiantes inscritos en prácticas profesionales por sector de participación en el período 2008-2011.

Programa Educativo	2008			2009			2010			2011		
	Sector Público.	Sector Educativo	Sector Privado	Sector Público.	Sector Educativo	Sector Privado	Sector Público	Sector Educativo	Sector Privado	Sector Público.	Sector Educativo	Sector Privado
Licenciatura en Administración	103	8	37	97	29	91	130	62	49	122	52	36
Licenciatura en Contaduría Pública	17	2	127	87	15	122	109	23	65	136	20	78
Licenciatura en Relaciones Comerciales	25	5	43	56	19	68	81	14	28	79	7	16
Licenciatura en Economía	24	1	4	38	5	15	38	9	2	82	23	14

Fuente: Elaboración propia tomado de la base de datos de prácticas profesionales de la DACEA-UJAT

Otra información que aporta al análisis de datos son los convenios que se firmaron por cada sector en cada uno de los años que conformaron el rango de evaluación del estudio (Tabla 7)

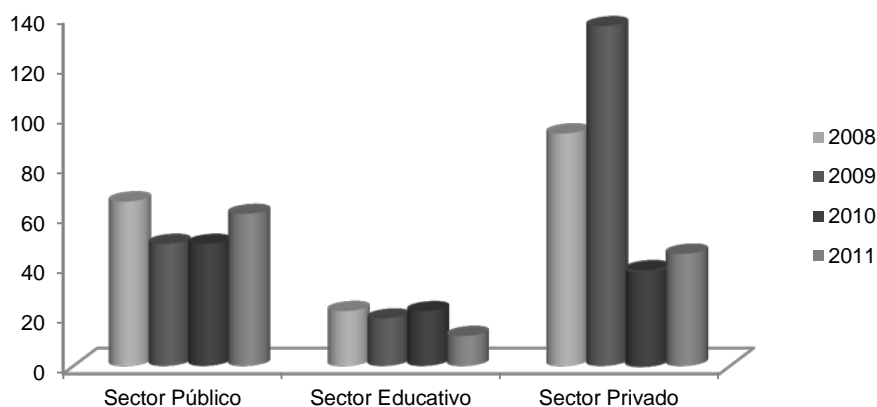

Tabla 30: Convenios firmados para la realización de prácticas profesionales con diversos organismos de los tres sectores en el período 2008 - 2011.

Sector de participación	2008	2009	2010	2011
Sector Público	66	49	49	61
Sector Educativo	22	19	22	12
Sector Privado	93	136	38	45

Fuente: Elaboración propia tomado de la base de datos de prácticas profesionales de la DACEA-UJAT

En la tabla 7 se puede apreciar con claridad que en los años 2008 y 2009, fue el sector productivo el que gozó de un mayor número de convenios con la institución para la realización de las actividades de los alumnos lo que permitió que se reflejara también en su participación, sin embargo los siguientes años fue el sector público el que reflejó un mayor número de convenios de participación lo que también mostró un efecto en las opciones que tuvieron los alumnos para la realización de sus prácticas profesionales (Figura 2).

Figura 12: Convenios firmados para la realización de prácticas profesionales con diversos organismos de los tres sectores en el período 2008 - 2011.

Fuente: Elaboración propia tomado de la base de datos de prácticas profesionales de la DACEA-UJAT

La figura 2 permite como los convenios de colaboración pueden ser un indicador de las actividades que se obliga la institución a fomentar y poder brindar los espacios requeridos para que esta tarea permita cumplir su función en el proceso de enseñanza aprendizaje en áreas profesionalizantes.

CONCLUSIONES

La Universidad Juárez Autónoma de Tabasco (UJAT) tienen una gran tradición y compromiso con los problemas sociales de su entorno, debido a esto se implementa la práctica profesional en la currícula de las licenciaturas de la División Académica de Ciencias Económico Administrativas (DACEA) con la finalidad de fortalecer la formación integral de los alumnos y para proporcionar un beneficio de la sociedad mediante la aplicación de conocimientos adquiridos de los estudiantes. Las acciones de vinculación en la UJAT se desarrollan bajo estrategias de planeación que permiten ejecutar las mejores acciones, enfatizando como elemento clave, la sensibilización, interacción y conectividad de los actores sociales, los cuales son los estudiantes por lo que se encaminan hacia la ejecución de políticas viables que fortalecen a la sociedad. Las acciones de vinculación, basadas en las capacidades innovadoras de los académicos y alumnos de la UJAT, han propiciado un desarrollo de las capacidades y recursos del estado de Tabasco y de la universidad lo cual ha traído como resultado un fortalecimiento en la economía y el bienestar de las familias en un entorno de desarrollo en el estado.

Esta vinculación es tan importante como lo es la formación, la enseñanza y los nuevos modos de aprender así como la vinculación con las empresas, sociedad y estado que requiere de proyectos, planes y programas orientados según políticas educativas integradas a las necesidades institucionales, comunitarias, locales, regionales y nacionales. El que la universidad sea considerada como institución de referencia, requiere de la misma, un constante y permanente trabajo de actualización, además de la política organizacional, que la sostenga como líder institucional, con ascendencia en su entorno, mediante proyectos locales entre ella y el gobierno e industrias (Perozo, 2009).

Queda como una reflexión para los gestores de la vinculación, la consideración de un mayor número de acuerdos formales con los sectores involucrados a fin de permitir ampliar las opciones que los alumnos valoran en cada período con la finalidad de cumplir los objetivos de las prácticas profesionales en áreas que requieren de competencias específicas antes de poder ingresar de manera formal al mercado laboral. La universidad debe pensar de igual forma que la práctica profesional no es la única opción para lograr una vinculación de manera sostenida con la sociedad, las empresas y el estado, sino que se convierte en una herramienta más en este proceso de retroalimentación continua que debe existir entre estos tres actores a fin de cumplir con la función social del entorno universitario.

COMERCIO ELECTRÓNICO COMO FACTOR COMPETITIVO EN LAS MICRO, PEQUEÑAS Y MEDIANAS EMPRESAS DEL SECTOR COMERCIAL EN EL ESTADO DE DURANGO

Ernesto Geovani Figueroa González UJED
Flor Isela Hernández Cantú UJED
María Brenda González Herrera UJED
Delia Arrieta Díaz UJED

RESUMEN

Esta investigación tiene por objetivo el análisis del comercio electrónico, como factor competitivo para las micro, pequeñas y medianas empresas, dentro del sector comercial del Estado de Durango. Para lograr el objetivo, se realizaron entrevistas con empresarios del sector ya mencionado, y así recabar la información necesaria para obtener un panorama sobre la situación con respecto a la aplicación del comercio electrónico y si éste puede ser considerado un factor competitivo para las MIPyMES. Durante el proceso de la investigación se tienen como resultados, que el comercio electrónico es poco aplicado en estas MIPyMES. Se desprenden líneas de investigación, que buscan favorecer en determinados aspectos al comercio electrónico, con la finalidad de que se le pueda dar una aplicación efectiva, y así las MIPyMES, estén en condiciones de tener una ventaja competitiva para su desarrollo.

PALABRAS CLAVE: Comercio electrónico, factor competitivo, MIPyMES

ELECTRONIC COMMERCE AS A COMPETITIVE FACTOR IN THE MICRO, SMALL AND MEDIUM ENTERPRISES OF THE BUSINESS SECTOR IN THE STATE OF DURANGO

ABSTRACT

This study aims at the analysis of electronic commerce as a competitive factor for micro, small and medium companies in the business sector in the State of Durango. To achieve the objective, interviews were conducted with entrepreneurs of this sector already mentioned, and thus obtain the information necessary to obtain an overview of the situation regarding the application of electronic commerce and whether it can be considered a competitive factor for MSMEs. During this research process has as a result, that electronic commerce is not widely applied in MSMEs. Lines of research emerge that seek to promote certain aspects of electronic commerce in order that they can give effective implementation, and so MSMEs are able to have a competitive advantage for its development.

JEL: M15

KEY WORDS: Electronic commerce, competitive factor, MSMEs.

INTRODUCCIÓN

Las micro, pequeñas y medianas empresas (MIPyMES), de acuerdo con datos del Instituto Nacional de Estadística Geografía e Informática (2009), tienen una gran importancia en la economía, en la generación de empleo a nivel nacional y regional, tanto en los países industrializados como en los de menor grado de

desarrollo. Así mismo, las MIPyMES representan a nivel mundial el segmento de la economía que aporta el mayor número de unidades económicas y personal ocupado, de ahí la relevancia que reviste este tipo de empresas y la necesidad de fortalecer su desempeño, al incidir estas de manera fundamental en el comportamiento global de las economías nacionales; de hecho, en el contexto internacional se puede afirmar que al menos el 90% de las unidades económicas totales está conformado por la MIPyMES.

Parte fundamental en las MIPyMES, son las tecnologías de información y comunicación un ejemplo es el comercio electrónico ya que ha permitido ampliar los canales tradicionales usados para proveer de bienes y servicios a un mercado de consumidores cada vez más en crecimiento, además de que provee la herramienta para adentrarse a mercados más extensos y globalizados.

Por otro lado es importante saber que el Internet se ha convertido en la espina dorsal de estas tecnologías pues ha experimentado un rápido crecimiento en cuanto a su uso y exploración, llegado a ser un recurso comercial global que da lugar a nuevas y numerosas industrias y la reconfiguración de las ya establecidas, por lo que para tener éxito en la actualidad las empresas tiene que aprovechar esta tecnología, pues provee una herramienta para tener una relación más cercana con el cliente. Es por esto que el comercio electrónico es una pieza fundamental, para las organizaciones mercantiles.

Lo anterior representa una ventaja competitiva es decir, lo que hace diferenciarse a las empresas de sus competidores de una manera favorable, pues la implantación de la tecnología, es un factor que en los tiempos actuales se traduce en un gran éxito para las empresas. Las MIPyMES son importantes para el desarrollo económico de las naciones, por la gran cantidad de empleos que generan, igualmente representan un factor económico benéfico para México, también para el Estado de Durango, es por esto que es necesario realizar investigaciones, que permitan conocer la situación de estas empresas y que es lo que aportan al estado, a fin de estar en condiciones de evaluarlas y diagnosticarlas como apoyo para que continúen con su crecimiento. De acuerdo con un estudio realizado por el Centro Empresarial de Durango (COPARMEX) en el año 2010, las que en realidad sostienen la economía de la entidad, a pesar de la falta de atención son las MIPyMES, ya que estas canalizan al estado millones de pesos, así como empleos. Por lo anterior el presente estudio tiene la finalidad de realizar un análisis del comercio electrónico como un factor competitivo para las micro, pequeñas y medianas empresas del sector comercial en el Estado de Durango. Por lo anterior se generaron las siguientes interrogantes:

¿Cuentan con actividades y herramientas para el desarrollo del comercio electrónico, las MIPyMES del sector comercial en el Estado de Durango?

¿La aplicación del comercio electrónico, es considerada un factor competitivo para las MIPyMES del sector comercial en el Estado de Durango?

¿Cuál es el comportamiento de las MIPyMES del estado de Durango respecto a la aplicación del comercio electrónico?

REVISIÓN LITERARIA

Comercio Electrónico

Hablando de tecnologías de información y comunicación, el Internet según comenta Jim (1995), se convierte en la espina dorsal, puesto que ha experimentado un crecimiento rápido en cuanto a su uso y capacidad de exploración, ha llegado a ser un recurso comercial global que da lugar a numerosas y nuevas industrias y a la reconfiguración de las ya establecidas. Por lo que para tener éxito en la actualidad las empresas, tienen que aprovechar esta tecnología, que provee una herramienta para tener una relación más cercana con el cliente (Koontz y Weihrich, 2003, p.12). De acuerdo con Owens (2006), el comercio electrónico se define como el medio para comprar y vender mercancías y servicios usando una red de

comunicaciones de datos en lugar de un sistema de papel o el teléfono, consiste en el desarrollo de actividades económicas a través de las redes de telecomunicaciones y se basa en la transmisión electrónica de datos, incluyendo textos, sonidos e imágenes.

Así mismo Del Águila (2001), comenta que el comercio electrónico incluye actividades muy diversas como el intercambio de bienes y servicios, el suministro online de contenido digital, la transferencia electrónica de fondos, las compras públicas, los servicios postventa, actividades de promoción y publicidad de productos y servicios, campañas de imagen de las organizaciones, marketing en general, facilitación de los contactos entre los agentes de comercio, seguimiento e investigación de mercados, concursos electrónicos y soporte para la compartición de negocios. El comercio electrónico es el modo en que las empresas realizan transacciones comerciales en red, fundamentalmente a través de Internet. Existen empresas que operan exclusivamente a través de Internet, otras que tienen en la red una sección complementaria de su comercio tradicional y otras que lo utilizan sólo para determinadas actuaciones, como las publicitarias, que dan a conocer la empresa o sus productos.

Pereira (2006), afirma que la enorme y rápida expansión de Internet ha logrado que este tipo de comercio se desarrolle en forma acelerada por todo el mundo. La verdadera revolución del comercio electrónico la ha originado las nuevas tecnologías de comunicación, que han puesto en manos de pequeñas y medianas empresas, emprendedoras, profesionales y usuarios de todo el mundo, las facilidades para desarrollar actividades comerciales, por medio de redes de área amplia. Al respecto, Pérez y Leyva (2002), comentan que para Vinton Cerf, considerado uno de los padres de esta red de redes, el fenómeno en que se ha llegado a convertir Internet, es comparable con una nueva fiebre del oro de la que es prácticamente imposible permanecer inmune. En sus propias palabras “estamos al borde de una fiebre del oro en Internet y no sé si recuerdan cómo es el fenómeno, pero la forma en que la gente gana dinero en esas fiebres de oro no es buscándolo, la forma en que lo hacen es vendiendo picos y palas a la gente que lo está buscando”. Las tecnologías de información y comunicación representan un área de oportunidad para las MIPyMES. El desafío consiste en que necesariamente estas empresas tendrán que adoptar e incorporar de manera estratégica la tecnología a su organización (Owens, 2006).

Según McLeod (2000), las empresas adoptan el comercio electrónico con el fin de mejorar su organización, esperando que tales mejoras produzcan beneficios, principalmente: mejor servicio a clientes, mejores relaciones con los proveedores y la comunidad financiera y mayor rendimiento de las inversiones de los accionistas y dueños. Es importante considerar la contribución significativa que la tecnología de información (Internet, Comercio Electrónico, Negocios por Internet) puede brindar a las MIPyMES, como una oportunidad de desarrollo, expansión y diversificación como respuesta al mercado en constante cambio (Czuchry, Yasin & Sallmann, 2004). Sin embargo, el solo hecho de poseer la tecnología, no asegura el éxito de una empresa, por otro lado, el no tenerla implicaría un seguro fracaso. ¿Qué empresa podría sobrevivir hoy en día sin una computadora? (Barragán, 2002, p. 188).

El cambio tecnológico puede afectar a una empresa en dos sentidos importantes: puede proporcionarle la oportunidad de producir nuevos productos o adoptar nuevos procesos o puede alterar el entorno en el que la empresa opera, por ejemplo, liderando a los competidores de productos nuevos, creando nuevos mercados o afectando los costes de aprovisionamiento. De este modo, la empresa tiene que interesarse por el desarrollo tecnológico en dos niveles de intensidad: el primero es con los desarrollos dentro de su propia industria; el segundo es con los desarrollos en cualquier otra parte que la afecte (Garrido, 2003, p. 114). Así mismo, las tecnologías de información representan oportunidades y amenazas importantes para las MIPyMES, por lo que es recomendable que se tomen en cuenta al formularse las estrategias de la empresa. Los adelantos tecnológicos afectan en forma drástica los productos, servicios, mercados, proveedores, distribuidores, competidores, clientes, procesos de manufactura, prácticas de mercadotecnia y la posición competitiva de las empresas (David, 2003, p. 93).

De todo lo anterior afirmamos que los límites del comercio electrónico no están definidos por fronteras geográficas o nacionales, sino por la cobertura de las redes de computadoras. Como las redes más importantes son de ámbito global, el comercio electrónico permite incluso a los proveedores más pequeños alcanzar una presencia global y hacer negocios en todo el mundo. El beneficio del cliente es la elección entre todos los proveedores potenciales de un determinado producto o servicio. La ventaja competitiva para las organizaciones puede lograrse de muchas maneras; por ejemplo, al proporcionar bienes o servicios a un precio bajo, mejorando el de la competencia y así satisfacer las necesidades especiales de ciertos segmentos del mercado. En el campo de la informática, la ventaja competitiva se refiere al uso de la información para adquirir peso en el mercado. La idea es que la compañía no tiene que depender únicamente de recursos físicos superiores para competir; también puede usar recursos conceptuales superiores tales como datos e información (McLeod, 2000, p. 36).

El Estado de Durango México

El Estado de Durango es una de las treinta y dos entidades federativas que integran la República Mexicana, representada en el Congreso de la Unión por 4 Senadores y 10 diputados federales. Con una superficie de 123,181 kilómetros cuadrados, es el cuarto Estado de la República Mexicana en extensión, y representa el 6.3% de la superficie total del país. Se encuentra al centro-norte de la República Mexicana y colinda al norte con Chihuahua y Coahuila, al este con Coahuila y Zacatecas, al sur con Jalisco, Zacatecas, Nayarit y Sinaloa y al oeste con Sinaloa y Chihuahua, y se divide en 39 municipios (Durango Competitivo, 2003). De acuerdo con el Censo de Población y Vivienda del 2005, la población total del Estado de Durango asciende a 1, 509,117 con una densidad de población de 12 habitantes por kilómetro cuadrado, cuando en el resto del país es de 50 habitantes lo cual lo sitúa entre los estados con menos concentración de población. La tasa de crecimiento anual del Estado ha sido en los últimos años muy reducida; en el período 2000-2005 fue del 0.7%, e incluso únicamente 9 municipios presentaron tasas positivas. El municipio de Durango es el que cuenta con el mayor porcentaje de habitantes (35.1%), seguido de Gómez Palacio (20.2%) y en tercer lugar se encuentra Lerdo (8.6%), siendo las tres regiones con mayor concentración de productividad.

Actualmente la actividad económica se encuentra distribuida en cinco regiones económicas: a) La región de la Laguna, es la región más desarrollada del Estado por haberse visto beneficiada por los esfuerzos conjuntos del gobierno de Coahuila y de Durango. Dicha región alberga cuatro de las actividades económicas del Estado, como la textil y la de confección, muebles, productos lácteos y cárnicos; b) En la región centro se encuentra la producción cárnica, mueble, textil y confección además de la forestal, que no comparte con la Laguna; c) En la región noroeste se concentra la actividad minera y forestal más que en el resto del Estado; d) En la región norte se concentra la producción de cárnicos y e) En la región sur la producción de cárnicos y forestal. Del número de unidades económicas que operaron en el país en el año de 2004, en Durango fueron 64515, y su personal ocupado fue de 353, 087. Durango contaba con 37911 unidades económicas de todas las ramas, así como son 216591 de personal ocupado en el año 2003. De acuerdo con el Sistema de Información Empresarial Mexicano, las empresas en el Estado de Durango se clasifican de acuerdo a su tamaño y sector como se muestra en la siguiente tabla.

Tabla 1: Clasificación de empresas de Durango

Tamaño	Industria	Comercio	Servicios	Total
Micro	306	303	149	758
Pequeñas	140	59	55	254
Mediana	91	33	11	135
Grande	25	19	8	52
Total	562	414	223	1199

Clasificación de las empresas del Estado de Durango México por su tamaño y sector de actividad.

Como se menciona en Durango Competitivo (2003), las MIPyMES representan para el Estado, un apoyo para desempeñar diversas funciones en la sociedad como: responder a las demandas concretas de los consumidores, crear productos y servicios, generar empleos y contribuir al crecimiento económico. Algunas de las características más importantes de las MIPyMES en el Estado de Durango son: empresas cuyo origen es de capital familiar y su integración es en sociedad mercantil o personas físicas. La edad del gerente, los estudios académicos, la experiencia, la visión del negocio, son significativos dependiendo del sector y tamaño. El tamaño del negocio se clasifica en 3 magnitudes: microempresa, pequeña y mediana; de acuerdo al número de empleados que laboran. Y las ventas y compras, las enfocan al tipo de proveedores y clientes que manejan en el mercado, según el tipo de producto/servicio que operen.

METODOLOGÍA

Investigación vertical ya que las muestras se recopilaron en un determinado punto del tiempo. Para la confección del cuestionario definitivo y su adaptación a la realidad del Estado de Durango, se realizó un panel de expertos externos y visitas a empresas de diferentes sectores para la realización del pre-test y formación de la encuesta definitiva. La estructura del instrumento de medición, o cuestionario, comprende cuatro bloques:

Primer bloque: se piden datos de la empresa sobre su antigüedad, sector de actividad, si se trata de una empresa familiar, edad y nivel de estudios del gerente, número de empleados y volumen de ventas, así como los mercados de destino de sus ventas y el origen de su aprovisionamiento.

Segundo bloque: se enfoca en aspectos de dirección, se pide datos sobre las alianzas o acuerdos de cooperación con otras empresas, si se elabora un plan estratégico y estrategias. En cuanto a esta última, se ha utilizado la tipología de estrategias competitivas propuestas por Miles y Snow (1978) y las estrategias genéricas de Porter (1980) con la finalidad de emplearlas como base para su medición.

Tercer bloque: se piden datos sobre la gestión de recursos humanos, actividad de capacitación, y estructura organizativa.

Cuarto bloque: se pide datos sobre tecnología, innovación, calidad, equipamiento de comunicaciones y medios informáticos, aspectos contables y financieros. Finalmente, se pide al gerente su opinión sobre la posición de su empresa respecto de la competencia, la importancia de acciones específicas para su desarrollo futuro y sobre el efecto de determinados problemas para el desarrollo de su empresa.

Selección De Variables

Para la selección de las variables se toma información del bloque dos, donde habla de los factores competitivos así como del bloque cuatro donde se encuentra la información sobre las herramientas y actividades para el desarrollo del comercio electrónico, así como la situación con respecto a otros competidores.

Tabla 2: Actividades y herramientas de comercio electrónico

No. Pregunta	Variable
22.2	Página web
22.3	Ventas electrónicas con internet
22.4	Compras electrónicas con internet
22.5	Banca electrónica
22.6	Mercadotecnia a través de internet

Esta tabla relaciona el número de la pregunta en el cuestionario y la variable a estudiar sobre las actividades y herramientas de comercio electrónico.

Los factores competitivos, son el conjunto de elementos que la empresa considera como clave para competir con éxito en el mercado, con los cuales busca obtener y mantener una ventaja competitiva.

Tabla 3: Factores competitivos

No. Pregunta	Variable
12.1	Desarrollo Nuevos Productos / Servicios
12.2	Acceso a Nuevos Mercados
12.4	Esfuerzo en Investigación y Desarrollo
12.6	Servicio al cliente
21.1	Calidad en producto / Servicio
21.4	Satisfacción de los Clientes
21.5	Rapidez de adaptación a las necesidades de los mercados

Esta tabla relaciona el número de la pregunta en el cuestionario y la variable a estudiar sobre los factores competitivos.

Estructura De La Muestra

La población objeto de estudio, queda definida por las MIPyMES del Estado de Durango constituida por 3,835 empresas, tomando en cuenta que el tamaño de la empresa se ha definido en función del número de empleados generándose tres grupos: microempresas (de 6 a 9 trabajadores), empresas pequeñas (de 10 a 49 trabajadores) y empresas medianas (de 50 a 250 trabajadores). Por tanto, no se han incluido las empresas con 5 o menos trabajadores ni las grandes empresas (más de 250 trabajadores). Se realizó un muestreo aleatorio simple. Para la determinación del tamaño de muestra se considerará la fórmula para poblaciones finitas, obteniendo de la población la muestra, de acuerdo a la siguiente fórmula:

$$n = \frac{NZ_a^2 pq}{d^2(N-1) + Z_a^2 pq} \quad (1)$$

Sustituyendo los valores en la fórmula para la determinación para tamaño de muestra se tiene:

$$n = \frac{(3835)(2)^2(0.05)(0.95)}{(0.0224)^2(3835-1) + (2)^2(0.05)(0.95)} = 345$$

De la muestra de 345 MIPyMES representativa de todos los sectores se estudiaron las empresas del sector comercio el estrato esta integrado por 60 MIPyMES.

Análisis De Datos

En este estudio se utilizó el programa SPSS 17 para Windows con el fin de obtener los siguientes estadísticos: frecuencias, frecuencias relativas y medias. Que fueron la base del análisis de los datos.

RESULTADOS

En estos tiempos modernos, con la constante aparición de nuevas tecnologías, el comercio electrónico ha tenido gran auge y ha abierto nuevas posibilidades en el acceso a un mercado cada vez más globalizado, y por ende mas grande, permitiendo llegar a mercados no antes previstos y facilitando el acceso de productos y servicios a un potencial de millones de personas, en los distintos puntos del orbe, esto representa una enorme área de oportunidad para las empresas que ofrecen estos productos y servicios, en la tabla 4 se muestra el porcentaje de empresas por tamaño referente a sus actividades y herramientas de comercio electrónico.

Tabla 4: Actividades y herramientas de comercio electrónico

Porcentaje de de empresas que:	Microempresa	Pequeña empresa	Mediana empresa
Tienen pagina web	25.0%	40.5%	71.4%
Efectúan ventas electrónicas a través de Internet	6.3%	37.8%	28.6%
Efectúan compras electrónicas por medio de internet	31.3%	40.5%	28.6%
Usan la banca electrónica	68.8%	83.8%	100%
Tienen mercadotecnia usando el Internet	25.0%	35.1%	42.9%

En la tabla se muestra el porcentaje de empresas por tamaño referente a sus actividades y herramientas de comercio electrónico.

Es necesario analizar el comportamiento de las empresas del sector comercial en el Estado de Durango, con respecto a sus principales competidores y la importancia que le dan a factores para el desarrollo del éxito de la empresa como se muestra en la siguiente tabla.

Tabla 5: Desarrollo de nuevos productos / servicios.

	Nada importante	Poco importante	Indiferente	Importante	Muy importante.
Microempresas	12.5%	18.8%	6.3%	18.8%	43.8%
Pequeñas empresas	10.8%	2.7%	24.3%	21.6%	40.5%
Medianas empresas	28.6%	0%	28.6%	14.3%	28.6%

Se muestra con porcentajes el nivel de importancia que las empresas por tamaño le dan al factor competitivo: Desarrollo de nuevos productos o servicios.

Siguiendo con los factores competitivos en la tabla 6 se analiza la importancia que se le da al acceso a nuevos mercados.

Tabla 6: Acceso a nuevos mercados

	Nada importante	Poco importante	Indiferente	Importante	Muy importante.
Microempresas	18.8%	6.3%	12.5%	12.5%	50.0%
Pequeñas empresas	8.1%	5.4%	13.5%	27.0%	45.9%
Medianas empresas	28.6%	57.1%	0%	0%	14.3%

Se muestra con porcentajes el nivel de importancia que las empresas por tamaño le dan al factor competitivo: Acceso a nuevos mercados.

El esfuerzo que realizan las empresas comerciales en investigación y desarrollo, con la finalidad de implementar tecnologías en la empresa y tener una ventaja competitiva, juegan un papel muy importante para el desarrollo del comercio electrónico. El comportamiento de las empresas respecto a la importancia que otorgan y el nivel de esfuerzos que emplean en la investigación y desarrollo, se muestra en la tabla 7.

Tabla 7: Esfuerzo en Investigación y Desarrollo

	Nada importante	Poco importante	Indiferente	Importante	Muy importante.
Microempresas	25.0%	6.3%	12.5%	25.0%	31.3%
Pequeñas empresas	8.1%	8.1%	43.2%	21.6%	18.9%
Medianas empresas	28.6%	14.3%	28.6%	0%	28.6%

Se muestra con porcentajes el nivel de importancia que las empresas por tamaño le dan al factor competitivo: Esfuerzo en Investigación y Desarrollo.

Otro factor importante para analizar es la satisfacción de los clientes a quienes dirigen sus productos o servicios. Esta perspectiva de las empresas es imprescindible, ya que finalmente, los clientes representan el sector clave al que va dirigida la empresa, y para que funcionen y sigan creciendo las actividades que se realizan a través de Internet, es de importancia trascendental la opinión de los clientes. Además es importante conocer cómo se ven a sí mismas las empresas respecto a sus principales competidores, en cuando a la rapidez de adaptación a las necesidades del mercado, ya que sobre este punto, el comercio electrónico ofrece una valiosa oportunidad para que las empresas logren una mejor adaptación de una manera global. El sector de actividad resulta un factor determinante en el rendimiento de la empresa. En el

sector Comercial se encuentran diferencias estadísticamente significativas en las variables analizadas (tabla 8), perciben una mejor posición competitiva.

Tabla 8: Situación media de la empresa con respecto a la competencia con relación a varios factores según sector (escala 1-5^a)

Factores competitivos	Media
Calidad del producto / servicio	4,33**
Satisfacción de los clientes	4,43***
Rapidez de adaptación a las necesidades de los mercados	4,10***

^aEn una escala de 1 = Mucho peor a 5 = Mucho mejor. Diferencias estadísticamente significativas: (*): $p < 0,1$; (**): $p < 0,05$; (***): $p < 0,01$.

La mayoría de las empresas se considera mejor que sus competidores en la calidad del producto o servicio, en la satisfacción de los clientes, en los procesos operativos así como en la rapidez de adaptación a las necesidades del mercado. Es muy importante tomar en cuenta lo anterior, ya que de acuerdo a ello, se conocerá cómo influye el comercio electrónico en la perspectiva de los empresarios de considerarse mejor que sus principales competidores.

CONCLUSIONES

El grado de aplicación de las herramientas y actividades para el desarrollo del comercio electrónico en la microempresa es muy bajo, aunque tengan página web, realicen compra-ventas electrónicas, lleven a cabo publicidad por Internet, y usen la banca electrónica, no son parte importante de la empresa. Por su parte la pequeña y mediana empresa también cuentan con todas las herramientas, aunque todavía no adquiere la importancia debida, ya que el grado de uso de estas herramientas es bajo al igual que en las microempresas. La banca electrónica es la más usada por las medianas, pero por lo que se refiere a ventas, compras y mercadotecnia por medio de internet, ambos tipos de empresa se encuentran en la misma situación. Todo esto representa una problemática, no solo en cuanto a la adopción de nuevas tecnologías de información y comunicación, sino en cuanto al seguimiento y atención a las herramientas con las que se cuenta. Las empresas deben hacer uso y preservar las herramientas ya instaladas, igualmente adquirir las tecnologías que sean necesarias para implementar completamente el comercio electrónico.

Por otro lado en lo referente a los factores con los que se relaciona el comercio electrónico como son la satisfacción del cliente, la rapidez de acceso a nuevos mercados, los esfuerzos en investigación y desarrollo, se da a conocer la perspectiva de cómo se considera el empresario con respecto a sus competidores. Uno de los objetivos de las empresas es satisfacer las necesidades específicas de un grupo particular de potenciales clientes, la satisfacción del cliente y las ventas están relacionadas. Los clientes satisfechos tienden a regresar a la empresa que les prestó un buen servicio o que les proporcionó un buen producto y tienen la tendencia a promocionar el negocio con sus amigos, conocidos y familiares.

En este sentido, las empresas de la muestra de estudio se encuentran en ventaja con respecto a sus principales competidores, pues consideran que es importante la satisfacción de sus clientes. En cuanto a la rapidez de adaptación a los nuevos mercados, la mayoría de las empresas se autodefinen como mejores que las empresas competidoras, lo que demuestra que cuentan con la tecnología apropiada como el Internet para adentrarse a mercados que también han ingresado sus principales competidores. En los esfuerzos para investigación y desarrollo las MIPyMES no se muestran muy entusiastas, parece que lo realizan en una ocasión y probablemente no lo vuelvan a hacer. Por lo que es importante que en este aspecto se dé más asesoría a las empresas, sin importar el tamaño de éstas, ya que los tres coinciden en la investigación y desarrollo, en cuanto a su forma de funcionar y el financiamiento que se tiene al respecto.

Por lo tanto se puede apreciar que el comercio electrónico no puede ser considerado un factor de éxito para las micro y pequeñas empresas, ya que a pesar de que cuentan con las herramientas o realicen las

actividades relacionadas con Internet, no consideran que influya para que la empresa logre un mejor desarrollo o sea más competitiva.

Para las medianas empresas el comercio electrónico si representa una ventaja competitiva, pues los medianos empresarios consideran que la aplicación de las tecnologías, puede hacer que la organización mejore sus procesos y así lograr el éxito. Esto demuestra que entre más grande es una empresa, es más factible que apliquen las nuevas tecnologías de información y comunicación como el comercio electrónico. Entonces se puede ver que las MIPyMES del sector comercial en el Estado de Durango, comienzan a confiar en el uso de esta tecnología para sus negocios, pero esta aceptación depende del tamaño de la empresa, ya que como pudo observarse no presentan el mismo comportamiento una microempresa que una pequeña o una mediana. También se puede observar que los procesos no son realizados a través de Internet. En general el comercio electrónico puede ser considerado como un factor competitivo para las medianas empresas del sector comercial en el Estado de Durango, ya que este tipo de empresa es el que presentó mayor aceptación sobre el uso de esta tecnología de acuerdo a los resultados de las entrevistas. Se desprenden las siguientes líneas de investigación:

- Analizar el impacto del comercio electrónico en la permanencia de las MIPyMES.
- Análisis comparativo del uso del comercio electrónico en las MIPyMES por entidad federativa.
- Causas por las que las empresas aun no le dan mayor seguimiento a las herramientas y actividades para el desarrollo del comercio electrónico.
- Verificar si el comercio electrónico coadyuvará en un futuro a que las MIPyMES en el Estado de Durango accedan a nuevos mercados internacionales.
- Proponer modelos de sistemas de comercio electrónico adecuados para las MIPyMES.
- Proponer estrategias para implantación del comercio electrónico en las MIPyMES.

APLICACIÓN DE LA METODOLOGÍA SIX SIGMA PARA MEJORAR LA EFICIENCIA DEL PROCESO DE ADQUISICIONES EN INSTITUCIONES PÚBLICAS

Carlos Manosalvas V., Universidad Estatal Amazónica

Luis Manosalvas V., Universidad Estatal Amazónica

RESUMEN

La Aplicación de la metodología Six Sigma al proceso de Adquisiciones en Instituciones Públicas, busca principalmente tener procesos más eficientes disminuyendo el gran número de quejas de los clientes acerca de su funcionamiento, reduciendo la gran variabilidad que presentan en su ejecución. La estrategia del Six Sigma que se debe utilizar tiene que ser de fácil aplicación y sobre todo que permita plantear alternativas de solución con rigor científico y matemático eliminando subjetividades subyacentes. La estrategia utilizada fue la de mejora de procesos, que incluye cinco etapas: definir, medir, analizar, mejorar y controlar. Estas etapas incluyen herramientas y técnicas que permiten definir claramente el problema a solucionar, como hacerlo, cuál es el alcance, quien está involucrado, los factores claves del proceso y como se medirá cada uno de ellos. Permiten también analizar y determinar las causas principales que causan los problemas definidos anteriormente, y plantear una serie de alternativas para eliminar las causas raíz del problema y un sistema de control, para asegurar su estabilidad en el tiempo y sobre todo que cumpla con los requisitos de clientes internos y externos.

APPLICATION OF SIX SIGMA METHODOLOGY TO IMPROVE EFFICIENCY OF ACQUISITION PROCESS IN PUBLIC INSTITUTIONS

ABSTRACT

The Application of Six Sigma Methodology to acquisition process in Public Institutions aim to have more efficient processes decreasing the large number of complaints from de costumers about working processes, reducing the huge variation in their execution. The strategy of Six Sigma to use must be easy to apply and especially that allow to bring up solutions with scientific and mathematical support without underlying subjectivities. The strategy used was the Process Improvement, which includes five phases: Define, Measure, Analyze, Improve and Control. These stages include tools and techniques that allow to defined what the problem was to solve, how to do, what is the scope, who is involved, the key factors of the processes and how to measure each of them. They also allow to detect what were the main causes that produced the problems defined last time and many alternatives to eliminate the root causes of problems and a control ensure their stability over time and especially that achieves the customer requirements.

INTRODUCCIÓN

La Aplicación de la Metodología Six Sigma a procesos involucrados en el área de servicios, resulta ser innovadora y relevante, principalmente en épocas actuales donde las organizaciones buscan constantemente mejorar la eficiencia de sus procesos de negocio y la satisfacción del cliente. Esta metodología fue creada para mejorar procesos de producción de bienes; y, es en los últimos años donde se ha demostrado que puede aplicarse a procesos que generan servicios

Este trabajo investigativo pretende demostrar que, aplicando ciertas herramientas de control de calidad y técnicas de análisis estadístico propias del Six Sigma al proceso de adquisiciones de una Institución Pública, es posible reducir la variación del proceso para mantenerlo bajo control estadístico y lograr así una ejecución más eficiente, satisfaciendo los requerimientos de sus clientes internos y externos. Se pretende demostrar además que, esta metodología de mejora de procesos puede ser ampliada para aplicarse a procesos de generación de servicios y no únicamente a aquellos que generan bienes tangibles.

REVISIÓN DE LITERATURA

PANDE (2004) señala que el Six Sigma es una metodología que combina los mejores principios y técnicas de calidad con los más recientes avances en el pensamiento empresarial. Incorpora los aportes de muchos de los pioneros de la calidad como Demming, Juran, Ishikawa y otros, para lograr un desempeño de negocio sin errores (cero defectos). Sigma es una letra del alfabeto griego (σ) utilizada en estadística para representar la variabilidad de un proceso. Esta metodología mide las variaciones en los procesos internos de una organización, utilizando niveles sigma, los que a su vez permiten determinar el rendimiento general de toda la organización.

Mejora De Procesos Con Six Sigma

Esta estrategia orienta sus esfuerzos a encontrar las causas raíz de los problemas que afectan el rendimiento del proceso. Principalmente se enfoca en eliminar las causas principales de la variación de los procesos sin cambiar la estructura de procedimientos y tareas que lo componen. En el lenguaje del Six Sigma las causas suelen representarse con la letra X y los defectos no deseados con la letra Y. Para ejecutar esta estrategia, se utiliza un proceso que consiste de cinco etapas: Definir, Medir, Analizar, Mejorar y Controlar

METODOLOGÍA

Para realizar la presente investigación se utilizaron una serie de herramientas de investigación. La primera de ellas fue la Entrevista; esta técnica se aplicó a todos los miembros que laboran en el departamento de adquisiciones de una Institución Pública, así como a los encargados de las Compras en cada Departamento. Para realizar el análisis estadístico correspondiente, se hizo un estudio de los tiempos que demoraban cada una de las tareas de los procesos que se ejecutaron durante el período de investigación; una vez obtenidos estos datos, se realizó un estudio estadístico descriptivo de cada una de las variables involucradas así como un análisis de componentes principales, capacidad del proceso y gráficos de control. Se estudiaron además todos los procesos ejecutados en la Institución, durante el período de estudio

Tabla. 1: Procesos de Adquisiciones Ejecutados

Tipo de Proceso	Total
Ínfima Cuantía	52
Catálogo electrónico	8
Procedimiento Especial	4
Menor Cuantía	1
Subasta Inversa Electrónica	20
Procesos Pendientes	48
Total	133

Esta tabla describe los diferentes tipos de adquisiciones que se realizaron durante el período de investigación

Como se puede apreciar en la tabla anterior, la población objeto de estudio la componen 133 procesos, de los cuales 85, representan la Población Investigada; es decir que, los 48 procesos pendientes, como no han iniciado formalmente, no se tomarán en cuenta para hacer los análisis correspondientes.

VARIABLES CRÍTICAS DEL PROCESO

En la etapa de medición del Six Sigma, se debe determinar en primer lugar cuáles son las causas de mayor peso que provocan el problema generado, que en este caso es la demora en el tiempo de adquisición de bienes y/o servicios. Al descubrir cuáles son las variables críticas que están causando el problema que se pretende mejorar, se podrá establecer qué tipo de medidas o métricas utilizar para corroborar este análisis y plantear mejoras con mayor rigor estadístico y científico.

Las variables detectadas fueron:

- X_1 : Tiempo de Solicitud de Certificación Presupuestaria
- X_2 : Tiempo de Solicitud de Firmas de Autorización por parte del Rectorado
- X_3 : Tiempo que lleva la Elaboración de Pliegos
- X_4 : Tiempo de Revisión de Pliegos
- X_5 : Tiempo de Autorización y Resolución de Inicio
- X_6 : Tiempo de Firma de la Convocatoria
- X_7 : Tiempo de Firma de la Orden de pago

Para detectar estas variables se utilizaron varias herramientas como: Árbol CTQ, Hoja de Trabajo para la implementación del Proyecto de Mejora entre otras.

RESULTADOS

Gráfico de Control del Proceso de Adquisiciones: Los gráficos de control son un medio para revisar la variación de la característica de un producto o un servicio mediante la consideración de la dimensión temporal en la cual el sistema fabrica productos o presta servicios y el estudio de la naturaleza de la variabilidad del sistema.

Figura 1: Diagrama de Control de los Procesos de Adquisiciones

Gráfico de Control que describe el comportamiento de los diferentes procesos de adquisiciones

El gráfico anterior muestra el comportamiento del proceso de adquisiciones durante todo el período de investigación; los límites de control calculados se muestran con una línea roja en el gráfico. Este diagrama muestra que la mayoría de los procesos de compras están ubicados dentro de los límites de control calculados; lo que además permite observar que la variación de la mayoría de adquisiciones se debe a causas inherentes al mismo proceso ya que no hay causas asignables externas que afecten a estos procesos. Sin embargo, existe un patrón de puntos que están por encima del Límite Superior de Control, lo que muestra que para algunos procesos existen variaciones causadas por factores externos a las variaciones inherentes del mismo. Es importante mencionar que las fórmulas de los límites de control que se obtuvieron no son iguales a las especificaciones de los clientes del proceso y de los mismos directivos

de la Unidad de Adquisiciones. En las diferentes la mayoría de ellos, expresó su deseo de que los trámites previos a los procesos de compras, se deberían ejecutar en un tiempo no mayor a 1 semana equivalente a 8 días. Si se considera estos tiempos para realizar el gráfico de control, se podría observar que muchos más procesos estarán fuera de los límites de control, dando mayor peso a nuestra conclusión anterior.

Capacidad Del Proceso De Adquisiciones: El Índice de Capacidad del Proceso, permite determinar si el proceso, tal como se está ejecutando en este momento, es capaz de producir satisfactoriamente los servicios y resultados que esperan de éste sus usuarios. Para calcular este índice se utiliza la siguiente fórmula:

$$C_{pk} = \frac{LSE - \mu}{3\delta} \quad 1)$$

Con los datos obtenidos, se aplica la fórmula para obtener el índice C_{pk} .

$$C_{pk} = \frac{8 - 11,92}{3(10,17)} = -0,128 \quad 2)$$

Cuando el Índice de Capacidad de Proceso es mayor a uno, se puede decir que el proceso es capaz. Como se puede observar en la fórmula anterior, el índice obtenido es menor a uno, por lo que se puede concluir que el proceso no es capaz de satisfacer los requerimientos de los usuarios pues existe mucha variación en los datos del proceso. Este resultado también permitiría hacer otra conclusión muy importante: Si se reduce esta variación alta en el proceso de adquisiciones, es posible que mejore la capacidad del proceso, lo que a su vez permitirá satisfacer los requerimientos de los usuarios del mismo y elevar la eficiencia en la ejecución del proceso.

Análisis De Componentes Principales: La figura siguiente muestra la representación gráfica de la matriz de componentes, herramienta que permite analizar de mejor manera las variables que intervienen en cada componente, para así determinar sobre que variables implementar los procesos de mejora.

Fihura 4: Representación Gráfica De La Matriz De Componentes

Esta figura muestra cuáles son las variables principales que provocan la mayor variación en el proceso

Etapa De Mejora Y Control

En esta etapa se analizan y seleccionan las mejoras que permitan eliminar las causas raíz del problema que se pretende mejorar. Six Sigma proporciona algunas herramientas tales como: prueba de requisitos

mínimos, evaluación de impacto y del esfuerzo y un análisis formal de los pros y contra de los costos y los beneficios. Estas herramientas permitan escoger la mejor solución con un criterio más científico eliminando en gran parte la subjetividad que puede presentarse al seleccionar alternativas de acuerdo al criterio de los directivos de la Institución. Finalmente, se diseñó un sistema de control para garantizar la estabilidad de ejecución de proceso principalmente en lo relacionado a la satisfacción de los requerimientos de clientes internos y externos. Las herramientas utilizadas para esta etapa incluyen: Ficha Técnica del proceso. Se utilizó además un diccionario de indicadores para definir adecuadamente como se medirá el rendimiento del proceso para controlar su ejecución futura.

CONCLUSIONES

A partir del análisis estadístico y matemático realizado al proceso de adquisiciones, se ha podido determinar las principales falencias que presenta el mismo, especialmente en lo que se refiere al tiempo de duración que lleva ejecutar las diferentes actividades del proceso. Por esta razón, con la ayuda de algunas herramientas propias del Six Sigma, ha sido posible proponer alternativas de solución que ayudarán a mejorar al proceso de compra y con ello satisfacer a usuarios internos y externos del mismo. Para ello es importante mencionar que de las alternativas propuestas han sido los directivos de la Institución y los involucrados en este tema, quienes han tomado la decisión de adoptar las mejoras que más convienen a la Institución en lo que a costo/beneficio se refiere.

Los resultados expuestos en el presente trabajo, pueden ser ampliados para desarrollar proyectos de mejora en otros procesos de la Organización, pues, como se demostró, es posible medir aspectos como la variación y capacidad del proceso y desarrollar análisis estadísticos que permitan determinar estadística y matemáticamente las causas raíz de un problema particular para aplicar las mejoras sobre estas; todo esto, indiferente al hecho de que los procesos produzcan bienes y/o servicios.

RESUMEN

El proceso de globalización ha cambiado los patrones de comercio en las últimas décadas, México es uno de los países que más se han involucrado en este cambio. Por tanto, es importante medir el grado en que se ha involucrado, el presente trabajo tiene como finalidad medir los niveles de comercio intraindustrial (CII) en el complejo textil (CT) mexicano y su impacto en el valor agregado de dicha industria, reflexionando sobre las repercusiones que esto conlleva en el desarrollo de las regiones donde se establece la producción y comercio del CT, además del grado de integración que existe en la cadena productiva. Para ello se utiliza la metodología propuesta por Grubel-Lloyd (Bi) y se propone un modelo de regresión que mida los cambios en el valor agregado provocados por el CII considerando el periodo de 1989 al 2009. Los resultados son: el índice de CII ha aumentado durante el período analizado, siendo mayor en el sector prendas del vestir, esto como resultado de la presencia de la maquiladora en dicho sector, en el CT en su conjunto el aumento se debe al comercio intrafirma de las grandes empresas.

RESUMEN

The globalization process has changed trading patterns in recent decades; Mexico is one of the countries that have engaged in this change. It is therefore important to measure the degree to which it has been involved, this paper aims to measure the levels of Intraindustry trade (CII) in the textile complex (CT) and its impact on Mexican value added of the industry, reflecting on the implications that this entails the development of the regions where you set the CT production and trade, besides the degree of integration that exists in the production chain. It uses the methodology proposed by Grubel-Lloyd (Bi) and proposes a regression model to measure changes in value added resulting from the CII considering the period 1989 to 2009. The results are the CII index has increased over the study period, being higher in the sector of clothing items, that as a result of the presence of the maquiladora sector, in the CT as a whole the increase is due to intra-firm trade of large companies.

KEYWORDS: Itraindustry trade, Textil Industry, México

INTRODUCCIÓN

En las últimas décadas se ha tratado de describir los hechos característicos de la economía mundial con una palabra: “globalización,” la cual ha tenido distintas concepciones, así también, ha sido objeto de estudio de distintas formas y de corrientes de pensamiento, sin embargo, cualquiera que sea la concepción y la escuela de estudio, todos coinciden que en el comercio internacional, en las últimas fechas, se ha modificado dado los siguientes hechos: la crisis del modelo fordista, los avances tecnológicos y el desarrollo y expansión del modelos de producción capitalista.

Los hechos anteriores han dado inicio a una nueva división del trabajo internacional industrial, de tal manera que algunos países en desarrollo, a través de las políticas financieras, productivas y comerciales

de las empresas multinacionales, iniciaron o consolidaron, según el caso, una dinámica industrializadora orientada fundamentalmente a la exportación generando una relocalización mundial de las industrias manufactureras que permitió la incorporación de economías periféricas (países en vías de desarrollo) al tejido productivo y comercial mundial de manufacturas.

Bajo este contexto, el comercio internacional se ha vuelto más diversificado, de ser dominado por los Estados Unidos y por varios países europeos, hoy es resultado de una interdependencia económica creciente entre todos los países del mundo. Así mismo, los flujos de comercio se han modificado, de ser un intercambio de bienes distintos entre las naciones a un comercio de bienes similares (comercio intraindustrial, CII), siendo esto una de las principales características de la expansión de la globalización económica.

La globalización económica a través del comercio intraindustrial (CII), el comercio exterior y la inversión extranjera directa (IED), afecta de distintas maneras a las regiones de un país, dada la lógica de localización de estos elementos y de su capacidad de encadenamientos intrasectoriales o intersectoriales, aumentando o disminuyendo el ingreso de los agentes económicos que participan en la región. Por tanto, es necesario conocer el grado en que la economía mexicana se ha involucrado en el proceso de globalización, si existen niveles de CII suficientes para entenderla como globalizada y cuál ha sido el comportamiento en los sectores económicos. Para ello se toma como ejemplo el Complejo Textil (CT), ya que es una rama de las manufacturas que más dinamismo ha presentado bajo el contexto anterior. Así el objetivo de este trabajo es medir los niveles de CII en el CT mexicano, considerando los flujos de productos por clase de bienes y lugar de procedencia y el impacto en el valor agregado de cada clase que integra el complejo textil, reflexionando sobre las repercusiones en las regiones de México donde se establece la producción y comercio del CT, además del grado de integración que existe en la cadena productiva. Para ello se utiliza la metodología propuesta por Grubel-Lloyd (Bi) y se propone un modelo de regresión que mida los cambios en el valor agregado provocados por el CII.

El complejo textil está compuesto por todas aquellas actividades relacionadas con la confección, desde la producción de fibras, producción de hilados, terminado de telas, confección de ropa, vestiduras para suelos y vestiduras para automóviles entre otros, hasta la comercialización de estos artículos. De acuerdo al INEGI, está comprendido por los subsectores 313, 314, 315 del Sistema de Clasificación Industrial de América del Norte (SCIAN): Producción de Textiles, Prendas de vestir e industrias del cuero, conformado por 9 ramas y 29 clases industriales

BASES CONCEPTUALES

Los indicadores de la expansión de la globalización son la IED y el Comercio intraindustrial (CII), se ha tratado de cuantificar el grado de globalización a través de la relación exportaciones a Producto Interno Bruto (PIB) (Saxe-Fernández, 1999: 18), como grado de integración de la región al contexto internacional, sin embargo, esta relación solo explica el grado de en que se es capaz de salir al exterior, dejando fuera el grado de integración de la región o nación vía importaciones, para salvar lo anterior, es necesario obtener un indicador del grado de expansión que involucre los dos elementos y que sea más significativo en el actual proceso de globalización acorde a los nuevos patrones productivos y los criterios de movilidad de la IED. El elemento que involucra estos aspectos es el nivel de CII ya que incluye las importaciones y las exportaciones, además es uno de los móviles de la IED, La expansión de la globalización, en el pasado, se daba en el grado en que las naciones intercambiaban bienes distintos sobre la base de sus ventajas absolutas o comparativas otorgadas por la abundancia o disponibilidad de algún factor productivo en la nación, por tanto el comercio era de bienes distintos; en la posguerra, la base de competitividad se formuló bajo los criterios de economías de escala y de diferenciación del producto, por lo que los patrones de comercio cambiaron a un comercio de bienes similares. Con la crisis del fordismo, las empresas multinacionales descentralizaron sus actividades productivas, sobre todo a la periferia,

aquellas de alto contenido de mano de obra. El desplazamiento de las actividades productivas por parte de las multinacionales del centro a la periferia, en los últimos años, ha aumentado el CII, entendido como el intercambio de bienes pertenecientes a una misma industria, dentro del comercio mundial (Bernhofen & Brown, 2005).

Diversas teorías tratan de explicar la existencia del CII; la teoría clásica y neoclásica del comercio internacional fundamentan el comercio interindustrial, es decir, el intercambio de bienes distintos entre naciones, en el que el patrón de especialización es producto de la diferencia en la dotación de recursos entre los países, es decir se basa en las ventajas absolutas y comparativas. Sin embargo, el patrón de comercio internacional actual se caracteriza por el intercambio entre países con similares dotaciones de factores, por lo que las teorías clásica y neoclásica no son suficientes para explicar este hecho. Las nuevas teorías del comercio internacional como las de Porter, Vernon y Krugman, tratan de explicar la existencia de estos nuevos patrones de comercio, basados en la disparidad tecnológica y la emulación de la misma, en los ciclos de comercialización de los productos y su grado de diferenciación y en la existencia de economías de escala. Porter (1991), por su parte, identifica el CII en la diferenciación del producto que es uno de los pilares de la ventaja competitiva de un sector, mientras Gereffi (2001 y 2011) con el comercio de partes dadas las cadenas mercantiles globales.

Los estudios del CII se han realizado bajo la óptica de las nuevas teorías del comercio internacional, ya sea bajo el esquema de ciclo de vida del producto o de la diferenciación y competencia imperfecta tratando de comprobar la fuente que da origen a éste. Los puntos de vista abordados son: como resultado de los procesos de integración entre las naciones (Aromando, 1999; Trigo, 1999; Dussel y León-González, 2001; Martínez y Álvarez, 2011), tipo de comercio intraindustrial (Artís, 2000; García y Sansó, 2000; Valderrama y Neme, 2011); sus determinantes (Trigo, 1999; Krugman 1990), como elemento de especialización productiva (Quijano, 1996), como reajuste de los factores (Dixon y Menon, 1996 y Selaive, 1998); como elemento de reestructuración de la industria (Moreno y Palerm, 2001).

Todas las investigaciones anteriores se han enfocado a estudiar el CII de una manera agregada a nivel de rama industrial, tratando de explicar de qué tipo es el CII por el nivel de precios relativos. (Moreno y Palerm, 2001; Selaive, 1998; Trigo, 1999) y entre países (Falvey, 1981; Dixon y Menon, 1996; Padilla, 1998; Torstensson, 1996 y 1999). Dado lo anterior se presupone un vacío en el estudio del CII en un sector económico y a nivel de producto y como elemento del proceso de expansión de la globalización.

Entre los estudios concretos para explicar el CII destacan: Los de Krugman (1993) quien asume que las economías de escala conducen a que cada país se especialice en la producción de cierta variedad de un bien e importe las diferentes clases de dicho producto que se elaboren en el extranjero; Hirschberg (1994), relaciona el CII con el intercambio de partes o componentes de un producto (comercio intrafirma); y Padilla (1998), relaciona la existencia del CII con la existencia de tratados comerciales.

Por tanto, los resultados de los anteriores estudios son: cuando existen acuerdos de libre comercio entre dos naciones con semejanza de desarrollo, el principal beneficio deriva de aprovechar las economías de escala al nivel de empresa. El resultado es un gran impulso al CII con mayor especialización en las fábricas, costos de producción y precios más bajos y mayor variedad de productos pero con pocas repercusiones en el ingreso de los países, salvo la opción de ubicación de las fábricas (De Yanvry y Sadoulet, 1997). El comercio intrafirma también toma relevancia cuando las relaciones intersectoriales son muy pequeñas o no están suficientemente encadenadas, se observa una alta tasa de comercio intrafirma, ya que los insumos necesarios para su operación son importados y poco se abastece de los sectores nacionales; en este sentido la capacidad de irradiar su dinamismo al resto de la economía es muy débil (Millán, 1997).

La ventaja comparativa determina el modelo del comercio interindustrial, en tanto, las economías a escala en productos diferenciados dan lugar al CII. Por tanto, entre mayor sean las diferencias entre los países, mayor importancia toma las ventajas comparativas y el comercio interindustrial; por ende, se puede decir, que el comercio interindustrial es el reflejo de las ventajas comparativas naturales o estáticas y el CII es de las ventajas comparativas adquiridas o dinámicas (Canals, 1994).

Así mismo, la IED, en relación con el comercio internacional, toma dos papeles dentro de la economía: el primero, como apoyo al comercio permite establecer para las exportaciones servicios posteriores a la venta, lo que mejora el CII; el segundo como sustituto parcial del comercio, cuando utiliza al país sede como fuente de expansión de la demanda efectiva (Janvry y Sadoulet, 1997). Las oportunidades crecientes del comercio interno son una fuerza motriz importante para la IED, además del CII.

Los flujos de inversión entre países con tratados de libre comercio, similar dotación de factores y el mismo nivel de desarrollo, se traduce en un impulso al comercio intrafirmas. En contraste cuando tienen diferencias en los niveles de pago a los factores o en sus niveles de productividad, la IED estimula el comercio interindustrial, en torno a las ventajas comparativas. En este último caso, para Cervantes (1996) la motivación del CII es la búsqueda de la mano de obra barata, que puede propiciar sistemáticamente la reubicación de las instalaciones.

La IED en su búsqueda de los mercados que le presenten la mejor opción para residir ha modificado dichos mercados a través de: los niveles de CII e interindustrial, la especialización productiva, la productividad de los factores, las estructuras del mercado y el concepto de competitividad del Estado-nación postulado por las teorías del comercio internacional, y además la especialización regional dentro del mismo Estado-nación.

La existencia de IED y el CII son resultado de la política económica y de la necesidad que tiene el capital de concentrar sus medios de producción en unidades de producción grandes y competitivas, con altos estándares de productividad y competitividad. De tal manera que la especialización de la economía canaliza las inversiones hacia las actividades exportadoras, generando con ello la presencia de CII (Sotelo, 1997).

PROCEDIMIENTO METODOLÓGICO PARA MEDIR EL COMERCIO INTRAINDUSTRIAL

El grado de comercio internacional intraindustrial en un sector, se puede medir de acuerdo con el índice de CII o el índice de Grubel-Lloyd (Bi) (ecuación 1), el índice Bi puede tomar los valores entre cero y uno, cuando su valor es 0, no existe CII, el valor extremo es cuando es igual a 1, es decir que el total del comercio es de carácter intraindustrial, es decir, que las importaciones (Mi) de un bien o sector son iguales a sus exportaciones (Xi).

$$Bi = ((X_{it} - M_{it}) - |X_{it} - M_{it}|) / (X_{it} - M_{it}) \quad (1)$$

Los estudios aplicados a medir el grado de CII se han realizado bajo los supuestos del modelo de competencia monopolista y economías de escala de Krugman, resaltando la necesidad de igualdad de condiciones entre los países para que se genere CII. Considerando los enfoques anteriores, se puede abordar la problemática del CT, donde México ha firmado acuerdos comerciales con países con diferencia de factores por lo que la presencia del CII puede ser bajo, sin embargo, la existencia de la maquiladora cumpliría la perspectiva de la presencia de CII de partes, cumpliendo con los postulados de Gereffi (1994) de la presencia de cadenas mercantiles globales.

Para obtener los valores de CII por subsector, primero se calcula por producto específico de una subrama, posteriormente se pondera el peso de producto dentro de la subrama, para así calcular un índice indicativo

de ella, ponderando el peso de cada subrama en el CT para obtener un índice del complejo en su conjunto por cada año analizado.

Para determinar cual es el impacto de los niveles de CII en el periodo de apertura económica del país se realiza un modelo de predicción de la relación que guarda el CII y el valor agregado del CT y de las ramas que lo componen.

Cuando el CII tiene una relación directa, con el Valor Agregado (VA) del complejo, es decir, que se tienen comportamientos en la misma dirección, significa que los encadenamientos con el resto de la economía son pequeños, por el contrario, si la relación es baja existen encadenamientos intersectoriales importantes, de tal manera que un análisis de regresión simple puede cuantificar el efecto del CII en el valor agregado del CT (ecuación 2).

$$VA_{it} = \alpha + \beta CII_{it} \quad (2)$$

En donde: VA es el valor agregado del sector, CII es el nivel de comercio intraindustrial del sector, α es el valor del VA suponiendo ausencia de comercio intraindustrial y β es la proporción de cambio del VA con respecto a cada unidad adicional de comercio intraindustrial.

EL COMERCIO INTRAINDUSTRAL EN MÉXICO

Como la principal característica de la globalización el CII, en los últimos tiempos, tiene una fuerte presencia en el CT a nivel mundial, ya que es una de las ramas de la manufactura que más globalizada se encuentra. México y el CT mexicano, en particular se han visto también inmersos en esta dinámica de internacionalización económica. Muestra de lo antes expuesto es el comportamiento del CII dentro del CT mexicano, ya que en el período analizado el índice de CII calculado de acuerdo con la metodología propuesta, se ha incrementado conforme han transcurrido los años dentro del proceso de apertura comercial en el país, sobre todo después del año 1994.

Las subramas del CT que mayores niveles de CII han presentado son: primero, prendas de vestir y complementos, exceptuando los de punto, con un promedio en el período de 0.71, en segundo, prendas de vestir y complementos de punto con un promedio anual de 0.68. Los artículos que mayores niveles de CII presentaron durante el período fueron: abrigos, chaquetones, capas y artículos similares exceptuando, los de punto, tanto de hombre como de mujer, que alcanzaron niveles casi totales de CII, sobre todo en el año de 1995 con un promedio del 97% del comercio exterior total. Otros artículos como trajes sastres, conjuntos, sacos, pantalones, faldas y similares exceptuando los de punto para mujeres y niñas alcanzó un promedio mayor al 90% a partir del año 1992.

En los artículos de vestir de punto el promedio ponderado de CII fue mayor del 70% a partir de 1992, con menor presencia que los artículos de no punto. En total de las ramas del CT la de prendas del vestir fue la que presentó mayor presencia del CII en el comercio total; otra de las ramas también fue la de recubrimientos para el suelo, alcanzando en el año 1995 y 1997 el 99% del comercio total. El total del CT el índice de CII fue mayor del 70% a partir de 1993, creciendo hasta el 95% en el año 1995 (ver cuadro 1).

El comercio externo del CT es básicamente producto del CII, ya que en el período analizado el índice Bi o CII en promedio fue del 0.82. Por lo tanto, el CII representó el 82% de las transacciones internacionales del sector, dado tal vez, por la presencia de las grandes corporaciones multinacionales dentro de la rama. Sin embargo, a lo largo de la cadena presenta muy distintos niveles, destacando que, en las fases primarias de la cadena se tienen niveles bajos ya que son sectores netamente importadores, a excepción de las fibras sintéticas donde la estructura productiva es de tipo oligopolista y con fuerte presencia de capital

transnacional. De esta manera, en las fases más avanzadas de la cadena se presentan mayores niveles de CII.

Así, para el sector prendas del vestir en su conjunto el índice de CII tuvo un promedio de 0.70, lo que significó que el 70% del comercio internacional de los bienes producidos en el sector fueran responsabilidad del CII, dado en este caso, por la presencia de las multinacionales en forma de maquiladora. Pero a la vez, se hace evidente lo postulado por Domínguez y Brown (1997), que cuando existen acuerdos comerciales entre países que difieren en sus dotaciones de factores y en el nivel de desarrollo de los mismos, el CII tiene menos presencia que en sectores donde la disponibilidad es más homogénea entre los países del acuerdo. Ante el TLCAN, se presenta esta situación en el caso del sector prendas del vestir, ya que las exportaciones de México del sector a Estados Unidos representan alrededor del 90% del total de las exportaciones de prendas del vestir; en el caso de las prendas confeccionadas de punto representó en 1995 el 97% y para las demás prendas del vestir, exceptuando las de punto, el 98.23%.

Por ello, se hace evidente que el CII fue entre empresas norteamericanas con filiales en México o muestra la presencia de la subcontratación de las empresas nacionales por alguna empresa norteamericana y, a la vez, las diferencias entre el nivel de CII entre el total del CT y el subsector prendas del vestir demuestran mayor dependencia al exterior en este último. Sin embargo, los niveles de CII, por países no solo se presentaron con Estados Unidos, sino que la presencia de Canadá fue evidente en varias fases de la cadena (ver cuadro 2), por ejemplo en la de fibras sintéticas alcanzó en el periodo niveles mayores al 80% de CII, aún mayores a los niveles presentados con Estados Unidos de un 60%, otro país con los que se presentaron altos niveles fue el Reino Unido con un promedio de 60%.

En la fase de confección de alfombras y recubrimiento para el suelo, además de los países anteriores, se tuvo niveles de CII significativos con Francia Japón y España, y en menor medida con Panamá. En la confección de prendas de vestir fue más diversificado ya que a los anteriores países se sumaron con niveles importantes de CII Italia y Hong Kong.

De acuerdo a los niveles de comercio exterior y de CII, se puede visualizar que existe una desintegración de la cadena productiva, ya que en las primeras fases de la cadena el comercio exterior es para el abasto nacional, es decir, es netamente importador, dado los saldos negativos en la balanza comercial existentes en el período analizado. Por ello se puede concluir que las importaciones son para consumo nacional, más que para el apoyo a la exportación, sólo en las últimas fases se puede distinguir que se utilizan para abastecer la siguiente fase de la cadena, ejemplo de ello es la importación de tejidos y telas para la elaboración de prendas de vestir.

Otro elemento a resaltar, resultante de los niveles de CII, es que en el subsector de la confección, México es competitivo a nivel internacional y la especialización ha sido tal que, se exportan bienes que presentan un alto nivel de diseño y de características especiales que los hacen competitivos en su principal mercado: Estados Unidos. Por otro lado, el alto nivel de CII muestra que las importaciones son para abastecer a segmentos muy particulares del mercado interno, ya sea para mercados más exigentes en calidad y diseño o para mercados en que el factor de decisión de compra es el precio.

Cabe destacar que la ausencia de los países del Sudeste asiático en el comercio internacional del CT mexicano, y dada su alta presencia en el mercado internacional, muestra que son los principales competidores en el gran mercado de Estados Unidos. Así también, se puede resaltar que las importaciones realizadas al mercado nacional procedentes de estos países es a través del contrabando o con intermediación de otro país, principalmente Estados Unidos.

Cuadro 2 El Comercio Intraindustrial en la cadena del CT

Etapas Productivas del CT

Saldo comercial	negativo		negativo		negativo		negativo			

Por otro lado, el CII ha conducido, en las primeras etapas de la cadena, a acentuar los saldos negativos en la balanza comercial, en las últimas etapas de la cadena, en la parte de la confección de bienes finales, el comercio tiene una relación positiva con los saldos superavitarios, por ello, se reitera los niveles de competitividad que este subsector tiene en el período analizado. Las correlaciones pertinentes entre los flujos de CII y los saldos de la balanza comercial en cada fase de la cadena que integra el CT se presentan en cuadro 2. Donde existen altos niveles de correlación en todo lo largo de la cadena productiva, a excepción de la fase de confección de alfombras y recubrimientos para el suelo. Las correlaciones negativas que se presentan en la producción de fibras e hilados significan que a mayores niveles de CII existe una tendencia hacia un saldo negativo, las correlaciones positivas, por lo contrario, implican que a mayores niveles de CII se tiende a obtener saldos positivos en la balanza comercial.

Así mismo, el CII tiene una relación directa con los niveles de IED, así, esta última en su búsqueda de reducir costos, genera cadenas mercantiles globales, presuponiendo con ello altos niveles de CII vía el comercio intrafirma. En México, en los últimos años del período analizado, la existencia de IED esta relacionada con en aquellos sectores que presentan altos niveles de CII, principalmente en el subrama de confección, en donde el 68.9% de las empresas extranjeras establecidas en el país y el 60% del capital acumulado pertenecen a ésta. El restante 31.1% se distribuye en el resto de la cadena, exceptuando en el primer eslabón. Coincidente con los niveles altos de CII con Estados Unidos, el 54.7% de las empresas y el 80% del capital invertido tiene el mismo origen. Esto explica el destino de las exportaciones de la subrama de confección, así, como el origen de las importaciones.

Cuadro 2 Correlación entre CII y Saldos Comerciales

Correlación entre CI y saldo comercial			
Fibras textiles			-0.640
Otros textiles			-0.757
Tejidos especiales			-0.956
Tejidos impregnados			-0.978
Tejidos de punto			-0.881
Alfombras y demás revestimientos para el suelo			-0.428
Prendas y complementos del vestir de punto			0.984
Prendas y complementos del vestir, excepto los de punto			0.849
Otros artículos textiles confeccionados			0.961
Elaboración propia con datos de INEGI			

Por otro lado, la relación entre CII y los niveles de valor agregado en el CT y en el sector prendas del vestir, se encontró que para el CT en su conjunto presentaron la siguiente expresión:
 $VACT = 10\,000,000 + 0.247\,CICT$

En donde VACT es el valor agregado del CT y CICT es el volumen de comercio intraindustrial del CT. Por lo tanto, el valor agregado esta dado por un nivel inicial de valor agregado de 10 mil millones de pesos, aumentando en \$0.247 por cada unidad adicional de comercio intraindustrial existente.

Por su parte, en el sector prendas del vestir la varianza de factores es del 0.9509, por lo tanto, el 95% de las variaciones del valor agregado son explicadas por el CII, a un valor autónomo inicial de 5 mil

millones de pesos del valor agregado, con una proporción de cambio del \$0.2559 por cada unidad adicional de CII.

El CII dentro del CT se debe a los cambios organizacionales realizados por las empresas globales, que han buscado en México un buen lugar para operar. Esto ha conducido a que el sector prendas del vestir se haya incorporado de una manera más rápida que el CT en su totalidad al contexto mundial de manufacturas. Por tanto, las relaciones intersectoriales son pequeñas, ya que el comercio internacional del complejo se da principalmente entre empresas hermanas o iguales. La política industrial debe encaminarse a incorporar a la micro y pequeña empresa en el proceso de globalización para que los beneficios de esta sean mayormente multiplicados entre la población.

CONCLUSIONES

Los resultados de este trabajo coinciden con las nuevas teorías del comercio internacional, las cuales determinan que la existencia del CII es resultado de la actividad de las empresas globales, ya que el índice de CII ha aumentado durante el período analizado, siendo mayor en el sector prendas del vestir, esto como resultado de la presencia de la maquiladora en dicho sector, en el CT en su conjunto el aumento se debe al comercio intrafirma de las grandes empresas.

Dado la anterior, se puede decir, que el CT ha partir de 1989, se ha involucrado en mayor medida a la globalización, producto del CII, la IED y la maquiladora, es decir, si ha existido una expansión de la globalización. El CII es producto de las filiales norteamericanas en el país, teniendo un impacto positivo en los saldos de la Balanza Comercial en las últimas fases de la cadena y por el contrario, en las primeras fases, ello demuestra una desvinculación en toda la cadena productiva. Otro hecho que afirma lo anterior, es que la ausencia de IED en los primeros eslabones de la cadena mantienen bajos niveles de CII, por el contrario en la fase de confección los altos niveles de CII tienen una relación con la IED, por lo que su desarrollo está supeditado a la política comercial de las empresas contratistas, a los niveles de demanda en Estados Unidos y a la actuación competitiva de los países emergentes productores de bienes confeccionados, como el caso de China y otros del Sudeste asiático.

Por otro lado, el CII ha influido en los niveles de valor agregado del CT, teniendo mayor impacto en el sector prendas del vestir. Esto es, que el cambio en el valor agregado está dado por la transferencia al pago de los factores productivos, con poco encadenamientos con otros sectores económicos.

IMPACTO DE LA HUELLA DE CARBONO, EN LA COMPETITIVIDAD EXPORTADORA REGIONAL

Erico Wulf Betancourt, Universidad de La Serena

ABSTRACT

This paper deal with the impact on the regional export, of measuring the carbon dioxide emission throughout the productive process of key regional products. Although there are not a conventional methodology, efforts have been made to apply some of them. The outcome is that there is no way regional export, can avoid new carbon dioxide emissions requirements arising in the most important export markets,(USA, Europe, Japan),The cost of such a process, will affect the competitiveness of regional export.

KEYWORDS: Cambio climático, Huella de carbono, Mitigación

INTRODUCCIÓN

En una economía integrada al comercio exterior, el tipo de cambio real es un indicador de la competitividad del sector exportador Sin embargo, las variables ambientales, también pueden influir en dicha competitividad. En particular, la “huella de carbono” puede transformarse en un factor condicionante de las relaciones comerciales, pues su medición tiene impacto en el precio. Muchos países están asumiendo una posición más definida en la protección del medio ambiente, aplicando políticas de exclusión para los productos que no cumplan ciertas normas de emisión, que finalmente también inciden en la competitividad, pues afectan el precio.

En los últimos años, el concepto de Huella de Carbono ha aumentado su importancia dentro de la difusión medio ambiental en el mundo, y si bien, en nuestro país este asunto sigue desarrollándose a niveles investigativos, no pasará mucho tiempo, en que tener una certificación de huella de carbono, sea una exigencia para los mercados, dónde Chile exporta gran parte de su producción: como E.E.U.U y Europa. En estos países, ha aumentado la proporción de consumidores que deciden comprar en base a la reputación ética, social o medioambiental.(EEUU(45%),Francia (34%),Alemania (28%).El desafío de cuantificar y gestionar las emisiones de CO₂ que se liberan al ambiente, ha sido incentivado principalmente por las exigencias de los mercados internacionales y de una mayor conciencia ambiental. En Chile, el cálculo del volumen de dióxido de carbono que emiten las compañías nacionales, es aún voluntario. En contraste, en varias economías desarrolladas este tema ha llevado a algunas firmas o a los gobiernos, a iniciar acciones concretas. La tendencia a nivel global, sin embargo, está siendo impulsada por las grandes cadenas del comercio detallista, que están comenzando a exigir certificados de huellas de carbono a sus proveedores.No sólo la ubicación geográfica de nuestro país, que aumenta el registro de emisiones por concepto de transporte y logística de las compañías locales, preocupa a los productores nacionales. Un problema que deben enfrentar, es que para medir la huella de carbono no existen estándares o protocolos reconocidos oficialmente por todas las partes involucradas.

Asimismo, los esfuerzos necesarios para adaptarse a las nuevas condiciones climáticas y, simultáneamente, controlar y reducir las emisiones de gases de efecto invernadero, implican costos económicos y modificaciones substanciales en los actuales patrones de producción, distribución y consumo, en los flujos comerciales internacionales, e incluso en los estilos de vida de la población. En este sentido, el cambio climático será un factor condicionante esencial en las características y opciones del desarrollo económico de este siglo, en particular en América Latina y el Caribe, donde las condiciones

geográficas y climáticas, y la vulnerabilidad a los eventos extremos y los factores económicos, sociales e incluso institucionales acentúan e intensifican los impactos de este fenómeno climático.

METODOLOGÍA

El enfoque de trabajo para la presentación del tema en análisis, es de tipo descriptivo y exploratorio. En los estudios de medición realizados, fundamento de esta investigación, se decidió aplicar la norma PAS 2050:2008, (*“ Specifications for the assessment of the life cycle greenhouse gas emissions of goods and services ”*), promulgada por la *British Standards Institution (BSI)*. En lo fundamental, la PAS-2050:2008 permite establecer el ámbito de la huella de carbono de un bien o servicio entre dos enfoques distintos, conocidos como “de la cuna a la tumba” y “de la cuna a un próximo negocio”, además de identificar las emisiones de gases invernadero que deben ser consideradas. También, esta norma explicita las emisiones que deben excluirse del cálculo y que corresponden a aquellas provenientes de:

La manufactura y transporte de bienes de capital,

El traslado del personal entre sus hogares y sitios de trabajo, y

Los animales de carga.

Un tema importante de la norma, es que incluye la contabilidad de los gases invernadero por cambio de uso de los suelos y; establecimiento del sistema productivo si la acción ocurrió desde el 01 de Enero de 1990. La aplicación de estas directrices a las circunstancias del estudio condujo a las siguientes decisiones metodológicas:

Debido a que la distribución de los productos en los países de destino, conforman un negocio independiente de estos; aplicar el criterio de la “cuna hasta el próximo negocio” para identificar el ciclo de vida de un producto, se tradujo en un ciclo conformado por las siguientes fases:

Cambio de uso de suelo (si ocurrió a contar del 01 de Enero de 1990),

Animales, que contabiliza las emisiones por fermentación entérica y por gestión de los residuos biológicos animales.

Producción en campo (considerando el sistema productivo en plena producción),

Unidades de post-cosecha (paking, planta de secado, bodega de vinificación y embotelladora, mataderos, frigoríficos, procesadoras de productos animales),

Transporte terrestre entre campo y unidades de post-cosecha, entre unidades de post-cosecha y puerto de embarque (marítimo y aéreo), y

Transporte marítimo o aéreo entre puertos,

Por producto, la huella de carbono fue calculada en función de sus dos principales destinos.

- Si los envíos son a Norteamérica, los destinos marítimos fueron Filadelfia (Uvas, Paltas, manzanas, ciruelas), ó Veracruz (quesos), y el destino aéreo, Nueva York (Bérries); y
- Si los envíos son a la Unión Europea, los destinos marítimos fueron Rotterdam, Liverpool (para vinos) ó Castellón (para carnes ovinas), mientras que Rotterdam fue el destino aéreo de las semillas de maíz.

Otro supuesto necesario, fue la elección de los puertos de salida para la oferta exportable regional. Así, se asumió que los productos:

De las regiones de Atacama y Coquimbo, son despachados por Caldera;

De las regiones de Valparaíso hasta el norte de la Región del Maule lo son por Valparaíso;

Del sur de la Región del Maule hasta la Araucanía, salen por Talcahuano; y

De las regiones de los Ríos y de los Lagos, salen por Puerto Montt; y

De la Región de Magallanes son enviados por Punta Arenas.

Efecto Invernadero Y Cambio Climatico

La parte más vulnerable del sistema ecológico de la tierra es la atmósfera, que consiste en una capa protectora cuya función es atrapar los rayos del sol, y mantenerlos en el planeta para conservar la temperatura. Esto se conoce como efecto invernadero y es efectuado por gases como : el Vapor de Agua (H₂O), Dióxido de Carbono (CO₂), el Metano (CH₄), Oxidos de Nitrógeno(NO_x), Ozono (O₄) y Cloro fluoro carburos (CFC'S).Estos gases , en una proporción adecuada, cumplen su cometido, pero si aumenta su concentración y por ende el grosor de la atmósfera, los rayos del sol no pueden escapar y la temperatura de la tierra se eleva.Estos gases aumentan su proporción por tres factores fundamentalmente, la quema de combustibles fósiles, la destrucción de bosques que absorben el dióxido de carbono, y el aumento de la población. Es así que cuando la radiación solar aumenta la temperatura de los océanos, esto provoca mayor evaporación y precipitaciones. Pero además cuando un huracán entra en contacto con aguas más cálidas, provoca tormentas más fuertes.

Huella De Carbono

Según un estudio ejecutado por el Instituto de Investigaciones Agropecuaria (INIA La Platina), no existe una definición única de “huella de carbono” de un producto, no obstante que se entiende que se refiere a la cantidad de gases efecto invernadero (expresada como CO₂-equivalente) emitida por una unidad funcional del producto enviada hasta un sitio de distribución ó consumo determinado; para los alimentos, sería la sumatoria de los gases invernadero emitidos-directa ó indirectamente- como consecuencia de sus ciclos de vida, comprendiendo tanto las fases por medio de las cuales se produce y procesa un producto como las de transporte y comercialización”.

La huella de carbono contabiliza emisiones directas e indirectas.

Las emisiones directas son aquellas que se generan en fuentes de propiedad de la empresa o son controladas por ella. Ej.: Consumo eléctrico, uso de combustibles fósiles, entre otras.

Las emisiones indirectas son aquellas que la empresa no controla directamente. Ej.: Emisiones por actividades tercerizadas, transporte.

La Metodología de gestión y de medición de la Huella de carbono se gestiona en los 5 pasos que se mencionan a continuación:

Gráfico N°1: Lineamientos de gestión de la Huella de carbono

Fuente: Elaboración propia. Fases de diseño de políticas de control de la HC

Gráfico N°2: Metodología de medición

Fuente: Elaboración propia

Factores De Emision

Los factores de emisión permiten estimar las emisiones de GEI a partir de datos de actividades disponibles (como toneladas de combustible consumido, toneladas de producto producido), y las emisiones totales de GEI . Actualmente las exportaciones regionales , no están siendo afectadas por la Huella de Carbono, sin embargo, esto podría ocurrir en un futuro cercano, dado que ya se están discutiendo en parlamentos de diferentes países proyectos de ley que aplicarían impuestos a productos con una huella de carbono “alta”. En términos de emisiones per cápita, Chile pasó de 3 toneladas por persona en 1984 a 5,7 toneladas por persona en 2008. Por otra parte, se destaca que el sector de la energía domina las emisiones, con un aporte del 73% de las emisiones totales en 2008.

METODOLOGIAS DE MEDICION DE LA HUELLA DE CARBONO

El interés por la competitividad, las emisiones y la huella de carbono, ha llevado a diferentes organizaciones a proponer modelos para contabilizar e informar los impactos de los gases efecto invernadero, en productos y servicios. Los más importantes son patrocinados por los gobiernos y buscan facilitar la definición de estándares nacionales. Otras tienen por objetivo reducir las emisiones en los procesos productivos, o se enfocan sólo en la entrega de información ambiental de mayor calidad a clientes y gobiernos. Países como Alemania, los Estados Unidos, Francia, Japón y Reino Unido, han logrado importantes avances en la definición y aplicación de metodologías orientadas al cálculo de la

huella de carbono para incorporarla al etiquetado de productos. Además, estiman que contabilizar las emisiones, permite a las empresas trabajar con sus proveedores para que éstos las reduzcan. Las metodologías hoy existentes se dividen en dos tipos, y las hay basadas en enfoque corporativo y de producto:

- 1.1.1. *Guías Generales*: normas ISO que representan estándares de referencia para el cálculo de CO₂ (norma ISO 14.040, sobre Gestión Ambiental – Análisis de Ciclo de Vida; BS ISO 14.064-1:2006, sobre gases de efecto invernadero – Especificación con orientación, a nivel de organización, para la cuantificación y divulgación de las emisiones y de la remoción de gases de efecto invernadero)
- 1.1.2. *Guías Específicas*: PAS 2050, Bilan Carbone® o el GHG Protocol para la contabilidad, cálculo y monitoreo de los gases de efecto invernadero.

Tabla N°1: Enfoque Corporativo y enfoque de Producto

CARACTERISTICAS	ENFOQUE CORPORATIVO		ENFOQUE PRODUCTO
	<i>Bilan Carbone®</i>	<i>GHG Protocol</i>	<i>PAS 2050</i>
Perímetro	<i>Emisiones directas provenientes del uso de combustibles (controladas por la Compañía)</i> <i>Emisiones indirectas por el uso de electricidad</i> <i>Emisiones indirectas no controladas por la compañía</i>		<i>Emisiones generadas evaluando el ciclo de vida del producto</i> <i>B to B</i> <i>B to C</i>
Comparabilidad	<i>Ausencia de un estándar único</i> <i>No hay una obligación de incluir todas las fuentes</i> <i>Difícilmente comparables</i>		<i>Enfoque sobre una unidad funcional específica (producto)</i> <i>Herramienta diseñada para fines de comparabilidad</i>
Norma Base ISO	<i>ISO 14064-1 cuantificación e informe de las emisiones y reducciones de GEI</i>		<i>ISO 14040 análisis del Ciclo de Vida</i> <i>ISO 14067 Huella de Carbono para (en preparación)</i>
Verificación Externa Independiente Incertidumbre	<i>No – trabajos efectuados solo por personal formado por la ADEME</i> <i>Si – Obligatoria</i>	<i>Recomendado- verificar fuentes- indicadores- FE</i> <i>Si – Voluntaria</i>	<i>Obligatoria para comunicar los resultados</i> <i>Si – Obligatoria para comunicar los resultados</i>
Uso Internacional	<i>No</i>	<i>Si</i>	<i>Si</i>

Fuente: Ernest &Young, 2009

GHG Protocol: Incluye un enfoque corporativo, y fue desarrollado por el Instituto de Recursos Mundiales (World Resources Institute- WRI) y, el Consejo Mundial Empresarial para el Desarrollo Sustentable (World Business Council for Sustainable Development), en conjunto con empresas y organizaciones no gubernamentales.

PAS 2050:2008: Elaborado por el Instituto de Normalización Británico (British Standard Institute), en conjunto con empresas, universidades y organizaciones internacionales. Tiene un enfoque de ciclo de vida de las emisiones procedentes de las actividades relativas tanto a la producción de bienes como de servicios.

La norma ISO 14067: Consta de dos secciones:

Carbon footprint of products—Part 1:Quantification

Carbon footprint of products—Part 2:Communication

Al igual que la serie ISO 14064 sobre la contabilidad y la verificación de los gases de efecto invernadero, la norma ISO 14067 es un régimen neutro. La forma más apropiada de utilizar estas metodologías, es adaptarlas a las necesidades de las empresas en base a requerimientos del mercado de destino, clientes, indicadores de impacto ambiental, sistemas de gestión, políticas de gobierno, normas internacionales etc.

Tabla N°2: Relevancia de la HDC en algunos mercados de destino

PAIS	PROYECTO	CONTENIDO
Alemania	PCF Projekt	Elaborar un estándar para la huella de carbono de los productos, utilizando como referencia el PAS 2050 del Reino Unido.
EEUU	Ley de energía limpia y seguridad de América (2) Proyecto Markey- Waxman H.R.2454	Propuesta legislativa de EEUU, orientada a conducir al país hacia una economía energéticamente más limpia y de menor impacto sobre el calentamiento global reduciendo las emisiones de gases de efecto invernadero, realizando acciones específicas orientadas a dicha finalidad.
Francia	Bilan Carbone. Desarrollada por la Agencia francesa del medio ambiente y de la gestión de la energía .Proceso Grenelle de l' environnement	Método para contabilizar emisiones directas e indirectas de gases de efecto invernadero, relacionadas con las actividades industriales, empresariales, de otras asociaciones y entidades administrativas. Permite clasificar las emisiones según fuente, siendo la base de la herramienta, una planilla Excel que calcula las emisiones asociadas a cada actividad de un proceso. A partir del 1° de enero del año 2011, en Francia será obligatorio el etiquetado con información del contenido en carbono de los productos y el impacto ambiental estimado de su embalaje. Desde 2010 se aplica un impuesto al carbono.
Japón	Guía para la huella de carbono de los productos del Ministerio de Economía, Comercio e industria de Japón.	Guía detallada para el etiquetado de la huella de carbono de algunos productos, que se mide a lo largo del ciclo de vida del producto.

Fuente : Elaboración propia. Esta tabla detalla el avance en las actividades relacionadas con la medición de la huella de carbono.

Intercambio Comercial Nacional Y Regional De Chile

Chile organizado administrativamente en 15 regiones, ha suscrito tratados comerciales con 57 países, abarcando 4.040 millones de potenciales consumidores alrededor de todo el mundo, y el acceso preferente de mercado al 86% del PIB mundial. La Región de Coquimbo está formada por 3 provincias, que en conjunto reúnen 15 comunas. Tiene una superficie que representa el 5,4% del territorio nacional. La región cuenta con una población de 603.210 habitantes (que representa un 4% del territorio nacional), de los cuales el 78,1% corresponde a población urbana. (Censo 2002). -La economía de la región se basa en las actividades relacionadas con la minería, la agricultura, la pesca y el comercio. El PIB regional, representa una participación del 2,2% en el PIB nacional .

Exportaciones Regionales: Durante el año 2009 (Enero-Diciembre), las exportaciones de la Región de Coquimbo totalizaron US\$ 2.250.mill distribuidos en 276 productos, lo que representa un descenso del 2,47% en comparación con el año anterior. El 93,26% del total exportado, se concentra en 15 productos. Dentro de estos productos, figuran los minerales, que concentran el 75,83% del total exportado. La Agricultura, participa en las exportaciones regionales con diversas variedades de uva, paltas y clementinas. La agroindustria, se destaca con los envíos de jugos de uva sin fermentar, las conservas de alcachofas, y algunos productos recientes (arándanos). Dentro de los Productos del Mar, destacan los envíos de Algas y de Ostiones del Norte, los cuales representan un 1,1% del total exportado por la región. En el área de los servicios sigue siendo liderada por la exportación de servicios mineros.

Principales Mercados de Exportación: Durante el año 2009, las exportaciones totales de la Región de Coquimbo, tuvieron como destino a 95 países. Los principales mercados, concentraron el 96,64% del total exportado. América (17,8%), Asia (75%), Europa (7,3%), otros países (1%). La concentración de los envíos regionales en Asia, se debe principalmente a los envíos de minerales a Japón y China.

Principales Empresa Exportadoras: Durante el año 2009, fueron 378 las empresas que exportaron algún bien o servicio desde la Región de Coquimbo, lo que representa un aumento del 2,72% en comparación con el año anterior. Se mantiene la concentración de las exportaciones en grandes empresas, puesto que las 10 principales empresas exportadoras concentran el 84,04% de los envíos al exterior. Lo anterior se explica en gran medida en que se mantiene una alta concentración de las exportaciones en las empresas del sector minero. (Una empresa participa con el 66,04% del total exportado). La mayor cantidad de empresas exportadoras, se encuentran en el rubro agrícola, seguidas de empresas de productos del mar.

Tabla N°3: Oferta Agroalimentaria Exportable De La Iv Region

producto		participacion (%)
1	Uva Thompson, frescas	9,29 %
2	Uva Red Globe, frescas	8,98 %
3	Uva Flame Seedless, frescas	8,80 %
4	Palta Hass, frescas	1,39 %
5	Otras variedades de Uvas frescas	0,83 %
6	Ostiones del Norte congelados	0,59 %
7	Clementinas frescas	0,50 %
8	Jugos de Uva diversos	0,43 %
9	Limonos	0,37 %
10	Algas Chascón	0,36 %
11	Langostinos diversos	0,22 %
12	Naranjas frescas	0,21 %
13	Ají Seco	0,14 %
14	Otras Jibias	0,07 %
Total 14 principales Productos		32,26%
Otros productos exportados		67,74 %
Total Exportaciones Región de Coquimbo		100 %

Fuente: Elaboración propia. Esta tabla muestra la importancia de las uvas dentro de la oferta exportable agroalimentaria regional.

Análisis De Los Principales Mercados De Destino, Y Las Prioridades De Implementación De La Huella De Carbono

Este análisis se realiza en base al estudio realizado por INIA-La Platina. Este estudio, contó con el apoyo y participación de numerosas asociaciones gremiales del ámbito de la producción, y exportación de productos agropecuarios. Se encuestaron a 92 productores, incluyendo productos de la oferta agroalimentaria regional. La Huella de carbono se desagregó en dos niveles: Global y nacional. En esta última, se excluye la fase de transporte internacional, lo cual es importante desde el punto de vista de la gestión posterior de los datos alcanzados, especialmente desde la perspectiva de una estrategia de mitigación que debe apuntar preferentemente hacia las acciones que ocurren en el territorio nacional y que, por tanto, son controlables. Para identificar los principales mercados de destino de las exportaciones regionales, y las prioridades en la implementación de la Huella de Carbono, pertinentes en la oferta agroalimentaria exportable regional, se toma como base la participación de mercados e ingresos generados. Para ello, se utilizan tablas de frecuencia, con el objetivo de determinar el Peso Relativo de los diversos mercados, considerando un período de 5 años, (2005-2009), y focalizado en :

Tipo de Producto: 14 productos principales de la Región, correspondientes a la oferta Agroalimentaria.

Mercados: 10 principales mercados destino de las exportaciones regionales..

HUELLA DE CARBONO A NIVEL GLOBAL

El Cuadro N°1, presenta los rangos asumidos por la huella de carbono, en kg CO₂e por unidad funcional, para cada producto. El primer elemento interesante es que los cinco productos con las más altas huellas de carbono incluyen, en primer lugar, los dos productos de origen animal, seguidos por los tres productos vegetales que son trasladados por vía aérea a Europa (semillas de maíz) y a los EUA (berries).

Cuadro N°1: Valores máximos y mínimos de la huella de carbono

Producto	Encuestas		AN- mar		AN-aire		EU-mar		EU-aire	
	Cam Po	Packing	Mín	Máx	Mín	Máx	Mín	Máx	Mín	Máx

Quesos Gauda	9	0	7,40	17,76						

*1*kilogramo, para todos los productos excepto vino, para el cual corresponde a litro embotellado ²Números negativos indican captura de carbono atmosférico y números positivos, emisión de gases invernadero ⁴incluye las encuestas a productores orgánicos (frambuesas=2; vinos=1) AN mar: transporte a América del Norte, vía marítima AN aire: transporte a América del Norte, vía aérea EU mar: transporte a Europa, vía marítima EU aire: transporte a Europa, vía aérea Fuente: INIA La Platina. Valores máximos y mínimos de la huella de carbono de los productos incluidos en el estudio (en kg CO_{2e} unidad funcional¹), según destino y vía de despacho

El aporte del transporte marítimo entre países es relativamente bajo, pero se transforma en dominante cuando es aéreo, tanto en términos relativos como absolutos. En valores absolutos, el aporte del transporte por mar fluctuó entre 0,10 y 0,12 kg CO_{2e} por unidad funcional ,si el destino fue Norteamérica ;(entre 0,14 y 0,20 kg CO_{2e} por unidad funcional si el destino fue Europa) pero la contribución a la huella de carbono de los productos transportados por vía aérea excedió los 5 kg CO_{2e} por unidad funcional.

Huella De Carbono A Nivel Nacional

El Cuadro N°2, presenta los rangos de valores asociados a las fases del ciclo de vida que ocurren en el territorio nacional y que conforman por tanto la huella de carbono naciona

Cuadro N°2: Variación de la huella de carbono por producto

Producto	N° de encuestas		Rango de variación		
	Campo	Packing	Mínimo	Máximo	Amplitud ó delta
Ciruelas ang	6	3	1,56	1,91	0,35

*Incluye las encuestas aplicadas a productores orgánicos **Números negativos= captura de carbono atmosférico; números positivos: emisión de gases invernadero Fuente: INIA La Platina Este cuadro muestra la HC (kg CO_{2e})hasta el punto de salida del país de cada producto exportado.

Analisis De La Hc Por Producto: Es posible clasificar los productos estudiados en los siguientes tres grupos: Grupo 1: productos cuya huella de carbono está dominada por las emisiones provenientes

directamente de los animales y de sus residuos biológicos (productos de origen animal) Grupo 2: productos cuya huella de carbono está dominada por las emisiones provenientes de la fase de producción (semillas de maíz y patatas), y Grupo 3: productos cuya huella de carbono está dominada por las emisiones provenientes de la ó de las fases de post cosecha (packing y frigorífico, para ciruelas, manzanas, uva de mesa y berries; bodega y planta embotelladora, para vinos). Para el análisis del estudio se tomarán en consideración los dos últimos grupos.

Paltas En Valle: La huella de carbono de las paltas producidas en fondo de valle está dominada, entre 60% y 70%, por la producción de campo; le siguen los packings cuyo aporte fluctuó entre 21% y 27%, y el transporte terrestre nacional, con aportes entre 3% y 13%. Para este producto, no hubo necesidad de contabilizar cambio de uso de los suelos. Casi el 70% de las emisiones fueron directas, consistiendo el restante 30% prácticamente en emisiones involucradas. Estas emisiones, fueron generadas a partir de las tres fuentes de emisión (insumos, residuos, fuentes de energía) en una proporción casi equivalente.

UVA DE MESA (Red Globe, Y Thompson Seedless): Con algunas diferencias en los porcentuales, puede decirse que la estructura para ambas es similar, en el sentido que las fases de post-cosecha (packing y refrigeración) ,son las más contribuyentes a la huella de carbono, ubicándose la producción de campo en segundo lugar y el transporte terrestre en un tercer lugar. En todo caso, la fase packing hace una mayor contribución para el cultivar Red Globe que para el cultivar Thompson Seedless, mientras que fase de producción asume una posición exactamente inversa. Ambos cultivares presentaron una situación similar a la de las ciruelas, en el sentido que la principal fuente de emisión correspondió largamente a los insumos pero con la diferencia que el principal tipo de emisión correspondió a las emisiones involucradas, claramente por sobre las directas.

Figura N°1

Fuente: INIA

BERRIES (arándanos y frambuesas): Ambos productos tienen una huella de carbono similar y, a la vez, con alta similitud a la de las manzanas y uva de mesa. En general, puede verse que el mayor aporte a la huella de carbono provino del procesamiento de post cosecha (packing y refrigeración), con importancia variable entre 46% y 80% para los arándanos, y entre 44% y 82% para las frambuesas. Para estos productos, en todo caso, la fase de producción de campo hizo un aporte mayor a la huella de carbono que para las manzanas, ciruelas y uva de mesa; la contribución relativa de la producción varió entre 7% y 48% para los arándanos y entre 10% y 37% para las frambuesas. Otro factor común con los otros productos de este grupo fue que los insumos fueron la principal fuente de emisiones, aunque las fuentes de energía también hicieron una contribución relativa relevante. Asimismo, se repite el hecho que el principal tipo de

emisión correspondió a las directas. Un hecho interesante es que la huella de carbono de los dos productos orgánicos encuestados (FR-9 y FR-10) no se diferencia de los productos convencionales, tanto en términos absolutos como relativos. Esto podría ser indicativo que la huella de carbono no es un buen indicador para detectar diferencias entre ambos estilos de cultivación.

Figura N°2

Fuente: INIA La Platina

Vinos Tinto

La huella de carbono de los vinos fue productor específica, con amplias variaciones entre estos; esta amplia variabilidad entre productores representa una restricción a la generalización de los resultados. De acuerdo con los resultados obtenidos, la producción en campo -si bien importante- no es la más contribuyente a la huella de carbono, sino que lo son las fases de post-cosecha: en este caso, bodega de vinificación y planta de embotellado. El transporte terrestre hizo una contribución menor. Un tema importante es que la huella de carbono de la viña orgánica (VIN-1) cayó dentro del rango de los valores absolutos de la huella de carbono de este producto, permitiendo afirmar con mayor certeza que la huella de carbono no es un elemento diferenciador entre sistemas orgánicos y convencionales; no obstante lo anterior, la mayor incidencia de los residuos en el caso de la viña orgánica (VIN-1) está señalando que la estructura de la huella de carbono puede ser distinta para los vinos orgánicos.

Si bien las principales fuentes emisoras fueron los insumos y la energía, que generalmente suman casi el 100% de las emisiones, los residuos son fuente importante de emisiones directas desde la viña orgánica. En la mayoría de los casos, los tipos de emisiones más importantes fueron las directas con una participación menor de las emisiones indirectas. Llama la atención que este es el único producto para el que las emisiones indirectas son importantes, con una contribución entre 1% y 20%.

Acciones De Mitigacion

El factor común para estos productos es que todo intento por reducir la huella de carbono deberá apuntar, preferentemente, a las fases de post-cosecha e invirtiendo menos esfuerzos en las otras fases. En lo general, los esfuerzos deben orientarse al establecimiento de códigos de buenas prácticas laborales para incrementar la productividad, y la eficiencia en el uso de los insumos, a contar con información sobre la huella de carbono de los insumos y, a la formulación de programas de eficiencia energética. Estas dos opciones deberían hacerse extensivas a las restantes fases del ciclo de vida, así como también considerar la formulación de códigos de buenas prácticas agrícolas, que incluyan aumentos de eficiencia y productividad así como también formas inocuas de disposición de residuos.

Igualmente, toda estrategia de mitigación no puede dejar de considerar aquellos temas transversales de gestión y cuya inclusión no genera gastos adicionales.-Además, conviene dejar establecido que la primera y más efectiva opción de reducción de la huella de carbono de cualquier producto, es alcanzar un aumento de la productividad de la carga emisora, esto es, el estar en condiciones de prorratar una misma carga por una mayor cantidad de producto. En segundo lugar, mientras en los productos de origen animal, el principal foco emisor son los propios animales, para los de origen vegetal, el principal foco emisor cambia entre la producción de campo y el procesamiento de postcosecha. En los productos estudiados, está el hecho de que ninguno presentó al transporte (nacional e internacional), como principal foco emisor, a menos que algún tramo se haga por aire. Estos resultados permiten establecer que no es posible montar una estrategia mitigadora única y aplicable a todos los productos; por el contrario, corresponde pensar en estrategias producto-específicas.

En términos generales, las opciones de mitigación pueden ser activas ó de gestión. En el primer caso, se trata de estrategias conducentes a modificar esquemas de producción, de post-cosecha, de comercialización y de transporte, con el objeto primordial de reducir las emisiones definidas como directas e indirectas . Bajo este título, se emplazan los códigos de buenas prácticas agrícolas y laborales (aunque estos códigos también tienen que ver con gestión), los programas de eficiencia energética y las formas inocuas de disposición de residuos. Su definición y aplicación conlleva costos adicionales e inversiones que deberían ser solventados por los actores involucrados.

En el segundo caso, se trata de acciones orientadas planificar y programar, cuya ocurrencia no debería traducirse en costos adicionales. En este aspecto, entra la definición de la ruta crítica de los productos, la elección de suministros según la huella de carbono de las alternativas disponibles (que puede, también, ser parte de las buenas prácticas), la armonización del avance (tiempos, rutas) del producto dentro del ciclo de vida, los códigos de conducción eficiente de camiones (horario, mantención, reparación) y programas de renovación de máquinas y motores.El Estado –en cumplimiento de su rol subsidiario-debería asumir una serie de acciones en ámbitos que claramente exceden el campo de acción del sector privado. Básicamente, se sugiere que el Estado tome medidas en ámbitos normativos(información), de subsidio(apoyo a unidades que utilicen energías limpias) y apoyo financiero, de inversión, de capacitación y de difusión de información.

CONCLUSIONES

La huella de carbono se ha transformado en una barrera que podría aumentar los costos a los exportadores chilenos, esto significa perder competitividad en colocar productos como: frutas, vegetales, pescados y mariscos, fuente de negocios que en la región representan un valor exportable que bordea los 300 millones de dólares al año. Pero si los exportadores locales no cumplen con estas normativas, simplemente perderán mercados. Para evitar que en el corto plazo las exportaciones totales, se vean afectadas por estas imposiciones, especialmente en los países industrializados donde van alrededor del 47% de los productos regionales, urge la necesidad de sostener por parte del los exportadores locales, una actitud proactiva frente al tema y visualizarlo como una oportunidad para generar diferenciación y competitividad a partir de la vinculación del medio ambiente, con procesos productivos. Para ello, se deben localizar los esfuerzos en conocer y cuantificar las emisiones asociadas al producto y generar acciones internas compensatorias. Con productos ya rotulados y compensados en sus emisiones, se logra con ello sin duda, una ventaja especialmente frente a otros oferentes, que no han avanzado al respecto.

Actualmente la oferta exportable agroalimentaria de la región, está dirigida a mercados como Estados Unidos con una participación de alrededor del 38%, el cual ha adoptado la metodología de cálculo GHG Protocol (Protocolo de Gases de Efecto Invernadero), sustentado en la Ley de energía limpia y seguridad de América, seguido por Japón con un peso relativo correspondiente al 12%, cuya metodología

desarrollada toma como referencia la PAS 2050. Otros de los destinos más destacados se encuentran: Francia que ha desarrollado la Bilan Carbone, y Reino Unido gestor de la PAS 2050, ambos líderes europeos en materia de desarrollo de éstas herramientas metodológicas. Se posicionan con una participación para los productos de la región, de un 7% y 3% respectivamente. En el caso de Francia, se encuentra vigente la Ley Grenelle(2011), a través de la cual se exige el etiquetado con información del impacto de su embalaje en la emisión de carbono. En definitiva, se han desarrollado estándares y marcos metodológicos todavía poco armonizados.

A nivel país se ha optado por un proceso institucional de análisis de adaptación/respuesta a los desafíos planteados por las orientaciones europeas y estadounidenses, con la visión clara de lograr mantener y fortalecer su competitividad en el escenario internacional frente a vecinos latinoamericanos o países de otras regiones. Pese a que Chile todavía no dispone de todas las herramientas necesarias, el país ha establecido las bases hacia la adaptación de estrategias y herramientas dedicadas a la Huella de Carbono.- El consumidor verde o ecológico se puede definir como aquel consumidor que manifiesta su preocupación por el medio ambiente en su comportamiento de compra, buscando productos que sean percibidos como de menor impacto sobre el medio ambiente. En algunos casos, dicha valoración se manifestará en pagar un mayor precio por productos percibidos como ecológicos; en otros casos se manifestará en el rechazo de aquellos productos más contaminantes; y en otros casos se manifestará en preferir el producto más ecológico.

PROGRAMA DE ASISTENCIA EMPRESARIAL ENTRE LA UNIVERSIDAD AUTONOMA DE BAJA CALIFORNIA Y LA SECRETARIA DE DESARROLLO ECONOMICO DEL GOBIERNO DEL ESTADO DE BAJA CALIFORNIA PARA IMPULSAR EL DESARROLLO Y CRECIMIENTO DE LOS MICROEMPRESARIOS

Francisco Meza Hernández, Universidad Autonoma de Baja California
Pedro Javier Bernal Rodríguez, Universidad Autonoma de Baja California
Santiago Pérez Alcalá, Universidad Autonoma de Baja California

RESUMEN

La presente investigación pretende mostrar la metodología estratégica educativa y gubernamental, para impulsar el desarrollo y crecimiento de los microempresarios. Lo cual se fomenta a través de programas convenidos entre la Universidad Autónoma de Baja California por medio de la Facultad de Ciencias Administrativas y la Secretaría de Desarrollo Económico del gobierno del estado de Baja California. En México, del total de las empresas más del 95% son microempresarios, es por eso que esta investigación aporta las acciones necesarias para mostrar los alcances y beneficios de implementar programas que contribuyan al desarrollo y crecimiento empresarial de dichos microempresarios. La base fundamental del programa consiste en establecer objetivos y metas definidos para brindar asesoría legal y fiscal, capacitación, apoyos económicos, gestión de créditos, cobertura de seguridad social, seguimiento y evaluación. Todo esto, bajo un esquema de apoyo del gobierno en localizar a los sectores marginados de la sociedad que requieren ser impulsados para el desarrollo y crecimiento de su microempresa. Este programa requiere la participación activa de autoridades gubernamentales y universitarias, docentes, universitarias y microempresarios.

PALABRAS CLAVE: Programa, Desarrollo, Microempresarios

INTRODUCCIÓN

La realización de este trabajo nace de la necesidad y problemática actual de los gobiernos federales y estatales de afrontar y enfrentar el problema de cómo generar de empleos formales y oportunidades para su comunidad o región, para detonar el crecimiento empresarial y económico. De esta manera, surge el establecimiento de convenios y acuerdos sobre la implementación de programas que fomenten la empresarialidad en la población informal de bajos recursos. El acercamiento, pretende que a través de las instituciones de educación superior (UES) se otorguen asesorías de formalización y capacitación que fomenten el crecimiento empresarial, para lograr la permanencia y estabilidad de las Micro y Pequeñas Empresas a través del acceso a apoyos económicos y financiamientos.

El objetivo fundamental de toda Universidad Económico-Administrativa es impulsar el desarrollo de la comunidad a la cual pertenece; y apoyar el progreso de su país. La economía, la actividad empresarial, el sector político y el bienestar social son sectores altamente impactados por el papel que desempeñan las Universidades. Ante este reto, queda claro, que las micro y pequeñas empresas contribuyen ampliamente en el desarrollo y progreso económico del cualquier nación, ya que son generadoras de empleos y seguridad social. Las Universidad Autónoma de Baja California y la Secretaría de Desarrollo Económico del gobierno del estado de Baja California buscan proveer servicios e información para el desarrollo empresarial, formar capital humano, desarrollar el espíritu emprendedor, constituir un modelo de

enseñanza-aprendizaje, promover la formación empresarial para estudiantes y empresarios, desarrollar investigación sobre microempresas, potenciar políticas e infraestructura pública en apoyo al sector empresarial. En esta exploración se obtuvieron datos estadísticas de microempresarios informales, que fueron asesorados y formalizados en la constitución de su empresa. Lo cual genera bienestar legal y rectitud empresarial. De igual manera, estas microempresas pueden ser sujetas de crédito ante instituciones privadas, acceder a financiamientos gubernamentales, solicitar apoyos económicos de programas establecidos por los gobiernos, encontrar nuevos mercados y contribuir al gasto público.

Ante este contexto, la aportación y participación de la universidad vinculada con el gobierno estatal constituyen una alianza potencializadora para promover la empresarialidad y emprender programas que contribuyan al crecimiento y desarrollo de los microempresarios en Baja California. Este programa ha generado resultados excelentes desde su implementación en el año 2007 a la fecha, y se aplica de forma general en el Estado con la Universidad y el propio gobierno, bajo una metodología específica presentada en la presente investigación.

REVISIÓN LITERARIA

Los principales actores que participan e intervienen en la educación superior, son las unidades de Educación Superior (UES); Gobierno; y la Sociedad. Estos actores intervienen entre sí en el contexto del mercado educativo y mercado laboral, esto lo define Alejandro Mungaray Lagarda, Giovanna Valenti Nigrini (1997) en su obra denominada “Políticas Públicas y Educación Superior” publicada por la *Asociación Nacional de Universidades e Instituciones de Educación Superior (ANUIES)*, pag 91, de tal manera que las Universidades deberán formar un vínculo estrecho entre educación y ámbito empresarial. Francisco Albuquerque (2004) en su libro; “Desarrollo económico local y descentralización en América Latina” publicado en la revista de CEPAL a la memoria de Gabriel Aghón describe perfectamente lo que se debe considerar como desarrollo local estableciendo que este desarrollo viene a destacar fundamentalmente los valores territoriales, de identidad, diversidad y flexibilidad que han existido en el pasado en las formas de producción no basadas tan sólo en la gran industria, sino en las características generales y locales de un territorio determinado.

METODOLOGÍA

El objetivo fundamental de este estudio es presentar la metodología estratégica, implementada en el programa de asistencia empresarial, capacitación y seguimiento a microempresarios, a través de un plan de trabajo y acciones, y que permitan a los interesados, implementar programas de tal naturaleza. Por tal motivo se presentan el papel que cada actor requiere realizar para llevar de forma coordinada y organizada la realización exitosa del programa.

La Secretaría de Desarrollo Económico (SEDECO) del Gobierno del Estado de Baja California y la Universidad Autónoma de Baja California (UABC): Es la SEDECO quien da inicio el primer acercamiento en marzo de 2007 con la UABC, para establecer el convenio y acuerdo para formalizar el trabajo colaborativo y de cooperación donde participan: Académicos, Estudiantes y Autoridades de la Secretaría, para establecer actividades a favor de la población informal de bajos recursos, de forma vinculada con la ejecución de la Universidad y El gobierno. En el convenio se formalizaron los acuerdos donde la UABC proporciona: Capital humano conformado por estudiantes y académicos profesionales, los cuales fueron capacitados en cuestión de requisitos y trámites de constitución de empresas y aplicación de asistencia empresarial, lo que afianza su aprendizaje profesional. También se establecen pláticas con Autoridades Fiscales del Orden Federal y Estatal, para recibir apoyo mutuo en la atención a los microempresarios. De igual manera, por medio de padrones y bases de datos de la SEDECO con presidentes vecinales y sus comunidades, se les impartió pláticas de trámites, asesoría, constitución de

empresas y capacitación en áreas básicas detectadas mediante diagnóstico empresarial realizado por los estudiantes, que permite al microempresario permanencia y crecimiento empresarial. En el convenio se formalizaron los acuerdos donde la SEDECO en función de las actividades realizadas por la UABC se compromete a: otorgar apoyos económicos y gestión de seguridad social a los microempresarios formalizados según los procedimientos y trámites que la SEDECO instrumenta para tal efecto, y que la UABC apoya para cumplir con los requisitos establecidos. Otro compromiso es otorgar créditos accesibles de acuerdo a la capacidad económica de los microempresarios formalizados. Asimismo la SEDECO se comprometió a respetar la confidencialidad y credibilidad de la información que la UABC obtuvo de los microempresarios.

Faculta de Ciencias Administrativas(FCA): La primer actividad de la FCA, comprendió la planeación, diseño y elaboración de un programa de servicio social, que involucra a estudiantes de servicio social obligatorio de primera y segunda etapa. Dicho programa se definió en funciones de conformidad al perfil profesional de cada estudiante para estimular su formación profesional. De igual manera en el programa se plasmaron los propósitos que se pretenden cumplir con los microempresarios y los beneficios que representan para la Institución Educativa, El Gobierno, Microempresarios y Sociedad. Dicho programa de servicio social se denominó como “Programa de Investigación, Asistencia y Docencia a la Micro y Pequeña Empresa (PIADMYPE) aprobado por la Universidad Autónoma de Baja California.

Para llevar a cabo este programa se requirió que el estudiante haya tenido pleno conocimiento de las actividades a realizar como: metas, objetivos, compromisos a adquirir, nivel de responsabilidad, profesionalismo, trato, actitud, sensibilidad, atención y seguimiento para los microempresarios. Por lo que fue de suma importancia para los académicos, seleccionar a los mejores estudiantes que contemplaran los requisitos para participar en este programa. Dicha actividad se reforzó mediante pláticas previamente programadas con los estudiantes.

Autoridades Fiscales Federales y Estatales: Las acciones llevadas a cabo por la FCA y SEDECO son fortalecidas con la participación activa de las autoridades federales y estatales, puesto que se busca generar conciencia de la importancia que representa la colaboración de la FCA, al fomentar la cultura de la legalidad y formalización de los microempresarios informales. De lo cual se desprende, que es indispensable contar con el apoyo de las autoridades para coordinar actividades en pro de los microempresarios en cuestiones referentes a: trámites, requisitos, control y atención. Por lo cual, la FCA presentó el programa de asistencia empresarial, capacitación y seguimiento a microempresarios ante las autoridades fiscales y estatales, obteniendo como respuesta favorable: el colaborar activamente en apoyo a las acciones de la FCA.

Microempresarios de zona específicas para el programa: De conformidad con los padrones y bases de datos de la SEDECO, se establecen las rutas, puntos, fechas y horarios para difundir el programa, y llevar a las zonas, aéreas o colonias donde específicamente se requiere brindar el apoyo efectivo, y que sea requerido por microempresarios idóneos para el programa. De tal manera que esta forma se llevan a cabo pláticas con los microempresarios informales previa difusión por parte del presidente vecinal, donde las Autoridades de la SEDECO, Académicos de la FCA y Universitarios exponen el programa y brindan la asesoría para cumplir con los requisitos y trámites para formalizar su negocio y obtener los beneficios de apoyo económico, seguridad social, capacitación, créditos y seguimiento.

Microempresarios base del programa: La población objetivo determinada en los acuerdos y convenio realizados entre UABC-FCA y SEDECO se establece en Pequeñas y Medianas Empresas con giros diversos que no excedan los 2, 000,000.00 (dos millones de pesos de ingresos al año), que en años anteriores no hayan tenido ningún tipo de actividad empresarial u semejante, excepto sueldos, y que por primera vez formalicen su negocio para recibir apoyo económico en función de un estudio socio-económico. A su vez obtendrán asesoría, capacitación y seguridad social. Posteriormente seguirán siendo

apoyador por la SEDECO-UABC para la aplicación y obtención de créditos y afiliación a red de microempresarios. Estas acciones se llevaron a cabo con el propósito de otorgar a los microempresarios herramientas básicas que les permitan administrar, controlar y ampliar sus expectativas empresariales, en un marco de legalidad con visión empresarial, fomentando su participación activa en la economía del país.

Universitarios: Los estudiantes son la parte esencial para conocer la problemática que afrontan los microempresarios, su nivel educativo, su capacidad económica y operativa. De sexta forma, es necesario que los estudiantes estén debidamente capacitados para asesorar, formalizar y capacitar a los microempresarios. Las capacitaciones comprenden: llenado de formatos, requisitos y trámites fiscales, capacitaciones empresariales, expedientes, financiamiento y metodología.

Académicos: Principalmente del área de negocios planearon e impartieron cursos para los estudiantes respecto a: Diagnostico empresarial, requisitos y trámites para formalizar empresas, régimen fiscal de los microempresarios, áreas básicas de finanzas, costos, administración y mercadotecnia, gestión de apoyos económicos y financiamientos. Lo cual permitió que los estudiantes brindaran una asistencia empresarial integral y vincular a los estudiantes en ambientes reales que fortalezcan su formación profesional. De igual manera el Académico es el responsable de coordinar todas las acciones y controles entre la UABC-SEDECO-Microempresarios y Universitarios, así como tener un acercamiento constante de comunicación colaborativa entre las distintas instancia de gobierno donde los microempresarios requieren apoyo, para no ser trabados en sus trámites. De igual manera el académico, participa de forma activa en reuniones de trabajo y planeación respecto a las disposiciones o requerimientos de la SEDECO.

RESULTADOS

Esta investigación demostró los datos estadísticos de forma exploratoria al seguimiento de las microempresas del 2009, a las cuales se les continua apoyando el programa de programa de asistencia empresarial, capacitación y seguimiento a microempresario; y que comprende 305 microempresarios que cumplieron con los requisitos y tramites, así como su deseo y aceptación para la formalización de sus negocios, donde se les otorgo información y trato personalizado respecto a los siguientes temas: régimen fiscal al que pertenecen según su actividad e ingresos anuales, obligaciones fiscales y, los requisitos y trámites fiscales que deben realizar y cumplir. En la fase de capacitación se les brindo lo siguiente: conocimientos en las áreas básicas de finanzas, costos, administración y mercadotecnia. Además se les gestiono su incorporación al seguro popular conocido como asistencia social, incluyendo los familiares.

De igual manera se les gestiono por parte de los estudiantes y académicos, la obtención de apoyos económicos ante la SEDECO, y recibiendo un promedio de \$4,530.00 pesos moneda nacional para cada microempresa, dicho apoyo la SEDECO lo destina a fondo perdido, y los microempresarios destinan el apoyo económico en capital de trabajo. Actualmente del universo de 305 microempresarios, el 32% representados por 98 microempresarios aceptaron la aplicación y obtención de créditos entre \$12,000.00 a \$25,000.00 pesos moneda nacional, siendo apoyados en trámites, llenados de formatos y acompañamiento por la UABC-FCA ante la SEDECO para dar continuidad a su crecimiento y desarrollo empresarial

CONCLUSIONES/RECOMENDACIONES

Con los resultados obtenidos después de un periodo de 24 meses de investigación, del 2009 a la fecha, se concluye que la participación estrecha únicamente entre SEDECO microempresarios y UABC con programas de apoyo empresarial, genera un ambiente de confianza para el microempresario con el ánimo voluntario de formalizarse, recibir asesoría y encaminar su negocio a la legalidad, en búsqueda del

crecimiento y desarrollo empresarial. Esto provoca que el actuar académico de la UABC y SEDECO logren por parte de los microempresario, un mejor nivel de credibilidad que el resto de las instancias correspondientes. La intervención directa de la UABC, fortalece el desarrollo de los empresarios hacia sus empresas, y descubren que la formalización, les aporta: seguridad jurídica, conocer su marco de regulación fiscal, la forma y montos para contribuir al gasto público bajo las bondades fiscales en las que el Gobierno estimula a los microempresarios. Logrando con esto, que el microempresario se proponga formal y libremente a ampliar su rango y ruta de crecimiento empresarial.

De esta manera se recomienda que la asistencia con calidad, la transferencia de aprendizaje, la formalización del empleo con cobertura de seguridad social, el reforzamiento de la asistencia mediante el acompañamiento con estudiantes y la cultura de la legalidad, fortalezcan la economía de las microempresas y del país. Estas acciones se recomiendan ser ejecutadas por las Universidades conjuntamente con sus gobiernos estatales, lo cual redundará en resultados óptimos en sus modelos educativos al implementar programas con perfil empresarial. La asesoría, la capacitación, el acompañamiento, el apoyo económico y la seguridad social son aspectos indispensables a considerar en programas de desarrollo empresarial con gran soporte de aceptación y confianza por parte de los microempresarios. Estos aspectos conforman un paquete integral que actúa como detonante en el crecimiento y permanencia de los negocios. Estos programas, al ser aplicados o implementados por Universidades y Gobierno, refuerzan sus programas educativos, logrando en la comunidad empresarial gran credibilidad y confianza. Por último, se concluye que los alumnos que participan en este tipo de programas fortalecen su formación profesional al actuar en ámbitos reales. Asimismo, los conocimientos teóricos-prácticos que adquieren en las aulas los aplican directamente y de forma activa de este programa. Con este programa se fomenta el espíritu y la cultura de la empresarialidad en los estudiantes, y se apoyan los propósitos y estrategias de los gobiernos para impulsar el progreso del país.

REFERENCIAS

Por primera vez en el año de 2009 se crea el programa de asistencia empresarial, capacitación y seguimiento a microempresarios con el propósito de brindar asesoría, asistencia empresarial, formalización, seguimiento, gestión de apoyos económicos y seguridad social (asistencia social) a las microempresas. Existen antecedentes de programas similares implantados en el Estado de Baja California, México; a través de la Universidad Autónoma de Baja California, mas sin embargo estos programas denominado Programa de Investigación, Asistencia y Docencia al Micro y Pequeña Empresa (PIADMYPE) solo busco en su momento realizar investigaciones con fines estadísticos, del cual también se obtuvieron datos importantes para detonar otros programas.

RESUMEN

El presente trabajo de investigación, pretende realizar un estudio analítico sobre: “La problemática de los manglares, los riesgos naturales en las zonas costeras del sur de Tamaulipas y sus alternativas Jurídico Administrativas”. Los manglares prestan valiosos servicios ambientales a los mexicanos: mitigan los efectos de huracanes, marejadas, inundaciones y erosión costera; son la zona de maternidad y crianza de más del 70% de las pesquerías comerciales. Actualmente se reporta en el país 650 mil hectáreas de estos ecosistemas, con el 62% en el Golfo de México y el Caribe y el 38% en la Costa del Pacífico en México. En los últimos años, el 75% de los manglares de la República Mexicana han desaparecido. Víctimas de la codicia de compañías inmobiliarias y de desarrollos mega turísticos en conjunción con una legislación laxa, estos humedales están en vías de desaparición. En el deterioro del manglar las Administraciones Públicas Municipales han jugado un papel protagónico, como ejemplo el caso del municipio de Tampico, en Tamaulipas, entre otros. Por consecuencia, se plantearán una serie de problemáticas que hoy sufre México debido a una serie de preceptos legales ambientales en vigor; así como también nos abocaremos a buscar posibles alternativas de solución legal basados en la normatividad ambiental nacional e internacional.

THE PROBLEMATIC ONE OF THE MANGROVE SWAMPS, THE NATURAL RISKS IN THE COASTAL ZONES OF THE SOUTH OF TAMAULIPAS AND THEIR ADMINISTRATIVE ALTERNATIVES LEGAL

ABSTRACT

This research work aims to perform an analytical study, “The problematic one of the mangrove swamps, the natural risks in the coastal zones of the south of Tamaulipas and their Administrative alternatives legal.” Mangroves provide valuable environmental services to Mexicans mitigate the effects of hurricanes, storm surges, flooding and coastal erosion, are the maternity and nursery area for over 70% of commercial fisheries. Currently the country is reported in 650 000 hectares of these ecosystems, with 62% in the Gulf of Mexico and the Caribbean and 38% in the Pacific Coast in Mexico. In recent years, 75% of mangroves in Mexico have disappeared. Victims of the greed of real estate companies and mega tourism developments in conjunction with lax legislation, these wetlands are disappearing. The deterioration of mangrove Municipal Public Administrations have played a leading role, for example the municipality of Tampico, Tamaulipas, among others. Consequently, raised a number of problems that Mexico is suffering today because of a series of environmental legal regulations in force, and also leads us to seek possible alternative legal solution based on national and international environmental regulations.

PALABRAS CLAVE: Manglares, Legislación ambiental, Riesgos naturales, Zonas costeras, Sur de Tamaulipas.

INTRODUCCIÓN:

Los humedales constituyen uno de los ecosistemas existentes dentro del territorio nacional y entre ellos los manglares, que son humedales costeros, ocupan un lugar privilegiado por la riqueza natural que encierran y los servicios ambientales que prestan a los mexicanos, como mitigar los efectos de huracanes, marejadas, inundaciones y erosión costera; son la zona de gestación y crianza de la pesquería comercial nacional.

Las actividades humanas, que difieren de país a país, constituyen la principal amenaza para los manglares. Entre ellas están las relacionadas con el desarrollo urbano, industrial y turístico, así como el desarrollo agrícola, ganadero y acuícola, que compiten por el suelo en donde se asientan los manglares. Así mismo, los manglares han recibido presiones por efecto de la contaminación: desechos sólidos urbanos, contaminantes industriales, pesticidas y fertilizantes agrícolas, derrames de petróleo, etc., así como modificaciones a las condiciones hidrológicas. Distintos estudios a nivel internacional señalan que recuperar un manglar que ha sido severamente dañado puede tomar muchos años cuando ello es posible; en muchas ocasiones la pérdida es total e irreversible.

Ante la destrucción de manglares en el país, las múltiples funciones que tiene dicho ecosistema y el valor ecológico que este posee desaparecerían y su impacto ambiental se traduciría en la destrucción y degradación de ecosistemas, pérdida de hábitat, erosión de costas, aumentando el peligro de impacto de fenómenos meteorológicos extremos en los litorales, contribuyendo con esto, el acrecentamiento del problema ambiental que hoy sufre México al respecto, por lo que nos abocaremos a buscar posibles alternativas de solución legal basados en la normatividad ambiental nacional e internacional.

El presente trabajo de investigación consta de un resumen; introducción: planteamiento del problema de estudio; objetivos; justificación del fenómeno de estudio; limitaciones; delimitaciones; revisión de la literatura; metodología; resultados; conclusiones; referencias bibliográficas y biografía de los autores.

Planteamiento del problema de estudio En este trabajo, se procederá a realizar un análisis del deterioro de los manglares como riesgo natural en la zona costera del sur de Tamaulipas. Los manglares proporcionan valiosos servicios ambientales a los mexicanos: mitigan los efectos de huracanes, marejadas, inundaciones y erosión costera; son la zona de gestación y crianza de más del 70% de la pesquería comercial del país. En los últimos 25 años, el 75% de los manglares de la República Mexicana han desaparecido, víctimas de la ambición de empresas inmobiliarias y de mega desarrollos turísticos junto con una laxa y deficiente legislación. Los Ayuntamientos han jugado un papel protagónico en el deterioro del manglar, como por ejemplo el caso del municipio de Tampico, en Tamaulipas en el año 2007, entre otros. Se describirán una serie de dificultades que hoy sufre nuestro país debido a diversos preceptos legales ambientales vigentes. Así como también nos abocaremos a buscar posibles alternativas de solución a fin de hacer viable la convivencia entre dos tendencias; la protección de estos sorprendentes ecosistemas y la posibilidad del desarrollo de proyectos de infraestructura.

Objetivo General: Analizar el deterioro de los manglares como riesgo natural en la zona costera del sur de Tamaulipas.

Objetivos específicos(1). Obtener de los Estados, gobiernos y empresarios privados el estricto cumplimiento de las leyes y la reparación de los daños ocasionados a las comunidades y a los ecosistemas. (2). Incidir y demandar para que los gobiernos adopten políticas, cumplan y expidan leyes y

otros instrumentos legales en concordancia con los tratados internacionales que permitan la conservación de los manglares y ecosistemas marino-costeros.

Justificación del problema de estudio: Los manglares aminoran los efectos de huracanes, marejadas, inundaciones y erosión costera; son la zona de maternidad y crianza de más del 70% de las pesquerías comerciales. En el deterioro del manglar los Ayuntamientos han jugado un papel protagónico, no han aplicado el orden jurídico vigente para controlar la avaricia de las compañías inmobiliarias que ajenos a este problema ambiental, destruyen promoviendo un desarrollo económico pero no sustentable, por consecuencia, es necesario una revisión de la legislación ambiental nacional como internacional, a fin hacer frente a la problemática del fenómeno de estudio y buscar posibles alternativas de solución.

Limitaciones: La presente investigación se delimitará a estudiar el fenómeno de los riesgos naturales en las zonas costeras por la destrucción de manglares, en especial en el sur de Tamaulipas.

Delimitaciones: El presente trabajo se delimitará a estudiar el fenómeno en los municipios conurbados de Tampico, Cd. Madero y Altamira, Tamaulipas.

REVISIÓN LITERARIA

Los manglares:

Los manglares, son bosques de plantas leñosas tolerantes a la sal, que se caracterizan por su habilidad para crecer y prosperar a lo largo de litorales. Se les conoce también como bosques hidrófilos ya que debido a que se desarrollan en las costas, siempre están en contacto con cuerpos de agua de origen marino y agua que llega a través de las escorrentías o por la desembocadura de los ríos. Los manglares son un maravilloso ecosistema que cuenta con una infinita variedad de recursos pesqueros, forestales así como, con presencia de aves, tanto residentes como migratorias. (Pérez, 2006) No existe una definición universal de los mismos, sin embargo, aquellos que se interesan por su belleza e importancia, toman como patrón de estudio los beneficios de los ecosistemas y los mecanismos de adaptación de las especies vegetales y animales que ahí habitan.

Actualmente, existen 26'530,000 hectáreas en el mundo cubiertas por manglares, de las cuales México es poseedora de 660,000. La importancia de los manglares se encuentra en el gran valor ambiental y económico que estos constituyen pues son base fundamental para que millones de aves puedan emigrar año a año, se protejan especies en peligro de extinción o inclusive, entre otras cosas sirvan como barrera natural contra huracanes y cualquier otro fenómeno meteorológico.

La problemática que hoy sufre México en lo relativo a conjugar protección con desarrollo, no solamente se sitúa en el marco jurídico sino también económico. La búsqueda de un desarrollo sustentable es la meta de la actual administración pública sin embargo, conseguirlo no es tarea fácil, pues conflictos como los que se pretenden presentar en este trabajo no solo no han tenido solución sino que inclusive pareciera ser que ésta se encuentra muy lejana.

La destrucción de los manglares y los riesgos naturales en las zonas costeras de México:

La devastación acelerada de bosques, selvas y manglares ha dejado sin protección natural a más de una tercera parte de la población en México directamente expuesta a los fenómenos hidrometeorológicos - huracanes y tormentas tropicales- que este año se presentarán en el Atlántico y el Pacífico con similar magnitud a la temporada de 2005, considerada una de las más intensas y destructivas de los últimos 20 años.

Aún con el recuerdo de la fuerza demoledora de "Emily", "Stan" y "Wilma", miles de habitantes en zonas de riesgo de Tamaulipas, Veracruz, Tabasco, Campeche, Yucatán, Quintana Roo, Chiapas, Oaxaca y Guerrero, donde se ha acabado con los humedales costeros y las selvas bajas, se preparan como pueden, para la presente temporada de huracanes en que se prevé que 5 de cada 10 eventos meteorológicos previstos superen las categorías 3 a 5 en la escala de Saffir-Simpson, lo que implica lluvias torrenciales y vientos de más de 200 kilómetros por hora. (Gómez, 2008, 18 de mayo).

La organización Greenpeace-México expone que ante la fuerza de los fenómenos hidrometeorológicos y la destrucción de los ecosistemas que representaban una barrera natural ante los fuertes vientos y lluvias, hay una situación de extrema vulnerabilidad de la población que debe ser seriamente considerada por los servicios de protección civil. (Planeta Azul, 2009, 4 de septiembre).

Establece que, de acuerdo al Atlas de Riesgos Naturales que elabora la Secretaría de Desarrollo Social, se tienen 37 millones de personas que están expuestas a las acometidas de fenómenos meteorológicos: De ellos, 12 millones se localizan en la trayectoria de huracanes y ciclones, 20 millones en zonas potencialmente inundables y otros 5 millones en zonas de corrimientos de tierra como son laderas y montañas. (SEDESOL, 2007).

Greenpeace señala que la situación es preocupante si se considera que México ha perdido la mitad de sus bosques en los últimos 50 años y ocupa el deshonroso quinto lugar en deforestación mundial con una tasa promedio anual de 1.1 por ciento. Chiapas es uno de los cuatro estados más afectados con una cobertura forestal degradada en 76 por ciento lo que agudiza el proceso de erosión de los suelos y los escurrimientos de agua y de tierra, lo que se comprobó con el sepultamiento de parte importante de Motozintla y Tapachula ante las intensas lluvias causadas por "Stan" en octubre de 2005. (Greenpeace-México, 2010, 3 de febrero).

Además, aunque oficialmente existen 886 mil 760 hectáreas de manglares en México, éstos desaparecen a un ritmo de diez mil hectáreas por año, acentuando la vulnerabilidad de la población que habita en las zonas costeras como es el caso de Cancún, en Quintana Roo, donde "Wilma" causó estragos inusitados. En el Caribe mexicano se registra la tasa de deforestación de manglares más alta del país con casi 12 por ciento, principalmente por la construcción de nuevos desarrollos turísticos y expansión de la mancha urbana.

Alejandro Calvillo, director ejecutivo de Greenpeace, expone que entre las razones por las que hay que proteger los bosques, selvas bajas y manglares está el hecho de que atenúan las inundaciones y minimizan los efectos del oleaje provocados por los huracanes.

Sin manglares y selvas bajas -indica- la población está abiertamente expuesta a los embates de los huracanes que ahora son más frecuentes y potentes como consecuencia del calentamiento de las aguas oceánicas que favorece su formación y fuerza destructiva.

En un informe evaluatorio el Programa de Naciones Unidas para el Medio Ambiente (PNUMA), anota que prácticamente en todas las naciones costeras donde los fenómenos meteorológicos han cobrado miles de vidas, se presentan altas tasas de deforestación, erosión del suelo y desaparición de manglares.

Caso específico fue Nueva Orleans donde desde hace años se acabó con la barrera natural de bosques lo que permitió que "Katrina" impactará frontalmente a esa población hasta casi desaparecerla del mapa.

El PNUMA señala que la devastación que provocó "Stan" en los estados de Chiapas, Oaxaca y Veracruz, fue acrecentada precisamente por la desaparición de los manglares, bosques y selvas, la erosión del suelo y el asentamiento de poblaciones en los cauces naturales de los ríos.

La destrucción de esos ecosistemas ha aumentado la vulnerabilidad de la población frente a los fenómenos hidrometeorológicos que, en el caso de los huracanes y ciclones, son 50 por ciento más intensos y prolongados por los efectos del calentamiento global, precisa el PNUMA en su informe "Destrucción de los Ecosistemas y su Impacto Social".(PNUMA, 2008).

Lo más preocupante -apunta el PNUMA en su informe- es que los fenómenos meteorológicos tienen mayor impacto entre la población de escasos recursos económicos que se asienta en las zonas bajas y en los cauces de los ríos y que al presentarse una contingencia opta por quedarse en sus hogares para proteger sus pertenencias.

El PNUMA subraya que ante el cambio climático que se traduce ya en huracanes y ciclones de gran potencia, es necesario preparar a la población para actuar a tiempo y evitar pérdidas humanas. "Se debe comprender que el efecto invernadero no es una predicción sino una realidad que causará un sufrimiento humano creciente y una mayor carga económica".(PNUMA, 2008; 22)

La organización Greenpeace advierte que los impactos climatológicos se resienten muy particularmente en México por estar en la ruta de los huracanes y porque es uno de los países que más aceleradamente destruye sus bosques, selvas y manglares con una tasa de deforestación de 800 mil hectáreas anuales que ha provocado la desaparición del 70 por ciento de las selvas bajas y cerca de la mitad de la superficie de bosques templados.

La destrucción de los manglares en el sur de Tamaulipas:

En la destrucción del manglar las Administraciones Públicas Municipales han jugado un papel protagónico, como ejemplo el caso del municipio de Tampico, en Tamaulipas en el año 2007, se comenzó a construir en el espacio natural de la laguna del Carpintero el polémico «Mega proyecto turístico», conformado por un centro de convenciones y exposiciones, acuario, centro comercial con 150 locales comerciales y hotel de 5 estrellas, y que tendría una inversión de 80 millones de dólares. En el inicio de las obras se pudo comprobar cómo en dicho terreno las máquinas (camiones y excavadoras) estaban afectando al mangle de la laguna y a su frágil entorno natural. Además, la Procuraduría Federal de Protección al Medio Ambiente (PROFEPA), en coordinación con la Secretaría de Medio Ambiente y Recursos Naturales (SEMARNAT), indica que las obras han afectado hasta el momento a 1,3 hectáreas de manglares (especie protegida) por lo que se ordenó su paralización. Dichas obras están siendo objeto de estudio y discusión por las autoridades Federales, Estatales y Municipales competentes (Gómez, 2008:4).

El proyecto de la laguna del carpintero fue planteado al margen de cualquier criterio de sustentabilidad, dejando en un profundo deterioro al parque metropolitano y a su microsistema. El desarrollo urbano desordenado y los planes de negocio se superponen a la dimensión ambiental y social de este espacio urbano que requiere ser protegido. Merece atención la desaparición de humedales específicamente de manglares, cuya importancia, en función de su productividad biológica, no guarda proporción alguna con su reducida extensión geográfica. Los humedales han ido cediendo terreno a desmontes y rellenos para el desarrollo urbano sufriendo diversas alteraciones como el resultado del desarrollo de la infraestructura y que ahora presenta una severa amenaza. Las transformaciones del hábitat a las que se ha hecho referencia han determinado una pérdida de especies difícil de cuantificar. Esta riqueza biótica que ni siquiera se ha cuantificado con certeza, hace más preocupante su exterminio, para dar paso a proyectos de desarrollo económico. (De la Cruz y Tello, 2009).

En esa misma entidad federativa podemos referirnos a otro caso reciente, del presente año, conforme en la llamada Laguna la Aguada correspondiente al municipio de Altamira, el relleno de vasos lacustres está acabando con el ecosistema manglar, según versión de la autoridad ecológica municipal, manifestando la disposición de esa administración pública de llevar a cabo de manera coordinada con las dependencias estatales y federales la investigación correspondiente con el objeto de actuar en consecuencia y sancionar.

Los manglares en la legislación mexicana:

A continuación se realiza un análisis al marco jurídico mexicano en torno a los manglares.-

a. Norma Oficial Mexicana 022 (NOM 022): La protección de los manglares de manera particular en nuestro país se dispuso por primera ocasión en el 2003 con la Norma Oficial (NOM 022) la que establecía el impedimento de su destrucción.

b. Norma Oficial Mexicana 059 (NOM 059): En una interpretación general de la norma oficial mexicana (NOM 059) y su regulación al contenido de esta investigación en primer término tendremos que mencionar su objetivo, para poder entender su nexo, este es, el de identificar las especies o poblaciones de flora y fauna silvestres en riesgo en la república mexicana mediante la integración de las listas correspondientes, así como establecer los criterios de inclusión, exclusión o cambio de categoría de riesgo para las especies o poblaciones, mediante un método de evaluación y su riesgo de extinción.

c. Ley General de Equilibrio Ecológico y Protección al Ambiente (LGEEPA): Sin embargo la reformada Ley Federal de Protección al Ambiente de 1971, que a partir de 1988 la conocemos como Ley General del Equilibrio Ecológico y Protección al Ambiente, ya establecía de manera general en su Art. 1 frac. IV que dicho ordenamiento legal tenía como objeto establecer las bases para la protección de las áreas naturales, la flora y fauna silvestre y acuática, y en su Art. 15 relativo a la política ecológica disponía la observancia de ciertos principios, destacando para fines de nuestro trabajo, las fracciones I y II que prevenían dentro de otras cosas que: “los ecosistemas son patrimonio común de la sociedad y de su equilibrio dependen la vida y las posibilidades económicas. Además que estos deberán ser aprovechados de manera que asegure una productividad óptima y sostenida...”

La citada Ley General que modifica la de 1971, sufre también una trascendental reforma en 1996, en donde se incorporan definiciones de los términos que hoy se consideran fundamentales como los de sustentabilidad y biodiversidad, a fin de aplicarlos en las distintas acciones reguladas por la propia ley, que tienen que ver con nuestro tema.

d. Ley general de Vida Silvestre (LGVS):

El 1 de febrero del 2007 se publicó en el Diario Oficial las reformas de la Ley General de Vida Silvestre (LGVS) en donde se adiciona el Art. 60 TER y el segundo párrafo del Art. 99, disposiciones que aluden a la regulación de los manglares. En caso del Art. 60 TER dispone “queda prohibida la remoción, relleno, trasplante, poda, o cualquier obra o actividad que afecte la integridad del flujo hidrológico del manglar; del ecosistema y su zona de influencia; de su productividad natural; de la capacidad de carga natural del ecosistema para los proyectos turísticos; de la zona de anidación, reproducción, refugio, alimentación y alevinaje; o bien de las interacciones entre el manglar, los ríos, la duna, la zona marítima adyacente y los corales, o que provoquen cambios en las características y servicios ecológicos.

Dicha reforma ha causado grandes revueltos debido a que con el apego a dicha legislación, no se ha logrado el consenso de varios actores, lo anterior debido a que de su lectura y desde el punto de vista de la autoridad, se desprende una limitante absoluta a las actividades extractivas y/o productivas que

podieran realizarse en los manglares . En este sentido , la problemática se acrecienta dado que , mucho de los elementos de este tipo de ecosistemas , se encuentran situados en la propiedad privada , lo que supondría una afectación a la misma.

Si bien es cierto que la finalidad de la reforma fue la búsqueda de la protección del ecosistema en comento , es de la importancia destacar que quizá no fue lo mejor manera de llevarla a cabo . Grosso modo , esta reforma restringe las actividades en los lugares donde hoy en día existe manglar , lo que se traduce en una limitación para la creación de desarrollos en la materia de energía , infraestructura, pesca, turismo, entre otros, piezas claves para el desarrollo de nuestro país.

Dentro de los objetivos planteados en el Plan Nacional de Desarrollo (“PND”) se encuentra que, el sector turístico es una prioridad nacional debido a su importancia como factor de desarrollo, no obstante, muchos opinan que esta reforma, lo único que va a generar, es un detrimento en la inversión para desarrollos y que, por lo tanto, dicha limitación acarrearía un freno en la economía y en el consiguiente desarrollo de empleos, entre otros rubros. (Quintana, 2007).

Continuando con el tema, es importante señalar que varios legisladores interpretan esta reforma como una violación a las garantías individuales así como al principio de irretroactividad consagrado en el artículo 14 de la Constitución Política de los Estados Unidos Mexicanos.(Carbonell, 2011).

Los litigantes han experimentado complicaciones al llevar a la práctica la implementación de este artículo pues, si bien es cierto que es obligación de las autoridades la aplicación de las leyes, también lo es su apropiada interpretación así como la realización de la evaluación del impacto ambiental. (López y Ferro, 2007). Ahondaremos un poco más en la idea anteriormente planteada pues nos será de utilidad para proponer una solución a esta problemática.

La Ley General de Equilibrio Ecológico y Protección al Ambiente (LGEEPA), señala, que para llevar a cabo determinadas actividades, es necesario contar con la Autorización de Impacto Ambiental (AIA), por parte de las autoridades. Lo antes dicho se materializa con la presentación de una Manifestación de Impacto Ambiental (MIA) o con un informe preventivo (IP), dependiendo el caso. Lo antes señalado tiene relación con el problema de las prohibiciones creadas con la entrada en vigor del artículo 60 TER, al quitarle a la autoridad facultades para que esta sea quien determine si las actividades que se pretenden efectuar en un predio donde se localiza un manglar, efectivamente tendrán un impacto ambiental o no. Con lo anterior se concluye que, si el desarrollo o la actividad que se quiere realizar no conllevan un impacto ambiental o que, teniéndolo, puede ser subsanado o compensando estas actividades no deben por ningún motivo verse limitadas. (Gutiérrez, 2007).

Lo antes dicho, de conformidad con la teoría, haría viable la realización de cualquier proyecto ya que se reúnen los dos elementos que hacen técnicamente posible el desarrollo de una actividad a saber: que se garantice el adecuado equilibrio e intercambio entre flora y fauna, que se resguarde la capacidad de carga de los ecosistemas.

La evaluación de impacto ambiental es en realidad un instrumento muy valioso que contribuye a una mejor gestión ambiental y que debe tomarse como una herramienta para impulsar un verdadero desarrollo sustentable. No debe perderse de vista que, para realizar el estudio de impacto ambiental es importante que la autoridad comprenda que en cada análisis es necesario que se profundice en las consecuencias que pueden causarse y que si lo que se busca es en realidad un desarrollo sustentable hay que verlo como un todo relacionado donde la parte técnica, física y biológica van de la mano. La búsqueda del equilibrio entre el sistema natural y el sistema social es lo que ha causado las problemáticas ambientales, por lo que hemos llegado a un punto en la explotación de nuestros ecosistemas donde la visión de la utilización de los mismos debe verse modificada.

Por lo que se refiere al Art. 99 de la Ley que comentamos, este se adiciona su segundo párrafo en donde hace referencia a aprovechamiento en manglares, su texto quedo como sigue: Art. 99... “Las obras y actividades de aprovechamiento no extractivo que se llevan a cabo en manglares, deberán sujetarse a las disposiciones previstas por el Art. 28 de la Ley General del Equilibrio Ecológico y la Protección al Ambiente”.

Los manglares en el tratamiento internacional:

A continuación se realiza un análisis al Derecho Internacional en torno a los manglares.-

a. La Convención Relativa a los Humedales (RAMSAR): La Convención Relativa a los Humedales de Importancia Internacional conocida mundialmente como “RAMSAR”, es el marco legal bajo el cual, varios países del mundo rigen la protección y el cuidado de sus humedales.

Es importante señalar que, para esta Convención son humedales; las extensiones de marismas, pantanos y tuberías o superficies cubiertas de agua, sean éstas de régimen natural o artificial, permanentes o temporales, estancadas o corrientes, dulces, salobres o saladas, incluidas las extensiones de agua marina cuya profundidad en marea baja no exceda de seis metros. Resaltemos pues que dentro de la definición de humedal se encuentran los manglares. (INE, 2007)

La principal finalidad de RAMSAR es el establecimiento, por parte de los países firmantes, de una lista que contiene una determinada cantidad de humedales que se inscribirán para su protección internacional.

Aunado a lo anterior otro objetivo que se tiene al realizar una lista de humedales, es el de resguardarlos a fin de dar protección a las aves acuáticas que emigran todos los años y que utilizan estos ecosistemas como su hogar. Es importante destacar que para marzo del 2007, existían 154 partes firmantes donde México inscribió un total de 65 humedales por su importancia internacional en términos ecológicos, botánicos, zoológicos, limnológicos o hidrológicos tal y como lo especifica la convención, lo que nos da un panorama de que cada vez la visión de protección de estos hábitats es mayor tanto a nivel nacional como internacional. (INE, 2007).

Debemos tener muy en cuenta que, si bien la misión de RAMSAR es “la conservación y el uso racional de los humedales mediante acciones locales, regionales y nacionales, gracias a la cooperación internacional, como contribución al logro de un desarrollo sostenible en todo el mundo”, esto no indica que esta convención este imponiendo una limitación a la utilización de los mismos, como así lo plantea el multicitado artículo 60 TER de la LGVS de nuestro país.

b. Convención sobre el Comercio Internacional de Especies Amenazadas de Flora y Fauna (CITES): Otra Convención en donde varias naciones se comprometieron a proteger especies amenazadas de flora y fauna silvestre, prohibiendo su comercio es la Convención sobre el Comercio Internacional de Especies Amenazadas de Flora y Fauna (CITES), firmada en Washington, D.C., el 3 de Marzo de 1973 en donde se regula el comercio internacional de productos de plantas y animales silvestres, dado el grave peligro y amenaza de extinción que sufren algunas especies.

Estableciéndose en su apéndice número I una relación de las especies amenazadas, en este listado se incluyen los bosques manglares situados en las regiones tropicales a lo largo de la línea de costas.

METODOLOGÍA:

El presente trabajo de investigación es de carácter documental mediante un estudio de análisis sobre el fenómeno de los riesgos naturales en las zonas costeras por la destrucción de manglares, en especial en el

sur de Tamaulipas, mediante la revisión de la legislación ambiental nacional como internacional, y buscar posibles alternativas de solución.

Procedimiento:

a. Búsqueda bibliográfica en bibliotecas y centros de documentación sobre el fenómeno de estudio; b. Consulta a expertos sobre el objeto de estudio; c. Redacción de Informe sobre resultados.

RESULTADOS:

Creación de ponencias, artículos para revista y un capítulo de libro y un libro.

CONCLUSIONES:

Lo que es una realidad es que el desarrollo del país no se puede ver truncado de una manera radical e insensata, por lo que se propone que se utilicen oportunamente por la Administración Pública Municipal tanto la Evaluación de Impacto Ambiental, la compensación ambiental y/o en su caso el cobro de impuestos o contribuciones como herramientas, a fin de ser canalizadas para la protección de estos manglares.

Aunado a lo anterior, es necesario que, una vez demostrada la viabilidad y los resultados positivos de las actividades que se pretenden realizar, estas serán aprobadas sin mayor complicación, ya que en muchas ocasiones la inversión en los lugares donde se localiza este hábitat puede aparejar beneficios y no perjuicios como al parecer lo asegura el multicitado artículo 60 Ter.

Junto con las alternativas planteadas líneas arriba sugerimos que, para promover la inversión y el desarrollo sustentable en México, las autoridades administrativas competentes, una vez que hayan analizado los proyectos apliquen al interesado, un sistema de compensaciones a fin de dar una verdadera protección a estos ecosistemas y se consiga promover la restauración de los mismos en otras áreas, ya que si México no promueve la protección de estos manglares y toma como herramienta el factor económico proporcionado por los interesados en los proyectos, estos ecosistemas quedaran olvidados y no subsistirán; estas compensaciones, podrían ser entregadas por ejemplo, al Fondo Forestal Mexicano.

Lo antes dicho, traería como consecuencia que los interesados quedarían obligados a proteger estos hábitats y le tendrían que dar su justo valor pero sin tener que frenar el avance tecnológico, económico y científico, entre otros.

Como ya se indicó, el desarrollo sustentable debe ser la meta a perseguir por lo que, sugerimos que la legislación sea más flexible únicamente cuando los interesados demuestren que los efectos a producir sean benéficos para los ecosistemas.

IDENTIFICACION DE LOS FACTORES QUE OCASIONAN ALTOS INDICES DE REPROBACION EN LOS CURSOS BASICOS DE MATEMATICAS. EL CASO DE LA FACULTAD DE INGENIERIA Y NEGOCIOS SAN QUINTIN DE LA UNIVERSIDAD AUTÓNOMA DE BAJA CALIFORNIA

Claudia Soledad Herrera Oliva, Universidad Autónoma de Baja California

RESUMEN

En los últimos 3 años, en la Facultad de Ingeniería y Negocios San Quintín (FINSQ) de la Universidad Autónoma de Baja California, se han observado serios problemas de reprobación y rezago, particularmente, en las unidades de aprendizaje de matemáticas y cálculo que se imparten en los troncos comunes, de las áreas de ciencias administrativas, ciencias de la ingeniería, y ciencias agropecuarias, que se ofertan en la FINSQ. Esta situación, sin duda, se ve reflejada en el elevado incremento en los índices de rezago y deserción escolar. La matrícula de los estudiantes que pasan del primer al segundo año disminuye alrededor del 70%. Esta situación demanda una urgente necesidad de analizar a detalle, las causas que afectan negativamente los indicadores de permanencia, eficiencia terminal y por ende, los fines educativos de esta dependencia. En el presente trabajo se emplearon métodos de investigación cualitativos. Se utilizaron como instrumentos de medición un cuestionario y una entrevista, y fueron aplicados a los alumnos que actualmente cursan el tronco común, de las distintas carreras que se ofertan en la FINSQ. Los factores identificados se clasificaron en dos grupos: los relacionados con el alumno y los relacionados con la institución.

PALABRAS CLAVE: reprobación de matemáticas, rezago, deserción escolar.

IDENTIFICATION OF THE FACTORS THAT CAUSE A HIGH INDEX OF FAILED IN MATH COURSES. THE CASE OF THE FACULTAD DE INGENIERIA Y NEGOCIOS SAN QUINTIN OF THE UNIVERSIDAD AUTONOMA DE BAJA CALIFORNIA

ABSTRACT

In the last 3 years, in the Facultad de Ingeniería y Negocios San Quintin (FINSQ), of the Universidad Autónoma de Baja California, serious problems of courses failed have been observed. Particularly, in the mathematic and calculus courses taught at the FINSQ, in the areas of administrative sciences, engineering sciences, and the agribusiness sciences. This situation, without doubt, had been reflected in the high increment of the school desertion. According to the record of the FINSQ, the number of the students that promote from the first one to the second year diminishes around the 70%. This situation demands an urgent need to analyze in detail, the causes that affect negatively the indicators of continuance, terminal efficiency and therefore, the educational objectives of this dependence. In the present research—methods of qualitative investigation were employed. Measuring instruments like a questionnaire and an interview were applied to the student of the common trunk at the present days,

whom are registered at the different careers that are offered in the FINSQ. The identifying factors were classified in two groups: which are related to the student and which are related to the institution.

KEYWORDS: math failed, school desertion.

INTRODUCCION

La educación superior en México, es reconocida por el Gobierno Federal como el pilar para el desarrollo del país. En el Programa Nacional de Educación 2001-2006 se hace referencia a ella de la siguiente manera: *“La educación superior es un medio estratégico para acrecentar el capital humano y social de la nación, y la inteligencia individual y colectiva de los mexicanos; para enriquecer la cultura con las aportaciones de las humanidades, las artes, las ciencias y tecnologías; y para contribuir al aumento de la competitividad y el empleo requeridos en la economía basada en el conocimiento. También es un factor para impulsar el crecimiento del producto nacional, la cohesión y la justicia sociales, la consolidación de la democracia y la identidad nacional basada en nuestra diversidad cultural, así como para mejorar la distribución del ingreso de la población”*.

En México, las actividades de las instituciones de educación superior varían según el tipo y misión de cada una de ellas. Entre dichas actividades se encuentran: la docencia, investigación; extensión, preservación y difusión de la cultura. En la actualidad, la educación superior en México, enfrenta numerosos desafíos, entre los principales retos, se encuentran, los altos índices de reprobación de unidades de aprendizaje, la deserción escolar y la baja eficiencia terminal de los egresados, estos problemas se atribuyen a diversos factores, entre los que figuran; la especialización excesiva de los planes de estudio, los métodos obsoletos de enseñanza y de evaluación de los alumnos, el rol inadecuado del profesorado ante las necesidades actuales de aprendizaje y una orientación vocacional deficiente, entre otros. Roger Díaz de Cossío (1998) comenta que en la educación superior mexicana, de cada 100 alumnos que ingresan, 60 acreditan las unidades de aprendizaje que contiene el plan de estudios en un lapso de cinco años y de éstos, sólo 20 se titulan.

De los que se titulan, sólo el (10%) lo hacen en edades entre 24 o 25 años; el resto lo hace en edades entre 27 y 60 años, lo que representa un enorme desperdicio. Esto se debe a varias causas, como son la falta de compromiso de las universidades por graduar a sus estudiantes; la falta de flexibilidad curricular de los planes de estudio; excesiva rigidez del sistema educativo; la carencia de movilidad estudiantil, que permita al alumno transitar por diferentes escuelas o instituciones; la falta de nuevas opciones de educación superior, y otras. Es lamentable que en estos tiempos haya más de cien mil cursos en Internet y que nadie pueda tomar alguno que tenga validez curricular en su institución.

También es triste que el profesorado de nivel superior no modifique sus cursos, de modo que puedan ofrecerse a distancia a quienes le resulten de interés. Finalmente señala que las instituciones de educación superior son indispensables en la sociedad, son insustituibles y deben ser apoyadas en sus esfuerzos de transformación, en un ambiente de cooperación unas con otras; sólo de esta manera podrán enfrentar el desafío que tienen por delante. Lamentablemente en los últimos tres años, en la Facultad de Ingeniería y Negocios San Quintín (FINSQ) de la Universidad Autónoma de Baja California, se han observado problemas como los que describe Díaz de Cossío en su trabajo de (1998), los altos índices de reprobación observados particularmente, en las unidades de aprendizaje de matemáticas y cálculo que se imparten en los troncos comunes, de las áreas de ciencias administrativas, ciencias de la ingeniería, y ciencias agropecuarias, que se ofertan en la FINSQ han ocasionado que la matrícula de los estudiantes que pasan del primer al segundo año disminuya alrededor del 70%, situación que demanda una urgente necesidad de analizar a detalle, las causas que afectan negativamente los indicadores de permanencia, eficiencia terminal y por ende, los fines educativos de esta dependencia, y así implementar las estrategias que

incidan en la mejora del desempeño de los estudiantes, lo cual redundará también en disminuir los índices de reprobación y deserción y elevar la eficiencia terminal.

Antecedentes

Existen numerosos estudios que tratan sobre los factores que influyen en el aprovechamiento académico de los estudiantes, a continuación se describe brevemente algunos de ellos. Vincent Tinto (1989), en un estudio titulado “Definir la deserción: Una cuestión de perspectiva”, señala que el rendimiento escolar se determina por algunos aspectos como los antecedentes familiares y educativos, las características personales y el compromiso por alcanzar las metas educativas. Durón y Oropeza (1999) mencionan la presencia de cuatro factores, los cuales son:

- Factores fisiológicos. Se sabe que afectan aunque es difícil precisar en qué medida lo hace cada uno de ellos, ya que por lo general están interactuando con otro tipo de factores. Entre los que se incluyen en este grupo están: cambios hormonales por modificaciones endocrinológicas, padecer deficiencias en los órganos de los sentidos, desnutrición y problemas de peso y salud.
- Factores pedagógicos. Son aquellos aspectos que se relacionan con la calidad de la enseñanza. Entre ellos están el número de alumnos por maestro, los métodos y materiales didácticos utilizados, la motivación de los estudiantes y el tiempo dedicado por los profesores a la preparación de sus clases.
- Factores psicológicos. Entre estos se cuentan algunos desórdenes en las funciones psicológicas básicas, como son la percepción, la memoria y la conceptualización, los cuales dificultan el aprendizaje.
- Factores sociológicos. Son aquellos que incluyen las características familiares y socioeconómicas de los estudiantes, tales como la posición económica familiar, el nivel de escolaridad y ocupación de los padres y la calidad del ambiente que rodea al estudiante.

Tejada y Arias (2003) trabajaron con alumnos de primer ingreso a la licenciatura en Psicología, y comentan que la tutoría académica de los estudiantes es un factor que afecta su rendimiento escolar, pues facilita la adaptación del alumno a su ambiente escolar y el éxito en su implementación se ve afectado por el significado que los profesores y alumnos le atribuyan, ya que de esto depende el nivel de compromiso e involucramiento que tienen. Mediante redes semánticas, la ayuda, la orientación, el apoyo, el responsable, el maestro, la responsabilidad, la asesoría y la confianza resultaron ser definidoras centrales de la atribución asignada a la tutoría.

METODOLOGIA

En el presente trabajo se emplearon métodos de investigación cualitativos. Se utilizaron como instrumentos de medición un cuestionario y una entrevista, mismos que fueron aplicados a los alumnos que cursan su primer año universitario, y han acreditado o están por acreditar alguna de las siguientes unidades de aprendizaje: Matemáticas, Algebra Lineal, Calculo Diferencial, Calculo Integral. El cuestionario contiene datos generales de los estudiantes; el grado y la carrera que cursan; su nivel socioeconómico, la orientación vocacional que han recibido, el promedio que obtuvieron en el bachillerato; así como la escolaridad de sus padres. Este instrumento de evaluación esta dividido en tres secciones, los factores que se pretende identificar con este instrumento son hábitos de estudio, el estilo de aprendizaje de cada individuo y la evaluación del desempeño docente desde el punto de vista del alumno.

RESULTADOS

Los resultados de las entrevistas aplicadas a 141 alumnos que cursan su primer año universitario (tronco común) en la FINSQ, indican que el 100% de los profesores que imparten los cursos de matemáticas, continúan utilizando con mayor frecuencia la enseñanza tradicional, que se caracteriza por ser una práctica docente más centrada en contenidos, que en el alumno y sus necesidades, en este tipo de enseñanza, es el profesor quien emplea con regularidad el pizarrón, hace poco uso de las tecnologías de la información y en las actividades extraescolares que se asignan a los estudiantes se siguen dejando las mismas actividades de antaño, que se centran en problemas de razonamiento e investigación bibliográfica. Con respecto a las *estrategias de enseñanza* para el logro del aprendizaje, encontramos que en realidad los docentes no aplican las estrategias apropiadas para cada uno de los distintos grupos que atienden, un factor que obstaculiza esta labor es que el profesor atiende en esta etapa de formación, grupos numerosos. Los resultados de los cuestionarios en la sección de evaluación del desempeño del docente indican que el 72% de los alumnos opinan que los profesores dominan ampliamente el contenido la unidad de aprendizaje, son claros en la transmisión de la información y en las instrucciones a seguir, empleando para ello ejemplos ilustrativos y vinculando los contenidos de las clases anteriores, dándole así seguimiento claro al contenido, mostraron habilidad en el manejo de situaciones imprevistas, mantienen un ambiente agradable durante el desarrollo de las clases.

Un 71% opino que siempre recibieron atención y orientación por parte del profesoro, demostrando de esta manera interés ante las inquietudes de los alumnos. Un 85% opino que los profesores cumplen con la normatividad institucional, asistiendo ordinariamente a clases con puntualidad, manteniendo la disciplina en el salón y respetando los criterios de evaluación. En cuanto a los hábitos de estudio los resultados indican que el 75% de los alumnos, poseen malos hábitos, no saben como administrar adecuadamente su tiempo, requieren de gran motivación para estudiar, no saben toma notas en clase, y presentan serias deficiencias con la optimización de la lectura, el 45% menciono antecedentes de reprobación durante sus estudios de nivel medio superior, sus actividades recreativas y pasatiempos ocupan la mayor parte de su tiempo.

Figura 1: Estilos de aprendizaje

Los estilos de aprendizaje observados, fueron diversos, los resultados observados se muestran en la siguiente figura. Estos resultados indican que los profesores se enfrentan al reto de rediseñar sus cursos pues todos los días trabajan con personas que aprenden de forma diferente.

CONCLUSIONES

Son varios los factores que han incidido en los altos índices de reprobación y rezago observados, siendo los más sobresalientes:

Por parte del alumno: Deficientes conocimientos básicos, malos hábitos de estudio, y desinterés por aprobar sus cursos dado que no están estudiando la carrera de su preferencia por que no se oferta en la región o por presión familiar.

Por parte de la institucion: La programación de grupos de primer y segundo semestre con un elevado número de alumnos y en salones inadecuados. La preferencia de los profesores por la práctica docente tradicional. La falta de cursos remediales y el diseño e implementación de estrategias para implementar programas permanentes de asesorías alumno-alumno, así como implementar programas interactivos que fomenten el interés. En el presente trabajo no se presentan los resultados de la relación del rendimiento académico de los estudiantes con variables como, orientación vocacional, nivel socioeconómico y escolaridad de los padres, estos resultados se presentaran en futuras investigaciones.

DESARROLLO TURÍSTICO EN EL VALLE DE GUADALUPE BAJA CALIFORNIA, MÉXICO. RURALIDAD, PRODUCCIÓN DE VINOS Y HOTELES

Jorge Antonio Valderrama Martínez, Universidad Autónoma de Baja California

Juan Carlos Flores Trejo, Universidad Autónoma de Baja California

Claudia Islas Arredondo, Universidad Autónoma de Baja California

Sandra Griselda Serrano Contreras, Universidad Autónoma de Baja California

RESUMEN

En la visita al Valle de Guadalupe en Baja California, México el turista forma parte activa de la comunidad toda vez que aprecia el paisaje, aprende aspectos relacionados con el cultivo de la vid, conoce el proceso de elaboración de vinos y degusta varios de ellos conviviendo con los pobladores, esta experiencia se extiende involucrándose con el medio rural a través del cultivo y cosecha de productos orgánicos que posteriormente se consumirán en los restaurantes locales. Todo lo anterior permite que el turista realice actividades que si bien son tradicionales para la comunidad son alternativas para los visitantes. El valle ofrece una experiencia significativa que se inicia con el enoturismo y llega hasta el agroturismo, de ahí esta singular visita que es apoyada por un pequeño grupo de servidores turísticos destacando entre ellos la asistencia en cómodos hoteles de baja oferta en cuanto al número de habitaciones pero con servicios de alta calidad próximos a los viñedos y a huertos orgánicos como parte extendida de los ranchos agrícolas, hoy espacio compartido.

PALABRAS CLAVES: Experiencia turística, ruralidad, producción vitivinícola, hoteles.

TOURIST DEVELOPMENT IN VALLE DE GUADALUPE BAJA CALIFORNIA, MÉXICO. RURALITY. PRODUCTION OF WINES AND HOTELS

ABSTRACT

In the visit to Valle de Guadalupe en Baja California, México, the tourist forms a part activates of the community although it enjoy the landscape, learn aspects related to the culture of the grapevine, knows the process of wine production and tastes several of them coexisting with the settlers, this experience spreads interfering with the rural way across the culture and crop of organic products that later will be consumed in the local restaurants. Everything previous allows that the tourist should realized activities that thought they are traditional for the community are alternative for the visitors. The valley offers a significant experience that begins with the enotourism and comes up with the agrotourism, from there this singular visit that is supported by a small group of tourist servants distinguishing between them the assistance in comfortable hotels of low offers as for the numbers of rooms but with services of high quality, near the vineyards and the organic gardens, as widespread part of the agricultural fields, today shared space.

KEYWORDS: Tourist experience, rurality, wine production, hotels

REVISIÓN LITERARIA

Consciente de que el turismo es riqueza para la persona, para la familia, para la comunidad, para el país y para el mundo entero, la Organización Mundial del Turismo (OMT), como principal organización

internacional en el ámbito turístico, aboga por que la actividad económica que se realice contribuya al crecimiento, a favor de un desarrollo turístico incluyente, social y ambiental solidario, si bien lo anterior se plantea como un objetivo, también constituye una visión, amplia, suficiente y participativa. Congruente con lo anterior es que la Secretaría de Turismo de México (2004) define al turismo alternativo como “los viajes que tienen como fin el realizar actividades recreativas en contacto directo con la naturaleza y las expresiones culturales que le envuelven con una actitud y compromiso de conocer, respetar, disfrutar y participar en la conservación de los recursos naturales y culturales”. Dando prioridad al viaje, a la convivencia respetuosa y lógicamente a la experiencia que provoca todo el atractivo.

Pese a que la "Secretaría de Turismo de México no considera en su clasificación de turismo alternativo al enoturismo, sin embargo si está incluido por el tipo de actividad que se realiza, diferenciándose por el enfoque a la producción de vino, el conocimiento de sus procesos de cultivo y de las áreas geográficas en las que este se realiza (turismo rural), permitiendo a los turistas o visitantes un contacto con las zonas naturales circundantes a las zonas de cultivo (ecoturismo) donde se da esta actividad rural especializada." (2011, Ruiz, Martínez, Verján y Valderrama). Si bien para turismo alternativo existen diversas definiciones y conceptos, existen dos aspectos que se presentan constantes, la primera de ellas es una interrelación muy estrecha con la naturaleza, resaltando la atención por la conservación de los recursos naturales del área en que se efectúa la actividad turística, y también la interacción social que se da entre los visitantes y los locales se presenta respetuosa e intensa, ambas interrelaciones son valoradas generando registros valiosos que se aprecian, se comparten y forman expectativas en torno a la visita. Respecto al “turismo alternativo se presenta en perspectiva de valoración recursos excepcionales y manifestaciones singulares tanto de atractivos naturales, como socioculturales. El turismo alternativo por contexto se relaciona con el turismo rural y el ecoturismo, se asocia fuertemente al agroturismo, comparte referencias con el turismo cultural e incluso con el turismo de aventura". (2010, Valderrama, Verján, Velázquez).

Planteamiento Referencial

Para llegar al Valle de Guadalupe desde San Diego, California es necesario cruzar la frontera USA-MEXICO y tomar la Autopista Escénica Tijuana-Ensenada, la carretera que generalmente utilizan los turistas y los visitantes nacionales, llegando a la altura de El Sauzal, se sigue el camino hacia el este para en unos cuantos minutos estar en el poblado de Francisco Zarco; un punto central franqueado de lado izquierdo por la comunidad rusa y hacia la derecha por los viñedos y algunas de las más importantes bodegas entre ellas, L.A. Cetto y Pedro Domecq, complementando la visita se tienen museos, presencia indígena, restaurantes campestres, pequeños hoteles boutique y una variada oferta de vitivinícolas familiares, el atractivo existente conforma una satisfactoria convivencia en el espacio rural bajacaliforniano. El Valle de Guadalupe es la región vitivinícola, conocida como la Ruta del Vino la cual integra como estructura empresarial más de 40 bodegas productoras de vino en su gran mayoría empresas pequeñas y medianas que bajo sistema artesanal producen diferentes variedades de vino, todas ofrecen servicios guiados por sus instalaciones y viñedos, ofrecen degustaciones y comparten sus prácticas productivas, así mismo realizan venta directa de sus productos y una gran mayoría de ellas están abiertas al público sin necesidad de hacer reservaciones aunque si tienen horarios preestablecidos, en cantidades crecientes son visitadas por turísticas y visitantes, expertos e interesados, quienes encuentran en un ambiente cotidiano y atractivo, expectativas para realizar nuevos acercamientos, ya que la Ruta del Vino es amplia y renovada en actividades.

Parte fundamental del éxito de mercado es que a lo largo de toda la visita el turista se convierte en un actor protagónico de las actividades programadas, que si bien son tradicionales para la comunidad son auténticamente alternativas para los visitantes, toda vez que además de hacer enoturismo el convivio con la ruralidad puede favorecer la práctica de otras alternativas en el mismo territorio, lo anterior no solo incrementa los conocimientos sobre la vid y el vino (objetivo primordial de visita) sino que además

se puede el mismo tiempo-espacio relacionarse con otras opciones de recreación relacionadas con el campo, los ranchos y los cultivos, todo lo anterior conviviendo socialmente con los pobladores, compartiendo cultura y participando de una experiencia por demás alternativa a la actividad de los visitantes. Si bien para los visitantes los niveles de satisfacción son amplios, para la población residente es vital que el turismo alternativo sea una verdadera opción de bienestar, para ello es importante que las personas tengan mayores oportunidades de insertarse a la dinámica positiva del turismo, es decir que la comunidad sea receptora directa indirecta del beneficio económico generado. Es importante que la población se sienta convencida y orgullosa de poder compartir y conservar los recursos existentes, para ello se requiere trabajar en las formas y en los medios, bajo la condición de hacer uso racional de los recursos naturales y sociales existentes en el territorio.

Discusión

Los tres elementos identificados en el presente trabajo son la ruralidad referida al contexto físico social en donde se desarrolla la actividad económica, la producción de vinos conformando el mayor atractivo turístico de la región, integralmente relacionado con el territorio, naturaleza, tradición y emprendimiento y por último y no por ello menos importante la prestación de servicios turísticos, específicamente hoteles de bajo impacto, en dinámica continua de mejoramiento de la experiencia y cada vez con más recursos para facilitar la visita al Valle de Guadalupe, todos ellos fortalecidos por el gran atractivo existente

La Tabla No. 1 registra una parte de la oferta de alojamiento que existe en el Valle de Guadalupe se trata de hoteles pequeños y lujosos que cuentan con todos los servicios y presentan como principal atractivo su localización, enclavada en atractivos espacios naturales, rodeados de viñedos y/o con vista panorámica, ocupan espacios relativamente pequeños con tarifas medianas y altas asociadas a la calidad de sus servicios y por ende favorecedoras de una estancia/visita placentera, se trata de firmas comerciales que se encuentran fuertemente relacionadas con el destino, las vitivinícolas se encuentran muy cerca de los hoteles, los restaurantes internos y los que se encuentran cercanos a los mismos ofrecen posibilidades de alta cocina gourmet, nacional e internacional.

Tabla No 1: Oferta de hospedaje en el Valle de Guadalupe, Baja California, México.

Nombre del hotel	Servicios
Adobe Guadalupe	6 habitaciones, restaurante, huerto orgánico, viñedos y vinícola.
Casa de Guadalupe	2 villas, cocina integral, viñedos
Cuatro Cuartos	12 cabañas, comedor y transporte a viñedos.
El Mesón del vino	13 habitaciones, restaurante y degustación de vinos
Finca Koochaeye	7 habitaciones, restaurante huerto orgánico y recorrido por viñedo.
Hacienda de Guadalupe Hotel	12 habitaciones, alberca, jacuzzi, huerto orgánico, vino y viñedos
Hotel Boutique Malagón	10 habitaciones, restaurante, vinícola.
Hotel del Valle de Guadalupe	8 habitaciones, viñedos y vinícola, paseo a caballo
Hotel Mesón del Vino	8 habitaciones, asador, venta de vino
La Villa del Valle Hotel Boutique	6 habitaciones, restaurante, huerto orgánico y viñedos.
Rancho María Teresa / Posada Inn	10 habitaciones y 2 villas ,restaurante y vinícola
Villa Tierra Santa	8 villas y 3 hab. Restaurante, viñedos y vinos.

Fuente: Investigación directa 2012.

Si bien solo se trata de una muestra de los servicios hoteleros existentes en el área, es valioso reconocer el carácter excepcional de los mismos, en donde el lujo y el confort de sus ingredientes son acompañados por la atención personalizada de sus colaboradores agregando la singularidad de su localización; estos servicios además de alojamiento cuentan con spas, jacuzzi, albercas, acceso a varias vinícolas y por ello recorridos, degustaciones y venta de vinos, algunos ofrecen paseos a caballo y otros en bicicleta, agregando a las facilidades y atracciones el acceso a huertos orgánicos propios o próximos en donde los huéspedes participan de la siembra/ cosecha de verduras y legumbres que posteriormente formaran parte de los platillos que serán consumidos por ellos mismos durante su estancia en los hoteles. Es tan importante lo artesanal, lo local y lo orgánico en el Valle de Guadalupe que visitando los ranchos, que

están cerca de las vinícolas, algunos producen vino y/o productos compatibles por lo que existen sembradíos de cebolla, tomate, calabacita estrella, pepino y hortalizas orgánicas, algunos de ellos comercializan aceite de olivo, mermeladas, ates frutales conservas, salsas y aderezos, pollo y huevo de origen orgánico, además de quesos y pan, estos últimos complementos ideales del vino que se produce en la región. Como ejemplo de las posibilidades agrícolas del territorio Erick Falcón refiere en su trabajo titulado "Lo que vino del Valle" que las esencias aromáticas con las que se elaboran muchos de los productos artesanales como el pan y el queso vienen de los huertos orgánicos del Valle de Guadalupe, además de mermeladas y ates frutales, en los ranchos se cosechan hortalizas orgánicas y hasta suplementos alimenticios son a base de semilla de uva y la peculiar miel de vino, todo ello es hoy a través de la apertura a la actividad turística, actividades compartidas.

Sobre este último referente, es importante valorar que varios huertos orgánicos son visitados por los turistas para comprar directamente la producción natural y/o conservas generando además de un producto comercializable una oportunidad de incorporación de la población local a la dinámica positiva del turismo. Lo anterior confirma que " la actividad turística asociada al vino y a las zonas productoras propicia una actividad crucial para el desarrollo regional al abrir nuevas oportunidades de negocio para miembros de la comunidad que pueden sumarse a la oferta turística existente con productos y servicios locales. " (2010, Valderrama, et. al).

CONCLUSIÓN

Como parte de un suceso no necesariamente reciente el medio rural bajacaliforniano está dando apertura a la diversificación de las actividades económicas, particularmente actividades turísticas que se abren paso, justificadas por el desarrollo agrícola implementando, asociado a un proceso histórico glocal que en estos momentos se presenta para la Ruta del Vino en el Valle de Guadalupe inicialmente no contradictorio, en opción perfilada por un turismo de bajo impacto que se ajusta a una perspectiva ambiental y socialmente validada, en modalidad alternativa, congruente a la estrategia de desarrollo integral

RUTAS ENOLÓGICAS COMO ESTRATEGIA DE POSICIONAMIENTO TURÍSTICO PARA BAJA CALIFORNIA, MÉXICO

Jorge Antonio Valderrama Martínez, Universidad Autónoma de Baja California

Lino Meraz Ruiz, Universidad Autónoma de Baja California

Guadalupe Velázquez Romero, Universidad Autónoma de Baja California

Juan Carlos Flores Trejo, Universidad Autónoma de Baja California

RESUMEN

En los últimos años se han venido produciendo importantes cambios en la actividad turística mundial, en donde los destinos urbanos han sido parcialmente desvalorizados frente a las propuestas alternativas que presenta el territorio rural, entre ellas, las rutas enológicas que han adquirido relevancia, desde el punto de vista socioeconómico. En el contexto de la diversificación de las actividades agrícolas y el empleo no agrícola, estas estrategias empresariales han representado una oportunidad para mejorar las condiciones de vida de los pobladores optando por la actividad turística en beneficio de una dinámica de crecimiento económico ampliada. El presente trabajo señala como la Ruta del Vino en Baja California ha favorecido el aprovechamiento de los elementos endógenos de la región, sustentado en la industria vitivinícola, los recursos naturales, históricos y sociales hoy conformados como producto integrado, parte central de la estrategia de posicionamiento turístico en Baja California, sin lugar a duda uno de los más valorados recursos de atracción de visitantes a la región.

PALABRAS CLAVES: Comunidades, ruta del vino, actividad vitivinícola, actividad turística.

WINE ROUTES AS STRATEGY OF TOURIST POSITIONING FOR BAJA CALIFORNIA, MÉXICO

ABSTRACT

In the last years have been producing important changes in tourist activity worldwide, where the urban destinations have been partially devalued opposite to the alternative offers that the rural territory presents, between them, the wine routes that have acquired relevancy, from the socioeconomic point of view. In the context of the diversification of the agricultural activities and the not agricultural employment, these managerial strategies they have represented an opportunity to improve the living conditions of the settlers choosing for the tourist activity in benefit of a dynamic of economic growth extended. The present work indicates as the wine route of Baja California has favored the utilization of the endogenous elements of the region, sustained in the wine industry, the natural, historical and cultural resources today shaped as integrated product, central part of the strategy of tourist positioning of Baja California, without place to the doubts one of the most valued resources visitors' attraction to the region.

KEYWORDS: Communities, wine route, wine activity, tourist activity.

REVISION LITERARIA

Las rutas alimentarias son un mecanismo de interpretación turística, capaz de generar el interés de traslado del turista al sitio donde se producen los alimentos y que es también en donde se generan sus apropiaciones culturales. Refieren (2010, Renardt y Thomé) Al respecto señalan que este planteamiento resulta útil para identificar a las regiones que congregan productos con fuerte identidad territorial y

patrimonio cultural local como es el caso de la regiones vinícolas. Viajar para conocer las características naturales de los territorios, toda vez que en su interior existen valores motivacionales asociados a la producción agrícola local, que le da identidad, provocando interés por comprender el carácter patrimonial de los productos, es hoy en día, una situación que provoca desplazamientos, estancias y visitas repetitivas. Confirmando lo anterior (2009, Barrera y Bringas) apuntan que las rutas alimentarias son un instrumento, que promueve el desarrollo rural a través del posicionamiento de los alimentos con identidad territorial. Señalan que los vinos y quesos son los alimentos que acumulan más distintivos de calidad referenciados territorialmente y son también ellos los que muestran mayor cantidad de rutas alimentarias desarrolladas a nivel mundial. Fortaleciendo la identificación (2011, González) refiere que el turismo de rutas gastronómicas se desarrolla basado en el conocimiento y disfrute de productos alimenticios (gastronomía) y aspectos culturales (belleza paisajista, fiestas, atractivos históricos y convivencia con la población) a lo largo de recorridos por carreteras y caminos, con ello da evidencia de que si bien las motivaciones fundamentales son provocadas por las rutas gastronómicas, el destino reclama atractivos variados y suficientes para provocar el disfrute de la experiencia, fundamentando, se advierte en la misma que la convivencia con la población local resulta un componente insustituible.

Al respecto Hall y Mitchell (2000) (citados por Barrera y Bringas, 2009) señalan que el turismo del vino es la experiencia de visitar viñedos, conocer bodegas, asistir a festivales y a demostraciones vinícolas en los cuales la cata del vino y/o la experiencia de los atributos del mismo son el principal motivo para los visitantes, la opción turística planteada perfila a un turista activo, generalmente educado, respetuoso que interactúa no solo con la naturaleza sino con la población local con quien comparte y desarrolla amplios conocimientos del sitio.

Planteamiento

El Valle de Guadalupe en Baja California México se sitúa a 25 kms. al norte de la ciudad de Ensenada, en el estado de Baja California, a 85 kilómetros al sur de la ciudad de Tecate y a 15 kilómetros del Océano Pacífico aproximadamente, en una extensión de zona rocosa-montañosa de 66,353 hectáreas, sobre los márgenes del arroyo Guadalupe y con una elevación sobre el nivel del mar de 1,100 pies. En dicho valle se asientan los poblados Francisco Zarco, El Porvenir y San Antonio de Las Minas, lugar donde se concentran más de 40 bodegas dedicadas a la producción de vino. El Valle de Guadalupe es una región vitivinícola, también conocida como la Ruta del Vino, cuenta con una importante historia ya que los primeros pobladores de esta región fueron de las culturas Kiliwa y Kumiai, seguidos de misioneros ibéricos y mexicanos quienes abrieron brecha para la llegada de inmigrantes de Rusia, Italia y connacionales provenientes del interior de la república mexicana esta condición histórico-social le ha impregnado una dinámica de emprendimientos, habilidades, tradiciones e influencias étnicas hoy manifiestas en muchas formas del quehacer y desarrollo humano, carácter único que se manifiesta como uno de los principales valores y condición de posicionamiento de la Ruta del Vino.

La Ruta del Vino de Valle de Guadalupe en Baja California México define una estrategia de aprovechamiento de los elementos naturales y culturales, como producto de la integración de recursos y servicios turísticos de una región, relacionados con el vino, aunado a actividades relacionadas a éste, como la apreciación del paisaje, recorridos por viñas, participación de la vida cotidiana como parte de una experiencia de turismo alternativo, en donde además de recorridos por las viñas existen museos, eventos culturales, comunidades indígenas y vida campesina compartida. Entorno al turismo alternativo el atractivo de la gastronomía se combina con el vino y la cultura constituyendo el principal motivo de viaje a una determinada región por lo que la estrategia de desarrollo se basa en el aprovechamiento de las vocaciones naturales y patrimoniales de los lugares, el Valle de Guadalupe, cuenta entre sus recursos tres factores que destacan su nivel de autenticidad, el primer factor es el rango de la marca que divide las montañas por donde entra una brisa marina del Pacífico la cual refresca los suelos ofreciendo una excelente humedad y respiración para la vid en las temporadas calurosas. Como segundo factor el Valle

cuenta con una temperatura mínima media de ocho grados centígrados y una máxima media de veintidós grados centígrados en condición caracterizando el clima mediterráneo, y el tercer factor característico, es la peculiaridad del suelo ya que tiene una superficie oscura, suave y rica en materias orgánicas y nutrientes. Todo lo anterior determina que el área vitivinícola cuente con recursos naturales de una zona privilegiada haciéndola la principal zona vitivinícola de México. Considerando lo anterior es importante destacar que la Ruta del Vino en el Valle de Guadalupe en Baja California, basada en su condición natural, emprendimiento y resultado empresarial contribuye al desarrollo del área geográfica que ocupa específicamente su contexto rural el cual como hemos visto reúne condiciones para atraer y proporcionar experiencias positivas basadas en el conocimiento de apreciación, degustación y consumo del vino, generando desplazamientos que impactan positivamente en la generación de riqueza y empleo en los espacios que ocupa, estimulando la inversión y la creación de oferta de servicios turísticos por parte de la comunidad, que completen los niveles de satisfacción y consoliden el destino. Estimular el turismo del vino impacta positivamente en la zona geográfica la cual que como hemos visto resulta atractiva para el turista que en busca de experiencias basadas en el conocimiento del producto agrícola local, realizara desplazamientos que tienden a hacer valorados de manera creciente dado los impactos que genera a favor del contexto ampliado.

Discusión

Actualmente, como respuesta a las tendencias turísticas mundiales, los destinos están buscando conocer y atender las motivaciones de los turistas agregando los servicios que acorde a los recursos existentes tendrán que imponerse en condición de valor para responder a las motivaciones de los viajeros, el turismo enológico avanza en su condición y posibilidad de producción aperturando su condición natural, sus atractivos y servicios sumados, impactando favorablemente en la programación de actividades recreacionales y en el disfrute de las mismas. El turismo se encuentra en busca de nuevos y mejores formas de dedicar su tiempo para vacacionar, dejando atrás las motivaciones convencionales como la playa, los casinos y los parques de diversiones ahora se aprecia un creciente interés por desarrollar nuevas formas de turismo, surgiendo un sin número de alternativas y novedosas formas de viajar dirigidas a turistas más exigentes quienes buscan otros tipos de experiencias (2009, Elías).

Los desplazamientos turísticos que bajo motivaciones emotivas y razonadas relacionadas con el disfrute del entorno específicamente en torno al vino, recorridos guiados por la bodegas en donde el conocimiento de las características que dan valor agregado a cada uno de los productos son conocidos en su lugar de origen y en voz de los productores, son motivaciones cubiertas. La experiencia está apoyada por diversos servicios turísticos que se suman al tiempo de estancia y a la mejor y más amplia valoración de la modalidad turística vivenciada. Más allá de un concepto mercadológico utilizado en varios países del mundo para identificar un recurso menor representa más que un itinerario, conforma una estrategia integrada o una propuesta integral que convierte al viajero, en un investigador, de una realidad que le es atractiva, que habla de vino, de su proceso de producción, de sus ingredientes y condiciones naturales, lo mismo que de sus productores directos, de sus costumbres y tradiciones, aportando conocimientos mayores que avanzan en línea directa a su bienestar y satisfacción. La experiencia turística y no solamente el viaje a una región vitivinícola convierte al turista en un conocedor del vino de la zona rural en donde se localizan los plantíos, de su proceso agroindustrial, de las características de sus variedades y lógicamente de sus singulares sabores y calidad, desarrollando niveles de comunicación amplios y respetuosos con los pobladores conociendo contexto y cultura.

CONCLUSION

La actividad turística relacionada con el vino y sus zonas productoras propicia una actividad económica ampliada, por el impacto positivo que se presenta a nivel regional toda vez que se abre la oportunidad de

ampliar los servicios y atracciones para los visitantes de las zonas rurales en donde la actividad se inicia de manera formal, el estímulo a la producción y a la comercialización se da de manera directa pero también ampliada a productos y servicios alternos y complementarios lo anterior genera beneficios extendidos a otros miembros de la comunidad que efectivamente pueden sumarse a la dinámica de crecimiento, lo anterior, revela la dinámica positiva que el turismo puede generar en zonas donde existen valores patrimoniales asociados a la producción original. Las posibilidades de visita turística a zonas vitivinícolas permiten el alcance de beneficios para los empresarios directos, favoreciendo el fortalecimiento de marcas, así como entregar valor agregado a los vinos por aumento en las ventas, lo mismo que para las localidades, permitiendo la diversificación de la oferta turística existente, así como el proteger y revitalizar el patrimonio vitivinícola, así mismo los beneficios para los turistas son el compartir conocimientos enológicos con los protagonistas de la actividad, protagonizar condiciones de viaje singulares de alta calidad y el que es sin duda el atractivo más importante que es el vivir experiencias significativas de viaje, positivas y satisfactorias.

FACTORES DE INFLUENCIA EN LA ELECCIÓN DE COLEGIOS PARTICULARES DESDE LA PERSPECTIVA DE LOS PADRES DE FAMILIA

Gilberto Joaquín Farías Camarero, Universidad Autónoma de Baja California

Martha Ofelia Lobo Rodríguez, Universidad Autónoma de Baja California

RESUMEN

De acuerdo con cifras oficiales; el sector de educación particular a nivel medio superior intenta recuperarse del impacto negativo que la crisis global ha provocado en la demanda de sus servicios y por ende, en su competitividad intersectorial. Ante este hecho, queda el reto de emprender las estrategias correctas para captar o retener inscripciones. Conocer de primera mano los gustos, preferencias y opiniones de los usuarios del servicios –padres de familia– representa un primer paso y un importante ejercicio para obtener valiosa información y así emprender acciones para desarrollar productos y servicios de calidad, competitivos y que generen bienestar entre los usuarios; un objetivo fundamental en la disciplina de la Mercadotecnia.

PALABRAS CLAVE: administración, mercadotecnia, educación.

FACTORS INFLUENCING THE CHOICE OF PRIVATE SCHOOLS FROM THE PARENTS PERSPECTIVE

ABSTRACT

According to government sources; private education sector stills trying to get over the negative impact caused by the global economic crisis, which is directly affecting to its demand and intersectoral competitiveness. To face this issue, sector has the challenge to launch precise strategies in order to prospect and retain users and student's tuitions. Acknowledging –by first hand– final user's likes and dislikes, preferences and opinions; represents an important first step in order to obtain valuable information, so institutions would be able to start up actions looking to develop quality and competitive products and services that bring up comfort and wealth to their users; which is a primary objective when talking about Marketing.

KEY WORDS: management, education, positioning, marketing

INTRODUCCION

De acuerdo con el SEE de Baja California, el sector educativo particular intenta recuperarse del impacto negativo que la crisis global ha provocado en la demanda de sus servicios, es precisamente en este escenario que el presente estudio cobra una particular importancia, pues explora los factores que son relevantes para los padres de familia al hacer la elección de escuela a nivel medio superior para sus hijos. En esta investigación, toma como punto de partida el concepto de *Servicios de Compra Reflexionada*; expuesto por expertos en la materia –como el profesor Juan Manuel Manes (2005), de la Universidad Argentina de la Empresa, en Buenos Aires– quien afirma que en la elección de una institución educativa existe un riesgo percibido originado en la expectativa de calidad, valor, precio, capacidad de pago del usuario y consecuencias de decisión. En este tipo de servicios –dice el profesor Manes– existe un proceso de comparación entre las diferentes ofertas educativas en el que se dará preferencia a aquella que se acerque más a las expectativas y de mejor respuesta a los riesgos percibidos. Si bien es cierto que los

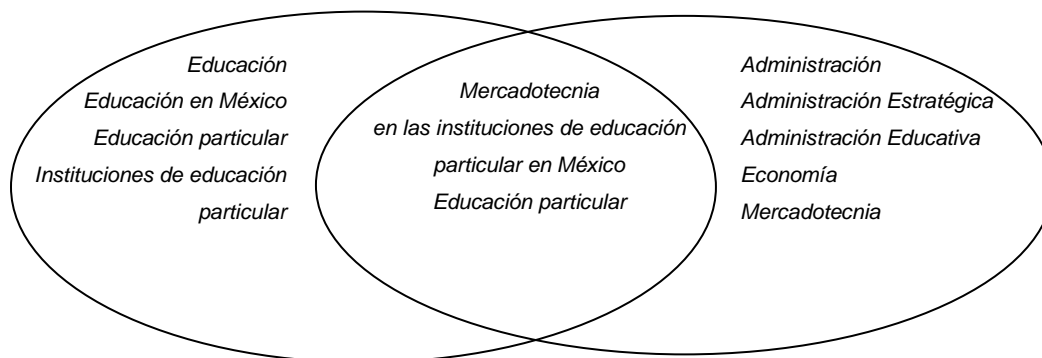

factores externos a las instituciones educativas –tales como la crisis económica global– impactan directo en la demanda de sus servicios; la Teoría Administrativa también nos dice que existen factores internos que –si se descuidan– pueden impactar negativamente en las organizaciones. De esta manera, entonces es posible afirmar –como lo hace la reconocida experta en temas de Administración, Lourdes Münch (2010) – que “la calidad de cualquier institución educativa está en relación directa con la aplicación de una adecuada administración” y más aún, que “a través de una correcta administración en instituciones educativas, se logran los objetivos con la máxima eficiencia, eficacia, calidad, productividad y competitividad” (Münch, 2010: p. 14). Si bien el objetivo principal es determinar los factores de influencia relevantes para los padres de familia en la elección de un colegio particular para sus hijos, también es importante reconocer y sustentar la Mercadotecnia como una herramienta estratégica para la retención y captación de alumnos en los colegios del sector privado.

METODOLOGIA

Geográficamente, la presente investigación tiene lugar en la ciudad de Tijuana Baja California; y la muestra de instituciones observadas se considera intencional; pues sólo se toman en cuenta colegios que acogen alumnos de familias de mediano y alto poder adquisitivo de la ciudad, de acuerdo con el directorio oficial de escuelas del Sistema Educativo Estatal (SEE), suman en total 118 preparatorias; de las cuales 87 son particulares y 31 son públicas. La muestra del presente estudio incluye cuatro colegios ampliamente conocidos y distinguidos que además integran –en un solo plantel– educación secundaria y bachillerato. La metodología para este trabajo de investigación integra aquellos métodos pertinentes a la Investigación de Mercados; y comprende un ejercicio de *Focus Group* para obtener información principalmente cualitativa. En este ejercicio se utilizaron los como instrumento de investigación; *Discusión Grupal*, *Técnica de Asociación de Palabras*, *Técnica de Diferencial Semántico* y *Encuesta* (instrumento diseñado sometido a un análisis de fiabilidad utilizando la paquetería IBM SPSS versión 19 y arrojó un coeficiente Alfa de Cronbach de 0.869 cuya consistencia interna –de acuerdo con la teoría psicométrica– es considerada como *Buena*). Dicho instrumento mide el grado de conocimiento que el padre de familia tiene sobre la institución; y –por otra parte– mide la valoración que el padre de familia da ciertos componentes del colegio; tales como instalaciones, profesores, entre otros. En total se aplicaron doce encuestas en una muestra de doce padres de familia, con un nivel socioeconómico A/B y que tengan hijos en escuelas privadas a nivel medio superior.

REVISION DE LA LITERATURA

La presente investigación se ubica dentro de los estudios de Mercadotecnia; pertenecientes a su vez, al campo de estudio de las Ciencias Administrativas y la Economía. De igual manera se inserta en los estudios sobre Administración de la Educación. En este contexto –y de la intersección resultante– es necesaria la inclusión de literatura técnica pertinente con el fin de comprender plenamente la naturaleza, contenido y metodología de esta investigación. A continuación se muestra un diagrama de Venn que ilustra y justifica la selección de literatura para este trabajo de investigación:

El marco teórico está principalmente apuntalado en conceptos presentes en Michael Parkin (2006); para los conceptos de *Economía, Mercado, Oferta, Demanda, Bienes y Servicios*; Sergio Hernández y Rodríguez (2008) para las nociones de *Administración y Administración Moderna, Proceso Administrativo y Empresa*; Charles W. Hill y Gareth R. Jones (2009) para las nociones relativas a *Estrategia y Administración Estratégica*; Michael Porter (1985) para las nociones relativas a *Competitividad y Ventajas Competitivas*; Lourdes Münch (2010) para las nociones de *Administración Educativa*; Philip Kotler (1998) para las nociones relativas a la *Marketing*; José María de Andrés Ferrando (2008) y Valarie Zeithaml (2008) para las nociones relativas a *Marketing de Servicios*; Jack Ries y Al Trout (1980) para las nociones relativas a *Imagen y Posicionamiento*; Ricardo Homs (2011) para las nociones de *Estrategias de Marketing*; Kevin Lane (2008) para las nociones relativas a *Administración Estratégica de Marca*; y Juan Manuel Manes (2010) para las nociones de *Marketing Educativo y Servicios de Compra Reflexionada*. De igual manera –y conforme el cuerpo de la investigación así lo requiera– se presentan otros autores y conceptos asimismo importantes.

RESULTADOS

Con base en la información obtenida a través de los instrumentos anteriormente mencionados; se encontraron los siguientes resultados:

Técnica de Asociación de Palabras: Los logotipos de las escuelas privadas de nivel medio superior no son identificados sólo por su imagen corporativa y no existen elementos de diferenciación entre una y otra. *Discusión Grupal:* El elemento más importante que resalta en esta técnica fue la seguridad, además de mencionarla como un elemento clave en la toma de decisión entre una escuela pública y una privada.

Técnica de Diferencial Semántico: Con esta técnica se confirma la carencia de elementos de diferenciación significativos entre escuelas.

Respecto a las Encuestas, los resultados arrojaron que un 70% de los usuarios eligió la escuela por recomendación de alguien, mientras que un 25% ya había tenido experiencias anteriores en esa institución. Al ordenar los factores de influencia en orden de importancia un 75% considera la planta docente como el factor más importante, seguido por el prestigio de la institución y la disciplina, en la segunda opción se encuentra la disciplina con un 60%, seguido por el prestigio y las instalaciones, como tercera opción un 50% mencionan las actividades culturales y deportivas, seguido por las instalaciones.

Como podemos observar los factores que más se repiten en los primeros tres lugares son el prestigio, disciplina e instalaciones, pero sobre estos el factor más sobresaliente para la mayoría es la planta docente. Al cuestionar sobre el elemento diferenciador de la institución en la cual su hijo está inscrito, un 40% considera las instalaciones, 25% mencionan la disciplina y solo un 20% menciona el nivel académico, aun cuando mencionan que para ellos es el factor (nivel académico) más importante al momento de decidir, lo cual se valida al preguntar si consideran que hay mejores opciones para sus hijos, a lo cual un 40% responden que si hay mejores opciones de instituciones privadas para sus hijos, por lo que si cambiarían de escuela a sus hijos si alguna institución presentara una opción que cubriera sus

expectativas. Un 40% de los usuarios están totalmente satisfechos y 30% están medianamente satisfechos con el servicio que ofrece la institución actual en donde estudia su hijo.

CONCLUSIONES

Con base en el desarrollo de esta investigación; sumado a los resultados aquí presentados, se concluye que aspectos como *Profesores, Disciplina, Prestigio, instalaciones y Actividades Deportivas* son considerados por los padres como factores determinantes en la elección de un colegio de nivel medio superior para sus hijos; todos ellos factores internos perfectamente controlables, medibles y perfectibles desde la administración de las instituciones. Cuando estos factores satisfacen –y en el mejor de los casos exceden– las expectativas tanto de padres y alumnos pueden generar una mejor posicionamiento de la institución a través de una multiplicación de recomendaciones; y por ende, posibilitar una mayor atracción, captación y retención de matrícula.

RECOMENDACIONES

Ahora bien, con base en lo anterior llegamos a las siguientes conclusiones desde la perspectiva de la Mercadotecnia:

- Desarrollar diagnósticos internos y emprender estrategias de diferenciación
- Publicitar sus fortalezas actuales con una Mezcla de Mercadotecnia balanceada.
- Emprender estrategias de fidelización, pertenencia y apego a la marca
- Emprender estrategias de promoción de ventas y programas de referidos

Posteriormente, se buscaría entonces que dichas recomendaciones –interpretadas y ejecutadas desde la Mercadotecnia– generen soluciones al problema de la pérdida de matrícula en el sector educativo y aporte herramientas para que las instituciones involucradas y emprendan acciones y desarrollen servicios educativos de calidad que generen bienestar y competitividad. Se debe insistir en que este primer estudio es sólo un avance que –en su etapa más madura– servirá de base para proceder a estudios cuantitativos que arrojen información complementaria que precise y explique otras variables; o bien que posibilite otras futuras líneas de investigación. He aquí algunas propuestas: Explicar la importancia del Proceso Mercadológico para el logro de los objetivos en las instituciones educativas, Detectar el posicionamiento que las instituciones con descenso de matrícula tienen en la mente del consumidor. Sírvanse futuros investigadores, tomar como punto de partida estas sugerencias.

DISEÑO DE UNA METODOLOGÍA PARA LA IMPLEMENTACIÓN DE UN REPOSITORIO ELECTRÓNICO DE CONOCIMIENTO

Aracely Madrid, ITESM Campus Chihuahua
Raime Bustos, ITESM Campus Chihuahua
Jonathan Ortíz, ITESM Campus Chihuahua
Antonio Ríos, ITESM Campus Chihuahua

RESUMEN

En el presente trabajo se desarrolla una metodología de implementación de un modelo de repositorio con alcance global que permite la máxima transferencia de conocimiento en repositorios electrónicos. Su objeto de estudio es el personal de la federación de Observatorios Santander, fabricantes y universidades en los continentes americano, europeo y africano, que busquen implementaciones de aplicaciones con la TUI. El resultado es una metodología compuesta por cinco fases: Valoración, Toma de Decisiones, Diseño y Desarrollo, Implementación y Evaluación del Desempeño. Dicha metodología es evaluada a través del criterio de expertos, teoría e implementación práctica. Los resultados demuestran que los expertos coinciden con un coeficiente de concordancia ANOCHI de 0.82 en que la metodología tiene una fundamentación teórica sólida, la definición de las fases y su secuencia lógica es adecuada y es factible y rentable de implementar. Además, se desarrolla e implementa un repositorio siguiendo la metodología, y en la prueba piloto se observa que el desempeño el repositorio implementado con la metodología es mejor evaluado por el usuario que el repositorio de control. Concluyendo que la metodología es factible y exitosa, y un repositorio que la sigue tiene un nivel de éxito mayor que aquel que no lo hace.

PALABRAS CLAVE: Transferencia de conocimiento, repositorios electrónicos de conocimiento

DESIGN OF A METHODOLOGY FOR THE IMPLEMENTATION OF AN ELECTRONIC KNOWLEDGE REPOSITORY

ABSTRACT

This document presents a methodology for the implementation of a repository's model with global reach that maximizes the knowledge transfer in electronic repositories. The object of study is Santander's Observatories Federation, manufacturers and Universities on America, Europe and Africa. The result is a methodology composed for five phases: Valuation, Decisions Making, Design and Development and Performance Evaluation. This methodology is evaluated through experts' criteria, theory and practical implementation. The results show that the experts match with a concordance coefficient ANOCHI of 0.82, it means that the methodology has a strong theory foundation, the definition of the phases and their logical sequence is appropriate and feasible and cost effective to implement. In addition, an electronic repository is implemented following the methodology and the pilot test performance shows that the repository implemented supported with the methodology is best evaluated by the user than the repository that does not apply the methodology. Concluding that the methodology is feasible and successful and a repository that accomplishes it, show a greater level of success against the one that does not.

MIGRACIÓN FORZADA DE EMPRESAS MEXICANAS A ESTADOS UNIDOS: UNA PRIMERA APROXIMACIÓN TEÓRICA DESDE LA ADMINISTRACIÓN INTERCULTURAL

Oscar Javier Montiel Méndez, Universidad Autónoma de Cd. Juárez (UACJ)
Zoila Arámbula Monreal, Centro de Bachillerato Tecnológico Industrial y de Servicios 114
Larisa Ordoñez Molinar, Universidad Autónoma de Cd. Juárez (UACJ)

RESUMEN

Existe un acuerdo generalizado en la literatura que los empresarios y emprendedores de organizaciones son los principales motores del crecimiento económico. (Storey y Thether, 1998). El ambiente contemporáneo tanto en las PYMES como en grandes empresas es cada vez más internacional, y requiere una administración intercultural para la combinación de talentos en un ambiente potencialmente problemático, donde contextos multiculturales implican una dimensión de gestión de trabajo y de cooperación entre individuos (convergencia), pero también una donde cuenten las diferencias y acomodamientos (divergencia) al interior de la empresa (Irrman y Arcand, 2010, p. 348). Un aspecto que ha recibido poca atención es la contribución de los migrantes a la actividad empresarial y creación de empleo en sus países de acogida, ya que en sus países miembros, la supervivencia de estas empresas es a menudo inferior que en sus países de procedencia (OCDE, 2010). Debido a la violencia en Ciudad Juárez, el Servicio de Ciudadanía e Inmigración y el Departamento de Inmigración y Naturalización de los Estados Unidos, calcula en 100 mil sus habitantes que migraron a ese país desde 2007, principalmente a El Paso, Texas., y la Asociación de Maquiladoras A.C de Ciudad Juárez estima que mil millones de dólares no se invirtieron, y hubieran generado entre 70 mil y 80 mil empleos (Milenio, 2010).

PALABRAS CLAVE: Emprendimiento, Migración Forzada, Administración Intercultural

FORCED MIGRATION OF MEXICAN COMPANIES TO THE UNITED STATES: AN INTERCULTURAL MANAGEMENT THEORETICAL APPROACH

ABSTRACT

There is widespread agreement in the literature that businessmen and entrepreneurs of organizations are the main drivers of economic growth (Storey and Thether, 1998). The contemporary atmosphere in both SMEs and large enterprises is becoming more international, and requires an intercultural management to allow the combination of talents in a potentially problematic area, where multicultural contexts involve a work management dimension and cooperation between individuals (convergence), but also where they have differences and accommodations (divergent) within the company (Irrman and Arcand, 2010, p. 348). One aspect that has received little attention is the contribution of migrants to business and job creation in their host countries, since in the OECD member countries, the survival of these companies is often less than in their countries of origin (OECD, 2010). Because of the violence in Ciudad Juarez, the United States Bureau of Citizenship and Immigration and the Office of Immigration and Naturalization estimated 100, 000 persons who migrated to the USA since 2007, mainly to El Paso, Texas, and the Maquiladora Association of Ciudad Juarez estimated that one billion dollars were not invested and would have generated between 70,000 and 80,000 jobs (Milenio, 2010).

KEYWORDS: *Entrepreneurship intention, Universities, Business Creation.*

INTRODUCCIÓN

Desde inicios de la humanidad los seres humanos migran y el fenómeno de las migraciones, es reconocido como un proceso esencial en la vida del ser humano sobre la tierra, que ha permitido generar diferentes desarrollos socio culturales y económicos (Gómez, Astaiza, De Souza, 2008, p.4). De acuerdo con estos autores, es de vital importancia la definición de migrante: “toda persona que por cualquier motivo decide, mediante una elección tomada libremente, cambiar su lugar de residencia, ya sea de manera permanente o no” (Gómez, et al 2008, p.6). La definición anterior brinda la oportunidad de análisis en el sentido en que una persona experimenta procesos migratorios por decisión propia para la búsqueda de un mejor empleo, salarios más altos, mejor educación para los hijos o asuntos familiares (Villa, 2006, p.2).

Dentro del constructo Migración, algunos autores como Villa, proporciona un rubro o clasificación llamado Desplazamiento Forzado o Migración Forzada, siendo esta, “aquella que ocurre dentro de las fronteras del territorio nacional o internacional que está motivada por desastres naturales o por diversas formas de persecución, amenaza o agresiones que atentan contra la integridad de las personas” (Villa, 2006, p.4). En base a la revisión de literatura efectuada, se propone una definición específica sobre la migración forzada de naturaleza empresarial, siendo que es aquella que ocurre dentro de los límites de un territorio, motivada por diversas formas de persecución, amenaza o agresiones que atentan contra la integridad física o patrimonial de un empresario, emprendiendo por ello una nueva organización en otro territorio diferente a su lugar de origen.

Partiendo de la constatación de la gravedad y magnitud del fenómeno, según el Alto Comisionado de las Naciones Unidas para los Refugiados (Acnur, 2000), son alrededor de 25 millones de personas las que, bajo estos contextos, están desplazadas en el mundo. Un ejemplo de Migración Forzada reciente es el de Colombia, que en 2005 presentó aproximadamente 3.7 millones de personas desarraigadas por un conflicto armado interno sociopolítico, ocupando así el segundo lugar en el mundo después de Sudan en migraciones internas (Ibáñez, 2005). Según la Organización Internacional de las Migraciones (OIM, 2005), existen aproximadamente 200 millones de migrantes internacionales, y desde 1970 al 2005, hay un aumento de 2.5 veces la cifra de migrantes internacionales: el 3% de la población mundial está dentro de esta categoría. Según esta misma organización, los principales destinos de estas personas son Europa con 56.1 millones y Estados Unidos con 35 millones de migrantes que corresponde al 7.7 % y el 20 % de su población, respectivamente.

La Migración Forzada derivada por la inseguridad que opera en el País en general, y que forma estos flujos migratorios de mexicanos a Estados Unidos, ha ocasionado que en las ciudades fronterizas como Ciudad Juárez, Chihuahua, se estime que 230 mil a 250 mil personas decidieron irse a vivir a El Paso, Texas (Observatorio de Seguridad y Convivencia, 2010), y cerca de una cuarta parte de las viviendas están desocupadas, pues de las 467 mil 151 casas que existen en el municipio, 111 mil 103 están solas (a diferencia del 2005, cuando había 69,600), siendo la segunda a nivel nacional en este rubro (Censo de Población y Vivienda, 2010).

Como resultado del contexto de violencia que Ciudad Juárez ha presentado en épocas recientes, de acuerdo con el INEGI más de 200 mil empleos se han perdido y representa el 20 por ciento de la población actual. El Consejo Coordinador Empresarial estima que tres de cada 10 negocios locales están cerrados. La Cámara Nacional de Comercio (Canaco local) menciona que en 2008 tenía registrados 11 mil negocios: hoy sólo 2 mil 700. Es decir, 8 mil 300 (75%) han cerrado (Milenio, 2010). Según datos proporcionados por la Cámara de empresarios mexicanos radicados en El Paso, Texas, (llamada La Red), tienen como afiliados aproximadamente 500 negocios, de los cuales, 230 son considerados como activos,

esto es, que pagan su membresía, cuotas y asisten a los eventos organizados por dicha cámara. Fue fundada en 2010.

Es aquí en donde se presenta la Administración Intercultural. El término más utilizado en inglés es administración «cross-cultural» y no «intercultural». La dimensión «cross-culture» evoca la comparación entre dos grupos culturales, mientras que «intercultural» estaría más centrado en la interacción. Se utiliza el término intercultural de manera inclusiva en sus dos acepciones. definida como “la que estudia la conducta de las personas en organizaciones de todo el mundo y forma a las personas para que trabajen en organizaciones con poblaciones de empleados y de clientes. Describe la conducta organizacional al interior de países y culturas; compara las conductas organizacionales entre culturas y entre países y, tal vez lo más importante, busca comprender y mejorar la interacción entre los trabajadores, los clientes, los proveedores y los socios de alianzas de diferentes países y culturas” (Adler, 1991, p. 10-11).

El presente estudio se enfocara en la segunda parte de esta definición, que pretende comprender y mejorar la interacción entre los empleados, clientes y los socios que viven en países y culturas diferentes, tal y como sugieren Irrmann y Arcand (2000, p.2), quienes también comentan que ningún administrador u organización pueden eludir el problema de la administración intercultural en la economía contemporánea y es donde este tipo de administración se encuentra al interior de las empresas y se presenta en los grupos procedentes de horizontes culturales diferentes que deben cooperar dentro de la misma organización.

Para estos empresarios, es esencial saber si sus procedimientos logran los mismos resultados en diversas culturas extranjeras (Adler y Bartholomew, 1992). Estudios de la administración intercultural pueden avanzar en la investigación empresarial, ayudando a distinguir las relaciones que son universalmente válidas y las que son dependientes de la cultura (Tiessen, 1997). Por tanto, es importante entender los efectos en conjunto de las dimensiones culturales, los rasgos de personalidad, así como de los estándares culturales, en los modos de acción de la administración intercultural y que funcionen mejor en diferentes contextos de esta (Fink, Neyer, Kolling, 2007). Al entender esta problemática, se podrá mejorar la habilidad de crear relaciones abiertas y productivas en sus organizaciones (Silverthorne, 2005).

Engelen, Heinemann y Brettel (2009) señalan que aun cuando la administración intercultural en el campo del emprendimiento está en su infancia como una línea de investigación, ofrece importantes inferencias tanto para la teoría como para la práctica. También la OCDE (2010) encuentra que un mayor conocimiento de la iniciativa empresarial migrante es esencial para que los responsables políticos puedan apoyar mejor a las empresas de migrantes y su papel en el crecimiento económico y la creación de empleo, así como aumentar la conciencia del papel positivo que los migrantes pueden jugar como empresarios, ya que puede contribuir a un debate público más equilibrado sobre la inmigración. Por otra parte, menciona que se requiere mayor investigación en la calidad de las fuentes de datos sobre el espíritu empresarial migrante, y al analizar su iniciativa empresarial, la de integrar en hipótesis explicativas los rasgos personales que contribuyen al éxito empresarial, cómo saber hacer frente a desafíos y asumir riesgos, la pasión, visión y la personalidad.

Es a partir de ello que se presenta la oportunidad de realizar una investigación sobre las dimensiones culturales, rasgos de personalidad y estándares culturales que funcionen mejor en la administración intercultural de los empresarios mexicanos que instalados en Ciudad Juárez, Chihuahua y, bajo una migración forzada, hayan emigrado e instalado en la ciudad de El Paso Texas. Su objetivo general, será determinar aquellos elementos (dimensiones culturales, rasgos de personalidad y estándares culturales) de la Administración Intercultural que llevan a cabo empresarios mexicanos instalados originalmente en Cd. Juárez y que, bajo una migración forzada, se han establecido en la Ciudad de El Paso Texas, Estados Unidos de América y cómo llevan a cabo esta administración intercultural. Asimismo, en lo concerniente al contexto mexicano, hasta este momento no se tiene conocimiento de alguna investigación como la propuesta por el presente estudio. Lo anterior sugiere que la literatura sobre el tema es escasa. Una

búsqueda rápida con SCIRUS (29 de Mayo de 2011), el motor de búsqueda de información científica, refleja las escasas investigaciones sobre el tema: El, bajo cualquier área del conocimiento, en la frase “administración intercultural”, en la opción “documento completo”, se obtuvo solo 65 hits. En la frase “cultural standards”, misma opción, solo 4. Bajo “estándares culturales”, misma opción, 88 hits.

Una conclusión preliminar de Fink et al. (2007), es que una comprensión más profunda de las relaciones entre estas tres líneas de investigación (dimensiones culturales, rasgos de personalidad y estándares culturales) en la administración intercultural, de la procesos que conducen a la aparición de incidentes críticos, y de las reacciones de los de las personas a estos, permitirá a estas mejorar el rendimiento en las interacciones interculturales y, por tanto, también el rendimiento de las organizaciones a las que pertenecen.

REVISIÓN DE LITERATURA

En términos de la iniciativa empresarial Low (2001, p 21) define al emprendimiento como "el proceso de identificar, valorar y la captura de oportunidad". En paralelo con Tiessen (1997), se distinguen dos niveles de análisis: (a) el empresario como (enfoque de rasgos) individuo y (b) la organización emprendedora como enfoque conductual. Engelen et al. (2009) menciona que la literatura ofrece ideas sobre la dependencia que en la cultura tienen diversos fenómenos del emprendimiento. También este autor señala que a nivel individual, se sabe que los empresarios comparten ciertas creencias y valores a través de las culturas nacionales. A nivel organizativo, sugiere que la cultura es probable tenga un impacto en la configuración de organizaciones en todas las culturas, como una predilección por su defensa de sus preferencias y estrategias de cooperación. Sin embargo, los mecanismos subyacentes en términos de las causas y los efectos de las diferencias siguen siendo preocupantemente poco claros.

Según la OCDE (2010), la evidencia de varios países sugiere que los migrantes tienen más probabilidades que los nativos para poner en marcha nuevas empresas, pero también son más propensos a ver a sus empresas fracasar. Un número de factores contribuyen al éxito de las empresas de migrantes. En Francia, empresas creadas por los hombres tienen mejores probabilidades de éxito que los de las mujeres; y empresas creadas por las familias tienen más probabilidades de éxito que los establecidos por una sola persona. Las principales razones para el fracaso se relacionan con bajos niveles de educación, las restricciones de crédito, el tiempo de residencia, el idioma, la condición jurídica y la región de origen. Llama la atención que no menciona nada acerca de la administración intercultural.

No es posible hacer una reflexión seria sobre la administración intercultural si no se acepta que cada persona es portadora de una multiplicidad de culturas, y las organizaciones deben ser vistas como “portadoras potenciales de una multiplicidad de grupos culturales que pueden ser separados, superpuestos, entrelazados y donde cada miembro de la organización puede ser a la vez miembro de muchos grupos culturales diferentes” (Sackmann, Phillips, Kleinberg y Boyacigiller, 1997, p.33).

Irrman (2010) señala que la administración intercultural debe concebirse hoy como la gestión de múltiples culturas que integran simultáneamente una dimensión regional y de culturas profesionales y organizacionales, ya que en el contexto moderno de los negocios, fuertemente interconectado y en vía de globalización económica, la tarea central de la administración intercultural ya no es la comprensión de las diferencias con el objetivo de atenuar y de disminuir los problemas de incompreensión, sino facilitar y dirigir las interacciones, las sinergias y el aprendizaje allí donde existe el contacto entre las culturas (Søderberg y Holden, 2002).

El área de investigación del presente estudio, es contribuir al entendimiento de la administración intercultural que podría verse obstaculizado por incidentes críticos. En ese contexto, la cuestión decisiva no es la existencia de las diferencias culturales per se, sino la forma en que diferencias de comportamiento

son percibidas, interpretados y gestionados por personas de diferentes culturas nacionales en el contexto empresarial (Fink et al. 2007). Dado que los individuos suelen crecer en el seno de una sola cultura, incidentes críticos pueden ocurrir cuando las personas interactúan con otras personas que son de una sociedad extranjera, nación, cultura, o incluso sólo un diferente grupo organizacional. Los incidentes son críticos cuando el comportamiento o las medidas adoptadas, de acuerdo con las normas vigentes de conducta del actor, conducen a resultados inesperados o provoca reacciones inesperadas por las contrapartes.

Respecto a las dimensiones culturales ya señaladas, estas miden valores, es decir, "una concepción, distintivo de un individuo de lo deseable que influye en la selección de modos disponibles, medios y fines de la acción" (Kluckhohn 1951, p. 395). Las dimensiones culturales no abordan los problemas reales que surgen en negocios y encuentros de gestión. No ayudan a entender cómo encuentros interculturales se perciben y se interpretan, y cómo y por qué gerentes y personal reaccionan de una manera específica. A pesar de que las dimensiones culturales son normas similares, las normas (estándares) culturales y la percepción de estas pueden ser diferentes. Con el fin de obtener una comprensión más profunda de por qué y cuales incidentes críticos pueden ocurrir en interacciones entre las culturas, es necesario considerar los rasgos de personalidad y las normas culturales.

Siguiendo a Buss (1991), los rasgos de personalidad puede ser entendidos como motivos disposicionales utilizados por individuos durante la consecución de objetivos. La investigación sobre los rasgos de personalidad y el Proyecto GLOBE (Chocar et al. 2007) ha demostrado que los rasgos de personalidad y los valores culturales, medido por las dimensiones, son estadísticamente distribuidos. Por conveniencia, la diferencia nacional suele aproximarse por las diferencias entre las localizaciones de la media o la mediana de estas distribuciones. Sin embargo, esto significa que en cualquier sociedad, dentro de cierto rango, se encuentran diferentes personas con diferentes percepciones de valor y rasgos diferentes de personalidad. Estas diferencias son a menudo más pequeñas dentro de una cultura nacional determinada que las diferencias entre los individuos de diferentes culturas, pero puede traslaparse entre las culturas similares. Por lo tanto, dependiendo del tipo de personas que tengan encuentros interculturales y en las acciones gerenciales, las reacciones de los individuos que interactúan para incidentes críticos puede variar también. La psicología intercultural ofrece algunos estudios sobre cómo los valores dan forma al comportamiento humano, y estos estudios podrían ser utilizados como base para el desarrollo de teoría del emprendimiento intercultural (por ejemplo, Schwartz 1994 y la literatura citada en él, citado en Engelen, et al. 2009)

Para hacer frente a estas cuestiones, Thomas (1988, 1996) desarrolló el concepto de "normas o (estándares) culturales" como una manera de generar más conocimiento cultural específicos y de acción. El concepto de estándar cultural se basa en la psicología del desarrollo de Piaget (1975) y en la psicología cultural y concepto de acción de Boesch (1980), que exigen una consideración explícita del contexto cultural de la organización y posible reacción de otros.

“Por estándares culturales se entiende toda clase de percibir, pensar, juzgar y actuar, que en una cultura determinada son consideradas por la mayoría de los individuos para si mismos y otros como algo normal, evidente, típica y obligatoria (Thomas, 1993, p. 381). Los estándares culturales son más específicos y, por tanto, proporcionan más conocimiento sobre las diferencias culturales que las dimensiones culturales pueden proporcionar.

Las diferencias en normas culturales entre dos culturas no son necesariamente la consecuencia de las diferencias en una sola dimensión cultural (es decir, valores). Se puede suponer que los contextos, las opciones, y las decisiones tomadas dentro de una sociedad por parte de grupos u organizaciones y de las interacciones entre los conjuntos de valores (combinaciones de valores) pueden influir en la aparición de normas culturales específicas.

Las tres áreas de la literatura intercultural (es decir, las dimensiones culturales, los rasgos de personalidad y las normas culturales) ayudan a explicar ciertos efectos de encuentros bajo interacción intercultural. Fink et al. (2007) recomienda seguir investigando la relación de los constructos de estos campos de investigación entre sí y de manera explícita (bajo un modelo) estas relaciones en análisis posteriores, ya que puede proporcionar una mejor comprensión de la complejidad de las interacciones interculturales.

Para poner estas tres líneas de investigación en un marco teórico más coherente, Fink et al. (2007) hace referencia a la teoría de la acción de Parsons y Shils (1962). Ofrece un marco de análisis de por qué y cómo las dimensiones culturales, rasgos de personalidad, y las normas culturales están relacionados entre sí. Con este concepto, Fink et al. (2007) señala es posible contribuir a una mejor comprensión de los incidentes críticos en las interacciones interculturales.

Para desarrollar el modelo, Fink et al. (2007) se basa en la teoría sociológica de la acción de Parsons. Parsons y Shils (1962) describen la acción como un proceso para lograr la satisfacción de necesidades o para alcanzar una meta en una situación. Según estos autores, la acción está organizada en tres sistemas: sistema cultural, sistema de la personalidad, y sistema social. Estos sistemas son interdependientes, pero siguen siendo autónomos. El supuesto subyacente en el modelo de Parsons y Shils es que los rasgos de la personalidad y los valores culturales caracterizan a los individuos y gobiernan su comportamiento -es decir, la acción que realizan en el sistema social-, y por esa acción el sistema social se reconstituye. Rasgos de la personalidad comunes dentro de un grupo determina los valores compartidos (es decir, la cultura de ese grupo y viceversa). Los valores compartidos dentro de un grupo permiten que el grupo se distinga de otros grupos (diferentes culturas). Para comprender mejor las interacciones interculturales, Fink et al. (2007) integra las tres principales líneas en la investigación intercultural en el modelo de acción de Parsons y Shils (1962).

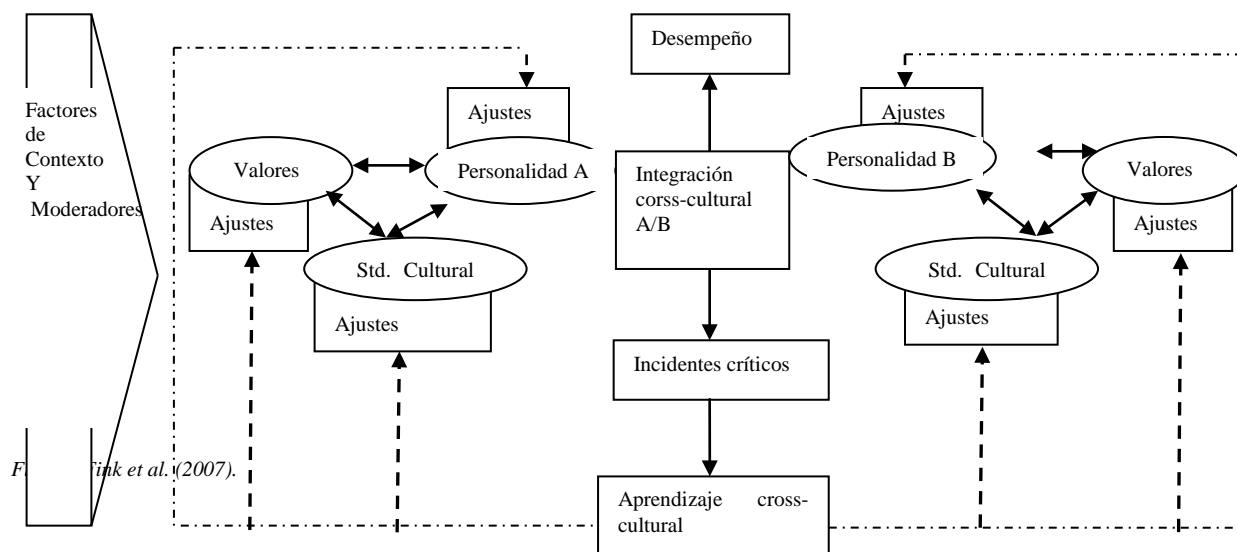

Sin embargo, el conocimiento de ambos sistemas no es suficiente para entender realmente la interacción intercultural. Una comprensión más profunda del sistema social es necesaria, ya que se caracteriza por acciones (es decir, los comportamientos de los individuos en el sentido más amplio). La interacción intercultural tiene lugar entre los sistemas sociales de las diferentes culturas, que constituyen un espacio común intercultural. Es importante tener en cuenta que no hay interacción directa entre los *sistemas de valores* o los *sistemas de personalidad*. La acción y la interacción pueden tener lugar sólo en el ámbito social.

Basado en el modelo de Parsons y Shils (1962), Fink et al. (2007) muestra cómo las dimensiones culturales, normas culturales, y rasgos de personalidad se relacionan y, en consecuencia, determinan el comportamiento en las interacciones interculturales, y aplica el modelo de Parsons y Shils al contexto interculturalidad de los negocios y la gestión (figura 2.1), donde los imperativos económicos se encuentran en el trabajo (ingresos tienen que ser mayores que los costos) y los resultados económicos son de mayor importancia. Lo anterior permitió mostrar cómo los constructos que fueron desarrollados en los diferentes niveles de análisis, están relacionados con la interacción intercultural (cuadro 2.1). Su modelo muestra que los incidentes críticos en la interacción intercultural puede ocurrir debido a las diferencias en las dimensiones culturales, en los rasgos de personalidad, y en las normas culturales existentes en el sistema social (es decir, la acción).

Antes de describir este modelo, Fink et al. (2007) señala que los incidentes críticos en encuentros pueden surgir debido a un conflicto de interés, y posiblemente intencionados, sino que también pueden surgir debido a una diferencia cultural no prevista, y entonces posiblemente surgen como una sorpresa. En su trabajo, al igual que en el presente estudio, se está principalmente preocupado por el último, el incidente crítico intercultural no previsto. Retroalimentación de los incidentes críticos y del rendimiento hace que las personas aprendan y modifiquen su comportamiento. Las personas pueden aprender a adaptar este,

pueden ajustar sus valores y sus rasgos de personalidad, reconsiderar sus normas culturales, y puede actuar de manera diferente en las acciones futuras. Desde una perspectiva de gestión, esto conducirá a menos incidentes críticos y mejorar el rendimiento intercultural.

Figura 2.1 Modelo de desempeño intercultural

Asimismo, Irrman y Arcand (2010) consideran falso que la proximidad cultural sea una garantía de cohesión y de armonía. Que un nuevo empleado provenga de una cultura muy similar a la que prevalece entre la mayoría de los empleados no es una garantía de que habrá o no conflictos. Para fomentar el desempeño intercultural, la comprensión de la interrelación entre las dimensiones culturales, rasgos de personalidad, y las normas culturales es necesario el análisis de incidentes críticos y sus razones subyacentes (es decir, las relaciones de los valores culturales, rasgos de personalidad, y las normas culturales) que permite a investigadores y gestores obtener una comprensión más profunda de las formas en las que el rendimiento intercultural se pueden mejorar (Fink et al., 2007).

METODOLOGÍA

La presente investigación es no experimental, transversal descriptiva, ya que según Babbie (2000) es la que se aplica para estudiar y analizar el fenómeno de estudio en un momento del tiempo, y descriptiva ya que presenta una descripción lo más detallada posible de un hecho social en un contexto determinado (Yin, 2003).

El propósito no es el probar hipótesis deductivamente en el método científico tradicional, ni es el de generalizar de una muestra hacia una población, sino formar una interpretación particular de los eventos (Leblanc y Gillies, 2005). Hernández (2008) menciona que no todas las investigaciones cuantitativas plantean hipótesis y los estudios cualitativos, por lo regular, no formulan hipótesis antes de recolectar datos. El hecho de que formulemos o no hipótesis depende de un factor esencial: el alcance inicial del estudio.

Cuadro 2.1. Similitudes estándar culturales, dimensión cultural y rasgos de personalidad.

Estándar cultural	Dimensiones Culturales Similares	Rasgos de personalidad similares
Dar orientación		Eficacia propia
Conducta en comunicación	Flujo de información	Apertura, orientación interna/externa, extroversión
Pensamiento de elite	Adscripción de estatus, distancia de poder, evasión de la incertidumbre	Orientación de estatus
Jerarquía	Distancia de poder	Orientación de estatus
Orientación de estatus	Distancia de poder	Orientación de estatus
Conducta hacia el tiempo	Tiempo	
Orgullo nacional	Colectivismo	
Orientación hacia relaciones	Orientación humana	Orientación social, privacidad, independencia, orientación profesional, autonomía.
Experiencia		Disposición de aprender
Libertad personal	Individualismo	Orientación social
Egoísmo	Individualismo	Orientación social
Familia	Colectivismo	Orientación social
Improvisación, orientación a reglas.	Universalismo	Conciencia hacia las reglas
Autoridad a través del conocimiento	Adscripción de estatus,	Orientación de estatus
Paternalismo	Colectivismo	Orientación social
Pensamiento económico	Orientación al desempeño	Orientación al desempeño, hábitos de trabajo, orientación hacia la competencia.
Conciencia hacia la calidad	Orientación al desempeño	Orientación al desempeño, hábitos de trabajo, orientación hacia la competencia.
Clientelismo, corrupción (en grupo).	Particularismo	Orientación externa/interna
Imagen tradicional de género	Egalitarismo de género	
Autoconfianza variable		Estabilidad emocional
Necesidad de seguridad	Evasión de incertidumbre	búsqueda de riesgo y de competencia, intrepidez.
Énfasis en títulos o puestos	Distancia de poder	Orientación de estatus
Respeto por posiciones alcanzadas	Distancia de poder	Orientación de estatus
Distancia formal	Distancia de poder	Orientación de estatus
Orientación hacia hechos domina sobre armonía.	Asertividad	Preferencia hacia problemas, intrepidez, Orientación externa/interna.
Orientación al desempeño	Orientación al desempeño	Orientación al desempeño
Búsqueda de eficiencia	Orientación al desempeño	Compromiso, orientación profesional
Orientación al futuro	Orientación al futuro	
Conducta directa (comunicación)	Asertividad	Propósito, intrepidez
"Negocios entre amigos"	Colectivismo en grupo, evasión del riesgo.	Orientación externa/interna
Confluencia de grupos de trabajo y lazos familiares	Colectivismo en grupo	Orientación social
Armonía		Búsqueda del acuerdo, empatía emocional, orientación social.
Guardar apariencias		Calidez, sensibilidad
Reciprocidad, dentro/fuera del grupo.	Colectivismo en grupo	Orientación externa/interna
Renuencia		Simpatía

Fuente: Fink et al. (2007)

La revisión de literatura sobre el objeto del presente estudio muestra como este hecho social ha sido abordado principalmente bajo enfoques cuantitativos. Por tanto, la estrategia de la investigación es el estudio de caso múltiple con enfoque mixto (cualitativo y cuantitativo), sugerida por Yin (2003) para responder al tipo de preguntas de cómo y porqué. Respecto al enfoque mixto, Patton (1990) señala que los datos cuantitativos y cualitativos no son mutuamente excluyentes y pueden combinarse en una investigación. Para la investigación futura en la administración intercultural, Fink et al. (2007) recomienda la combinación de métodos cuantitativos y cualitativos para probar los aspectos sociológicos y psicológicos de su modelo de interacción intercultural. Estos modelos deben integrar variables endógenas y exógenas así como influencias moderantes, con el fin de arrojar luz sobre causas y los efectos de las diferencias culturales (Engelen, et al. 2009). Debido a lo anterior, el presente estudio sugiere abordarse bajo la metodología del estudio de caso, ya que Yin (2003) precisa que esta estrategia es sugerida cuando se presentan en un hecho social, gran cantidad de variables.

“La esencia del estudio de caso, la tendencia central entre todos los tipos de casos de estudio, es que trata de iluminar sobre una decisión o conjunto de decisiones: Porqué fueron tomadas, cómo fueron implementadas, y con qué resultado” (Schramm, 1971, citado en Yin, 2003, p.12). Una ventaja importante del estudio de caso es la oportunidad de obtener una visión holística de un proceso (Yin, 2003). Los datos que emergen de este estudio son mayormente descriptivos, reportados en palabras (principalmente en las del participante) o imágenes, en lugar de números (Fraenkel y Wallen, 1990; Locke et al., 1987; Marshall y Rossman, 1989; y Merriam, 1988; citados en Leblanc y Gillies, 2005, p. 260).

Respecto al impacto económico que tiene el estado de Chihuahua y en general de los estados del norte de México que colindan con los Estados Unidos de América, en la participación por entidad federativa en el PIB nacional 2009, Chihuahua aparece en el decimo lugar. Los estados del Norte de México, ocupan el lugar tres (Nuevo León), diez (Chihuahua), once (Tamaulipas), doce (Coahuila), trece (Baja California) y catorce (Sonora) (INEGI, 2010). En términos nominales, el Distrito Federal, Estado de México, Nuevo León, Jalisco, Campeche, Veracruz, Guanajuato, Tabasco, Puebla y Chihuahua, generaron el 64.1% del PIB nacional en 2009. Asimismo, durante el año en cuestión, las entidades que más contribuyeron al PIB de las actividades terciarias (comercio y servicios) fueron: el Distrito Federal, Estado de México, Nuevo León, Jalisco, Veracruz, Guanajuato, Puebla, Tamaulipas, Chihuahua y Baja California, participando con 67.7% del producto total de estas actividades. Ello muestra su importancia en la economía mexicana (México tiene 31 entidades federativas más un Distrito Federal)

Ciudad Juárez es la octava zona metropolitana de México (INEGI, 2010) y es la ciudad de mayor importancia económica en el estado de Chihuahua (Gobierno del Estado de Chihuahua, 2011). El presente estudio ha sido diseñado para ser dirigido a empresas mexicanas instaladas originalmente en Cd. Juárez Chihuahua, y que bajo un contexto de migración forzada, emigraron para establecerse en la vecina ciudad de El Paso Texas., durante los años 2008 al 2011. El área metropolitana de El Paso del Norte, está integrada por las ciudades de El Paso, Texas, USA, y Ciudad Juárez, Chihuahua, México, junto con varios suburbios. Su población es aproximadamente 2.5 millones de habitantes, es la 2da. Área metropolitana binacional en la frontera México-Estados Unidos, una de las más grandes de cualquier frontera internacional y esta entre las 50 áreas metropolitanas más grandes en el Hemisferio Occidental (Pan American Health Organization, 2009).

Las empresas de reciente creación pueden ser un contexto favorable para realizar estudios de administración intercultural, ya que por lo general no han desarrollado una cultura organizacional madura (Engelen, et al. 2009). El método de muestreo utilizado es la presente investigación es no probabilístico, también conocido como muestreo dirigido, mencionado por diversos autores (Patton, 1990 y Gilchrist, 1992, p. 87, citado en Leblanc y Gillies, 2005; Yin, 2003). Las muestras cualitativas tienden a ser dirigidas más que aleatorias, lo cual es muy importante en estudios de caso pequeños (Miles y Huberman,

1994). Patton (1990) menciona que la lógica y el poder de este método está en el seleccionar casos con gran riqueza, que puedan ser estudiados a profundidad y estos casos serán aquellos en donde el investigador pueda aprender sobre los temas que son de suma importancia para el objetivo de la investigación, buscando variedad entre ellos y escogiendo aquel o aquellos más accesibles o en donde podamos pasar la mayor parte del tiempo, ya que el potencial de aprender es un criterio diferente y algunas veces superior al de representatividad (Stake 2005, citado en Denzin y Lincoln, 2005).

Stake (2006) menciona que un estudio de caso múltiple debe contener al menos 4 y no más de 10 casos. Por su parte, Yin (2003) propone realizar un estudio de “dos colas”, en donde intencionalmente se muestran casos opuestos (ej., un caso de éxito, otro de fracaso, ambos bajo el mismo hecho social). La presente investigación llevará a cabo un estudio piloto (2 empresas) y contendrá 4 casos en su etapa final (caso múltiple): dos empresas que hayan tenido éxito, y dos empresas que hayan cerrado sus operaciones (dos en sector comercio y dos en sector servicios). Tendrán mínimo 1 año operando en El Paso Texas. Se aplicarán tres cuestionarios a los miembros (500) que La Red tiene afiliados.

Al ser una investigación con enfoque mixto, se propone analizar la parte cualitativa siguiendo la teoría fundamentada (Corbin y Strauss, 2008), en donde la codificación de las entrevistas semiestructuradas (cuyo guion será construido a partir de los datos obtenidos en la etapa cuantitativa) será llevado bajo este método, utilizando para el análisis de texto el software Atlas ti., llevando en primer lugar una codificación axial, y luego una abierta, tomando muy en cuenta en esta última las codificaciones “in vivo”. Asimismo, las investigaciones muestran que aun cuando la mayoría de las investigaciones han propuesto un enfoque cuantitativo, ninguna ha utilizado métodos no paramétricos. La presente investigación propone abordarlo de esta manera, ya que se recomienda para muestras pequeñas (Lind, 2005; Siegel, 1995). Para ello, se pretende, previo permiso de los autores, utilizar el cuestionario de House et. al. (2002) (quienes también utilizaron un enfoque mixto) para medir la variable dimensiones culturales, y el cuestionario de Arthur y Bennett (1995) para medir la variable rasgos de personalidad. Respecto a los estándares culturales, se propone realizar el diseño, prueba y aplicación de un cuestionario construido en base a lo propuesto por Fink et al (2007) (véase cuadro 4.1).

RESUMEN

El emprendimiento ha sido considerado un factor significativo para el crecimiento socioeconómico y el desarrollo y recientemente se ha observado un crecimiento importante en la educación en emprendimiento en instituciones educativas en el mundo (Karimi, Chizari, Biemans y Mulder, 2010). Por ello, Frese (2010) sugiere programas de intervención para ayudar a los emprendedores a tener éxito en crecer a sus organizaciones. La presente investigación analiza un primer acercamiento de la implementación de un programa de asistencia psicológica a nuevos emprendedores llevado a cabo en una incubadora de empresas universitaria, así como su impacto en ellos. Los hallazgos sugieren que este programa tiene un impacto positivo en donde la psicología aplicada al emprendimiento, como un área más de apoyo a emprendedores, da un espacio a la reflexión, motivación y perseverancia de estos, pues les permite verse como un ser integral que requiere de saber manejar diversas emociones o factores para lograr sus metas planteadas y así coadyuvar a mejorar las posibilidades de éxito de un nuevo emprendedor en iniciar su empresa.

PALABRAS CLAVE: Emprendimiento, Psicoemprendimiento, Incubadora de Empresas

ABSTRACT

Entrepreneurship has been considered a significant factor in socio-economic growth and development and has recently seen a substantial growth in entrepreneurship education in educational institutions in the world (Karimi, Chizari, Biemans and Mulder, 2010). Therefore, Frese (2010) suggests intervention programs to help entrepreneurs succeed in their organizations growth. This research analyzes a first approach of implementing a program of psychological assistance to new entrepreneurs conducted in a university incubator, as well as its impact on them. The findings suggest that this program has a positive impact on applied psychology on entrepreneurship where, as another area of support for entrepreneurs, provides a space for reflection, motivation and perseverance of these, allowing them to be seen as an integral human being that requires knowledge in how to handle emotions or factors to achieve their goals set and thus help improve the chances of success of a new entrepreneur to start their business.

KEYWORDS: Entrepreneurship, Psychopreneurship, Business Incubator

INTRODUCCIÓN

De acuerdo a Concilio Europeo de las pequeñas empresas, (1997) las empresas pequeñas y medianas (PYMES) aportan empleos más rápido que las empresas consideradas grandes en mercados tanto desarrollados como subdesarrollados. Asimismo, señalan que diferentes enfoques de la Psicología han experimentado una revitalización recientemente debido a la importancia de las PYMES y debido a que sus fundadores (esto es, los emprendedores) son área de estudio de varias áreas de la psicología

(organizacional, psicología del trabajo, y del mercado). Frese y Rauch (2000) mencionan que todos los aspectos de la psicología son abordados al estudiar a los emprendedores.

REVISIÓN DE LITERATURA

El enfoque cognitivo hacia el estudio de la dinámica del emprendedor surgió como una alternativa al enfoque de los rasgos, ya que, aun cuando este último produjo resultados relevantes, muchos de estos son contradictorios, por lo que se comenzó a tomar en cuenta otros aspectos personales de este (Boucknooghe, Van den Broeck, Cools, & Vanderheyden, 2005; Vecchio, 2003). Este enfoque puede ayudar a explicar la conducta empresarial (identificación de oportunidades para creación de empresas y su crecimiento) y definición del emprendedor, éxito en su empresa, y el distinguirlo de otros individuos, y estos aspectos cognitivos incluyen sus creencias y sus valores, estilos cognitivos y procesos mentales (Sánchez, Carballo y Gutiérrez, 2011).

Algunos autores como Boucknooghe et al. (2005) y Sánchez (2009) han abordado identificar las estructuras de conocimiento que los emprendedores usan al realizar decisiones, juicios o evaluaciones, evaluar oportunidades, crear y crecer sus empresas. Otros autores como Baron y Markman (1999) y Krueger y Evans, (2004) se han basado en la idea de que cualquier cosa que una persona piensa diga o haga, esta influenciado por procesos cognitivos bajo los cuales ellos adquieren, usan y procesan información. Sánchez, Carballo y Gutiérrez (2011) sugieren que lo anterior separa a los emprendedores de aquellos que no lo son, al pensar y procesar información de forma diferente, ayudando a conocer quienes desean o establecerán nuevas empresas de aquellos que no lo harán.

La Psicología Cognitiva también toma en consideración el medio ambiente bajo el cual estos procesos mentales toman lugar (Mitchell, Busenitz, Lant, McDougall, Morse y Smith, (2002), dando lugar a la Teoría de la cognición Social la cual, es muy útil para ayudar a establecer el hecho social asociado con el emprendimiento (Sánchez, Carballo y Gutiérrez, 2011). Autores como Busenitz y Lau (1996) y Sánchez (2010a, b) insisten en la posibilidad de explicar gran parte de la conducta empresarial y de su origen tanto de las variables de las estructuras cognitivas como de las de los procesos. Las primeras representan y contienen conocimiento, mientras que las últimas se relacionan con la forma en que el conocimiento se recibe y usa (Sánchez, Carballo y Gutiérrez, 2011).

Recientemente Nwankwo y Akam (2011, pág. 257) han propuesto un nuevo constructo llamado Psychopreneurship (Psicoemprendimiento), definido como la conducta socio-humana que facilita el logro y la creación de riqueza, derivado de los constructos Psicología y Emprendimiento. Funcionalmente, afirman los autores, implica las cualidades psicológicas los cuales, aprovechadas, son el instrumento en la activación proactiva del logro y potencial emprendedor de los individuos por lo que, el psicoemprendimiento, es la dimensión psicológica del emprendimiento.

El nivel de pobreza en una sociedad usualmente se manifiesta en una relación significativa entre la conducta de la gente y el emprendimiento donde la sociedad bajo pobreza falla en ajustarse cuando las situaciones cambian, sin tomar el enfoque correcto hacia los problemas (Oghuvbu, 2007). De tal forma, el emprendimiento es sustententado básicamente por la conducta, y donde su valor es mejorado por la habilidad de la persona de ser flexible, pragmático y adaptarse, así como tener el pensamiento estratégico necesario para explorar oportunidades (Nwankwo y Akam (2011). La necesidad de articular los atributos psicológicos y cualidades que influyen las motivaciones sustentables de emprendimiento así como la audacia socio-humana, constituyen el cuerpo principal del Psicoemprendimiento (Nwankwo y Akam, 2011).

La enseñanza del Psicoemprendimiento en estudiantes es muy importante y puede ayudar a despertar en ellos el espíritu empresarial (Archibong, & Ejue, 2009, Montiel et al., 2012). Los objetivos del

Psicoemprendimiento (Nwankwo y Akam, 2011) se enfocan en la influencia o roles de la psicología en los esfuerzos socio-humanos, tales como:

- *Exploran y entienden los paradigmas socio-humanos que afectan al emprendimiento
- *Promueve las propensiones motivacionales de las personas para logros
- *Ayuda a los individuos desarrollar pensamiento estratégico inventivo
- *Inculca en individuos un sentido empresarial como estilo de vida y habito
- *Reestructurar constructivamente las disposiciones cognitivas que inhiben las motivación empresarial
- *Promueve en individuos la percepción y actitudes correctas para no ser disuadidas por fracasos
- *Desarrolla en individuos sensibilidad hacia crear o encontrar oportunidades
- *Reorienta el retardo en la gratificación como una virtud de inversión.
- *Equipa a los individuos la administración del riesgo
- *Articula las habilidades sociales y competencias que dan asistencia o inducen éxito
- *Redirige los impulsos individuales en proyectos productivos.

En el Psicoemprendimiento, la teoría psicológica es usada para explicar las razones por las cuales algunos individuos o sociedades son más orientados al emprendimiento que otras. Nwankwo y Akam (2011) y ello reitera el hecho de que el emprendimiento es función de las disposiciones socio-humanas basadas en la necesidad de logro (McClelland, 1969).

Nwankwo y Akam (2011) utilizan la teoría psicológica de la necesidad del logro, en donde una necesidad es una privación que usualmente provoca una acción para reducir o eliminar esta (Myers, 1990). Por el otro lado Nwankwo y Akam (2011) mencionan que el sentido del emprendimiento usualmente inicia con un sentimiento de insuficiencia y falta de logro (privación). Como resultado, el individuo es estimulado en participar en acciones (que promuevan crecimiento (sucesos en proyectos y en la vida).

Respecto a México, según el Global Entrepreneurship Monitor (GEM), las oportunidades percibidas entre la población de (véase tabla 1) para poder emprender un negocio son de mas del 50%, así como la percepción de sus capacidades. El miedo a fracasar es más alto en México, pero el emprendimiento es visto como una opción de carrera atractiva, es alto el status que perciben tiene un emprendedor y la atención de los medios hacia ellos. El problema radicaría en la intención de emprendimiento, donde solo el 22.3% estaría dispuesto a crear una empresa.

De esta manera, proponemos una extensión hacia lo social del concepto, siendo definido este Psicoemprendimiento Social, como la conducta socio-humana que facilita el logro y la creación de riqueza en un ecosistema de escasos recursos, con un enfoque tanto de lucro como de acción comunitaria.

Tabla 1. Actitudes y percepciones empresariales en algunos países latinoamericanos GEM en 2010 por fase de desarrollo económico.

	Percepción de Oportunidades	Percepción de Capacidades	Miedo al Fracaso*	Iniciativa Empresarial como una Buena Carrera	Alto de Status de los Empresarios Exitosos	Atención de los Medios hacia la Iniciativa Empresarial	Intención Empresarial **

MÉTODO DE LA INVESTIGACIÓN

La presente investigación es no experimental, exploratoria transversal descriptiva. La estrategia de la investigación es el estudio de caso. Yin (2003) menciona que en esta estrategia puede utilizarse tanto el enfoque cuantitativo como el cualitativo, o utilizarse un enfoque mixto, para responder al tipo de preguntas de cómo y por qué. Este mismo autor define un estudio de caso como aquel donde el estudio se desarrolla sobre un solo objeto, proceso o acontecimiento, realizados con una unidad de análisis. Es un estudio de caso intrínseco, ya que Stake (2006) menciona que en él se busca analizar y comprender un caso particular y el propósito no es entender alguna construcción abstracta o un fenómeno genérico ni construir una teoría. El estudio es emprendido porque hay un interés intrínseco en él.

El presente estudio de caso comprende los cinco pasos que Yin (2003) recomienda en su diseño: pregunta de investigación, proposiciones, unidad de análisis, la lógica para enlazar los datos a las proposiciones y el criterio para interpretar los hallazgos. De esta forma, la pregunta de investigación general es: Cómo funciona el psicoemprendimiento en incubados bajo programas de intervención?

RESULTADOS

La Universidad Autónoma de Ciudad Juárez (UACJ) cuenta con 4 campus en el estado de Chihuahua, México: Ciudad Juárez, Nvo. Casas Grandes, Ciudad Cuauhtémoc y Chihuahua Capital. Su matrícula asciende a cerca de 24,000 estudiantes. En Cd. Juárez existen 4 institutos: Ciencias Biomédicas, Ingeniería y Tecnología, Arquitectura y Diseño de Arte, así como de Ciencias Sociales y Administración, donde se encuentra el Centro de Innovación y Desarrollo de Organizaciones y esta localizada la Incubadora de Empresas y la de Empresas Sociales, en donde se apoya a interesados (incubados potenciales) a crear su microempresa en base a un proyecto presentado ante ellas. Se trabajó con 8 proyectos de incubación (3 en Nuevo. Casas Grandes, y los restantes en Cd. Juárez, del total, 5 localizados en la Incubadora de Empresas Sociales), brindando 3 sesiones de psicología a cada emprendedor(a).

La tabla #2 muestra las características de los(as) emprendedores(as) reflejadas a lo largo de las sesiones del área de psicología. Algunas características fueron percibidas dentro de las pláticas y otras en el llenado de los formatos con cada incubado(a). La cantidad hace referencia a cuantas personas componían el proyecto de incubación, así también se ha marcado el género de los integrantes del grupo. La letra mayúscula es el nombre con el que se identifica cada incubado(a), y la letra minúscula que se encuentra enseguida marca el lugar dónde se desarrolla el proyecto de incubación, siendo la letra “n” Nuevo Casas Grandes, Chihuahua y la letra “j” Cd. Juárez, Chihuahua.

Los diversos conceptos abordados en las sesiones con los incubados se muestran en la tabla #3. Los números representan el avance o retroceso desde el inicio de asesorías en Octubre de 2011, hasta el cierre en Noviembre de 2011. La escala de puntuación se tomó de 0-5, considerando el 0 como “no avance”, el 1 como “ligero avance”, 2 como “regular avance”, 3 como “buen avance”, 4 “muy buen avance” y el 5 “excelente avance”, siendo una escala arbitraria; los números positivos reflejan el avance, los negativos el retroceso. Se midió en relación a los formatos que se llenaron en la primera sesión y en la última, haciendo una comparación de los resultados, además se le pidió al incubado que expresara lo obtenido a lo largo de las asesorías.

La dinámica de trabajo en las sesiones, se realizaba con una presentación en computadora donde se mostraban y explicaban los temas al emprendedor(a), como la definición de cada concepto y elementos que lo conforma. Se le pedía al incubado que comentara sobre ello y a su vez preguntara dudas. Después de ver los conceptos se llenaba un formato de reforzamiento del tema, éste mostrando un ejercicio o una serie de preguntas sobre la aplicación en su proyecto de incubación.

De los conceptos de factores positivos y negativos, definiendo factor, como elemento condicionante que contribuye a lograr o no un resultado, aquí cada emprendedor (a) veía en su proyecto, cuáles eran los factores positivos y negativos del mismo, por lo cual al llenar el formato en base a un análisis FODA adaptado a su proyecto y a su persona, manifestaba cuales factores influían directamente en la realización de su negocio.

Tabla 2. Características de los(as) emprendedores

EMPRENDEDORES(AS)	An	Jn	Dn	GSj	GZj	Gj	Yj	Hj
Cantidad	5	1	2	1	2	1	1	1
Características								
Femenino	X	X	X	X	X	X	X	
Masculino			X					X
Claridad de objetivos	X	X	X		X		X	
Unidos(as)	X		X		X			
Entusiasta	X	X		X	X	X	X	
Perseverante	X			X	X		X	
Auto motivado(a)		X	X	X		X	X	X
Motivación grupal	X				X			
Fortaleza	X	X	X			X	X	
Buena comunicación	X		X		X			
Inteligente emocionalmente	X		X	X			X	
Responsable	X	X		X		X		X
Competitivo(a)	X				X		X	

Tabla 3. Conceptos abordados en las sesiones

Emprendedores (as)	An	Jn	Dn	GSj	GZj	Gj	Yj	Hj
Conceptos								
Factores positivos y negativos	1	1	-1	1	0	1	0	0
Motivación Intrínseca	2	0	-2	0	2	2	1	0
Motivación extrínseca	0	0	-2	0	4	0	0	0
Perseverancia/ Deseos de logro	0	1	0	2	4	2	1	0
Inteligencia emocional	2	2	0	1	2	2	2	0
Resiliencia	1	3	1	2	0	2	3	1
Autodesarrollo	1	0	2	2	2	0	0	1
Espíritu emprendedor	2	2	2	2	1	1	2	1
Éxito	1	1	-2	1	2	3	1	-1
Resolución de conflictos	1	2	0	2	0	2	1	1

No se incluye una tabla de desglose de los factores mencionados, ya que cada incubado (a) mencionó factores muy diferentes. Sin embargo es importante destacar que el conocer los factores positivos y negativos que percibía el emprendedor(a), brindaba un panorama de cómo percibe su desarrollo del proyecto y si tiene más factores negativos que le impidan avanzar, o si comenta más factores positivos que le ayudan a continuar. 4 de los emprendedores (An, Jn, GSj y Gj) muestran un avance, en tres más no existe cambio entre el inicio y el cierre, pues seguían encontrando los mismos factores tanto positivos como negativos. El emprendedor D, muestra un retroceso debido a que encontró nuevos factores negativos que le impiden avanzar, principalmente el tiempo, pues el trabajo con el que cuenta actualmente

le absorbe mucho y no puede dedicarle tanto a su proyecto, así como el congeniar también para ver a su compañero de incubación.

La motivación intrínseca, la cual se define como “el deseo de realizar una conducta que surge a partir de la misma conducta realizada” (Morris y Maisto, 2009); aumenta dos puntos en los emprendedores An, GZj y Gj, ya que encontraron más factores intrínsecos como el crecimiento personal, profesional y logro de una meta. Los emprendedores Jn, GSj y Hj, no encuentran más factores intrínsecos de motivación, el emprendedor Yj aumenta un punto y los emprendedores Dn cierran con -2 ya que encuentran menos factores que le motivan.

La motivación extrínseca, se define como “el deseo de realizar una conducta para obtener una recompensa externa o para evitar algún castigo” (Morris y Maisto, 2009). Aquí resaltan más en el emprendedor GZj, en cuanto a los 6 emprendedores restantes mencionan al cierre el mismo factor motivante que al inicio y los emprendedores Dn con -2 reducen su motivación extrínseca por factores que influyen en ese momento en su vida personal.

De la perseverancia o deseos de logro, definido como la constancia y firmeza en la realización de un objetivo, 5 de los emprendedores fortalecen más este concepto, y 3 de ellos (An, Dn y Hj) permanecen igual. La inteligencia emocional la cual es la capacidad para reconocer sentimientos en sí mismo y en otros, siendo hábil para gerenciarlos al trabajar con otros, marca un cambio favorable en 6 de los emprendedores, mostrando en ellos más claridad en el concepto y manejo de éste, así como aplicación. Los emprendedores Dn y Hj permanecen igual que al inicio.

Sobre la Resiliencia, definida como “la capacidad de adaptarse; elasticidad y poder de recuperación ante situaciones difíciles” (Consuegra, 2010), los emprendedores Jn y Yj mostraron un avance significativo de 3 puntos, GSj y Gj muestran un cambio de 2 puntos. Los emprendedores An, Dn y Hj presentaron cambio de un punto, mostrando un nuevo conocimiento del concepto, aplicación y gran utilidad en el emprendimiento; GZj permaneció sin mencionar cambios. En cuanto al autodesarrollo, que es definido como un proceso de mejora individual, y sin un seguimiento guiado por otra persona, que permite acercar al participante a los requisitos óptimos de desempeño en su función actual dentro de una organización, 5 de los emprendedores mostraron más conocimiento de sí mismos y seguridad, reflejándose números positivos, tres de ellos (Jn, Gj y Yj) no mostraron cambios.

El emprendedor (abordado en la intervención como espíritu emprendedor) definido por Elosua (1997) como una persona que esta constantemente en la búsqueda de nuevos campos de actuación, éste se vio fortalecido en todos los emprendedores, comentando ellos mismos la importancia de ser emprendedor, tener el espíritu y no olvidar que son ejemplo de este concepto. El éxito entendido como el cumplimiento de alcanzar alguna meta u objetivo, disminuye en los emprendedores Dn y Hj debido a que muestran una motivación menor al cierre debido a algunos factores personales y laborales, como la distribución de su tiempo entre el trabajo actual y su proyecto, así como su autoestima o el apoyo de las personas que les rodean, por lo cual esto afecta el hecho de que alcancen su meta de manera exitosa. Los emprendedores An, Jn, GSj, GZj, Gj y Yj, muestran avance sobre el concepto de éxito, visualizando su negocio con aspectos positivos y que éste se logrará realizar de manera exitosa. En la resolución de conflictos de acuerdo a Davis y Newstrom (2003) como la habilidad de plantear estrategias para solución de problemas, resolviéndolos a partir de un acuerdo entre las partes involucradas, y confrontándolos desde una perspectiva positiva, 6 de los emprendedores tienen avance, ya que encuentran diversas soluciones y toma de decisiones adecuada a cada problema que se suscite, solo los emprendedores Dn y GZj no muestran cambio, pues algunos problemas presentes les están dificultando su avance en el proyecto.

La tabla 3 aborda diversos conceptos, los cuales fueron medidos de acuerdo a lo mencionado por cada incubado en los formatos de cada concepto. De algunos de éstos no se ha incluido tabla de desglose de

números de avance o retroceso ya que cada incubado mencionó la información de acuerdo a su proyecto, por lo que no son repetitivas las respuestas emitidas; sin embargo se puede hacer medición de acuerdo a las respuestas brindadas en un inicio y al cierre, pues ahí se verifica en avance o retroceso, según lo expresado. Los conceptos de los cuales no se incluye tabla de desglose son: factores positivos y negativos, perseverancia/ deseos de logro, inteligencia emocional, resiliencia, autodesarrollo, éxito y resolución de conflictos.

La motivación se abordó en sus dos tipos, motivación intrínseca y extrínseca, de manera que los emprendedores (as), pudieran ver los factores intrínsecos y extrínsecos que los motivan, entendiendo como factor de motivación intrínseca la satisfacción interna que una persona siente al realizar un trabajo, de modo que exista una conexión directa e inmediata entre una y otro y el factor de motivación extrínseco, como las retribuciones externas que ocurren con independencia del trabajo (Davis y Newstrom, 2003). De acuerdo a los resultados obtenidos, los emprendedores comentaron que factores eran los que tenían en cada una de estas, como se muestra en la tabla 4.

Tabla 4. Factores de motivación intrínsecos y extrínsecos mencionados por los emprendedores

EMPRENDEDORES	An	Jn	Dn	GSj	GZj	Gj	Yj	Hj
FACTORES INTRÍNSECOS								
Crecimiento personal	X	X	X				X	
Logro de una meta	X			X	X	X		X
Crecimiento profesional	X							
Independizarse					X			
FACTORES EXTRÍNSECOS								
Necesidad económica/desempleo	X	X	X			X	X	X
Negocio propio		X	X	X				
Ser fuente de empleo	X		X		X		X	
Apoyo social								X
Familia	X	X			X		X	

De los 8 emprendedores, 6 coinciden que el factor extrínseco que los movió a iniciar el proyecto fue la necesidad económica o el desempleo. Siguiéndole con 4 menciones, los factores de la familia y ser una fuente de empleo. Tres mencionaron el factor de tener un negocio propio y uno cita el factor de apoyo social. En relación a los factores intrínsecos, 5 mencionan que el factor que los motiva es el lograr una meta, 4 coinciden en el factor del crecimiento personal y 2 refieren que es un crecimiento profesional o lo hacen para independizarse. La tabla #5 muestra las diversas cualidades que los emprendedores refirieron que debe de tener una persona con espíritu emprendedor, marcándose con color cada recuadro según lo que el incubado(a) mencionó. La tabla se construyó a partir de las diversas sesiones y formatos, sobre todo, el formato “espíritu emprendedor”, en el cual aparece la pregunta sobre cuáles serían las cualidades que debe de tener una persona con espíritu emprendedor.

Como resultado de las cualidades que consideran los incubados que debe de tener una persona con espíritu emprendedor, se encuentran con los puntajes más altos: perseverancia con 5, motivación e iniciativa con 4. Las cualidades de disciplina, fortaleza, entusiasmo y seguridad con 2 puntos cada uno. Y asertividad, responsabilidad, lealtad, tolerancia, liderazgo y creatividad con 1 punto cada uno.

La Tabla #6, muestra las herramientas referidas por los emprendedores que obtuvieron a lo largo de las asesorías. De las herramientas que expresaron los emprendedores llevarse de las asesorías, 6 refieren que abren su panorama general y una reflexión sobre los diversos conceptos en la aplicación a su futuro negocio, 5 mencionaron que las asesorías les dieron mayor seguridad o confianza para emprender, 3 citan que los hace más perseverantes y con una mayor aplicación de la inteligencia emocional, 2 comentan que

ven aplicación en su vida personal y tienen una mayor motivación, y uno que obtiene aprendizaje sobre la aplicación de la resiliencia y comprensión de ésta.

Tabla 5. Cualidades que los emprendedores refirieron debe tener una persona con espíritu emprendedor

EMPRENDEDORES CUALIDADES EMPRENDEDOR	DEL	UN	An	Jn	Dn	GSj	GZj	Gj	Yj	Hj
1	Disciplina		X							X
2	Asertividad		X							
3	Responsabilidad		X							
4	Fortaleza			X		X				
5	Lealtad		X							
6	Entusiasmo				X					X
7	Tolerancia		X							
8	Motivación		X	X	X				X	
9	Perseverancia			X	X		X	X	X	
10	Iniciativa				X		X		X	X
11	Liderazgo									X
12	Creatividad							X		
13	Seguridad					X	X			

Todos los emprendedores mencionaron al cierre de las sesiones el gran apoyo que les brinda el área de psicología, tanto como una herramienta de uso personal como laboral, pues la mayoría de los conceptos abordados a lo largo de las sesiones, pueden ser puestos a prueba en la vida diaria o en las situaciones laborales que se les lleguen a presentar. Mostraron una alegría y satisfacción en terminar las sesiones del área, pues consideraron de suma importancia la intervención de la psicología en el emprendimiento, incluso algunos de ellos mencionaron el deseo de que se incrementaran las horas de asesoría de psicología, pues comentaron que había más cosas que profundizar y más conceptos que tocar.

Tabla 6. Herramientas obtenidas según los emprendedores al cierre de las asesorías de psicología.

EMPRENDEDORES	An	Jn	Dn	GSj	GZj	Gj	Yj	Hj
RESULTADOS OBTENIDOS								
Aplicación también en lo personal	X	X						
Perseverancia			X				X	X
Motivación			X			X		
Confianza/ seguridad	X			X	X	X		X
Abrir el panorama/ reflexión	X	X			X	X	X	X
Inteligencia emocional	X	X	X					
Resiliencia			X					

Comentaron a su vez que algunos conceptos ya habían tenido la oportunidad de tocarlos o escucharlos en otros lugares, sin embargo no los habían visto con aplicación al emprendimiento, y las asesorías les ampliaron esa nueva perspectiva de abordaje. El análisis realizado durante las sesiones por parte de los incubados, se considera que crea una idea más amplia para ellos de lo que significa ser un emprendedor, así como los diversos factores que están inmersos para la realización de su proyecto.

DISCUSIÓN Y CONCLUSIONES

Diversos autores señalan es relevante investigar los factores positivos y negativos (Liñán, Urbano y Guerrero, 2011), motivación intrínseca y extrínseca (Huovinen y Matti, 2011; Rahman y Rahman, 2011; Baycan-Levent y Kundak, 2009; Itani, Sidani y Baalbaki, 2011), perseverancia/deseo de logro (Nurwahida y Abdul, 2011) inteligencia emocional (Cross y Travaglione, 2003), resiliencia (Ayala y Manzano, 2010), espíritu emprendedor (García del Junco, Alvarez y Reyna (2007), éxito (Makhbul y Hasun, 2011) y resolución de conflictos en el emprendimiento (Shelton, Danes y Eisenman, 2008).

Como resultado de las cualidades que consideran los incubados debe tener una persona con espíritu emprendedor, se encuentran similitudes con lo encontrado (entre paréntesis) por Rozell, Meyer, Scroggins y Guo (2011) en la cultura china como: perseverancia (persistente, trabajador, pasión), motivación e iniciativa (exploratorio, aventurado, visionario), disciplina, fortaleza (determinado) asertividad, responsabilidad, lealtad, (fuerte de carácter, agradecido, integridad). De acuerdo al trabajo realizado, y siguiendo con la propuesta de Nwankwo y Akam (2011) el objetivo de las asesorías implicó desarrollar las cualidades psicológicas las cuales, aprovechadas, fueran el instrumento en la activación proactiva del logro y potencial emprendedor de los individuos. Los emprendedores analizan por medio de las pláticas de cada sesión y los formatos de reforzamiento, los diversos factores que influyen en su vida, mostrando una mayor motivación por hacer las cosas para consolidar la idea, tener un mejor sustento económico, y a su vez hacer realidad su meta. Ello reitera el hecho de que el emprendimiento es función de las disposiciones socio-humanas basadas en la necesidad de logro (McClelland, 1969).

Se encontró que las sesiones lograron abordar algunos de los objetivos que Nwankwo y Akam (2011) mencionan, como, explorar y entender paradigmas socio-humanos que afectan al emprendimiento, promover las propensiones motivacionales de las personas para logros, redirigir los impulsos individuales en proyectos productivos, inculcar en individuos un sentido empresarial como estilo de vida y hábito, reestructurar constructivamente las disposiciones cognitivas que inhiben la motivación empresarial, promover en individuos la percepción y actitudes correctas para no ser disuadidas por fracasos, desarrollar en individuos sensibilidad hacia crear o encontrar oportunidades y articular habilidades sociales y competencias que inducen al éxito.

Es relevante destacar que el fortalecimiento en su motivación intrínseca es básico, algo sugerido también por Nwankwo y Akam (2011) donde la motivación intrínseca tiene un mayor peso en el individuo, pues lo mueve a buscar alternativas, a ser perseverante y a encontrar soluciones a los conflictos, por lo cual el proyecto de emprender puede existir a largo plazo. Se sugiere que la motivación extrínseca tiene un menor peso en el emprendedor, pues tienden a ser desalentados más rápidamente o encontrar menos alternativas, pues estarán esperando siempre el motivador externo y no el propio, por lo tanto los proyectos tienden a mantenerse solo a corto plazo. Nwankwo y Akam (2011) mencionan que el sentido del emprendimiento usualmente inicia con un sentimiento de insuficiencia y falta de logro (privación). Como resultado, el individuo es estimulado en participar en acciones (que promuevan crecimiento, sucesos en proyectos y en la vida). Por todo esto, fue importante el reforzar la motivación intrínseca en los emprendedores. El reforzamiento de la motivación intrínseca se realizó brindándole un énfasis a la importancia de los factores intrínsecos, y preguntándoles sobre los aspectos internos y características que poseían como persona, las cuales le ayudaban a seguir avanzando en su objetivo y trabajo de incubación. Éste trabajo se reforzó al cierre de las 3 sesiones, sin embargo fue solo retomar el tema de manera breve. Por lo cual podría ser una limitante el hecho del tiempo de asesorías, ya que no se reforzó de manera amplia este concepto.

En cuanto a las limitantes de los resultados (logro de la realización del negocio o proyecto de cada emprendedor), pueden influir los aspectos personales, los cuales no fueron abordados, pues no se realizó

una previa historia clínica y pueden existir diversos problemas personales que impidan lograr con éxito el proyecto de incubación.

Dentro de las características de cada emprendedor, solo se han mencionado las que los incubados refirieron (no se trabajó la historia clínica), en la cual se podría reflejar más información que pudiera afectar ciertos conceptos trabajados a lo largo de las asesorías (estado civil, nivel socioeconómico, autoestima, problemas personales o familiares, nivel educativo, entre otros). El aspecto cultural o educativo, pueden ser otros factores limitantes que intervienen en la realización del proyecto de un nuevo emprendedor, ya que el nivel educativo con el que cuentan, probablemente afecte en la comprensión de los conceptos y la aplicación de estos en el desarrollo de su negocio. Otra limitante que existe o que pudiera presentarse, es que a largo plazo debe realizarse un reforzamiento de esta área, y a su vez monitorear que aspectos o conceptos deben de revisarse de nuevo con los emprendedores o cuales deben incluirse, debido que podría existir que a lo largo del desarrollo de su proyecto decayeran o resultaran más factores negativos de los que ya habían encontrado en un inicio en las asesorías, o que en relación a las pocas sesiones que se trabajaron, tal vez no se reforzaron de una manera amplia los temas.

Existieron otros conceptos, como: toma de decisiones, factores de riesgo, fracaso, asertividad, que también fueron comentados a lo largo de las asesorías de psicología con los incubados, sin embargo para esta investigación no se han mencionado, debido a que no fueron vistos con mayor profundidad o no podríamos mostrar cambios o resultados en cuanto a ellos. Existe aun mucho trabajo por realizar para lograr, tal y como lo sugiere Nwankwo y Akam (2011), articular los atributos psicológicos y cualidades que influyen las motivaciones sustentables de emprendimiento así como la audacia socio-humana dentro de las sesiones. Los resultados sugieren que la psicología debe ser un área más de apoyo a emprendedores pues otorga un espacio a la reflexión, motivación y perseverancia del emprendedor, le permite verse como un ser integral que requiere de saber manejar diversas emociones o factores, para lograr la meta planteada. Se sugiere que el psicoemprendimiento hace que los lazos de seguridad y confianza se fortalezcan, encontrando el valor de cómo comunicarse de forma adecuada, teniendo una inteligencia emocional, viendo alcances y limitaciones, para convertir metas realizables, con recursos y herramientas disponibles.

EL IMPACTO DEL ESTUDIO DE LAS FINANZAS EN LA CARRERA DE NEGOCIOS INTERNACIONALES DE LA FACULTAD DE CIENCIAS ADMINISTRATIVAS DE LA UNIVERSIDAD AUTÓNOMA DE BAJA CALIFORNIA.

María Belén Murillo Pedraza, Universidad Autónoma De Baja California
Gloria Alicia Nieves Bernal, Universidad Autónoma De Baja California
Rafael Cruz Casanova, Instituto Tecnológico De Baja California
Claudia Viviana Álvarez Vega, Universidad Autónoma De Baja California

RESUMEN

El estudio de las finanzas es resultado fundamental del incremento desmesurado del comercio a nivel mundial; las causas de este incremento deriva de la globalización de la economía producida por dos factores que fundamentalmente son: el avance tecnológico de las comunicaciones electrónicas, que ha permitido reducir el espacio en el mundo de los negocios y la liberación económica a nivel regulatorio que se ha dado en la mayoría de los países para dar pasos a los tratados comerciales. Esta necesidad de estudiar y analizar los flujos de efectivo a nivel mundial sin importar la ubicación de la empresa, la administración de riesgos financieros, las operaciones de los mercados de dinero y de capitales, se traduce en la búsqueda de instrumentos, herramientas, fórmulas con una didáctica tal que se pueda lograr que en el alumno obtenga estos conocimientos que aplicados a la práctica profesional logren obtener capacidades en esta área.

Este proyecto realiza un análisis documental de la importancia de la enseñanza de las finanzas internacionales para los futuros egresados de la carrera de negocios internacionales de la Facultad de Ciencias Administrativas de la Universidad Autónoma de Baja California; su pertinencia y diseño curricular.

RESPONSABILIDAD SOCIAL EN LA EDUCACIÓN SUPERIOR: UN CASO CHILENO

Erwin Navarrete Andrade, Universidad Mayor Sede Temuco
Carlos Berner Otto, Universidad Mayor Sede Temuco

RESUMEN

El artículo describe las iniciativas de Responsabilidad Social de las Universidades Chilenas, y la forma de cómo estas se incorporan en sus procesos estratégicos. El objetivo principal es determinar las oportunidades y limitaciones en el que una universidad podría aprovechar su papel de promotor social, para impulsar el desarrollo sostenible en la comunidad de la que es participe. En este contexto, las instituciones educativas para hacer frente a la enorme competencia que existe en el sistema de educación superior chileno, han tenido que descubrir el papel que desempeña la responsabilidad social como una poderosa fuente de ventaja competitiva, que les permita mantener una cierta viabilidad y una generación de valor en el “mercado”.

El trabajo es el resultado de una investigación exploratoria construida sobre la base de la literatura y también de las experiencias, a través de la observación y la participación en el sistema de educación superior chileno. El presente documento es limitado en términos de datos experimentales. La investigación futura debe examinar los factores de exploración y la correlación entre ellas para la investigación experimental. Los resultados muestran que una universidad puede lograr una ventaja competitiva si maximiza sus contribuciones a causas sociales, ejerciendo de esta forma un mayor compromiso hacia la comunidad, lo que reditúa en tener una mayor visibilidad a través del tiempo.

EMPRESAS SUSTENTABLES EN PUEBLA

María del Carmen Domínguez Ríos, BUAP
Michele Alexandra Corona Dominguez, BUAP

RESUMEN

Esta investigación analiza la trayectoria de dos empresas rurales sustentables ubicadas en Puebla “Frutas y Conservas de Xochiapulco” y “Cacahuete tostado Chiautla” que pertenecen a la Red Nacional de Desarrollo Rural Sustentable (RENDRUS). Se destaca el papel de las redes sociales en la innovación tecnológica-productiva y en la comercialización de sus productos.

Una empresa rural sustentable se preocupa por satisfacer las necesidades de la generación actual sin comprometer las necesidades de las generaciones futuras. Incluye el bienestar de sus empleados, de su comunidad. Equilibrio entre aspectos de índole económico, social y ambiental. Existen factores que se combinan para favorecer el éxito de la inserción de los productores rurales a los mercados. La organización de los productores en la producción y comercialización, la introducción de cambios tecnológicos que permiten responder a la demanda generando productividad y/o reducción de costos y la capacidad de los recursos humanos para operar los procesos de producción y organizar el proceso de innovación para participar en la industria de la que forman parte. La contribución más significativa de las instituciones públicas para la inserción de los productores al mercado ha sido a través de la organización de eventos organizados por SAGARPA a través de RENDRUS a nivel local, regional y nacional.

SUSTAINABLE FIRMS IN PUEBLA

ABSTRACT

This research analyzes the performance of two sustainable rural firms located in Puebla Mexico. One is “Canned fruit of Xoxhiapulco” and the other is “Toasted Peanuts of Chiautla”. Both of them belong to the National Network of Sustainable Rural Development (RENDRUS in Spanish) The main role of social networks in the productive- technological innovation process, in the distribution and commercialization of their products is identified. A sustainable rural firm satisfies the needs of the people without compromising the needs of future generations. Therefore, this includes the well being of their employees, their community. This kind of firm preserves equilibrium between economic, social and environmental aspects.

There are some factors that foster the performance of rural producers into the markets: Organization of producers in the production and commercialization process, the introduction of technological changes that responds to market demand and increases productivity. Giving training to human resources to improve production process and organize innovation in the industry they work. The most important contribution of the federal government to these rural producers and their market insertion has been the program of the Agriculture Ministry (SAGARPA) called RENDRUS. This program creates a network and organizes events at local, regional and national level.

KEYWORDS: Sustainable firms, RENDRUS, rural producers.

INTRODUCCION

Las empresas rurales cuentan con recursos limitados, tales como mano de obra, habilidades y capital, lo que les hace difícil cumplir con los estándares requeridos para los mercados mundiales. Esta falta de recursos obstaculiza su expansión y las excluye de un mercado de mayor valor como proveedoras para empresas más grandes o proveedoras directas para otros mercados. Los costos de transacción por trabajar con empresas rurales son elevados debido a sus pequeñas dimensiones, a su naturaleza dispersa y a su lejanía, por lo anterior es necesario que estas empresas se asocien y de manera formal soliciten apoyos públicos que les permitan desarrollar competencias para acceder a los mercados

La Red de Desarrollo Rural Sustentable (RENDRUS) es una red que muestra a empresarios rurales los aciertos y errores de otros empresarios, para que reflexionen sobre su propia experiencia e identifiquen procesos de mejora. Esta Red cuenta con el apoyo académico del Colegio de Postgraduados, quien en coordinación con la Subsecretaría de Desarrollo Rural de la SAGARPA son los responsables normativos de la misma.

La evaluación de los proyectos productivos presentados a RENDRUS para su selección como exitosos se realiza en base a la innovación tecnológica-productiva, organización y administración, calidad, valor agregado y desarrollo del mercado, capacitación y asistencia técnica, impacto social y económico, sustentabilidad y medio ambiente.

Con el fin de difundir los logros, restricciones y posibilidades a las que se enfrentan las empresas rurales sustentables se seleccionaron dos empresas exitosas ubicadas en el Estado de Puebla-México pertenecientes al padrón 2011 de RENDRUS. La primera dedicada a la producción de frutas y conservas y la otra a la producción de cacahuate tostado, ambas son microempresas familiares que han logrado construir una red estable con el mercado y lograr rentabilidad económica, social y sustentable.

VALOR AGREGADO EN EL SISTEMA PRODUCTO MANZANA-HIGO EN XOCHIAPULCO, PUEBLA

El Municipio de Xochiapulco se localiza en la Sierra Norte del Estado de Puebla, (México). La palabra Xochiapulco proviene de las raíz náhuatl xochilt que significa flor y Apulco nombre del río que atraviesa la orilla del municipio, por lo que significa Flor del Apulco. La economía es agrícola, predomina el cultivo de maíz y frijol, se siembran árboles de tipo frutal, la ganadería no es comercial solo de sostén dentro de la población. Además se explota la madera de los bosques de esta región Serrana.

Las remesas de los paisanos radicados en el estado de Nueva Jersey en Estados Unidos han contribuido a sostener la economía local de consumo básico. Con el objetivo de generar ingresos y fuentes de empleo en 2004 se conforma legalmente la sociedad “Frutas y Conservas de Xochiapulco”, se inician actividades con recursos propios para construir una nave procesadora equipada donde se realizan las primeras pruebas de proceso semi-industrial de manzana en mermelada. Actualmente se elabora mermelada de manzana y conserva de higo.

El procesamiento agroindustrial de elaboración de mermelada de manzana, conserva de higo y cáscara de naranja son productos que aportan valor agregado a la fruta que recolectan los socios productores. Los productos son comercializados en diferentes presentaciones.

Las necesidades de capital de trabajo y de inversión se cubren con las aportaciones de los mismos socios, por lo cual no se han recibido apoyos gubernamentales ni financiamientos bancarios. Actualmente se cuenta con asistencia técnica de un despacho contable.

La asociación de productores participa en cursos de capacitación para mejorar el proceso de elaboración y comercialización de sus productos. El impacto social y económico de este proyecto ha generado empleos 15 directos y 60 indirectos. La participación de los productores locales en el acopio de fruta arraiga a la población local reduciendo la migración. Esta asociación de productores constituye un ejemplo de aprovechamiento de los recursos locales generación de valor agregado a la fruta de la región y fomento de la organización y desarrollo de capacidades entre los productores rurales.

La empresa ha contribuido a reducir la deforestación mediante la conservación del cultivo de árboles frutales en la región y el aprovechamiento de los recursos naturales de forma sustentable y cuidando el medio ambiente.

PRODUCCIÓN DE CACAHUATE TOSTADO

Se trata de una organización de productores de cacahuete legalmente constituida con el nombre de “Cacahuates Chiautla” localizada en Chiautla de Tapia municipio localizado en el suroeste del estado de Puebla en la región económica de Izúcar de Matamoros. La asociación cuenta con una estructura organizacional, realiza asambleas de forma mensual con sus integrantes para presentar los avances de la producción y diseñar estrategias para enfrentar el mercado en constante crecimiento. En lo que se refiere a la innovación tecnológica-productiva se adquirió un tostador de mayor capacidad, logrando un aumento de producción para cumplir con los pedidos y reducir el costo de energía. Han implementado un nuevo proceso de producción con el propósito de dar un valor agregado con el apoyo y capacitación de parte de la Universidad de Chapingo, asesoramiento técnico y estadías de investigación y servicio social de parte de alumnos de la Universidad Tecnológica de Izúcar de Matamoros y el Colegio de posgraduados de Puebla.

Participan activamente en cursos de capacitación convocados por SAGARPA y Secretaría de Desarrollo Rural en diferentes temas como administración, plan de negocios, imagen del producto, estrategias de comercialización.

Los productores diseñaron una descascaradora y sopleteadora para mejorar el proceso reduciendo costos y aumentando la producción. A partir de 2006, la inició las actividades de compraventa en la región y a nivel nacional en Chiapas.

En referencia, al impacto social y económico, la empresa beneficia directamente a 40 familias que se dedican al cultivo del cacahuete, en el área administrativa laboran 15 personas. Se ha logrado incrementar el área de este cultivo de manera considerable dando empleo indirecto a más de 100 personas que pensaban emigrar a Estados Unidos.

La demanda del producto va en aumento y la empresa ha considerando ampliar la producción al doble, beneficiando a más personas de la región que participan en la cadena productiva del cacahuete.

Respecto a lo sustentable y al medio ambiente se ha creado una cisterna receptora de agua pluvial, se utiliza la cascarilla como fertilizante natural; se están utilizando a los fertilizantes de origen natural en las tierras de cultivo, tanto del cacahuete como de otros cultivos de la región, y la asociación ha realizado compañías para el acopio de cartón y botellas de plástico en la región.

CARACTERÍSTICAS DEL MERCADO

El mercado al cual están vinculadas las experiencias de los proyectos es local, regional y nacional, se espera mediano plazo tener presencia en el mercado internacional. “Frutas y Conservas” se caracteriza

por poseer principalmente clientes minoristas, mientras que, “Cacahuates Chiautla” cuenta con un mayor número de clientes mayoristas

A nivel local, la competencia es escasa. A nivel nacional, existen empresas grandes. Los canales de distribución inicialmente eran directos: pero a partir de su consolidación como asociación formal cuentan con agentes de distribución independiente y mayorista.

CONCLUSIONES

Ambas organizaciones son sostenibles porque su funcionamiento depende en gran parte de sus propios recursos, carecen de subsidios y las decisiones se toman en la Asamblea de socios, no están sujetos a un solo proveedor, poseen capacidad de identificar y adaptarse a los cambios del mercado. Igualmente han incrementado y diversificado su producción incorporando procesos que incrementan el valor agregado.

Las experiencias son exitosas porque han generado rentabilidad económica, social y de género. Según la percepción de los integrantes, sus proyectos son exitosos porque han superado la pobreza, están mejorando sus prácticas productivas, han alcanzado certificaciones, reconocimientos y premios. Las utilidades se reinvierten para mejorar las instalaciones y los equipos, superan a sus competidores locales con productos de mejor calidad. Por lo anterior pertenecen a RENDRUS consideradas como experiencias exitosas.

Existen dos elementos clave del éxito en la producción y comercialización: la innovación y la competitividad, factores que suponen cambios relacionados con la organización, capacitación y tecnología. Estos factores determinan en gran medida la capacidad de los productores para acceder a los mercados. (Santacoloma, et al, 2005: 4)

Para iniciar el proceso de innovación se reconoce la necesidad de que los agricultores se asocien en organizaciones. Como base de este vínculo entre el productor y su organización, los agricultores pueden establecer una compleja red de conexiones con otros agentes como son las organizaciones procesadoras o comercializadoras, inversionistas, particulares que ofrecen servicios, comerciantes locales, productores no socios, empresas propias en el caso de una integración vertical de la producción, universidades, centros tecnológicos, la cooperación internacional y el gobierno.

Existen varios factores que deben combinarse para favorecer el éxito en la inserción a los mercados: acceso al financiamiento al inicio, para lo cual se requiere de un sistema financiero que atienda adecuadamente los requerimientos de este sector; la calidad y valor agregado como ventaja competitiva, ya que un producto que carece de un buen nivel de calidad difícilmente podrá sobrevivir en el mercado; capacitación y asesoría para estar en capacidad de adaptar su producto, procesos productivos y tecnología a las necesidades del mercado; disponer de canales de comercialización; compartir experiencias y aprovechar las condiciones propias de su entorno.

La contribución más significativa de las instituciones públicas para la inserción de los productos de estas microempresas al mercado, ha sido a través de la organización de eventos a nivel local, regional y nacional como lo ha hecho SAGARPA a través de la Red Nacional de Desarrollo Rural Sustentable (RENRUS). Pero un factor imprescindible, es poseer carácter emprendedor.

LA CONFIANZA COMO ELEMENTO DEL CAPITAL SOCIAL EN UNA PEQUEÑA EMPRESA DE LA INDUSTRIA METALMECÁNICA DE LA REGIÓN CENTRO DE COAHUILA, MÉXICO

Edna de la Garza Martínez, Universidad Autónoma de Coahuila-México
Elvira Velarde López, Universidad Autónoma de Coahuila-México
Eunice Coronado Rojas, Universidad Autónoma de Coahuila-México

RESUMEN

Los estudiosos de la acción colectiva indican que la confianza es un componente del capital social clave para favorecer la cooperación y resolver problemas de acción colectiva que ha su vez permiten mejores niveles de desarrollo. El presente trabajo tiene como finalidad mostrar los niveles de confianza que se presentan en la empresa inherentes al trabajo, a las personas responsables con cargo directivo, a las personas sin cargo directivo que están trabajando, y por último a las instituciones y/o organizaciones que están relacionadas con la empresa, así como la relación que existe con la antigüedad del empleado, su nivel académico y la edad. Para ello, se obtuvo información cuantitativa de 32 personas que laboran en una pequeña empresa de la industria metalmeccánica de la región centro de Coahuila, mediante un cuestionario estructurado y posteriormente se analizaron los datos a través del software SPSS, aplicando la herramienta de Cross Tabs. Entre los hallazgos más relevantes cabe mencionar que en este estudio se muestra que sí hay confianza interna, mientras que la confianza externa no se manifiesta.

Palabras clave: Confianza, Capital Social, Pymes.

TRUST AS PART OF SOCIAL CAPITAL IN A SMALL COMPANY IN THE METALWORKING INDUSTRY IN THE CENTRAL REGION OF COAHUILA, MEXICO

Scholars of collective action, suggests that trust is a key component of social capital to foster cooperation, and resolve problems of collective action which has in turn allow higher levels of development. The present work is to show levels of trust that are inherent in the company to work with those responsible management position, people without managerial responsibilities, who are working, and finally to the institutions and / or organizations are related to the company, and the relationship with the employee's seniority, their academic level and age. To do this, quantitative information was obtained from 32 people who work in a small company in the metalworking industry in the central region of Coahuila, using a structured questionnaire and then analyzed the data using SPSS software, using the tool of Cross Tabs. Among the key findings include that in this study shows that there is inner confidence, while the external trust is not present.

Key words: Trust, Social Capital, SME's

INTRODUCCION

El medir indicadores de capital social, se ha constituido en un instrumento de gran utilidad, para aquellos que buscan el desarrollo social en las naciones, razón por la cual numerosos estudios se han enfocado a estudios empíricos y conceptuales respecto a las familias, comunidades, empresas, organizaciones no gubernamentales, sector público, raza y sexo; elementos que el banco mundial determina como fuentes de capital social en el contexto de desarrollo social.

El término de capital social, (Durston,2000:7) hace referencia a las normas, instituciones y organizaciones que promueven la confianza, la ayuda recíproca y la cooperación y plantea que las relaciones estables entre las mismas pueden contribuir a tres tipos de beneficios: reducir costos, producir bienes públicos y facilitar la constitución de organizaciones de base efectiva de actores sociales y de sociedades civiles saludables.

En este contexto resulta conveniente identificar elementos fuertes y débiles relacionados con la confianza, elemento clave del capital social, con el propósito de realizar un diagnóstico que oriente a los responsables de la empresa a crear un plan de acción para mejorar la confianza de sus empleados y crear mayor valor en su comunidad y la sociedad. Lo anterior marca la pauta en analizar la relación que existe entre los niveles de confianza que se presentan en la empresa inherentes al trabajo, a las personas responsables con cargo directivo, a las personas sin cargo directivo que están trabajando y por último a las instituciones y/u organizaciones que están relacionadas con la empresa, así como la relación que existe con la antigüedad del empleado, su nivel académico y la edad. La investigación se centra en una Pyme debido a que representan el 98% de unidades económicas, participan con el 34.7% del producto interno bruto y en ellas se encuentra el 73% del personal ocupado del país. (INEGI, 2010).

En este estudio se presenta una revisión de la literatura referente al tema de confianza y de capital social; consecutivamente, la metodología utilizada en el trabajo de investigación; se continúa con la presentación de resultados y por último se exponen conclusiones y las referencias bibliográficas.

REVISIÓN LITERARIA

Confianza

El estudio de la confianza y su relación con la economía, ha logrado que se entienda como una variable de desarrollo para fortalecer entre otros aspectos, la cooperación (Granovetter,1985; Hardin,2002), para bajar costos de transacción (Fukuyama,1995) y como un instrumento de gran utilidad para aquellos que dirigen organizaciones (Jimenes,2005).

Las teorías de la elección racional, definen a la confianza como el conjunto de expectativas racionales basadas en la comprensión del otro con respecto al propio, y en cálculos que sopesan los costos y beneficios de quien confía o de la persona en quien se confía. (Gordon S, 2005:45). La confianza para (Atria y Siles, 2003:305) implica la voluntad de aceptar riesgos, lo que supone que otras personas responderán como se espera, ofreciendo apoyo mutuo, o al menos sin intención de causar daño, mientras que (Herrerros, 2002:37) considera la confianza como una expectativa subjetiva y racional acerca del comportamiento del depositario de la misma.

Para (Herrerros, 2002:131) “la confianza se deriva de la pertenencia a una red social y las expectativas subjetivas acerca de los dignos de confianza que son los demás, están relacionadas con las relaciones sociales a las que se tiene acceso. Otras expectativas de confianza son las referidas a individuos desconocidos, denominadas como confianza social o confianza generalizada.”

El interés de reflexionar sobre la confianza que pueda manifestarse en la empresa, se debe también a los bajos niveles que se manifiestan en nuestro país, como lo expone la OCDE al informar que solo uno de cuatro mexicanos expresa alta confianza en otros, el tercer porcentaje más bajo de la OCDE. La necesidad de crear en las empresas un clima favorable para la confianza (Jiménes, 2005:2) se debe a que “es el fundamento para la eficacia, pues cuando la confianza es débil las personas empiezan a sospechar de las intenciones de los otros, lo que hace que aumenten los malos entendido y se gaste tiempo en actividades de autoprotección y justificación”.

Diversos estudios relacionados con la confianza se han desarrollado, entre ellos el de (Herreros y Criado, 2006) que comprobaron empíricamente que las instituciones públicas tienen un efecto sobre la confianza interpersonal ya que en aquellos países en los que el estado es más eficaz y más neutral, la probabilidad de que la gente confíe en sus conciudadanos es mayor. Por otra parte deducen, que el nivel de educación es positivo, mayores niveles de educación están asociados a niveles de confianza social. Para obtener evidencia del grado de confianza entre las personas que conforman una organización (Jimenes, 2005) realizó un estudio en 3 departamentos de una Institución bancaria, considerando juicios de sinceridad y de competencia y determinó que existe confianza entre las personas que conforman las secciones. Si bien, no existe un consenso en cuanto a si la confianza es una consecuencia o un componente del capital social (Fukuyama, 1995) se define como un elemento muy importante del mismo.

Capital Social

Paralelo a los conceptos de capital financiero, capital psicológico y capital humano (Coleman 1988:188) introdujo el concepto de capital social, que a diferencia de los otros se encarna en las relaciones entre las personas. (Herreros,2004:129) lo entiende como “recursos-obligaciones de reciprocidad e información-derivados de las relaciones entre personas”. Un elemento común de las definiciones de capital social es que éste se encuentra en las relaciones entre las personas a diferencia de otras formas de capital social que residen en los objetos o los individuos en forma aislada (López, 2004).

Se ha demostrado que la creación de capital social es un factor importante en la empresa respecto a la rentabilidad o la capacidad de innovación (Tsai y Ghoshal, 1998; Dakhli y Clercq,2004;) y a nivel de organización se ha definido como el valor a una organización en términos de las relaciones formadas por sus miembros con el fin de participar en la acción colectiva (Nahapiet y Ghoshal,1998).

(Gleaser, et.al.,2000) han analizado la relación entre capital social y características socioeconómicas de las personas, utilizando como indicador el acervo poseído de capital social individual y el número de organizaciones voluntarias a las que pertenecen, estimando para ello la relación de capital social con la edad, el género, el grupo étnico, el ingreso y la educación. (López, y De la Torre 2004) comentan, que en los estudios efectuados en México relacionados con el capital social, se ha utilizado indicadores a nivel macro, como son las percepciones de solidaridad, la confianza en los demás y la participación en organizaciones de beneficio comunitario.

METODOLOGÍA

Una pequeña empresa de la industria metalmecánica es el foco de este estudio, para el cual se consideró a los 32 empleados de la misma. Se trabajó con un muestreo censal, con enfoque cuantitativo. La confiabilidad de los indicadores a medir fueron determinados y pretestados por sus autores (Mujika,comp,2010). La información se obtuvo cara a cara, con preguntas estructuradas, utilizando como variable dependiente la confianza y para las variables independientes de la edad, nivel académico y antigüedad en la empresa, se utilizaron rangos. Después de levantar la información, se procedió a la captura y al procesamiento de los datos a través del software estadístico SPSS, utilizando para el análisis la estadística descriptiva y las tablas de contingencias (cross tabs), con la finalidad establecer las asociaciones entre las variables.

RESULTADOS

De los resultados de la encuesta se puede apreciar lo siguiente:

Tabla 1: Indicadores de confianza y la magnitud del acuerdo o desacuerdo con diferentes cuestiones relacionadas con la empresa.

	Totalmente desacuerdo	Bastante desacuerdo	Ni de acuerdo ni en desacuerdo	Bastante acuerdo	Totalmente acuerdo	Total
Tengo confianza en este trabajo	0/0%	2/6.3%	9/28.1%	17/53.1 %	4/12.5%	32/100 %
Confío en las personas responsables con cargo directivo de esta empresa	2/6.3%	4/12.5%	11/34.4	10/31.3 %	5/15.6%	
Confío en las personas sin cargo directivo que están trabajando en la empresa	0/0	00	15/46.9%	12/37.5 %	4/12.5%	
Tengo confianza en las instituciones, organizaciones, etc. Que están relacionadas con esta empresa	12/37.5%	6/18.8	8/25.0%	3/9.4%	2/6.3%	
						100%

Se presentan las frecuencias y porcentajes de respuestas a cada uno de los indicadores de confianza. Fuente: elaboración propia.

Se puede observar que los empleados muestran confianza en el trabajo ya que el 53.1% se encuentran bastante de acuerdo y el 12.5% totalmente de acuerdo. En cuanto al indicador de confianza con las personas responsables con cargo directivo en la empresa, aun cuando la mayoría 34% no están de acuerdo ni en desacuerdo, la proporción entre los que están bastante y totalmente de acuerdo suman el 46.9%. Respecto a la confianza que manifiestan en las personas sin cargo directivo que están trabajando en la empresa, la mayoría 46.9% no están de acuerdo ni en desacuerdo, el 50% se manifiesta totalmente y bastante de acuerdo. Por último la confianza en las instituciones, organizaciones, etc. Que están relacionadas con la empresa la mayoría 37.5% están totalmente en desacuerdo. A continuación se presenta una descripción de los resultados en relación porcentual, a las variables de edad, antigüedad en la empresa y formación académica.

Relación entre confianza en el trabajo: 1) Respecto a la edad: los que estuvieron totalmente y bastante de acuerdo fueron el 100% de la muestra mayor a 60 años, el 90% de los 45-59, el 55% entre 30-44 años y el 33% de los de menos de 30. 2) Antigüedad en la empresa: los que contestaron las opciones bastante y totalmente de acuerdo conforman el 100% de menos de un año, el 40% entre 1-3 años, el 25% de 3-5 años, el 72% de 5-10 años y el 100% más de 20 años. 3) Formación académica: en las opciones bastante y totalmente de acuerdo el 80% tienen estudios de primaria, el 61% de secundaria, el 87% de preparatoria y el 33% estudios superiores, ya que éstos últimos contestaron el 50% de esa muestra que no estaban de acuerdo ni en desacuerdo. Por lo anterior, se percibe un nivel alto de confianza hacia el trabajo en las 3 variables.

Relación entre la confianza en personas con cargo directivo en la empresa: 1) Respecto a la edad, en las opciones bastante y totalmente de acuerdo el 33% tiene menos de 30, el 38% entre los 30-44 años, el 70% entre 45-49 años y el 100% de 60 o más. 2) Antigüedad en la empresa, en las opciones bastante y totalmente de acuerdo de la muestra de menos de un año el 100%, de 1-3 años el 40%, de 5-10 años el 54%, entre 10-20 años, el 50% más de 20 años el 100%. Solo en los rangos de 3-5 años se muestran en bastante desacuerdo. 3) Formación académica: de primaria el 80% se muestra totalmente y bastante de acuerdo, de secundaria el 61.5% no están de acuerdo ni en desacuerdo, de preparatoria el 62% están totalmente y bastante de acuerdo, mientras que el 50% de los que tienen estudios superiores están totalmente y bastante en desacuerdo. En este aspecto, se puede observar que por la edad y la antigüedad en la empresa en nivel de confianza es alto, mientras que por su formación académica la confianza se manifiesta medianamente.

Relación entre la confianza en personas sin cargo directivo que laboran en la empresa: 1) Respecto a la edad: las personas que contestaron que estaban bastante y totalmente de acuerdo: menos de 30 el 66%, de 30-44 el 50%, de 45-59 el 44% y de 60 o más el 100%. 2) Antigüedad en la empresa: no se encuentran de acuerdo ni en desacuerdo los de menos de 1 año el 60%, de 3-5 años el 100%; los que se encuentran bastante y totalmente de acuerdo son los de 5-10 años de antigüedad con el 54% y de 10-20 con el 50%. 3) Formación académica: ni de acuerdo ni desacuerdo 53% de los que tienen estudios de primaria; bastante y totalmente de acuerdo el 50% de secundaria, el 60% de preparatoria y el 50% de nivel superior. En esta pregunta nadie contestó que estaba en desacuerdo. Se percibe por la edad, un nivel alto de confianza, y por la antigüedad y formación académica medianamente alto.

Relación entre confianza entre organizaciones e instituciones relacionadas con la empresa: 1) Respecto a la edad: En los rangos de totalmente y bastante en desacuerdo se muestran los siguientes porcentajes: menos de 30 años el 66%, entre 30 y 44 el 55%, entre 45-59 el 55% y 60 o más el 100%. 2) Antigüedad en la empresa: en los rangos de totalmente y bastante en desacuerdo se encuentra lo siguiente: el 100% de la muestra de menos de un año, el 80%, de 1-3 años, el 45%, de 5-10 años, el 54%, entre 10-20 años y más de 20 años el 80%. 3) Respecto a la formación académica, en los rangos de totalmente y bastante en desacuerdo sobresalen los siguientes porcentajes: 75% educación primaria, 77% secundaria, 50% preparatoria y 16% estudios profesionales, ya que estos últimos el 66% no están de acuerdo ni en desacuerdo. Por lo anterior, se puede inferir que el nivel de confianza en organismos externos a la empresa, es muy bajo.

CONCLUSIONES

A través de los resultados, se puede percibir que los niveles de confianza interna en la empresa, se manifiestan a niveles relativamente altos, sin embargo resulta conveniente que los responsables de la empresa de estudio, puedan crear un plan de acción que eleve la confianza del trabajador hacia los directivos y con las personas que laboran en ella, que no son directivos, ya que en la medida en que los niveles de confianza puedan ser considerados como una señal de la integración de los empleados, esta pueda redundar en la eficacia organizacional y crear mayor valor en su comunidad. Respecto a la confianza externa, ésta se presenta a niveles muy bajos respecto a instituciones u organizaciones que están relacionadas con la empresa, ante lo cual se deberán establecer políticas que incrementen la credibilidad de las mismas. Los resultados estadísticos no muestran en este estudio, asociación y/o relación, entre los niveles de confianza y la antigüedad del empleado, su nivel académico y edad.

APLICACIÓN DE LA INGENIERÍA ECONÓMICA EN LA EVALUACIÓN DE PROYECTOS DE INVERSIÓN HOSPITALARIOS

Liliana Elisa Cueto Aguiar, Universidad Panamericana

ABSTRACT

El objetivo de esta investigación, es establecer las bases para una metodología, proponiendo qué criterios de Ingeniería Económica, deben utilizarse a nivel hospitalario y qué decisiones encaminadas al establecimiento de prioridades, pueden tomarse, para el ahorro de recursos en hospitales públicos. Los costos en la atención de salud en México y en el mundo, son cada vez mayores, por lo tanto, se requiere reducir costos, sin sacrificar resultados para los pacientes, los recursos son limitados y las necesidades de servicios de salud son crecientes, es necesario optimizar. Los hospitales y unidades de atención médica, pueden ser vistos como empresas, con ciertas características especiales, al brindar servicios de salud a la población, por lo que requieren enfocarse en la toma de decisiones a nivel de la gestión asistencial, administrativa y económico-financiera, basados en criterios de eficacia, eficiencia y calidad, con un enfoque distintivo. Los proyectos de inversión que se propongan, tales como reemplazo de equipos, mejoras en el servicio o en la calidad, sistemas para un mejor control de los insumos, ampliación del hospital, entre otros, requieren de un estudio, que la Ingeniería Económica facilita, a través de sus herramientas, para evaluar el impacto de las propuestas, en el estado de salud de los pacientes y en los costos, con el fin de lograr ahorros, que permitan dar mayor cobertura y equidad en los servicios de salud pública.

RETOS Y OPORTUNIDADES DEL EMPRESARIO SONORENSE: LA NUEVA AGROINDUSTRIA

Natalia Guadalupe Romero Vivar, Centro de Estudios Superiores del Estado de Sonora.

Rosalina Jaime Meuly, Centro de Estudios Superiores del Estado de Sonora.

Beatriz Alejandra Hurtado Bringas, Centro de Estudios Superiores del Estado de Sonora.

RESUMEN

La agricultura de Sonora exhibe un comportamiento diferenciado, a más de una década de apertura comercial. Por una parte, crecieron las exportaciones y la superficie sembrada de hortalizas y frutales; y contrario a lo que se preveía, los granos básicos mantuvieron una posición sólida en el patrón de cultivos. Por otra, se advierten síntomas interesantes de transformación, tal es el caso del surgimiento de una cultura empresarial visible entre los productores. En estas condiciones, el sector agrícola sonorenses parece estar preparado para enfrentar los retos de la competencia global. En enero de 2006 se cumplieron 12 años de vigencia del Tratado de Libre Comercio (TLC), firmado entre México, Estados Unidos y Canadá. Este acuerdo coronó la liberalización unilateral, iniciada a mediados de la década de 1980. Desde entonces, la política agrícola refleja las contradicciones de un proceso de transición complejo, que ha pretendido modernizar el agro a través de un esquema inspirado en el mercado, pero con la prevalencia de programas propios de la etapa proteccionista. Las inconsistencias son evidentes: por un lado se diseñan acciones de desregulación típicas de la libre competencia, y por otro se ofrecen subsidios que parecen restaurar estrategias de fomento, propias del pasado.

PALABRAS CLAVE: Agricultura, Exportaciones, Comercio.

CHALLENGES AND OPPORTUNITIES OF THE SONORENSE INDUSTRIALIST: THE NEW AGROINDUSTRIA

ABSTRACT

The agriculture of Sonora exhibits a differentiated behavior, to more than one decade of commercial opening. By a part, the exports and the seeded surface of vegetables and fruit trees grew; and in opposition to which it was anticipated, the basic grains held a solid position in the pattern of cultures. By another one, interesting symptoms of transformation are noticed, so is the case of the sprouting of visible an enterprise culture between the producers. In these conditions, the sonorenses agricultural sector seems to be prepared to face the challenges of the global competition. In January of 2006 12 years of use of the Treaty of Commerce were marked (TLC), signed between Mexico, the United States and Canada. This agreement crowned the unilateral liberalization, initiate to half-full of the decade of 1980. Since then, the agricultural policy reflects the contradictions of a complex process of transition, that it has tried to modernize the land through a scheme inspired by the market, but with the prevalence of own programs of the protectionist stage. The inconsistencies are evident: on the one hand typical actions of deregulation of the free competition are designed, and by another one subsidies that seem to recover promotion strategies, own are offered of the past.

INTRODUCCION

La agricultura es la actividad humana que más estrecha relación tiene con el medio ambiente y con la sobrevivencia del hombre en el planeta, en virtud de que a través de ella obtiene satisfactores a sus necesidades básicas, pero lamentablemente se ha convertido en una causa significativa del deterioro, la contaminación y el agotamiento de los recursos naturales. Este problema ambiental representado por la erosión en el campo, la falta de agua, contaminación, plagas, etc. están mermando la productividad de los agricultores y en consecuencia, sus ganancias. Estos factores ambientales han impactado fuertemente a la agricultura, situación que ha provocado una fuerte crisis en el sector, por lo cual organizaciones de públicas y privadas, han trabajado en su transformación a través de nuevas formas de impulsar la productividad, rentabilidad y competitividad del campo, pero optimizando al mismo tiempo el uso de los recursos naturales, esto mediante el fomento de nuevas tecnologías ambientales que den como resultado una manera innovadora de producir y hacer negocios.

La transformación del campo se inició en los años 50, cuando en otras partes del mundo con más desarrollo, la agricultura empezó a ser más que producir cosechas o animales, a convertirse en un negocio creciente, produciendo lo que la sociedad necesitaba, tomando en cuenta al consumidor y no llevando a cabo cultivos por tradición, dándole un valor agregado al producto y orientándolo más a su consumidor final. En 1954 en la Universidad de Harvard, el Profesor Ray Goldberg se refirió a este nuevo concepto como agro negocios, es decir al negocio de manejo del mercado y financiamiento de la agricultura, produciendo de acuerdo a los requerimientos específicos de los consumidores.

El concepto de “agro negocio” comprende los distintos eslabones que componen la cadena productiva de cada producto en cuestión, es decir, desde la provisión de insumos y servicios, la producción primaria, el manejo pos cosecha e industrialización de los productos agropecuarios, hasta los mercados terminales y su conexión con los canales de comercialización y distribución existentes. Los agro negocios se han convertido en “motores” de la economía en el siglo XXI, representando un 50% del comercio global, por lo que se le ha considerado como un conductor del desarrollo económico, mismos que estimulan a su vez a otras actividades relacionadas. Dentro de los aspectos que propician el desarrollo de los, se encuentra el gran intercambio de información que se da gracias al desarrollo tecnológico, esto a inculcado en la sociedad nuevos valores respecto a la salud y el consumo; orienta a los consumidores a buscar productos con calidad (mejor producto al precio adecuado), inocuidad (limpios, sanos, sin contaminación ni riesgo para la salud) y trazabilidad (perfecta identificación del origen, procesos y transporte de los productos). La sociedad mexicana se está informando y los consumidores se vuelven cada vez más exigentes.

Dentro de un ambiente externo cambiante, el mundo se transforma, el proceso de globalización (TLCAN, TLCUEM, MERCOSUR, entre otros) está reorganizando los mercados, redefine las percepciones sobre la realidad, la educación, la cultura y las fronteras de la sociedad y de los países. Cambian las ideologías, cambian las necesidades y por lo tanto se modifican las formas de producción y de consumo, al igual que las estructuras económicas. La globalización y todos estos acontecimientos internacionales influyen en México, la estructura económica del sector agroalimentario mexicano ha pasado por distintas etapas:

En la segunda mitad del siglo XX había un fuerte proteccionismo, donde el gobierno participaba en la planeación agrícola, abasto y producción de insumos, acopio y comercialización. Los productos básicos (maíz, frijol, arroz, carne, leche y otros) estaban articulados y regulados por el aparato gubernamental, creando un sistema comercial distorsionado y altamente receptor de subsidios, favoreciendo un ambiente de poca competitividad y nula planeación a largo plazo, sin tomar en cuenta al mercado.

Hacia finales de los 80's y durante los 90's México fue abriendo sus fronteras comerciales, aunado a una política de desregulación, por lo cual el gobierno se fue retirando paulatinamente de los servicios que antes se señalaron, creándose grandes vacíos que en su momento se estimó .

REVISIÓN LITERARIA

En 1994 se firma el Tratado de Libre Comercio de América del Norte (TLCAN), lo cual significaba grandes oportunidades al poder participar en uno de los mercados más grandes y con mayor poder adquisitivo del mundo pero sobre todo con grandes retos en productividad, industria y logística. Desafortunadamente en diciembre de ese mismo año, se suscitó una severa crisis financiera, por lo cual los esfuerzos tanto de productores agropecuarios como de entidades gubernamentales y financieras, se concentraron en atender sus efectos, las carteras vencidas y reestructuración de pasivos, frenando por completo las expectativas y debilitando más al sector agrícola.

La agricultura en el sur del Estado de Sonora, se basa en un 90% en la producción de cultivos extensivos como el maíz, trigo y las oleaginosas como cártamo y algodón, los factores ambientales antes mencionados han afectado sobremanera la producción y rentabilidad de estos cultivos, ya que los precios de estos productos son inferiores a los requeridos para compensar el costo de los insumos que se utilizan para su producción, dependiendo grandemente de los apoyos que se otorgan para cada cultivo por parte de las organizaciones de gobierno. El campo del sur del Estado de Sonora cuenta con una gran infraestructura para transformarse en una agricultura orientada al consumidor, ya que no solamente cuenta con uno de los valles más ricos y mejor trazado del país, sino que también con una extensa calidad de tierras para diferentes cultivos, empaques en sitio de trabajo, un parque industrial que ofrece a los productores primarios un excelente espacio para procesar productos directo del campo a su envase o destino, y la facilidad de trasladar los productos hacia la frontera o al resto del país.

METODOLOGIA

El diseño de la investigación partió de una investigación propiamente documental y descriptiva, por otro lado, se realizó una investigación de campo; es decir, se consultó a organismos oficiales y de Gobierno, para afianzar datos e información estadística sobre el tema investigado; así como también, sitios y/o bases de datos oficiales nacionales e internacionales, para el uso de la información estadística, económica y exportaciones del estado de Sonora.

Por lo anterior, el análisis de los aspectos para determinar el nuevo mercado de la agroindustria se dividió en dos grandes áreas: El sector agrícola regional y el sector agroindustrial; en ese sentido y con la apertura comercial, las exportaciones se han incrementado favorablemente para los productos agro industriales, por esta razón la importancia de hacer énfasis en los retos que depara para el empresario en este sector ante la globalización.

RESULTADOS

Las incongruencias de la política agrícola, afectan el desempeño del campo sonoreño; de hecho, coexisten agricultores que trabajan como si nada hubiera pasado, junto a otros que lo hacen en un ambiente competitivo en extremo. Mientras los primeros mantienen viejos esquemas productivos (siembran granos y siguen usando los apoyos estatales), los segundos aprovechan la apertura comercial. Pese a dicha heterogeneidad, consciente o inconscientemente se ha incubado una nueva cultura organizacional y empresarial entre los agricultores, desde hace pocos años. Esta forma de trabajar la adaptan la mayoría de los productores, del sur o del norte; se dedican a sembrar cereales o a cultivar frutas u hortalizas. Dicha cultura empresarial está modificando el antiguo patrón de explotación del agro. Esto ocurre tanto entre los agricultores que utilizan el riego por bombeo como por gravedad; del sector social y sobre todo los particulares. Producir lo que el mercado demanda, y no lo que el Estado compra, es quizá uno de los cambios más significativos de este periodo. Detecta un proceso de "creciente cultura empresarial en ámbitos geográficos cada vez mayores en el medio rural", en el territorio nacional a partir

del TLC. Aunque es difícil de medir, señala, una muestra de estos procesos son los cambios en la estructura de la producción y comercialización en el sector agropecuario, producto de la sustitución de la intervención del Estado por la de los sectores privado y social en la producción y distribución de insumos, el crédito y el aseguramiento, así como en el almacenaje y la comercialización.

La negociación del capítulo agropecuario del TLC implicó la desregulación de gran parte de los cultivos producidos en la entidad, la apertura fue inmediata para frutas y hortalizas, así como para algunos granos, como el trigo; en cambio, la liberalización para el maíz y frijol se alcanzaría en el largo plazo; en 2008 concluye dicho periodo de protección. Según estas premisas, se consideró que la superficie sembrada de hortalizas y frutales se incrementaría, y se reduciría paulatinamente la dedicada a granos y oleaginosas. La explicación era que en estos casos la competitividad de los productores locales era inferior a la de los socios norteamericanos. Sin embargo, al tiempo que se aplicaban programas afines al proceso de desregulación, comprometido en el acuerdo comercial, el Estado rediseñó y aplicó programas de subsidios que iban en sentido inverso al proceso de apertura y desregulación, las políticas agropecuarias y de desarrollo rural que se han puesto en marcha desde el TLC, reflejan las tensiones generadas por las visiones divergentes de las alternativas para el campo, presentes en el debate nacional. Tales indefiniciones afectaron el desempeño del subsector agrícola, y explicaron en parte la evolución contradictoria característica del agro sonorense en los años del TLC; esto es, se observa una convergencia clara de cambios sustanciales junto a una propensión a la continuidad. Ante esas consideraciones, resulta conveniente revisar la evolución de la agricultura local.

Con la reestructuración que produciría el acuerdo comercial, se esperaba una reactivación agropecuaria rápida. Sin embargo, al menos en los años posteriores al TLC, dicha recuperación parece lejana. Entre 1994 y 2003 el producto interno bruto (PIB) agropecuario y agrícola creció a un ritmo de 1.43 y 1.35 por ciento anual, respectivamente. Son tasas menores a las registradas en el pasado (véase gráfica 1)..De igual forma son inferiores al crecimiento del conjunto de la economía, mismo que ascendió a 3.2 por ciento en promedio anual entre 1994 y 2003. La evolución precaria se confirma al compararlo con el dinamismo de la población (1.86 por ciento en el mismo periodo); la diferencia da cuenta de las dificultades enfrentadas para satisfacer la demanda de alimentos de una población en aumento constante.

Figura 1: Grafico Crecimiento del PIB Estatal y Agropecuario 1994-2003

La superficie sembrada en la entidad evidencia el débil desempeño de la producción agrícola; que se desplomó abruptamente entre 1996 y 2004. En 1996 ascendió a 713 729 mil hectáreas, para reducirse a 428 mil en el ciclo 2003–2004. Esto es, se sembró alrededor de 40 por ciento menos de superficie. Entre

2000 y 2004 el área cosechada promedio fue de 512 mil, cuando de 1990 a 1997 había sido de 654 mil y de 1979 a 1989 casi de 700 mil. Este decremento en la superficie promedio cultivada representa una condición restrictiva para la reactivación del campo sonoreense. De hecho, el desplome de la superficie sembrada es tan agudo, que en varios ciclos agrícolas el total de hectáreas sembradas ha sido menor al de la década de 1950.

El patrón de cultivos también muestra cambios importantes. Antiguamente, el trigo y el maíz concentraban la mayor parte de la superficie sembrada en la entidad. Esta estructura continuaba igual hasta el ciclo 2002–2003, cuando los granos básicos representaron más de 5.5% por ciento de la superficie sembrada. La tendencia cambió en el ciclo 2003–2004: los cultivos mencionados constituyen apenas menos de 30 % del área sembrada. Sin embargo, es prematuro adelantar una conclusión en el sentido de que tal reestructuración podrá mantenerse.

Si se toma el patrón prevaleciente hasta el ciclo 2002–2003, queda claro que permanece uno similar al de los años previos al TLC. Esto significa que no se ha cumplido la expectativa de un desplazamiento de los cultivos básicos; por el contrario, excepto en el 2003–2004, éstos se han fortalecido. Al respecto, varios factores permiten comprender ese comportamiento; uno de los más sobresalientes es la escasa disponibilidad de agua. Sí bien el ciclo 2003–2004 puede considerarse fuera de la tendencia, puesto que la disminución se relaciona con la disponibilidad de agua, es importante reconocer que en condiciones normales, es decir, con apoyo directo a la siembra y comercialización, con disponibilidad de agua de riego y mercados estables, el patrón de cultivos exhibe una disminución casi imperceptible de granos básicos; en cambio, en ciclos caracterizados por limitaciones en el abasto de agua y restricciones de apoyos oficiales, los cereales, particularmente el trigo, son los primeros en sustituirse o en experimentar ajustes en el área sembrada. De ahí que sea factible suponer que, de acentuarse las dificultades (suspensión o modificación de subsidios al ingreso o a la capitalización y comercialización), se registraría un desplome notable de la superficie hasta ahora destinada a granos. Pese a no registrarse una modificación significativa en el porcentaje de los cultivos tradicionales, se observa una reestructuración en las variedades de granos sembradas; especialmente visible en el caso del trigo, que representó en promedio más de un tercio del área cultivada entre 1991 y 2003.

De las distintas variedades de trigo, las principales son las harineras y cristalinas. Las primeras se utilizan primordialmente para alimento de animales y las segundas para elaborar pastas. El alto contenido proteico de algunos tipos de cristalino le significa una demanda apreciable en el mercado externo, en particular para Canadá e Italia. En 1996, casi el total de la superficie se sembraba con trigos harineros, no obstante, este patrón ha cambiado y actualmente (ciclos 2010-2011) la proporción es favorable a los cristalinos. La mayor parte de la producción se vende al extranjero, debido a lo favorable del mercado. Esto explica los incrementos súbitos que en las exportaciones de ese cereal ha registrado el agro sonoreense.

La reconversión productiva ha sido uno de los objetivos centrales de la política sectorial. La modernización del campo sonoreense se asocia con el incremento de cultivos de alto valor agregado, enfocados al mercado externo. De acuerdo con los datos disponibles, este proceso ha evolucionado de forma positiva: entre 1996 y 2004 la superficie sembrada de hortalizas pasó de 29 990 a 39 921 hectáreas, es decir, cerca de 13 mil más; esto constituye casi 50 por ciento más que la correspondiente a 1996.

En cuanto a los frutales, el cultivo principal es la uva industrial y de mesa. La vid para vino y aguardiente tiende a desaparecer: en 1996 se sembraron cerca de 20 mil hectáreas, mientras que de 2003 a 2004 apenas 9 mil. En cambio, se advierte un incremento sustancial de la superficie sembrada de uva de mesa: en 1996 era de 10 mil hectáreas; en el ciclo 2010–2011 se elevó a casi 16 mil, lo que significa un incremento de 60 por ciento.

En suma, frutales y hortalizas representaron en el ciclo 2010 alrededor de 16 por ciento de la superficie sembrada, cuando en 1991 era de 11.5. Se trata sin duda de un cambio sustancial en el rostro de la economía agrícola regional.

Las hortalizas están entre los cultivos que experimentaron mayor dinamismo exportador. En efecto, en correspondencia al incremento de la superficie sembrada con esos cultivos, se elevaron las ventas a los mercados externos, en especial a Canadá y Estados Unidos. En términos de valor, las hortalizas y la vid para consumo humano explican cerca de 60 por ciento de las exportaciones agropecuarias de la localidad. Uno de los propósitos medulares de la reestructuración agrícola es fortalecer la competitividad del agro sonorensé, considerada menor en comparación con la de los otros países asociados al TLC. Entre sus causas determinantes, se ubica la atomización de la propiedad que hace ineficiente la explotación de la tierra, e inhibe las de economías de escala. El mercado de la tierra, abierto tras la reforma del artículo 27 constitucional, puso las bases para compactar la extensión de la explotación a través de varias modalidades como la compra-venta, coinversiones y renta. No existen estadísticas que documenten la evolución de estos esquemas productivos. Sin embargo, es posible sostener que la compactación y las economías de escala avanzan menos a través de la compra-venta y más mediante la renta, por parte de los pequeños propietarios.

Según lo anterior, es evidente que el otrora poderoso e influyente sector social muestra los estragos de una política de modernización, que lo está afectando con severidad. Para muchos, incluso, ese sector ya no existe. La reestructuración de la propiedad, esto es, el usufructo se está dando por distintas vías: venta o renta a agricultores pertenecientes al sector privado o bien a antiguos ejidatarios prósperos. Asimismo, en los escasos espacios donde el sector social sigue operando se advierten modalidades de producción típicas del sector privado empresarial. La organización Empresa Social pretende que los ejidatarios vuelvan a producir, pero ahora según un modelo cuyo rasgo fundamental es la incorporación de la visión empresarial a la actividad. Esta estrategia se inició en el ciclo 2004-2005, bajo los auspicios de la Liga de Comunidades Agrarias de la CNC en Sonora. En resumen, se trata de conjuntar las propiedades de los ejidatarios, hasta ahora rentadas a productores privados; los dueños del ejido reciben un ingreso similar al que obtendrían si la rentaran, pero la utilidad se reparte entre los participantes. El control y administración es ajeno a los socios. En esencia, esta nueva realidad pone en entredicho la idea de que los agricultores sólo sabían producir, pero estaban incapacitados para vender. Es cierto que requieren profesionalizarse más, es innegable que estas formas novedosas de producción muestran que la cultura empresarial está transformando, para bien o para mal, al agro regional.

RESULTADOS

Entre los productores agrícolas están surgiendo formas nuevas para explotar la tierra. Estas modalidades nacen a propósito de los criterios empresariales aplicados en la producción y comercialización de los sistemas-producto. Dicha cultura empresarial ha alcanzado a buena parte de los agricultores, quienes ahora ligan sus programas de siembra con la comercialización. Esto se conoce como agricultura por contrato, y significa producir lo que el mercado demanda, y no lo indicado por los programas oficiales. Los productores de trigo, por ejemplo, han modificado sus estructuras organizativas para producir y comercializar. En la agricultura por contrato, se acuerda con el comprador el tipo de variedades para sembrar (trigo cristalino por ejemplo), los volúmenes para entregar, así como el precio o sobreprecio, de acuerdo con la calidad del producto final. Por otra parte, se han hecho cambios efectivos en las modalidades de organización y se han creado comercializadoras a partir de asociaciones de productores, tanto del sector social como del privado. Todos estos elementos contribuyen a reforzar la idea de que permanecerán en el negocio quienes tengan la capacidad de conocer las condiciones del mercado, y lleven a cabo las acciones más adecuadas para mantenerse y obtener beneficios de su actividad. En ese proceso se encuentran tanto los productores del sector social como los particulares.

Conclusiones

La prosperidad relativa que ahora exhibe la agricultura del estado de Sonora es resultado de su anticipación a la modernización impulsada a escala nacional por el TLC. La siembra y exportación de hortalizas y de frutales, ha crecido básicamente, gracias a la diversificación de sus mercados, al aprendizaje y la cultura organizativa y a la relación establecida principalmente con comercializadores de Estados Unidos. En los últimos diez años, el aumento de las exportaciones ha sido significativo para algunos cultivos: de 1993 a 1997 se enviaron 305 mil 181 toneladas a los mercados de Estados Unidos, Inglaterra y Canadá., el volumen de exportación a esos destinos se incrementó a 489 mil 945 toneladas. También, aumentó la siembra de cultivos que ya se exportaban, como espárrago, olivo, cítricos y nogal, además de hortalizas como sandía, chile, calabaza kabocha y melón cantaloupe, que incursionan con éxito en los mercados de Estados Unidos y Japón. La exportación de dichos cultivos ha estimulado la rentabilidad agrícola en esta región, generando a su vez condiciones favorables para la apertura de mayores superficies, y por ende la reactivación de la actividad agrícola en la zona norte.

El desarrollo organizativo y el arraigo de una cultura empresarial en la región facilitaron el incremento de las exportaciones. Ya existen organizaciones de tipo gerencial especializadas por cultivos, como la Asociación de Productores de Uva de Mesa de Hermosillo y la Asociación de Productores de Hortalizas de la Costa de Hermosillo, agrupadas a su vez en la AOANS. Asimismo, se cuenta con esquemas nuevos de vinculación entre los productores y sus distribuidores (brockers), a través de la asociación con empresas ubicadas en los mercados a los que exportan su producción, principalmente estadounidenses. Este proceso precedió a la firma del TLC, y dotó a los agricultores del norte de una cultura de asociación y de esfuerzo, que les permitiría cumplir con las exigencias de los mercados demandantes de frutas y hortalizas para la comercialización. De nuevo, los agricultores de esta región se habían adelantado a las normas sanitarias impuestas por Estados Unidos a los productos importados de México y otros países, luego del TLC.

Anexo 1:

Como un ejemplo de agro negocio en el sur del Estado de Sonora, mencionaremos el caso de Citrícola del Yaqui, S.A. de C.V.

En Agosto del año 2001, un grupo de 16 citricultores con un total de 700 Has. Ubicados en el valle del yaqui en Cd. Obregón, Sonora, crearon el organismo Citrícola del Yaqui SA de CV, con el fin de integrarse como grupo y mejorar sus procesos de siembra, cultivo, recolección y comercialización, inclusive la mejora de patrones, injertos y nuevas variedades. Esta alianza a creado un organismo de agro negocios que está cosechando éxitos, ya que está aportando a sus agremiados innumerables oportunidades en el desarrollo y crecimiento de su actividad, como lo son los siguientes ejemplos: Se creó un cuerpo técnico especializado, para llevar a cabo la prevención y tratamiento de enfermedades de los árboles, considerando a todos sus agremiados como universo de trabajo, ya que anteriormente cada quien contaba con su técnico especializado y llevaba a cabo sus labores de forma individual sin considerar quien o a quien se podría afectar.

Este mismo cuerpo de técnicos, lleva a cabo un programa de plantación y replantación de nuevos patrones de diferentes variedades de naranja, así como la injertación en las plantaciones existentes. Así mismo también se encarga de la nutrición de los árboles, programación de irrigación, manejo de suelos, y podas. Derivado de los trabajos que se llevan a cabo por este cuerpo técnico especializado, se espera que el rendimiento promedio que actualmente es de 24 toneladas por hectárea, se eleve a 35 toneladas por hectárea. Anteriormente los productores empezaban a cosechar cada quien en su momento y por su cuenta, ahora se realiza un programa cronológico de turnos de inicio de cosecha a cada productor, permitiendo mayor orden y con la posibilidad de poder estimar con mayor certeza las producciones que el organismo Citrícola del Yaqui va comercializar. Esto ha permitido que las cosechas se comercialicen a precios de hasta \$1,200 por tonelada, cuando en lo individual vendían en hasta \$900 por tonelada, así

mismo les a permitido penetrar a diferentes mercados que antes un productor en lo individual no podría haber accedido, ya que en la actualidad se comercializa en 45 ciudades de la república, ubicadas en los estados de Chihuahua, Jalisco, México, Sinaloa y Sonora., y anteriormente solamente se comercializaba en Sonora y una parte de Sinaloa.

Citrícola del Yaqui S.A. de C.V., ha conseguido a sus agremiados ante la Secretaria de Agricultura, Ganadería, Desarrollo Rural, Pesca y Alimentación (SAGARPA), apoyos para el crecimiento y/o establecimiento de nuevas huertas frutales, así como apoyos a la compra de equipos de riego y equipo en el manejo de pos cosecha, como empaques, cuartos fríos, cuartos de pintado y gaseo, etc. Adicionalmente Citrícola del Valle del Yaqui S.A. de C.V., en conjunto con SAGARPA y el gobierno Estatal, dieron inicio a un proyecto que terminara en el año 2006, con el establecimiento de 1,000 Has., de las cuales 750 son de Naranja, 150 Toronja y 150 de Mandarina.

Como proyecto en proceso de estudio, Citrícola del Yaqui S.A. de C.V., está buscando la forma de agro negociar más su producto, como lo es la extracción e industrialización de jugo en su forma natural, concentrados, polvo y aceite de su cáscara que se ha utilizado mucho en EU. y otros países en productos de limpieza. Los agro negocios ofrecen la oportunidad al agricultor de pasar de ser un productor a un proveedor, explicándolo de la siguiente manera:

El Productor Produce de acuerdo a sus condiciones.	⇒	El Proveedor Produce de acuerdo a las necesidades de su cliente consumidor.
Produce Genéricos (comodities).	⇒	Produce materia prima especializada.
Vende a quien puede Tiene reducidas posibilidades de crecimiento y sustentabilidad.	⇒	Vende como empresa a otra empresa. Puede organizar su producción de acuerdo a planes de rotación y biodiversidad.

Se sugiere que en todo proyecto de agronegocio se realice un diagnostico del sector y este puede ser apoyado mediante el balance estratégico ó análisis FODA ya que es una herramienta que permite conformar un cuadro de la situación actual de la empresa u organización, obteniendo así un diagnóstico preciso y en función de este tomar decisiones acordes con los objetivos formulados. El término FODA es una sigla conformada por las primeras letras de las palabras Fortalezas, Oportunidades, Debilidades y Amenazas (en inglés SWOT: Strengths, Weaknesses, Opportunities, Threats). De entre estas cuatro variables, tanto fortalezas como debilidades son internas de la organización, por lo que es posible actuar directamente sobre ellas. En cambio las oportunidades y las amenazas son externas, por lo que en general resulta muy difícil poder modificarlas.

Fortalezas: son las capacidades especiales con que cuenta la empresa, y por los que cuenta con una posición privilegiada frente a la competencia.

Recursos que se controlan, capacidades y habilidades que se poseen, actividades que se desarrollan positivamente, etc. (Circunstancia interna que permite un nivel adecuado de competitividad al proyecto).

Oportunidades: son aquellos factores que resultan positivos, favorables, explotables, que se deben descubrir en el entorno en el que actúa la empresa, y que permiten obtener ventajas competitivas (Circunstancia externa al sector que lo favorece actual o potencialmente y que mejora la competitividad del mismo).

Debilidades: son aquellos factores que provocan una posición desfavorable frente a la competencia. Recursos de los que se carece, habilidades que no se poseen, actividades que no se desarrollan positivamente, etc. (Circunstancia interna que dificulta alcanzar un nivel adecuado de competitividad al proyecto).

Amenazas: son aquellas situaciones que provienen del entorno y que pueden llegar a atentar incluso contra la permanencia de la organización (Circunstancia externa al sector que lo debilita o perjudica su competitividad actual o potencial).

A continuación se detallan estas cuatro variables del análisis FODA aplicadas al caso Citrícola del Yaqui S.A. de C.V. :

Fortalezas:

- 1.- Unión de citricultores que permite un mayor volumen de ventas.
- 2.- Calidad en el fruto.
- 3.- Excelente base de clientes.
- 4.- Único estado libre de la mosca de la fruta y otras plagas.

Oportunidades:

- 1.- Exportación a Estados Unidos, Canadá y Europa.
- 2.- Cercanía de la frontera.
- 3.- Capacidad de crecimiento de los proyectos.
- 4.- Apoyos a la exportación (fletes y asesoría internacional).

Debilidades:

- 1.- Falta de recursos financieros.
- 2.- Falta de volumen de producción.
- 3.- Falta de mano de obra calificada para la pizca.
- 4.- Desunión entre sus integrantes.

Amenazas:

- 1.- Virus de la tristeza.
- 2.- Pulgón Café.
- 3.- Sequías.
- 4.- Importaciones de Estados Unidos y Brasil.

Como se puede observar, el diagnóstico del sector, apoyado a través del análisis FODA, le ha permitido Citrícola del Valle del Yaqui S.A. de C.V. actuar sobre las Fuerzas, Oportunidades, Debilidades y Amenazas a las que están expuestos sus agremiados, de tal forma que les permita potencializar las fuerzas y oportunidades, convertir las debilidades en fortalezas y estar preparado para afrontar las amenazas. Para concluir es importante resaltar que el sur del Estado de Sonora tiene una gran variedad de recursos naturales y un enorme potencial productivo y económico; esto representa un reto para los productores, las instituciones de fomento, instituciones educativas y de gobierno, para apoyar a la creación de empresas más competitivas en el entorno de la globalización, así como nuevas formas de negocio que incrementen la economía de la región y al mismo tiempo, contribuyan a preservar y mejorar el medio ambiente y los recursos naturales que ya han sufrido bastante, por lo tanto los agro negocios, son una excelente opción para cumplir con este reto.

En base a esta información se considera que para todo proyecto de agro negocios que se pretenda iniciar se debe de realizar un diagnóstico del sector y apoyarse en herramientas como el balance estratégico o análisis FODA, ya que con estos elementos, se podrá tener una visión del potencial de éxito del proyecto. En el sur del Estado de Sonora la agricultura está dejando de ser una actividad tradicional, ya que este sector está atravesando nuevamente por una fuerte crisis, ocasionada por la falta de agua, factores climatológicos, bajos precios, plagas por monocultivos, falta de tecnología, etc. lo que hace necesario que los agro negocios sean la alternativa para diversificar los giros comerciales, buscando opciones distintas a

las netamente agrícolas. El mundo está cambiando y Sonora también. Ante estas circunstancias es importante poder vincular los mercados mayoristas con las cadenas de valor de los agros negocios.

COMERCIO INFORMAL: UN ESTUDIO EN EL MUNICIPIO DE TEXCOCO, EDO. DE MÉXICO

Rebeca Teja Gutiérrez, Universidad Autónoma del Estado de México, CU UAEM Texcoco
Nidia López Lira, Universidad Autónoma del Estado de México, CU UAEM Valle de Chalco
Alejandro Barragán Ocaña, Universidad Autónoma del Estado de México, CU UAEM Valle de Chalco

RESUMEN

Se llevo a cabo un análisis socioeconómico de los tianguista en la ciudad de Texcoco, México, para identificar los factores que orillan a las personas al comercio informal. Mediante estadísticas descriptivas e historias de vida, se obtuvo que el 44% de los entrevistados incursionan en el ambulante por la falta de empleo, un 26% lo atribuye al bajo nivel de estudios y un 13% por no tener las competencias laborales y profesionales. Se encontró que los comerciantes informales de las edades entre 40 y 50 años de edad tienen un nivel básico de estudios (primaria) y los que oscilan entre 18 y 30 años de edad cuentan con secundaria y preparatoria, un problema que el gobierno Federal y Estatal deberá atender porque cada vez más jóvenes están participando en la economía informal del país.

Palabras Clave: Comercio informal, Tianguis, Situación socioeconómica.

INFORMAL COMMERCE: A STUDY IN THE MUNICIPALITY OF TEXCOCO, EDO. OF MEXICO

ABSTRAC

You carries out a socioeconomic analysis of the tianguista in the city of Texcoco, Mexico, to identify the factors that border people to the informal trade. By means of statistical descriptive and histories of life, it was obtained that 44% of the interviewees intrudes in the ambulante for the employment lack, 26% attributes it to the first floor level of studies and 13% for not having the labor competitions and professionals. It was found that the informal merchants of the ages between 40 and 50 years of age have a basic level of studies (primary) and those that oscillate between 18 and 30 years of age count with secondary and preparatory, a problem that the Federal and State government will assist because more and more young they are participating in the informal economy of the country.

JEL: L22, L23, L24, L25, L66

Key Words: Trade informal, theory of the informal trade and socioeconomic situation

INTRODUCCIÓN

Las estimaciones sobre el tamaño de la economía informal en México difieren ampliamente, no obstante, se reconoce que ésta ha crecido en los últimos tres años, y que es una parte importante de la economía tanto en la producción como en la generación de empleos. Los vendedores ambulantes, los trabajadores a domicilio, los vendedores en la vía pública son identificados como miembros del sector Informal. Este sector funciona con bajo nivel de organización, poca división del trabajo y capital, con mano de obra y tecnología poco calificada; los activos fijos pertenecen a los propietarios y pueden ser utilizados indistintamente por su empresa no constituida en sociedad o por el hogar, no existen garantías formales de contratación y pueden realizar transacciones y contraer pasivos sólo en nombre propio.

En México desde tiempos ancestrales existe el comercio informal, que ha recibido el nombre de “Tianguis”, el cual se instala en las calles de una ciudad, determinado día de la semana para ofertar toda clase de productos en cientos de puestos. El comercio informal es una de las actividades más notables de

la economía informal, la cual se lleva a cabo fundamentalmente a través del comercio callejero, los llamados vendedores ambulantes. Mucha gente de origen modesto, en su gran mayoría emigrantes del campo a la ciudad, tienen que dedicarse al comercio informal para así generar una actividad de subsistencia (Bustamante: 2006).

Se creía o se tenía la idea, que este tipo de comercio (el tianguis) como comercio tradicional, poco a poco se iría extinguiendo, para ser sustituido por “mercados más modernos” como son los centros comerciales y las cadenas de autoservicio. Cuestión que está en duda ya que se ha extendido y generalizado este espacio social (Contreras, 2007:9). Sin embargo, se sabe que el comercio informal fomenta la competencia desleal para el comercio establecido, el enriquecimiento ilícito de inspectores y líderes, la manipulación política, hace más sucia las ciudades, disminuye la fiscalización de impuestos y fomenta la delincuencia (Calderón, 2004: 164).

La cuestión, entonces es, por qué no ha desaparecido la actividad informal, qué factores sociales y económicos orillan a que las personas incursionen y participen en la economía informal del país. Y que se debe hacer desde las políticas públicas para combatir este problema. Al respecto, Maldonado y Hurtado (1997), precisan que todos los estudios que se han realizado sobre el tema, poco o nada han significado a la hora de tomar decisiones y de diseñar políticas públicas. Por la complejidad del fenómeno siempre se descuidan factores y aspectos fundamentales e importantes, ya que este fenómeno no puede ser estudiado ni resuelto sin la participación multidisciplinaria de antropólogos, sociólogos, economistas, urbanistas, planificadores, juristas, legisladores, educadores, entre otros. Además se debe de incluir a políticos, funcionarios públicos, empresarios privados, comerciantes formales e informales y al consumidor que, como usuario y co- responsable, también tiene algo que decir y hacer. Sin embargo, el apareamiento del tianguis se encuentra justificado por los mismos comerciantes del tianguis de Texcoco, que de voz comentaron:

“Este tianguis en sus inicios tuvo una particularidad, reunió a todas aquellas personas que no tenían un trabajo formal o que eran desempleados de todas partes cercanas a la ciudad de Texcoco, con un sólo objetivo, generar empleos a las familias con escasos recursos para poder vivir o sobrevivir ante las carencias económicas de la sociedad, sin mencionar que fue el único espacio que tuvieron las personas para los tiempos difíciles que vivía el país en cuestiones económicas, y es este mismo espacio el que les ofrece trabajo actualmente” (*Guillermo Vergara González, 2009.*)

De tal manera, que el crecimiento de la economía y el aumento de puestos ambulantes en la vía pública, es y seguirá siendo un problema que aqueja en su gran mayoría a los países sub desarrollados, debido a que existen factores sociales y económicos no solo del país sino del interior de cada familia afectadas por el desempleo y que se refugian en la economía informal. Dicho trabajo plantea los cimientos teóricos de lo que se entiende por sector informal, expone los factores sociales y económicos que orillan a los comerciantes a vender en la vía pública, así mismo, se proponen acciones para el Ayuntamiento del Municipio de Texcoco para consolidar cooperativas y asociaciones legalmente establecidas.

MÉTODOS Y MATERIALES

El enfoque de la investigación es cualitativo, con la aplicación de estadísticas descriptivas. La zona de estudio se localiza en la ciudad de Texcoco. El universo de estudio fueron los integrantes de los tianguista del mercado de los lunes, la cual lleva por nombre “Unión de Tianguistas Texcocanos San Antonio A. C.” La unidad de análisis fueron los aspectos socioeconómicos que orillan a las personas a fomentar el comercio informal. El instrumento de medición fue mediante un cuestionario con preguntas cerradas y la técnica de historias de vida. El estudio se dividió en tres fases: 1. Caracterización de los comerciantes, 2. Identificación de los agentes sociales y 3. Identificación de los agentes económicos.

RESULTADOS

La Unión de Tianguistas Texcocanos San Antonio A.C. no es una asociación legalmente constituida. Se recomienda establecer políticas públicas a través de programas de consolidación del comercio informal para llevar a cabo la legalización de este tipo de asociaciones y así controlarlos.

El 16% de los ambulantes se dedican a la venta de discos piratas, el 11% vende comida preparada y el 11% vende verduras frescas. El 6% vende chácharas (cosas usadas). Un 15% ofrece otros productos como ropa nueva, juguetes usados, cazuelas de barro, chiles secos, artículos de plástico, entre otros. Todos en forma desordenada. Para darle un plus al tianguis y de acuerdo a la Teoría de mercados, se sugiere que los puestos afines se establezcan en una sección, tal como se encontraría en una tienda de autoservicio, lo cual agilizaría las ventas, se evitarían las aglomeraciones, los robos de carteras, pero sobre todo, fomentaría la competitividad entre los comerciantes, en todos los aspectos: calidad, precio, tiempo, servicio y garantía.

El 63% son hombres y el 37% son mujeres. Se sugiere que los programas que se están recomendando se elaboren bajo la perspectiva de género con el fin de ser equitativos y dar las mismas oportunidades de éxito, ingresos y un estatus a las mujeres que se dedican al comercio informal.

La media y la moda de la antigüedad de los puestos es de entre uno y tres años. De manera que el gobierno deberá regular el crecimiento del ambulante, restableciendo la economía del país, donde se oferten mejores oportunidades de trabajo para los mexicanos.

El 38% de los comerciantes dedica su trabajo en un promedio de cuatro a seis días a la semana en diferentes zonas de la región de Texcoco. Es necesario que en cada zona donde se ha hecho costumbre el tianguis, se regulen y asignen espacios, con el fin de no obstaculizar y cuidar la limpieza de las vías públicas.

El 40% de los ambulantes pagan en promedio de \$5.00 a \$10.00 pesos por metro cuadrado por uso de la vía pública al H. Ayuntamiento. El 92% mencionó que sólo paga como impuestos la cuota por utilizar la vía pública, sin embargo, el 8% dice pagar impuestos como el IVA, IETU y otros. Se recomienda que esta cuota entre a Tesorería del municipio como pago de impuestos por el uso de la vía pública y se evite pagar directamente a los representantes del H. Ayuntamiento ya que sólo fomentan la corrupción y el enriquecimiento ilícito de éstos. Dentro de los estatus de las asociaciones, exigir el registro ante Hacienda como requisito para seguir vendiendo.

Más del 50% de los comerciantes se encuentran en un estatus de sobrevivencia, debido a que la media está entre una inversión de \$1,000.00 a \$2,500.00 pesos y obtienen un promedio de ingresos de \$1000.00 a \$3,000.00 pesos mensuales. El 89% de los ambulantes opinan que hay mayores ingresos en el comercio informal que en el formal. Es necesario fomentar el ahorro en los comerciantes en cajas de ahorros para la inversión, a través del programa de consolidación de las asociaciones.

Más del 50% de los comerciantes tienen entre 18 a 30 años de edad, y han dejado de estudiar para incursionar en esta actividad. Se recomienda implementar un programa de tutorías en los niveles básicos de educación, donde se les brinde asesoría en las áreas más difíciles y ayuda psicológica. Y que la asociación brinde ayuda monetaria mediante el otorgamiento de becas.

El 44% incursiona en el ambulante y lo atribuye a la falta de empleo, al escaso nivel de estudios y por no tener las competencias técnicas y profesionales; además comentan que porque no pagan impuestos. Se sugiere que a través de una política fiscal, establecer un programa donde se establezca el pago de

impuestos a través de una cuota fija mensual de acuerdo a sus ingresos y esa recaudación se quede en los municipios para que se aplique en obras públicas, educación y seguridad en las comunidades.

Los beneficios del ambulante son mayores ingresos, disponibilidad de tiempo, ingresos íntegros sin descuentos de impuestos, con la salvedad de que no cuentan con prestaciones sociales. Es necesario establecer un programa de competencias laborales técnicas, como un servicio que den las asociaciones de tianguistas a sus agremiados.

El 46% contrata personal como ayudante, siendo el 23% familiares, el 22% amigos y el 1% otros. Y el 31% paga a sus trabajadores por semana. Una cantidad promedio de \$50.00 a \$100.00 pesos. Se recomienda la participación del gobierno en sus tres niveles, para recuperar la vía pública y garantizar condiciones mínimas de orden urbano que evite la corrupción.

El 82% atribuye como causante del ambulante a los excesivos impuestos ya que no alcanza el dinero para vivir. De tal manera que las autoridades hacendarias deben regular los excesos elevados y complicados cálculos de impuestos y manejar sólo una tasa de acuerdo a sus ingresos, y reducir los trámites administrativos y de recaudación.

CONCLUSIONES

El comercio informal bajo los postulados de la teoría del Agente principal y de los Sistemas mundiales, es un problema que radica en las escasas oportunidades de trabajo con mejores condiciones salariales y prestaciones sociales en México, por lo cual los trabajadores prefieren ser independientes y dedicarse al comercio informal. Tomando en cuenta la Teoría de mercados y la Teoría de la venta móvil al menudeo, es necesario establecer políticas públicas a través de un programa de sustentabilidad y reubicación de los tianguis.

INTEGRACIÓN DE MERCADOS ACCIONARIOS LATINOAMERICANOS: ANÁLISIS DE FACTORES DE RIESGO EN COMÚN

Yaneth Patricia Romero Alvarez, Instituto Tecnológico Metropolitano (ITM), Medellín, Colombia

RESUMEN

En este trabajo se analizan los seis más importantes mercados accionarios Latinoamericanos, desde sus rendimientos y riesgos históricos, con el fin de explorar los posibles beneficios de una eventual integración entre dicho mercados similar a la zona Euro. Para ello se investigaron los rendimientos históricos de las cotizaciones de las 15 acciones más negociadas en 6 países suramericanos (Argentina, Brasil, Chile, Colombia, México y Perú) en el período de enero de 2008 a febrero de 2012. El proceso de integración de dichos países fue analizado bajo hipótesis conjuntas mediante un análisis de los factores comunes sobre las acciones de dichos países partiendo del método CAPM. Para modelar procesos de los países se observaron las acciones más bursátiles, se construyó la tasa de retorno de los portafolios, y de sus excesos de retorno comparándolos con la tasa libre de riesgo de EEUU con el fin de estandarizarlos y se realizó un análisis de la estructura de correlación en cada país y entre ellos. Mediante un análisis de varianza de los valores propios obtenidos mediante el análisis factorial, específicamente el de componentes principales, se determina el número de factores de riesgo compartidos y los beneficios de una posible integración financiera.

PALABRAS CLAVE: Análisis factorial, Análisis de componentes principales, integración de mercados de capitales, CAPM.

INTEGRATION OF LATIN AMERICAN STOCK MARKETS: ANALYSIS OF COMMON RISK FACTORS

ABSTRACT

This paper analyzes the six major Latin American stock markets, from its historical returns and risks, to explore the potential benefits of a possible integration between the markets like the Euro zone.

For do this we investigated the historical returns of the prices of the 15 most traded stocks in six South American countries (Argentina, Brazil, Chile, Colombia, México y Peru) in the period January 2008 to February 2012. The process of integration of these countries was analyzed under joint hypothesis through an analysis of common factors on the actions of these countries based on the CAPM.

To model processes of the countries were observed more stock shares, we built the rate of return of portfolios, and their excess returns compared with the risk-free rate of U.S. to standardize and an analysis of the correlation structure in each country and each other. An analysis of variance of the values obtained by factor analysis, specifically principal components determining the number of shared risk factors and potential benefits of financial integration.

KEYWORDS: Factor analysis, principal component analysis, integration of capital markets, CAPM.

INTRODUCCIÓN

La integración financiera de los mercados de capitales representa una importante tendencia a nivel mundial en las últimas décadas, siendo el principal ejemplo la Unión Europea. Este tipo de integraciones permiten que las economías que la conforman aceleren el crecimiento de sus economías, mejoren la transferencia del riesgo, y se disminuyan los costos transaccionales (Corbo, 1997). Así mismo, desde hace ya varias décadas en Latinoamérica se han venido realizando progresos hacia una mayor integración económica, a través de convenios multilaterales, políticas regulatorias e incentivos de intercambio de bienes y de flujos de capital. Como un paso muy importante desde el 2011 se dio comienzo a la integración de los mercados bursátiles de Colombia, Chile y Perú en el denominado Mercado Integrado Latinoamericano –MILA-. Con MILA se busca crear un mercado único en el que los agentes de cada uno de los tres países puedan negociar acciones de los otros participantes sin necesidad de recurrir a una firma comisionista en los mismos, sino a través de su comisionista local, empleando una misma plataforma tecnológica y un mismo conjunto de reglas, lo que permite ampliar el abanico de opciones a los inversionistas. Se espera que esta integración traiga beneficios para los tres países, en forma de mayores alternativas de inversión, mejores posibilidades de diversificación del riesgo sistémico, mayor profundidad, mayor liquidez y menores costos de transacción (Agudelo & Gutiérrez, 2011).

La integración perfecta entre un grupo de mercados es entendida generalmente como la ausencia de barreras para las transacciones entre los mismos. Estas incluyen tarifas, impuestos, restricciones en las posiciones de activos extranjeros, costos de información o cualquier otro impedimento económico que dificulte la negociación de títulos entre los mercados (Ayuso & Blanco, 2001). El concepto de integración de los mercados fue definido formalmente por primera vez por Cournot, como “un territorio de cuyas partes están tan unidos por las relaciones de comercio sin restricciones que los precios tienen el mismo nivel en todas partes con facilidad y rapidez”. (Federico, 2006). Con una integración perfecta no existen oportunidades de arbitraje y prevalece la ley del mismo precio. Por su parte, en los mercados financieros la integración implica que los activos de idénticos tipos de riesgo presentan similares rendimientos esperados independientes de su mercado de origen. De esta manera, los costos de las operaciones de capital disminuyen y aumenta la inversión. (Bekaert & Harvey, 2003). Como consecuencia, la integración financiera es el estado en el que diferentes mercados de capitales brindan a los inversionistas, tanto locales como extranjeros, oportunidades de inversión en un portafolio más amplio de activos que comparten factores de riesgo en común, sin dar lugar a posibilidades de arbitraje, pero permitiendo mayor diversificación de los riesgos.

Aunque MILA dio inicio desde Mayo de 2011, no es posible evaluar el efecto del mismo por dos razones: primero, no se cuenta hasta el momento con una historia suficientemente amplia para evaluar los efectos de dicha integración y segundo, a la fecha actual, el volumen de transacciones entre los tres mercados es una mínima fracción del volumen negociado dentro de cada uno, reflejando que el proceso apenas es incipiente. En anticipación a una mayor integración de los mercados latinoamericanos, esta ponencia pretende establecer mediante un método estadístico de análisis de factores, si existen factores de riesgo común en los retornos de los 6 mayores mercados accionarios de la región: Colombia, Chile, Perú, México, Argentina y Brasil de forma tal que se pueda establecer las variabilidades que tienen en común sus activos. Con este análisis, se tendría una mejor idea de los beneficios de una posible integración de mercados de capitales latinoamericanos, si se encuentra que factores conjuntos son más explicativos de los rendimientos que los factores propios de cada país por separado.

La metodología planteada se basa parcialmente en Heston y Rouwenhorst (1995), quienes parten de la premisa de que dos mercados son integrados si la rentabilidad de los activos es la misma si se encuentran en las mismas condiciones de riesgo. Estos autores probaron que era posible medir la integración de los mercados de capitales de dos países, examinando los retornos de dos portafolios de acciones poniendo a prueba la hipótesis nula de integración perfecta, que implica que la dispersión en los rendimientos

corresponde a la variación de un solo factor, en este caso una prima de riesgo. Mediante el método de máxima verosimilitud analizaron las correlaciones de los mercados de capitales de EEUU y 12 países Europeos para analizar su posible integración, encontrando que existen factores en común entre ellos pero no idénticamente distribuidos y de fuentes diferentes (Heston, Rouwenhorst, & Wessels, 1995). Más recientemente, Morelli y cols (2010) examinaron la integración de 15 países europeos que integran la Unión Europea bajo el contexto de un modelo de valoración de activos CAPM, asumiendo que los retornos siguen una estructura con k factores, encontrando que éstos países comparten varios factores en común y que si existe un grado de integración entre ellos (Morelli, 2010).

En este estudio se analiza el beneficio de una potencial de los mercados de capitales de países latinoamericanos mediante la exploración de la existencia de factores comunes, utilizamos el método estadístico de Análisis Factorial cuyo propósito es “describir la relación de covariación entre múltiples variables en términos de pocas variables no observables mediante la definición de una serie de estimación de las dimensiones subyacentes llamadas factores. La estimación de los factores se hace a través de algunos métodos como el de componentes principales, de factores principales y el de máxima verosimilitud” (Díaz M., 2002), en otras palabras permite explicar un conjunto de variables por uno mas pequeño compuesto de factores.

DATOS, METODOLOGÍA Y RESULTADOS

Para este estudio se utilizaron los históricos de los precios de las 15 acciones más negociadas en las bolsas de valores de Colombia, Chile, Perú, México, Argentina y Brasil para el periodo de Enero de 2008 a febrero de 2012. Para cada una de estas acciones se construyó una matriz de retornos y de excesos de retorno utilizando la tasa libre de riesgo de EEUU. La tabla 1, muestra los estadísticos descriptivos para cada país. Los históricos de los precios fueron tomados de Bloomberg.

Tabla 2: Estadísticos de fiabilidad Alfa de Cronbach inicial por país

Tabla 1: Estadísticos descriptivos							
	Media	Desv. típ.	Varianza	Asimetría		Curtosis	
	Estadístico	Estadístico	Estadístico	Estadístico	Error típico	Estadístico	Error típico
Argentina	-0,04%	1,99%	3,963	-0,394	0,076	7,219	0,151
Brasil	-0,03%	3,27%	10,7	0,158	0,076	9,479	0,151
Chile	0,01%	1,82%	3,323	-0,124	0,076	8,92	0,151
Colombia	0,05%	1,71%	2,929	-0,275	0,076	7,884	0,151
México	-0,03%	2,44%	5,96	-0,34	0,076	14,43	0,151
Perú	-0,01%	2,00%	3,982	0,427	0,076	12,324	0,151

Fuente: Elaboración propia.

Antes de hacer cualquier tipo de análisis factorial, es necesario determinar si todas las variables son pertinentes para dicho análisis. Mediante el análisis de fiabilidad, más concretamente el estadístico del Alfa de Cronbach, se puede determinar si alguna de las variables es redundante dentro del modelo. El Alfa de Cronbach es una medida de fiabilidad e indica el límite inferior para la verdadera fiabilidad de la fuente, entre más grande sea éste mejor, así por ejemplo, la literatura indica que un valor de este estadístico debe ser superior a un límite mínimo de fiabilidad de 0,5; solo para valores superiores a 0,9 se indica una fiabilidad excelente. Si al eliminar una variable el valor del estadístico mejora entonces mejor será el ajuste de los datos (Ledesma, Molina Ibañez, & Valero Mora, 2002).

Para hacer este análisis se utilizó el programa SPSS encontrando los siguientes estadísticos de fiabilidad (tabla 2) para cada uno de los países:

Tabla 2: Estadísticos de fiabilidad Alfa de Cronbach inicial por país

Argentina	Brasil	Chile	Colombia	México	Perú
0,91	0,977	0,924	0,956	0,929	0,849

Fuente: Elaboración propia

Sin embargo dicho estadístico se mejoró, descartando acciones con datos atípicos en la muestra de cada país resultando los datos definitivos señalados en la tabla 3 con un alfa de Cronbach.

Tabla 3: Estadísticos de fiabilidad Alfa de Cronbach final por país

Argentina	Brasil	Chile	Colombia	México	Perú
0,915	0,979	0,946	0,964	0,938	0,885

Fuente: Elaboración propia.

Para poder predecir la relación entre el rendimiento y el riesgo de un solo portafolio suramericano, partimos del modelo CAPM que permite predecir la relación esperada entre el riesgo y el rendimiento esperado de equilibrio en los activos de riesgo y el cual es una aplicación específica de un modelo factorial. Según el CAPM, existe una relación directa entre el retorno de un activo y sus factores de riesgo, dada por:

$$R_t = \beta R_{Mt} + e_t \quad (1)$$

Donde R_t representa el retorno esperado de los activos, β refleja la sensibilidad de los retornos a los riesgos no diversificables y R_{Mt} los excesos de retorno del mercado en su conjunto. Para este estudio y de forma matricial establecemos la ecuación de forma matricial:

$$R_t = \beta R'_{Mt} + e_t \quad (2)$$

Donde R_t es un vector de $1 \times n$ columnas de los excesos de retorno esperado de las acciones de un portafolio latinoamericano en el tiempo t , β es una matriz $n \times k$ de coeficientes en los K -factores para cada una de los n países, y R'_{Mt} es un vector columna traspuesto de factores comunes en el tiempo t , generados desde el análisis factorial y e_t es un vector de $n \times 1$ columna de términos propios relacionados con cada una de las n acciones en el tiempo t . Se asume que los términos son independientes de los factores, $cov(R_{Mt}, e_t) = 0$ y distribuidos uniformemente mediante una distribución normal con media cero $E(e_t) = 0$ y matriz de covarianza D en el tiempo, $cov(e_t, e'_t) = \sigma^2 I = D$. La matriz de covarianza D se asume que es diagonal y proporcional a la matriz de identidad I .

Para analizar entonces la existencia de factores comunes, utilizamos el método estadístico de Análisis Factorial específicamente el análisis de componentes principales ya que aunque el más utilizado es el método de Máxima verosimilitud, uno de los principales requisitos que exige este último, es que los datos a analizar sigan una distribución normal, lo cual, de acuerdo a los resultados de la prueba Kolmogorov-Smirnov señalados en la tabla 3 no se da con los excesos de retorno de los países latinoamericanos.

Tabla 4: Prueba de Kolmogorov-Smirnov para una muestra

		Argentina	Brasil	Chile	Colombia	México	Perú

El análisis factorial debe tener suficientes correlaciones para poder aplicarse. Si no hay un número sustancial de correlaciones mayores de 0,5 entonces es probablemente inadecuado. Las correlaciones entre variables pueden ser analizadas mediante el cálculo de las correlaciones parciales de tal manera que si las correlaciones parciales son bajas, entonces no existen factores subyacentes verdaderos y el análisis factorial es inapropiado. La matriz de correlaciones para los rendimientos de los índices accionarios de cada país en el período muestreado se presenta en la tabla 4.

Tabla 4: Matriz de correlacionesa

		Argentina	Brasil	Chile	Colombia	México	Perú

El Test de esfericidad de Bartlett es el test estadístico que permite verificar si el coeficiente de correlación simple es significativamente diferente de cero (0) y sigue una distribución chi-cuadrado. Contrasta si la matriz de correlaciones es la matriz identidad, para valores bajos (<0,5) los datos son inadecuados, proporcionando así información acerca de la validación de los modelos de análisis factorial (Ávila Zarza, 2007). De acuerdo a la tabla 5, la medida KMO es de 0,913 indicando que los datos son estadísticamente adecuados.

Tabla 5: KMO y prueba de Bartlett

Analizados cada uno de los países por separado encontramos que sólo se retiene un factor en común que explique la variabilidad de los datos. La Figura 1 de sedimentación muestra una sola clara ruptura entre la pendiente de los factores más importantes y el descenso gradual de los restantes.

Figura 1: Todos los países

Fuente: Elaboración propia

Analizados los países de forma individual, existe un factor común que comparten sus activos, en este caso de las 15 acciones analizadas que explican el porcentaje de la variabilidad de los retornos, de acuerdo a los datos de la tabla 6. Solo Perú obtuvo como resultado dos factores por la extracción de componentes principales, lo que quiere decir que para este país, los retornos de sus acciones son explicados por dos factores diferentes, uno que explica el 48,38% y otro del 10,416%.

Tabla 6: Porcentaje de varianza explicada por cada factor por país

	% de la varianza	% acumulado para cada país
Argentina	48,783	48,783
Brasil	77,737	77,737
Chile	61,148	61,148
Colombia	70,151	70,151
México	56,752	56,752
Perú	48,34	58,756
	10,416	

Fuente: Elaboración propia.

En términos de una potencial integración, es decir, analizando los factores en común que expliquen el conjunto de datos de los retornos de un portafolio latinoamericano diversificado encontramos que existe un factor en común que explica el 70,418% de la varianza conjunta de todos los países siendo así significativa la interrelación entre los factores individuales de variabilidad en los retornos de Argentina, Brasil, Chile, Colombia y Perú y brindando confianza en los resultados que se pueden esperar de dicha integración.

En resumen, las cargas factoriales encontradas en la tabla 7 explican la función o influencia de cada país en un modelo único de relación entre riesgo y rentabilidad:

Tabla 7: Matriz de componentes

	Componente 1
Argentina	,822
Brasil	,880
Chile	,833
Colombia	,816
México	,895
Perú	,783

Método de extracción: Análisis de componentes principales. Fuente: elaboración propia.

Dichas cargas factoriales, superiores a 0,5 para todos los países permiten entonces demostrar la importancia de la participación de dichos mercados en un solo Mercado integrado que permita a los inversionistas diversificar su riesgo y obtener beneficios de inversiones transfronterizas, sin restricciones y sin dar lugar al arbitraje

CONCLUSIONES

Al analizar los mercados de capitales de cada uno de los países los factores únicos que explican la varianza en Argentina y Perú la explican en una menor proporción que en países como Brasil y Colombia. En caso de un mercado accionario latinoamericano integrado, la variabilidad de los retornos estaría explicada por una carga factorial en un 70,418%, lo cual indica una alta posibilidad de diversificación de portafolios.

Este modelo explica entonces los factores de riesgo asociados a portafolios de una posible comunidad latinoamericana, aunque se espera que se determinen mas modelos de medición de integración financiera que permitan proyectar los factores de riesgo que comparten los países y establecer con éxito la estabilidad de las integraciones y permitir así a inversionistas tanto nacionales en cada país como extranjeros, la realización de operaciones de contado sobre inversiones en acciones inscritas en la Bolsa de Valores de Colombia (BVC), Bolsa de Comercio de Santiago (BCS) en Chile, la Bolsa de Valores de Lima (BVL) en Perú, la Bolsa Mexicana de Valores (BMV), la Bolsa de Comercio de Buenos Aires (BCBA) y la Bolsa de Valores de Brasil (BM&FBOVESPA).

Luis Rubio Andrada, Universidad Autónoma de Madrid

María Soledad Celemín Pedroche, Universidad Autónoma de Madrid

ABSTRACT

La incorporación masiva de la mujer al mercado laboral y los cambios acaecidos en los últimos años, tanto en la economía mundial como en el propio perfil profesional de la mujer, deberían propiciar el ascenso de la misma a puestos directivos en las cúpulas de las empresas. Sin embargo, diversos autores y autoras están denunciando que esta situación no se está produciendo sin que existan razones fundadas que lo justifique. Esta investigación, de forma exploratoria, analiza la situación de las cadenas hoteleras a nivel mundial proporcionando unos resultados que difieren de los encontrados por la investigación previa y que pueden servir de base para analizar el comportamiento directivo de las mujeres.

Palabras Clave: mujeres directivas, cadenas hoteleras, ápice estratégico.

INTRODUCCION

Diversos estudios han puesto de manifiesto el cambio que se ha producido en el mercado de trabajo debido a la incorporación de la mujer de forma masiva desde los años 70, donde ha alcanzado en la mayoría de países desarrollados alrededor del 50% de la fuerza laboral (Hopkins et al., 2008). Sin embargo no ha sido hasta principios del siglo XXI cuando la investigación sobre el papel de la mujer en la empresa comienza a cobrar relevancia (Marlow et al., 2009) por lo que se puede considerar que en la actualidad se encuentra la teoría de la dirección de empresas desde la perspectiva de género en un estado de construcción creciente.

Esta entrada al mercado de trabajo se ha visto favorecida por una mayor y mejor formación de las mujeres en las últimas décadas que se ha inclinado favorablemente, ya que son éstas las que ocupan mayoritariamente las aulas universitarias (de Bruin et al., 2007; Bennett, 2009; Rodríguez-Antón et al., 2009).

Por eso la investigación previa ha resaltado que las capacidades adquiridas por las mujeres a través de su formación y el porcentaje de la fuerza laboral que representa no se corresponde con la realidad del papel de liderazgo que juegan en las organizaciones, siendo muy baja en relación con estos dos factores - educación y tamaño de la fuerza laboral- (Appelbaum et al., 2003; Alonso-Almeida, 2011). De hecho frente a las voces que piden una mayor igualdad en el desarrollo profesional entre hombres y mujeres, se ha encontrado que delante de las mujeres se encuentra un techo de cristal (Broadhidge & Hearn, 2008) que impide su ascenso en base a un supuesto peor rendimiento y compromiso con la empresa por sus distintas necesidades, aludiendo a su maternidad, crianza de sus hijos y otras responsabilidades como el cuidado de enfermos y mayores. (Wood & Viehland, 2000; O'Connor, 2001; Wise & Bond, 2003; Mulvaney et al, 2007).

Por estas razones, la posición de las mujeres a los puestos de alta dirección de las empresas a nivel mundial, en la actualidad aunque creciente, todavía es un porcentaje bajo a pesar de las políticas

nacionales e internacionales para promover la igualdad a dichos puestos (Booth & Bennet, 2002; Davidson & Burke, 2004; Browell & Walsh, 2008).

Sin embargo, algunos sectores parecen ser más permeables a la incorporación de mujeres a los puestos de alta dirección a nivel mundial. Uno de esos sectores es el Turismo. Este sector incorpora a los consejos de administración mujeres hasta 10 puntos por encima de la media mundial (Alonso Almeida, 2009). Este sector es importante dado que es el sector de servicios más grande del mundo y la presencia de mujeres es de un 60% a nivel mundial (WTO, 2012).

A pesar de que se trata de un sector más igualitario que otros, hasta ahora no se ha realizado un análisis exploratorio sobre la posición de las mujeres en los puestos de alta dirección de las cadenas hoteleras a nivel mundial. Por eso, la realización de un estudio de este tipo contribuye a fomentar el conocimiento de la dirección de las empresas desde la perspectiva de género de varias maneras.

El trabajo se estructura a continuación en cuatro partes. En primer lugar, se pretende hacer una recopilación del estudio de la literatura previa sobre mujer y empresa. En segundo lugar, se presentan la muestra utilizada. En el siguiente apartado se explican y discuten los resultados obtenidos. Finalmente, se finaliza con conclusiones, recomendaciones prácticas para el sector y futuras líneas de investigación.

MARCO TEÓRICO Y CONCEPTUAL

Mujer y Empresa: ¿Donde nos encontramos?

Los fundamentos de la situación actual de la mujer en la empresa se pueden resumir siguiendo a Goodman et al. (2003). Según estos autores el poder en las empresas ha estado asociado con el género masculino. Las formas hegemónicas de masculinidad que se observan en la sociedad y en las empresas modernas derivan del crecimiento del modelo de economía capitalista, el cual integró los modelos masculinos predominantes en otros ámbitos del poder como la política. Este modelo se caracteriza por una rígida división por géneros del trabajo, modelos de gestión patriarcales, diferencias simbólicas de género y una gran distancia emocional entre hombres y mujeres. A pesar de esta situación poco ventajosa para las mujeres, su incorporación al mercado de trabajo en los años setenta buscaba revertir la situación de subordinación al hombre y una vida dedicada al hogar, impulsada por el resurgimiento de los movimientos feministas y otros movimientos de protesta social que buscaban cambiar las condiciones de vida de colectivos invisibles hasta ese momento (Galvez & Torres, 2010). Pero esta incorporación al mercado de trabajo de las mujeres se hizo en los nuevos sectores emergentes de servicios, en las industrias más maduras como la textil y en las industrias más atrasadas en las nuevas economías exportadoras.

Por lo tanto, a pesar de las voces críticas, Galvez & Torres (2010) afirman que la incorporación al mercado de trabajo de la mujer no supuso una amenaza para los hombres al hacerlo en sectores diferenciados y de forma segregada. De esta forma se construyó un modelo masculino de mercado laboral y un modelo femenino diferenciado. Así, los hombres ocuparon los puestos de poder de las empresas y se encargaron de establecer reglas no escritas, ni formales por las cuales los grupos de poder se debían seguir manteniendo sin cambios. De esta forma se creó una barrera invisible que impedía, especialmente, el ascenso hacia arriba en vertical a las mujeres a los puestos de poder de las empresas a partir de un determinado nivel jerárquico. A esta barrera o techo se la denominó el "techo de cristal -glass ceiling-. Este modelo persiste en la actualidad obligando a las mujeres que desean ascender a los puestos de poder en la empresa a adaptarse al mismo (Ocklay, 2000; Broadhidge & Hearn, 2008).

Así parece que el líder ideal está representado por las características que poseen la mayoría de los hombres lo que Schein llama "think-manager; think-male" efecto. Lo que parece que califica a los

hombres como más capacitados para ser líderes. Estos estereotipos continúan asociados a la función de dirección y a la preferencia de hombres en estos puestos frente a las mujeres, lo cual actúa como una barrera invisible -techo de cristal- que dificulta a las mujeres su ascenso en vertical en las organizaciones (Schein, 2007).

Como afirman Eagly & Sczesny (2009) aunque cada vez menos personas responden que los hombres están más capacitados que las mujeres para ocupar puestos de liderazgo pero "*la existencia de esa minoría crea barreras para la igualdad de género*" en todos los ámbitos de la vida económica y social. Ya que siguiendo a estos mismos autores esta actitud pudiera producir un comportamiento que se traduciría en un menor acceso a puestos de responsabilidad para las mujeres y un trato discriminatorio para las mujeres que lograrse alcanzar tales puestos.

Mientras que durante muchos años se ha premiado las características masculinas en la forma de hacer negocio, en la actualidad la globalización, la focalización en el cliente, la búsqueda de nuevos segmentos de mercado y otros cambios en el entorno como preocupación por el medioambiente, la calidad, la responsabilidad social y la necesidad de relacionarse con todos los grupos de interés de la empresa, parecen marcar la necesidad de nuevas capacidades para las personas que dirigen las empresas dando paso a lo que se ha llamado el liderazgo transformacional, un comportamiento donde priman las capacidades consideradas femeninas, más acordes para entender los cambios que se producen en los consumidores (Schein, 2007; Schaap et al, 2008; Eagly & Sczesny, 2009). Otros estudios posteriores también sugirieron que sería beneficioso para las empresas incorporar mujeres a los puestos de poder de las empresas (Helgesen, 1990; Driscoll et al., 1993; Helgesen, 1995), por su análisis de la experiencia de mujeres que habían alcanzado puestos de responsabilidad en la empresa. De esta forma se puso la base para que comenzase lentamente a resquebrajarse este techo invisible y algunas mujeres pudieran alcanzar algunas posiciones de liderazgo en las empresas (Goodman et al., 2003; Adams et al., 2007).

La estructura organizativa de la empresa

Adicionalmente, también se ha criticado que las estructuras organizativas tienen varias barreras en su diseño que impiden a las mujeres alcanzar una situación de equidad. Existen rigideces asociadas a los principios de diseño en vertical, en horizontal y, especialmente, en los principios de equilibrio que impiden a las mujeres tener visibilidad en la organización y que por lo tanto perpetúan una serie de prácticas en contra de las mujeres como el mantenimiento de los estereotipos masculinos, la no valoración de lo que hagan las mujeres no importa lo que sea *-double bind-*, el estilo de comunicación masculino, la preferencia por mantener los valores tradicionales masculinos y las redes informales de hombres que luchan por mantener su status quo (Ocklay, 2000). Además, la falta de flexibilidad organizativa hace que las empresas no hayan sido capaces de adaptarse a la realidad existente en la economía actual y aprovechar la oportunidad de desarrollar las capacidades de las mujeres para su propio desarrollo. En este sentido, es muy importante que las organizaciones sean capaces de incorporar la atención a la diversidad a su estilo de dirección. Dicho de otra forma, las empresas deben asegurar la igualdad de oportunidades entre géneros, así como permitir y facilitar implicaciones, intensidades y compromisos distintos de sus trabajadores y trabajadoras en función de las situaciones o estados diversos que les sean intrínsecos o en los que éstos se encuentren.

Dentro de cualquier cadena hotelera existen cinco elementos que configuran su estructura organizativa (Mintzberg, 1984; Mintzberg, 1992 y Rodríguez Antón y Alonso, 2008). El primero, se corresponde con el denominado Ápice estratégico o Alta dirección. En esta posición se encontrarían los puestos más elevados del organigrama de una cadena como son el Presidente, el Chief Executive Officer (CEO), los Vicepresidentes y los Miembros del Comité de Dirección. En el segundo se encuentra la Línea media, que es la parte medular de la cadena; en ella se encontrarían las personas que ocupan los puestos de Chief Revenue Officer (CRO), Chief People Officer (CPO), los Directores de las Áreas Funcionales del Grupo, los Directores de las Zonas en las que actúa la cadena, los Directores de las Áreas o tipos de negocio que

desarrolla y los Directores de las distintas marcas que configuran la cadena. En la tercera, llamada Tecnoestructura, se encontrarían los puestos que pretenden normalizar y controlar los procedimientos de la cadena; concretamente estarían en esta posición las personas que desempeñaran el puesto de Controller. La cuarta posición estaría configurada por el denominado Staff de apoyo, y en él se encontraría el puesto de Assistant. La quinta, denominada Núcleo de operaciones, estaría formada por personal de apoyo, no directivo, que tiene como misión desarrollar actividades básicas para el negocio hotelero. Por último, se podría crear un último grupo, tal y como Mintzberg (1992) considera, que son los propietarios a través del Consejo de Administración.

Pues bien, las personas que ocupan cualquiera de estos puestos, salvo el Núcleo de operaciones, son directivos y desempeñan un papel trascendental en la elección de la estrategia y la política de la cadena hotelera. Por ello, se ha considerado que una mujer es directiva en una cadena hotelera si ocupa cualquiera de las cinco posiciones de dirección anteriormente consideradas. Dada la variedad de puestos que en la realidad ocupan las mujeres en la dirección de las cadenas hoteleras, hemos agrupado todos esos puestos en cinco categorías para facilitar su estudio. Así mismo, vista Dada la importancia que tienen los puestos del Ápice estratégico, hemos diferenciado esta categoría de las demás para profundizar en la importancia que están adquiriendo al dirigir una cadena.

MUESTRA

El presente estudio se ha empleado aplicado a aplicado a una base de datos elaborada sobre la información cuantitativa de número de hoteles y número de habitaciones que poseen las grandes cadenas hoteleras mundiales publicada en Hotels Magazine (www.hotelsmag.com) y sobre la publicada que publican en sus respectivas páginas web por estas cadenas relativa a sus organigramas y puestos de dirección.

Concretamente, se ha trabajado con una subpoblación de 113 grandes cadenas hoteleras mundiales, de las 325 que aparecen en Hotels Magazine, para las que se ha podido obtener información, a través de su página web, de los niveles superiores de su estructura organizativa personalizada para el año 2011.

RESULTADOS

El análisis descriptivo realizado revelo que de las cadenas hoteleras 81 son americanas, 18 europeas, 13 asiáticas y una africana (ver tabla 1)

Tabla 1. Distribución de las cadenas hoteleras por continentes.

	Continente	N	Porcentaje
Número de grandes cadenas hoteleras que configuran la muestra	Europa	18	15,9%
	Asia	13	11,5%
	África	1	0,9%
	América	81	71,7%
	Total	113	100,0%

En cuanto a países, Estados Unidos es el país más representado de la muestra con un 69% de las cadenas analizadas, seguido por el Reino Unido y China con un 3,5% y España, Francia y Japón con un 2,7%, respectivamente

El porcentaje medio de mujeres directivas sobre el total de puestos directivos -hombres y mujeres- es notoriamente superior en América, con un 20,34%, seguido por Europa y Asia con un 13,69 y un 13,5%, respectivamente. Sin embargo, la desviación típica de América (17,2) es muy superior a las de Europa

(10,91) y Asia (11,79), que son muy parecidas. Por ello, es interesante efectuar un análisis del coeficiente de variación para poder efectuar una comparativa de la dispersión relativa y de la representatividad de las medias. Dado que tanto el coeficiente de variación obtenido para América (0,85), Europa (0,80) y Asia (0,87) son bastante elevados -indicando dispersiones relativas elevadas-, las medias no representan muy bien los valores obtenidos por continentes. La distribución que siguen estos resultados son similares a los que se habían encontrado en la presencia de mujeres en los consejos de administración de las cadenas hoteleras a nivel mundial (Alonso-Almeida, 2009), sin embargo la presencia de mujeres en los puestos directivos es superior a la de los consejos de administración y a la que otros estudios habían reportando con anterioridad en el sector hotelero (Brownell y Walsh, 2008).

En cuanto a la presencia de mujeres directivas en el *Ápice estratégico*, el continente americano ocupa una posición de privilegio pues el 53% de las cadenas analizadas cuenta con presencia de mujeres en el *Ápice estratégico*. Mucho más atrás se encuentran Europa con un 28% y Asia con un 15%. (ver tabla 2). Estos resultados indican que -aunque de manera lenta- algunas mujeres consiguen romper el techo de cristal (Goodman et al., 2003; Adams et al., 2007).

Tabla 2. Distribución de mujeres directivas por continente.

	Continente		Estadístico
Mujeres directivas	Europa	Media	13,69
		Desv. típ.	10,91
	Asia	Media	13,50
		Desv. típ.	11,79
	América	Media	20,34
		Desv. típ.	17,20
Mujeres en el <i>Ápice estratégico</i> (1)	Europa	Media	0,28
		Desv. típ.	0,46
	Asia	Media	0,15
		Desv. típ.	0,38
	América	Media	0,53
		Desv. típ.	0,50

(1) Respecto a los valores de la media y la desviación típica relativas a la parte de la tabla de mujeres en el *Ápice estratégico*, dado que fueron codificadas como 0 (no presencia de mujeres en el *Ápice estratégico*) y 1 (presencia), esos valores equivalen a la proporción de mujeres en dicha posición que, multiplicados por cien, se convierten en porcentaje.

Con el objetivo de determinar si el tamaño es un factor de contingencia que afecta a la participación de las mujeres en la dirección de las grandes cadenas hoteleras mundiales, hemos estructurado la muestra en cuatro grupos. En el primero se encuentran las cadenas hoteleras incluidas entre las 25 mayores, en el segundo las incluidas en las 25 siguientes, y así sucesivamente, salvo en el último grupo, que estará formado por 38 grupos hoteleros. Considerando esta segmentación, el mayor porcentaje de mujeres directivas se encuentra en el último segmento considerado, es decir, en el las de inferior tamaño, con un 23,93%, más del doble que en el segmento de las mayores cadenas, que registraron un 11,50% de media.

Sin embargo, si consideramos única y exclusivamente, las mujeres que se encuentran en el *Ápice estratégico*, el porcentaje de cadenas hoteleras de los que se encuentran en el primer segmento que cuentan con mujeres en esa posición es del 52%, al igual que el tramo de las cadenas situadas entre el número 26 y el 50, muy por encima del siguiente tramo –en el que sólo un 28% de las cadenas cuentan con ellas- y algo superior al segmento inferior, en el que un 45% de las cadenas poseen mujeres en esa posición de privilegio.

Estos resultados proporcionan una doble visión. Por una parte las mujeres parece que ascienden en la línea jerárquica en las empresas turísticas de menor tamaño (Danes et al., 2007; Alonso-Almeida, 2011).

Por otra parte, parece que en las empresas que consiguen un puesto directivo se reconoce su valía profesional ocupando puestos estratégicos (Barsh et al., 2008). Otro hallazgo interesante es que las empresas más grandes son las que tienen una mayor presencia de mujeres, contrario a lo que se había encontrado en los estudios previos donde la presencia de las mujeres en los órganos directivos se encontraban en las empresas de menor tamaño (Fabowale et al., 1995; Coleman, 2007, Alonso-Almeida, 2011).

Igualmente, se han efectuado contrastes de diferencias de medias, considerando como variable independiente o de segmentación el hecho de contar o no con mujeres en el Ápice estratégico, y como variables dependientes el número de habitaciones y de hoteles con los que cuentan las cadenas analizadas en el periodo 2006-2010. En la tabla 3 se observa que en la prueba de Levene se rechaza la hipótesis nula de igualdad de varianzas tanto para número de habitaciones como para número de hoteles, en todo el periodo considerado, por lo que hay diferencias en la evolución de esas magnitudes en función de que posean o no mujeres en esa posición. En cuanto a la existencia de diferencias estadísticamente significativas de medias, no se han encontrado para el caso del número de habitaciones en ningún año, pero sí para el número de hoteles en los años 2006, 2009 y 2010. En todos los casos, la media del número de hoteles poseídos por aquellas cadenas que tienen mujeres en el Ápice estratégico es muy superior a la de aquellas cadenas que no cuentan con ellas.

Tabla 3. Influencia del Género en el Crecimiento de las Cadenas Hoteleras.

	Prueba de Levene para la igualdad de varianzas		Prueba T para la igualdad de medias		
	F	Sig.	t	gl	Sig. (bilateral)
Número de habitaciones 2006	19,228	0,000	-1,923	56,282	0,060
Número de habitaciones 2007	14,447	0,000	-1,722	67,690	0,090
Número de habitaciones 2008	14,338	0,000	-1,748	61,772	0,085
Número de habitaciones 2009	16,434	0,000	-1,862	37,351	0,071
Número de habitaciones 2010	16,873	0,000	-1,880	38,268	0,068
Número de hoteles 2006	26,542	0,000	-2,127	46,050	0,039
Número de hoteles 2007	20,552	0,000	-1,948	55,445	0,056
Número de hoteles 2008	21,385	0,000	-1,957	50,798	0,056
Número de hoteles 2009	28,213	0,000	-2,109	30,592	0,043
Número de hoteles 2010	28,576	0,000	-2,111	31,579	0,043

CONCLUSIONES

Como dicen Eagly & Sczesny (2009) "un indicador de que una sociedad ha alcanzado la igualdad será la presencia aproximadamente igual de hombres y mujeres en las posiciones de liderazgo". Este estudio muestra como en las grades cadenas hoteleras a nivel mundial hay una elevada presencia de mujeres,

aunque todavía dista mucho de poder ser considerado un sector igualitario. Sin embargo, este sector se puede considerar un buen punto de partida para estudiar el comportamiento directivo de las mujeres.

Un estudio realizado por Barsh et al. (2008) para McKinsey Leadership Project afirman que no existen diferencias en la actualidad entre educación académica, compromiso y preparación profesional entre hombres y mujeres. Por lo tanto y dado que es necesario más líderes para dirigir las organizaciones con éxito, se esperaría que más mujeres accedieran en el futuro a estos puestos en todos los sectores.

En definitiva existen razones puramente económicas que por la que se consideran esencial evitar los sesgos y prejuicios de género, raza u otros, que pueden afectar negativamente a los resultados y la eficacia de las organizaciones. Hoy en día las empresas del sector del turismo actúan en economías complejas y la gestión de las mismas necesita personas poseedoras de cualidades, habilidades y capacidades para gestionar a las empresas en entornos complejos. Por eso el hecho de que tengan más mujeres en su dirección dentro de un entorno económico complejo mundial, hace que sea necesario estudiar porqué ocurre esto y que mecanismos existen en su estructura que lo propicia, ya que no ocurre esto en otros sectores donde la mujer tiene una alta representación como se ha demostrado anteriormente. Por tanto, este trabajo plantea muchos interrogantes que se analizarán en futuras investigaciones para intentar arrojar luz sobre este asunto crucial en la economía actual.

MARGEN DE INEFICIENCIA DE LAS MYPES: ROL DE LA CAPACITACIÓN DEL RRHH Y MARKETING ESTRATÉGICO

Graciela Vidal Carvajal, Universidad La República

INEFFICIENCY MARGIN IN SMALL ENTERPRISES: THE IMPORTANCE OF TRAINING AND STRATEGIC MARKETING

ABSTRACT

This paper, deals with the relevance of training to improve the rate of success concerning entrepreneurs activities. In fact, without such a training, it is hard to avoid the failure of these projects. Actually, three out of five new entrepreneurs activities end up in failure. So it is proposed to focus training on each step of any entrepreneurs business plan.

KEYWORDS: Entrepreneurs, Training, Business Plan, Strategy and Management.

INTRODUCCION

Este trabajo trata de contribuir con algunas directrices orientadoras sobre el tema, las que deben ser consideradas y estudiadas antes de iniciar el emprendimiento y hacer la inversión y no, cuando el emprendedor haya perdido el interés o su negocio no haya resultado y por ende, se desmotive.

Muchos de los nuevos negocios fracasan al primer año y algunos logran sostenerse apenas, mediante un escaso margen de ganancias; sin embargo, también hay algo que distingue a aquellos que triunfan y tienen las habilidades de emprender con éxito.

Los emprendedores saben que crear un emprendimiento, de forma seria y duradera, supone un gran desafío. Además, debe estar dispuesto al cambio y tener la disposición constante en el ámbito personal, por lo que resulta conveniente hacerse una auto evaluación para saber si se tiene la capacidad de adaptarse, positivamente, al cambio, determinando si se está en condiciones de asumir la responsabilidad correspondiente y con ello, el riesgo para afrontar los innumerables obstáculos que van surgiendo durante el proceso de creación y la puesta en marcha del emprendimiento.

Es lógico pensar que, de acuerdo a las facultades, capacidades y características propias de cada persona, se podrían determinar el éxito y/o fracaso de un emprendimiento o nuevo negocio. Más aún, si a ello le agregamos las herramientas de gestión pertinentes, la posibilidad de éxito debería aumentar. Es importante entonces, que la iniciativa y la buena idea sean llevadas, primeramente, al papel para diseñar la empresa o productos a comercializar. Al plasmar y escribir el propio proyecto de negocio, el emprendedor transmitirá su motivación, su auto convencimiento de querer hacer un proyecto viable y capaz de ponerlo en marcha. Este ejercicio, dará confianza, fortalecerá y potenciará las habilidades y características de este nuevo empresario.

MARCO TEORICO

Las cifras de fracaso de las PYMES (Pequeña o Mediana Empresa) son abrumadoras en cualquier país en que éstas se analicen. Las estadísticas indican que, en promedio, el 80% de las, pequeñas y medianas empresas fracasa antes de los 5 años; y el 90% de ellas no llega a los 10 años de existencia en el mercado.

De acuerdo a la Comisión Económica para América Latina y el Caribe (CEPAL) “*en los países subdesarrollados, un 50 y 75% de Pymes dejan de existir durante los primeros tres años de trabajo en el emprendimiento*”. Los dueños de las Pequeñas y Medianas Empresas se defienden y aducen que “*las razones del fracaso están fuera de los emprendimientos realizados*”. Se refieren, entre otros, al escaso apoyo oficial, deficientes programas de ayuda a las PYMES, fuentes de financiación casi inexistentes, excesivos controles gubernamentales, altas tasas impositivas y costo de las fuentes de financiación disponibles.

Por otra parte, los analistas se orientan a identificar las causas del fracaso en las propias PYMES y en particular, en el desconocimiento y poca capacidad de gestión de sus responsables o emprendedores de los nuevos negocios. Aparentemente, no se dan el tiempo y no tienen la capacidad de analizar si la buena idea es o no, posible de realizar y desarrollar en cualquier lugar, en cualquier momento, bajo qué circunstancias, con quién, dónde y cómo invertirán sus dineros que, con mucho esfuerzo, han ahorrado o solicitado para iniciar su emprendimiento y cubrir sus necesidades.

Datos y Cifras alarmantes a nivel internacional:

Para el mexicano Francisco Yañez, al cumplir los 10 años “*solamente el 10% de las empresas maduran, tienen éxito y crecen*”. De acuerdo con la consultora Cetro-Crece, también de México “*el 75% de las nuevas empresas mexicanas debe cerrar sus operaciones después de dos años en el mercado. Lamentablemente la experiencia demuestra que el 50% de las empresas quiebran durante el primer año de actividad, y no menos del 90% antes de cinco años*”.

En EEUU, según Samuelson y Nordhaus (2012) “*el promedio de vida de las empresas es de seis años y más de un 30% no llega al tercer año*”. La Asociación Argentina para el desarrollo de la Pequeña y Mediana Empresa afirma que “*sólo un 7% de los emprendimientos llegan al 2º año de vida y sólo el 3% de ellos, llegan al 5º año en el mercado*”. Finalmente, en Chile, también tenemos cifras abrumadoras.

Según informa el economista Rodrigo Castro, en un estudio que dio seguimiento a 67.310 empresas creadas en 1996, se indicó que el 25% de ellas desapareció en el primer año; un 17% en el segundo año; el 13% en el tercer año; y un 11% en el cuarto año. Cabe preguntarse ¿Por qué, un pequeño porcentaje de emprendimientos, a pesar de tener que enfrentar la misma problemática, sobreviven, progresan y crecen hasta convertirse, con el paso de los años, en grandes empresas? No es factible pensar que este éxito sea sólo cuestión de suerte.

Este problema no sólo es en Chile, sino en el mundo entero: un estudio comparativo de proyectos de innovación, presentaba estadísticas que indicaban que cerca del 80% de los proyectos innovadores, fracasa dentro de los primeros seis meses de haber sido lanzado al mercado. Esta cifra aumentaba al 90% cuando se consideran los 12 meses iniciales.

La actividad emprendedora

Se debe considerar que el emprendimiento juega un rol más importante que la simple creación de empleo o el desarrollo económico. Su impacto es mucho más profundo y se enmarca en el empoderamiento de las personas de una comunidad que desarrolla sus capacidades en varios ámbitos, donde el potencial del emprendedor capacitado es una ventaja, además del apoyo gubernamental existente y la participación ciudadana. Si bien la educación es la principal proveedora de la capacidad de movilidad social, también lo son las experiencias de vida y, por ello, el emprendimiento se muestra como una herramienta potente de movilidad social.

Cabe explicar que el indicador por excelencia del *Global Entrepreneurship Monitor* (GEM) es el Índice TEA, que se refiere a la Actividad Empresarial Emprendedora en sus fases iniciales. Consiste en un grupo

de personas entre 18 y 64 años, que actualmente están involucrados en un emprendimiento, ya sea en calidad de emprendedor, como propietario y/o director de un nuevo negocio.

Por otro lado, se observa que el patrón seguido por todos los países considerados en el GEM (para participar de sus estudios y otros), es que el índice TEA tiende a disminuir conforme al país en que se desarrolla la actividad. Esta situación se repite con las diferentes motivaciones para emprender, pues a medida que un país crece económicamente, tiende a disminuir el porcentaje de personas que emprenden motivadas por necesidad. Así, los países basados en la innovación tienden a presentar tasas más bajas de emprendimientos basados en necesidades.

Cabe mencionar que, en relación a los motivos que impulsan un emprendimiento, existen grandes variaciones en los porcentajes según la fase de desarrollo, ya que cada país tiene un conjunto de condiciones económicas y sociales que repercuten en la actividad emprendedora. En el sector comercio de América Latina, y según la actualización de cifras PYME hechas por FUNDES, en Latinoamérica existen 18 millones de empresas formales.

Análisis de la Actividad Emprendedora en Sectores de Comercio, en América Latina:

Existen datos desagregados por sector económico. Esta información indica que 5.587.299 de estas empresas pertenecen al sector comercio, es decir, el 46,5%. De este total, un 97,5% son micro, pequeñas y medianas empresas (MIPYMES), según la definición de cada país y un 94% microempresas. El sector comercial representa una importante fuente de empleos en la economía de la región: genera el 24,8% del empleo formal de América Latina y actualmente, se ha calificado a Perú, como el país más emprendedor a nivel mundial, según el *General Entrepreneurship Monitor (GEM) 2007*. La tasa de actividad emprendedora (TAE) de la población económicamente activa del Perú es del 40,2%, (la más alta del mundo), y sin embargo, aún no cuentan con un Estado que promueva las condiciones de competencia en el camino correcto hacia la competitividad nacional (Ver figuras 1 y 2)

MARCO METODOLÓGICO

Desafíos para emprender exitosamente: Un relato personal

Profesora -me decía un alumno-trabajador del curso “Taller de Emprendedores”, que desde años dicto en la Universidad- *“he iniciado dos veces una pequeña empresa y en las dos he fracasado, razón por la que, actualmente estoy estudiando”*; otro alumno más avezado comentó *“yo tengo dinero y cuando ponga mi empresa, tengo claro que con dinero arreglo todo, por lo que no dudo en que tendré una empresa exitosa”*; una tercera alumna agregó *“yo pienso que la plata no es todo, pues con mi esposo pusimos una empresa hace dos años: partimos bien, pero nuestro personal nunca se motivó, no se comprometió y muchos renunciaron. No supimos qué hacer, por lo que lo único que nos quedó fue cerrar y perder nuestro capital de trabajo”*...

Posterior a este intercambio de opiniones en el aula y, aprovechando la oportunidad, invité a todos los participantes, que de manera grupal, investigasen y analizaran las diferentes situaciones presentadas, realizando un diagnóstico situacional con los resultados de emprendimientos en Chile y especialmente, en la Región de Coquimbo, a fin de buscar tipos de problemas, sus causas, efectos, proponer soluciones certeras a la evidente problemática, sugerir un trabajo que ayude y oriente a las personas que inician sus emprendimientos para aminorar el fracaso o bien, verlo como una oportunidad, aprendiendo del mismo.

Y, ¿Qué se entiende por emprendedor/a?

Ser emprendedor es una competencia y desafío personal de fondo, los casos de éxito *“de la noche a la mañana”* son como la lotería. Lo normal es que una empresa se inicie no siendo rentable, y que tras un cierto tiempo, empiece a obtener ganancias y estabilizarse económicamente.

Es un hecho que la formación es un factor estratégico para el desarrollo de la empresa y sus elementos competitivos en el mercado pues, además de desarrollar habilidades, competencias y otorgar un perfil, en los casos en que ha habido un éxito rápido, ha habido mucho tiempo de trabajo, dedicación y estudios, lo que finalmente ha alcanzado una masa crítica suficiente y ha despegado. Por ello, cuando se es emprendedor, hay que tomarlo como una carrera con muchos obstáculos en el camino, tener una visión de largo alcance, y tener claro que habrá barreras que superar antes de alcanzar el éxito.

No sólo esa travesía (que no se sabe realmente cuánto va a durar) es el camino del emprendedor, también se debe tener recursos económicos, humanos y materiales hasta que la empresa pueda mantenerse por sí sola, esto además, exige una enorme fortaleza mental, dedicación y aprendizaje diario. Toda persona en el campo laboral sabe que la capacidad, tenacidad y perseverancia es una habilidad imprescindible, y que aunque se puedan tener todos los recursos necesarios, sin esta capacidad, no es posible avanzar. Muchas personas explican lo bien que les va a algunos micro o pequeños empresarios, sin apreciar o considerar las características enunciadas anteriormente y otras, inventan verdaderas historias que se venden, consumen y extinguen. Quizás porque esa es la mentalidad reinante: cada vez escasea más la capacitación, los aspectos valóricos, el manejo de las competencias requeridas y habilidades imprescindibles para ser emprendedor.

El fracaso o éxito de los negocios, depende mucho de la personalidad de quien lo ejecuta. Existen ciertas cualidades que caracterizan a las personas que toman la decisión de ser sus propios jefes, auto emplearse y lanzarse al mundo empresarial. Para ello, deben tener claro que para triunfar, el desafío más grande que tienen por delante es aprender a crear, innovar, desarrollar un perfil emprendedor y aceptar el cambio, entre otros aspectos.

¿Cuáles son entonces, las competencias requeridas para enfrentar este desafío: Capacitación funcional, Marketing y aprender del fracaso?

La educación, desde la enseñanza básica, implica desafíos constantes para los profesores, la organización educativa y un desafío personal e intelectual, para convivir con y en la sociedad. Las competencias fundamentales que hoy la educación requiere proveer, tiene que ver con dotar a los educandos de capacidades y oportunidades de innovación y esto, desde pequeños, pasando por la enseñanza media y superior. Se trata de formar personas que desarrollen la capacidad de hacer e innovar, personas que sepan adaptarse a los requerimientos que se necesitan hoy para vivir en una sociedad que demanda, imperiosamente, egresados y trabajadores preparados para enfrentarla.

Hoy en día, hay un constante cambio en el mundo: los mercados y las necesidades institucionales, empresariales y económicas no están ajenas a ello. El mundo de las comunicaciones, nos muestra la realidad en segundos, algo que años atrás no sucedía. Entonces la pregunta es ¿Cómo generar que una persona que pase por la escuela, y durante todo el proceso enseñanza-aprendizaje no sólo conociendo o manejando distintas herramientas, pueda enfrentar el desafío de aprender a crear y discernir cómo introducirse en el proceso innovador, sin quedarse atrás?

Es decir, fomentar en las personas, desde los inicios de su formación, la capacidad de hacer, saber hacer, saber ser y aprender a vivir juntos. Crear una asignatura dentro de los planes de estudio que les oriente y les capacite en emprendimiento (de forma práctica), y aprovechando los recursos que cada escuela tiene; que los profesores propongan además, el desarrollo de valores, habilidades y competencias en los directivos a fin de dar direccionalidad, coherencia, participación e integración a los alumnos y los propios proyectos educativos, en el marco de los lineamientos locales, comunales y laborales. Por su parte, los profesores deben fomentar el auto empleo en los alumnos, la creatividad orientada a los emprendimientos, fomentar un perfil emprendedor y desarrollar las competencias necesarias para que, paulatinamente, se vaya sembrando en ellos, una forma diferente de ver su futuro profesional.

Algunas causas por la que los emprendimientos fracasan y además, no son sostenibles en el tiempo:

Así como a los estudiantes se les debe inculcar y fomentar el autoempleo y las posibilidades de emprender en su futuro laboral, a los emprendedores se les deberían capacitar antes de iniciar su propio

negocio. Esta capacitación debe estar orientada a desarrollar competencias, habilidades, valores, perfiles en temas como Planes de Negocios, Marketing, Liderazgo, Comunicación y Comercialización entre otras.

Actualmente en Chile, se capacita a través de Seminarios, Congresos, Talleres y Cursos. El tema, es tratado desde el punto de vista de cómo generar emprendedores y por ende el autoempleo como cultura país y ventaja competitiva – económica. En este sentido, si bien el Estado ha creado instrumentos para fomentar los emprendimientos y la innovación, lamentablemente, no se tratan otras aristas relativas al fracaso y consolidación de los negocios. En general, no se analizan los proyectos que por variadas razones no han llegado a feliz término, perdiendo la oportunidad de aprender de los errores y considerando las nefastas experiencias ocurridas, como lecciones de orientación y planificación de un plan de mejoras para un mejor futuro en las iniciativas emprendedoras.

Si a continuación consideramos los siguientes errores que, constantemente, se producen en los nuevos -y no tan nuevos- emprendimientos, es posible planificar la Capacitación en forma práctica y orientada a mejorar los Planes de Negocios con ideas que realmente sean factibles de realizar, Competencias, Marketing y otros aspectos relevantes para que paulatinamente, pueda aplicarse un plan de mejoras. A continuación, las faltas y traspies más recurrentes:

a) Uno de los aspectos que más perturban o dificultan el avance de la iniciativa emprendedora, es la burocracia administrativa de parte de las Instituciones encargadas de los temas respectivos. Son extremadamente exigentes en el papeleo, sin dar posibilidades al emprendedor para formar su proyecto inicial. Las trabas desmotivan a aquellas personas que desean surgir y que no cuentan con la capacitación y experiencia que entrega el constante lidiar en el mercado. La justificación del tema, va por evitar o disminuir fraudes o cumplimientos con el Fisco, pero mirando las estadísticas, es posible observar que el número de delitos por esta causa, oscila sólo entre el 2 y 3%. Los costos, además, de crear una empresa, es posible agruparlos en cinco ó seis ítems, de los cuales tres son los más relevantes: 1) Constitución de Sociedad, 2) Autorización Sanitaria correspondiente (si se requiere), y 3) Obtención de la Patente Comercial. En términos de tiempo, a veces esta gestión, tarda de 6 a 7 meses dependiendo del rubro de la iniciativa y los costos se reducen en forma importante cuando se trata de emprendimientos que no están asociados a alimentos perecibles, también en tiempo de tramitación de documentos, se reduce a 3,8 meses.

b) Otro tema de fracaso es la irresponsabilidad, el no cumplimiento o desconocimiento de los nuevos empresarios, para con los acuerdos tomados; este índice de error, alcanza entre un 25 a 35% ; otra dificultad que aparentemente dificulta la gestión empresarial, es que en Chile, las políticas sociales se orientan considerablemente a una capacitación mal orientada o muy generalizada a veces, ya que no capacita en cómo generar las ideas de emprendimientos o innovación de productos, antes de dar un mayor respaldo económico a las PYMES.

c) Es oportuno considerar que, además, los emprendimientos son limitados de recursos y plazos, precisan de personas con distintas competencias, lo que genera muchas veces, conflictos. El emprendedor para desarrollar su proyecto, debe contar con un soporte metodológico que conduzca el quehacer, exitosamente. Con lo anterior se plantea la relevancia de identificar qué es lo que hace que un proyecto sea exitoso y conocer las causas de otros que no lo son. Los aspectos más relevantes para estos últimos resultados pueden ser:

- c1) Falta de generación de múltiples alternativas de solución, a los problemas o necesidades del consumidor
- c2) Falta de capacitación y adiestramiento mediante experimentación, desarrollo de prototipos y casos reales, preparación del emprendedor para desarrollar visión y ver oportunidades de negocios y nichos de mercado.

- c3) Deficiente manejo e inclusión de la perspectiva del mercado y clientes a lo largo del proceso de desarrollo
 - c4) Planificación inadecuada del negocio
 - c5) Problemas relacionados con los recursos humanos
 - c6) Controles inapropiados o nulos
 - c7) Factores externos no controlables (regulación, burocracia)
- d) En relación a la mala planificación, la causa típica de fracaso es no definir correctamente los problemas en el plan de trabajo; al no entenderlo, se destinan recursos en forma ineficiente, lo que lleva a una incorrecta solución. Los planes de proyectos deben tener el máximo de información y los detalles necesarios, para realizar exitosamente cada actividad y tarea a implementar. Es recurrente que por ahorrar, no se contrate a personal capacitado y no se adquieran los recursos tecnológicos necesarios, por lo que es muy difícil, cumplir con los objetivos planteados, si es que los hay.
- e) Así también, los problemas con el RRHH se dan constantemente; no siempre el/la emprendedor o dueño del negocio, son líderes o tienen liderazgo por lo tanto, no es visto este por sus colaboradores como buen jefe/a, además, por la misma razón, se produce una falta de comunicación y coordinación para trabajar en equipo.

Capacitación y adiestramiento, previo al inicio del nuevo negocio

Para solucionar el problema que se suscita en los fracasos de emprendimiento, deberá hacerse una óptima planificación de capacitación que considere la elaboración, ejecución y evaluación del Plan Estratégico, Plan de Marketing y Plan de Negocios. Es imprescindible ejecutar éste, antes del desarrollo del emprendimiento para así, fortalecer la formación, enseñarles a buscar oportunidades de negocios y nichos de mercado, tener aptitudes, perseverancia, visión, capacidad de gestión y entendimiento de los índices económicos, etc. de los/las emprendedores. Para ello, se sugiere el diseño de un modelo de capacitación funcional para el campo de los emprendimientos.

Cabe comentar que, en numerosas oportunidades, los emprendedores son invitados a recibir capacitación para el desarrollo de las competencias requeridas, sin embargo esta actividad tan importante es, muchas veces, vista como una imposición del modelo particular por parte del emprendedor, y no como una inversión que traerá dividendos en el futuro. ¿Por qué sucede esto? La experiencia en el tema indica dos razones fundamentales: el financiamiento de la capacitación es asistencialista y el énfasis tiende a enfocarse en la gestión general, más que en desarrollar habilidades específicas.

José L. Méndez, en su trabajo titulado La capacitación como herramienta esencial de la estrategia emprendedora, comenta: *“las investigaciones realizadas por diversos investigadores han sido concluyentes respecto a la necesidad de promover la capacitación específica para aprender a crear empresas, a fin de impulsar el crecimiento económico, debido a que se desperdicia un gran número de oportunidades de negocio por falta de emprendedores con los conocimientos y habilidades requeridos (...) De conformidad con los resultados de esas investigaciones, la capacitación de nuevos emprendedores favorece una imagen social positiva de la actividad empresarial y facilita la adquisición de actitudes, conocimientos y habilidades claves para el desempeño exitoso de las iniciativas empresariales”*.

Capacitación requerida para optimizar la capacidad de emprender y la gestión emprendedora:

La capacitación es un conjunto de técnicas que se utilizan para optimizar el desenvolvimiento laboral y personal de un emprendedor/a. Perfecciona a la persona en su auto-empleo antes o durante su puesto de trabajo, ayudando a mejorar el desempeño y desarrollo personal.

El desarrollo consiste en descubrir el potencial oculto que tiene el/la emprendedor/a y cultivarlo para mejorar su rendimiento laboral. Además, la capacitación les permite mantener la competitividad de la empresa en un mercado altamente globalizado y enfrentarlo de la mejor manera posible.

Figura 3: ESQUEMA de CAPACITACIÓN orientada al/la emprendedor/a

Fuente: *Elaboración Propia*

Entrenamiento: Otorga conocimiento a fin de lograr cambios en las personas

Adiestramiento: Práctica en terreno, desarrolla el potencial y auto conocimiento

Desarrollo: Produce cambio de actitudes para llegar al cambio

En consecuencia, se sugiere desarrollar el siguiente modelo de Capacitación en uno de los temas más relevantes para el éxito del nuevo emprendimiento, cual es la Capacitación y las Herramientas de “Marketing Estratégico y su Administración”, previo de iniciado el negocio.

En relación al Marketing y Plan de Marketing

La American Marketing Association define Marketing como “*el proceso de planificación y ejecución del producto, precio, promoción y distribución de ideas, bienes y servicios, a fin de crear intercambios que satisfagan tanto objetivos individuales como los organizacionales*”. En cuanto al Plan de Marketing, responde éste a la pregunta ¿Hay suficientes consumidores interesados en el producto o servicio, como para que sea rentable la venta?

En consecuencia, es aconsejable que el Plan, incluya dos partes muy importantes a considerar:

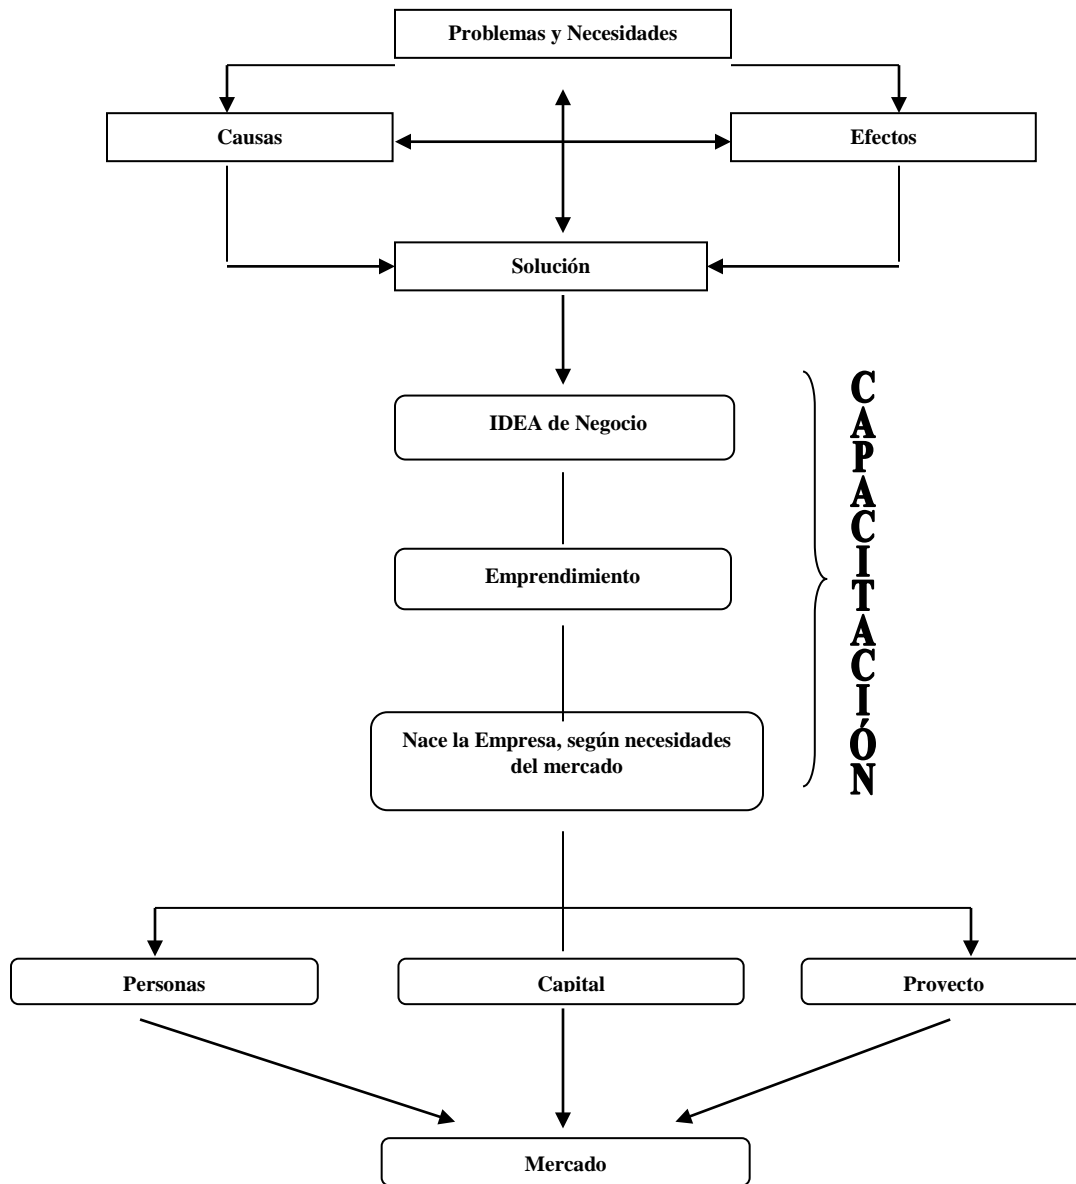

- 1- Definición del grupo objetivo al que deseamos llegar
- 2- Un programa de Marketing para promocionar y vender el producto deseado

En la figura 6, se trata de explicar la secuencia y gestión que se debería considerar, antes de iniciar el nuevo negocio, de acuerdo a los requerimientos deseados para apuntar a un mercado objetivo ideal. Una vez definido el mercado objetivo, se determinará qué gestión se realizará, para alcanzarlo y llegar a los clientes potenciales, que compren y además se cree la fidelización.

El Plan de Marketing es un documento escrito, en el que se recogen los objetivos, estrategias, planes de acción relativos a los elementos del Marketing Mix, los que facilitarán el cumplimiento de las estrategias dictadas a nivel corporativo, paso a paso y año tras año.

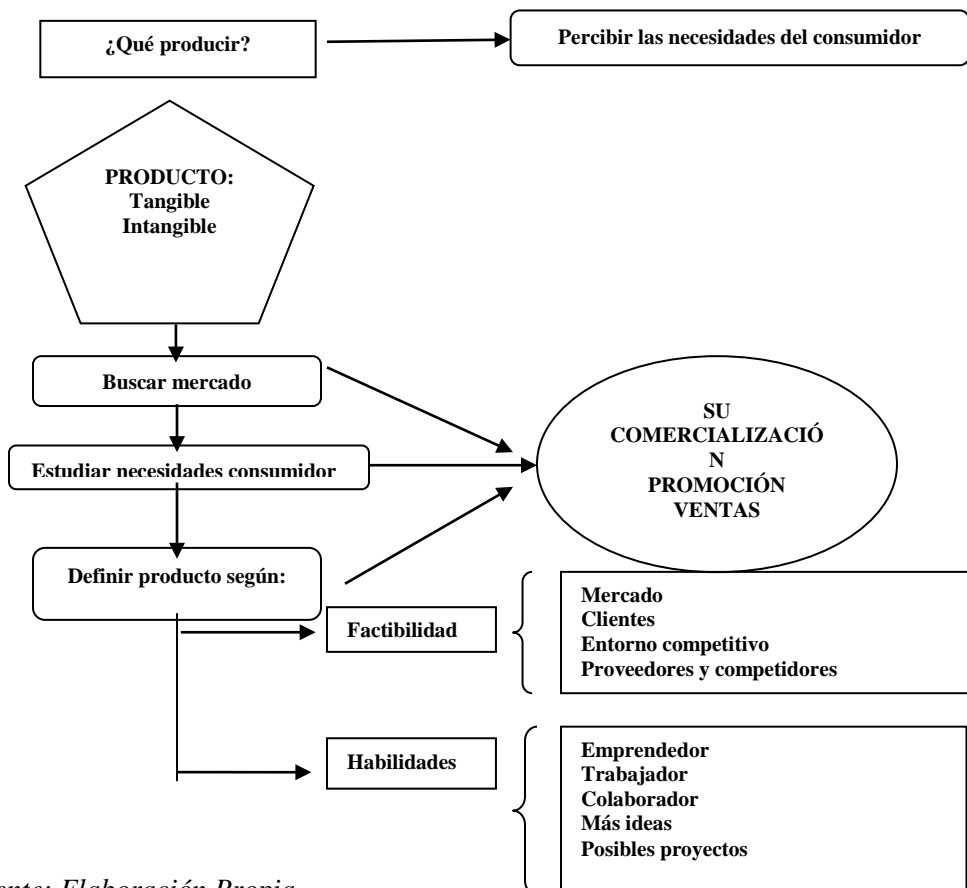

Nace la Idea de Negocio:

Figura 4: Hacia una idea de negocio, según problemas y necesidades del mercado

CONCLUSIONES

Con el análisis y propuesta anteriormente realizados, es posible mencionar 2 principales conclusiones que son relevantes para las iniciativas de emprendimiento: en primer lugar, los proyectos exitosos se diferencian de los fallidos desde el origen. Esto significa que un proyecto exitoso parte identificando problemas y necesidades de mercado, mientras que aquel que fracasa, surge de las ideas espontáneas o bien, por el solo hecho de copiar una idea exitosa. Así, el negocio parte con posibilidades de fracaso ¿Por qué?

Simplemente porque no toma en consideración a sus posibles clientes, sino que basa su iniciativa en una idea preconcebida, que lo más probable es que no satisfaga al potencial usuario. No así cuando el esfuerzo inicial se focaliza en identificar problemas y necesidades para entender al consumidor. Es así como toma relevancia el concepto de investigación de mercado. En el contexto de un emprendimiento de pequeña escala, el hecho de dedicar tiempo y esfuerzo en investigar, conversar y observar a potenciales clientes, prestándoles atención a sus comportamientos, permitirá identificar necesidades y problemas.

En segundo lugar, los proyectos exitosos se diferencian de los fallidos en que los primeros incluyen la perspectiva de los clientes en el proceso de desarrollo. Esto se justifica dado que el mercado está en constante movimiento, por lo que se debe mantener contacto permanente con los consumidores para presentar y probar soluciones que estén lo más alineadas posibles con su demanda. Esto implica que en la etapa de desarrollo de un emprendimiento hay que evitar buscar validación de una idea preconcebida sino

más bien, una vez identificada una necesidad o problema, es recomendable generar varias soluciones en conjunto con los clientes y finalmente, definir la mejor solución en base a la retroalimentación de éstos. La principal enseñanza que nos deja este estudio es que las ideas sólo son tan buenas como lo consideren los clientes, no como sean percibidas por el emprendedor o empresa. Para esto, utilizar métodos cualitativos de investigación de mercado –como observación, reacción ante prototipos, entrevistas, entre otros- al inicio y durante el desarrollo de un nuevo emprendimiento, hacen sentido si se quiere minimizar el nivel de incertidumbre que implica lanzar una nueva oferta al mercado. Además, la capacitación debe orientarse hacia aquellos aspectos centrales previos al emprendimiento.

Actualmente, algunas empresas ya han obtenido ayuda en la inversión a través del programa estatal “Chile Emprende”; estas empresas han proyectado sus ventas en un 30% al año, han contratado a nuevos trabajadores y han utilizado Internet como herramienta permanente de su gestión comercial; con ello se busca que las PYMES logren formar parte de una cadena de valor productiva para lograr una distribución y participación pareja de beneficios en bienes y servicios, que realizan las grandes empresas. La idea es vincular a las empresas con el sector dinámico de la economía, a través de las grandes empresas que avanzan rápidamente produciendo un positivo crecimiento económico en la región.

RESUMEN

El presente documento muestra en forma sintética los hallazgos de la investigación en cuanto el sentir de los empresarios de Tecomán en relación al desarrollo de sus trabajadores, y el contraste de lo que opinan los propios empleados al respecto. Paralelamente se indago las percepciones que tienen los clientes en analogía al trato que reciben, para verificar en base al resultado si la consideración del desarrollo es significativa al trato como usuarios del producto o servicio que ofrecen las mismas; resultando diferencias notorias en correspondencia a la falta de atención al desarrollo del personal y la percepción positiva referente al buen trato que reciben los usuarios de las empresas investigadas.

Palabras clave; Competitividad, redes semánticas, percepciones, desarrollo.

THE HUMAN DEVELOPMENT OF THE COMPANIES, ALTERNATIVE FOR THE IMPROVEMENT OF THE COMPETITIVENESS, CASE OF TECOMÁN COLIMA, MEXICO

ABSTRACT

The present document shows in synthetic form the findings of the research in all that to feel of the businessmen of Tecomán in relation to the development of her workers, and the contrast of what the own employees think in the matter. Parallel at this investigate the perceptions that the clients have in analogy to the treatment that they receive, to check on the basis of the result if the consideration of the development is significant to the treatment as users of the product or service who offer the same ones. Turning out to be well-known differences in correspondence to the lack of attention to the development of the personnel and the positive perception relating to the good treatment that there receive the users of the investigated companies.

KEYWORDS; Competitiveness, semantic networks, perceptions, development.

INTRODUCCIÓN

Se plantea este tema, con base a diálogos sostenidos con algunas personas empleadas de empresas pertenecientes al centro de Tecomán Colima, pudiéndose tocar el tema relativo a sus experiencias laborales, obteniendo en su mayoría quejas, destacándose entre otras: 1. Bajo salario, 2. el no contar con atención médica o prestaciones de ley pero sobre todo, 3. la inconformidad de ser poco valorado su desempeño y desarrollo. Cabe recalcar que las todas las organizaciones poseen un elemento común: están integradas por personas. Y son ellas las que llevan a cabo los avances, los logros y los errores de sus

organizaciones. Por eso no es exagerado afirmar que constituyen el recurso máspreciado. Si alguien dispusiera de cuantiosos capitales, equipos modernos e instalaciones impecables pero careciera de un conjunto de personas, o éstas se consideraran mal dirigidas, con escasos alicientes, con mínima motivación para desempeñar sus funciones, el éxito sería imposible. (González, 2006). A causa de lo anterior se planteó la siguiente pregunta de investigación ¿Como repercute en el servicio que ofrecen, el valor que le dan los empresarios al desarrollo de sus empleados de la zona centro de Tecomán Colima?

El objeto de estudio es conocer el valor que otorgan los directivos de las microempresas del centro de Tecomán, al desarrollo del recurso humano en cuanto a desempeño laboral, personal y en dado caso conocer tus técnicas de aplicación.

Hipótesis inicial de este trabajo de investigación. Fue que los empleadores no se preocupan por provocar el desarrollo de sus trabajadores, y esto repercute en la calidad en el servicio y los clientes lo perciben.

El desarrollo personal y laboral son importantes para realizar las tareas en equipo y dar una buena imagen del la empresa ya que sin el recurso humano no se puede realizar ningún objetivo anteriormente planeado. El talento humano proporciona la chispa creativa en cualquier organización. La gente se encarga de diseñar y producir los bienes y servicios, de controlar la calidad, de distribuir los productos, de asignar los recursos financieros, y de establecer los objetivos y estrategias para la organización. Sin gente eficiente es imposible que una organización logre sus objetivos. El trabajo del director de talento humano es influir en esta relación entre una organización y sus empleados. (Cardona, 2002)

El objetivo básico del desarrollo es crear un ambiente propicio para que los seres humanos disfruten de una vida prolongada, saludable y creativa”. Según esta concepción, “invertir en la gente es la mejor estrategia de crecimiento económico: una sociedad progresa sólo si todas las personas que la integran incrementan sus libertades y capacidades, y las instituciones se concentran en trabajar para la gente y con la gente”. (González, 2006)

Para el desarrollo de esta investigación la percepción fue un elemento importante ya que a través de ella se obtuvo información fundamental. La percepción es un proceso mediante el cual, la conciencia integra los estímulos sensoriales sobre objetos hechos o situaciones y los transforma en experiencia útil.

Denominamos percepción, que tienen de los clientes o usuarios, a ésa conciencia que integra los estímulos sensoriales sobre objetos, hechos o situaciones y los transforma en experiencia útil para él. (Hermann von Helmholtz).

Ya que el Gobierno del Estado de Colima está interesado en vigilar la competitividad empresarial y que esta pueda cubrir adecuadamente la demanda por parte de la sociedad. Se indaga la percepción de los clientes en cuanto el servicio que reciben, tratando de distinguir si los resultados de esta percepción son influidos por la capacitación y desarrollo que les otorguen los dueños de las empresas a sus empleados que son el contacto directo con ellos.

REVISIÓN LITERARIA

Las microempresas en muchos casos, son empresas de tipo familiar, las cuales funcionan, inclusive, en locales acondicionados en la misma casa de habitación. Tal es el caso de oficios como la costura, la repostería, la piñatería, transcripción de documentos, entre otros oficios.
<http://www.coninpyne.org/pdf/EmprendedoresyMicroempresarios.pdf>

Comportamiento del consumidor

Peter y Olson (2006) lo describen como la interacción dinámica de los efectos y cognición, comportamiento, y el ambiente, mediante la cual los seres humanos llevan a cabo los aspectos de intercambio comercial en su vida. Abarca los pensamientos y sentimientos que experimentan las personas, así como las acciones que emprenden en los procesos de consumo. También incluye todo lo relativo al ambiente que influye en estos pensamientos y acciones.

Solomón (2008) lo refiere como el estudio de los procesos que intervienen cuando una persona o grupo selecciona, compra, usa o desecha productos, ideas o experiencias para satisfacer necesidades y deseos.

Competitividad

A nivel empresa, es la capacidad de mantener y fortalecer su rentabilidad y participación de la mipymes en los mercados. Con base en ventajas asociadas a sus productos o servicios, así como a las condiciones en que los ofrecen. (Artículo 3 ley para el desarrollo de la competitividad de micro, pequeña y mediana empresa)

El elemento humano.

“El activo humano es el verdadero artífice del éxito”, “en las empresa es importante preocuparse por retener el talento”, “sabemos que todos llevamos un potencial dentro y ofrecemos oportunidades de realización profesional”, “la productividad empresarial empieza por un buen clima laboral”, “la comunicación es el centro neurálgico de toda organización” (Pertusa, 2006)

Desarrollo organizacional.- fortalecimiento de aquellos procesos humanos dentro de las organizaciones que mejoran el funcionamiento del sistema orgánico para alcanzar sus objetivos.

Desarrollo Humano.- es la adquisición de parte de los individuos, comunidades e instituciones, de la capacidad de participar efectivamente en la construcción de una civilización mundial que es próspera tanto material como espiritualmente.

Londoño (2007) sugiere que el desarrollo humano y social podría ser favorecido por una serie de condiciones en la sociedad que aportan a la satisfacción como individuos y como grupos humanos: confianza, bienes materiales (acceso a servicios básicos, libre de hambre enfermedades, oportunidades de educación) y percepción sobre la propia autonomía, en otras palabras sobre la propia libertad en asociación con la democracia. (Sen 2002).

Desarrollo Cultural.-proceso mediante el cual se rescata, evidencia y enaltece toda costumbre y/o tradición.

Los valores morales surgen primordialmente en el individuo por influjo y en el seno de la familia, y son valores como el respeto, la tolerancia, la honestidad, la lealtad, el trabajo, la responsabilidad, etc. son aquellos valores que perfeccionan al hombre en lo más íntimamente humano, haciéndolo más humano, con mayor calidad como persona.

Según Charles Morris indica que valor es un término que se emplea en diferentes maneras.

Valores Operativos Es simplemente la elección del valor que se indica de modo conductual cuando un organismo escoge un objeto y rechaza otro.

Valores concebidos Esto es la preferencia del individuo por un objeto simbolizado. En dicha preferencia hay una anticipación o previsión del resultado de la conducta dirigida hacia dicho objeto simbolizado.

Valor Objetivo Desea hablar de lo que es objetivamente preferible, ya sea que sienta o se conciba como deseable o no.

En cuanto la aplicación metodológica

Redes semánticas Constituye un procedimiento híbrido debido a su utilidad para recolectar datos tanto desde el paradigma cuantitativo como para la investigación cualitativa.

José Luis Valdez Medina (2002) considera que las raíces de este método se encuentran en los estudios realizados respecto a la memoria y se basa en Endel Tulving (1972), quien plantea la existencia de dos tipos de memoria: la memoria episódica, que recibe y almacena información acerca de datos temporales, de episodios o eventos y de las relaciones temporales que se dan entre tales eventos, y la memoria semántica, que organiza el conocimiento acerca de las palabras y otros símbolos verbales, sus significados, sus referentes y las relaciones entre ellos.

Las redes semánticas parten del supuesto básico de que las ideas que los sujetos tienen sobre los objetos no están en el vacío, sino que se encuentran relacionadas con un contexto (Young 2001) Autores como Cofer (citado por J. L. Valdez 2002) propone que una parte importante del conocimiento de la memoria semántica es potencialmente generativo, es decir, que tiene efectos directos sobre el comportamiento de los individuos.

METODOLOGÍA

Desarrollo de la investigación.

APLICABILIDAD Y LA UTILIDAD DE LOS RESULTADOS

Contexto de la investigación: Lugar donde se realizó la investigación (Tecomán), Colima, México
Localización El Municipio de Tecomán se Localiza en la Porción Sureste del Estado entre las Coordenadas 103° 59' a 103° 73' de Longitud Oeste del Meridiano de Greenwich y 18° 41' 20" a 19° 06' de latitud norte. Limita al Norte con los municipios de Coquimatlán y Colima, al Sur con el Océano Pacífico, al Este con el Municipio de Ixtlahuacán, al Oeste con el de Armería y al Sureste con el Estado de Michoacán. Está situado a 33 Metros sobre el nivel del mar. La distancia aproximada de la cabecera Municipal a la Capital del Estado es de 46 Km. Ocupa una extensión territorial de 834.77 kilómetros Cuadrados que corresponden al 15 por Ciento de la superficie estatal. La población del Municipio asciende a 99,289 Habitantes, el 18.3% de la Población Estatal. Hombres 50.0%. (<http://www.municipiotecoman.gob.mx> obtenida el 13 enero 2009)

Evolución Demográfica

La mayor concentración de la población se encuentra en la ciudad de Tecomán y los poblados de Cerro de Ortega, Madrid, Tecolapa, Caleras, Cofradía de Morelos y Nuevo Caxitlán. La población joven constituye el 37.7 de la población total con una distribución proporcional entre ambos sexos. El mayor porcentaje de habitantes lo forma la población urbana. (<http://www.municipiotecoman.gob.mx> obtenida el 13 enero 2009)

Centro de Tecomán

La presente se realizó en el centro de Tecomán Colima y es conveniente recalcar algunos términos. Las empresas son todas pequeñas y medianas empresas, y están situadas en la zona principal del centro de Tecomán, Colima.

Estas pequeñas y medianas empresas son alrededor de 30 tiendas con giros de comercio y servicio, se encuentran ubicadas entre las calles de Libertad, Medellín, Constitución y 20 de Noviembre, todas haciendo esquina, formando el cuadro principal del centro de Tecomán. **(Inegi, censo 2005)**

El Diseño de Investigación

Tipo de investigación: descriptiva El método que se esgrime es descriptivo, ya que “se utiliza para recoger, organizar, resumir, presentar, analizar, generalizar, los resultados de la observación”. Este método implica la recopilación, presentación sistemática de datos para dar una idea clara de cada situación. Esta recolección se realizó en dos tiempos primero realizando encuestas a empleadores y empleados de las empresas del centro de Tecomán colima, y el segundo mediante la aplicación de la herramienta de las redes semánticas para medir la percepción de los clientes del servicio que reciben en esas empresas.

Descripción De La Muestra

Se entiende por muestra a un subgrupo específico de la población a estudiar. En este caso las personas que dirigen las empresas del centro de Tecomán, quienes laboran en ella y quienes son clientes habituales y esporádicos.

Dando lugar al siguiente listado de empresas

Mantra (tienda de ropa)	Bio Centro.	El Remate.
Viviana Moda.	Helados Dolphy.	Palettería la Pantera Rosa.
Sky.	Centro Operativo de la Parroquia.	Banco HSBC.
México Lindo (tienda de ropa).	Casa Vargas.(tienda de ropa)	Taller de Costura.
Galy (Palettería y café).	Jugos Parroquia.	Regalos La Pulguita
Faraha fric. (venta de ropa)	Palettería Michoacana.	Bisutería.
Zapatería Patria.	La Presidencia.	Tienda Parisina.
Coppel.	Publicaciones Román. (venta de periódico y revistas)	Zapatería. (patria)
Palettería el Portal.	La Rana Rosa. (tienda de ropa)	Discos y cassetts Carmelita.
La Primavera. (venta de ropa)	Super Oferta. (venta de ropa)	Novedades Kaory. (venta de ropa)
Casa Rentería.	Netel Bisutería .	

Empresas donde fue aplicado el cuestionario a empleado y empleadores

RESULTADOS

Análisis del cuestionario a empleadores: Nivel de estudios de los empleadores.

Gráfica 1 elaboración propia datos obtenidos de la encuesta empleadores. Como podemos observar en la grafica el nivel escolar predominante de los encargados de las microempresas del centro de Tecomán es el bachillerato con un 40% y solo un 20% de los encuestados tiene licenciatura.

Que utiliza para estimular la productividad en sus empleados

Gráfica 2 elaboración propia datos obtenidos de la encuesta empleadores. El 90% de los patrones de microempresas de centro de Tecomán, considera que es importante que trabajador se sienta valorado, para un mejor desempeño laboral. Por otra parte en relación a las estrategias utilizadas para estimular la productividad, se muestra al graficar esta pregunta que suman 97% de los microempresarios que las estrategias que utilizan para fomento de la productividad, las basan en estímulos económicos o materiales por desempeño a sus empleados.

De los cuestionamientos realizados a los empleados podemos destacar:

El 50% de los empleado de zona centro de Tecomán expresan que no han recibido cursos de motivación en su trabajo. Solo un 25% si recibe o a recibido cursos de motivación.

el 80% de la de los empleados de centro de Tecomán desean obtener un mejor salario en su trabajo, por lo tanto si ven como un incentivo cualquier remuneración económica que reciban por su trabajo.

El 95% de empleados encuestados cuentan con un nivel máximo de estudio de secundaria y solo el 5% restante cuentan con bachillerato o trunco.

La segunda parte de la investigación consistió en la aplicación e interpretación de las redes semánticas naturales a los clientes habituales o esporádicos de esas empresas.

Fue necesario precisar claramente el problema, las preguntas de investigación y los objetivos del proyecto. Posteriormente se determinó el estímulo o pregunta que a aplicara, “¿Usted como considera el servicio de los empleados de este negocio o microempresa?”

Para la obtención de una buena red semántica, es necesario solicitar con toda claridad los sujetos que realicen dos tareas fundamentales:

Que definan con la mayor precisión posible el estímulo, mediante la utilización de un minino de cinco palabras sueltas que consideren relacionadas con la palabra o frase estímulo. Pueden ser verbos,

adverbios, sustantivos, adjetivos, pronombres, sin utilizar artículos, preposiciones ni ninguna otra partícula gramatical sin significado propio.

Que una vez definido el estímulo de manera individual jerarquicen todas las palabras que expresaron como definidoras, en función de la relación, importancia o cercanía de cada una de ellas tenga con el estímulo definido. De esta forma, asignaran el número uno a la palabra más cercana o relacionada con el estímulo, el dos a la que sigue en importancia, y así sucesivamente hasta terminar. (Valdez, 2002)

Se aplicó a un total de tres clientes por empresa seleccionados aleatoriamente.

Estímulo: ¿Usted como considera el servicio de los empleados de este negocio o microempresa?

9	Respetuosos	29	28,71
10	Buen surtido	26	25,74

El adjetivo calificativo que describe como una percepción negativa de servicio es "mal servicio" y se encuentra en 7º lugar de percepción.

Grafico Radial que muestra las 10 palabras SAM

Grafica 3 elaboración propia datos obtenidos de la figura 2 Un 37 por ciento del total de adjetivos emitidos por los clientes estudiados describió como malo el servicio de esas empresas indagadas.

Grafica 4 elaboración propia datos obtenidos del grafico 3
Totalizando solo un 8% de las percepciones emitidas por los clientes es negativa y el resto 92% son positivas.

CONCLUSIONES

Podemos destacar entre otras cosas que un 80% de los empleadores de las microempresas de la zona centro de Tecomán no cuentan con estudios de licenciatura, lo cual puede favorecer el desconocimiento del término de desarrollo humano. El 90% cree que si es importante motivar a los empleados para que realicen bien su trabajo, pero la forma que manifiestan conocer es por medio de sanciones o incentivos económicos.

Aditivo a ello, solo buscan que el empleado brinde el servicio al cliente, sin importar las herramientas con las que cuente y los conocimientos que al respecto tengan, además, los sueldos son bajos, no preocupándose por capacitarlos, mucho menos por desarrollarlos.

De parte de los empleados, podemos observar, que están consientes de sus limitaciones académicas y de las carencias que ello le originan, quizá en consecuencia, si reconocen como motivación, cualquier incentivo monetario extra, al salario que reciben.

En referencia a la percepción de los clientes de dichas empresas, se suicito, que las percepciones indagadas, en relación al servicio que reciben, solo el 8% de percepciones son negativas. Destacando que esas percepciones Positivas (92%) son manifestadas por clientes que son de la región (Tecomán, pueblos aledaños, Armería y sus correspondientes), y las negativas son originarias de clientes de Colima capital y entidades de Jalisco.

Discusión de datos: Los gerentes de las micro y pequeñas empresas del centro de Tecomán colima actualmente profesan un modelo autocrático de dirección donde dependen del poder. Quienes mandan deben tener el poder para exigir “hace esto o...”, es decir que un empleado que no acate las órdenes será castigado. En un entorno autocrático, la autoridad se delega mediante la cadena de mando a las personas a las que se aplica. Supone que es necesario dirigir, persuadir y obligar a la gente para lograr su rendimiento; los empleados sólo deben obedecer órdenes.

Se propone que evolucione a un modelo sistémico, que es un modelo de dirección donde se busca el mayor significado en el trabajo, ya que muchos empleados en la actualidad: quieren algo más que la simple paga y la seguridad en su puesto. Porque ya que se les pide que pasen muchas horas diarias en el trabajo, requieren un contexto laboral que sea ético, esté infundido de integridad y confianza, y brinde la oportunidad de experimentar una sensación creciente de comunidad con los compañeros de trabajo.

Los empleados dado su nivel de educación y la limitación del acceso a herramientas que favorezcan su desarrollo y conocimientos solo aspiran a cubrir las necesidades fisiológicas y a las de seguridad; segundo nivel de la escala de necesidades de Maslow. Estos dos niveles juntos forman lo que suele llamarse necesidades de orden inferior. Para que; el o los empleados, puedan tener acceso a las necesidades de orden superior los empleadores deberán:

Identificar y aceptar las necesidades de los empleados, reconocer que las necesidades difieren de un empleado a otro. Brindar satisfactores de necesidades específicas que estén insatisfechas y sobre todo percibir que dar más de lo mismo (en especial, de lo que satisfacen las necesidades de orden inferior) puede tener efecto decreciente en la motivación.

En cuanto a la calidad en el servicio percibida por los clientes esporádicos o no, por parte de las empresas investigadas, los datos indican que “están bien”, sin embargo, si consideramos que la competencia por el logro de ventas va en aumento, los empleadores deberían otorgar capacitación para la adquisición de estrategias de venta y buen servicio si desean ser competitivos en un mercado destinado a ser global.

RENTA VARIABLE UNA ALTERNATIVA DE INVERSION EN COLOMBIA

José Armando Hernández Bernal, Universidad De La Salle Colombia

RESUMEN

El conocimiento en temas financieros facilita los procesos de toma de decisiones no solamente para la adquisición y conformación de portafolios, sino que se hacen indispensables en las negociaciones de financiación. Estos elementos resultan habituales en la administración de las finanzas personales, ya que la periodicidad en la que sucede un evento como la compra de un paquete accionario o el financiamiento para de un inmueble o un vehículo frecuentemente se presentan bajo diversas alternativas, en cuanto periodicidad e interés. En este sentido el documento intenta justificar la necesidad de difundir la formación en finanzas para el común de las personas como instrumento de análisis previo a la toma de decisiones. Específicamente introducir los conceptos de básicos de renta variable como alternativa de inversión, para de esta forma evidenciar las ventajas que traería la inversión en renta variable para un colombiano promedio, el cual por temor o desconocimiento prefiere invertir en un escenario seguro de renta fija, ello implicará justificar la comparación entre el valor de un activo en el mercado y su valor en libros.

PALABRAS CLAVE: Finanzas, Valoración, Comercio Justo.

EQUITY ASSETS AN ALTERNATIVE INVESTMENT IN COLOMBIA

ABSTRACT

Knowledge in finance facilitates the processes of decision making not only for the acquisition and creation of portfolios, but are indispensable in financing negotiations. These elements are common in the management of personal finances, as the frequency at which an event occurs such as the purchase of a stake or funding for a building or a vehicle often occur under various alternatives, in terms of frequency and interest. The meaning of the document attempts to justify the need to spread financial literacy for the common people as a tool for analysis prior to decision making. Specifically introduce the basic concepts of equity as an investment alternative, and in this way would demonstrate the benefits of investment in equity for the average Colombian, who through fear or ignorance rather invest in a bond insurance scenario, this involve justify the comparison between the value of an asset in the market and book value.

KEYWORDS: Finance, Valuation, Equable Trade

JEL: G20, G21, O16

INTRODUCCION

Esto puede observarse en el figura 1 en donde se evidencia como el índice que mejor representa la evolución del mercado accionario crece sustancialmente (figura 1 evolución del IGBC), dicho índice resulta de la ponderación de las acciones que tranzan en la bolsa de valores de Colombia las cuales presentan mayor capitalización y liquidez. En consecuencia el IGBC se conforma con aquellas acciones que tengan una rotación mayor a 0,5% semestral y una frecuencia superior a 40% en el trimestre anterior.

Figura 1: Evolución Del IGBC

Fuente: Construcción propia a partir de la información reportada en la bolsa de valores de Colombia.

El índice IGBC es actualizado con una periodicidad trimestral, la figura 2 muestra la canasta vigente para el último trimestre del 2011

Figura 2: Canasta IGBC

Fuente: Construcción propia a partir de la información reportada en la bolsa de valores de Colombia

Por otro lado la evolución de las tasa de interés con las que se liquidan los certificados de depósito a termino fijo (CDT) ha venido decreciendo tal como se muestra en la figura 3. Dicho producto financiero representa la alternativa habitual de inversión para el colombiano promedio.

Figura 3: Evolución Tasa CDT

Fuente: Construcción propia a partir de la información reportada en la bolsa de valores de Colombia.

ELEMENTOS DE COYUNTURA.

El funcionamiento del sistema bancario en Colombia.

El principal elemento que se debe resaltar en este tópico hace referencia al funcionamiento del sistema bancario en Colombia, en el cual participan tres agentes, El banco de la república como máxima autoridad monetaria en el país, la banca comercial como intermediario financiero y finalmente las empresas y personas naturales que están representadas como el público en la figura 4.

Figura 4: Sistema Bancario

Fuente: Construcción propia a partir de la información recopilada

Puede observarse como las tasas de interés que funcionan en el mercado financiero son: la tasa de intervención la cual es establecida por el banco de la república con la intención de intervenir el mercado de dinero, y de esta forma tener un control de la inflación, dicha tasa constituye el principal instrumento de política monetaria en el país.

La tasa de colocación: representa la tasa de interés que cobran los bancos comerciales al público por préstamos otorgados, dicha tasa se conoce como tasa de interés activa, ya que representa un derecho para las entidades financieras.

La tasa de captación: representa la tasa de interés que pagan los bancos comerciales al público por los depósitos realizados, dicha tasa se conoce como tasa de interés pasiva, ya que representa una obligación para las entidades financieras.

Finalmente; esta la tasa de interés de intermediación, la cual resulta de una resta aritmética entre las tasas de colocación y captación. En un estudio realizado por Miguel Urrutia, se encontró que el sector financiero colombiano se sitúa, por lo general, entre el quintil más alto en cuanto a márgenes de intermediación se refiere, ya que Colombia se encuentra en el 18% superior de la muestra de 129 países. Si se recurre a las Estadísticas Financieras Internacionales del Fondo Monetario Internacional para el cálculo del margen ex ante, dicho margen de intermediación, es del orden de 10 puntos porcentuales, como se señala en un estudio realizado por Javier Gómez (Tomado del estudio de antecedente sobre el Margen de intermediación en Colombia, elaborado por el senador Luis Humberto Gómez Gallo Presidente de la Comisión Primera del Senado de la República.).

Realizando un símil práctico, en donde se utiliza la DTF como la tasa interés de captación, ya que ella representa el promedio ponderado de las tasas de captación utilizadas por las entidades financieras para determinar los rendimientos de los certificados de depósito a término CDT. Y la tasa de usura como la tasa interés de colocación, puesto la tasa de usura es fijada por la superintendencia financiera y representa una y media veces el interés bancario corriente.

El gráfico 5 muestra la comparación entre la tasa de interés DTF y la tasa de usura durante los periodos 2010 y 2011.

Figura 5: Comparación Usura DTF

Fuente: Construcción propia a partir de la información reportada por el Banco de La Republica.

INVERSIÓN RENTA FIJA VERSUS RENTA VARIABLE.

Resulta evidente como las entidades financieras se ven obligadas a dar regalos por la apertura de CDT, pues en realidad es el único incentivo que logra llamar la atención de los inversionistas.

Prueba de ello son las siguientes imágenes que muestran el tipo publicidad que manejan muchas de las entidades financieras que operan en Colombia.

CDT Regalo de BBVA

BBVA

¿Te quedaste atrás en tecnología? adelante, abre o renueva tu CDT Regalo.

En BBVA, abrir o renovar tu CDT se disfruta desde el primer momento, porque te llevas un regalo con excelente tecnología. Además, obtienes rendimientos.

En este orden de ideas puede afirmarse que la rentabilidad que generan los productos financieros tradicionales de inversión, se circunscriben a los regalos que otorga la banca comercial en el país. De esta forma si tomamos como base el año 2011, podemos observar que la rentabilidad promedio para los CDT fue del 4.13% mientras que la inflación del año cerró en 3.73%, lo que permite afirmar que la rentabilidad real de estos productos son equivalentes al 0.4% anual. Adicionalmente sobre los rendimientos brutos se debe aplicar una retención en la fuente equivalente al 7%. Con base en la anterior aclaración podríamos citar dos ejemplos de inversión:

Inversión de \$100.000.000 a una tasa nominal del 3.73% durante un año. Las ganancias o rendimientos brutos equivalen a \$ 3.730.000, menos la retención en la fuente, obtendríamos \$ 3.468.900 de beneficio después de impuestos.

Inversión de \$100.000.000 a una tasa real (descontada con la inflación) del 0.40 % durante un año. Las ganancias o rendimientos brutos equivalen a \$ 400.000, menos la retención en la fuente, obtendríamos \$ 372.000 de beneficio después de impuestos.

Las cifras anteriores permiten asegurar que la rentabilidad se refleja en la calidad de los regalos que la banca comercial puede ofrecer, y no en una utilidad coherente a una inversión financiera. Finalmente es importante aclarar que las rentabilidades mostradas en los ejemplos se hacen incomparables cuando las cotejamos con los rendimientos que obtuvieron acciones de empresas como Fabricato (214%) o almacenes Éxito (11.18%) durante el mismo año.

Fenómeno de las pirámides en Colombia.

El modelo financiero presentado por las pirámides en Colombia, es conocido técnicamente como el esquema Ponzi, denominado así por su creador Carlo Ponzi, quien lo aplico por primera durante los años veinte en Estados Unidos. el cual consiste en pagar unas rentabilidades muy altas a los inversionistas con dineros de nuevos interesados en invertir, desatando así una cadena en donde existe evidentemente un riesgo muy alto de incumplimiento, así como una estafa inminente.

Y aun cuando en Colombia se conocían antecedentes de fraudes financieros con este modelo, las personas del común vieron en ella una nueva alternativa de inversión.

Las siguientes cifras evidencian una capacidad e intención de ahorro e inversión de los colombianos: Captación Costa Caribe \$432.392'501.000 (Tomado del diario el tiempo fecha de publicación 12 de enero de 2009)

2.5 billones de pesos captaron las 'pirámides' en Putumayo, Nariño, Huila y Cauca (Tomado del diario el tiempo fecha de publicación 26 de noviembre de 2008)

En el 2008 DMG captó un billón 43 mil millones de pesos (Tomado del diario el tiempo fecha de publicación 26 de noviembre de 2008).

Captación tomadas en conjunto, 45,6 billones de pesos: Ese monto representa más de la mitad del recaudo de impuestos que espera recoger este año (2011) el gobierno o la mitad de la deuda externa total del país y alcanzaría para cubrir cuatro veces el costo de la tragedia invernal.

El boom de la renta variable en Colombia.

Durante el año 2011 las compañías que usualmente transan en la bolsa de valores de Colombia. Han venido incrementando su nivel de emisiones, vinculando así no solamente a nuevos inversionistas corporativos, sino que también las personas del común han logrado interesarse por este tipo de inversiones.

De igual forma; compañías que nunca habían realizado emisiones para el público decidieron democratizar sus entidades realizando ventas masivas de sus acciones, a través de paquetes accionarios que fueron difundidos y comercializados de forma práctica por medio de entidades financieras. El siguiente cuadro muestra algunas de las emisiones realizadas durante el 2011 en Colombia.

Tabla 1: Emisión de Acciones 2011

EMISOR	VALOR	FECHA DE EMISIÓN
ECOPETROL	5.7 BILLONES DE PESOS	Jun- 2007
ISAGEN	0.5 BILLONES DE PESOS	Ene-2008
ISA	0.4 BILLONES DE PESOS	Nov-2009
DAVIVIENDA	0.4 BILLONES DE PESOS	Nov-2010
AVIANCA-TAVCA	0.5 BILLONES DE PESOS	Mar-2011

GRUPO EXITO	2.5 BILLONES DE PESOS	Nov-2011

Fuente: Construcción propia a partir de la información recopilada en la investigación

Finalmente; la necesidad de conocer sobre portafolios de inversión se ha convertido un tema obligatorio, pues el nuevo esquema planteado por la Ley 1328 del 2009, ha forzado a que las personas del común decidan sobre sus ahorros en los fondos de pensiones obligatorias.

DIFERENCIA ENTRE EL VALOR DE MERCADO Y EL VALOR CONTABLE.

Es evidente que en la ciencia contable se adaptan metodologías a registros sistémicos a partir de directrices jurídicas, las cuales no siempre se ajustan plenamente a la realidad financiera. Para citar un caso específico, en Colombia se establece que los activos tales como vehículos deberán depreciarse en su totalidad, para tal efecto se estima que la vida útil es de 5 años (El artículo 8 de la ley 1111 de 2006, decreta que los contribuyentes que adquieran activos fijos depreciables a partir del 1° de enero de 2007 y utilicen la deducción por tal inversión, sólo podrán depreciar dichos activos por el sistema de línea recta) sin ningún valor de salvamento, de esta forma un vehículo que es adquirido por una compañía a un precio de 30.000.000 de pesos, pasados 2.5 años registrará un valor en libros de 15.000.000. Sin embargo esta disminución del 50%, puede diferir del valor comercial o de mercado. Pues es probable que el vehículo pueda ser vendido por un monto mayor o menor al reportado en la contabilidad.

Acudiendo nuevamente a la casuística financiera, puede surgir la necesidad de determinar ¿cuál es el valor, que en el mercado de recetas tiene el conocimiento en la preparación de un plato específico? Y aun cuando al remitirse al plan único de cuentas puede identificarse el rubro correspondiente, el problema radica específicamente en establecer un valor para el plato, coherente a su capacidad para generar flujos de dinero, para una empresa de comidas o un restaurante. Ahora vale la pena pensar en cómo la contabilización de un activo físico puede diferir ampliamente de la realidad, es de esperarse que la complejidad aumente cuando se trata de la valoración de una empresa. Así pues que uno de los principales problemas de la gestión financiera radica en la medición y no en el registro contable. Drucker (1995). Los siguientes gráficos muestran la evidente diferencia que existe entre el valor de mercado y el valor en libros de algunas de las acciones que tranzan en el mercado de valores colombiano.

REVISION DE LITERATURA

A continuación se relacionan los principales argumentos teóricos y conceptos propios de la ciencia financiera en los que se circunscribe la problemática planteada. En este sentido; el documento espera revelar la importancia de la ciencia financiera, así como evidenciar las limitantes que posee la contabilidad tradicional de expresar en forma rigurosa los sucesos económicos y los valores de mercado. En la búsqueda de una conceptualización clara acerca de la valoración de financiera, se hace la propuesta de recrear cronológicamente, cómo; la preocupación de explicar los determinantes del beneficio de la empresa, están asociados a la medición del mismo. Por ello abordaremos la conceptualización teórica teniendo como referentes el pensamiento de la ciencia económica y la implementación de modelos de medición y valoración financiera de empresas, Lo anterior con la intención de ampliar la descripción y el análisis de los cuestionamientos hasta aquí expuestos.

Orígenes de la valoración financiera.

En la ciencia económica se describe a un mercado competitivo como aquella relación entre demandantes y oferentes, en donde cada agente económico actúa como un tomador de precios (por tanto esta variable se considera exógena). De la misma manera el bien o servicio que se tranzan en el mercado es idéntico, de este modo los consumidores son indiferentes a la elección de una oferta u otra.

Otra característica es la existencia de la libre entrada y salida de agentes, así como la movilidad de factores de producción. En consecuencia cada empresa puede ingresar o retirarse del mercado cuando lo desee.

Por su parte, la teoría de la utilidad establece que los compradores cuentan con una información cierta de todo lo que tenga que ver con sus decisiones de compra, ya que el supuesto contempla un conocimiento del total de los precios de los bienes y servicios que se tranzan en los mercados.

Involucrando el modelo de competencia perfecta al escenario financiero. Modigliani y Miller (1958), citado por González (2003) compara la definición del valor en el que una empresa maximiza su beneficio con el valor su mercado, en este sentido; el valor en el que se maximiza el beneficio es equivalente al valor de mercado, sin embargo en condiciones de incertidumbre no se cumple la identidad entre el valor del beneficio y el valor del mercado. Así pues que en ausencia de incertidumbre el beneficio se examina con base en la teoría de la utilidad, y es allí donde la subjetividad de la rentabilidad futura determina el coste que asumirá el capital.

Grafico de la acción ISA Fuente: Bloomberg

El enfoque tradicional en la estructuración financiera de empresas, se basa fundamentalmente en dos tipos de decisiones. Inversión y endeudamiento, las cuales se circunscriben en escenarios de riesgo. En consecuencia las alternativas financieras buscan maximizar el valor de mercado, minimizando el riesgo y el costo de capital (Herrera Santiago, Limón Suárez y Soto Ibáñez: "Fuentes de financiamiento en época de crisis" en Observatorio de la Economía Latinoamericana, Número 67, septiembre 2006. en <http://www.eumed.net/cursecon/ecolat/index.htm>).

En este orden de ideas la función financiera de endeudamiento, puede elegir la opción de apalancarse con recursos propios (patrimonio) o de terceros (pasivos), y su decisión está enmarcada en aquella alternativa que le proporcione menor riesgo y menor costo de capital.

En razón al riesgo, el costo del financiamiento con terceros es inferior que si se hace con recursos propios, sin embargo el propósito consiste en encontrar el balance óptimo para una estructura de capital que garantice una decisión de inversión, es decir que el retorno de la inversión sea mayor a su costo de capital.

Es así como el teorema de Modigliani *ét al.* (1963) introduce nuevos elementos tales como los costos de transacción, asimetría de la información y la tasa impositiva de renta. Encontrando que el valor de la empresa no está en función del origen de sus fondos de capital (pasivo o patrimonio), ni de la ponderación que se le asigne a los mismos, tampoco de su política de dividendos. Sino de la capacidad de generar valor con los activos que posee.

Los anteriores postulados dan origen a lo que se conoce como la teoría del *Trade-Off*, la cual se fundamentan en el modelo de toma de decisiones de causalidad inversa, en donde los beneficios fiscales derivados de los gastos financieros presentan ventajas para las compañías. La disyuntiva planteada entonces por el *Trade-Off*; es aquella en donde se encuentra un nivel de endeudamiento, tal que los gastos financieros reduzcan la base gravable hasta encontrar un óptimo paretiano entre la probabilidad de quiebra mínima y el escudo fiscal generado por la deuda.

Por su parte la teoría del *Pecking order* arguye que las empresas establecen un orden al momento de tomar decisiones de financiamiento, de forma tal que priorizan el financiamiento interno por encima del externo. En este caso si se cuentan con recursos propios disponibles, se prefieren aquellos por encima de la financiación externa, estos solo se asumen en casos extremos. Finalmente; si la necesidad operativa de la empresa requiere una financiación externa, se preferirá la emisión de deuda en prioridad a la emisión de acciones, ya que la asimetría de la información obstaculiza la decisión de los nuevos socios a querer invertir en proyectos, pues los inversionistas prefieren no acarrear con el componente asociado al riesgo, ya que la disponibilidad de la información siempre está a favor de los directivos de la compañía (lo cual genera una discordia entre los directivos y los accionistas. A esta situación se denomina "Los costos de agencia".

Teorema de Modigliani & Miller

La teoría clásica de las finanzas se basa en la disyuntiva de inversión y financiación. Para las primeras (inversión). Evalúa cual portafolio es más conveniente para la empresa, a partir de la combinación de activos financieros que rindan más que su costo de capital. Para las segundas (financiación). Se debe propender por un equilibrio entre pasivos y patrimonio que maximice el valor de la empresa.

El teorema de Modigliani *ét al* (1958) establece, que no existe correlación perfecta entre la estructura del costo de capital y el valor de mercado de la empresa. Pues este último no es el resultado de la forma como se financian los activos, sino de las expectativas de ganancias de la empresa, y del nivel de riesgo actual de sus activos. Finalmente; el teorema de Modigliani *ét al* (1958) establece que existen beneficios para la

empresa cuando se encuentra financiada, ya que los intereses pueden deducirse al momento de pagar sus impuestos.

Elección de Portafolios Bajo la Medición del Riesgo

Las propuestas teóricas contemporáneas de las finanzas sugieren una armonización de las variables: riesgo, rentabilidad futura y diversificación. En este sentido la teoría financiera considera el mercado de valores eficiente a partir de establecer que el precio de una acción refleja el comportamiento y plena información del emisor. Así pues que la decisión racional consiste en exigir una mayor rentabilidad, a aquellas acciones que presenten un mayor riesgo.

Dada la importancia de la medición del riesgo en el proceso de toma de decisiones financieras, Markowitz (1952) demuestra cómo se puede reducir el riesgo de un portafolio a través de la elección de acciones las cuales no presenten correlación⁴La correlación se expresa en términos covarianzas, dicho método recibe el nombre de análisis de media varianza, en el cual se valora la rentabilidad del portafolio dado un nivel de riesgo⁵ entre sí. Dicha medición se realiza a través del cálculo de la varianza en la serie histórica de rentabilidades observadas.

En consecuencia la existencia de una alta correlación en un grupo de acciones que conforman el portafolio de un inversionista, impide una diversificación adecuada y genera por supuesto una exposición de la inversión al riesgo.

CONCLUSIONES

Es evidente que existe una necesidad de conocer sobre temas financieros en Colombia, pues habitualmente el proceso de financiamiento e inversión implica tomar decisiones trascendentales para las personas del común. Durante el año 2011 las compañías que usualmente transan en la bolsa de valores de Colombia. Han venido incrementando su nivel de emisiones, vinculando así no solamente a nuevos inversionistas corporativos, sino que también las personas del común han logrado interesarse por este tipo de inversiones.

El fenómeno de las pirámides en Colombia, y las estadísticas presentadas evidencian una capacidad de ahorro e inversión, las cuales no se reflejan en el comportamiento de la renta fija. De la misma forma la teoría de la utilidad económica establece que los compradores cuentan con una información cierta de todo lo que tenga que ver con sus decisiones de compra, ya que el supuesto contempla un conocimiento del total de los precios de los bienes y servicios que se tranzan en los mercados. Dicho supuesto difiere en la práctica, puesto que en el mercado de valores se basa en elementos de especulación e incertidumbre.

Por otro lado las metodologías de valoración financiera facilitan los procesos de toma de decisiones no solamente para la adquisición y conformación de portafolios, sino que se hacen indispensables en las negociaciones de fusión y compra de compañías.

Es evidente que en la ciencia contable se adaptan metodologías a registros sistémicos a partir de directrices jurídicas, las cuales no siempre se ajustan plenamente a la realidad financiera. Esta conclusión se hace evidente cuando se coteja el valor de una acción en libros y su valor en el mercado de valores.

Bajo la perspectiva económica, el valor en el que se maximiza el beneficio es equivalente al valor de mercado, sin embargo en condiciones de incertidumbre no se cumple la identidad entre el valor del beneficio y el valor del mercado. Así pues que en ausencia de incertidumbre el beneficio se examina con base en la teoría de la utilidad, y es allí donde la subjetividad de la rentabilidad futura determina el coste que asumirá el capital.

El teorema de Modigliani y Miller (1963) aporta elementos a la teoría financiera tales como los costos de transacción, asimetría de la información y la tasa impositiva de renta. Encontrando que el valor de la empresa no está en función del origen de sus fondos de capital (pasivo o patrimonio), ni de la ponderación que se le asigne a los mismos, tampoco de su política de dividendos. Sino de la capacidad de generar valor con los activos que posee.

Las propuestas teóricas contemporáneas de las finanzas sugieren una armonización de las variables: riesgo, rentabilidad futura y diversificación. En este sentido la teoría financiera considera el mercado de valores eficiente a partir de establecer que el precio de una acción refleja el comportamiento y plena información del emisor

RESUMEN

La culturización del uso de nuevas energías es un elemento necesario en la sociedad, es por lo anterior, que el siguiente proyecto busca hacer conciencia para hacer más efectivo el uso de energía. Conocer las alternativas paralelas a las tradicionales en el ámbito de la energía, sobre todo sin sacrificar cuestiones financieras fuertes, de sencillo manejo e instalación así como aplicable a espacios físicos adecuados como son las viviendas en aéreas de clima extremoso como lo es Cd. Juárez chihuahua. Importante tener en cuenta que la evidencia de ahorro, es llevado a cabo en intervalos de tiempo, haciendo un comparativo de ahorro. El uso de las nuevas tecnologías no es nuevo, muchas construcciones no solo en nuestra ciudad, sino más allá del país, involucran en sus proyectos materiales ahorradores, así como maquinaria en uso y tiempo para racionar gastos de combustibles y agua, en fin, que se tiene ya la base para el uso de energías diferentes. El proyecto que presentamos es posible y los beneficios pueden ser aun mayores ya probado nuestro trabajo en donde no solo podemos trabajar con una sola tecnología de abastecimiento de energía, sino con una combinación de tecnologías a fin de reducir aún más los gastos que una familia en una vivienda pueda sufragar.

PALABRAS CLAVE: Nuevas energías, ahorro, beneficios y familia.

GOODNESSES OF THE ENERGY EFFICIENCY AND THE RENEWABLE ENERGIES IN THE HABITATIONAL SECTOR: I ANNUL CD. JUÁREZ CHIHUAHUA, MÉXICO

ABSTRACT

The habituation of the use of new energy is a necessary element in the society, it is for the above, that the following project seeks to do conscience to give more effect to the use of energy. Knowing the parallel alternatives to the traditional ones in the space of energy, most of all without sacrificing financial strong, simple- handling issues and installation as well as applicable to physical adequate spaces as they are the houses in aerial of excessive weather as he is Cd. Juárez Chihuahua. Important having in account that the evidence of saving, is taken to stub in spans, making one comparative of saving. The use of the new technologies is not new, a lot of constructions not only in our city, but beyond the country, they involve in his material thrifty projects, as well as machinery in use and time to ration expenses of fuels and water, in short, that he has the base for the use of different energy already. The project that we present is possible and the benefits can be even major right now once our work was tried where we can not only work with a single technology of supply of energy, but with a combination of technologies in order to reduce still more the expenses that a family in a house can defray.

KEYWORDS: New energy, saving, benefits and family.

INTRODUCCIÓN

De acuerdo a Morillón, D. (s/f) Ciudad Juárez, se encuentra enclavada en una zona desértica al norte del país, en la frontera con los Estados Unidos de Norteamérica, presenta un clima cálido seco extremo, con veranos que alcanzan temperaturas máximas promedio hasta 36°C y con inviernos donde la temperatura puede llegar a mínimas promedio de -1.2°C, con veranos calientes y lluvias escasas y frío en invierno presentando heladas a nevadas. Tiene dentro de la mancha urbana un gran porcentaje de calles pavimentadas, esto genera lo que se conoce como islas de calor, mismas que producen el encajonamiento de las altas temperaturas al ser absorbido el calor por el pavimento durante el día para posteriormente ser, si a eso le sumamos que no hay suficientes áreas verdes dedicadas a usos como parques, jardines y camellones; y las pocas que existen catalogadas como tales no cuentan con la suficiente superficie cubierta de vegetación ni arborización, no existe en realidad un atenuante para las altas temperaturas que se lleguen a registrar.

Debido a la situación y clima de Ciudad Juárez, es menester para buscar la mejor manera de climatizar nuestra vivienda de una manera pasiva, es decir sin ningún medio mecánico, como aparatos de aire acondicionado o calefactores convencionales.

En la actualidad cada vez es más común escuchar de otras personas o de nosotros mismos exclamaciones de verdadero terror al recibir los recibos del servicio de electricidad y de gas natural y enterarnos del importe cada vez más y más elevado por un consumo que en realidad no tenemos modo de rebatirles si efectivamente lo consumimos o no, a pesar de que ya hemos sustituido todos los focos de nuestra casa los cuales eran incandescentes y que la CFE nos invita a cambiar por los nuevos focos fluorescentes compactos, y ni así logramos reducir el consumo de electricidad. Y en invierno no se diga, nuestro consumo de gas sube automáticamente a partir de octubre, que son meses que aun no habilitamos la calefacción central (los que tenemos), pero al acudir a la compañía de gas a hacer algún reclamo, los cajeros de la compañía de gas nos indican que esa es la causa por la que nuestro recibo marca más metros cúbicos del energético.

Al conocer la población en general las bondades de una cultura del ahorro de energía y el uso racional de la misma, ya que si bien es cierto que los aparatos electrónicos son cada vez un poco más eficientes, nosotros tendemos a consumir más, tal es el caso de los televisores, que hasta hace algunos años se tenía un área específica a colocar y ver un solo aparato de televisión en la casa, en estos días cada habitación tiene uno y por muy pequeño que sea este consume energía eléctrica, así podemos decir lo mismo de las computadoras y los aparatos reproductores de video (DVD).

Al crear conciencia sobre el ahorro de energía se busca también generar una necesidad ofrecer servicios enfocados a la eficiencia energética en el hogar, abarcando desde el diseño arquitectónico, consistiendo en lograr dar las orientaciones óptimas para aprovechar la radiación solar dependiendo de la zona climática en la que se encuentre la vivienda, el uso de sistemas constructivos con materiales térmicos, eco tecnologías, así como el uso de la vegetación caducifolia y perennifolia nativa y plantada en la región para control de asoleamiento y evitar pérdidas y ganancias de calor desmesuradas, asimismo crear una demanda de los sistemas fotovoltaicos y eólicos como principales fuentes de energía para su vivienda, e ir dependiendo cada vez menos y de ser posible dejar de depender en lo absoluto de los combustibles fósiles logrando grandes ahorros económicos, preocupándose cada vez menos de cuanto tendrá que reunir cada mes o bimestre para pagar los recibos de gas y de electricidad.

Alcances y limitaciones

El presente trabajo de tesis pretende ofrecer con cifras los ahorros económicos que se pueden obtener después de poner en práctica algunas recomendaciones para la eficiencia energética, y mostrar como con la utilización de la tecnología de las energías renovables es posible dejar de depender e incluso se puede llegar a vender energía a la Comisión Federal de Electricidad.

El estudio se llevara a cabo en un período de dos años, lapso en el cual se llevarán a cabo las mejoras y equipamiento de la vivienda modelo.

La vivienda a estudiar tiene una superficie construida de 102.40 m² distribuidos en dos plantas, se encuentra localizada en Cd. Juárez en el área entre el Infonavit San Lorenzo y el campo de golf del Fracc. Campestre. La zona es de un nivel económico medio.

En base a los resultados obtenidos, se generarán estrategias de mercadotecnia por medio de manuales, volantes impresos y volantes electrónicos, que se enviarán a centros de trabajo previamente seleccionados.

Viabilidad

Este estudio se considera viable, debido a que se pueden conseguir los recursos financieros suficientes estos se invertirán en un lapso propuesto más adelante en el equipamiento de la vivienda modelo.

En cuanto a los recursos humanos se cuenta con personal que será un servidor el cual estará llevando a cabo una bitácora grafica del avance de los trabajos de mejoras en la vivienda y posteriormente recogerá datos de consumo para generar estadísticas.

Así mismo los materiales que se utilizarán en el estudio serán proveídos por un servidor. En cuanto al tiempo requerido para la terminación del estudio se propone sea de dos años, tiempo en el cual se harán las mejoras en la vivienda modelo.

La información requerida en cuanto a los consumos se tomara como modelo la vivienda de un servidor, utilizando los datos de consumo de los 2 años anteriores a la fecha de inicio de equipamiento, y un año posterior a la instalación de las mejoras, para ver el comportamiento de la grafica de consumos tanto de gas como de electricidad.

MARCO TEÓRICO

El presente trabajo de esbozo de marco teórico describe lo que a eficiencia energética y energías renovables se refiere, enfocándolo al sector habitacional. Empezaremos por exponer las definiciones de estos dos términos, ¿Qué es la eficiencia energética? ¿Que son las energías renovables?

(Rosagel y Rodríguez 2011). Para el año 2030 la demanda de energía a nivel mundial se incrementará en un 35% más que la demanda registrada en el 2005, según el estudio “Energía: suministro, demanda y eficiencia, una prospectiva global al 2030”, elaborado por Exxon Mobil.

Por esta razón se está poniendo especial atención en el concepto de eficiencia energética, la cual según la Massachusetts Technology Collaborative Renewable Energy Trust, se refiere a productos o sistemas que utilicen menos energía para funcionar, pero que entreguen la misma o más cantidad de trabajo o potencia que los sistemas o productos convencionales, resultando así un ahorro en dinero de por sí. Estos ahorros se consiguen sustituyendo los aparatos electrodomésticos y electrónicos “viejos” por unos certificados como ahorradores.

La eficiencia energética no significa obtener menor productividad o detener el progreso, o renunciar al confort, sino utilizar la energía de una manera racional obteniendo los mismos o mejores resultados.

En México se han implementado varios tipos de programas enfocados a la eficiencia energética con el apoyo de la CONUEE (Comisión Nacional para el Uso Eficiente de la Energía), el programa de horario de verano el cual entró en vigor en 1996, y la promulgación de las Normas Oficiales Mexicanas de eficiencia energética de motores eléctricos de corriente alterna, NOM-014-ENER-2004 y NOM-016-ENER-2010, con la Secretaría de Energía (SENER) el programa “Luz Sustentable” se pretende eliminar los focos de tipo incandescente por lámparas fluorescentes compactas, con el Fideicomiso para el Ahorro de Energía (FIDE) se pone en marcha el programa “Cambia tu viejo por uno nuevo”, el cual consiste en ofrecer financiamiento para los usuarios del servicio eléctrico que califiquen, a sustituir su aparato de aire acondicionado o bien su refrigerador por unidades nuevas y más eficientes. Energías renovables, que son y cuales con las más comunes

Estas son recursos energéticos que se recargan naturalmente pero que son de flujo limitado. Estas son virtualmente inagotables en duración pero limitadas en la cantidad de energía que esté disponible por unidad de tiempo. Los recursos energéticos renovables incluyen: solar, mini hidráulica, geotérmica, biomasa y eólica.

De acuerdo con la Secretaría de Energía (SENER) existen varias fuentes renovables de energía:
Energía solar

Existen dos tipos de energía solar:

Fotovoltaica: Transforma la energía solar en energía eléctrica, por medio de celdas, paneles, conductores o módulos fotovoltaicos compuestos de arena de silicio que al reaccionar con la luz producen un voltaje. La capacidad de estos dispositivos dependerá del material con el que estén fabricadas.

Térmica: Utiliza la energía del sol para calentar fluidos contenidos en colectores o concentradores solares, algunos desarrollos de este tipo son utilizados en las plantas termoeléctricas para mejorar la eficiencia de producción de energía eléctrica, también sirve para calentar agua de albercas, o para calentar agua de uso domestico, para uso en calefacciones radiantes y aire acondicionado.

Energía mini hidráulica

Es generada en instalaciones de capacidad limitada, se produce al circular de un nivel a otro más bajo, natural o hecho por el hombre, entre dos puntos. En este proceso la energía eléctrica es producida al circular el agua por dentro de una turbina, haciendo girar la misma. La potencia generada en la turbina se transmite después a un generador eléctrico mediante un eje giratorio.

Se le considera renovable porque no agota la fuente primaria al explotarla y no emite contaminantes ni residuos.

Energía geotérmica

Esta energía proviene del núcleo de la Tierra en forma de calor. El tipo de yacimiento que se explota para generar electricidad es en donde se acumula agua de lluvia o de deshielo, y se filtra por fracturas en la tierra descendiendo hasta encontrar una fuente de calor, brotando después en forma de vapor.

Biomasa

Es la que se obtiene de los desechos animales y vegetales. Se puede aprovechar de dos maneras: quemándola para producir calor o transformarla en combustible sólido, líquido o gaseoso.

Para generar electricidad se utilizan calderas que se conectan a máquinas de combustión interna y estas se conectan a un generador eléctrico. También de la biomasa se puede obtener gas, el metano el cual se produce por la descomposición llevada a cabo por las bacterias de los desechos orgánicos húmedos.

Energía eólica

Esta consiste en la captación de viento por medio de aspas giratorias que hacen girar un generador por medio de un eje, esta es la energía mas estudiada y mas explotada actualmente, aunque al hablar de energía eólica nos viene a la mente los grandes molinos localizados en los llamados parques eólicos, como los que actualmente se encuentran construyendo en la zona del istmo de Tehuantepec, también es posible instalar micro generadores eólicos a nivel casero, cabe recordar que en las zonas rurales existen desde hace tiempo los llamados “papalotes” que se utilizan para bombear el agua que extraen del subsuelo. (Calderon, Arredondo, Gallegos, & Mayagoitia, 2011) Presentan en un estudio sobre la reducción de consumo eléctrico en viviendas en tres ciudades del norte de México, siendo estas Mexicali, Baja California; Obregón y Hermosillo, Sonora, las cuales se encuentran ubicadas en zonas desérticas, al igual que Ciudad Juárez, haciendo comparaciones entre viviendas construidas con sistemas tradicionales no eficientes y viviendas modelo con sistemas eficientes, consistentes en aislante térmico, focos ahorradores y sistemas de aire acondicionado eficientes.

Después de realizar los estudios concluyen que los altos consumos de la vivienda no eficiente, son en verano debido al uso excesivo del aire acondicionado y en invierno se ve reflejado en la iluminación.

También sacan en conclusión que aplicando solo estas tres factores de eficiencia los consumos se reducen trayendo como consecuencia un ahorro en el salario del trabajador y se reducen emisiones de CO2 a la atmosfera.

La Comisión Nacional del Fomento a la Vivienda (CONAFOVI) edita en 2006 una guía para el uso eficiente de energía en la vivienda, la cual puede ser consultada en la página de la Comisión Nacional de Vivienda (CONAVI), esta guía explica el panorama actual del consumo de energía en México, haciendo recomendaciones de sistemas mecánicos, pero también establece criterios para diseño arquitectónico basado en eco tecnologías y en sistemas del tipo pasivo, como buscar orientaciones optimas de acuerdo a la clasificación de las zonas climáticas del país.

(Ross, 1980) En la actualidad la industria de la construcción no edifica viviendas eficientes en sí, sino que más bien se dedica a tratar de dar a conocer e implementar información acerca de sistemas y medidas de ahorro de energía, quizá la concientización del usuario final de la vivienda y la educación energética de los constructores sean probablemente los más efectivo para lograr la meta que es la conservación de energía.

(Trechsel, 1977) Uno de los retos de la arquitectura en la actualidad es proveer un hábitat confortable aun bajo las condiciones más adversas de frio, calor, lluvia y nieve, el objetivo del estudio de la eficiencia energética es proveer herramientas para el diseño y construcción de espacios habitables con los mínimos requerimientos de energía.

El principal elemento que se ha estudiado en el sentido de consumo de la energía es la envolvente exterior de la edificación, es decir el aislante térmico. Los consumos excesivos de energía de una edificación dependerán directamente de la existencia, eficiencia y aplicación de esta envolvente.

La otra parte de la envolvente exterior son las ventanas, ya por la naturaleza de su material y su espesor no es tan térmico, ya que permiten el paso e intercambio de las temperaturas.

Luego de las envolventes, el siguiente punto a revisión para una correcta climatización de una edificación, vienen a lugar los equipos mecánicos, ya que dependiendo de su correcto cálculo, contribuirá o perjudicará al confort dentro de la vivienda.

En todas las edificaciones la climatización por medio mecánicos es el gran consumidor de los energéticos convencionales, por esta razón se acuñó el término arquitectura bioclimática, que trata de resolver los problemas de calentamiento y enfriamiento del interior de edificaciones de modo natural, llamándose también modo pasivo.

(Morillón Gálvez,)El bioclimatismo significa la relación directa entre el sistema constructivo, materiales y el clima local donde se construya.

Entre los preceptos que maneja la arquitectura bioclimática están, por ejemplo para la zona bioclimática de Cd. Juárez a nivel básico:

- Optimizar la ventilación
- Reducir las ganancias de calor del exterior en verano
- Propiciar la disipación nocturna del calor estructural de la edificación en verano
- Ganancias directas de calor en invierno
- Protección solar en verano

Incluyendo a la vegetación podríamos decir que si se tienen ventanas hacia el Sur y al Poniente se debe procurar poner árboles de hoja caduca para proteger del sol durante el verano.

Con todo esto nos encontramos con un término recientemente acuñado, “net zero-energy building” el cual se traduce como “edificio cero energía”, del cual en México ya existen unos pocos ejemplos piloto desarrollados por empresas promotoras grandes de vivienda, aplicando el concepto al sector habitacional.

Con estas acciones se pretende lograr el objetivo de dejar de emitir a la atmosfera los gases de efecto invernadero, y se pretende llevar a la población en general acceso a energías verdes y eficiencia energética en su vivienda.

En cuanto a las energías renovables se refiere para producir la energía necesaria para satisfacer las necesidades de una vivienda o comercio, mediante cualquier recurso renovable como el viento, solar, mareomotriz, hidráulica, etc. la Comisión Federal de Electricidad, ya tiene instrucciones de llevar a cabo contratos de interconexión.

Los cuales permiten a un usuario regular del servicio eléctrico, generar su propia energía eléctrica y si es posible vender el excedente a la CFE, mediante la instalación de un medidor bidireccional, en el cual se registrara la energía que entre o salga hacia la red, procediendo a calcular las diferencias entre estos dos concepto se cobrará o se pagará las diferencias a favor del usuario.

(Torres Roldán & Gomez Morales, 2006)Dicho todo esto nos debemos preparar para hacer la transición hacia las energías renovables, se han estado desarrollando leyes y con ellas se han incluido estímulos para todos aquellos que quieran y puedan hacerse de estas tecnologías, como el caso de la propuesta de un crédito fiscal del 30% para la inversión en equipos de energías renovables.

O bien la modificación que se hizo al artículo 40 de la Ley del Impuesto Sobre la Renta en donde indica que los contribuyentes del ISR que inviertan en este tipo de tecnología podrán depreciar el 100% de la inversión en un solo ejercicio.

Estamos en el momento justo para tomar la decisión adecuada de cómo podemos abordar esta ola en la que ya nos hallamos inmersos de cómo deberemos atacar cada uno desde nuestra postura tanto política, social y económica.

Los hechos están ahí, también las políticas, falta saber si nosotros nos convertiremos en actores activos en esta situación para que no nos cueste más a nosotros en lo económico ni al planeta.

Porque a final de cuentas todos estos esfuerzos y llamados que se han estado haciendo en realidad no son para salvar al planeta, sino que son para salvarnos a nosotros la humanidad, ya hemos visto con los eventos naturales que han aparecido últimamente en los medios de comunicación, lo frágiles que somos.

El planeta bien puede seguir sin nosotros y equilibrarse como mejor le parezca.

Resultados esperados

- Por medio del presente trabajo, se espera demostrar con estadísticas recabadas a partir de un lapso de dos años que es el tiempo en el cual se propone equipar la vivienda modelo, de sistemas eficientes así como mejoras de las envolventes tanto opacas como transparentes (muros y ventanas), una reducción de hasta de un 50%, en los consumos energéticos tanto de gas como electricidad.
- Acercar el uso de las tecnologías de las energías renovables a la población en general.

Aportaciones originales

- Producir un manual con un lenguaje claro y sencillo para generar en la población una cultura del ahorro de energía y uso racional de esta.
- Considerar las estadísticas desde el punto de vista del consumo de la energía en sus unidades medibles, y no en dinero ya que el costo por kilowatt-hora o por metro cubico va a seguir yendo en aumento durante el transcurso de la investigación.

Impacto social esperado

Con los resultados obtenidos a partir de la implementación de las acciones para obtener la eficiencia energética se espera que exista una aportación directa en la comunidad, así como la utilización de las energías renovables, al ir las desmitificando como algo a lo que no es posible tener acceso, acercándolo a la población en general y haciendo notar la repercusión en el presupuesto familiar directamente, al recalcar que la inversión sería solo una vez pero los ahorros serán para siempre.

ANALYSIS OF RESULTS OF EXAMINATION OF GRADUATE DEGREE (EGEL) AND ITS EFFECT ON THE ACCREDITATION PROCESS

Martha Elena Verdugo Saldivar, Universidad Autónoma de Baja California
Héctor Gerardo Arriola Zorrilla, Universidad Autónoma de Baja California
Nicolasa Valenciana Moreno, Universidad Autónoma de Baja California
Santiago Pérez Alcalá, Universidad Autónoma de Baja California

ABSTRACT

This study was the first developed about the implementation of the General Graduation Test (EGEL Examen General de Egreso for its acronym in Spanish) as a mandatory requirement for the automatic graduation of the students in bachelors from quality or accredited programs (such as the bachelors offered by the School of Administrative Science, which are accredited since 2002) for the Bachelor in Business Administration at the School of Administrative Science in Mexicali. For the above mentioned, it was necessary to make a review of the graduation ratings impact, in contrast to the EGEL passing ratings and its possible effects in the accrediting process. The followed steps were, first of all, the compilation of the National Evaluation Center (CENEVAL, Centro Nacional de Evaluación for its acronym in Spanish) frame; which is the institution in charge for regulation of national level in the EGEL, then the analysis of statistic results in the last two years in application of this test, and the application of an instrument to know the students' opinion about the test applied. Finally, with the obtained results, the conclusions related to the performance in the academic areas carried us to suggest necessary measures to improve the accreditation process of the bachelor program.

KEY WORDS: Graduation test, graduation, accreditation

INTRODUCCIÓN

El exámen general de egreso (EGEL) se aplica en la Facultad de Ciencias Administrativas desde el año 2000 como una más de las opciones de titulación y está regulado por el Estatuto Escolar de la Universidad Autónoma de Baja California desde el año 2006, fecha en la que se estableció como obligatorio para todos los programas educativos de calidad. Desde entonces hasta la fecha se ha estado aplicando el exámen general de egreso para todos los alumnos de la carrera de Licenciado en administración de empresas, a través del organismo a nivel nacional que regula dicho exámen y que viene a ser el Centro Nacional de Evaluación para la Educación Superior, A.C. (CENEVAL). CENEVAL es quien elabora el exámen general de egreso, por medio de la participación de académicos de diversas Facultades del área contable y administrativa de Instituciones de Educación Superior Mexicanas, además de ser la encargada de la aplicación y evaluación del exámen, enviando los resultados a cada Universidad.

Desde el año 2006 hasta el año 2011 los resultados muestran que el índice de reprobación del exámen general de egreso (EGEL) se ha ido incrementando, para la carrera de Licenciado en Administración de Empresas, debido a lo anterior es necesario hacer un análisis de los aspectos que abarcan su elaboración, aplicación y evaluación, además de hacer las propuestas necesarias al Estatuto Escolar de la Universidad Autónoma de Baja California ya que no se establece que deban de aprobar el examen de egreso para poder titularse. Lo anterior ha dado como consecuencia la falta de interés por parte de los alumnos en la preparación del examen general de egreso (EGEL) al considerarlo como un requisito para la titulación pero sin valor curricular. Debido a esta situación fué necesario hacer una revisión profunda de los resultados del examen general de egreso (EGEL) y sus posibles efectos en el proceso de acreditación de la

carrera de Licenciado en administración de empresas, ya que se está visualizando por parte del organismo acreditador que los resultados del examen general de egreso sean una parte determinante en la acreditación o no acreditación de las carreras de esta Facultad de Ciencias Administrativas. El problema a resolver en esta investigación fué determinar las causas del incremento en el índice de reprobación del exámen general de egreso (EGEL) y su impacto en el proceso de acreditación de la carrera de Licenciado en Administración de Empresas. Los objetivos de la investigación fueron:

1. Analizar el índice de reprobación del exámen general de egreso comparando el índice de titulación de la carrera de Licenciado en administración de empresas.
2. Identificar las áreas académicas deficientes para los alumnos.
3. Proponer las medidas correctivas para mejorar los resultados del exámen general de egreso.

REVISIÓN LITERARIA

Los exámenes generales para el egreso de licenciatura (EGEL), evalúan el nivel de conocimientos y algunas habilidades indispensables que debe poseer un recién egresado de los estudios de licenciatura.

En el área de educación, la evaluación es el proceso que permite valorar los aciertos, reconocer las fallas y detectar potencialidades. En México el organismo que se encarga de tal responsabilidad es el Centro Nacional de Evaluación para la Educación Superior, A.C. (CENEVAL), ofreciendo servicios de evaluación a escuelas, universidades, empresas, autoridades educativas, organizaciones de profesionales del país y otras instancias particulares y gubernamentales. La misión de CENEVAL es promover la calidad de la educación mediante evaluaciones válidas, confiables y pertinentes de los aprendizajes, que contribuyan a toma de decisiones fundamentales. La actividad principal de CENEVAL es el diseño y aplicación de instrumentos de evaluación de conocimientos, habilidades y competencias, así como el análisis y difusión de los resultados que arrojan. El exámen general de egreso de licenciatura (EGEL) proporciona diversos beneficios tanto para el sustentante como para las instituciones formadores, empleadores y la sociedad en general. A las instituciones de educación superior les permite:

-Incorporar el exámen como un medio para evaluar y comparar el rendimiento de sus egresados con un parámetro nacional, además de uso de instrumento como opción de titulación.

-Contar con elementos de juicio para realizar un proceso confiable, preciso y objetivo que apoye los procesos de planeación y evaluación curricular que les permita mejorar la formación académica de los profesionales, adecuando los planes y programas de estudio.

-Aportar información a los principales agentes educativos como son autoridades, instituciones, maestros, estudiantes y sociedad en general acerca del estado que guardan los individuos respecto de los conocimientos considerados como necesarios para integrarse al campo laboral.

-Conocer los resultados de las acciones nacionales tendientes a armonizar el dominio de la disciplina de los egresados de las diferentes instituciones universitarias de país.

El exámen general de egreso (EGEL) evalúa que el egresado de la licenciatura en administración cuente con una visión integral de la empresa y su entorno, que tenga capacidad de generar estrategias y tomar decisiones para el logro de objetivos de forma eficiente mediante el proceso administrativo. Las áreas que conforman el exámen general de egreso (EGEL) son: el área básica la cual incluye los fundamentos de administración, finanzas, contabilidad, recursos humanos, mercadotecnia, operaciones y métodos cuantitativos. La segunda área es la de apoyo la cual incluye economía, derecho, informática, psicología y sociología. La tercera área es la de conocimiento final integrado que incluye la creación y administración

de negocios, evaluar y tomar decisiones sobre la información financiera, formulación y evaluación de proyectos de inversión, reclutar, seleccionar, motivar, capacitar y evaluar a los recursos humanos, evaluar el plan de mercadotecnia, control de inventarios, toma de decisiones sobre costos y administración de la producción. La cuarta área incluye los ámbitos de desempeño que incluye: el ámbito nacional e internacional, sectores privado, público, social e independiente y la investigación y docencia.

Las habilidades que se evalúan en el exámen general de egreso (EGEL) son: proponer y aplicar soluciones, liderazgo, negociación y comunicación, aplicación de tecnología, competencia para actuar en un contexto global, combinar conocimientos de otras disciplinas y trabajo en equipo. Las actitudes que se evalúan en el exámen general de egreso son: actuar con ética, educación continua, actuar de manera crítica y propositiva, mejora continua y desarrollo, generar y difundir el conocimiento, trabajo bajo presión e incertidumbre, responsabilidad social, disciplina y socialización. El alcance del exámen general de egreso (EGEL) es contribuir con el grado de idoneidad de cada egresado con respecto a un estándar de formación nacional, establecer el nivel de eficacia de los distintos programas y modalidades de formación profesional que administran las Instituciones de educación superior y proporcionar los indicadores de rendimiento a partir de los cuales, los organismos acreditadores pueden identificar los méritos de cada programa de licenciatura en cada institución educativa. Los resultados del exámen general de egreso (EGEL) se presentan por tres niveles de desempeño: sobresaliente (DSS), satisfactorio (DS) y aun no satisfactorio (ANS). Con base estos resultados se estableció un concentrado de los resultados por los años 2010-2011 de la carrera de Licenciado en administración de empresas: de 546 alumnos que aplicaron el exámen general de egreso solo 204 tuvieron desempeño satisfactorio (DS) y 12 desempeño sobresaliente (DSS). El examen general de egreso (EGEL) conlleva diversos beneficios tanto para el sustentante como para las instituciones formadoras, empleadores y la sociedad en general.

Al sustentante le permite: Conocer el resultado de su formación en relación con un estándar, mediante la aplicación de un examen, confiable y válido, probado nacionalmente. Conocer el resultado de la evaluación en cada área del conocimiento, por lo que puede ubicar aquellas donde tiene un buen desempeño, lo cual puede orientarlo tanto en la elección de estudios de posgrado, como opciones laborales donde se encuentra mejor capacitado. Beneficiarse curricularmente al contar con un elemento adicional para integrarse al mercado laboral. A las instituciones de educación superior (IES) les permite: Incorporar el EGEL como medio para evaluar y comparar el rendimiento de sus egresados con un parámetro nacional, además del uso del instrumento como opción de titulación.

Contar con elementos de juicio para analizar un proceso confiable, preciso y objetivo, que apoye procesos de planeación y evaluación curricular que les permita emprender acciones capaces de mejorar la formación académica de los profesionales, adecuando los planes y programas de estudio. Aportar información a los principales agentes educativos (autoridades, instituciones, maestros, estudiantes, sociedad en general) acerca del estado que guardan sus individuos y poblaciones, respecto de los conocimientos considerando necesarios para integrarse al campo laboral. Conocer los resultados de las acciones nacionales tendientes a armonizar el dominio de la disciplina de los egresados de las diferentes instituciones universitarias del país. A los empleadores y a la sociedad les permite: Contar con una forma objetiva de medir el desempeño de los egresados en administración respecto del perfil nacional de su disciplina. Conocer con mayor precisión el perfil de los candidatos a contratar y de los que inician su ejercicio profesional mediante elementos objetivos de juicio para contar personal de calidad profesional, acorde con las necesidades nacionales. Presentar el EGEL, y obtener un testimonio de desempeño satisfactorio o sobresaliente, no condiciona la expedición del título ni de la cedula profesional por parte de la institución de educación superior a la que pertenece el egresado. Para efectos de titulación, en su caso, cada centro educativo establece el nivel o resultado requerido y los trámites necesarios.

Como lo muestra la siguiente figura, la parte central del documento la constituye la descripción del examen: que es, su estructura y sus resultados. Esta explicación complementa con información útil

respecto a la forma en que se desarrollan las sesiones. Como apoyo para su preparación, se incluyen ejemplos de reactivos, sugerencias y bibliografía. Todos estos aspectos están íntimamente relacionados para lograr buenos resultados. Este panorama le permitirá ubicar cada capítulo y establecer su relación con el resto de los apartados. Características del examen general de egreso (EGEL): Es un instrumento de evaluación que por sus características puede describirse como un examen:

objetivo: tiene criterios de calificación unívocos y precisos. Estandarizado: cuenta con reglas fijas de diseño, elaboración y aplicación. De ejecución máxima (de poder): exige el máximo rendimiento en las tareas que se le piden que ejecuten al sustentante, contiene reactivos de diferentes niveles de dificultad cognitiva y tiene un tiempo límite suficiente para poder contestarse en su totalidad. De opción múltiple: cada reactivo se acompaña de cuatro opciones de respuestas de las cuales solo una es correcta y tres son distractores. Orientado a criterios: lo que permite comparar el resultado obtenido por el sustentante con los estándares predefinidos. Que evalúa resultados de aprendizaje: no se refiere a los insumos ni a los procesos para lograr ese aprendizaje. El EGEL se redacta en idioma español, por lo que comprende solo a individuos que puedan realizar esta evaluación bajo esta condición lingüística. Los sustentantes con necesidades físicas especiales serán atendidos en función de su requerimiento especial.

El EGEL contiene preguntas acerca de las normas jurídicas y profesionales que hayan entrado en vigor seis meses antes de la fecha de aplicación del examen. El examen puede contener reactivos sobre aspectos que correspondan a normas jurídicas que aun no siendo vigentes pueden ocuparse en el ejercicio profesional actual. Que evalúa el examen general de egreso (EGEL): Evalúa el nivel de conocimientos y algunas habilidades que debe poseer un egresado de la licenciatura en administración de acuerdo con un perfil referencial de validez (PRV). El sustentante que presentara el examen general de egreso (EGEL-A): Es el egresado de la licenciatura en administración que cuenta con una visión integral de la empresa y su entorno. Tiene capacidad de generar estrategias y tomar decisiones para el logro de objetivos de forma eficiente mediante el proceso administrativo. Su desempeño debe ser con base en el conocimiento integral de su disciplina, debe conducirse con ética y responder a los requerimientos de la sociedad, en los ámbitos nacional e internacional. Los egresados en administración son personas que se encuentran en etapa final de sus estudios o los han concluidos pero aun no están titulados.

Objeto de estudio de la administración: la empresa es el objeto de estudio, es la parte central de la disciplina. Consiste en la delimitación de estos elementos esenciales de que se ocupa la administración: la estructura de la empresa, su conducción, su organización y funcionamiento eficiente en la consecución de los propósitos fundamentales para lo que fue integrada. Estos principios se aplican generalmente a empresas con fines de lucro, no obstante, se pueden utilizar en organizaciones que sin propósitos de lucro se constituyan con los recursos humanos y materiales para cumplir objetivos especiales. Los ejes principales del examen general de egreso para la licenciatura en administración son: el área básica y de apoyo. El conocimiento de la administración está conformado por los ejes curriculares, los cuales son líneas de contenidos que pasan por el conjunto de áreas; cada eje los conforma un elemento del proceso administrativo. Las áreas se dividen en: básicas, integradas por el conocimiento para administrar cada área funcional de la empresa, y de apoyo, que brindan una formación multidisciplinaria. Todas forman el contexto de conocimientos del egresado. Los ejes sobre los que se analiza el objeto de estudio de la administración son los elementos del proceso administrativo: planeación, organización de una empresa. Estos ejes atraviesan cada área funcional de la empresa, y son la herramienta fundamental de desarrollo en todos los procesos: financieros, de dirección, personal, operación, planeación y organización. El área básica se identifica con las áreas funcionales de las empresas sobre las que actúa el administrador. Constituye la parte primordial y de sustento de la administración de un negocio. Son:

Fundamentos de administración

Dirección

Finanzas

Recursos humanos

Mercadotecnia

Operaciones

El área de apoyo es el estudio y evaluación del entorno en la administración resulta fundamentalmente para su ejercicio, toda vez que este proporciona los elementos para la toma de decisiones en cada una de las áreas básicas de la disciplina. En este sentido, el entorno puede ser interno y externo y se encuentra dividido al menos en: económico, social, legal, político y tecnológico. Las subáreas de apoyo proporcionan elementos que caracterizan cada aspecto del entorno para su evaluación.

Economía

Derecho

Informática

Psicología y sociología

La importancia de las disciplinas de apoyo radica en la forma en que se emplean en la administración creando un entorno sujeto de estudio y evaluación para la toma de decisiones en cada una de las áreas básicas. El conocimiento final integrado identifica los aspectos centrales del conocimiento que se va a evaluar. Estos elementos demuestran las capacidades o aptitudes que le permitirán a un egresado participar de manera activa en el mercado laboral y contribuir al desarrollo de su disciplina y de su sociedad. La evaluación del conocimiento final integrado en las áreas básicas pueden anunciarse de la siguiente forma: 1) para la dirección general, la creación y administración de negocios; 2) para las finanzas y la contabilidad; la manera de tomar decisiones y evaluar la información financiera, así como la formulación y evaluación de proyectos de inversión; 3) en el caso de los recursos humanos, reclutar, seleccionar, motivar, capacitar y evaluar al personal; 4) para el área de mercadotecnia, la evaluación de planes de mercadotecnia; 5) en operaciones y métodos cuantitativos, el control de inventarios, la toma de decisiones sobre costos y la administración de la producción. Tomando en cuenta siempre que la actuación del administrador ocurre en el ámbito multidisciplinario.

En este examen el egresado demostrara que asimiló las prácticas y principios de esta disciplina, evaluándose hasta el conocimiento final integrado, dejando al proceso de certificación profesional aquellos aspectos relacionados con los ámbitos de desempeño. En este caso se observa que será capaz de aplicar los conocimientos propios de la disciplina en los sectores privado, público, social e independiente, en los ámbitos nacional e internacional. Así como en la investigación y la docencia. Habilidades Las habilidades que aquí se enuncian constituyen, al igual que el conocimiento final integrado, parte esencial de la formación de los egresados en administración; no obstante, el EGEL puede medir solo algunas de ellas, ya que se ve limitado en esta función por la clase de reactivos que se pueden aplicar. El examen pone énfasis en la evaluación del conocimiento final integrado más que en las habilidades. La relación de estas habilidades entre sí y con los conocimientos propios de la disciplina resulta vital para la formación de individuos con mayores y mejores competencias; por lo que, aun cuando el EGEL no evalué todas ellas, es compromiso de las instituciones de educación superior considerarlas en la formación de sus alumnos y estas habilidades son las siguientes:

-Proponer y aplicar soluciones

Por la actividad que desempeña, el egresado en administración requiere de la habilidad para generar soluciones a problemas de persona, financieros, de mercadotecnia, administración y de operaciones, de manera eficiente y eficaz; así crear procedimientos y sistemas de trabajo y control interno ágiles que permitan un mejor desempeño de sus actividades.

-Liderazgo, negociación y comunicación El egresado de esta licenciatura debe ser conciliador, un líder para identificar y orientar las acciones hacia el logro de objetivos, agente de cambio, capaz de identificar nichos de oportunidad, integrador y director de grupos, así como excelente capacidad de comunicación oral y escrita.

-Aplicación de tecnología Debe ser capaz de utilizar con destreza el software aplicado a la administración, para la solución de problemas en su área de competencia y en general las tecnologías de la información y la comunicación para interactuar en un mundo globalizado.

-Competencia para actuar en un contexto global Deberá tener conocimiento de diversas culturas, incluyendo idiomas, para interactuar profesionalmente en el ámbito internacional.

-Combinar conocimientos de otras disciplinas La habilidad para actuar en equipos multidisciplinarios complementa la formación del egresado. De los cruces disciplinarios puede obtener elementos tanto como criterio, comprensión y evaluación no solo de problemas relacionados directamente con sus áreas de trabajo, sino también de todo aquello que influya en su entorno.

-Trabajo en equipo Para un adecuado desempeño, requiere trabajar en equipo tanto en el área en que se desempeña, como interactuando con otras áreas o componentes de su sistema.

-Actitudes Estas características del individuo también forman parte del bagaje del egresado y son, al igual que algunas de las habilidades, elemento clave, que deben considerar las universidades al momento de formar a sus egresados, pese a que estos no sean evaluados a través del EGEL.

-Actuar con ética El egresado de administración requiere guiar su actuación con el deber y responsabilidad moral que debe quedar de manifiesto en cada momento en que intervengan.

-Educación continua Es responsabilidad profesional del egresado actualizarse en forma continua.

-Actuar de manera crítica y propositiva Debe actuar con un sentido analítico, crítico y propositivo.

-Mejora continua y desarrollo Debe buscar la satisfacción de los requerimientos de los clientes y de las partes interesadas, así como imbuir una cultura de la mejora continua dentro de la organización.

-Generar y difundir el conocimiento Deberá desarrollar una actitud de apertura que lo lleve a compartir, proponer y construir conocimientos, técnicas y métodos susceptibles de ser promovidos en la docencia y la investigación.

-Trabajo bajo presión e incertidumbre Exige de la versatilidad y creatividad para la toma de decisiones asertiva, en ambiente de alta presión. Poseer además alta tolerancia a la frustración y a la ambigüedad.

-Responsabilidad social El egresado está comprometido a contribuir y participar en la mejora y desarrollo de la sociedad.

-Disciplina Su desempeño debe ser con orden y constancia, encaminado al logro de metas organizacionales.

-Socialización.El egresado deberá contar con un buen manejo de las relaciones humanas.

Que es perfil referencial de validez Lo anteriormente expuesto conforma el perfil Referencial de Validez para el EGEL, el cual se define como un estándar de conocimientos y habilidades que debe poseer el sustentante del EGEL y sobre el cual se diseña el examen.

Quien elabora el perfil Referencial de Validez El perfil Referencial de Validez es elaborado por el CENEVAL de acuerdo con lo dispuesto por el consejo Técnico, cuenta con la revisión y actualización técnica del comité Académico y redactores altamente calificados de instituciones de educación superior del país y gremios profesionales como la Asociación Nacional de facultades y Escuelas de Contaduría y Administración (ANFECA), el colegio Nacional de Licenciados en Administración (CONLA) y la Academia Mexicana de Auditoría Integral y al Desempeño (AMAID).La base jurídica en la cual se determina la validez del examen general de egreso (EGEL), es el Estatuto Escolar de la Universidad Autónoma de Baja California del año 2006 y el cual establece lo siguiente: ARTÍCULO 105. Para obtener el título profesional a nivel de licenciatura se requiere:

I. Haber cubierto el total de los créditos del plan de estudios del programa respectivo;

II. Haber terminado y acreditado el servicio social comunitario, y liberado el profesional;

III. Satisfacer los demás requisitos establecidos en la normatividad universitaria aplicable, y

IV. Cumplir con lo dispuesto por el artículo 106, en lo relativo a las modalidades de titulación, salvo que el programa educativo cursado este considerado como de buena calidad al momento de egresar el alumno.

ARTÍCULO 106. Para la obtención del título de la licenciatura, y salvo lo dispuesto por el presente estatuto respecto a los programas educativos considerados de buena calidad, los alumnos podrán acogerse a las modalidades de titulación ofrecidas por la universidad, siendo estas:

I. Aprobar el examen profesional, con apego a lo dispuesto en el reglamento respectivo y demás normas complementarias.

II. Obtener la constancia de Examen General de Egreso de Licenciatura aplicado por el centro de Nacional de Evaluación para la Educación Superior, A.C., que acredite el índice Ceneval Global mínimo requerido por la Universidad, al momento de su expedición, o su equivalente en otro examen de egreso que autorice al Consejo Universitario.

III. Haber alcanzado, al final de los estudios profesionales, un promedio general de calificaciones mínimo de 85;

IV. Haber cubierto el total de los créditos del plan de estudios de una especialidad o 50% de los créditos que integran el plan de estudios de una maestría, cuando se trate, en ambos casos, de programas educativos de un área del conocimiento igual o afín al de los estudios profesionales cursados.

V. Comprobar, de conformidad con los criterios de acreditación que emita la unidad académica encargada del programa, el desempeño del ejercicio o práctica profesional ; por un periodo mínimo acumulado de dos años, contados a partir de la fecha de egreso;

VI. Aprobar el informe o memoria de la prestación del servicio social profesional, en los términos previstos por la unidad académica correspondiente, y

VII. Las demás modalidades de titulación establecidas en los planes de estudio a nivel licenciatura.

Criterios de calidad de los programas y planes de estudio. ARTÍCULO 150. Los programas educativos en todos los niveles estarán sujetos a un proceso de evaluación permanente y sistematizado, con el propósito de mantener o elevar la buena calidad de sus planes y programas de estudio.

ARTICULO 151. La evaluación de los programas educativos se llevará a cabo por las unidades académicas que imparten los programas educativos, conjuntamente con las coordinaciones que tengan a su cargo vigilar el desarrollo del programa en los términos señalados en el estatuto General. La evaluación se efectuará cada dos años o de manera extraordinaria cuando así lo determine el rector.

ARTICULO 152. Los trabajos de evaluación a que se refiere el artículo anterior comprenderán: la valoración curricular; el desempeño del personal académico y alumnos inscritos al programa; la infraestructura física y equipamientos existentes; los apoyos académicos y servicios administrativos de atención a los alumnos, los demás indicadores estándares determinados en las disposiciones complementarias. ARTICULO 153. La Universidad deberá solicitar la colaboración de expertos de reconocido prestigio, cuerpos académicos, colegios de profesionistas, organismos locales, nacionales o internacionales especializados, y la opinión de los ex alumnos, para apoyar los proyectos de creación, reestructuración, actualización, actualización y evaluación de los programas educativos y planes de estudios. ARTICULO 154. La Universidad considerará como programas educativos acreditados de buena calidad:

I. Los programas de técnico superior universitario y de licenciatura que estén acreditados por un organismo acreditador o evaluador reconocido nacional o internacionalmente, en virtud de cumplir con los indicadores y estándares de calidad según las evaluaciones realizadas por dichos organismos, y

II. Los programas de posgrado que estén incluidos en los registros o padrones de los programas de buena calidad de un organismo integrador, evaluador o acreditador, reconocido nacional o internacionalmente.

METODOLOGÍA

Esta fue una investigación aplicada de carácter cuantitativo, ya que se elaboró un cuestionario para aplicarlo a una muestra de alumnos que tuvieron: un desempeño sobresaliente, un desempeño satisfactorio y un desempeño aún no satisfactorio, durante el periodo de marzo del año 2011 que fueron los alumnos potenciales a egresar de la última generación de Licenciados en administración de empresas.

La información anterior se contrastó con la estadística de titulados del año 2011 y los resultados del examen general de egreso (EGEL) durante el mismo período de evaluación.

Además se procedió a analizar el desarrollo de las áreas académicas de los alumnos, concernientes al área disciplinaria y terminal, para poder obtener las conclusiones correspondientes.

RESULTADOS

Los resultados preliminares de esta investigación fueron que los resultados obtenidos en el examen general de egreso (EGEL) del mes de marzo de 2011, el 62% de los alumnos obtuvieron un desempeño no satisfactorio (ANS), el 37% obtuvieron un desempeño satisfactorio (DS) y el 1% un desempeño sobresaliente. Las áreas de conocimiento en que fue más bajo el aprovechamiento fueron: administración organizacional y gestión de calidad y administración de las finanzas. El índice de titulación de la última generación que egreso de Licenciados en administración de empresas del periodo 2007-1 al 2011-1 fue del 59% de un total de 83 alumnos.

CONCLUSIONES

Considerando que es mayor el porcentaje de titulados, que el porcentaje de alumnos que obtuvieron un desempeño satisfactorio junto con los que obtuvieron un desempeño sobresaliente, es necesario aplicar el Estatuto Escolar con mayor rigurosidad ya que no debe permitirse la titulación de los egresados que no hayan aprobado satisfactoriamente el examen general de egreso (EGEL), además de que hay que hacer una revisión del contenido de las materias que incluyen las dos áreas de más bajo aprovechamiento como fueron: la de administración organizacional y gestión de la calidad así como la de administración de las finanzas, verificando que estén incluidos todos los temas que se ven en el examen, así como revisar los perfiles de los docentes que imparten las materias de esas dos áreas para efectuar los cambios respectivos y que se pueda mejorar el aprovechamiento de los alumnos y esto se refleje en el incremento de alumnos que obtengan un desempeño satisfactorio en el examen general de egreso (EGEL). Lo anterior dará como resultado que durante el proceso de acreditación de la carrera se pueda constatar la calidad de los egresados en base a los resultados de dicho examen.

LA INVESTIGACIÓN SOBRE GESTIÓN DEL TALENTO HUMANO EN LA INDUSTRIA AEROSPACIAL EN MÉXICO

Cruz Elda Macías Terán, Universidad Autónoma de Baja California
Robert Efraín Zárate Cornejo, Universidad Autónoma de Baja California
Maricela Macías Terán, Universidad Autónoma de Baja California

RESUMEN

El presente artículo tiene como objetivo analizar los trabajos publicados sobre gestión de talento humano aplicada al sector aeroespacial en México. El propósito de este estudio es plantear estrategias de investigación que permitan una aproximación a la gestión del talento humano que realiza la industria aeroespacial. Es un estudio descriptivo de tipo documental transversal en el que se realiza una revisión de algunos planteamientos teóricos sobre la naturaleza de la investigación cualitativa y cuantitativa. Se analizan diversos diseños de investigación mixta y las diferentes tradiciones o estrategias de investigación cualitativa. Así también se identifican algunas publicaciones que, hasta el momento, se han realizado sobre la industria aeroespacial en México y se analizan las estrategias de investigación utilizadas en ellas. Algunos hallazgos del presente trabajo fueron la escasa investigación existente sobre la gestión del talento humano en la industria aeroespacial en México y la falta de consenso sobre el número de empresas que conforman la industria aeroespacial, particularmente en Baja California. Lo anterior resulta significativo si se considera que la industria aeroespacial cuenta con más de 40 años en esa región. Con base en los resultados de este trabajo, se presentan algunas reflexiones finales y se plantea un diseño de investigación.

PALABRAS CLAVE: industria aeroespacial, gestión del talento, investigación cuantitativa, investigación cualitativa

THE RESEARCH ON MANAGEMENT OF THE HUMAN TALENT IN THE AEROSPACE INDUSTRY IN MEXICO

ABSTRACT

This article aims to analyze papers published on human talent management in the aerospace industry in Mexico. The purpose of this study is to raise research strategies to approach the management of the human talent that performs the aerospace industry. A transversal descriptive study was conducted to review some theoretical approaches on the nature of the qualitative and quantitative approaches. Several designs of joint research and the different traditions or qualitative research strategies are discussed. Some papers which, so far, have been published on the aerospace industry in Mexico and the research strategies used in them are analyzed, as well. Some findings of this work were that there is very little research on the management of the human talent in the aerospace industry in Mexico, and that there is lack of consensus on the number of companies that comprise the aerospace industry, particularly in Baja California. This is significant considering that the aerospace industry has been in that area for more than 40 years. Based on the results of this work, some concluding reflections and a proposal of a research design are presented.

JEL: M12

INTRODUCCIÓN

En las dos últimas décadas la industria aeroespacial ha mostrado tener mayor relevancia a nivel mundial, dado el crecimiento en la conectividad de las líneas comerciales de aviación, el creciente interés internacional por tener satélites artificiales en el espacio y el aumento del uso de armamento cada vez más sofisticado para usos militares, entre otros. A decir de Carrincazeaux y Frigant (como se citó en Hualde y Carrillo, 2007:11), la industria aeroespacial se ocupa de “actividades productivas destinadas al diseño y construcción de aviones, helicópteros, *launchers*, misiles naves espaciales y satélites; así como el equipo del que dependen éstos, además de los motores y los equipos electrónicos utilizados a bordo.”

La industria aeroespacial mexicana, no está ajena a este grado de sofisticación de la industria aeroespacial mundial, pues se encuentra en una marcada expansión. En los últimos 20 años, México se ha convertido en el primer receptor mundial de inversiones para manufacturas de la industria aeroespacial, ya que captó cerca de 33 mil millones de dólares, un volumen mayor que Estados Unidos, China, Rusia y la India. Con ello, el país se convirtió en un sitio estratégico para esa actividad, informó la consultora Deloitte (Martínez, 2010: párrafo 1). Así el crecimiento de esta industria en México, representa una gran oportunidad de empleo para los mexicanos. Sin embargo, se hace conciencia que estas actividades productivas requieren la aplicación de una tecnología que en ocasiones avanza a pasos agigantados, lo que implica una carrera por la actualización en el nivel de especialización de los trabajadores que las realizan. En México, no siempre el entrenamiento de los técnicos resulta suficiente para cubrir las necesidades de especialización de estas empresas. Al respecto, Salieri, Santibañez y Fuentes (2010) comentan que...

El entrenamiento de técnicos podría resultar insuficiente, particularmente en el norte de México. Los únicos programas especializados existentes en el norte del país (de reciente incorporación) son los del CENALTEC y del ITSON. Aunque las empresas contactadas localizadas en estas regiones no parecen exigir por el momento altos niveles de capacitación previa a la contratación, la falta de recursos capacitados podría constituir una barrera a la transición hacia segmentos de mayor valor agregado (p. 4).

Lo anterior resulta trascendente, dada la alta concentración de la industria aeroespacial en el norte de México. Hualde y Carrillo (2007:79), afirman que la industria aeroespacial fue establecida desde hace 40 años en Baja California y es precisamente esta entidad federativa la que “en la actualidad cuenta con el mayor número de plantas en México.” En el mismo sentido y con base en un estudio realizado sobre la industria aeroespacial en México, el Consejo Mexiquense de Ciencia y Tecnología [COMECYT] (s.f.), informa que “Baja California cuenta con la mayor concentración de empresas, que representan 26% de la industria nacional, incluyendo dos empresas con operaciones de ingeniería y de diseño.” (p. 9).

Por su parte la Secretaría de Desarrollo Económico de Gobierno del Estado de Baja California señala en su portal oficial que “con más de 40 firmas establecidas, Baja California representa una concentración única con el 35% del total de compañías en México, que ensamblan y manufacturan partes y componentes aeroespaciales. La mayoría de estas empresas se concentran en el corredor Mexicali-Tecate-Tijuana.” Sin embargo, según datos del Instituto Nacional de Estadística y Geografía [INEGI, 2011] sólo existen en Baja California 11 empresas dedicadas a la fabricación de equipo aeroespacial. Se puede observar que no existe consenso en cuanto al número de empresas que conforman la industria aeroespacial en esta entidad federativa. En Baja California se observa, en consecuencia, un fenómeno en la industria aeroespacial de múltiples aristas. Las empresas se enfrentan, entre otras cosas, al hecho de la escasez de técnicos especializados, a la necesidad de capacitar al personal con que se cuenta para que se mantenga actualizado y al reto de mantener en la empresa al personal que han capacitado, pues la piratería ahora existe a través de una guerra por el talento humano. Una adecuada gestión del talento humano se vuelve primordial. Lo anterior detona interrogantes sobre la gestión del talento humano que realiza la industria aeroespacial en México. Sin embargo, al momento no hay respuestas concretas, pues según lo señalan

algunos estudiosos del tema, “En México existe un creciente desarrollo de la industria aeroespacial, pero se carece de estudios y cifras exactas al respecto” (Hualde y Carrillo, 2007, pág. 67). Resulta evidente que se requiere investigar este fenómeno dada su importancia para la economía de México.

Por tanto, como primer paso hacia el estado del conocimiento sobre este tema, el objetivo del presente artículo es analizar los trabajos publicados sobre la gestión de talento humano aplicada al sector aeroespacial en México. Como objetivos específicos se establecen 1) revisar algunos planteamientos teóricos sobre la naturaleza de la investigación cualitativa y cuantitativa, 2) determinar de qué manera se ha realizado la investigación sobre la gestión del talento humano en la industria aeroespacial en México, y 3) identificar los principales hallazgos de estas investigaciones. Se espera que este artículo sirva para guiar los pasos de los investigadores que pretendan adentrarse en este tema, al ofrecerles estrategias de investigación con un sustento teórico y práctico.

REVISIÓN LITERARIA

Para iniciar este recuento comenzaremos por realizar una revisión de algunos planteamientos teóricos sobre la naturaleza de la investigación cualitativa y cuantitativa, pues debemos reconocer que el vertiginoso cambio social y la pluralidad de estilos de vida, entre otros, han creado contextos inéditos bastante complejos, en donde el uso de uno u otro método pueden resultar limitados. Se hace necesario que los investigadores sean sensibles a estos cambios y sean capaces de aplicar de manera flexible las estrategias que resulten más idóneas para adentrarse en esta complejidad. No es de sorprender por tanto, que en las últimas décadas, la investigación cuantitativa se haya visto de alguna manera rebasada y que el interés en la investigación cualitativa haya crecido. La investigación cualitativa pone en práctica un conjunto de complejas prácticas interpretativas coherentes con las también complejas formaciones sociales. Al respecto, Flick (2009) expone la importancia de estudiar los significados subjetivos, las experiencias y prácticas diarias, así como las narrativas y el discurso.

Existe una marcada diferencia entre las ideas centrales que fundamentan la naturaleza de la investigación cualitativa como de la investigación cuantitativa. Denzin y Lincoln(2000) señalan que al realizar una investigación cualitativa se enfatiza la naturaleza de la realidad construida socialmente, la relación íntima entre el investigador e investigado, mientras que al realizar una investigación cuantitativa se enfatiza la medida y análisis de las relaciones causales entre las variables. Actualmente la disputa por la supremacía entre ambos métodos de investigación ha llegado a un buen término, pues ahora se reconoce que no son excluyentes sino complementarios. La aplicación de una investigación mixta brinda al investigador una visión más amplia del fenómeno estudiado. Autores como Blaxter, Hughes y Tight (2008) al hablar sobre la combinación de ambos modos de investigar han señalado lo siguiente:

La investigación cuantitativa y cualitativa se combinan para ofrecer una imagen general. La investigación cuantitativa puede emplearse para subsanar las lagunas que surgen en un estudio cualitativo porque, por ejemplo, el investigador no puede estar en más de un lugar a la vez. Alternativamente, puede suceder que no todos los problemas sean asequibles únicamente a la investigación cuantitativa o únicamente a la cualitativa (p. 100).

Resulta pertinente analizar a continuación diversos diseños de investigación mixta y las diferentes tradiciones o estrategias de investigación. Miles y Huberman (como se citó en Flick, 2009), exponen cuatro diseños en los que se pueden integrar el método cuantitativo y cualitativo. En el primer diseño, se realiza una recogida continua de ambas clases de datos. En el segundo diseño, la recogida de datos se realiza de manera paralela a través de investigación cualitativa y cuantitativa. A decir del citado autor, este diseño contempla tres etapas u oleadas como él les llama. En una primera oleada se investiga a través de investigación cuantitativa, luego se dan significado a los datos obtenidos en la

investigación cualitativa y se realiza la segunda oleada de investigación cuantitativa, posteriormente se dan significado a los datos obtenidos en la investigación cualitativa y finalmente se realiza la tercer oleada. En el tercer diseño se realiza una exploración a través de investigación cualitativa, seguido de la aplicación de un cuestionario a través de investigación cuantitativa y finalmente se realiza una profundización y evaluación de los resultados a través de investigación cualitativa.

En el cuarto diseño se inicia con una encuesta a través de la aplicación del método cuantitativo, seguido de un estudio de campo a través del método cualitativo y finalmente la realización de un experimento a través del método cuantitativo. Los diseños anteriores muestran que un estudio puede estar conformado tanto por enfoques cualitativos como cuantitativos en las diversas etapas del proceso de investigación. El uso de ambos métodos se puede secuenciar. Asimismo se puede triangular la investigación cualitativa y cuantitativa, esto es, combinar ambos métodos para compensar las debilidades de uno y otro. Creswell y Plano (2007) explican que en la realización de un diseño de investigación mixta, se deben tomar en cuenta las habilidades que tenga el investigador para realizar una investigación utilizando ambos métodos.

Asimismo se debe tomar en cuenta el factor tiempo, pues el recolectar datos a través de ambos métodos obviamente implica más tiempo. Cuando se aplica la investigación cualitativa en estos diseños mixtos, es importante recordar que existen diversas tradiciones o estrategias de investigación cualitativa. Así Creswell (1998) menciona que hay cinco tradiciones: biografía, fenomenología, la teoría fundamentada, etnografía y estudio de caso. Los procedimientos específicos de análisis de datos que se utilizan en estas tradiciones son: manejo de datos, leer y escribir memos, describir, clasificar, interpretar y representar o visualizar. A decir del precitado autor, aunque las cinco tradiciones de investigación realizan similares procedimientos específicos en cuanto a manejo de datos y escritura de memos, se observa que en los procedimientos de descripción, clasificación, interpretación y representación difieren (ver Tabla 1).

Por su parte Flick (2007), menciona otras estrategias de investigación como el análisis del discurso en donde los procedimientos se refieren no sólo a las conversaciones cotidianas, sino también a otros tipos de datos como por ejemplo, las entrevistas o los informes de medios de comunicación. Flick (2007) menciona además otras posiciones teóricas como los estudios de trabajo y la psicología discursiva. A decir de Padgett (2008), en la actualidad la investigación cualitativa abarca toda una familia de métodos, en donde como en cualquier familia, algunos miembros se frecuentan más que otros. Así se puede observar que mientras que unos miembros de la familia se han dejado de ver por largo tiempo, como la etnografía, los casos de estudio y la teoría fundamentada, otros como el análisis de la narrativa, el constructivismo y también los enfoques fenomenológicos son nuevos en el escenario.

Cuando se aplica la investigación cuantitativa, en estos diseños mixtos, es importante recordar que en la investigación cuantitativa existen a decir de Hernández, Fernández y Baptista (2010) diseños de “investigación experimental e investigación no experimental. A su vez, la primera puede dividirse de acuerdo con las clásicas categorías de Campbell y Stanley (1966) en: preexperimentos, experimentos “puros” y cuasiexperimentos. La investigación no experimental la subdividimos en diseños transversales y diseños longitudinales” (p. 121).

Tabla 1: Procedimientos Específicos En Cuanto A Manejo De Datos Por Tradición De Investigación Cualitativa

Etapa/Tradición	Biografía	Fenomenología	Teoría Fundamentada	Etnografía	Estudio de Caso
manejo de datos	Crear y organizar archivos de datos	Crear y organizar archivos de datos	Crear y organizar archivos de datos	Crear y organizar archivos de datos	Crear y organizar archivos de datos
leer y escribir memos	Leer a través del texto, hacer notas al margen y formar códigos	Leer a través del texto, hacer notas al margen y formar códigos	Leer a través del texto, hacer notas al margen y formar códigos	Leer a través del texto, hacer notas al margen y formar códigos	Leer a través del texto, hacer notas al margen y formar códigos
Descripción	Del grupo meta de experiencias	Del significado de la experiencia para el investigador	No lo realiza	De la fotografía de la situación (actores, lugares, etc.)	El caso y su contexto
Clasificación	material contextual	unidades de significado	contextos estrategias, etc.	buscando regularidades en el tema y patrones	categorías
Interpretación	Teoriza hacia el desarrollo de patrones y significados	Desarrolla una descripción textual, estructural y general de las experiencias (saca la esencia)	Desarrolla una matriz condicional	Interpreta y hace sentido de los hallazgos	Desarrolla generalizaciones.
Representación	Presenta una narración enfocándose en procesos y teorías	Presenta narración de la esencia de la experiencia	Presenta propuestas	Hace una presentación de una narración aumentada por tablas, figuras y diálogos	También hace una presentación de la narración aumentada por tablas y figuras.

En esta tabla se observa que en la etapa de manejo de datos y en la de leer y escribir memo, el procedimiento para el manejo de datos es igual. (Resumido de Creswell 1998:148-149).

Al llegar al final de este apartado y a manera de sumario, se puede afirmar que la propuesta de Creswell (1998) parece ser más acertada, dada la descripción concreta y sencilla de los procedimientos para la aplicación de la investigación cualitativa. De igual manera se puede afirmar, sin la intención de minimizar los beneficios que ofrece la investigación cuantitativa, que también la investigación cualitativa ofrece una amplia gama de posibilidades de estrategias de investigación, con la que se puede interpretar de una manera muy sensible y detallada las relaciones sociales. Sin duda, el poder observar un fenómeno a través de ambas lentes (investigación cualitativa e investigación cuantitativa) con una investigación mixta, le ofrece al investigador una visión más clara de la realidad que se pretende interpretar.

METODOLOGÍA

La presente investigación es de corte cualitativo. Es un estudio descriptivo de tipo documental transversal en el que se realiza una revisión de algunos planteamientos teóricos que hasta el momento se han vertido sobre la naturaleza de la investigación cuantitativa y cualitativa, así como los diversos diseños de investigación mixta y las diferentes tradiciones o estrategias de investigación cualitativa y cuantitativa. A la luz de los planteamientos teóricos revisados, se analizaron las estrategias de investigación utilizadas en estudios sobre la gestión del talento humano en la industria aeroespacial en México, específicamente en Baja California. Para localizar y seleccionar las publicaciones sobre el tema de estudio, se revisaron bases de datos como EBSCO HOST, la página oficial del Instituto Nacional de Estadística y Geografía (INEGI); portales de internet como Gestipolis.com, deGerencia.com e Infoespacial.com; repositorios de tesis de universidades como el de la Universidad Michoacana de San Miguel de Hidalgo, del Instituto de Altos Estudios Nacionales; libros, folletos, revistas especializadas como *Metalmecánica*, y periódicos como *RRHHdigital*. Se hace la precisión que las publicaciones sobre la gestión del talento humano en la industria aeroespacial en México fueron muy escasas, por lo que se tuvo que recurrir a analizar las publicaciones sobre la gestión del talento humano y de la industria aeroespacial de manera separada, así también se recurrió a analizar publicaciones sobre el tema realizadas en otros países.

El análisis de las publicaciones se llevó a cabo en cada caso, determinando el método de investigación utilizado e identificando las unidades de análisis, así como las técnicas de investigación aplicadas. Con los datos obtenidos en esta indagatoria, se realizaron reflexiones sobre los hallazgos de las publicaciones revisadas y se pudieron plantear estrategias de investigación que resultan de utilidad para profundizar en la investigación de este tema.

RESULTADOS

A la luz de las propuestas teóricas revisadas, se pueden mencionar a continuación algunas estrategias de investigación identificadas en publicaciones sobre la gestión del talento humano y la industria aeroespacial, así como algunos hallazgos vertidos en las mismas. Para iniciar la presentación de resultados comenzaremos por decir que en las publicaciones revisadas sobre gestión del talento humano, se pudo observar un predominio de aplicación del método cualitativo. Prácticamente en todas las publicaciones se realizó un estudio descriptivo de tipo documental para caracterizar la gestión del talento humano (Ver tabla 2). Destaca la nota publicada en Mas Noticias/Chihuahua, ya que se refiere precisamente al desarrollo del talento humano en la industria aeroespacial. En el documento se presentan los resultados de una entrevista al Secretario de Economía de Chihuahua, en la que confirma la próxima vinculación que tendrá el estado de Chihuahua con *Wichita State Collage*, considerada como la capital de la industria aeroespacial en el mundo. Esta vinculación se dará para desarrollar “planes de estudio en carreras de ingeniería aeronáutica, mecatrónica, mecánica, especialidades en el desarrollo del currículo que necesita la industria aeronáutica con las universidades locales” (párr. 7).

Fueron realmente muy pocas las publicaciones sobre gestión del talento humano realizadas en México, sólo una de ellas abordaba la gestión del talento humano aplicada a la industria aeroespacial. En el caso de dos investigaciones revisadas, una de Ecuador y otra de Colombia, se identificó la aplicación de un método mixto, en donde se realizó investigación documental y entrevistas, así como también trabajo de campo para la aplicación de una encuesta.

Entre los estudios revisados sobre la industria aeroespacial en México, destaca la investigación realizada por Hualde y Carrillo (2007), la cual aplica un método mixto para estudiar a una muestra de 23 empresas ubicadas en Baja California (Ver Tabla 3). Como parte de la investigación cuantitativa, aplica la técnica de encuesta y analiza los datos mediante medidas de tendencia central. Además realiza un análisis cualitativo de los datos para darles sentido, sin embargo en el estudio no se indica cuál de las tradiciones de investigación cualitativa se aplicó. Algunos hallazgos de esta investigación fueron que las empresas estudiadas representaron un 60% del empleo total de la industria aeroespacial en la entidad y 70% de los establecimientos. Se pudo determinar en este estudio que...

las empresas ocupan en promedio 17.8 por ciento de técnicos del total de empleados por establecimiento...en promedio, se emplean a 23 ingenieros por establecimiento, esto representa alrededor de 7.6 por ciento del empleo total y un considerable 22.5 por ciento del segmento de empleo calificado (p.107).

Asimismo destaca el estudio realizado por Salieri, Santibañez y Fuentes (2010) el cual a través de método cualitativo, por medio de entrevistas e investigación documental, logra ilustrar en el mapa los estados que han desarrollado la industria aeroespacial en México (Ver Tabla 3).

Tabla 2: Publicaciones Sobre La Gestión Del Talento Humano

Medina Orozco, A. M.	2001	Ecuador	T	Estado del Arte en la medición de la gestión del talento humano	Cualitativo (el ciclo hermenéutico)	medición en cada una de las funciones y prácticas de la G.T.H.		Investigación documental

En esta tabla se observa que sólo dos de los documentos revisados tratan el tema de la gestión del talento humano en la industria aeroespacial. L= libro, R= revista, F= folleto, P= periódico, W= portal de internet, T= tesis

El citado estudio pone de manifiesto las principales carencias en cuanto a capital humano, según lo refieren los entrevistados. La principal carencia lamentada por los entrevistados es la falta de técnicos con capacitación de CNC. “Algunas empresas han desarrollado programas de entrenamiento en colaboración con instituciones educativas (en Baja California: CECATI, CECITE y el Tecnológico de Mexicali) para poder capacitar a sus propios empleados, aun cuando la capacitación toma más de un año” (p. 24). Como se puede observar en la Tabla 3, sólo tres publicaciones presentan investigaciones relacionadas a la gestión del talento humano en la industria aeroespacial en México (Hualde y Carrillo, 2007; Carrillo y Hualde, 2009 y Salieri, Santibañez y Fuentes, 2010).

En esta tabla se observa que son escasos los estudios sobre la industria aeroespacial en Baja California. En la mayoría de las publicaciones se proporcionan los resultados del estudio, pero no se indica de manera específica el método de investigación utilizado.

L = Libro, R = Revista, F = Folleto, P = Periódico, W = Portal De Internet, I = Informe

CONCLUSIONES

Con base en la revisión de los planteamientos teóricos realizada en este estudio, en cuanto a la naturaleza de la investigación cualitativa y cuantitativa, se concluye que el poder observar un fenómeno a través de ambas lentes (investigación cualitativa e investigación cuantitativa) reduce la opacidad de un fenómeno. La investigación mixta, por tanto, resulta aplicable para el estudio del tema en comento.

La revisión de publicaciones sobre la gestión del talento humano en la industria aeroespacial en México, permitió dar sustento práctico a una propuesta de estrategias de investigación, pues el identificar en los estudios revisados algunas debilidades metodológicas, coadyuva a que las estrategias propuestas se realicen de manera depurada. Un ejemplo de las debilidades encontradas, fue la poca información proporcionada en las publicaciones revisadas sobre el diseño de investigación y en su caso la tradición o estrategia de investigación aplicada. Destaca el hecho que sólo en una publicación se haya mencionado la

aplicación del método mixto de investigación, pero sin especificar la tradición de investigación cualitativa ni las técnicas aplicadas. La revisión de publicaciones permitió también determinar la manera en que se ha venido realizando la investigación sobre este tema. Resultó evidente que las publicaciones sobre gestión del talento humano revisadas, en su mayoría fueron realizadas a través de investigación cualitativa, mientras que en las publicaciones sobre la industria aeroespacial se observó la aplicación de investigación mixta y un predominio de investigación cuantitativa.

Aunado a lo anterior, la revisión de publicaciones sobre el tema materia de estudio, permitió identificar los principales hallazgos de estas investigaciones. Se pudo identificar por ejemplo, que a pesar que la industria aeroespacial no es de data reciente en México, se ha realizado muy poca investigación sobre este tema, y menos aún sobre el tema de gestión del talento humano en la industria aeroespacial en México. Específicamente en Baja California, fue evidente que no existe consenso en cuanto al número de empresas que conforman la industria aeroespacial, pues mientras Hualde y Carrillo (2007) y la Secretaría de Desarrollo Económico de Gobierno del Estado de Baja California señalan que son aproximadamente 40 empresas, INEGI (2011) identifica sólo a 11. Se puede concluir, por tanto, que el tema materia de estudio ofrece grandes retos, partiendo del hecho que no existe consenso en cuanto a las características que determinan que una empresa sea considerada parte de la industria aeroespacial, lo que da como consecuencia este sesgo tan grande en el tamaño del universo, situación que sin duda impacta a cualquier investigación en cuanto al cálculo de la muestra, para que en verdad sea representativa.

Al finalizar el presente trabajo en el que se ha analizado la investigación sobre la gestión del talento humano de la industria aeroespacial en México, se hace conciencia que el tema no se ha agotado, pues se trata de un fenómeno que presenta múltiples oportunidades de investigación: la escases de técnicos especializados, la necesidad de capacitar al personal con que se cuenta para que se mantenga actualizado y el reto de mantener en la empresa al personal que se ha capacitado, son sólo algunas.

Para guiar los pasos de quienes pretendan abordar el tema de la gestión del talento humano en la industria aeroespacial, se plantean las siguientes estrategias de investigación: se propone un diseño de investigación mixta, en el que se realice una exploración a través de investigación cualitativa, seguido de la aplicación de un cuestionario a través de investigación cuantitativa y finalmente que se realice una profundización y evaluación de los resultados a través de investigación cualitativa, es decir, el tercer diseño propuesto por Miles y Huberman (como se citó en Flick, 2009). Para la exploración a través de investigación cualitativa, se propone que el estudio se lleve a cabo a través de la tradición de teoría fundamentada, dado que esta tradición de investigación cualitativa permite un análisis de datos sistemático, el cual inicia desde el momento mismo en que se obtienen. Este procedimiento de comparación constante permite recoger, codificar y analizar datos simultáneamente, no sucesivamente, lo que agiliza el establecimiento de conclusiones. Para la aplicación del cuestionario a través de investigación cuantitativa, se propone que se realice un muestreo probabilístico estratificado por zonas del país o por ciudades que integran la entidad federativa estudiada. Para realizar la profundización y evaluación de los resultados a través de investigación cualitativa, se propone que se retomen los resultados obtenidos en la investigación cuantitativa y se les dé sentido desde la teoría fundamentada, triangulándolos con información documental o de otras fuentes. Se espera que este trabajo sirva de base para subsecuentes investigaciones.

EFECTO QUE INFLUYE LA RELACIÓN DE COMPAÑEROS DE TRABAJO, CON LA SATISFACCIÓN LABORAL EN UNA EMPRESA METAL-MECÁNICA

Sandra Patricia de la Garza Cienfuegos, Universidad Autónoma de Coahuila
Armandina Margarita Olloqui López, Universidad Autónoma de Coahuila
Carolina Isabel Barrera Flores, Universidad Autónoma de Coahuila

RESUMEN

En la presente investigación tiene como finalidad medir la relación laboral del equipo de compañeros de trabajo en una empresa metal-mecánica de la Cd. de Frontera, Coahuila, resulta de vital importancia evaluar el efecto de la interacción de los motivos del individuo, de los incentivos que le provee la organización y de las expectativas despertadas en la relación. ¿Existe correlación en el equipo de compañeros de trabajo con el clima laboral satisfactorio? (Maslow, 1991) la motivación es constante y compleja, prácticamente es una característica casi universal en toda organización. La metodología es de carácter mixto cualitativa ya que se acudió a la información documental y cuantitativa donde las técnicas utilizadas fueron entrevistas, además la investigación presenta la aplicación de 34 encuestas a los trabajadores, y se complementa con fuentes de carácter documental que han investigado sobre este tema. Según (Alles, 2002) se puede obtener propuestas que solucionen mejorar el desempeño de producción. Al analizar los resultados encontrados se da a conocer el desempeño específico y el factor de comportamiento de los compañeros de trabajo, en base a estadísticas se elaboran propuestas que resultan de vital importancia para la empresa.

PALABRAS CLAVE: Compañeros de trabajo, Clima laboral, Motivación, Desempeño

SUMMARY

In the present investigation aims to measure the employment relationship of team co-workers in a metal working company from the city of Frontera, Coahuila, is vital to assess the effect of the interaction of the motives of the individual, the incentives that provides the organization and the expectations raised in the relationship. Is there a correlation in team of co-workers with the working environment satisfactory? (Maslow, 1991) and constant motivation is complex, practically an almost universal feature in every organization. The methodology is mixed qualitative since it went to the documentary and quantitative information where the techniques used were interviews, research also shows the application of 34 surveys of employees, and is supplemented by documentary sources that have investigated this subject. According to (Alles, 2002) can be solved to obtain proposals to improve production performance. In analyzing the results disclosed specific performance and the behavior factor of co-workers, based on statistics are made proposals that are vital importance for the company.

INTRODUCCIÓN

Hoy en día para las empresas en general les interesa saber si sus empleados se sienten dentro de un clima laboral satisfactorio, además de bajar el índice de rotación de personal, capacitar al personal, es de suma importancia siempre y cuando logren permanencia dentro de la organización. Según (Maslow, 1975) la motivación del personal es vital importancia. Se debe satisfacer una necesidad inferior previa, finalmente a medida que ascendemos en la pirámide, nuestras necesidades cambian de objetivos y pasan a ser necesidades de falta o privación a ser necesidades de crecimiento o autorrealización.

Planteamiento Del Problema

El problema principal es medir mediante un instrumento de clima laboral, si influye la relación de compañeros de trabajo con en la satisfacción laboral de los trabajadores en una empresa Metal-Mecánica Identificar las alternativas de motivación en la relación laboral.

Objetivo General

Determinar el efecto que influye la relación de compañeros de trabajo con la satisfacción laboral de los trabajadores en la empresa metal mecánica. Determinar si existe correlación en el equipo de compañeros de trabajo con el clima laboral satisfactorio. Determinar si los trabajadores disfrutaban el trato con los compañeros de trabajo.

Preguntas De Investigación

- ¿Existe correlación en el equipo de compañeros de trabajo con el clima laboral satisfactorio?*
- ¿Efecto que influye la relación de compañeros de trabajo con la satisfacción laboral?*
- ¿% de los trabajadores que disfrutaban el trato con los compañeros de trabajo en la empresa?*

MARCO CONTEXTUAL

Coahuila es el tercer estado más grande del país, se encuentra localizado en el noreste de México comparte frontera con estados unidos de Norteamérica de 512 kilómetros, su extensión territorial es de 151,571 km. su población es de 2;748,391 según datos del Inegi 2010. de los cuales el 49.63% son Hombres y el 50.37% son mujeres con un PIB estatal de 36.3 % comercio, restaurantes y hoteles 20.4% y servicios 16.9%, Frontera cuenta con 75,215 habitantes.

REVISIÓN LITERARIA

(Maslow, 1991) la motivación es constante y compleja, prácticamente es una característica casi universal en toda organización. Según (Alles, 2002) se puede obtener propuestas que solucionen mejorar el desempeño de producción. Al analizar los resultados encontrados se da a conocer el desempeño específico y el factor de comportamiento de los compañeros de trabajo, en base a estadísticas se elaboran propuestas que resultan de vital importancia para la empresa

MARCO REFERENCIAL

Para Abrajan Castro, Contreras Padilla y Montoya en su investigación mencionan que la satisfacción laboral es un elemento de gran utilidad para las organizaciones ya que a través de su medición muestra la importancia de la experiencia del capital humano. Sin embargo no influye en la satisfacción laboral, en el artículo de B. López- Araujo menciona que los compañeros de trabajo y supervisores no influye en la satisfacción laboral, es decir amortigua la relación y el estrés por sus dos fuentes de presión. En una entrevista a tres empleados de la empresa metal-mecánica se llega a la misma conclusión de investigaciones anteriores, ya que la relación de compañeros es excelente en esta empresa se ayudan unos con otros cuando terminan su labor, sin embargo no se sienten satisfechos ya que no cuentan con ninguna motivación económica cuando existe labor extra de trabajo de entrega inmediata.

METODOLOGIA

Es de carácter mixto cualitativa ya que se acudió a la información documental y cuantitativa donde las técnicas utilizadas fueron entrevistas, además la investigación presenta la aplicación de 34 encuestas a los trabajadores, y se complementa con fuentes de carácter documental que han investigado sobre este tema

RESULTADOS

¿Existe correlación en el equipo de compañeros de trabajo con el clima laboral satisfactorio?

Figura 1 Se observa que no existe correlación en la satisfacción laboral y en relación con los compañeros de trabajo.

Run Summary Section

$y = disfruto_el_trato_con_mis_compañeros_de_trabajo \quad x = x21$

Figura 2: En esta figura los resultados encontrados fueron de un 85% los empleados de la empresa metal-mecánica disfrutaban del trato de los compañeros de trabajo. Donde X21 es Satisfacción laboral, según instrumento.

CONCLUSIÓN

En los datos encontrados de acuerdo al instrumento validado, se observa claramente en los histogramas que un 85% de los empleados encuentra satisfecho con la relación entre los compañeros de trabajo sin embargo no existe efecto que influye en la satisfacción laboral de la empresa metal-mecánica. En entrevistas con 3 empleados informan que la relación de compañeros de trabajo es excelente y cuando el trabajo se carga para algunos en equipo le ayudan los que terminan su labor. En cuanto a la satisfacción laboral disfrutaron su empleo pero se sienten desmotivados cuando existe carga extra y no se les reconoce su participación.

PROPUESTA

Teniendo una excelente relación en los compañeros de trabajo y supervisores se recomienda a los directivos implementar recursos económicos motivacionales cuando exista una carga de trabajo extra.

ABSTRACT

A company that does things that it was not doing before will have incorporated knowledge. If this one is managed from the dynamic intervention that the triple helix paradigm proposes, linking University-Enterprises-Government Relations, we are talking about innovations that derive knowledge transference beyond the simple links. SEDESOL's Child Care Centers, in Mexico and particularly in Durango's State, are embedded in a complex reality related to the poverty and marginalization. The goal of this research is to show the obtained results from the involvement or intervention of the Economy, Accounting and Administration Faculty, ("Facultad de Economía, Contaduría y Administración de la UJED") through the implementation of a Management System for SEDESOL's Child Care Centers. The result is encouraging, since it can appreciate what kind of knowledge is easier to incorporate for this type of microbusinesses and to describe factors involved in such learning. Specific circumstances that either allow or inhibit organizational learning were identified and how this type of interventions may develop change and improvement.

SEDESOL'S CHILD CARE CENTERS: LEARNING ORGANIZATIONS. AN INTERVENTION FOR THE KNOWLEDGE MANAGEMENT FROM THE TRIPLE HELIX

RESUMEN

Una empresa que hace cosas que antes no hacía, habrá incorporado conocimiento. Si este, es gestionado desde la intervención dinámica que propone el paradigma de la triple hélice, relacionando universidad, empresa y estado, se está hablando de innovaciones que derivan transferencia de conocimiento más allá de la simple vinculación. Las Estancias Infantiles de SEDESOL, en México y particularmente en el Estado de Durango, están incrustadas en una realidad compleja relacionada con la pobreza y marginación. El objetivo de este trabajo de investigación es mostrar los resultados obtenidos de la intervención de la Facultad de Economía, Contaduría y Administración, a través de la implementación de un Sistema de Gestión para Estancias Infantiles de SEDESOL, El resultado es alentador, pues puede apreciarse qué conocimientos son más fáciles de incorporar para este tipo de microempresa y describir factores involucrados en tal aprendizaje. Se pudieron identificar circunstancias específicas que facilitan o inhiben el aprendizaje organizacional y como este tipo de intervenciones puede impulsar el cambio y la mejora.

PALABRAS CLAVES: Gestión del conocimiento, Aprendizaje organizacional y Triple Hélice.

INTRODUCCIÓN

Este proyecto de investigación se deriva de los resultados obtenidos en la implementación de un sistema de gestión para Estancias Infantiles (EI) de SEDESOL, antes de establecer el procedimiento a seguir, se realizó un diagnóstico de las entidades analizadas, lo que constituye además la base para la primera etapa del procedimiento propuesto. Para ello se revisaron dos apoyos clave: el instrumento de Diagnóstico Inicial y el de Diagnóstico Final. La culminación de las etapas iniciales permitió conocer los principales aprendizajes más fáciles de adquirir para las EI participantes en el Proyecto que influyeron en el aprendizaje organizacional de las mismas, derivado de la aplicación de un modelo de sistema de gestión de calidad, por lo que el resultado de los elementos analizados en el diagnóstico inicial y final constituyeron el punto de partida para el diseño y la aplicación de este estudio de investigación, el cual forma parte de la línea de investigación: “Tópicos selectos de administración empresarial”, del cuerpo académico “Estudios empresariales desde la perspectiva económico administrativa” de la Facultad de Economía Contaduría y Administración de la UJED.

En consecuencia, el objetivo general de éste análisis es identificar los principales aprendizajes adquiridos durante la aplicación del sistema de gestión y medir el nivel de aprendizaje organizacional obtenido por las EI de SEDESOL con miras a proponer los cambios necesarios para hacer del aprendizaje organizacional un proceso continuo en ellas. Hipótesis.- Se partió del supuesto de que existe un aprendizaje organizacional de la Estancias Infantiles de SEDESOL a través de la implementación del Sistema de Gestión. Para este avance se plantearon las siguientes preguntas de investigación: ¿La implementación del sistema de gestión permitió el aprendizaje organizacional de las Estancias Infantiles de SEDESOL?

¿Para cual de los elementos del modelo del sistema de gestión hay condiciones más favorables para el aprendizaje en las EI de SEDESOL?

¿Para cual elemento del modelo del sistema de gestión hay condiciones menos favorables para el aprendizaje en las EI de SEDESOL?

REVISIÓN LITERARIA

Considerando que el conocimiento o “capital cognitivo” y su tasa de incremento son las claves de éxito en el Siglo XXI, no sólo del crecimiento económico, sino también del lugar que países, regiones y ciudades ocuparán en el orden futuro de territorios “ganadores y perdedores” en el juego competitivo de la globalización. (Boisier, 2001), las empresas en todos los niveles deberán considerar el aprendizaje organizacional, para al menos mantenerse vigentes en el mercado. Información y conocimiento no son lo mismo y el aprendizaje individual respecto al colectivo tampoco tiene el mismo proceso ni las mismas implicaciones. “El círculo virtuoso: hacer más de lo mismo cada vez mejor” (Soto & Sauquet) era suficiente como concepto de aprendizaje en la época de Henry Ford y Taylor, pero la evolución de los individuos y por consecuencia de las organizaciones que estos son capaces de crear, indica que hoy son necesarios procesos colectivos y colaborativos que nos llevan a concebir el aprendizaje colectivo como un suceso más complejo que la suma de los aprendizajes individuales. En un mundo perfecto existirían organizaciones perfectas, en el real no. Es bastante con crear una organización apenas mejor que la competencia para subsistir. “Pero si además del corto plazo se aspira a un futuro, es necesario también ser capaz aprender más rápido que el resto. Sea lo que fuere que una empresa produzca, si aspira a subsistir, deberá producir e incorporar conocimiento” (Soto & Sauquet).

Conocimiento para las empresas y para los individuos es más que poseer libros. “Una empresa habrá incorporado conocimiento cuando pueda hacer cosas que antes no hacía” (Soto & Sauquet) La información es el insumo y el conocimiento lo que posibilita el cambio y el cambio la mejora.

Conocimiento entonces, tal como lo dijo Drucker, se vuelve en un recurso dominante y decisivo como factor de producción (Drucker, 1993). Un sistema de gestión hace posible la medición de desempeño en los niveles de procesos, lo que genera un impacto importante en la cultura de la organización, a diferencia de la medición a nivel de resultados. Este impacto se debe a que la medición de desempeño en este nivel, es un poderoso agente de cambio en las organizaciones, como ha sido ampliamente demostrado en el sector privado. (Rummler & Brache, 1995).

Aprendizaje Organizacional.

Es muy difícil afirmar que las empresas y los individuos aprenden de la misma manera, sin embargo por similitud podríamos afirmar que las organizaciones aprenden cuando a partir de la realización de las actividades que los miembros de una organización ejecutan de manera constante, se obtiene una mejora ya sea por un perfeccionamiento de procedimientos internos o porque la interrelación entre los objetivos, los recursos y el sistema relacional se hace, a nivel organizativo, menos disfuncional. (Sallán, 2000). Implica que la respuesta cambia ante la misma situación. Una parte fundamental del proceso de aprendizaje de una organización es la obtención de conocimiento de sus colaboradores.

Según lo dice George P. Huber: “Para la adquisición del conocimiento de los individuos en una organización hay solo un parte en la que ella puede influir, en la otra parte podrá influir muy poco o nada tal es el caso de aspectos como la experiencia personal y emocional, la capacidad de reflexión y asimilación, la experiencia adquirida en el pasado y la formación académica”.

Sin embargo pese a esta limitante hay otros elementos en los que la organización, si puede intervenir positivamente, entre ellos, está la capacitación y la gestión del conocimiento, en éste estudio nos estaremos refiriendo al aprendizaje individual que cada individuo puede adquirir a través de las herramientas que proporcione la organización colaborando, entonces si, como parte estratégica del aprendizaje organizacional.

Niveles Del Aprendizaje Organizacional.

Es importante revisar diferentes ópticas del aprendizaje, a partir del aporte de la psicología, con relación a él, existen tres enfoques dominantes, que son: Conductual o del Comportamiento en el que la empresa es un sistema racional que aprende a través de la experiencia, desarrollando nuevas respuestas y acciones en base a la interpretación de estímulos internos y o externos y considerando el papel limitante de las rutinas organizativas, tanto en número de respuestas posibles como por las respuestas estandarizadas. Cognitivo que señala como punto de partida del aprendizaje en la organización, la transformación de una estructura cognitiva dada como consecuencia de nueva información. El aprendizaje se ve como un proceso a través del cual se desarrolla conocimiento sobre las relaciones acción-resultado y sobre la influencia del entorno en dichas relaciones. Posteriormente, dicho conocimiento es distribuido a lo largo de la organización, comunicado entre los diferentes miembros, consensuado e integrado dentro de los procedimientos de trabajo y la estructura. Conductual-Cognitivo que representa la integración de las dos perspectivas anteriores, tal como un grupo de reconocidos científicos sociales ha venido planteando (Argyris y Schon, 1978; Fiol y Lyles, 1985; Miller, 1991; Easterby-Smith, 2000) y que representa la línea dominante en el abordaje actual del fenómeno. Bajo este enfoque, el aprendizaje es un proceso que requiere la adquisición de conocimientos y el desarrollo de esquemas conceptuales compartidos entre los miembros de la organización que permitan su disseminación y utilización, produciendo como resultado tanto nuevos marcos de referencia cognitivos dentro de los cuales tomar decisiones, como nuevos comportamientos, lo que permite mantener o mejorar la actuación de la empresa. (Naranjo Herrera & Gallego Giraldo, 2009).

Una organización es un sistema de relaciones sociales, coordinadas en un marco estructurado, cuyo desempeño se sustenta en el trabajo de equipos formados alrededor de objetivos a alcanzar, sobre la base de la utilización de recursos y de una cultura propia, que interactúa constantemente con el entorno. Los cinco grandes procesos de aprendizaje organizacional que identifica Garvin: (David A., 2000).

En palabras de Garvin: “Una organización que aprende es una organización experta en crear, adquirir y transmitir conocimiento, y en modificar su conducta para adaptarse a esas nuevas ideas y conocimiento”. (David A., 2000). Para que las EI logren pasar de una organización tradicional a una que aprende es importante entender el valor que tiene el conocimiento en el proceso y empezar a gestionarlo tal es el caso de la aplicación que se realizó en la EI de SEDESOL, implementando un sistema de gestión de calidad, al respecto Garvin señala: “Si falta el aprendizaje, las empresas –y las personas- simplemente repetirán las antiguas prácticas, el cambio seguirá siendo superficial y las mejoras serán fruto de la casualidad o durarán poco” (David A., 2000) Por esta razón el eje del cambio para las organizaciones es el aprendizaje, “es decir, el proceso mediante el cual la organización adquiere la capacidad de aprender, adaptarse y cambiar incesantemente”. (Robbins S. & Coulter, 2005).

El Modelo De La Triple Hélice.

El modelo de triple hélice pretende que la participación activa de la Universidad sea un elemento capaz de provocar la generación del conocimiento jugando un papel fundamental con su relación empresa y gobierno, no solo vinculándose sino ir más allá provocando a través de la sinergia de las acciones comunes un impulso de cambio de estadio en cada uno de los participantes para avanzar hacia nuevas situaciones.

METODOLOGÍA

Tomando en cuenta que se parte de un proyecto en el que se implementó un sistema de gestión de calidad en las Estancias Infantiles de SEDESOL, se trata de un estudio cualitativo, transversal y de tipo experimental. La población total del proyecto incluye a 39 EI, 39 alumnos participantes como asesores (a través de la presentación de servicio social de pasantes y de prácticas profesionales), 6 profesoras coordinadoras de equipos e instructoras del proyecto. Todos ellos de la Facultad de Economía Contaduría y Administración de la Universidad Juárez del Estado de Durango. Las etapas del procedimiento son: Implementar el Sistema de Gestión de EI de SEDESOL. Se tuvo acceso respondiendo a la convocatoria de SEDESOL para el “Programa de Estancias Infantiles para apoyar a Madres Trabajadoras” donde solicitaban la presentación de un proyecto que incluyera la participación de alumnos de servicio social y prácticas profesionales, obteniendo así un recurso financiero de \$327,500 para el pago de becas a alumnos y maestros participantes y adquisición de materiales. Análisis e Interpretación de Resultados. El estudio general es un análisis de la gestión del conocimiento en este tipo de intervenciones y este es un avance de una de las diferentes lecturas que ha implicado dicho análisis.

El Sistema de Gestión, es una adaptación del modelo diseñado por el Ing. Mauricio Rodríguez Martínez y sus colaboradores de la empresa Lajapyme, S.A. de C.V., (www.lajapyme.com) con base en el Sistema Dia LAJACONET, (www.lajaconet.com), desarrollado por el experto brasileño Carlos S. Andriani y adecuado al sector turismo por los consultores “M”, siendo SECTUR la propietaria de todos los derechos. El sistema ya adaptado se conforma por una estructura de 5 elementos y 13 técnicas:

1. Calidad Humana. Se busca establecer reglas claras y fomentar el liderazgo participativo, que genere un ambiente propicio para elevar la moral y la disciplina del equipo de trabajo, estableciendo un sistema humanista a partir de las metas organizacionales.
2. Satisfacción del Cliente. Se busca entender el mercado en el que participa una Estancia Infantil, para crear estrategias adecuadas de marketing.
3. Estandarización de procesos. Identificar los procesos estableciendo formatos para su estandarización, logrando así la disminución de desperdicios y garantizando calidad en el servicio.

4. Sistema de Información financiera. Desarrollar un sistema de información y análisis financiero para mejorar el proceso de toma de decisiones, concentrar los esfuerzos en los puntos clave e incrementar los resultados de la empresa.

5. Planeación y mejora continua. Proporcionar a la EI una herramienta de Planeación Estratégica acorde a su estructura, que permita establecer la filosofía de la empresa y desarrollar sistemas de información y análisis financiero para llevar un verdadero control de la misma.

La implementación se llevó de acuerdo a las siguientes acciones:

Tabla 1: Acciones realizadas

Evento	No	Participantes	Lugar
Sesiones de capacitación	5	PP y SS, REI, DS, SD	FECA-UJED
Reuniones de alineación	8	PP y SS, DS	FECA-UJED
Visitas a estancias infantiles	16	PP y SS, REI, CEI	Estancias infantiles
Visitas de diagnóstico	2	PP y SS, REI, CEI	Estancias infantiles
Visitas de evaluación	1	PP y SS, REI, CEI	Estancias infantiles
Evaluación cruzada	1	PP y SS, REI	Estancias infantiles
Sesión de informe	1	PP y SS, REI, DS, SD	FECA-UJED
Sesión de evaluación a PP y SS	1	PP y SS, SD	FECA-UJED
Sesiones de retroalimentación y planeación	8	DS	FECA-UJED

En esta tabla se describen las acciones realizadas durante la aplicación del Sistema de Gestión en las Estancias Infantiles de SEDESOL. PP se refiere a los alumnos de Practicas Profesionales, SS a los alumnos prestadores de Servicio Social, REI a los Responsables de las Estancias Infantiles, DS al Personal Docente de la Facultad y SD a las autoridades de SEESOL

Se recopiló información usando los siguientes instrumentos: Formatos del Sistema. Para construir las memorias de los procesos Formatos de Diagnóstico. Inicial y Final Formatos de Evaluación. Se aplicaron test a colaboradores y responsables de EI Formatos de Evaluación Cruzada. Se aplicaron entre los PP y SS como medio calificación del desempeño del estudiante. Bitácora de experiencia. Cada estudiante y cada profesor participante recopiló memorias de la implementación. Todos estos formatos dan origen a lecturas diversas de la implementación y se está en proceso de análisis de esos datos. Para este avance en particular se utilizarán los datos arrojados entre el Diagnóstico Inicial y el Diagnóstico Final ya que son los que nos permiten conocer el estado de cada EI sin un sistema de gestión de calidad y el que resulta una vez terminada la implementación del sistema de gestión. El formato de Diagnóstico, que está vinculado con el Sistema de Gestión, asume la evaluación de los 5 elementos y tiene los siguientes criterios:

Tabla 2: Formato de Diagnóstico.

Elemento	Subelemento	Ponderación	Máxima puntuación por elemento
1	9	5	45
2	9	5	45
3	9	5	45
4	9	5	45
5	4	5	45

En esta tabla se muestra el Formato de evaluación del Diagnóstico utilizado en el Sistema de Gestión. La puntuación máxima alcanzable después de la implementación del sistema de gestión es de 200 y la mínima de 100

RESULTADOS

Retomando las preguntas de Investigación: La implementación del sistema de gestión permitió el aprendizaje organizacional de las estancias infantiles de SEDESOL ¿Para cual de los Elementos del Modelo Sistema de Gestión hay condiciones más favorables para el aprendizaje en las EI de SEDESOL? ¿Para cual de los Elementos del Sistema de Gestión hay condiciones menos favorables para el aprendizaje en las EI de SEDESOL?. Participaron 39 estancias infantiles, de las cuales se ha terminado de procesar el 46% de los diagnósticos (18 estancias).

Figura 1: Participantes

En esta figura se muestra una representación gráfica de la muestra total, indicando en porcentajes el diagnóstico procesado y el diagnóstico en proceso.

Figura 2: Resultado promedio de aprendizaje en las estancias por elemento.

En esta figura se muestran los resultados obtenidos en el diagnóstico inicial y final aplicado a las Estancias Infantiles SEDESOL en los 5 elementos. Se observa como el elemento de planeación y mejora continua es el que presenta más dificultad para la gestión del conocimiento, siendo el de sistema de información el que presenta un paso más grande.

La máxima puntuación que se puede alcanzar en el elemento de Calidad humana es 45. Las EI iniciaron con un promedio global de 21 y alcanzaron en el diagnóstico final un promedio de 28. En este punto hay dos EI que inician con una puntuación alta y terminan con una baja. Sobresale una que inicia con una calificación baja y termina rebasando el promedio. Para el siguiente elemento, se puede observar un promedio de arranque de 20.55 y un promedio final de 29.11. Se destaca una con un arranque muy inferior al promedio y rebasando al final al promedio. No hay decrementos en los diagnósticos. Hay una estancia que se conserva en la misma puntuación al inicio y al término del SGC y otra con un avance de apenas 1 punto. Para el Elemento 3, El promedio de arranque es de 21 (de 45) y se termina con un promedio de 28.77. una de las estancias inicia con un mejor desempeño y termina con una disminución. En cambio dios son EI que inician con desempeños muy por debajo del promedio y terminan rebasándolo.El siguiente elemento es el 4, donde hay un arranque de 12.72 y el promedio final es de 26.33. Se aprecia que la mayoría de las EI tuvieron un avance significativo, con excepción de una que se mantuvo igual en ambos diagnósticos y otra que decrece considerablemente su promedio. El último elemento, tiene una puntuación máxima de 20, se hizo la equivalencia a 45 para hacerlo comparable en la grafica. Aquí el promedio inicial es de 5.94 y el final de 10. La 15 se mantiene en su desempeño por debajo del promedio y la EI presenta un decremento de 5 puntos.

Tabla 3: Desviación estándar

	Desviación estándar	
	Inicio	Fin
Calidad Humana	5.50	9.91
Satisfacción cliente	6.40	7.11
Estandarización procesos	6.50	6.76
Sistema de información financiera	6.21	9.29
Planeación y mejora	9.61	12.96
TOTAL	6.84	9.21

En la tabla anterior es interesante observar como en lugar de homologar el conocimiento entre las estancias, la desviación estándar aumenta, por lo que es mayor la variación entre las evaluaciones de las estancias en el diagnostico final, no siendo significativa la diferencia en el cambio en Satisfacción del cliente y estandarización de procesos en contraposición con los otros elementos

Tabla 4: Incrementos por empresas

EI	INCREMENTOS						S
	Calidad humana	Satisfacción cliente	Estandarización procesos	Sistema de información financiera	Planeación y mejora	Incremento promedio	
15	4	1	-1	0	0	0.80	1.92
17	0	6	0	6	0	2.40	3.29
10	-8	4	10	10	2	3.65	7.39
12	2	12	13	-12	5	3.90	10.06
1	2	0	0	16	5	4.50	6.69
4	9	5	5	4	0	4.60	3.21
6	6	2	8	12	0	5.60	4.77
9	-19	5	1	18	27	6.40	17.57
2	16	8	5	8	0	7.40	5.81
18	12	7	6	24	0	9.80	9.01
16	14	8	7	11	11	10.25	2.80
14	8	8	9	14	18	11.40	4.45
7	11	22	18	25	-11	12.95	14.51
3	6	10	16	20	14	13.10	5.39
13	14	10	13	22	20	15.85	5.07
11	16	8	4	26	27	16.20	10.35
8	12	18	7	19	27	16.60	7.57
5	19	20	19	22	18	19.60	1.52
Promedio	6.89	8.56	7.78	13.61	9.00	9.17	6.74
S	9.35	6.17	6.12	9.92	11.55	5.61	4.29

El objetivo de esta tabla es mostrar la falta de consistencia en los incrementos por elemento y por empresa. Las EI están ordenadas en función del incremento promedio de los 5 elementos en orden ascendente. Se observa una menor dispersión en los elementos de Satisfacción del cliente y estandarización de procesos, siendo la más alta la de planeación y mejora continua, siendo este elemento el de mayor dificultad para la generación de conocimiento. No se observa asociación alguna entre el nivel de promedio de incremento y el nivel de variación de los elementos por empresa

Figura 3: Promedio general por EI

En esta grafica se observa la falta de patrón o asociación entre el estado inicial y el incremento total por empresa. Las Ei están ordenadas de acuerdo a la evaluación del diagnostico inicial

Figura 4: Evaluación Diagnostico Promedio total al inicio y al final

En esta figura se muestran los resultados obtenidos en el Diagnóstico total aplicado a las Estancias Infantiles SEDESOL.

En la gráfica de “Diagnóstico Total de Estancias Infantiles SEDESOL 2011”, se aprecia que el promedio de puntos alcanzados según el Diagnóstico Inicial, es decir, antes de implementar el SGC es de 81.11 y el final es de 122. Ninguna estancia presenta decrementos. Hay crecimientos apenas perceptibles, como en una de ellas, pero otros sobresalientes. Considérese que el Modelo Adaptado del SGC considera una puntuación mínima de 100 y una máxima de 200.

CONCLUSIONES

Si se revisa el desempeño global de las EI utilizando los Diagnósticos Inicial y Final, se puede observar que las EI tienen una puntuación promedio por debajo de la mínima admitida por el Modelo Adaptado del SGC. El desempeño al final, supera apenas por 20 puntos la calificación mínima y aún está a 20 de alcanzar la puntuación máxima. Este significado es relevante pues refleja que aún hay mucha oportunidad de aprendizaje y de mejoras en procesos dentro de estas microempresas, en lo general. Sí, un Sistema de Gestión de Calidad, implementado con tal estructura como la de este proyecto, refleja adopción de aprendizajes y mejoras en las organizaciones, según lo demuestran los resultados y las gráficas. Si se observa específicamente las EI que inician con un promedio superior a la media, como la 1, 3, 7, 8, 16 y 18, se puede concluir que conservan un estado natural al aprendizaje. Una organización que tiene condiciones para aprender, aprenderá más rápido que otra que no tiene estos hábitos.

Observando la estancia 15, se puede ver que hubo un incremento en su puntuación final, respecto al inicial bastante pobre. En este caso en particular, se tiene información de condiciones sumamente adversas, como es el desinterés de la responsable y la inconsistencia para adaptar el SGC. Los elementos más aprovechados por las EI son el 4: Sistema de Información Financiera y el 5: Planeación y Mejora Continua. Aunque los desempeños terminales no son los ideales, hay una mejora casi del 50%. Esto no significa que fueron los más fáciles de aprender, muy por el contrario, refleja la carencia actual de las EI de SEDESOL en Durango de elementos para manejar una organización de estas dimensiones en condiciones de salud financiera y más aún, la falta de visión futura. Se puede decir que un elemento más fácil de aprender, es aquel para el que naturalmente ya se tiene disposición o al menos se parte de un conocimiento previo, como lo refleja la gráfica. Tales elementos son el 1: Calidad Humana, el 2: Satisfacción del Cliente y el 3: Estandarización de Procesos. Las EI si bien en su mayoría no tienen procesos estandarizados o no cuentan con sistemas como un CRM (*Customer Relationship Management*), por lo menos si tienen la consciencia de tratar de dar el mejor servicio a sus usuarios y de que se debe desperdiciar lo menos posible. Como un dato adicional a este análisis, en la Sesión de Presentación de Resultados, las Responsables de EI mencionaban que el aprendizaje más significativo había sido entre

otros de las 5's. Con la información obtenida se realizarán análisis posteriores sobre la asociación entre las características propias de cada EI y los resultados obtenidos

RESUMEN

La innovación es un proceso multidimensional en el que interactúan diferentes instituciones y agentes, se sustenta en diversos enfoques y se desarrolla a nivel macro, meso y micro. De ello se deriva la complejidad de su análisis y necesidad de su interpretación desde la armonía de lo tecnológico, económico y social, la correlación entre esfuerzos y resultados mediados por la capacidad y la actitud para su gestión integral y las interacciones e intersección en los sistemas de innovación. Por ello, el objetivo del trabajo es describir las características del proceso interactivo de innovación a nivel organizacional y del sistema regional de Coahuila. La metodología contempla dos momentos: análisis, con la técnica de triangulación, de los estudios diagnósticos previos que incluyen dentro del objeto de investigación el comportamiento de la innovación; estudio empírico, con un análisis orientado a las interacciones dentro del sistema regional de innovación, mediante entrevistas a gestores de 17 empresas medianas del sector industrial, donde se comparan los resultados de la innovación, sus interacciones internas y externas con las prácticas de gestión tecnológica. Los resultados permiten afirmar que existen evidencias de que las empresas que tienen Dpto., invierten y realizan I+D se apoyan en las relaciones con los agentes del sistema regional de innovación, a pesar del predominio de lo académico en la investigación de las universidades; y las pocas prácticas de gestión tecnológica reflejan la falta de innovación en el modelo de negocio, lo cual influye en la permanencia y sostenibilidad del éxito de la innovación.

INTERACTIVE PROCESS INNOVATION. DESCRIPTIVE ESTUDY OF REGIONAL INNOVATION SYSTEM COAHUILA

ABSTRACT

Innovation is a multidimensional process in which different institutions and agents interact, is based on various approaches and develops at macro, meso and micro levels. Thus come its analysis complexity and a need for an interpretation from the harmony between technology, economics and social development, a correlation of efforts and results measured by capabilities and an attitude towards its overall management and its interactions and intersections with innovation systems. Therefore, this paper objective is to describe the characteristics of the innovation's interactive process at an organizational and regional level in Coahuila. The methodology involves two stages: Analysis, using a triangulation technique of previous diagnostic studies in which innovation behavior is included as part of the research subject; empirical study, by means of an analysis focused on interactions within the regional innovation system using interviews with managers of 17 medium-sized industrial enterprises, in which

compares the innovation performance, its internal and external interactions with technology management practices. The results suggest that there is evidence that companies with a R+D department, invest in it and rely on relationships with the regional innovation system agents, despite the dominance of universities' academics in research; and the few management practices show the lack of technological innovation in business, which influences the permanence of the success and sustainability of innovative activity.

KEYWORD: interactive innovation, technology management, regional innovation systems

INTRODUCCIÓN

La innovación reconocida como una variable estratégica de competitividad, no siempre genera los beneficios económicos y sociales esperados. Dado su carácter dinámico como proceso e interacción la innovación requiere de prácticas de gestión tecnológica al interior de la organización y en la relación con los agentes del entorno, por lo que su éxito está condicionado por una serie de variables internas como estrategia, capacidad de la mano de los empleados, alianzas con agentes del sector y del entorno en general, asumir prácticas propias de la gestión tecnológica, entre otras.

Desde fines del siglo XX y en la primera década del XXI han cobrado mayor relevancia los estudios en torno la gestión tecnológica como un proceso multifacético que permite el éxito de la innovación. Autores como Freeman (1982), Seurat y Morin (1998), Hidalgo Nunchera, A. et al (2002), Nieto, M (2003), Caloghirou, Kastelli y Tsakanikas (2004) Castañón, R y J. L. Solleiro (2007), Bueno Campos, et al (2010), coinciden en plantean que la innovación es un proceso complejo que exige una red de interacciones hacia el interior de la organización y hacia el entorno tecnológico, económico y social.

De ahí, una visión más amplia de la innovación que abarca la logística, la organización, la distribución y la comercialización, los cambios incrementales generados en el ámbito interno (OCDE, 2005); así las empresas crean sus propios subsistemas de innovación articulado desde la demanda y se difunden los modelos de innovación de corte interactivo entre las diversas etapas que intervienen en el proceso. El presente trabajo es resultado de una investigación desarrollada en PYME del Estado de Coahuila, donde se muestra el comportamiento de la innovación desde las variables relacionadas con la interacción con el entorno y su relación con las prácticas de gestión tecnológica.

El trabajo se estructura de la siguiente manera: un apartado sobre la revisión de los estudios empíricos realizados en las PYME en diferentes regiones de México, que identifican el comportamiento de las interacciones para promover la innovación; un segundo apartado menciona la metodología seguida en el estudio y uno tercero donde se analizan los principales resultados de un análisis de estudios previos de la innovación y sus interacciones con el entorno y un estudio empírico más orientado a las interacciones de la innovación y su relación con la gestión tecnológica en una muestra de empresas medianas del sector industrial en el sistema regional de innovación de Coahuila.

REVISIÓN DE LITERATURA

Siguiendo el enfoque de la innovación como cambio y acción, Bueno Campos et al (2010) ha desarrollado, dentro de las concepciones de la gestión estratégica de la tecnología en las organizaciones y del SIN sustentada en la teoría de los recursos y capacidades, un modelo holístico de evaluación de la innovación que responda a la multidimensionalidad y complejidad del concepto y proceso. En su esclarecimiento conceptual enfatiza en los agentes sociales y la función socioeconómica de la innovación y la necesidad de su gobierno eficiente y eficaz en el desarrollo y progreso de la sociedad basada en el conocimiento. Desde la perspectiva meso y macro, la innovación aparece como un proceso permanente de creación de valor basado en el conocimiento, de y para la sociedad en su conjunto, con el objetivo de generar desarrollo sostenible (Bueno Campos et al, 2010). Por otro lado, la comunicación con el entorno

es importante en dos sentidos: entre los agentes del sector industrial para garantizar que los esfuerzos innovadores respondan a necesidades latentes o demandas existentes en el mercado minimizando el riesgo tecnológico o comercial; y con agentes externos, como complementariedad científico - tecnológica y de coste - financiación, mediante la cooperación con universidades e instituciones de investigación y desarrollo tecnológico, y con instituciones gubernamentales y agencias públicas y privadas que apoyan la innovación. Las empresas innovadoras procuran un aprendizaje interactivo con su entorno. (Lundvall, 1992), con el fin de identificar la demanda existente en el mercado y anticipar la demanda futura, así como ser líderes, o seguidores al menos, del desarrollo tecnológico en su sector industrial y áreas convergentes. La teoría de los sistemas de innovación - basada en un concepto holístico— plantea la creación de sinergias debido a la interacción entre sus agentes, que, a su vez, generan un proceso de aprendizaje colectivo, y la cooperación aparece como uno de sus mecanismos. Por ello, la innovación es reconocida hoy como una actividad de cooperación realizada en colaboración con otras empresas, universidades o centros de investigación y desarrollo (Tomlinson, 2000), con lo cual las redes de innovación y los cluster adquieren importancia como instancias para caracterizar y evaluar la innovación. El estudio de la cooperación y sus efectos no ha sido objeto de investigación difundido.

En evaluaciones sobre políticas de fomento cooperación en el campo de la innovación realizados en España se manifiesta que aunque es positivo y ha ido en aumento el apoyo público a la cooperación innovadora, se detectan insuficiencias tales como, muchos proyectos son mas concertados que cooperados, con contratación de servicios y participación marginal de instituciones públicas basado en un enfoque de clientelismo, con pocos agentes, impulsados por formalismos o uso de apoyos más que por que por necesidad real de cooperación ante carencias de capacidades de innovación. Además sólo se examinan dos o tres indicadores sin que se mida realmente el efecto de la cooperación. Se sugiere que el asunto no puede ser examinado sólo mediante encuestas. (Heijs, 2002).

METODOLOGÍA

La investigación es de tipo cualitativa, enfocada al análisis de las interacciones del proceso de innovación desde la organización y dentro del sistema regional de innovación, que consta de dos partes:

- ✓ El análisis, con la técnica de triangulación como estrategia pertinente para la investigación en las Ciencias Sociales (Rodríguez, O 2005), de los estudios diagnósticos previos que con temáticas más amplia, incluyen como objeto de investigación el comportamiento de la innovación, en el que intervienen empresas de la misma área geográfica (Estado de Coahuila) y sectores (industrial y servicios) aunque diversas según el tamaño, con instrumentos de investigación diferentes, pero con un sustento común: la metodología de medición de la innovación de los Manuales de Oslo y Bogotá y realizadas en el mismo período 2008-2009. Los datos utilizados están contenidos en: cuestionario aplicado a las empresas sobre la gestión del conocimiento y la innovación en Torreón, Coahuila, (Llanes et al 2009); la encuesta aplicada sobre el análisis estratégico en el desarrollo de las MIPYME en Coahuila (Medina et al, 2011) y la encuesta sobre infraestructura científica tecnológica y humana aplicada al sector empresarial, instituciones académicas y dependencias de gobierno del Estado (Noyola, 2012). El objetivo del análisis es contrastar los resultados obtenidos en cuanto a la situación existente sobre el papel que desempeñan las interacciones internas y externas en la innovación en el Estado de Coahuila, para extraer similitudes y diferencias y ofrecer una perspectiva más amplia y objetiva del tema de la innovación en la región. El planteamiento hipotético consiste en argumentar que la actividad de I&D diferencia el nivel y las características de las interacciones que se dan en el proceso de innovación en las empresas.
- ✓ El estudio empírico de naturaleza exploratoria y descriptiva, con un análisis orientado a las interacciones en el sistema regional de innovación, mediante entrevistas a gestores de PYME, en

dos localidades: 12 empresas medianas del sector industrial manufacturero en la región sureste del Estado y 5 empresas del sector industrial de la frontera norte, donde se caracteriza el comportamiento innovativo, comparando los resultados y las interacciones internas y externas con las prácticas de gestión tecnológica. Dado el número reducido de empresas y las características del estudio en esta etapa de la investigación, no se pretende generalizar. Los objetivos específicos son: a) Describir las características de la actividad innovativa e innovadora en el sector industrial manufacturero y las prácticas de gestión tecnológica y b) Establecer la correlación entre las variables de la gestión tecnológica y las acciones de interacción que sustentan la innovación. El planteamiento hipotético consiste en argumentar que la ausencia de prácticas de gestión tecnológica en las PYME manifiesta la no presencia de innovación del modelo de negocio, lo cual incide en la casi nula interacción de las empresas con los agentes del sistema regional de innovación.

RESULTADOS

Análisis De La Innovación Como Interacción En El Sistema Regional De Innovación De Coahuila.

En el estudio de la gestión del conocimiento y la innovación, mediante la encuesta aplicada a 123 gerentes de la alta dirección de empresas de Torreón, de sectores industriales y de servicios, mostró, coincidiendo con la propia teoría de la administración estratégica, confirma desde la percepción de la alta dirección la importancia de los conocimientos para la creación del valor y de la calificación y talento de los empleados para el éxito empresarial, con una asociación significativa y positiva entre estas variables. ($\Gamma=0.637$; $p<0.05$). No obstante, evidencia insuficiencias en su visión estratégica en cuanto a establecer vínculos y acuerdos de colaboración con instituciones externas como Universidades, Cámaras de Comercio u otras, tarea pendiente para el sector empresarial en la mejora de la eficacia de la gestión de la innovación en la Comarca Lagunera, ante la pobre comunicación universidad-empresa, confianza y difusión de los trabajos que desarrollan. (Llanes et al, 2009).

El estudio diagnóstico de la infraestructura científica, tecnológica y humana en el Estado de Coahuila, abarcó una muestra estructurada de 173 empresas e instituciones que realizan actividades científicas y tecnológicas en el sector industrial y de servicios, comprobó que la colaboración entre empresas y el entorno se comportó según su modalidad de la siguiente manera por orden de importancia: “Proyectos de Investigación y Desarrollo”, “Asistencia técnica, ensayos, pruebas y diseño”, “Capacitación”, “Acceso a información comercial y cambios organizacionales” y “acceso a nuevas fuentes de financiamiento”. A diferencia de las empresas, las IES tienen como actividades frecuentes los convenios de colaboración con centros de investigación o empresas de consultoría, la formación permanente del personal calificado (becas y/o entrenamiento y capacitación especializados) y la investigación propia para la innovación, que aportan más del 50% del total de las actividades de I+D+i. Las empresas declaran que la inversión en I+D+i proviene de fuentes internas, lo que resulta contradictorio con el hecho de que, el 73% de las empresas encuestadas han recibido algún tipo de apoyo público (financiero, fiscal, asistencia técnica, promoción) en sus actividades de innovación y un 81% apoyos públicos para sus actividades de ciencia y tecnología. El origen del apoyo público es 50 % federal y el 22.9% estatal.

El estudio de las MIPYME del Estado de Coahuila: las 372 MIPYME muestran que el 62,4% tienen una orientación reducida hacia la realización de acuerdos o alianzas inter-empresariales, a pesar de la importancia que en lo teórico y en la práctica se le atribuye a la cooperación. A nivel de tipos de alianzas o acuerdos concretos, se observa que las actividades comerciales (67,6%) y las de producción y prestación de servicios (63,9%) destacan por ser las áreas donde las empresas más se prestan al establecimiento de alianzas o acuerdos. Por el contrario, sólo el 20,3% y el 27,4% de las MIPYME cooperan para actividades de compartir almacenes, transportes, etc. y para el desarrollo de nuevas tecnologías, respectivamente. A medida que es mayor el tamaño de las empresas, también se incrementa

el número de acuerdos que éstas efectúan para cualquiera de las actividades analizadas (Medina et al, 2011). La encuesta no incluyó dentro de las variables e indicadores de las alianzas el área de proyectos de I+D.

Estudio Empírico Del Proceso De Interacción En La Innovación Y La Gestión Tecnológica En Las Pyme Del Sureste Y Norte Del Sistema Regional De Innovación De Coahuila.
Sobre Proceso De Interacción En La Innovación.

Desde el enfoque de la medición de la innovación en encuestas nacionales (Manual de Oslo, 2005 y Manual de Bogotá, 2002) estas empresas son catalogadas como “innovadoras”. Pero nuestro propósito es analizar hacia el interior de la organización qué y cómo se realizan las actividades y esfuerzos en el proceso dinámico de innovación. Dentro de las interacciones que se dan en el proceso de innovación, a partir de procesar sólo las empresas innovadoras, podemos destacar:

Relación con el cliente: Un aspecto importante presente en la mayoría de las empresas es la relación con el cliente, como motor del proceso de innovación; es decir, la *proximidad y conocimiento del cliente* son factores claves en la innovación de las PYME (Barañano, 2003). En este mismo sentido, los requerimientos de los clientes obtuvo el primer lugar por orden de importancia dentro de las motivaciones para la innovación, seguida por factores de posicionamiento en mercado, costos y calidad.

Acceso a información para la innovación de agentes externos: Medido a través de dónde y cómo encontrar ideas, conocimientos, contactos, mercado y datos para mejorar la innovación en la empresa. Se encontró que las principales fuentes de ideas creativas para las innovaciones en orden de importancia decreciente son: 1) los clientes, 2) los proveedores, 3) Internet, 4) revistas y 5) libros.

Búsqueda y acceso de fuentes alternativas de financiamiento: En el análisis se presenta una correlación de 0.989** entre el número de trabajadores de las empresas y el personal dedicado a la innovación. El porcentaje de la inversión en I+D sobre las ventas fue de un 21.25 y la gran mayoría de ellas (96%) no cuenta con un departamento o área especial para realizar estas actividades.

Comunicación eficaz entre agentes: En cuanto a las convocatorias de proyectos con financiamiento y las regulaciones de apoyo a la innovación por el gobierno, se denota falta de información y comunicación. En este sentido se encontró que ninguna de las empresas de la muestra ha empleado este crédito en sus gastos en investigación y desarrollo tecnológico.

Alianza en proyectos de innovación con agentes del sistema regional de innovación: Se encontró que solamente 10% de la muestra tiene una alianza con otra organización para el desarrollo de las innovaciones, todas ellas son específicamente los mismos proveedores quienes los impulsan, apoyan y capacitan para desarrollar nuevos productos o mejorar sus procesos. Asimismo, se observó en el análisis la nula relación que tienen con las instituciones de educación o centros de investigación.

Colaboración y sinergias entre los trabajadores dentro de los proyectos de I+D+i: En las entrevistas se evidenció, que aunque el 83.3% declararon que tenían organizados grupos para la innovación y la participación de los trabajadores está valorada en media-alta, los proyectos no son una forma muy extendida para la organización de la innovación en las empresas, siendo la forma que permite trabajar en equipo, que generan sinergias desde la percepción y objetivos de diferentes áreas de la empresa y diversas profesiones, el establecimiento de plazos, así como el desempeño de roles según avanza en cada etapa el proyecto.

Sobre La Evaluación De La Gestión Tecnológica.

Con el fin de profundizar en los factores internos de la empresa, vinculado a las capacidades para la gestión de la tecnología y el conocimiento se utilizó el modelo nacional de Gestión Tecnológica (FNGT, 2008) y el Test de Perfil de Excelencia Tecnológica (J.Morin y R. Seurat, 1998). Las 20 empresas fueron calificadas como innovadoras en la encuesta de innovación, al tener resultados en productos o procesos, realizar esfuerzos adicionales en cuestión de innovación.

En base a las frecuencias con un intervalo de confianza de 0,90, en general se evidencia una insuficiente gestión de los recursos tecnológicos, ya que el nivel de la mayoría de las funciones se ubica en un nivel bajo, con nula acción en el inventario tecnológico y un nivel medio en la gestión por competencia. Existe un programa de desarrollo tecnológico, pero no se conoce por el escaso diálogo entre los departamentos técnicos y de marketing, este aspecto es muy significativo atendiendo a las interacciones que tienen que darse dentro de los proyectos de innovación entre personas y áreas involucradas.

La evaluación de la gestión tecnológica, mediante el Modelo Nacional de Gestión Tecnológica (FNGT, 2008) que se diferencia del instrumento anterior por la incorporación de la visión de la planeación estratégica y la orientación a los proyectos de innovación tecnológica, el proceso que se siguió, fue a través de una autoevaluación con el relato de las evidencias y después se hace la asignación del puntaje obtenido en cada una de las categorías por grupo de investigación. En las dos primeras categorías predomina el carácter informal y poca o nula documentación de soporte que permita avalar las respuestas de las actividades con las cuales estas empresas logran el Conocimiento Estratégico de sus clientes, proveedores, mercados y competidores y realizan ejercicios de Planeación estratégica. En cuanto a la gestión estratégica y el patrimonio tecnológico se evidencia un mayor nivel de organización y la existencia de procedimientos implementados y documentados, aunque con pobres resultados en comparación con la competencia en la última categoría en lo referente a patentes. En lo referente a Resultados e Impacto en la comunidad tiene resultados positivos, sobre todo financieros y económicos.

CONCLUSIONES

La investigación realizada pretende también profundizar con un nuevo enfoque, que va más allá de las encuestas que constatan indicadores de innovación, orientado a la gestión de la innovación como proceso interactivo que abarca el modelo del negocio en su integridad, en la organización y la región como sistema. En este sentido resalta el estudio exploratorio sobre la gestión tecnológica, no abundante en la bibliografía del contexto mexicano, desde una visión de la administración estratégica acorde al contexto de la sociedad del conocimiento y muy importante para convertir la innovación en variable de la competitividad en las regiones. El vínculo con el entorno constituye una de las variables que facilita la cooperación entre empresas y diferentes agentes del sistema regional de innovación y sobre todo, un mecanismo que permite afrontar actividades de investigación e innovación que no son posibles para una sola empresa tanto en la complementariedad financiera como científica tecnológica. En relación con el primer planteamiento hipotético, los estudios previos han permitido determinar, que aunque en el contexto mexicano y en particular en el sistema regional de innovación de Coahuila son escasas las interacciones entre agentes según estudios anteriores (OCDE, 2009, FAEDPYME, 2009, Llisterri J.J., et al, 2011) en el caso de las empresas que tienen formalizadas sus actividades de I+D+i se da colaboración en torno a los proyectos de investigación e innovación.

Sin embargo, en el estudio empírico, todas las empresas, medianas por el tamaño, del sector manufacturero e innovadoras por sus resultados, se observan esfuerzos en I+D+i medidos por el personal dedicado a la misma y las inversiones, un dinamismo en el proceso de innovación medido por la frecuencia de lanzamiento de innovaciones (8,4) y la duración del ciclo de innovación (5,6), la realización de innovaciones tanto a los productos como en procesos, aunque no tienen estructuras departamentales de

I+D. Lo anterior confirma también, que allí donde se realizan actividades de I+D o de innovación formalizadas las relaciones con los agentes del sistema regional de innovación son más efectivas.

Se pudo comprobar que existen diferentes modelos que sustentan la gestión de la innovación. De manera particular se utilizaron dos de ellos, y se pudo constatar, por opinión de los empresarios y de los participantes, que resultó ser muy accesible a pesar del carácter novedoso de la temática en el ámbito empresarial, ya que brindan los soportes necesarios para su correcto manejo y entendimiento. Un aspecto relevante es que se mostraron interesados en continuar con la implementación de prácticas similares que mejoren el conocimiento de clientes, del mercado y de sus proveedores, de oportunidades de comunicación y colaboración en el entorno regional con otros actores, y perfeccionen la planeación y administración estratégica y tecnológica, entre otros aspectos. De manera general, se puede aseverar que el conocimiento y la innovación demandan de las organizaciones fortalecer y mejorar las técnicas y estilos de dirección que promuevan la creatividad e innovación a través de una intensa y eficaz comunicación y cooperación interna y externa.

RESUMEN

El mundo empresarial y de las decisiones económicas es, por tradición y cultura, un mundo masculino. Son escasas las referencias y autores que han abordado estas disciplinas desde una perspectiva de género, analizando las implicancias, diferencias, aportes e impactos que provoca la incorporación de mujeres al ámbito productivo, y más específicamente a la actividad emprendedora. En ese marco, esta investigación tiene como objetivos específicos: Construir un perfil de las mujeres emprendedoras en Torreón, Coahuila, México. Se aplicó una encuesta a 66 empresarias y el procesamiento se realizó utilizando el paquete estadístico SPSS, a fin de analizar cuatro dimensiones: la emprendedora, el entorno, la organización y el proceso de creación, según el Modelo de Gartner. En esta ponencia se muestra el perfil construido para la emprendedora con sus datos sociodemográficos. Los resultados muestran que: el promedio de edad es de 47, con un 77 % de 31 a 55 y un 33 % de 40 a 47 años, el 68 % tiene estudios universitarios, superando los niveles de comportamiento de los países de altos ingresos, predomina en un 47 % la conjunción de motivos (Necesidad y oportunidad) para emprender un negocio, seguido de la Necesidad (27 %), el sector de sus empresas es mayoritariamente comercio y servicios, y el 77 % de las mujeres emprendedoras tienen dependientes económicos.

BUILDING A PROFILE OF WOMEN ENTREPRENEURS IN TORREON, COAHUILA, MEXICO

ABSTRACT

The business and economic decisions is by tradition and culture, a man's world. There are few references and authors who have addressed these disciplines from a gender perspective, analyzing the implications, differences, contributions and impacts caused by the incorporation of women into production, and more specifically to entrepreneurial activity. In this context, this research has the following objectives: To develop a profile of women entrepreneurs in Torreon, Coahuila, Mexico. A survey to 66 entrepreneurs and processing was performed using SPSS, to analyze four dimensions: the entrepreneur, the environment, organization and process of creation, according to Gartner Model. This paper shows the profile built for the entrepreneur with demographic data. The results show that: the average age is 47, with 77% of 31 to 55 and 33% of 40 to 47 years, 68% have college degrees, surpassing the performance levels of high-income countries, dominated by 47% a combination of reasons (the need and opportunity) to start a business, followed by the need (27%), the industry is mostly their business trade and services, and 77% of women entrepreneurs have dependents economical.

INTRODUCCION

El género se define como “una categoría que ayuda a decodificar las características que se les atribuyen a las personas por cuestión de sexo”, ha implicado varias cuestiones y dificultades, como por ejemplo: ¿Cómo definir a la mujer, basándose en rasgos que no sean solo los físicos?. Una gran parte de los estudios de género están encaminados a establecer políticas de igualdad para construir sociedades más justas sin distinciones entre hombres y mujeres, por lo que, “la equiparación entre hombres y mujeres llegará cuando nadie hable de estudios de género, de acciones positivas, programas de paridad, *mainstreaming* de género y de todas las futuras medidas sociales que se tomarán encaminadas a la desaparición de la desigualdad entre géneros en las sociedades de hoy en día”. (Ramírez Belmonte, 2008).

Desde hace varias décadas se han desarrollado estudios de género desde diferentes perspectivas, y durante los años 80 se llevó a cabo un interesante debate sobre el concepto género, impulsado desde el feminismo anglosajón, como un instrumento útil en los análisis de las Ciencias Sociales y para el rediseño de políticas. (Fernández Poncela). En el Informe del 2010 del Programa de Naciones Unidas para el Desarrollo en México, se plantea en lo referente al empleo, “que el establecimiento de una economía competitiva requiere igualdad en la remuneración y en las condiciones laborales entre mujeres y hombres, así como la eliminación de la segregación en el acceso a puestos y determinación de ocupaciones por motivos de sexo. En 2007 se reportó un 41.4% de participación femenina y un 78.2% de participación masculina Sin embargo, el porcentaje de mujeres empleadoras fue tan sólo el 2.5% de la población económicamente activa femenina, cuando para los hombres fue del 6.5%”. (PNUD. México., 2010)

A mediados de los años 80 (del siglo XX) en países como Estados Unidos, Reino Unido y Canadá, aparecieron las primeras investigaciones que consideraron al individuo emprendedor por su género, y en ellas se planteaba que las mujeres no creaban empresas o que no había diferencias de actuar con respecto a los hombres. Lamolla en el 2005 explica que durante el período de 1980 a 1987 en la revista académica “Frontiers of Entrepreneurship” solo se publicaron 13 artículos escritos por mujeres de un total de 277. (Valencia Silva M. M., 2010) Sin embargo la situación ha ido cambiando. Ya existe otra visión y mayor conciencia acerca de estos temas y las políticas de los organismos internacionales y las de los gobiernos, intentan mejorar el escenario, para crear nuevas fuentes de oportunidades para las mujeres en el ámbito educativo, laboral y en general, en la sociedad. En ese sentido, esta investigación pretende hacer una modesta contribución, al plantearse como objetivo general: Construir un perfil de las mujeres emprendedoras exitosas en Torreón, Coahuila, México.

REVISIÓN LITERARIA

En las últimas décadas se observa un incremento de la atención hacia los problemas de la mujer y en los esfuerzos para mejorar la situación de discriminación sufrida durante siglos. En particular nos ocupan los estudios dirigidos a la participación de las mujeres en las actividades productivas, concretamente su papel como emprendedora de nuevos negocios. En España, por ejemplo, las Cámaras de Comercio, la Fundación INCYDE y el Instituto de la Mujer, con el apoyo del Fondo Social Europeo, parten de que catorce de cada cien mujeres ocupadas (en un trabajo remunerado) ha creado su propio puesto de trabajo, su propio negocio, para hacer un profundo análisis de los obstáculos que enfrentan las mujeres a la hora de crear sus empresas, su perfil, las diferencias de género y las políticas de apoyo. (Cámaras de Comercio. Fundación INCYDE. Servicio de Estudios., 2007) Un interesante estudio de la investigadora Lidia Heller, publicado por la CEPAL, examina las continuidades y transformaciones en la participación de la mujer latinoamericana en actividades productivas, en un sentido amplio: se incluyen pequeñas y medianas

empresas (PYME) y micro emprendimientos. Entre las conclusiones de su estudio se destaca que la información presentada confirma que las tasas de participación de mujeres en el mercado laboral se han incrementado durante la última década en la mayoría de los países de la región, sin embargo persiste la segregación por género en ocupaciones de baja productividad. Ellas siguen concentradas mayoritariamente, en áreas de la economía informal, como el trabajo doméstico, trabajo familiar no remunerado, ocupaciones que ofrecen un empleo precario, de baja calidad, irregular o sin remuneración, por lo cual tienen escaso o nulo acceso a la seguridad social o a la protección social. Es aún muy escasa la proporción de mujeres empleadoras en la mayoría de los países de la región. (Heller, 2010)

Otras investigaciones han estado encaminadas a identificar características y competencias de las mujeres empresarias en un afán por construir perfiles en distintos contextos y atendiendo a diferentes variables. Así por ejemplo, un estudio en México señala las siguientes características y competencias asociadas: Compromiso (Estrategia empresarial orientada a la organización y relaciones más que a las innovaciones tecnológicas y tendencia a buscar más la cooperación que la competencia), Participación (Trabajo en equipo), Intuición (Visión), Creatividad (Capacidad de planificación y Flexibilidad), Adaptabilidad (Capacidad para balancear tareas y actividades), Reflexión (determinación en la toma de decisiones), Actitud oportuna (Facilidad para la comunicación interpersonal), Independencia (Liderazgo), Trabajadora (Negociación y comunicación efectiva y Búsqueda de la eficacia y la eficiencia), Seguridad en si misma e independencia (Gran capacidad para delegar autoridad y tolerancia a la frustración). (Romo Rojas, Suárez Salazar, & Llamas Batres, 2007)

Un perfil de mujeres emprendedoras en Argentina se centra en determinar para mujeres exitosas el grado de existencia de las siguientes características personales: autoeficacia, foco de control, necesidad de logro, así como la presencia y grado de participación de mentores en el desarrollo personal y profesionales; y variables culturales. (Rábago, D'Annunzio, & Monserrat). En Chile, plantean que la experiencia, la propiedad y el tipo de emprendimiento que poseen actualmente (capaz de explicar un 21,93 % del perfil) pone de manifiesto la existencia de mujeres con alta experiencia en labores de emprendimiento; las características sociodemográficas (capaz de explicar un 13,69% del perfil presenta a las mujeres con alto nivel socioeconómico y educacional sobre 30 años de edad y casadas, participando activamente en emprendimientos; educación, edad y jefatura de las emprendedoras (capaz de explicar un 11,59 % del perfil) muestra dos perfiles opuestos; y la educación, región y afiliación a grupos y sociedades (capaz de explicar un 9,93 % del perfil) también muestra dos perfiles antagónicos. (Pizarro S., Amorós E., Guerra G., & Leguina R., 2009) En México, en noviembre del 2003, se efectuó el Primer Encuentro Nacional de Mujeres Empresarias, organizado por el Instituto Nacional de las Mujeres (INMUJERES). En ese marco se aplicó un cuestionario a 178 mujeres provenientes de todas las zonas del país, aunque con predominio de la zona centro (64.6%). Algunos de los resultados de este estudio revelan: la mayoría de las empresas (41 %) en el sector servicios, seguidas por el comercio (27 %); predominio de las microempresarias (55 %), cuatro de cada cinco empresas creadas por mujeres fueron fundadas por ellas mismas, solo un 13.9 % fue heredada de los padres; el motivo predominante para emprender es por necesidad (42 %). La mayoría de las empresarias declaró ser socia de su empresa (55 %) sobre todo con socios familiares, mientras que un 45 % son propietarias únicas de su empresa. (Instituto Nacional de las Mujeres. México.)

Ese estudio refiere el Perfil de la Mujer Empresaria en México construido por Gina Zabludovski. (Zabludovski, 1993). Al referirse al incremento de la participación de la mujer en los puestos directivos, esta autora plantea que en la década de los 90, se observó un avance significativo en la presencia de mujeres como funcionarias del sector privado y público, ya que éste aumentó del 14.8 % en 1991, a 19,6 en 1995, y a 24.6 % en el año 2000. (Zabludovski, Las mujeres en los cargos de dirección en México.)

Hasta donde nuestro conocimiento alcanza, no está definido un Perfil de la Mujer Emprendedora en general en México, ni en sus estados, lo que justifica la necesidad de esta investigación, que muestra un resultado parcial para una muestra intencionada en la ciudad de Torreón, y que como parte de un proyecto

de investigación mayor sobre la Autonomía y el empoderamiento económico de las mujeres, pretende continuar y sistematizar con investigaciones posteriores, la construcción y comparación de los perfiles de mujeres emprendedoras, en esta ciudad, la comarca lagunera y el Estado de Coahuila, entre otros propósitos. (Guerrero Ramos & Armenteros Acosta, 2010)

METODOLOGÍA

El análisis documental de estudios previos constituye la base para analizar y sistematizar los precedentes de esta investigación, en los aspectos teórico y metodológico. Para la investigación empírica, mediante la recolección de información y su posterior análisis, se hicieron algunas adaptaciones a un Cuestionario validado en la tesis doctoral de referencia. Como guía para las características de las emprendedoras (“female entrepreneurship”) se utilizó el mismo método que Valencia Silva, quien se apoya en el Modelo de creación de empresas de Gardner en las dimensiones: “la emprendedora (individuo)”, “el entorno”, los estudios enfocados a nivel de la “organización”, y finalmente el “proceso” de creación de la empresa. (Valencia Silva M. M.) Se aplicó el cuestionario en forma de entrevista a 66 empresarias, tratando de tener representatividad de los sectores industrial, comercial y de servicios. Para el procesamiento y obtención de gráficos univariados se utilizó el Excell y posteriormente se exportó esta base de datos al SPSS, a fin de recategorizar algunos campos y realizar otros análisis para preguntas dicotómicas como por ejemplo la de Resultados se utilizó la Prueba de Kolmogorov-Smirnov. Para la construcción del Perfil de las Mujeres Emprendedoras en Torreón, Coahuila México, además de la tesis mencionada y otros estudios citados en el texto, se toma como particular referencia el Global Entrepreneurship Monitor (GEM), que desde el 2004 estudia el emprendedurismo femenino (“female entrepreneurship”) y que ofrece su más reciente estudio sobre este aspecto en el 2010. (Global Entrepreneurship Monitor)

RESULTADOS

Se plantea que la mujer en las sociedades capitalistas desarrolladas sufre, efectivamente, las consecuencias de un sistema cuyos objetivos y modelos de éxito están definidos por la cultura dominante del varón, y es legítimo que desde posiciones feministas se clame por el cambio del sistema y por enfoques metodológicos que permitan un análisis del sistema que no se limite a reproducirlo. Pero mientras tanto la sociedad continúa su actividad diaria, y quizás los objetivos y los modelos de éxito cambien como consecuencia del desarrollo social, intelectual y profesional de la mujer. (Peris-Ortíz, Peris Bonet, & Ribeiro Soriano, 2010) En los países de menor desarrollo son aún más necesarios este tipo de estudios, dada la necesidad de rescatar a la mujer de siglos de atadura y sumisión, en los marcos de una sociedad de grandes tradiciones machistas. En este caso nos basamos en el Modelo de Gartner, citado en la metodología, que comprende cuatro aspectos, a saber, la emprendedora, el entorno, la organización, y el proceso de creación de la empresa. La ponencia a publicar en las memorias contiene los resultados más trascendentes relativos a “La Emprendedora”, los resultados en las otras dimensiones y la visión concentrada del perfil son sometidos a arbitraje para publicación en las revista del IBFR.

En el apartado de la Emprendedora, siguiendo el Modelo de Gartner se hace referencia a las variables sociodemográficas que caracterizan a este grupo de emprendedoras. De las 66 emprendedoras encuestadas, 57 para un 86 % son de Torreón, 6 (9 %) de Gómez Palacios, y 3 (5 %) de la ciudad de Lerdo, Durango. Esto porque el estudio se pretende ampliar a la Comarca Lagunera más adelante, pero en el presente la muestra es por tanto, representativa para la ciudad de Torreón. Tenemos 4 personas consideradas dentro de la dinámica de los emprendedores jóvenes con una amplitud de edad de 24 y 31 años, y 11 de las que se consideran mayores de edad, es decir, mayor de 55 años, el promedio de edad de las encuestadas es de 47 años y esto nos permite pensar que se tiene una madurez como emprendedoras o empresarias. El Global Entrepreneurship Monitor (GEM), que desde hace 12 años realiza y procesa encuestas en todo el mundo sobre las actitudes, actividades y aspiraciones de los emprendedores, durante el 2010 encuestó 175,000 en 59 economías. Cuando GEM analiza este tema de la edad plantea que el

grupo de edad de 44 años de edad, es la categoría de edad más prevalente en las economías impulsadas por la innovación (Global Entrepreneurship Monitor) , lo que coincide con los resultados de nuestro estudio explicados anteriormente; y valdría la pena investigar más profundamente, ya que las economías impulsadas por la innovación están más asociadas a países desarrollados en general, lo cual no es el caso de México. En lo referido al estado civil, el 59 % de la muestra estudiada son casadas o viven en pareja, mientras que el 21 % son solteras, el 14 % divorciadas o separadas, y un 6 % es viuda. El 76 % afirma tener hijos mientras el 24 % no los tiene. Se corresponde en general con el perfil que tienen los emprendedores, casados y con hijos. (Valencia Silva M. M.)

Los resultados de este estudio coinciden con otros en afirmar que el nivel de educación tiene un impacto positivo sobre la entrada inicial de una empresa y su resultado futuro y con el estudio de referencia ya que en ese el 65 % de las empresarias tienen Educación Superior coincidiendo con la media española (Valencia Silva M. M.), y en este caso el 68 % de la muestra tiene este tipo de estudios. Mientras que la experiencia profesional es considerada como un factor clave estructural que tiene gran impacto sobre la habilidad de las mujeres para crear un negocio y mejorar sus resultados.

“La mayoría de los estudios han concluido que las mujeres empresarias tienen mayor nivel de formación reglada que los empresarios varones pero menor nivel de formación específica para realizar actividades empresariales. (Romero, 1990; Lee y Rogoll, 1997)”... y también parece existir consenso en que “las mujeres empresarias acceden a la carrera empresarial con menor experiencia laboral que los empresarios varones, lo cual unido a su menor formación específica dificulta el desarrollo de la empresa y su orientación sectorial. (Alsos y Kolvereid, 1998)”. (Rodríguez Gutiérrez & Santos Cumplido, 2008)

Valencia Silva afirma que se puede decir en general que el motivo de las empresarias para crear una empresa es para aprovechar una oportunidad de negocio, siendo una minoría las que lo hacen por necesidad, aunque se observa en los países de bajos ingresos que el porcentaje de emprendedores por necesidad se incrementa. Su estudio en España reveló que un 29 % lo ha hecho tanto por necesidad como oportunidad, y solo un 8 % lo hace por necesidad. (Valencia Silva M. M.)

La realidad en Latinoamérica es totalmente diferente, y así lo confirma un estudio realizado en el 2010 para América Latina, donde se reconoce que en su mayoría, las mujeres se convierten en empresarias más por necesidad que por vocación, y el mayor reto que enfrentan es superar el rezago en diversas áreas, fundamentalmente en la conciliación entre familia-trabajo, por lo que se considera que el tipo de políticas públicas debe ser diferenciado para impulsar las PYMES de hombres y mujeres”. (Secretaría Permanente del SELA, 2010) En el estudio que se presenta predomina una combinación de ambos motivos, aunque en el análisis por separado es mayor en un 5 %, (27 %) el Motivo Necesidad que el de Oportunidad (23%).

Algunas características personales como su estado civil, si existen personas que dependen de ella son factores también que afectan sus motivaciones. Las investigaciones de la actividad emprendedora con enfoque de género han demostrado en primer lugar, que entre las características de las empresas impulsadas por mujeres destacan su menor dimensión media respecto a las de los varones y su decidida orientación hacia actividades de servicios tradicionales, especialmente comercio, hostelería y servicios personales. (Clark y Janes, 1992). En la investigación realizada se confirma lo anteriormente expresado, y que constituye consenso en las investigaciones en lo referido a que los sectores predominantes en los que emprenden las mujeres son el de comercio y los servicios, siendo éste último el de mayor atracción (41 %). En cuanto a los dependientes Económicos de estas mujeres emprendedoras analizadas, en su mayoría tienen hijos o familiares mayores que dependen de ellas. La tabla 1 resume el Perfil de las Mujeres Emprendedoras en Torreón, Coahuila, México en la dimensión EMPRENDEDORAS con sus características sociodemográficas.

Tabla no. 1: Resumen del perfil de las Mujeres Emprendedoras en Torreón, Coahuila, México. Dimensión EMPRENDEDORA.

CARACTERÍSTICA	EXPRESIÓN EN EL PERFIL DE LAS MUJERES EMPRENDEDORAS EN TORREÓN
EDAD PROMEDIO	Promedio de edad – 47
EDUCACION	77 % de 31 a 55, 33 % de 40 a 47 años.
MOTIVACIONES	68 % tiene estudios universitarios, superando los niveles de comportamiento de los países de altos ingresos.
SECTOR DE SUS EMPRESAS	Predomina en un 47 % la conjunción de motivos, seguido de la Necesidad (27 %)
DEPENDIENTES ECONÓMICOS	Servicios (41 %), Comercio (33 %)
	El 77 % de las mujeres emprendedoras tienen dependientes económicos. (Hijos o familiares)

La edad promedio en 47 años y el 68 % con estudios universitarios tiene un comportamiento similar a los países desarrollados, a diferencia de los Motivos, que en los países desarrollados es por Oportunidad, y aquí prevalece la conjunción de motivos (necesidad y oportunidad) seguido de la necesidad. Los sectores se comportan igual que en la mayoría de los estudios (Servicios y Comercio), al igual que la alta frecuencia de mujeres emprendedoras con dependientes económicos.

INEFICIENCY MARGIN IN SMALL ENTERPRISES: THE IMPORTANCE OF TRAINING AND STRATEGIC MARKETING

Graciela Vidal Carvajal, Universidad La República

ABSTRACT

This paper, deals with the relevance of training to improve the rate of success concerning entrepreneurs activities. In fact, without such a training, it is hard to avoid the failure of these projects. Actually, three out of five new entrepreneurs activities end up in failure. So it is proposed to focus training on each step of any entrepreneurs business plan.

KEYWORDS: Entrepreneurs, Training, Business Plan, Strategy and Management.

INTRODUCCION

Este trabajo trata de contribuir con algunas directrices orientadoras sobre el tema, las que deben ser consideradas y estudiadas antes de iniciar el emprendimiento y hacer la inversión y no, cuando el emprendedor haya perdido el interés o su negocio no haya resultado y por ende, se desmotive.

Muchos de los nuevos negocios fracasan al primer año y algunos logran sostenerse apenas, mediante un escaso margen de ganancias; sin embargo, también hay algo que distingue a aquellos que triunfan y tienen las habilidades de emprender con éxito. Los emprendedores saben que crear un emprendimiento, de forma seria y duradera, supone un gran desafío. Además, debe estar dispuesto al cambio y tener la disposición constante en el ámbito personal, por lo que resulta conveniente hacerse una auto evaluación para saber si se tiene la capacidad de adaptarse, positivamente, al cambio, determinando si se está en condiciones de asumir la responsabilidad correspondiente y con ello, el riesgo para afrontar los innumerables obstáculos que van surgiendo durante el proceso de creación y la puesta en marcha del emprendimiento.

Es lógico pensar que, de acuerdo a las facultades, capacidades y características propias de cada persona, se podrían determinar el éxito y/o fracaso de un emprendimiento o nuevo negocio. Más aún, si a ello le agregamos las herramientas de gestión pertinentes, la posibilidad de éxito debería aumentar. Es importante entonces, que la iniciativa y la buena idea sean llevadas, primeramente, al papel para diseñar la empresa o productos a comercializar. Al plasmar y escribir el propio proyecto de negocio, el emprendedor transmitirá su motivación, su auto convencimiento de querer hacer un proyecto viable y capaz de ponerlo en marcha. Este ejercicio, dará confianza, fortalecerá y potenciará las habilidades y características de este nuevo empresario.

MARCO TEORICO

Las cifras de fracaso de las PYMES (Pequeña o Mediana Empresa) son abrumadoras en cualquier país en que éstas se analicen. Las estadísticas indican que, en promedio, el 80% de las, pequeñas y medianas empresas fracasa antes de los 5 años; y el 90% de ellas no llega a los 10 años de existencia en el mercado. De acuerdo a la Comisión Económica para América Latina y el Caribe (CEPAL) “*en los países subdesarrollados, un 50 y 75% de Pymes dejan de existir durante los primeros tres años de trabajo en el emprendimiento*”. Los dueños de las Pequeñas y Medianas Empresas se defienden y aducen que “*las razones del fracaso están fuera de los emprendimientos realizados*”. Se refieren, entre otros, al escaso apoyo oficial, deficientes programas de ayuda a las PYMES, fuentes de financiación casi inexistentes, excesivos controles gubernamentales, altas tasas impositivas y costo de las fuentes de financiación

disponibles. Por otra parte, los analistas se orientan a identificar las causas del fracaso en las propias PYMES y en particular, en el desconocimiento y poca capacidad de gestión de sus responsables o emprendedores de los nuevos negocios. Aparentemente, no se dan el tiempo y no tienen la capacidad de analizar si la buena idea es o no, posible de realizar y desarrollar en cualquier lugar, en cualquier momento, bajo qué circunstancias, con quién, dónde y cómo invertirán sus dineros que, con mucho esfuerzo, han ahorrado o solicitado para iniciar su emprendimiento y cubrir sus necesidades.

Datos Y Cifras Alarmantes A Nivel Internacional

Para el mexicano Francisco Yañez, al cumplir los 10 años “*solamente el 10% de las empresas maduran, tienen éxito y crecen*”. De acuerdo con la consultora Cetro-Crece, también de México “*el 75% de las nuevas empresas mexicanas debe cerrar sus operaciones después de dos años en el mercado. Lamentablemente la experiencia demuestra que el 50% de las empresas quiebran durante el primer año de actividad, y no menos del 90% antes de cinco años*”. En EEUU, según Samuelson y Nordhaus (2012) “*el promedio de vida de las empresas es de seis años y más de un 30% no llega al tercer año*”. La Asociación Argentina para el desarrollo de la Pequeña y Mediana Empresa afirma que “*sólo un 7% de los emprendimientos llegan al 2º año de vida y sólo el 3% de ellos, llegan al 5º año en el mercado*”. Finalmente, en Chile, también tenemos cifras abrumadoras. Según informa el economista Rodrigo Castro, en un estudio que dio seguimiento a 67.310 empresas creadas en 1996, se indicó que el 25% de ellas desapareció en el primer año; un 17% en el segundo año; el 13% en el tercer año; y un 11% en el cuarto año. Cabe preguntarse ¿Por qué, un pequeño porcentaje de emprendimientos, a pesar de tener que enfrentar la misma problemática, sobreviven, progresan y crecen hasta convertirse, con el paso de los años, en grandes empresas? No es factible pensar que este éxito sea sólo cuestión de suerte. Este problema no sólo es en Chile, sino en el mundo entero: un estudio comparativo de proyectos de innovación, presentaba estadísticas que indicaban que cerca del 80% de los proyectos innovadores, fracasa dentro de los primeros seis meses de haber sido lanzado al mercado. Esta cifra aumentaba al 90% cuando se consideran los 12 meses iniciales.

La Actividad Emprendedora

Se debe considerar que el emprendimiento juega un rol más importante que la simple creación de empleo o el desarrollo económico. Su impacto es mucho más profundo y se enmarca en el empoderamiento de las personas de una comunidad que desarrolla sus capacidades en varios ámbitos, donde el potencial del emprendedor capacitado es una ventaja, además del apoyo gubernamental existente y la participación ciudadana. Si bien la educación es la principal proveedora de la capacidad de movilidad social, también lo son las experiencias de vida y, por ello, el emprendimiento se muestra como una herramienta potente de movilidad social. Cabe explicar que el indicador por excelencia del *Global Entrepreneurship Monitor* (GEM) es el Índice TEA, que se refiere a la Actividad Empresarial Emprendedora en sus fases iniciales. Consiste en un grupo de personas entre 18 y 64 años, que actualmente están involucrados en un emprendimiento, ya sea en calidad de emprendedor, como propietario y/o director de un nuevo negocio.

Por otro lado, se observa que el patrón seguido por todos los países considerados en el GEM (para participar de sus estudios y otros), es que el índice TEA tiende a disminuir conforme al país en que se desarrolla la actividad. Esta situación se repite con las diferentes motivaciones para emprender, pues a medida que un país crece económicamente, tiende a disminuir el porcentaje de personas que emprenden motivadas por necesidad. Así, los países basados en la innovación tienden a presentar tasas más bajas de emprendimientos basados en necesidades. Cabe mencionar que, en relación a los motivos que impulsan un emprendimiento, existen grandes variaciones en los porcentajes según la fase de desarrollo, ya que cada país tiene un conjunto de condiciones económicas y sociales que repercuten en la actividad emprendedora. En el sector comercio de América Latina, y según la actualización de cifras PYME hechas por FUNDES, en Latinoamérica existen 18 millones de empresas formales.

Análisis De La Actividad Emprendedora En Sectores De Comercio, En América Latina:

Existen datos desagregados por sector económico. Esta información indica que 5.587.299 de estas empresas pertenecen al sector comercio, es decir, el 46,5%. De este total, un 97,5% son micro, pequeñas y medianas empresas (MIPYMES), según la definición de cada país y un 94% microempresas. El sector comercial representa una importante fuente de empleos en la economía de la región: genera el 24,8% del empleo formal de América Latina y actualmente, se ha calificado a Perú, como el país más emprendedor a nivel mundial, según el *General Entrepreneurship Monitor (GEM) 2007*. La tasa de actividad emprendedora (TAE) de la población económicamente activa del Perú es del 40,2%, (la más alta del mundo), y sin embargo, aún no cuentan con un Estado que promueva las condiciones de competencia en el camino correcto hacia la competitividad nacional (Ver figuras 1 y 2)

MARCO METODOLÓGICO

Desafíos para emprender exitosamente: Un relato personal

Profesora -me decía un alumno-trabajador del curso “Taller de Emprendedores”, que desde años dicto en la Universidad- *“he iniciado dos veces una pequeña empresa y en las dos he fracasado, razón por la que, actualmente estoy estudiando”*; otro alumno más avezado comentó *“yo tengo dinero y cuando ponga mi empresa, tengo claro que con dinero arreglo todo, por lo que no dudo en que tendré una empresa exitosa”*; una tercera alumna agregó *“yo pienso que la plata no es todo, pues con mi esposo pusimos una empresa hace dos años: partimos bien, pero nuestro personal nunca se motivó, no se comprometió y muchos renunciaron. No supimos qué hacer, por lo que lo único que nos quedó fue cerrar y perder nuestro capital de trabajo”*...

Posterior a este intercambio de opiniones en el aula y, aprovechando la oportunidad, invité a todos los participantes, que de manera grupal, investigasen y analizaran las diferentes situaciones presentadas, realizando un diagnóstico situacional con los resultados de emprendimientos en Chile y especialmente, en la Región de Coquimbo, a fin de buscar tipos de problemas, sus causas, efectos, proponer soluciones certeras a la evidente problemática, sugerir un trabajo que ayude y oriente a las personas que inician sus emprendimientos para aminorar el fracaso o bien, verlo como una oportunidad, aprendiendo del mismo.

Y, ¿Qué Se Entiende Por Emprendedor/A?

Ser emprendedor es una competencia y desafío personal de fondo, los casos de éxito “*de la noche a la mañana*” son como la lotería. Lo normal es que una empresa se inicie no siendo rentable, y que tras un cierto tiempo, empiece a obtener ganancias y estabilizarse económicamente. Es un hecho que la formación es un factor estratégico para el desarrollo de la empresa y sus elementos competitivos en el mercado pues, además de desarrollar habilidades, competencias y otorgar un perfil, en los casos en que ha habido un éxito rápido, ha habido mucho tiempo de trabajo, dedicación y estudios, lo que finalmente ha alcanzado una masa crítica suficiente y ha despegado. Por ello, cuando se es emprendedor, hay que tomarlo como una carrera con muchos obstáculos en el camino, tener una visión de largo alcance, y tener claro que habrá barreras que superar antes de alcanzar el éxito.

No sólo esa travesía (que no se sabe realmente cuánto va a durar) es el camino del emprendedor, también se debe tener recursos económicos, humanos y materiales hasta que la empresa pueda mantenerse por sí sola, esto además, exige una enorme fortaleza mental, dedicación y aprendizaje diario. Toda persona en el campo laboral sabe que la capacidad, tenacidad y perseverancia es una habilidad imprescindible, y que aunque se puedan tener todos los recursos necesarios, sin esta capacidad, no es posible avanzar. Muchas personas explican lo bien que les va a algunos micro o pequeños empresarios, sin apreciar o considerar las características enunciadas anteriormente y otras, inventan verdaderas historias que se venden, consumen y extinguen. Quizás porque esa es la mentalidad reinante: cada vez escasea más la capacitación, los aspectos valóricos, el manejo de las competencias requeridas y habilidades imprescindibles para ser emprendedor. El fracaso o éxito de los negocios, depende mucho de la personalidad de quien lo ejecuta. Existen ciertas cualidades que caracterizan a las personas que toman la decisión de ser sus propios jefes, auto emplearse y lanzarse al mundo empresarial. Para ello, deben tener claro que para triunfar, el desafío más grande que tienen por delante es aprender a crear, innovar, desarrollar un perfil emprendedor y aceptar el cambio, entre otros aspectos.

¿Cuáles Son Entonces, Las Competencias Requeridas Para Enfrentar Este Desafío: Capacitación Funcional, Marketing Y Aprender Del Fracaso?

La educación, desde la enseñanza básica, implica desafíos constantes para los profesores, la organización educativa y un desafío personal e intelectual, para convivir con y en la sociedad. Las competencias fundamentales que hoy la educación requiere proveer, tiene que ver con dotar a los educandos de capacidades y oportunidades de innovación y esto, desde pequeños, pasando por la enseñanza media y superior. Se trata de formar personas que desarrollen la capacidad de hacer e innovar, personas que sepan adaptarse a los requerimientos que se necesitan hoy para vivir en una sociedad que demanda, imperiosamente, egresados y trabajadores preparados para enfrentarla.

Hoy en día, hay un constante cambio en el mundo: los mercados y las necesidades institucionales, empresariales y económicas no están ajenas a ello. El mundo de las comunicaciones, nos muestra la realidad en segundos, algo que años atrás no sucedía. Entonces la pregunta es ¿Cómo generar que una persona que pase por la escuela, y durante todo el proceso enseñanza-aprendizaje no sólo conociendo o manejando distintas herramientas, pueda enfrentar el desafío de aprender a crear y discernir cómo introducirse en el proceso innovador, sin quedarse atrás?

Es decir, fomentar en las personas, desde los inicios de su formación, la capacidad de hacer, saber hacer, saber ser y aprender a vivir juntos. Crear una asignatura dentro de los planes de estudio que les oriente y les capacite en emprendimiento (de forma práctica), y aprovechando los recursos que cada escuela tiene; que los profesores propongan además, el desarrollo de valores, habilidades y competencias en los directivos a fin de dar direccionalidad, coherencia, participación e integración a los alumnos y los propios

proyectos educativos, en el marco de los lineamientos locales, comunales y laborales. Por su parte, los profesores deben fomentar el auto empleo en los alumnos, la creatividad orientada a los emprendimientos, fomentar un perfil emprendedor y desarrollar las competencias necesarias para que, paulatinamente, se vaya sembrando en ellos, una forma diferente de ver su futuro profesional.

Algunas Causas Por La Que Los Emprendimientos Fracasan Y Además, No Son Sostenibles En El Tiempo:

Así como a los estudiantes se les debe inculcar y fomentar el autoempleo y las posibilidades de emprender en su futuro laboral, a los emprendedores se les deberían capacitar antes de iniciar su propio negocio. Esta capacitación debe estar orientada a desarrollar competencias, habilidades, valores, perfiles en temas como Planes de Negocios, Marketing, Liderazgo, Comunicación y Comercialización entre otras. Actualmente en Chile, se capacita a través de Seminarios, Congresos, Talleres y Cursos. El tema, es tratado desde el punto de vista de cómo generar emprendedores y por ende el autoempleo como cultura país y ventaja competitiva – económica. En este sentido, si bien el Estado ha creado instrumentos para fomentar los emprendimientos y la innovación, lamentablemente, no se tratan otras aristas relativas al fracaso y consolidación de los negocios. En general, no se analizan los proyectos que por variadas razones no han llegado a feliz término, perdiendo la oportunidad de aprender de los errores y considerando las nefastas experiencias ocurridas, como lecciones de orientación y planificación de un plan de mejoras para un mejor futuro en las iniciativas emprendedoras.

Si a continuación consideramos los siguientes errores que, constantemente, se producen en los nuevos -y no tan nuevos- emprendimientos, es posible planificar la Capacitación en forma práctica y orientada a mejorar los Planes de Negocios con ideas que realmente sean factibles de realizar, Competencias, Marketing y otros aspectos relevantes para que paulatinamente, pueda aplicarse un plan de mejoras. A continuación, las faltas y traspiés más recurrentes:

a) Uno de los aspectos que más perturban o dificultan el avance de la iniciativa emprendedora, es la burocracia administrativa de parte de las Instituciones encargadas de los temas respectivos. Son extremadamente exigentes en el papeleo, sin dar posibilidades al emprendedor para formar su proyecto inicial. Las trabas desmotivan a aquellas personas que desean surgir y que no cuentan con la capacitación y experiencia que entrega el constante lidiar en el mercado. La justificación del tema, va por evitar o disminuir fraudes o cumplimientos con el Fisco, pero mirando las estadísticas, es posible observar que el número de delitos por esta causa, oscila sólo entre el 2 y 3%. Los costos, además, de crear una empresa, es posible agruparlos en cinco ó seis ítems, de los cuales tres son los más relevantes: 1) Constitución de Sociedad, 2) Autorización Sanitaria correspondiente (si se requiere), y 3) Obtención de la Patente Comercial. En términos de tiempo, a veces esta gestión, tarda de 6 a 7 meses dependiendo del rubro de la iniciativa y los costos se reducen en forma importante cuando se trata de emprendimientos que no están asociados a alimentos perecibles, también en tiempo de tramitación de documentos, se reduce a 3,8 meses.

b) Otro tema de fracaso es la irresponsabilidad, el no cumplimiento o desconocimiento de los nuevos empresarios, para con los acuerdos tomados; este índice de error, alcanza entre un 25 a 35% ; otra dificultad que aparentemente dificulta la gestión empresarial, es que en Chile, las políticas sociales se orientan considerablemente a una capacitación mal orientada o muy generalizada a veces, ya que no capacita en cómo generar las ideas de emprendimientos o innovación de productos, antes de dar un mayor respaldo económico a las PYMES.

c) Es oportuno considerar que, además, los emprendimientos son limitados de recursos y plazos, precisan de personas con distintas competencias, lo que genera muchas veces, conflictos. El emprendedor para desarrollar su proyecto, debe contar con un soporte metodológico que conduzca el quehacer, exitosamente. Con lo anterior se plantea la relevancia de identificar qué es lo que hace que un proyecto sea exitoso y conocer las causas de otros que no lo son. Los aspectos más relevantes para estos últimos

resultados pueden ser:

- c1) Falta de generación de múltiples alternativas de solución, a los problemas o necesidades del consumidor
- c2) Falta de capacitación y adiestramiento mediante experimentación, desarrollo de prototipos y casos reales, preparación del emprendedor para desarrollar visión y ver oportunidades de negocios y nichos de mercado.
- c3) Deficiente manejo e inclusión de la perspectiva del mercado y clientes a lo largo del proceso de desarrollo
- c4) Planificación inadecuada del negocio
- c5) Problemas relacionados con los recursos humanos
- c6) Controles inapropiados o nulos
- c7) Factores externos no controlables (regulación, burocracia)
- d) En relación a la mala planificación, la causa típica de fracaso es no definir correctamente los problemas en el plan de trabajo; al no entenderlo, se destinan recursos en forma ineficiente, lo que lleva a una incorrecta solución. Los planes de proyectos deben tener el máximo de información y los detalles necesarios, para realizar exitosamente cada actividad y tarea a implementar. Es recurrente que por ahorrar, no se contrate a personal capacitado y no se adquieran los recursos tecnológicos necesarios, por lo que es muy difícil, cumplir con los objetivos planteados, si es que los hay.
- e) Así también, los problemas con el RRHH se dan constantemente; no siempre el/la emprendedor o dueño del negocio, son líderes o tienen liderazgo por lo tanto, no es visto este por sus colaboradores como buen jefe/a, además, por la misma razón, se produce una falta de comunicación y coordinación para trabajar en equipo.

Capacitación Y Adiestramiento, Previo Al Inicio Del Nuevo Negocio

Para solucionar el problema que se suscita en los fracasos de emprendimiento, deberá hacerse una óptima planificación de capacitación que considere la elaboración, ejecución y evaluación del Plan Estratégico, Plan de Marketing y Plan de Negocios. Es imprescindible ejecutar éste, antes del desarrollo del emprendimiento para así, fortalecer la formación, enseñarles a buscar oportunidades de negocios y nichos de mercado, tener aptitudes, perseverancia, visión, capacidad de gestión y entendimiento de los índices económicos, etc. de los/las emprendedores. Para ello, se sugiere el diseño de un modelo de capacitación funcional para el campo de los emprendimientos. Cabe comentar que, en numerosas oportunidades, los emprendedores son invitados a recibir capacitación para el desarrollo de las competencias requeridas, sin embargo esta actividad tan importante es, muchas veces, vista como una imposición del modelo particular por parte del emprendedor, y no como una inversión que traerá dividendos en el futuro. ¿Por qué sucede esto? La experiencia en el tema indica dos razones fundamentales: el financiamiento de la capacitación es asistencialista y el énfasis tiende a enfocarse en la gestión general, más que en desarrollar habilidades específicas. José L. Méndez, en su trabajo titulado *La capacitación como herramienta esencial de la estrategia emprendedora*, comenta: “las investigaciones realizadas por diversos investigadores han sido concluyentes respecto a la necesidad de promover la capacitación específica para aprender a crear *empresas, a fin de impulsar el crecimiento económico, debido a que se desperdicia un gran número de oportunidades de negocio por falta de emprendedores con los conocimientos y habilidades requeridos (...)* De conformidad con los resultados de esas investigaciones, la capacitación de nuevos

emprendedores favorece una imagen social positiva de la actividad empresarial y facilita la adquisición de actitudes, conocimientos y habilidades claves para el desempeño exitoso de las iniciativas empresariales”.

Capacitación Requerida Para Optimizar La Capacidad De Emprender Y La Gestión Emprendedora:

La capacitación es un conjunto de técnicas que se utilizan para optimizar el desenvolvimiento laboral y personal de un emprendedor/a. Perfecciona a la persona en su auto-empleo antes o durante su puesto de trabajo, ayudando a mejorar el desempeño y desarrollo personal. El desarrollo consiste en descubrir el potencial oculto que tiene el/la emprendedor/a y cultivarlo para mejorar su rendimiento laboral. Además, la capacitación les permite mantener la competitividad de la empresa en un mercado altamente globalizado y enfrentarlo de la mejor manera posible.

Figura 3: Esquema De Capacitación Orientada Al/La Emprendedor/A

Fuente: Elaboración Propia

Entrenamiento: Otorga conocimiento a fin de lograr cambios en las personas

Adiestramiento: Práctica en terreno, desarrolla el potencial y auto conocimiento

Desarrollo: Produce cambio de actitudes para llegar al cambio

En consecuencia, se sugiere desarrollar el siguiente modelo de Capacitación en uno de los temas más relevantes para el éxito del nuevo emprendimiento, cual es la Capacitación y las Herramientas de “Marketing Estratégico y su Administración”, previo de iniciado el negocio. Nace la Idea de Negocio:

En Relación Al Marketing Y Plan De Marketing

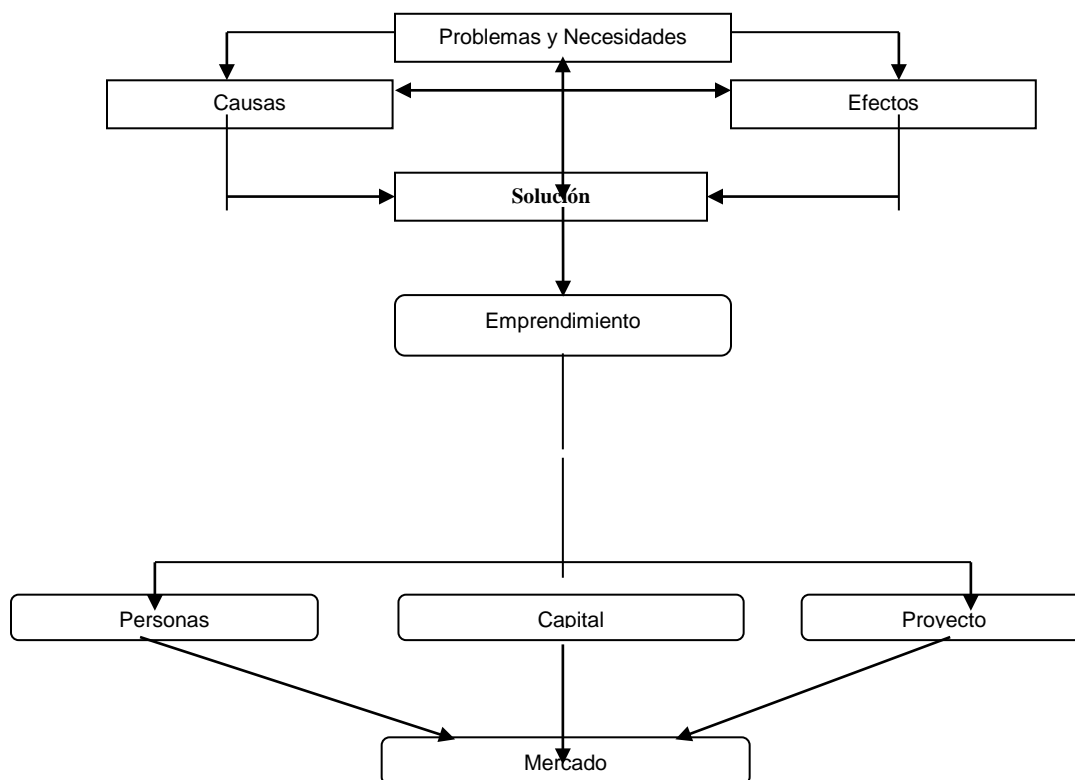

La American Marketing Association define Marketing como “*el proceso de planificación y ejecución del producto, precio, promoción y distribución de ideas, bienes y servicios, a fin de crear intercambios que satisfagan tanto objetivos individuales como los organizacionales*”. En cuanto al Plan de Marketing, responde éste a la pregunta ¿Hay suficientes consumidores interesados en el producto o servicio, como para que sea rentable la venta? En consecuencia, es aconsejable que el Plan, incluya dos partes muy importantes a considerar:

- 1- Definición del grupo objetivo al que deseamos llegar
- 2- Un programa de Marketing para promocionar y vender el producto deseado

En la figura 6, se trata de explicar la secuencia y gestión que se debería considerar, antes de iniciar el nuevo negocio, de acuerdo a los requerimientos deseados para apuntar a un mercado objetivo ideal. Una vez definido el mercado objetivo, se determinará qué gestión se realizará, para alcanzarlo y llegar a los clientes potenciales, que comprenden y además se cree la fidelización. El Plan de Marketing es un documento escrito, en el que se recogen los objetivos, estrategias, planes de acción relativos a los

elementos del Marketing Mix, los que facilitarán el cumplimiento de las estrategias dictadas a nivel corporativo, paso a paso y año tras año.

Figura 4: Hacia una idea de negocio, según problemas y necesidades del mercado

Fuente: Elaboración propia

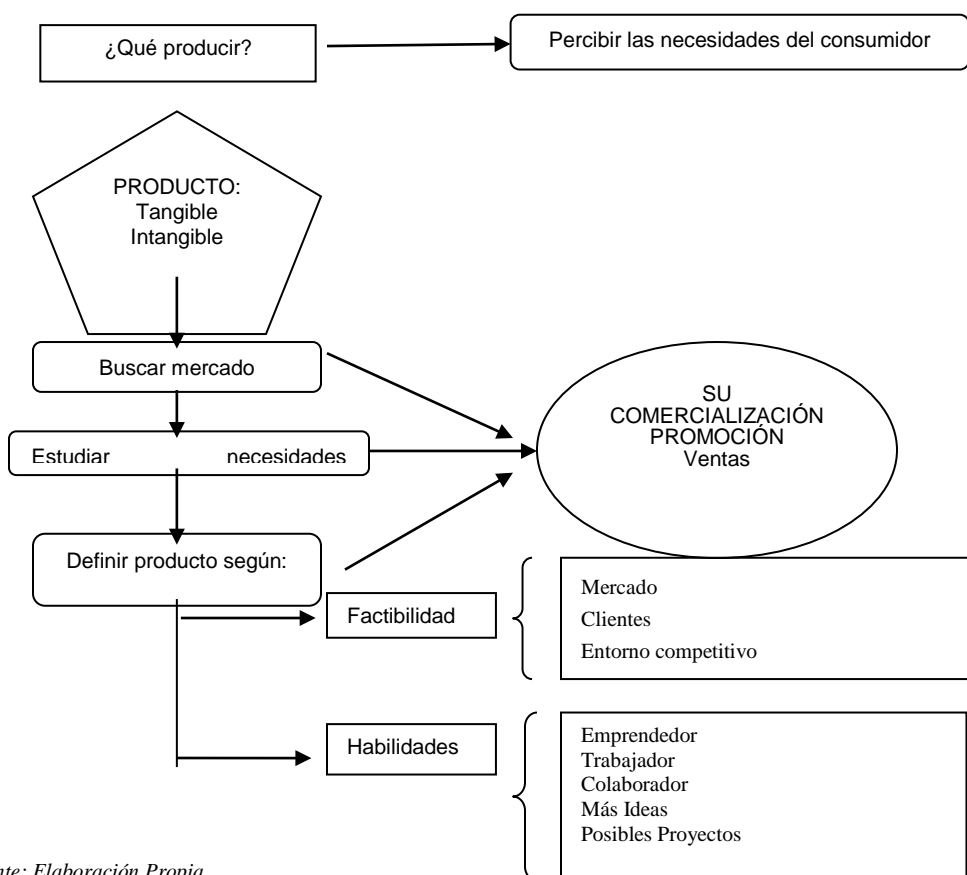

CONCLUSIONES

Con el análisis y propuesta anteriormente realizados, es posible mencionar 2 principales conclusiones que son relevantes para las iniciativas de emprendimiento: en primer lugar, los proyectos exitosos se diferencian de los fallidos desde el origen. Esto significa que un proyecto exitoso parte identificando problemas y necesidades de mercado, mientras que aquel que fracasa, surge de las ideas espontáneas o bien, por el solo hecho de copiar una idea exitosa. Así, el negocio parte con posibilidades de fracaso ¿Por qué? Simplemente porque no toma en consideración a sus posibles clientes, sino que basa su iniciativa en una idea preconcebida, que lo más probable es que no satisfaga al potencial usuario. No así cuando el esfuerzo inicial se focaliza en identificar problemas y necesidades para entender al consumidor. Es así como toma relevancia el concepto de investigación de mercado. En el contexto de un emprendimiento de pequeña escala, el hecho de dedicar tiempo y esfuerzo en investigar, conversar y observar a potenciales clientes, prestándoles atención a sus comportamientos, permitirá identificar necesidades y problemas.

En segundo lugar, los proyectos exitosos se diferencian de los fallidos en que los primeros incluyen la perspectiva de los clientes en el proceso de desarrollo. Esto se justifica dado que el mercado está en constante movimiento, por lo que se debe mantener contacto permanente con los consumidores para presentar y probar soluciones que estén lo más alineadas posibles con su demanda. Esto implica que en la etapa de desarrollo de un emprendimiento hay que evitar buscar validación de una idea preconcebida sino más bien, una vez identificada una necesidad o problema, es recomendable generar varias soluciones en conjunto con los clientes y finalmente, definir la mejor solución en base a la retroalimentación de éstos.

La principal enseñanza que nos deja este estudio es que las ideas sólo son tan buenas como lo consideren los clientes, no como sean percibidas por el emprendedor o empresa. Para esto, utilizar métodos cualitativos de investigación de mercado –como observación, reacción ante prototipos, entrevistas, entre otros- al inicio y durante el desarrollo de un nuevo emprendimiento, hacen sentido si se quiere minimizar el nivel de incertidumbre que implica lanzar una nueva oferta al mercado. Además, la capacitación debe orientarse hacia aquellos aspectos centrales previos al emprendimiento.

Figura 6: Emprendimiento, idea de negocio

Fuente: Elaboración Propia

Actualmente, algunas empresas ya han obtenido ayuda en la inversión a través del programa estatal “Chile Emprende”; estas empresas han proyectado sus ventas en un 30% al año, han contratado a nuevos trabajadores y han utilizado Internet como herramienta permanente de su gestión comercial; con ello se busca que las PYMES logren formar parte de una cadena de valor productiva para lograr una distribución y participación pareja de beneficios en bienes y servicios, que realizan las grandes empresas. La idea es vincular a las empresas con el sector dinámico de la economía, a través de las grandes empresas que avanzan rápidamente produciendo un positivo crecimiento económico en la región.

CARACTERIZACIÓN DE LA PYME PRODUCTORA DE QUESOS ARTESANALES Y SU NIVEL DE DIVERSIDAD: UN ESTUDIO DE CASO CON BASE EN LOS PRINCIPIOS DE MANUFACTURA ESBELTA

Edyamira Cardozo, Universidad Nacional Experimental de Guayana

Carlos Rodríguez-Monroy, Universidad Politécnica de Madrid

Wilfredo Guaita, Universidad Nacional Experimental de Guayana

RESUMEN

Se presenta un estudio de caso para caracterizar la PYME productora de quesos artesanales, analizar su diversidad y determinar su adecuación a los principios de producción esbelta. Fue realizado en la Red Artesanal de Productores de Queso Guayanés Telita, en dos municipios rurales del Estado Bolívar, Venezuela. La investigación fue de campo con alcance descriptivo. Se aplicó un cuestionario basado en las buenas prácticas de producción de alimentos a 30 unidades de producción. Se utilizó el análisis cualitativo para la caracterización y la herramienta STATGRAPHICS para el análisis multifactorial. Los resultados sugieren que estas PYME son de baja escala, con alta diversidad entre ellas y tienen limitaciones para garantizar la calidad del producto. Los factores vinculados con los principios de producción esbelta no fueron evidenciados. Se plantea la generación de nuevas líneas de investigación en cuanto a la producción de alimentos y del desarrollo rural se refiere.

PALABRAS CLAVE: PYME, quesos artesanales, industria láctea, manufactura esbelta

CHARACTERIZING SMALL AND MEDIUM-SIZED ENTERPRISES THAT PRODUCE FARMHOUSE CHEESE AND THEIR LEVEL OF DIVERSITY: A LEAN MANUFACTURING-BASED CASE STUDY

ABSTRACT

A case study is presented to characterize an SME that produces farmhouse cheese, analyse its diversity and determine to what extent it is adapted to the principles of lean manufacturing. The study was conducted in the Guyanes Farmhouse Telita Cheese Network (a soft cheese from the Guayana region of Venezuela) in two rural municipalities of Bolivar State in Venezuela. The research was carried out in the field with a descriptive scope. A questionnaire on good practice in food production was distributed among 30 production units. Qualitative analysis was used for characterization and the STATGRAPHICS tool for multifactorial analysis. The results suggest that these SMEs are low-scale with a high level of diversity among them but have limitations in guaranteeing product quality. The factors associated with lean manufacturing principles were not apparent. New lines of research are being considered regarding food production and rural development.

INTRODUCCIÓN

La PYME no escapa a los desafíos generados por la intensificación de los procesos globales; así como el acelerado cambio e incertidumbre asociados. Las empresas para lograr mayor participación del mercado afrontan el reto de mejorar sus sistemas internos y su competitividad. Aún cuando las dimensiones de la PYME pueden obstaculizar su posicionamiento en el mercado, en contraposición, su tamaño le aporta potencialidades de adaptación. En su estudio Mc Adam, Moffett, Hazlett y Shevlin (2010) demuestran que pueden implementar con éxito estrategias más flexibles y esbeltas. Su diseño organizacional y productivo menos complejo, lo permite. La PYME se encuentra en todos los sectores productivos. Definirla implica considerar factores que orienten su clasificación. Los esfuerzos por lograr una idónea conceptualización realizados en distintos ámbitos incluyen: actividad, capacidad de empleo, tecnología utilizada, intensidad productiva, niveles de inversión y volumen de ventas (Hillary, 2000; Diario Oficial de la Unión Europea, 2003; Ayyagari, Beckt y Demirguc-Kunt, 2007; García, Martínez y Aragón, 2009, European Commission Enterprise and Industry, 2009).

En la industria agroalimentaria existen PYME que bajo una dirección familiar se dedican a la manufactura de productos exóticos, de menor durabilidad, orientados a un mercado más restringido y territorial, con sistemas productivos artesanales. El acceso a los mercados impone a estas PYME el cumplimiento de requisitos de certificación de calidad, exigiendo un gran esfuerzo a los productores (Zeballos, 2003; Aragón y Marin, 2003; López y Castrillón, 2007). Otra de sus limitaciones es que no aparecen en el registro estadístico que llevan los organismos encargados de la seguridad alimentaria. Esto es un impedimento para acceder a las políticas y estrategias de apoyo que existen (FAO, 2006).

Para lograr su participación en el mercado estas unidades productivas deben garantizar la estandarización de sus productos (Mercado, Córdova y Testa, 2007). Es un reto incorporar de elementos de mejora y autorregulación en sus procesos internos. Deben realizar acciones de mejoramiento que las llevarían a la obtención de atributos de calidad para su inserción competitiva en el mercado. Una de estas estrategias es la implementación de los principios de manufactura esbelta en sus procesos. La investigación tuvo como propósito analizar el nivel de desarrollo que evidencia la PYME productora del queso artesanal Guayanés telita, establecer el grado de disimilitud existente entre ellas y determinar si están preparadas para adoptar estrategias de producción esbelta. Es parte de la fase diagnóstica de un trabajo empírico, dirigido a formular propuestas para insertarlas en esta filosofía de producción.

REVISIÓN LITERARIA

Manufactura Esbelta Y Su Aplicación En El Contexto De La PYME

La manufactura esbelta hoy día es considerada una filosofía organizacional de gran relevancia. Basada en la implementación de estrategias de calidad y mejora continua en la producción que puede resumirse en “un proceso de producción desde el pedido hasta su cumplimiento” e implica el desarrollo de productos, gestión de proveedores y clientes (Kocakülâh, Brown y Thomson, 2008). Se considera que un proceso productivo es *esbelta*, cuando logra el desarrollo de productos optimizando los insumos que en él intervienen. Al disminuir los desperdicios y defectos en la producción, la mano obra, espacios, inversión y tiempo son utilizados con máxima eficiencia generando mayor satisfacción de los clientes internos y usuarios. Son considerados como atributos de esta forma de producir: desarrollar productos estandarizados, de dimensiones y acabados requeridos, con el uso de técnicas de justo a tiempo, creación de sistemas para producir sin defectos, tener relaciones con los proveedores para compartir necesidades y eliminar actividades que no agreguen valor (Womack y Jones, 2003; Liker, 2003; Holweg, 2007; Shah, y Ward, 2009). Ello implica una producción apoyada en la mejora continua, en actividades estimulantes y retadoras para los colaboradores. Los sistemas de producción esbelta se sustentan en la aplicación de catorce principios. Su éxito se resume en cuatro grandes categorías conocido como el modelo 4P

—Philosophy, Process, People/Partners, and Problem Solving (Liker, 2003), compuesto por principios orientados a la máxima reducción de desperdicios.

Permiten a la empresa, concentrar los esfuerzos para producir con base en los requerimientos y la satisfacción del cliente, creando valor permanentemente (Dombrowski, Crespo y Zahn, 2010; Miller, Pawloski y Standridge, 2010; Padilla, 2010). En la mayor parte de la literatura que se ocupa del tema, se sostiene que estos sistemas están encaminados a satisfacer, específicamente, las demandas de las grandes organizaciones (Ghobadian y Gallear^a, 1996 y Ghobadian y Gallear^b, 1997). Desde luego, es menester adaptar estos sistemas de producción a las características particulares de cada unidad productiva, el nivel de desarrollo de los países y su contexto jurídico.

En cuanto a la PYME, iniciativas académicas se han orientado a explorar la aplicación de estrategias de organización, innovación y manufactura esbelta en este ámbito. Aun cuando es observada con escepticismo por los administradores o propietarios de algunas PYME, se han encontrado factores de éxito en su aplicación (Grewal, 2008; Niño y Bednarek, 2008; Dombrowski y Crespo, 2008; Mc Adam, Moffett, Hazlett y Shevlin, 2010; Herbane, 2010; Halgeri, McHaney y Pei, 2010). Actualmente los sistemas de producción esbelta pueden tener un espacio seguro en la PYME. Por estar obligada a competir en una economía global, este escenario exige el replanteo de nuevas estrategias productivas. La PYME debe adquirir mayor agilidad para lograr mejoras en su desempeño actual. Adaptarse a las rápidas transformaciones e integrarse competitivamente al mercado, requiere de funciones y procesos cada vez más esbeltos, más ajustados.

Pequeña Y Mediana Empresa (PYME)

La PYME es una categoría empresarial formada por un amplio y diverso grupo de firmas con diferentes grados de madurez. Se encuentra en todos los sectores productivos y poseen características comunes a la gran empresa. Su elevada diversidad ha generado en diferentes ámbitos la búsqueda de una clara definición y clasificación. La Unión Europea con miras a fomentar el apoyo a la misma, puso en vigor a partir del 1 de enero de 2005 una nueva definición. Esta tiene el propósito de estandarizar los criterios para su clasificación, agruparlas y establecer una base normativa común (Diario Oficial de la Unión Europea, 2003). Abarca esta definición la capacidad de empleo y el volumen del negocio. Países como Australia, Canadá, China y Corea utilizan la capacidad empleadora por tipo de sector, criterio donde también hay variabilidad. Japón utiliza el volumen de ventas y empleo por sector. Estados Unidos sólo maneja el número de empleos por sector. Es importante destacar que organismos promotores del desarrollo como la Agencia para el Desarrollo Internacional de Estados Unidos (USAID) y el Foro de Cooperación Económica Asia Pacífico (APEC) aceptan las definiciones de la Unión Europea o de Estados Unidos en sus políticas de apoyo a la PYME (SMEDA.org) según sea necesario.

Los intentos por estandarizar la definición coinciden en reconocer su creciente importancia, su impacto en el empleo, el aporte a las economías de los países y al bienestar de las regiones donde participan (European Commission enterprise and industry, 2009; Aragón-Correa, Hurtado-Torres, Sharmac y García-Morales, 2008). América Latina no se encuentra ausente en cuanto a complejidad y dispersión conceptual se refiere. Diversos autores han intentado clasificarla y agruparla con base en su capacidad empleadora, tipo de actividad, tecnología empleada e intensidad. También, han utilizado criterios financieros o su capacidad tributaria, combinando el capital invertido y la declaración del volumen de ventas (Guapatin, 2003; Dini y Stumpo, 2004; González, 2005; Saavedra y Hernández, 2008).

En Venezuela, el Decreto Ley 1547 (Decreto con Fuerza de Ley para la Promoción y Desarrollo de la Pequeña y Mediana Industria) establece los criterios para su caracterización, regulación y la define como “unidad de explotación económica realizada por una persona jurídica que efectúe actividades de producción de bienes industriales y de servicios conexos”. La clasificación atiende a los criterios

capacidad empleadora y volumen de ventas, con base en las Unidades Tributarias (UT), elemento técnico utilizado por el Estado para estimar los tributos y otras obligaciones dinerarias de índole fiscal. De acuerdo al IV censo económico en Venezuela el 95% de las unidades económicas activas en el año 2008 pertenecen a la categoría PYME, de éstas, el 75% se considera como microempresa con una capacidad de empleo que no llega a 10 trabajadores por unidad económica (INE, 2010).

Queso Guayanés Telita

Los quesos venezolanos al igual que los latinoamericanos tienen origen europeo y poseen las particularidades territoriales que han permitido su diferenciación. La FAO adelanta una definición y clasificación de uso general que se aplica para la producción de queso en todos los países. Ver Tabla 1.

Tabla 1: Clasificación del queso

SEGÚN SU CONSISTENCIA Y MADURACIÓN		
Según su consistencia	Denominación	Según las características de maduración
% Humedad sin materia grasa	Extraduro	Madurado
<51	Duro	Madurado/pormohos
49-56	Semiblando/Semiduro	No madurado/Fresco
54 - 69	Blando	En salmuera
> 67		

La tabla muestra la clasificación de los quesos según la norma CODEX STAN 283 (1978), que considera el porcentaje de humedad sin materia grasa (HSMG) y el grado de maduración. Esta clasificación fue acogida por la Norma venezolana COVENIN 1813:2000

FONDONORMA el ente normativo venezolano, desarrolla las características del queso blando en la Norma COVENIN 3822:2003:4 referida al queso de pasta hilada y lo define como un producto elaborado a base de leche sin madurar “que después de coagulado y escurrido parcial del suero es sometido a un proceso de amasado y estirado mecánico y en caliente dando origen a una masa hilante y homogénea.” Se encuentra listo para su consumo poco después de ser elaborado. El guayanés telita es un queso de pasta cocida e hilada único de Venezuela. Es elaborado en forma completamente artesanal y muy consumido en el país. Tiene un sabor suave, aspecto lechoso, bajo en sal, medianamente graso y de textura blanda (Márquez y García, 2007; Rodríguez, Caldas y Ogeerally, 2009). Este queso blando de origen territorial debe su denominación a Guayana, su región de origen y líder en la producción del mismo (Maldonado, Llanca y Oyón, 2007; Colina y Xiquez, 2008). También es producido en otras partes del país, pero se considera como un producto típico de la región.

METODOLOGÍA

La investigación fue realizada en los Municipios Piar y Padre Chien. Ubicados al sur de Venezuela, en el noreste del Estado, cuentan con una superficie de 20450 km² y una población de 130016 habitantes (INE, 2001-Proyección 2010). Su importancia como área ganadera es reconocida a nivel nacional y local, son municipios tradicionalmente productores de bovino, leche, queso de cincho, mozzarella y guayanés telita. Con apoyo de la UNEG y el órgano regional del Ministerio del Poder Popular para Ciencia, Tecnología e Industrias Intermedias (FUNDACITE Bolívar), los productores de la Red Artesanal de Productores de Queso Guayanés Telita, reciben apoyo tecnológico para mejorar sus procesos productivos, con miras a insertarse en el potencial mercado que significa la futura adhesión de Venezuela al MERCOSUR.

La investigación se realizó en las unidades de producción que conforman dicha red, conformada por 45 unidades de producción. Al momento del estudio se encontraban activas 38 que constituyen la población objeto. En el trabajo de campo realizado se hicieron las inspecciones a todas las unidades. Sin embargo 8 no aportaron información y la muestra final quedó establecida en 30 unidades de producción. Estas

representan el 66.67% de la población, considerándose como una muestra significativa. Dado el ámbito de aplicación y el nivel de especificidad de la PYME, se considera como un estudio de casos (Martínez, 2006; Vissak, 2010). Se realizó en tres etapas: diagnóstica, procesamiento de datos, análisis e inferencias.

La etapa diagnóstica implicó realizar inspecciones a las unidades de producción y aplicar un cuestionario basado en buenas prácticas de producción de alimentos. Incluyó capacidad de empleo, manejo de materia prima, condiciones ambientales del proceso productivo, aspectos sanitarios, área de trabajo, sistema de protección personal de los trabajadores, análisis de laboratorio y capacidad productiva en kilos.

En la etapa de procesamiento de los datos se utilizaron técnicas cualitativas y cuantitativas. Las cualitativas se identificaron los elementos del sistema productivo, se elaboró la cadena de valor y la clasificación de las unidades de producción. Las cuantitativas permitieron el análisis estadístico, con la herramienta computacional STATGRAPHICS versión 15.2, para caracterizar la PYME en su conjunto. Se separaron las variables en continuas y categóricas. A las continuas se le aplicó el Análisis Multivariado, para resumir datos y calcular varios estadísticos. El análisis de conglomerados se aplicó a las categóricas: se aplicó en forma general y con los factores relacionados con los principios de manufactura esbelta. En la fase de análisis e inferencias se estableció el comportamiento de las variables estudiadas.

RESULTADOS Y DISCUSIÓN

Descripción De La PYME Objeto De Estudio

La PYME estudiada se encuentra ubicada al noreste del Estado Bolívar. Pertenecen al eje ganadero Upata-El Callao de mayor densidad regional. Aportan 177621 cabezas de bovinos a la población ganadera del Estado (MAT, 2008). Las unidades de producción agrupadas en la Red Artesanal de Productores de Queso Guayanés Telita poseen rasgos de explotación familiar (Acosta y Rodríguez, 2006). Su capacidad empleadora es de 139 trabajadores directos y 452 indirectos y su producción diaria es 6246 kg del producto. Son productoras artesanales y su proceso productivo posee características lineales. Para su representación, se elaboró una cadena de valor que permitió su representación. Ver figura 1.

Figura 1: Proceso Productivo PYME artesanal.

La cadena de valor se compone de tres grandes fases: recepción de materia prima, recolección y proceso que a su vez abarcan: cuajado, diseño de la mezcla y producto final (cocción-moldeo-empaque). Fuente: Cardozo, R Monroy y Guaita (2010).

Clasificación De Las Unidades De Producción

A partir del resultado de los cuestionarios, desde la perspectiva teórica abordada y a los fines de lograr una clasificación, se reconocieron cuatro estratos, con base en la capacidad productiva como criterio relevante, es decir: volumen de leche procesada y producción en kilos. Aún cuando se analizó la variable cantidad de trabajadores se consideró para la estratificación, dos criterios. Ver Tabla 2.

Tabla 2: Clasificación de las empresas

Tipo	Trabajadores	Leche Procesada (Litros Diarios)	Cantidad Del Producto (Kilos)	% De Empresas (Dos Criterios)
I	10 A 13	4501 A 6000	600 A 800	0
ii	7 A 9	3001 A 4500	400 A 600	6.67
iii	4 A 6	Entre 1501 Y 3000	201 A 400	20.00
Iv	Hasta 3	Hasta 1500	Hasta 200	73.33

Las empresas reciben entre 160 y 3700 litros diarios (l/d) de leche para su procesamiento. La mayor producción diaria de queso registrada es de 740 y la menor de 38kg. El número de empleados oscila entre 1 y 9 trabajadores por unidad productiva. Fuente: Elaboración propia.

Análisis Descriptivo Y Variabilidad

Realizado a las variables continuas (Cantidad de trabajadores, Litros de leche procesada diaria y Cantidad del producto –kilos). Los resultados muestran la elevada variabilidad y asimetría de las unidades de producción estudiadas. Los coeficientes de variación fueron de 60.78% para cantidad de trabajadores; 85.19% para Leche procesada (Litros diarios) y 85.94% para Cantidad del producto (Kilos). La curtosis para la variable trabajadores fue 1.34; para Leche procesada (litros diarios) de 3.65 y para Cantidad del producto (Kilos) de 3.20. En todos los casos se encuentran fuera de los parámetros aceptables de +/- 2, lo cual sugiere la necesidad de ampliar el estudio, considerando otros elementos de análisis.

Análisis Multivariable

Dado el tipo de muestra y los datos observados, el procedimiento estadístico considerado adecuado es el análisis de conglomerados, que permite la agrupación automática de los datos a partir de su similitud. Se aplicó el vinculo simple (Vecino más cercano) como método de conglomeración, con una Métrica de distancia euclideana cuadrada (Pérez, 2002). Se realizaron dos tipos, el primero considerando todas las variables categóricas; y, en el segundo las vinculadas con los sistemas de producción esbelta. En la figura 2, se observa el primer análisis.

Figura 2: Dendograma, análisis de conglomerados con variables categóricas

La figura muestra 5 grupos. El mayor con patrones similares de comportamiento. Un segundo grupo, en tamaño, se compone de variables asociadas al Sistema de protección del personal (SPP). Un tercer grupo que comparte las variables Análisis de laboratorio (AL) y SPP. El cuarto grupo, compuesto por la variables Aspectos sanitarios (SAN), que a su vez se vincula con el quinto grupo con Área de trabajo-ventanas (AT). Fuente: Statgraphics, a partir de los datos

El segundo análisis fue realizado a los factores relacionados con los procesos de manufactura esbelta, abarco las variables: filtrado, acidez, densidad, textura, tipo de cuajo, temperatura, permiso sanitario y refrigeración. El resultado se observa en la figura 3.

Figura 3: Dendograma, análisis de conglomerados con variables asociadas a los factores de Manufactura Esbelta

La gráfica muestra tres grupos. De éstos, el mayor comparte 5 factores, lo cual indica que su comportamiento en las unidades de producción es similar. Los resultados sugieren la necesidad de profundizar en la evaluación del comportamiento de cada unidad productiva. Identificar con mayor grado de especificidad cada elemento y sus propiedades. Fuente: Statgraphics, a partir de los datos

Adecuación A Los Sistemas De Producción Esbelta

Las empresas estudiadas poseen un alto componente familiar y su grado de desarrollo productivo es incipiente. Fue realizado el análisis de los principios asociados a los sistemas de producción esbelta (Liker, 2003) y su nivel de cumplimiento por parte de las empresas. Este análisis se realizó a partir de los variables asociadas con las buenas prácticas de producción de alimentos que tienen el propósito de garantizar la inocuidad del producto. Fueron consideradas: temperatura, filtrado, sistema de refrigeración, permiso sanitario, acidez de la mezcla, densidad de la masa, textura y cuajo. Los resultados fueron ordenados en tabla para su presentación. Pueden verse en la tabla 3.

Tabla 3: Cumplimiento de los principios de producción esbelta

Variable	% de empresas
Temperatura	100
Filtrado	66,67
Sistema de refrigeración	43,33
Permiso sanitario	26,67
Acidez	83,33
Densidad	83,33
Textura	83,33
Cuajo	90,00

En cuanto al cumplimiento de los principios de manufactura esbelta, la Tabla muestra el grado de variabilidad existente en las empresas estudiadas. Puede decirse que sólo existe similitud en dos variables: medición de la temperatura de la leche y tipo de cuajo. Aspectos de los cuales dependen las características tipológicas del queso guayanés telita. Las variables sistema de refrigeración y permiso sanitario presentan resultados que pueden considerarse críticos. Fuente: Elaboración propia, a partir de los datos.

CONCLUSIONES

El queso Guayanés telita es un derivado lácteo de importancia territorial para el país y la región a la cual debe su nombre. Es un producto completamente artesanal. Sus productores se encuentran agrupados en una Red que recibe apoyo por parte del Estado y de la Universidad Nacional Experimental de Guayana. Estas son unidades de producción de pequeña escala, emplean hasta 9 trabajadores. Su capacidad instalada les permite un manejo de materia prima de hasta 3700 de litros de leche cruda procesada por días y una producción diaria de hasta 740 kilos de queso. Estos datos indican que su capacidad instalada es modesta, en comparación con la industria quesera de empresas medianas que puede procesar hasta 100000 litros diarios. Este es el caso de Argentina, México o algunos países europeos por lo que intentar establecer similitudes con estos niveles de desarrollo parece inadecuado. Su proceso productivo puede considerarse como lineal y con bajo nivel de complejidad. Se compone de una sencilla cadena de valor de tres fases: recepción de materia prima, recolección y proceso.

Reflejan los resultados que hay consistentes oportunidades de mejora para estas PYME. Llevarlas a niveles de desarrollo para lograr su progresiva inserción en el mercado nacional e internacional representa una oportunidad que no puede ser despreciada. El hecho de conformar una red de productores constituye una ventaja comparativa que puede ser potenciada. Especialmente puede permitir la profundización de los estudios para lograr mayores niveles de estandarización y mejorar el comportamiento de las variables en todas las empresas de la Red. Desde luego la obtención de mayores niveles de competitividad interna impactará positivamente el propósito de adecuarlas a los sistemas de producción esbelta. Entre sus metas a futuro se encuentra la apuesta por la calidad y cumplir con las Buenas prácticas de producción de alimentos. Paso previo para lograr la Certificación de Calidad. A su vez conformar la cadena productiva que permita la búsqueda de la reputación del queso Guayanés telita como un producto tradicional territorial diferenciado y garantizado. Son pasos previos para incursionar en otros mercados especialmente el Mercado Común del Sur (MERCOSUR), organismo al que Venezuela busca pertenecer y puede lograr a mediano plazo. Se han identificado cuatro estratos con base en cantidad de trabajadores, litros de leche procesados y kilos producidos como criterios de clasificación.

Considerando dos criterios de clasificación, se puede señalar que la mayor parte de las unidades de producción, un 73.33 %, se encuentran ubicadas en el estrato IV de menor tamaño. El estudio constituye un esfuerzo para lograr la clasificación y determinar el grado de diversidad de la PYME agrupada en la Red artesanal de productores de queso guayanés telita. Podrá servir como punto de partida para la formulación de estrategias orientadas a hacerlas más competitivas, lograr su incorporación progresiva en la filosofía de manufactura esbelta y a los estándares de calidad internacionales. Aporta elementos de análisis para profundizar el conocimiento de este tipo de empresas y futuros programas de mejoramiento. También puede concluirse que es un esfuerzo novedoso a nivel de Venezuela. La estrategia metodológica puede replicarse en los países en vías de desarrollo. Las nuevas líneas de investigación que pueden ser abordadas a partir de estos resultados se ubican en el contexto de la producción de alimentos y el desarrollo rural.

RESUMEN

La importancia del uso de las nuevas tecnologías es de gran utilidad para las empresas, específicamente para los establecimientos familiares por tal motivo la presente investigación pretende analizar el impacto del Internet como herramienta de promoción en el sector turismo, en la rama de la hotelería (empresa familiar), específicamente en el Hotel Hacienda Trinidad que se encuentra ubicado en San Juan de Alima, Michoacán, México, así como también demostrar la importancia que tiene el comercio electrónico en la actualidad y los beneficios que proporciona, conocer las razones por las cuales, la gente busca por Internet los servicios de hotelería y determinar la utilidad que ha tenido el Hotel Hacienda Trinidad a partir de elaborar su página Web.

PALABRAS CLAVES: Hotel Familiar, comercio electrónico, turismo, marketing, Internet, Web.

E-COMMERCE AS A PROMOTION TOOL. CASE STUDY: HOTEL HACIENDA TRINIDAD IN SAN JUAN DE ALIMA, MICHOACAN, MEXICO

ABSTRACT

Internet has proven to be an efficient technological tool as part of the electronic commerce strategy for all companies, but has been especially useful for family owned small businesses. Also, the Internet has arisen as a powerful tool for companies belonging to the touristic sector due to its international nature. Therefore, the aim of this study is to fully describe, analyze and assess the impact in terms of benefits, reach, search and usefulness that having a web page has over Hotel Hacienda Trinidad's operation.

KEY WORDS: Family owned small business, electronic commerce, touristic sector, web page.

INTRODUCCIÓN

El presente documento tiene la finalidad de detectar la importancia que tiene hoy en día el Internet como medio de difusión y promoción de las empresas nacionales como internacionales, nos enfocaremos en el sector turismo ya que es uno de los sectores económicos más importantes en México, específicamente en el Hotel Hacienda Trinidad que se encuentra ubicado en la playa de San Juan de Alima Michoacán, ya que es el único hotel que cuenta con comercio electrónico. El beneficio más visible del turismo es el empleo directo que genera en hoteles, restaurantes, comercio y transporte, además es un generador de divisas importante para los países (Philip Kotler, 2004 :468) Sabiendo la importancia que tiene el turismo para la economía de los países, es importante promoverlo introduciendo estrategias de promoción, el Internet es una herramienta muy importante en la actualidad ya que “el marketing electrónico está

transformando muy rápidamente el modo de dirigir los negocios de la empresas hoteleras y de viajes. Este tipo de marketing normalmente se asocia con el marketing en Internet (Philip Kotler, 2004 :404).

Más de 500 millones de personas tienen acceso a Internet; en 1996 existían menos de 50 millones de usuarios. Este incremento del 1.000 por ciento en menos de ocho años, muestra porque Internet se ha convertido en una herramienta de marketing importante (Philip Kotler, 2004 :458). La pagina Web es una gran herramienta que tiene múltiples beneficios y usos, alguno de los usos de la pagina Web incluye la venta de productos, el primer conocimiento del producto, el apoyo a la campaña de promoción de un producto o de una marca, permitir que los clientes contacten con las empresas, conseguir información de clientes potenciales que visiten la pagina, apoyo a las relaciones publicas y el suministro de información que permitirán a los consumidores hacer un mejor uso del producto (Philip Kotler, 2004 :405).

REVISIÓN LITERARIA

Hoy en día es ampliamente aceptado el hecho de que las nuevas tecnologías, en particular el acceso a Internet, tienden a modificar la comunicación entre los distintos participantes del mundo profesional, especialmente:

- las relaciones entre la empresa y sus clientes,
- el funcionamiento interno de la empresa, que incluye las relaciones entre la empresa y los empleados,
- la relación de la empresa con sus diversos socios y proveedores.

Por lo tanto, el término "**comercio electrónico**" se refiere a la integración dentro de la empresa de herramientas basadas en tecnologías de información y comunicación (denominadas por lo general **software empresarial** con el fin de mejorar su funcionamiento y crear valor para la empresa, sus clientes y sus socios (<http://es.kioskea.net/contents/entreprise/e-business.php3>). El comercio electrónico ya no se aplica solamente a empresas virtuales cuyas actividades están en su totalidad basadas en la Web, sino también a empresas tradicionales (denominadas de ladrillos y cemento). El término *comercio electrónico*, de hecho sólo cubre un aspecto de los negocios electrónicos: la utilización de un soporte electrónico para la relación comercial entre la empresa e individuos. El propósito de este documento es presentar las distintas "tecnologías" subyacentes (en realidad, modos organizativos basados en tecnologías de información y comunicación) y los acrónimos asociados a ellas. El objetivo de cualquier comercio electrónico es crear valor. Éste puede crearse de distintas maneras:

- **Como resultado de un aumento en los márgenes**, es decir, una reducción de los costes de producción o un aumento de las ganancias. El comercio electrónico permite lograr esto de muchas formas distintas:
 - Posicionamiento en nuevos mercados
 - Aumento de la calidad de los productos o servicios
 - Búsqueda de nuevos clientes
 - Aumento de la lealtad de los clientes
 - Aumento de la eficiencia del funcionamiento interno

- **Como resultado de un aumento en la motivación del personal.** Idealmente, el paso de una actividad tradicional a una de comercio electrónico permite motivar a los asociados al grado de que:
 - La estrategia global se hace más visible para los empleados y favorece una cultura en común
 - El modo de funcionamiento implica que todos los participantes asumen responsabilidades
 - El trabajo en equipo favorece la mejora de las competencias
- **Como resultado de la satisfacción del cliente.** De hecho, el comercio electrónico favorece:
 - Una caída de los precios en conexión con un aumento de la productividad
 - Una mejor atención a los clientes
 - Productos y servicios que son adecuados a las necesidades de los clientes
 - Un modo de funcionamiento transparente para el usuario
- **Como resultado de relaciones de privilegio con los socios.** La creación de canales de comunicación con los proveedores permite:
 - Más familiaridad entre sí
 - Mayor capacidad de reacción
 - Mejor capacidad de anticipación
 - Recursos compartidos para beneficio de para ambas partes

Por lo tanto, un proyecto de comercio electrónico sólo puede funcionar si añade valor no sólo a la empresa sino también a sus clientes y socios (<http://es.kioskea.net/contents/entreprise/e-business.php3>)

El comercio electrónico, también conocido como e-commerce, consiste en la compra y venta de productos o de servicios a través de medios electrónicos, tales como Internet y otras redes informáticas. Originalmente el término se aplicaba a la realización de transacciones mediante medios electrónicos tales como el Intercambio electrónico de datos, sin embargo con el advenimiento de la Internet y la World Wide Web a mediados de los años 90 comenzó a referirse principalmente a la venta de bienes y servicios a través de Internet, usando como forma de pago medios electrónicos, tales como las tarjetas de crédito.

La cantidad de comercio llevada a cabo electrónicamente ha crecido extraordinariamente debido a la propagación de Internet. Una gran variedad de comercio se realiza de esta manera, estimulando la creación y utilización de innovaciones como la transferencia de fondos electrónica, la administración de cadenas de suministro, el marketing en Internet, el procesamiento de transacciones en línea (OLTP), el intercambio electrónico de datos (EDI), los sistemas de administración del inventario, y los sistemas automatizados de recolección de datos.

La mayor parte del comercio electrónico consiste en la compra y venta de productos y/o servicios entre personas y empresas. La presente investigación pretende la utilización del comercio electrónico en Hoteles Familiares ya que el turismo es uno de los sectores económicos más importantes y dinámicos en el mundo actual, tanto por su nivel de inversión, participación en el empleo, aportación de divisas, como por la contribución al desarrollo regional. Aporta alrededor del 11% de la producción mundial y genera uno de cada once empleos

(http://www.sectur.gob.mx/wb/sectur/sect_Boletin_057_Destaca_Elizondo_Importancia_del).

La importancia del turismo para la economía mexicana es indudable, sus beneficios no sólo se reflejan en ser una industria que genera empleos y detonador del desarrollo regional, sino que además es factor de difusión de atractivos culturales y naturales. A nivel mundial, México ocupa el 8° sitio en captación de turistas internacionales y el 10° en captación de divisas

(http://archivos.diputados.gob.mx/Centros_Estudio/Cesop/Eje_tematico/d_turismo.htm).

La promoción turística juega un papel importante para mantener y consolidar a México como una potencia mundial, al generar una mayor demanda para los destinos y atractivos del país. Al centrarnos en las herramientas que utiliza la mercadotecnia turística para promocionar este sector nos hemos enfocado especialmente en las páginas Web con las que cuentan los hoteles, en las cuales se brinda información necesaria para el consumidor, la cual es esencial en el momento de realizar su compra. Sabiendo la importancia que tiene el turismo en México y aplicando el Internet como medio de promoción y venta de los servicios turísticos, realizaremos esta investigación para conocer si realmente existe un incremento en las ventas de los hoteles que cuentan con esta herramienta, específicamente en el hotel Hacienda Trinidad localizado en la playa de San Juan de Alima, Michoacán.

METODOLOGÍA

En este estudio es cualitativo y descriptivo ya que esta busca únicamente describir situaciones o acontecimientos; y no está interesada en comprobar explicaciones, ni en probar determinadas hipótesis.

Los estudios descriptivos buscan especificar las propiedades, las características y los perfiles de personas grupos, comunidades, procesos, objetos o cualquier otro fenómeno que se someta a un análisis (Danhke, 1989), “Es decir miden, evalúan o recolectan datos sobre diversos conceptos (variables), aspectos, dimensiones o componentes del fenómeno a investigar” (Sampieri 2006). En este caso específico se aplica al analizar índice de crecimiento que ha tenido el Hotel Hacienda Trinidad en sus ventas desde que introdujo al mercado su página Web. La herramienta empleada para recolectar la información requerida se hizo mediante un cuestionario el cual se diseñó con una mezcla de preguntas diferentes utilizando de respuestas abiertas y cerradas en donde se pretende conocer y medir el comportamiento del mercado, así como los factores que determina el consumo. El tamaño de la muestra fue por conveniencia en donde se aplicó el cuestionario a los huéspedes del hotel en la Semana Santa logrando la aplicación de 80 encuestas, una por habitación reservada de acuerdo a su estancia en dicho hotel y en los días antes mencionados.

RESULTADOS

Los resultados que nos arrojó el instrumento empleado y sobre todo las preguntas sensibles las que permite responder a las preguntas de investigación son de la uno a la cuatro en donde los resultados que nos arrojó fueron los siguientes: el 58% de la muestra mencionan que conoció la existencia del Hotel Hacienda Trinidad por medio del Internet, en segundo lugar lo tiene las agencias de viajes con el 15%, y el tercero la radio con el 12%, la razón por la cual decidieron hospedarse en el hotel fue por Internet 34%, un 29% por las recomendaciones obtenidas de sus conocidos, el 16% por la tranquilidad, el 15% por experiencias de visitas pasadas y el 6% por cuestiones económicas. La manera en la que fue hecha la reservación del hotel nos respondieron que el 50% por Internet, el 31% por teléfono y finalmente el 19% nos dijo que la hicieron personalmente. Estos resultados nos señala que la página de Internet fue el medio más utilizado por los clientes del Hotel.

CONCLUSIÓN

La confianza que hoy en día tienen las personas por comprar por Internet se ha ido incrementado esta se debe a que las empresas cumplen con lo prometido y sobre todo lo que muestran en las páginas Web es una realidad, para el Hotel Hacienda Trinidad tiene una gran ventaja competitiva ya que el volumen de

ventas se ha incrementado por tener la información en Internet, con la presente investigación queda confirmado que el uso de la tecnología en empresas de servicio turístico es benéfico ya que sus clientes reales y potenciales tienen la información de primera mano y no es necesario llegar al lugar y contratar el servicio.

LA SOLIDARIDAD DE LA SOJA EN ARGENTINA

Marisa Daniela Goytia, Universidad Nacional de Rosario-Argentina
Silvina Beatriz Marcolini, Universidad Nacional de Rosario-Argentina

RESUMEN

El cultivo de soja se ha convertido en los últimos años en el motor de la economía nacional. Diversos factores han sido determinantes en este aspecto, la expansión de la superficie de tierra destinada al mismo, los avances tecnológicos que provocaron un incremento de los niveles de producción, la suba de los precios internacionales del grano y la mayor demanda mundial de alimentos, entre otros. Sin embargo, a pesar del panorama alentador que plantea este cultivo, dicha situación no se refleja en otras actividades agrícolas y ganaderas de nuestro país. Por ello afirmamos que la soja se ha convertido en un cultivo solidario, desde el momento que sigue generando un crecimiento del sector agropecuario, a pesar del declive de otras producciones. No obstante circunstancias de origen endógeno provocaron que la repercusión en la situación financiera y de rentabilidad del productor agropecuario nacional de soja no fuera directamente proporcional a la modificación de las variables involucradas.

ABSTRACT

Soybean cultivation has become in the national economy's engine during last years. Several factors have been decisive in this respect, land expansion, technological advances that led to an increase in production levels, international prices and more demand for food, among others. However, other agricultural activities are not in the same situation. So, we are sure of soybean solidarity, because while agricultural sector is growing, other products are falling down. We think that endogenous circumstances produce financial and profitable situation is not increasing like variables sector.

INTRODUCCIÓN

La estructura económica de la República Argentina está conformada por una gran variedad de actividades, entre las que aparecen las primarias. Estas, se clasifican en:

- extractivas, que incluyen minería, actividad forestal en bosques nativos, pesca, caza, extracción de hidrocarburos (petróleo y gas) y carbón;
- agricultura, ganadería y forestación, que se diferencian de las anteriores porque requieren de actividades previas, tales como el cultivo en las plantas, la cría en el ganado, entre otras.

Argentina tiene uno de los territorios más extensos del planeta, con variedad de climas, suelos, y una gran diversidad étnica, en la que el agro cumple un papel fundamental como integrador. Tiene efectos estructurantes sobre el territorio y sus regiones; ocupa espacios e impulsa el desarrollo regional, favoreciendo nuevos emprendimientos, reteniendo a la población residente en sus lugares de origen y generando empleo en el interior del país.

El sector agropecuario ha sido en el siglo pasado el pilar de nuestro desarrollo económico, soportando no sólo cambios climáticos, tecnológicos y de precios, sino también los embates de las medidas tomadas por los distintos gobiernos de turno. Además, es el origen del crecimiento operado en el sector industrial y fundamentalmente en la agroindustria, o sea aquellas que necesitan como materia prima, productos primarios.

A través del tiempo la trascendencia del sector agropecuario ha ido declinando y su contribución al Producto Bruto Interno disminuyendo. El aporte de la actividad agropecuaria al PBI en nuestro país fue del 4,6 %, si se mide únicamente el sector primario de la economía, según lo revela una investigación

coordinada por el Instituto Interamericano de Cooperación para la Agricultura del año 2002. Pero si se analiza a la actividad de una manera ampliada, esto es con sus encadenamientos hacia adelante y hacia atrás contribuye a la economía siete veces más de lo que refleja el porcentaje. Según la Publicación Análisis Económico Nro. 4 (2005) del Ministerio de Economía y Producción de nuestro país la participación de la agricultura en el producto bruto interno del año 2004 fue del 6 %. En el año 2005 la participación se mantiene, cayendo en el año 2008 al 5,2%. Las distintas intervenciones estatales al campo hicieron que en pleno auge de la economía, la contribución al producto bruto interno del sector descendiera.

Sin embargo, durante los últimos años, el sector agropecuario, a través de la producción de soja se ha convertido nuevamente en el sostén de la economía de nuestro país. Diversos factores tales como, el aumento de la superficie destinada a su cultivo, los mayores rindes obtenidos en zonas marginales provenientes de la aplicación de nuevas tecnologías, la expansión de la frontera agropecuaria y los mejores precios internacionales, convirtieron a la soja y sus derivados en el principal producto agropecuario nacional.

El presente trabajo describe y demuestra a través de estadísticas y datos oficiales, la importancia del cultivo soja en nuestro país y tiene como objetivo explicar que, a pesar del panorama alentador que presenta el sector agropecuario argentino, que se ha mantenido en crecimiento gracias a la solidaridad de la soja con otras producciones agrícolas y ganaderas, la repercusión en la situación financiera y de rentabilidad de la empresa agropecuaria, no fue directamente proporcional a la modificación de las variables involucradas. Existen factores principalmente endógenos, que no permitieron que la situación internacional favorable a la soja en los últimos años se traslade directamente al empresario rural.

Para ello estructuramos el trabajo de la siguiente forma, una primera parte destinada a analizar el sector agropecuario argentino en general para derivar a posteriori en el complejo oleaginoso y centrarnos en el cultivo de soja, y una segunda parte que muestra las variables revisadas: niveles de producción, precios internacionales, derechos de exportación, tipos de cambio e inflación nacional, para terminar con las reflexiones sobre el tema.

EL SECTOR AGROPECUARIO ARGENTINO EN CIFRAS

Durante los años 1988, 2002 y 2008 se llevaron a cabo los Censos Nacionales Agropecuarios. Según datos del CNA 2008, de los 376.127.400 has. de superficie, que abarca nuestro país, 193,2 millones de hectáreas, son destinadas a uso agropecuario. La información, elaborada manteniendo la comparabilidad con los censos anteriores, nos permite hacer una serie de cotejos sobre el avance o retroceso del sector agropecuario. Hasta el momento, los datos del año 2008, son preliminares ya que no han sido sometidos a análisis integrales de exhaustividad ni consistencia estadística.

Para la realización de los Censos Agropecuarios se utiliza como unidad estadística, la explotación agropecuaria (EAP), definida como unidad de organización de la producción que produce bienes agrícolas, pecuarios o forestales destinados al mercado; tiene una dirección ejercida por el productor que asume la gestión y los riesgos de la actividad productiva, con una superficie no menor a 500 m², integrada por una o varias parcelas ubicadas dentro de los límites de una misma provincia; utiliza en todas las parcelas algunos de los mismos medios de producción de uso durable y parte de la misma mano de obra.

Tabla N°1: Cantidad de EAPs en los CNA 1988,2002 y 2008

Total País	CNA '88	CNA '02	CNA '08 (*)
Total	421.221	333.532	276.581

(*) Resultados preliminares *La presente tabla muestra la cantidad de Explotaciones agropecuarias, a través de los censos 1988, 2002 y 2008.* Fuente: Censo Nacional Agropecuario –INDEC

Queda en evidencia que a lo largo de los años se ha producido una notable disminución en la cantidad de explotaciones agropecuarias, concretamente se redujeron de 421.221 en el año 1988 a 276.581 en el año 2008. Dicha situación se presenta en forma homogénea en la mayoría de las provincias de la Argentina. Este no es un dato menor ya que indicaría que la posesión de la tierra se va concentrando, y provoca que los pequeños productores posean explotaciones que no constituyen una unidad económica rentable. Los grandes productores, con acceso al crédito, a mejores maquinarias y a sistemas de riego, entre otros; se encuentran en una mejor situación, lo que aumenta la brecha existente entre éstos.

COMPLEJO OLEAGINOSO

El Complejo Oleaginoso comienza con la producción de los granos y abarca hasta la industrialización de los mismos, esto es: aceites refinados y crudos, residuos de la industria aceitera procesados –pellets-, harinas y biodiesel.

Vamos a relacionar ahora, los datos de superficie cultivada con los grupos de cultivo. Si nos guiamos por el CNA' 08, encontramos; cereales, oleaginosas, cultivos industriales, frutales y forestales; tal como se expresa en la Tabla N° 2.

Tabla N° 2: Superficie Cultivada por Grupo de Cultivos.

Superficie cultivada por grupo de cultivos					
Total	Cereales	Oleaginosas	Industriales	Frutales	Forestales
21.159.848	8.655.925	10.408.513	766.904	496.124	832.382
Participac. %	40,91	49,19	3,62	2,34	3,93

La Tabla N° 2, establece la participación que tienen: los cereales, las oleaginosas, los cultivos industriales, los frutales y los forestales; en el total de la superficie cultivada. Fuente: INDEC-Censo Nacional Agropecuario

La superficie cultivada en primera ocupación por grupo de cultivos refleja la preeminencia de las oleaginosas con un 49,19%, sobre el total de la superficie nacional sembrada. Dentro de este grupo, las más importantes son: girasol, lino, maní, cártamo y soja.

La siguiente Tabla N° 3, se refiere entonces, a la producción de oleaginosas exclusivamente.

Tabla N° 3: Producción de Oleaginosas por Cultivo

Producción de oleaginosas por cultivo. Total del país. Campañas 2004-05 a 2008-09						
Campaña	Total	Producción (1)				
		Girasol	Lino	Maní	Soja	Cártamo
Miles de toneladas						
2004-05	42.483,8	3.662,1	36,1	444,8	38.290,0	50,8
2005-06	44.715,9	3.759,7	53,8	347,3	40.537,3	17,8
2006-07	51.672,6	3.497,7	34,1	600,0	47.482,8	58,0
2007-08	51.546,5	4.646,0	9,6	625,3	46.232,1	33,5
2008-09	34.188,8	2.483,4	19,5	605,5	30.993,4	87,0

(1) Se trata de los cultivos más importantes. El total no incluye a los cultivos restantes.

La presente Tabla muestra la producción en miles de toneladas de los cultivos que conforman el Complejo Oleaginoso: girasol, lino, maní, cártamo y soja. Evidencia la supremacía de la soja por sobre el resto de los cultivos. Fuente: Ministerio de Agricultura, Ganadería y Pesca. Dirección de Coordinación de Delegaciones.

Se advierte que dentro de la producción de oleaginosas que se lleva a cabo en el país, la soja tiene la mayor participación. Si tomamos como ejemplo la campaña 2008-2009, representa el 90,65% de la producción total, en tanto el girasol le sigue con el 7,26% y el resto constituye el 2,08%.

Claramente se desprende de las Tablas N° 2 y 3, como se consolida la importancia del complejo. Tanto el complejo oleaginoso en su totalidad, como la soja en particular, se han convertido en los más importantes en la balanza comercial de nuestro país, así como en los más grandes generadores de divisas.

Por todo lo dicho hasta aquí, es que nos vamos a dedicar en esta etapa del trabajo en forma exclusiva a la soja. Analizaremos los datos relativos a: superficie cosechada, rendimiento y producción anual de la misma. Una vez completado el mismo, lo relacionaremos con los derechos que se perciben por la exportación de soja en grano, sin tener en cuenta aceites y harinas.

VARIABLES REVISADAS

Niveles de Producción

En base a datos suministrados por el Ministerio de Agricultura, Ganadería y Pesca, detallamos la superficie cosechada de soja desde el año 2002 al 2010, que será el período sobre el que basaremos nuestro análisis. La misma se expresa en hectáreas en la Tabla N° 4, que se transcribe a continuación:

Tabla N° 4: Superficie Cosechada de Soja

Superficie cosechada de soja (hectáreas)	
Años	Hectáreas
2002	11.405.250
2003	12.420.000
2004	14.304.539
2005	14.032.198
2006	15.130.038
2007	15.981.264
2008	16.387.438
2009	16.767.548
2010	18.130.904

En esta Tabla se describe la superficie cosechada de soja en el período 2002 a 2010, expresada en hectáreas. Fuente: Ministerio de Agricultura, Ganadería y Pesca

Se observa el incremento experimentado en la superficie cosechada desde el año 2002 hasta la actualidad. Dicho aumento puede explicarse por el desplazamiento de la ganadería y de cultivos tradicionales de regiones Argentinas y la expansión de las fronteras de la soja, modificando las estructuras productivas regionales. Desde el año 2002 hasta el 2010 se produjo un acrecentamiento continuo del 58,97%.

Si al presente análisis le incorporamos el rendimiento de la soja en dichos períodos en toneladas por hectárea, obtenemos la producción total que se expresa en la Tabla N° 5 que se expone a continuación:

Tabla N° 5: Producción total en Toneladas

Años	Sup. Cosechada Hectáreas	Rendimiento Tn. por hectárea	Producción Toneladas
2002	11.405.250	2,630	30.000.000
2003	12.420.000	2,803	34.818.550
2004	14.304.539	2,207	31.576.752
2005	14.032.198	2,728	38.289.742
2006	15.130.038	2,679	40.537.363
2007	15.981.264	2,971	47.482.786
2008	16.387.438	2,821	46.238.087
2009	16.767.548	1,848	30.993.379
2010	18.130.904	2,905	52.677.371

En la Tabla N° 5 se detalla la superficie cosechada en hectáreas, el rendimiento por hectárea y la producción total obtenida en toneladas; durante el período en estudio 2002/2010. Fuente: Elaboración propia en base a datos del Ministerio de Agricultura, Ganadería y Pesca

La Tabla nos muestra una mayor superficie cosechada y un acrecentamiento en la producción total en toneladas, pero la variación de ambas no guarda la misma proporción.

El incremento de la producción total en toneladas en los mismos años considerados es del 75,59%; esto es sustancialmente superior a la variación que muestra la superficie. Esta diferencia obedece al aumento de los rendimientos por hectárea, producto de las nuevas tecnologías agrícolas incorporadas al sector. En

este aspecto si bien la tendencia es en alza, existen otros factores que condicionan dichos rendimientos, (temperaturas, humedad, lluvias, etc.).

Precios Agrícolas

Revisaremos la evolución de los precios internacionales del grano expresados en dólares durante el mismo período considerado. El objetivo en este caso es analizar si el incremento de producción se vio acompañado o no por una suba en los precios. Trabajaremos con valores FOB del Mercado de Chicago para operaciones a granel con hasta un 25 % de embolsado. Obtuvimos precios promedios mensuales, por lo que para obtener un precio promedio anual consideramos la sumatoria de los precios mensuales de cada año y lo dividimos por doce.

Es importante aclarar que la idea de analizar precios internacionales es porque Argentina es tomadora de precios para sus productos agrícolas. De acuerdo a lo señalado por Colomé y otros (2005: 2):

“Argentina es un país eficiente –de bajos costos- en el grueso de su producción agrícola, generando excedentes, los que son de exportación habitual y, además, commodities; por lo tanto el mercado para ellos es el internacional. A pesar de la importancia de su producción agrícola, Argentina es “país pequeño” y, tratándose además de commodities, actúa como tomador de precios de los mercados internacionales (excepto en el complejo sojero)”.

Los precios de los commodities se forman en las bolsas de los principales centros productores y comercializadores del mundo, en general de los EEUU y, especialmente, en la Bolsa de Chicago. Como es obvio, los precios se determinan en dólares y esto tiene una gran importancia”.

La forma en que se determina el precio de los cereales y oleaginosas en nuestro país, es la siguiente:

- A partir del precio CIF internacional (costo, seguro y flete); el vendedor deberá pagar los costos y el flete necesarios para llevar la mercancía al puerto convenido así como también el seguro, a efectos de cubrir cualquier contingencia durante su traslado.
- A este valor le deduce el flete y el seguro, con lo que llegaremos a determinar el precio FOB (libre a bordo) en el río de la Plata.
- Sobre dicho valor se calculan las retenciones o derechos de exportación
- Luego éstas se deducen junto con los gastos de carga y descarga en el puerto, para obtener el precio FAS, que es el que muestra la pizarra.

El precio para el productor en tranquera, será el que surge del procedimiento anterior menos el flete, que generalmente se realiza en camión y en menor medida en vagón y el acondicionamiento que sea necesario realizarle a la mercadería.

Exponemos a continuación en la Tabla N° 6 los precios FOB promedios anuales para el grano de soja de acuerdo a lo explicado precedentemente y expresados en dólares por tonelada:

Tabla N° 6: Precios FOB Chicago Soja: Dólares/Tonelada

AÑO	DOLARES/TONELADA (SOJA)
2002	197
2003	238
2004	268
2005	231
2006	234
2007	318
2008	456
2009	414
2010	409

La Tabla N° 6 refleja los precios FOB Chicago Soja, en dólares por tonelada desde el año 2002 hasta el 2010. Fuente: SAGPyA – Dirección de Mercados Agroalimentarios

La tabla refleja una suba permanente hasta el año 2008 y una baja en los años 2009 y 2010 que en ningún caso se acerca a los valores del 2007 por lo que, en términos generales podemos hablar de una tendencia alcista. Si bien no forma parte de nuestro análisis, aclaramos que esta tendencia continúa durante el año 2011 en el que el precio promedio anual del grano asciende a U\$S 505 por tonelada. Esto significa que el incremento de la producción a nivel nacional fue acompañado por una suba de precios a nivel internacional, que es muy significativa en los últimos tres años.

Derechos de Exportación

Tanto la Nación como las Provincias y los Municipios necesitan de recursos para hacer frente a sus compromisos, sin recursos no hay gobierno. Tras la reforma Constitucional de 1994 el artículo 4° establece las disposiciones para el federalismo fiscal, y dice:

“El Gobierno federal provee a los gastos de la Nación con los fondos del Tesoro Nacional, formado del producto de derechos de importación y exportación, del de la venta o locación de tierras de propiedad Nacional, de la renta de Correos, de las demás contribuciones que equitativa y proporcionalmente a la población imponga el Congreso General, y de los empréstitos y operaciones de crédito que decreta el mismo Congreso para urgencias de la Nación, o para empresas de utilidad nacional”.

Como vemos a la Nación le corresponde entre otros, el producto de los derechos de exportación, que grava la exportación para consumo. Hacia el año 1991, éstos tendieron a desaparecer, llegando a mínimos históricos. Siguiendo a Julio Berlinsky (1998) en “El sistema de incentivos en Argentina. De la liberalización unilateral al Mercosur” se suprimieron la mayoría de los derechos que gravaban las exportaciones con excepción de algunos productos primarios, como los porotos de soja, maní, semillas de girasol, otras semillas oleaginosas y las pieles y cueros, los cuales continuaron gravados con el objetivo de incentivar la industrialización doméstica de aceites y manufacturas de pieles y cueros.

En el año 2002, recobran su fuerza, a través de la ley N° 25.561, cuando se declaró el estado de Emergencia Pública en materia social, económica, administrativa, financiera y cambiaria. La Resolución N° 11/2002 del Ministerio de Economía e Infraestructura, expresa que se considerarán las consecuencias de eventuales alteraciones significativas en los precios internacionales de los productos agrícolas.

A través del artículo N°1 dispone:

“Fíjase un derecho del DIEZ POR CIENTO (10%) a la exportación para consumo de las mercaderías comprendidas en la Nomenclatura Común del MERCOSUR (NCM) detalladas en las seis planillas que como Anexo forman parte integrante de la presente resolución”

Su artículo N° 2, establecía el 5% sobre el resto. Las alícuotas establecidas en el art. N° 1 como en el art. N° 2, eran de carácter temporal y no sólo siguen en la actualidad en vigencia, si no que no existe un cronograma para su eliminación.

A mediados del 2006 los derechos de exportación para cereales como trigo, centeno, cebada, avena y maíz, harinas; soya, girasol y aceites; otras grasas y aceites vegetales; papel y carbón reciclados; propano y butano llegaron al 20%. La alícuota previa al 07 de noviembre de 2007, de la soja era de 27,5% alcanzando la actualidad el 35%.

Los derechos de exportación han incrementado no solo sus alícuotas, sino también han sufrido variaciones los precios internacionales, haciendo caso omiso a lo que se establecía en los considerandos de la Res. 11/2002, en cuanto a que se iban a considerar las consecuencias de eventuales alteraciones significativas en los precios internacionales de los productos agrícolas.

A esta altura de la investigación sería necesario analizar las exportaciones Argentinas por rubro, en millones de dólares desde el 2002 hasta el 2008, años que disponemos de información. En la Tabla N° 7, se detallan: el total de exportaciones de productos primarios, el total de exportaciones de semillas y frutos oleaginosos, en particular “soja” y las exportaciones totales.

Tabla N° 7: Exportaciones Argentinas por Rubro, en Millones de Dólares

Concepto	2002	2003	2004	2005	2006	2007	2008
1. PRODUCTOS PRIMARIOS	5.272,00	6.470,70	6.851,50	8.110,30	8.625,10	12.485,00	16.082,80
1.07. Semillas y frutos oleaginosos							
Soja	1.118,80	1.843,40	1.738,40	2.295,70	1.779,10	3.435,10	4.621,00
Total de exportaciones	25.650,60	29.938,80	34.575,70	40.386,80	46.546,20	55.980,30	70.020,60

En la presente Tabla se exponen el total de exportaciones de productos primarios y dentro de ésta específicamente las Semillas y frutos oleaginosos “Soja”. Seguidamente se muestra el total de las exportaciones del país a efectos de determinar, la participación de la soja sobre el total de productos primarios exportados y total de exportaciones. Fuente: elaboración propia en base a datos del INDEC.

De la Tabla se desprende, que las exportaciones de productos primarios se incrementaron desde el año 2002 hasta el 2008 en un 205,06%. Lo mismo se evidencia en semillas y frutos oleaginosos “Soja”, que en el mismo período presentaron un aumento del 313,03%, demostrando una mayor participación de la exportación de la soja sobre el total de productos primarios exportados.

Al comparar la participación de la soja sobre el total de exportaciones, es decir de todos los rubros exportados, tenemos lo que reflejamos en la siguiente Tabla:

Tabla N° 8: Participación de la Exportación de los Productos Primarios y la Soja sobre el Total de Exportaciones.

Concepto	2002	2003	2004	2005	2006	2007	2008
Productos Primarios/total exportados	20,55	21,61	19,82	20,08	18,53	22,30	22,97
Soja/total exportaciones	4,36	6,16	5,03	5,68	3,82	6,14	6,60

En la presente Tabla se muestra la participación de productos primarios exportados sobre el total de exportaciones del país y en segundo lugar la participación de la Soja sobre el total de exportaciones del país a fin de establecer su incidencia. Fuente: Elaboración propia en base a datos del INDEC.

Estamos en presencia de una gran participación de la soja en las exportaciones totales del país, si a ello le aplicamos el derecho de exportación vigente a la fecha del 35%, observamos que el sector representa una fuente continua e inmediata de entradas de divisas y recursos fiscales a nuestro país.

Actualmente los derechos de exportación de aceites de soja están en el 32%; las harinas y pellets de soja 32%; la semilla de girasol en el 32%, aceites de girasol 30%; harinas y pellets de girasol 30% y biodiesel puro 20%.

ARGENTINA ANTE ESTA REALIDAD

Como hemos demostrado, Argentina que hizo de la soja su principal cultivo, se vio favorecida en los últimos años por un importante incremento en su producción, acompañado de una suba significativa de los precios internacionales. Esto, sumado a la suba en los derechos de exportación sobre el grano debió impactar positivamente en la economía nacional y en la de los productores agrícolas individualmente considerados.

Nuestra presunción es que, por razones que no son objeto del presente trabajo, ese panorama externo e interno tan prometedor para nuestro país no tuvo una repercusión directamente proporcional ni a nivel nacional, ni a nivel empresa. La modificación de las estructuras de producción ya explicada es una consecuencia de esta situación.

Para contrastar esta presunción analizaremos a continuación la evolución en el tipo de cambio y en los índices de inflación de nuestro país, a fin de verificar su incidencia en el proceso de crecimiento explicado.

Tipo de Cambio

Cuando hablamos de tipo o tasa de cambio nos estamos refiriendo a la comparación entre dos monedas de acuerdo con los valores de la economía mundial. Es el precio de una moneda en términos de otra.

Los tipos de cambio permiten comparar los precios de los diferentes bienes y servicios de distintos países. Para Krugman y Obstfeld, (1995: 405):

.....“las variaciones en los tipos de cambio reciben el nombre de depreciaciones o apreciaciones. Una depreciación de la libra respecto al dólar es una caída del precio de la libra expresada en dólares. Por ejemplo, una variación en el tipo de cambio de 1,5 dólares por libra a 1,25 dólares por libra, supone una depreciación de la libra. Este ejemplo muestra que considerando todos los demás

factores constantes, la depreciación de la moneda de un país abarata sus productos para los extranjeros. Un incremento en el precio de la libra en términos de dólares, por ejemplo, de 1,50 dólares por libra a 1,75 dólares por libra, representa una apreciación de la libra respecto al dólar, y si se supone todo lo demás constante, la apreciación de la moneda de un país encarece sus productos para los extranjeros”.

Si se analiza la variación del tipo de cambio de nuestra moneda respecto al dólar sufrido durante los mismos años trabajados, nos encontramos con los datos que mostramos en la tabla N° 9, que incluye el tipo de cambio promedio de cada año, obtenido a partir de la sumatoria de las cotizaciones promedio mensuales divididas por doce:

Tabla N° 9: Tipo de Cambio Promedio \$/U\$S

AÑO	\$/U\$S
2002	3,24
2003	2,95
2004	2,96
2005	2,93
2006	3,08
2007	3,12
2008	3,18
2009	3,75
2010	3,92

En la Tabla N° 9 se expone el tipo de cambio de nuestra moneda respecto al dólar experimentado durante el período en estudio 2002/2010. Fuente: Indec

Esta tabla refleja un tipo de cambio con escasa variación hasta el año 2005 y una tendencia en alza a partir del 2006, que se acentúa notablemente en los últimos dos años. Por otra parte, el año 2011, que no forma parte del análisis en este trabajo, refleja un tipo de cambio de \$ 4,15 lo que mantiene la tendencia de los dos años anteriores. Esto significa que nuestra moneda local se fue depreciando respecto al dólar, situación que se hace más intensa desde el año 2009 y hasta la actualidad.

Inflación

La inflación es definida por los economistas como el aumento progresivo, constante y generalizado de los precios, teniendo como base el aumento anterior.

En períodos de inflación no necesariamente los precios y los salarios varían en la misma proporción, lo que produce una distorsión en los precios relativos y en la distribución de la renta entre los distintos grupos. De acuerdo con Mandolesi, A. (2008):

“Cabe recordar que la inflación es un impuesto indirecto, no legislado, que afecta en mayor medida a la población de menores ingresos, al mismo tiempo que genera incertidumbre sobre el devenir de la economía, acortando los horizontes de decisión y por lo tanto deteriorando el crecimiento económico y el empleo”.

En nuestro país, el Instituto Nacional de Estadísticas y Censos (INDEC), elabora diferentes índices de inflación, que varían según los elementos considerados para su cálculo. Si bien dichos índices aparecen desde hace un tiempo, siempre cuestionados por analistas y consultores privados que consideran que no

son representativos de la realidad, trabajamos con ellos por tratarse de la única información oficial que disponemos. Es necesario además definir el índice a utilizar para nuestro análisis y de la revisión de los mismo y en virtud al contenido de cada uno, seleccionamos dos, el Índice de Precios Internos al por Mayor (IPIM) y el Índice de Precios básicos del Productor (IPP), en ambos casos nivel general.

El IPIM, mide la evolución de los precios de los productos de origen nacional e importado ofrecidos en el mercado interno. Los precios observados incluyen IVA, impuestos internos y otros gravámenes contenidos en el precio como el Impuesto a los combustibles.

El IPP, mide la evolución de los precios de productos de origen nacional exclusivamente, por lo tanto no incluye importaciones. En las ponderaciones se considera tanto la producción con destino interno como la producción destinada a la exportación. A diferencia del índice anterior este índice considera los precios sin impuestos.

A continuación en la Tabla N° 10 exponemos ambos índices para los períodos analizados y los coeficientes anuales calculados en cada caso, sobre el período inmediato anterior:

Tabla N° 10: Índices y Coeficientes de Inflación

AÑO	INDICE IPIM	COEF. IPIM	INDICE IPP	COEF. IPP
2002	183,92	1,77	179,13	1,78
2003	216,83	1,18	214,26	1,2
2004	232,87	1,07	230,79	1,08
2005	252,56	1,08	250,16	1,08
2006	278,82	1,1	277,78	1,11
2007	306,74	1,1	310,54	1,12
2008	346,15	1,13	355,5	1,14
2009	370,6	1,07	377,84	1,06
2010	424,58	1,15	434,79	1,15

En esta Tabla se exponen los Índices de precios internos al por Mayor y el Índice de precios básicos al productor; con sus respectivos coeficientes anuales calculados en cada caso, sobre el período inmediato anterior. Fuente: INDEC

Si bien existen diferencias poco significativas entre ambos índices, definimos trabajar con el IPP, debido a que todos los demás datos considerados en este análisis excluyen todo tipo de impuestos, lo que lo convierte a nuestro criterio en el más adecuado.

Resulta importante aclarar que la inflación total acumulada, según datos oficiales, desde el año 2002 hasta el 2010 es del 333 % de acuerdo con el IPP.

RELACION ENTRE LAS VARIABLES ANALIZADAS

Si relacionamos a priori el precio FOB promedio por tonelada de soja en dólares y el tipo de cambio promedio, para obtener un precio promedio en pesos argentinos, durante los períodos revisados, resulta la siguiente tabla:

Tabla N° 11: Precio en Dólares, Tipo de Cambio y Precio en Pesos Argentinos por Tonelada de Soja

AÑO	DOLARES/TONELADA	TIPO DE CAMBIO	PESOS ARG./TONELADA
2002	197	3,24	638,28
2003	238	2,95	702,10
2004	268	2,96	793,28
2005	231	2,93	676,83
2006	234	3,08	720,72
2007	318	3,12	992,16
2008	456	3,18	1450,08
2009	414	3,75	1552,50
2010	409	3,92	1603,28

En la presente Tabla se muestra la relación existente entre el precio FOB promedio por tonelada de soja en dólares y el tipo de cambiopromedio, para obtener un precio promedio en pesos argentinos, siempre en el período bajo estudio. Fuente: Elaboración Propia

Los resultados de la tabla evidencian que hasta el año 2006 los precios internacionales de la oleaginosa y el tipo de cambio se mantuvieron dentro de valores que oscilaron entre los 197 y 268 dólares para el primero y entre 2,93 y 3,24 para el segundo, generando variaciones poco significativas en el valor de la tonelada medida en pesos argentinos.

La gran diferencia comienza a partir del año 2007, producto en los dos primeros años (2007 y 2008) de la estampida en los precios internacionales. Durante estos años aunque el tipo de cambio no mostró diferencias significativas, el precio de la tonelada en pesos se duplicó respecto a los valores hasta el 2006. Durante los años 2009 y 2010 los precios internacionales descienden aunque sin acercarse a los valores del 2007 pero una suba importante en el tipo de cambio sigue determinando un precio en pesos para la tonelada en suba.

Nuestra primera percepción tiene que ver con que este incremento tuvo que repercutir muy positivamente en la situación económica, financiera y de rentabilidad de la empresa agropecuaria, sin embargo existen dos factores internos que hacen que esta situación externa favorable no llegue íntegramente al productor del grano: la suba en los derechos de exportación implementada por el gobierno en el año 2008 y la tasa de inflación.

La aplicación de una alícuota del 35% como retención, calculada sobre el precio FOB del grano determina que del precio de \$ 1.450,08 expuesto en la tabla para el año 2008, el productor reciba \$ 942,55, quedando la diferencia de \$ 507,53 por tonelada para el estado nacional. Si realizamos el mismo cálculo para los años posteriores, en el 2009, el productor recibe \$ 1.009,12 y el estado \$ 543,38 por tonelada y en el año 2010, \$ 1.042,13 son para el productor y \$ 561,15 para el estado.

Por otra parte, si incluimos en el análisis los índices de inflación expuestos en la Tabla N° 10 y comparamos los precios en pesos por tonelada de soja, obtenidos luego de multiplicar el precio FOB promedio del año en dólares, por el tipo de cambio promedio, de acuerdo con la Tabla N° 11 y el precio en pesos por tonelada que surgiría de aplicar al precio en pesos del año que consideremos como base por los coeficientes de inflación, obtenemos lo que expondremos en la Tabla N° 12. Debido a que las diferencias sustanciales en los precios internacionales se producen a partir del año 2008, será éste el año que consideremos base y a partir del cual trabajaremos.

Tabla N° 12: Valores Reexpresados – Base año 2008

AÑO	PESOS ARG./TONELADA	INDICE DE INFLACION	PESOS ARG./TONELADA (VALORES REEXPRESADOS)
2009	Año 2008 = 1450,08	<u>Indice 2009 (377,84)</u> Indice 2008 (355,50)	1.541,20
2010	Año 2008 = 1450,08	<u>Indice 2010 (434,79)</u> Indice 2008 (355,50)	1.773,50

La Tabla refleja el valor promedio anual en pesos de la tonelada de soja del año 2008 reexpresado por inflación al año 2009 y 2010.

En todos los casos el valor de la tonelada de soja en pesos reexpresado por inflación es diferente al valor de cotización, lo que determina que la variación en el precio FOB de la soja y en el tipo de cambio peso/dólar, no puede ser analizada en valores nominales. En términos reales, ni la variación en el precio internacional de la oleaginosa, ni la variación en el tipo de cambio repercutieron de manera directamente proporcional en la situación patrimonial y de rentabilidad de la empresa agropecuaria. Para acompañar el efecto inflacionario, en el año 2010 el precio FOB debió haber sido U\$S 452,42 (1773,50 / 3,92) y en el año 2009 U\$S 410,99 (1541,20 / 3,75).

Se advierte que en el año 2009 el precio FOB de la soja y el tipo de cambio fueron suficientes como para compensar los efectos de la inflación, pero la situación es totalmente inversa en el año 2010, en el que los precios disminuyeron y los índices de inflación de nuestro país aumentaron significativamente.

Esta pérdida en términos reales de los valores de la oleaginosa sumada a las altas tasas de derechos de exportación impuestas por el gobierno nacional, son dos factores determinantes de nuestra presunción inicial.

Si bien esta reflexión es comprobable fácilmente a través de los informes de gestión interna de pequeñas y medianas empresas agropecuarias, principalmente del año 2010, su demostración empírica tiene dos limitaciones:

- No existen en nuestro país empresas que publiquen sus estados financieros auditados en la WEB y se dediquen al cultivo de soja exclusivamente. Las empresas agropecuarias en general realizan actividades diferentes utilizando el recurso tierra.
- Las empresas que dedican la mayor parte de su recurso tierra al cultivo de soja son pequeñas y en la mayor parte de los casos no publican información financiera ni siquiera tienen obligación legal de confeccionarla de acuerdo a su estructura jurídica.

REFLEXIONES

La producción de soja en nuestro país ha crecido notablemente durante los últimos años, por la expansión de la superficie terrestre destinada al cultivo y las mejoras tecnológicas que favorecen a la actividad.

Dicha superficie terrestre se fue concentrando en un número menor de explotaciones agropecuarias, generando una brecha importante entre las cada vez mayores posibilidades de los grandes productores y las cada vez menores oportunidades de los pequeños.

Los precios FOB internacionales del grano han experimentado una tendencia alcista desde el año 2002 que se acentúa en los últimos años.

Los derechos de exportación impuestos por el gobierno han crecido considerablemente llegando a alícuotas impensables desde el año 2008 y representan un importante aporte de divisas a las arcas del estado nacional, llegando a desfinanciar a los productores agropecuarios.

El incremento productivo y de precios debió generar una mejora semejante en la situación económica y de rentabilidad de los productores en general. Los índices de inflación interno provocaron que dicha variación positiva no se traslade directamente al productor agropecuario, fundamentalmente en el año 2010 como se demostró oportunamente.

Las estadísticas oficiales y la situación económica y financiera de nuestro país y de los empresarios rurales en la actualidad son una muestra clara de esta realidad.

No obstante, la solidaridad de la soja frente a otras producciones agropecuarias que, lejos de tener el mismo impulso, declinaron en nuestro país, ha permitido el desarrollo aunque acotado del sector rural y el mantenimiento y financiación de las políticas del estado.

LA CREATIVIDAD Y LA INNOVACIÓN COMO ALTERNATIVAS DE SOBREVIVENCIA DE LA MICRO EMPRESA: CASO REG. 101, CANCÚN, QUINTANA ROO, MÉXICO

Francisco José May Hernández, Universidad del Caribe, Cancún, México

Mario Gabriel Martínez Casas, Universidad del caribe, Cancún, México

Oswaldo Aguilera Muñoz, Universidad del Caribe, Cancún, México

RESUMEN

Hablar de emprendimiento y de emprendedores indudablemente conlleva a relacionarlos con la innovación y la creatividad como partes ineludibles de ambos, especialmente en un mundo globalizado y tan competitivo como el que existe hoy día, en donde la capacidad de innovar y crear cosas más adecuadas a las necesidades cambiantes del mercado llega a representar una ventaja competitiva y por ende una fortaleza en las empresas en las que se desarrolla esta habilidad. Diversas Universidades en diferentes países, han implementado materias o licenciaturas completas en el rubro del emprendimiento. Conferencistas de diversas nacionalidades hablan y arengan a atreverse, a “dar el paso” para pasar de empleado a empleador; estudiosos como Cantillon, Shumpeter y Say, han identificado características inherentes a los emprendedores debido a que pareciera que, al más puro estilo de Aldus Huxley, tratan de armar su propio “Mundo Feliz” aún y cuando al final se sorprendan de que su creación jamás llegará a ser perfecta, sino permanecerá en todo momento perfectible por los cambios que la naturaleza misma del hombre y su entorno demandan, por lo que extraer las características inherentes al emprendedor per se, parece no ser tarea fácil ni probable de manera general, ya que la cultura, condiciones sociales e incluso burocracia gubernamental, pueden en determinado momento, ser factores que determinen en gran medida características a desarrollar por los emprendedores dependiendo de su zona de desempeño. El presente trabajo, tiene como objetivo identificar los factores de innovación y creatividad entre los emprendedores de la una zona urbana, denominada Región 101, de la ciudad de Cancún, Estado de Quintana Roo, México.

PALABRAS CLAVE: Innovación, Creatividad, Microempresas, Región, emprendimiento

CREATIVITY AND INNOVATION AS A SURVIVAL TOOL FOR SMALL BUSINESSES: THE CASE OF REG. 101 CANCÚN, QUINTANA ROO, MÉXICO

INTRODUCCIÓN:

Centrándonos en la realidad, los emprendedores de cualquier índole o tamaño, al cumplir con sus responsabilidades y obligaciones a todos los niveles, coadyuvan en la generación y distribución de la riqueza y por añadidura aumentan el nivel y la calidad de vida. Cuanto mayor es la aportación de las empresas dentro de una sociedad en términos de riqueza, mayor calidad y nivel de vida tendrá ésta, es una fórmula paralelamente proporcional y de afectación mutua y directa.

Sin embargo, aún y cuando el tema no es de reciente interés, la visión de los economistas y de los expertos del comportamiento varía, ya que los primeros asocian al emprendedor con la innovación y el desarrollo económico. Por su parte los segundos ponen énfasis en actitudes como la creatividad, intuición y disposición para correr riesgos.

Cantillon (1755), identifica al emprendedor como “alguien que asume riesgos al comprar servicios o componentes a un precio determinado con la intención de revenderlos más tarde a un precio indeterminado”. Aludiendo con esto a la elasticidad que puede existir dentro de un mercado de acuerdo a la oferta y demanda sobre determinado producto o servicio.

Por su parte, Say (1888), referente al cuestionamiento respecto a ¿qué hacen los emprendedores? Responde que : “Utilizan su industria (o trabajo) para organizar y dirigir factores de producción a fin de atender las necesidades humanas”. Del mismo modo alude a que “Un país con muchos comerciantes, fabricantes y agricultores inteligentes, tiene mayores posibilidades de alcanzar la prosperidad que otro que se dedique preponderantemente a las artes y las ciencias”. Es decir que desde la óptica de Say, los emprendedores son capaces de alterar los recursos económicos de un área de baja productividad, transformándola en una de productividad y rentabilidad elevadas, para lo cual, sin duda alguna requieren explotar de cierta forma la innovación; y aunque éstas (las innovaciones), de acuerdo con Drucker (1985), en su mayoría son resultado de una búsqueda de oportunidades consciente y deliberada, no siempre se dan “por generación espontánea” en las empresas, podría decirse incluso, que a veces podrían pasar desapercibidas como necesidad dentro de las mismas.

Con base a lo anterior resulta prudente definir qué es creatividad y qué es innovación y en qué momento se interrelacionan dentro de la actividad empresarial específicamente en la actividad de las microempresas como una opción a desarrollar con miras a sobrevivir en un mundo cada vez más competido.

Objetivo General:

Identificar la existencia o carencia de las estrategias en innovación y creatividad de los empresarios en la región 101 del municipio de Benito Juárez en el Estado de Quintana Roo, con el propósito de crear un modelo de creación y gestión que permita a sus empresas sobrevivir y evitar el cierre de las mismas.

Objetivos Específicos:

1. Conocer los factores de innovación de los empresarios cancenenses de la región 101.
2. Identificar los factores de creatividad del empresario de la región 101.
3. Diseñar una propuesta de modelo de creación y gestión con base en la innovación y creatividad

CREATIVIDAD E INNOVACIÓN.

Empezaremos por definir la creatividad. De acuerdo con Carevic (2006) El concepto de creatividad es diferente según el contexto en que se encuentre, y no tiene un solo significado, ya que la actividad humana implícita en él puede ser variada. Esto no significa que se pueda llamar creativa a cualquier situación. Hay límites determinados para el uso del vocablo, pero esas mismas fronteras son vagas; los límites, indeterminados. Lo cual no implica que no podamos reconocer que estos límites existen.

La misma raíz etimológica la cual deriva del latín “creare”, que a su vez está emparentada con “crecere”, que significa crecer; hace deducir que la palabra creatividad significa “crear de la nada”.

Para Ponti (2008) la creatividad es una habilidad humana que permite generar de forma fácil ideas, alternativas y soluciones a determinadas problemáticas o situaciones.

Se podría incluso realizar un tratado tan solo de las definiciones de la palabra creatividad, ya que de acuerdo con Carevic (idem) Hay publicaciones que hablan de 400 términos distintos de la creatividad, algunos de ellos ambiguos y confusos. Lo que sí se tiene claro es que la creatividad, es más que una

condición necesaria en las actuales condiciones de vida y que por lo demás, ha sido siempre necesaria, ya que el medio obliga al hombre a modificarlo para que éste sea más adaptable a su entorno y pueda sacar mejores ganancias, tanto en lo personal como en lo empresarial en el caso de hacer uso de ésta dentro de las organizaciones.

En cuanto a la innovación, para Ponti (idem), se da, *cuando a través del Nuevo enfoque creativo logramos resultados originales y aplicables*, es decir que la creatividad fundamenta o da sustento a la innovación, por lo que toda innovación precede de un destello creativo, más no toda creatividad necesariamente desemboca en innovación como tal.

Una de las definiciones de innovación más utilizadas de forma común es la propuesta por la Organización para la Cooperación y el Desarrollo Económico (OCDE) en su Manual de Oslo (1996). Según ésta, la innovación consiste en la implementación con éxito de un producto o proceso nuevo -innovación radical- o significativamente mejorado -innovación incremental- en el mercado o en la empresa. Por lo que la innovación desde la óptica de la OCDE no necesariamente es cambiar o introducir algo al Mercado, sino que en el proceso de mejora también existe la posibilidad de innovar.

Drucker (1985), menciona que la innovación es “La función específica del espíritu emprendedor, tanto en una empresa ya existente o en una institución pública como en un negocio nuevo, montado por una persona en la cocina de su casa. Es el medio con que el emprendedor crea nuevos recursos productores de riqueza o potencia los ya existentes”.

Lo que hay que tener en cuenta es que se debe considerar a la innovación desde su génesis, ya que ésta puede proceder del trabajo realizado por departamentos de investigación y desarrollo (I+D), proveniente de la misma empresa o bien un servicio contratado con empresas especializadas en la materia; de la difusión de conocimiento en los mercados mediante la incorporación o imitación, o provenir simplemente de la experiencia que a lo largo de su existencia la empresa haya acumulado.

Lo cierto es que la innovación, tiene, entre otros, el objetivo básico de explotar las oportunidades que los cambios que el entorno puede ofrecer. Estos cambios que propician en gran medida la innovación pueden provenir de:

- El lanzamiento de nuevos productos.
- La ocupación de segmentos inexplorados del mercado.
- El uso de tecnologías que abaratan los costos o permiten un mejor aprovechamiento de los materiales.
- Diversificación de los proveedores.
- Introducción de mejoras organizativas y de gestión.
- Exploración de las necesidades no satisfechas de los clientes actuales y potenciales.
- Localización de nuevas oportunidades de mercado.
- Fidelización de clientes, que ven más satisfechos sus gustos y preferencias.
- Acceso a nuevos canales de distribución.

Lo interesante de lo anterior sería saber si las empresas, específicamente las Microempresas tienen siquiera conciencia de la importancia de la creatividad e innovación como parte ineludible de su quehacer cotidiano, porque si bien es cierto que en éste se perciben, desde la óptica de un emprendedor, oportunidades en el día a día en las cuales explotar los destellos creativos, también es cierto que hay innovaciones que surgen de un momento de inspiración suprema; sin embargo desde la óptica del mismo Drucker (idem) las que tienen éxito resultan de una búsqueda conciente e intencionada de oportunidades de innovar que tan sólo se hallan en unas cuantas situaciones.

Amabile (2000), menciona que en las empresas la originalidad no es suficiente. Para ser creativa una idea también debe ser apropiada, útil y viable. De alguna manera debe influir en la forma de hacer negocios, por ejemplo, mejorando un producto o abriendo una nueva vía para abordar un proceso. Si tomamos en consideración que todo emprendimiento surge de una idea de negocio, resulta por tanto que en apego a lo anterior cabría responder si éste cubre con las premisas de utilidad, viabilidad y pertinencia para ser catalogada como creativa.

De igual manera es cierto que en una micro empresa tradicional, hablar de ser creativo en los procesos es hacer alusión a tópicos desconocidos en la mayoría de los casos para los emprendedores o directores de las mismas (haciendo alusión con el término al propietario de la Unidad Económica) ya que de acuerdo con la misma Amabile (idem), en cualquier unidad que implica procesos sistemáticos o normativas legales –muchos directores tienen también una visión bastante limitada del proceso creativo. Para ellos la creatividad se reduce a la manera en cómo piensa la gente, es decir, a la capacidad inventiva en grado mayor o menor para enfrentar un problema.

En el aspecto de la innovación, de acuerdo con Drucker (idem), existen siete áreas donde ésta puede ser posible, de las cuales cuatro se encuentran *dentro* de una empresa o sector y tres *fuera* de ella, las cuatro primeras son:

1. Acontecimientos inesperados.
2. Incongruencias
3. Necesidades del proceso, y
4. Cambios en los sectores y el mercado.

Y las otras tres restantes

1. Cambios demográficos
2. Cambios en la percepción, y
3. Nuevos conocimientos.

Toda vez que el objetivo del presente documento no es presentar un tratado ni estudio a profundidad de la creatividad e innovación, solamente tomaremos las que a criterio de los autores y con base al avance que se tiene en el levantamiento de información a través de encuestas, focus groups y censos en la región objeto de estudio se consideran relevantes, sin menoscabo a la importancia de las demás.

En cuanto a las áreas internas, la que se observó y constató que podría estar afectando por no aplicarse como una alternativa a considerar para innovar es:

Acontecimientos inesperados esto hace alusión al hecho de que el mercado ha cambiado, el cliente es quien finalmente, como ha sido desde siempre, se reconoce como la parte primordial y medular de cualquier negocio y es quien orienta respecto a lo que se requiere fabricar, la forma en cómo se debe vender e incluso los lugares en los que pretende encontrarlo. Anteriormente una forma de estratificar el mercado era con base a los grupos de ingreso; sin embargo, ahora se basa en el principio de estratificación de “estilos de vida”.

Y en cuanto a lo externo, lo que se considera podría posiblemente aprovecharse son los Cambios de percepción. Drucker hace alusión referente a este punto que un cambio de percepción no altera los hechos pero si su significado, y de modo bien rápido. Se puede deducir que todo depende del cristal con que la situación se mire, ya que ésta orienta en gran medida las acciones a tomar, especialmente en un mundo globalizado y cada vez más competitivo donde los grandes almacenes y empresas especializadas parecen opacar cualquier posibilidad de sobrevivencia de las microempresas tal cual se les conoce,

especialmente si siguen abordando su emprendimiento y permanecen en la posición de mantener el mismo, bajo la óptica tradicional.

Con todo lo anterior surgen las preguntas a responder durante la presente investigación:

1. ¿Son la creatividad y la innovación factores que están presentes en el emprendimiento de los negocios mipyme en la reg. 101?
2. ¿Qué áreas de oportunidad se detectan para considerar la aplicación de la creatividad o la innovación dentro de las Microempresas de la reg. 101?
3. ¿Existe la posibilidad de generar una propuesta de modelo para la apertura de una Microempresa con los factores creatividad e innovación desde el génesis de la idea de negocio?

METODOLOGÍA.

En el año 2010, el Cuerpo Académico CAIVECI, de la Universidad del Caribe, inició una investigación longitudinal, en la Región que tendrá término hasta el año 2013. Esta investigación tiene como principal propósito conocer acerca de la supervivencia de las mipyme en esta zona. El estudio incluye elaborar tres censos, uno cada año, de la presencia de negocios mipyme en la región, así como levantar una muestra de la población de empresarios mipyme. Con las siguientes consideraciones:

- a) A partir de la población de 20400 Micro pequeñas y medianas empresas (mipymes) de los siguientes sectores económicos ubicadas en el municipio de Benito Juárez (Cancún): “servicios 9159, comercial 9770 e industrial 1471, las cuales aparecen registradas en el DENUE (Directorio Estadístico Nacional de Unidades Económicas), se seleccionó la región 101, que de acuerdo con el censo realizado por el Cuerpo Académico en Innovación, Visión Empresarial y Competitividad Internacional (CAIVECI); cuenta con 458 mipymes, de las cuales se tomaron, solamente 305 unidades económicas, ya que se excluyeron las mipymes informales, franquicias, cadenas y las de apoyo a la Economía Doméstica (EDOCO). Para el presente trabajo se considero una muestra representativa de 66 empresas las cuales fueron seleccionadas de forma aleatoria.
- b) Se consideró la clasificación y definición de MiPyME, que según la Secretaría de Economía y con base al número de empleados, son todas las micro, pequeñas y medianas empresas legalmente constituidas, con base en la estratificación establecida en la fracción III del artículo 3 de la Ley para el Desarrollo de la Competitividad de la Micro, Pequeña y Mediana Empresa y en el Acuerdo por el que se establece la estratificación de las micro, pequeñas y medianas empresas, publicado en el DOF el 30 de junio de 2009. Como sigue:

Micro	Máximo 10 empleados
Pequeña Comercio	Desde 11 hasta 30 empleados
Pequeña Industria y Servicios	Desde 11 hasta 50 empleados
Mediana Comercio	Desde 31 hasta 100 empleados
Mediana Servicios	Desde 51 hasta 100
Mediana Industria	Desde 51 hasta empleados.

- c) Se realizó una investigación documental para definir los elementos básicos de la innovación y creatividad empresarial y sentar las bases teóricas de la investigación.
- d) La encuesta se realizó mediante un cuestionario dividido en seis secciones que contienen un total de 39 preguntas dirigido a empresarios de la región 101. (ver Anexos).

- e) El instrumento fue probado a través de un estudio piloto de 10 cuestionarios a empresarios de la zona
- f) Hasta la fecha se tienen levantadas 66 entrevistas a empresarios de la zona, lo que representa, a un nivel de confianza de 95% y para una población finita, un nivel de error del 10.68%, suficiente para los propósitos del estudio.
- g) De las 39 preguntas del cuestionario, el presente documento está basado en seis de las preguntas, que son la pregunta 1, 3, 5, 10, 12 y 22.

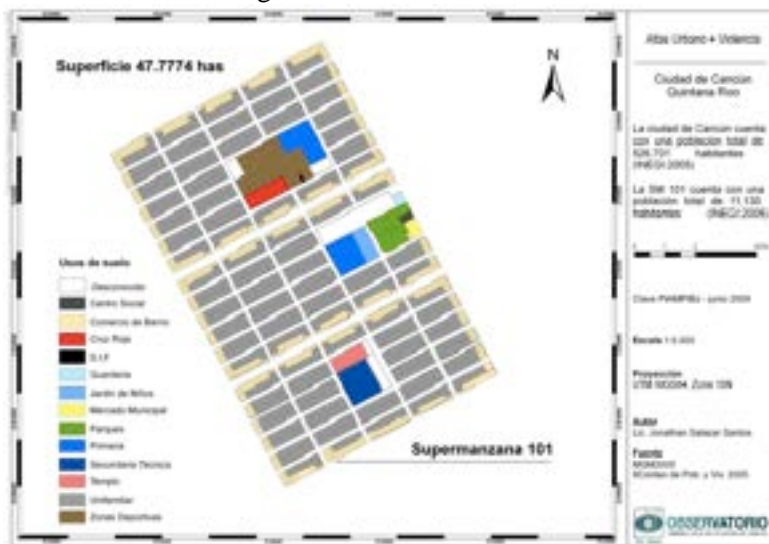

Marco de Referencia: Región 101, Descripción.

La región 101, objeto de nuestra investigación, presenta un bajo nivel de urbanización, tanto en lo concerniente a la falta de pavimentación en calles y banquetas, como en lo concerniente al tipo de casa – habitación predominante. Se trata de construcción no planeada o de autoconstrucción. Son casas-habitación que sus habitantes han construido, poco a poco, a lo largo de varios años.

Esta región pertenece al segundo cuadro de crecimiento histórico de esta ciudad (periodo de 1987-1994), que se conforma con las supermanzanas o regiones 90 y hasta la 149.

El Plan Director de Desarrollo Urbano de Cancún (PDDU, 2005), establece que la superficie territorial de la región 101 es de 47.77 hectáreas y su uso del suelo está destinado, predominantemente, para habitación unifamiliar y comercio de barrio. Cuenta con un total de 95 manzanas, de las cuales 15 están dedicadas a usos comunitarios como: parques, escuelas, mercado público, el dispensario de la Cruz Roja y otras áreas no habitadas.

Uso de suelo de la Región 101

En cuanto al nivel de ingresos, de la población que habita la Región 101, el mismo PDUC los clasificó como nivel D+, es decir con un ingreso mensual de entre \$ 6,800 y 11,599 pesos, de acuerdo a los niveles AMAI

Emprendimiento en la región 101 y resultados de la entrevista a 66 empresarios.

Como se mencionó, Si se analizara la manera en cómo se lleva a cabo el proceso de apertura de una empresa, no solo de la región objeto de estudio, sino de cualquier índole, de acuerdo con Puchol (2005), una empresa, para ser llevada a cabo de forma adecuada, debe pasar por un proceso en apariencia largo y tedioso, mismo que conlleva el seguimiento de 17 pasos, los cuales son:

1. Visión e identificación de una oportunidad de negocio.
2. Maduración de la idea
3. Creación experimental del producto
4. Análisis inicial de mercado
5. Análisis del entorno
6. Ubicación de la localización
7. Enunciación tentativa de objetivos
8. Análisis de viabilidad
9. Decisión de crear la empresa
10. Búsqueda del financiamiento
11. Elección de la forma jurídica
12. Elección de la denominación
13. Elaboración del Plan de Negocios
14. Constitución formal de la empresa
15. Iniciación de la actividad
16. Control de resultados de la etapa inicial
17. Medidas de rectificación de las desviaciones.

Sin embargo si consideramos a detalle el proceso anterior, paso a paso, caeríamos en cuenta que el emprendedor entrevistado realiza todo este proceso de una manera mucho muy simplificada.

RESULTADOS DE LA ENCUESTA.

En específico en la región 101, se ha observado que el proceso emprendedor se hace en cuatro pasos (el uno, el diez, el doce y el quince), de los 17 de Puchol (idem).

1. Visión e identificación de una oportunidad de negocio.
10. Búsqueda de financiamiento
12. Elección de la denominación
15. Iniciación de la actividad.

Sin embargo la visión e identificación de una oportunidad de negocio por lo regular es resultante de una necesidad de mejorar la situación económica de la familia más que de haber detectado una necesidad del mercado como tal, ya que considerando que Cancún, se encuentra en la zona geográfica “C” en donde el sueldo diario es de \$59.08 pesos y en el mejor de los casos, el mínimo profesional oscila entre \$74.00 y \$176.00 pesos. El aspirar a una vida más digna conlleva a “buscar” la manera en cómo incrementar el ingreso, y el emprender algo por cuenta propia parecería ser lo mas cercano a una panacea económica. Ante lo anterior se infiere que no hay conciencia por parte del emprendedor de la región 101, respecto a la detección de oportunidades reales de negocio que le permitan mayor supervivencia en el entorno, al realizar el levantamiento de la información a través de cuestionarios, se obtuvo lo siguiente:

Se puede notar que en cuanto a los motivos por los cuales un emprendedor abre su negocio, el principal factor es por que siempre han tenido un negocio propio y en segundo término por no tener un empleo; el apoyarse con la actividad en segunda instancia para mejorar el ingreso y la ambición personal resultaron

tercero y cuarto; sin embargo al preguntarles acerca de la segunda razón o motivo que los conllevó al emprendimiento, el procurar un segundo ingreso o tener una actividad adicional resultó ser lo mas importante seguido del interés por estar más tiempo con la familia. Es de llamar la atención el hecho de que quienes han tenido siempre un negocio propio, en gran medida de igual forma laboran en otra empresa, haciendo de su negocio un segundo ingreso, quizás por el hecho de que en un 69% de los casos la forma en la que se dan de alta es a través de la figura de Pequeño Contribuyente (REPECO), y el no darse de alta como trabajadores ante el IMSS y el INFONAVIT conlleva a buscar los beneficios laborales a través de un empleo dentro de una empresa.

Retomando el tema desde el punto medular, el de la creatividad, no siempre una buena idea conlleva a un buen negocio; por el contrario, ésta debe ponderarse para determinar la oportunidad que representa ante las necesidades manifiestas del mercado, el cual más que productos tiende a comprar emociones o el beneficio que el producto o servicio le proporciona, pero analizándolo y considerando la perspectiva del entorno en su conjunto (punto cinco del proceso), es decir incluyendo al mercado objetivo, la oferta actual de los competidores y especialmente las áreas de oportunidad para innovar de manera creativa. Sería mucho pedir, considerando el grado de preparación y el perfil del microempresario objeto de estudio, que al más puro estilo de las recomendaciones vertidas por Ries y Trout (2000), de no serles posible ser los primeros en una categoría, creen una en donde puedan ser los primeros.

Si bien es cierto que la creatividad al igual que la innovación han venido a representar hoy día una estrategia de diferenciación, o bien la falta de esta inclusive un motivo de cierre de empresas de cualquier índole o tamaño, también lo es que cada vez más empresarios toman conciencia de la importancia de esta, por lo que la adopción de estrategias creativas es algo que poco a poco viene despertando el interés de los emprendedores y empresarios de cualquier tamaño.

Mora (2010), agrega que adoptar estrategias creativas es una necesidad práctica en dos tipos de situaciones muy frecuentes:

- a. Cuando la empresa se encuentra en situación de crisis, ante lo cual peligras su supervivencia si no se desarrolla una idea nueva.
- b. Cuando la empresa no depende de la idea nueva pero se reconoce que aporta ventajas y beneficios importantes como es liberarse del peso y la influencia de viejas ideas que se siguen utilizando pero que son insuficientes.

En el caso de la región 101, resalta el hecho de que el 64 % de las empresas llevan más de tres años operando, de los cuales el 60% de éstas tienen más de seis años en el mercado, porcentaje que llama la atención, ya que al ubicar las acciones claves para los clientes y para el negocio, se encontró lo siguiente:

La razón por la cual resulta interesante el dato anterior, es por el hecho de que de acuerdo a un estudio elaborado por la empresa Centro de Negocios WSFB (2011) se calcula que en México, aproximadamente existen 4 millones de micro, pequeñas y medianas empresas de los sectores industriales, comercio y servicios de los cuales se obtienen los siguientes datos: a. El 65% de las MiPyME en México son de carácter familiar. b. Más de 80% no cuenta con algún tipo de certificación; c. Cerca de 50% no utiliza técnicas en calidad o productividad; d. Sólo 24 % maneja alguna licencia o patente

Para Yañez (2005) al cumplir 10 años, “solamente el 10% de las empresas maduran, tienen éxito y crecen”. De acuerdo con Cetro-Crece (2005), “el 75% de las nuevas empresas mexicanas debe cerrar sus operaciones apenas después de dos años en el mercado. Para degerencia.com, “la experiencia demuestra que el 50% de las empresas quiebran durante el primer año de actividad, y no menos del 90% antes de cinco años”. Con base a lo anterior y al ver el resultado de los cuestionarios respecto a que para con los clientes la atención es lo más importante desde la óptica de los empresarios junto con el trato familiar hacia los mismos, sumando ambos el 79.4%. De igual manera, para con el negocio, el trato hacia los proveedores ocupa la primera posición con un 51.8% del total de los cuestionarios respondidos. Lo anterior hace alusión a que la calidad en el servicio y el trato para con los clientes internos y externos es un punto relevante en las microempresas de la reg. 101. ¿Y la creatividad o innovación?, simplemente son términos lejanos a su realidad, ya que la necesidad de solventar los gastos propios de la familia o personales en el afán de sobrevivir es el motor que podría estar moviéndolos a emprender en los rubros tradicionales como: comida, abarrotes, ciber cafés, etc.

CONCLUSIONES Y RECOMENDACIONES.

Lo que se puede percibir en cuanto a los aspectos en dónde la creatividad y la innovación pueden tener espacio dentro de las microempresas de la reg. 101, cabe resaltar lo siguiente, si bien es cierto que podrían orientarse a potenciar las capacidades ya desarrolladas acerca del trato y servicio para con los clientes externos o internos, la realidad es que resulta necesario potenciar las áreas de oportunidad para diversificar acerca de las opciones que pudieran complementar o bien suplementar a las que desde siempre ha venido teniendo el mercado.

El desarrollar actividades de capacitación o talleres cercanos a su realidad inmediata parece ser el paso obligado y por el cual el proyecto que se viene realizando por parte de los investigadores en esta zona tiene especial relevancia. Pero sí recalando el hecho de que sean ad hoc a su entorno inmediato y no de modo general o replicando modelos que funcionen en otras latitudes; tal cual menciona Palomo (2005) acerca de que los estudios económicos identifican ciertos polos con más desarrollo económico que en el resto del país... por lo que en principio una solución general para las MiPyMe no debería aplicarse en todas las regiones por igual, ni sin tomar en cuenta el sector al que pertenecen, comercial, manufactura o de servicios, ya que esto plantea problemas de gestión propios al producto o servicio, mercados y clientes. Por lo tanto viene a lugar concluir que:

1. No hay evidencias que los factores de innovación y creatividad hayan estado presentes en los emprendimientos de los micro y pequeños negocios de la Región 101.
2. Los negocios de la región 101 evidencian más emprendimientos de supervivencia y de autoempleo, que de búsqueda de oportunidades de mercado, por lo que la creatividad e innovación como tal no se perciben, salvo en la búsqueda de recursos para llevar a cabo el emprendimiento per sé.
3. Con los resultados obtenidos hasta el momento no se tienen elementos para hacer una propuesta de modelo de apertura de pequeños negocios, donde los factores de innovación y creatividad estén presentes, lo que conlleva a realizar estudios a mayor profundidad para sustentar la creación de dicha propuesta
4. Sin embargo si hay evidencias de esfuerzo y tenacidad, en hacer que los negocios de la región 101, logren sobrevivir, con un promedio de 3 años de antigüedad, por lo que valdría la pena canalizar éstos de manera estructurada para minimizar la posibilidad de cierre o mortandad.
5. Hay evidencias, también, de la preocupación de los micro y pequeños empresarios, por mejorar simplemente sus negocios, para ofrecer mejores productos y servicios.

EL CONCEPTO Y LA CLASIFICACIÓN DE PYME EN AMÉRICA LATINA

Edyamira Cardozo, Universidad Nacional Experimental de Guayana
Yngrid Velásquez de Naime, Universidad Nacional Experimental de Guayana
Carlos Rodríguez Monroy, Universidad Politécnica de Madrid

RESUMEN

El trabajo es el resultado de la revisión sobre el concepto y la clasificación de PYME. Incluye un análisis del estado del arte en los últimos 6 años, las definiciones aplicadas en algunos países del Centro y Sur de América y de distintos Organismos Internacionales. La investigación fue documental, de alcance analítico, con el fin de reflexionar sobre las distintas definiciones identificadas. Los resultados sugieren utilizar: número de empleados y volumen de ventas, por ser los elementos que podrían unificarse y lograr una sola definición que facilite a la PYME el acceso a financiamientos tanto nacionales como internacionales. Es posible en futuras investigaciones, establecer los rangos más convenientes para definir la PYME en función del Número de Trabajadores y Volumen de Ventas, de manera de evitar las barreras a los financiamientos independientemente del sector o País al cual pertenecen.

PALABRAS CLAVES: Pequeña y mediana empresa, PYME, Definición, Clasificación

THE CONCEPT AND CLASSIFICATION OF SMES IN LATIN AMERICA

ABSTRACT

The work is the result of the review on the concept and classification of SMEs. Includes an analysis of state of the art in the last 6 years, the definitions applied in some countries of Central and South America and other international organizations. The research was documentary, analytical scope, to reflect on the various definitions identified. The results suggest use: number of employees and turnover, because the elements that could unite and achieve a single definition to provide the SMEs access to finance both domestic and international. Future research may establish the most appropriate ranges to define SMEs according to the number of employees and sales volume, so as to avoid barriers to financing whatever the sector or country to which they belong.

INTRODUCCIÓN

Es reconocida la creciente importancia de la pequeña y mediana empresa (PYME), especialmente en los países en vías de desarrollo, por su aporte al empleo y al bienestar económico. Integradas a la gran empresa, como parte de la cadena de valor, coadyuvan en la diversificación de la economía (Agyapong, 2010). También la PYME contribuye sólidamente en la dinamización de la economía; ello se manifiesta en su potencialidad para la creación de empleo y fomentar la riqueza. Los indicadores han demostrado su estabilidad como manifestación económica a nivel de: ingresos, capital de trabajo, infraestructura; así como una mayor flexibilidad para consolidar las tecnologías emergentes. (Zevallos, 2006; Rubio y Aragón, 2002). Definir la PYME conlleva a analizar la complejidad de los elementos que deben ser considerados en su conceptualización y consecuente clasificación. Para Dini, Ferraro y Gasaly (2007) disponer de una definición unificada, podrá permitir que la capacidad de permanecer en el mercado

dependa de sus recursos internos y de las potencialidades que aportan las modalidades de comunicación, relacionamiento e intercambio que la PYME establece con otras empresas o instituciones del sistema productivo en el que actúan. La complejidad conceptual es general. En tal sentido se han establecido diversos criterios y enfoques orientados a lograr una idónea conceptualización, tales como tipo de actividad, tecnología utilizada, intensidad productiva, niveles de inversión, volumen de ventas, o bien, su capacidad de empleo (Hillary, 2000; Official Journal of the European Union, 2003; Ayyagari, Beckt y Demirguc-Kunt, 2007; García, Martínez y Aragón, 2009; European Commission Enterprise and industry, 2009). Inclusive en algunos casos se observa que a nivel de países, sectores y criterios utilizados no existe uniformidad en la consideración de elementos comunes para llegar a una definición estandarizada. Contrariamente a lo que ocurre en la Unión Europea donde existe y se utiliza una definición uniforme de PYME, los países latinoamericanos no cuentan con un acuerdo común sobre el concepto (Vives, Corral e Iñigo, 2005). Se han realizado esfuerzos para estandarizar los criterios. Sin embargo sólo ha sido logrado por los países miembros del Mercado Común del Sur (MERCOSUR) y el North American Free Trade Agreement (NAFTA) (MERCOSUR, 1998; U.S. Small Business Administration, 2010). A nivel de países, la definición presenta variabilidad.

Tal complejidad para definir esta categoría empresarial orienta el propósito de la investigación, en la cual se aborda el esclarecimiento de la definición de PYME en el contexto de los países americanos, identificando los criterios utilizados por países y organismos internacionales. Se realiza una comparación de las definiciones disponibles a los fines de determinar semejanzas y diferencias para establecer criterios comunes que puedan ser considerados para formular una aproximación a una definición que pueda ser aplicada en todos los ámbitos. La investigación consistió en la revisión de la definición de PYME en tres ámbitos: estudios empíricos, definiciones de Países y de los organismos internacionales. Como estrategia metodológica se aplicó el análisis de contenido que permitió concluir sobre el aspecto tratado. Este documento se encuentra estructurado en cuatro secciones: naturaleza de la PYME; definiciones que incluye revisión de estudios empíricos, definiciones de países y de los organismos internacionales; análisis y discusión; y las conclusiones.

REVISIÓN LITERARIA

Naturaleza De La PYME

La PYME, ante la dinámica del nuevo escenario de la economía global, tiene el reto de renovar su diseño empresarial en pos de la eficiencia, de una mayor participación en el mercado internacional y en las cadenas productivas nacionales con destino internacional (Bloch y Oddone, 2007). En consecuencia, se encuentra involucrada en una suerte de cambios en el entorno global y nacional, donde se imponen por una parte, la globalización de los mercados y las tecnologías de información y comunicación (TIC's); y por la otra, la atención al impacto social y ambiental de sus actividades (Fernández, 2008). La PYME es básica para la producción industrial. Se enfrenta a exigencias cada más elevadas y a nuevas oportunidad que ameritan una evaluación y desarrollo de sus procesos. Para ofrecer productos de alta calidad y con mayor valor agregado, deben internamente, incrementar su productividad, rentabilidad y coadyuvar en el mejoramiento de la calidad de vida de sus trabajadores. Podrán competir de manera exitosa, sólo las más eficientes y las que se adecúan a las exigencias del mercado.

Como categoría empresarial formada por un amplio y heterogéneo grupo de firmas con diferentes grados de maduración, la PYME se encuentra en todos los sectores productivos (Ferraro, 2010). Su relevancia se ha incrementado y ha sido ampliamente reconocida, dado su impacto en el empleo, su aporte a las economías de los países y al bienestar de las regiones donde participan (Aragón-Correa et al, 2008). Poseen una enorme importancia para la economía de un país, ya que son la forma más habitual de organizar la producción. Además, contribuyen a la generación neta de empleo y protagonizan el proceso de renovación del tejido productivo asociado con fenómenos de movilidad empresarial (Coronel y

Cardona, 2009). Para Singh y Garg (2008), son la columna vertebral del crecimiento económico de los países. Contribuyen en la provisión de oportunidades de empleo; además, actúan como proveedoras de bienes y servicios a la gran empresa. De la misma forma, para Gilman y Edwards (2008), la fuerza de la naturaleza de la PYME, se encuentra en su capacidad empleadora.

Jong, de y Von Hippel (2009), también han reconocido a la PYME por su capacidad para el desarrollo de nuevas tecnologías. Con frecuencia y sin coste asociado, las innovaciones son transferidas a las grandes empresas productoras que contratan sus servicios. Las transformaciones que en el consumo aporta la globalización, generan una creciente demanda de nuevos productos. Para la PYME, esto constituye un nicho de ventaja competitiva, por su alta flexibilidad y mayor capacidad de adaptación al complejo entramado productivo que la gran empresa. Con ésta comparte mercado y los mismos retos que aborda desde la vulnerabilidad que producen sus dimensiones. Por ello, la PYME viene siendo objeto de políticas de protección e incentivos por parte de los Estados y diferentes organismos internacionales.

La PYME en América

La PYME, representan más del 95% del total de empresas existentes; abarcan el 87 % de las empresas en los sectores servicios y comercio; y, generan el 64,26% del empleo en la región (Saavedra & Hernández, 2008). Este sector, en todos los países latinoamericanos, está en un obligado crecimiento y con serias necesidades debido a los cambios veloces y en todo sentido que se están suscitando (Arroyo, 2008). Es vista con gran atención, debido a sus posibilidades para adaptarse a las complejas realidades locales, regionales y las diversas alternativas de emprendimiento existentes. De hecho todos los países, en mayor o menor grado, poseen políticas de fomento a estas manifestaciones económicas de creciente importancia.

Organismos como La Comisión Económica para América Latina y el Caribe (CEPAL), El Sistema Económico Latinoamericano y del Caribe (SELA) y El Mercado Común del Sur (MERCOSUR), han desarrollado acciones dirigidas a lograr una definición y clasificación uniforme, que abarque un gran conglomerado, en una amplia diversidad de sectores. Así lo demuestran los estudios realizados por Zevallos y Velazco (2003); Dini, Ferraro & Gasaly, 2007; Ferraro, 2010, Zevallos, 2006. La CEPAL e investigadores, a través de distintos estudios han promovido la uniformidad de la definición en la región, por lo que existen avances en esta tarea (Zevallos, 2006; Leal, 2006; Fernández, 2008; Saavedra y Hernández, 2008; Ferraro y Stumpo, 2010; Ferraro, 2010). Sin embargo, los resultados no pueden considerarse concluyentes, pues no abarcan todos los países ni organismos.

Definición De PYME

Señalan acertadamente Ueki, Tsuji y Cárcamo (2005) que la definición de pequeña y mediana empresa no se ha estandarizado internacionalmente. Inclusive puede haber discrepancias entre las filiales gubernamentales de un mismo país. La clasificación de las mismas, sobre la base del número de empleados y el volumen de las ventas varía de acuerdo a la realidad y tamaño relativo de cada país, lo que genera diversos agrupamientos de micro, pequeñas y medianas empresas (SELA, 2009). Esto constituye una preocupación importante, manifestada en la literatura que sobre PYME existe (Abor y Adjasi, 2007; Tueros, Dini, Polo, Poma y Henríquez, 2009). Mayor complejidad al logro de una definición, la suman los autores que sugieren ampliar la misma y utilizar criterios cualitativos, es el caso de Street & Cameron (2007). La discrepancia existente en la aplicación de los criterios, no permite llegar a una definición unificada (Ueki, Tsuji y Cárcamo, 2005; Gilman y Edwards, 2008; y Fernández, 2008). En su concepción más amplia una PYME, es una unidad económica productora de bienes y servicios, dirigida por su propietario, de una forma personalizada y autónoma, de pequeña dimensión en cuanto a número de trabajadores y cobertura de mercado.

METODOLOGÍA

Con la finalidad de indagar, interpretar, ampliar y profundizar sobre la definición de la PYME, se realizó una investigación documental, sustentada en la revisión de documentos de distinta índole, textos, artículos de revistas especializadas, estudios realizados por distintos organismos, hoy en día potenciada por el uso de internet, bases de datos, revistas digitales, portales oficiales (Orellana y Sánchez, 2006).

Se analizaron documentos derivados de estudios empíricos en el ámbito americano, en las cuales los autores aportan elementos para llegar a una definición y clasificación de PYME. Se consideraron las definiciones expresadas por los Países, a partir de su normativa existente. En este caso y donde existe, se hizo uso de la documentación legal de los países americanos. Abarcó también, las definiciones utilizadas por los Organismos Internacionales, que tienen influencia en el ámbito americano, a través de los estudios promovidos por estos entes y la información contenida en sus portales oficiales. Se utilizó el Análisis de Contenido, que para Cáceres (2003) posee fertilidad analítica para establecer categorías a partir de los datos existentes en comunicaciones de distinta índole. Su riqueza estriba en la interpretación de las palabras y su comprensión a partir del contexto en que son utilizadas. Esta técnica permitió crear las bases para reflexionar, generar conclusiones y recomendaciones sobre el tema tratado.

RESULTADOS

Los estudios que abordan la PYME, como entidad económica, consideran una diversidad de criterios en su definición y clasificación, ver Tabla 1.

La tabla muestra los estudios empíricos que abordan distintas problemáticas que enfrentan las PYMES, en relación a su entorno, el medio ambiente, la financiación entre otras. En relación a la definición de PYME, se identificaron en los documentos analizados, los siguientes criterios: Número de Trabajadores, Volumen Anual de Ventas, Activos, Tecnología y Situación Jurídica. La mayoría de las definiciones están conformadas por dos o más criterios. Sin embargo, los criterios más utilizados son: Número de Trabajadores, Volumen de Ventas y Activos. Fuente: Elaboración propia.

En relación a los países del Continente Americano, vale destacar que pese a que cada país tiene sus propias complejidades, la manifestación y desarrollo de la PYME, es similar. Algunos, como Bolivia (Nisttahusz, 2006; Borda y Ramírez, 2006) y Paraguay, llevan varios años intentando desarrollar una legislación que regule las actividades de la PYME. En el caso de Paraguay, mediante el Decreto 7516 del 24 de Octubre de 2011, ha sido objetada la Ley 447/2011 que regula la micro, pequeña y mediana empresa de ese país. Otros, aún cuando no cuentan con este tipo de legislación han desarrollado políticas, estrategias y resoluciones en las cuales se establecen los criterios para definir y clasificar la PYME. Ver Tabla 2.

¹Valor de las ventas totales anuales, según el sector de actividad. ²Aplica dos definiciones: para el Programa de Bonos con base en número de trabajadores y para definir empresas industriales usando los criterios activos totales, cantidad de empleados y ventas anuales. ³Clasificación denominada MYPE (micro y pequeña empresa). Se observa, que el 90% de los países considera el criterio de Número de Trabajadores en la definición de PYME. El 60% aplica el criterio Ventas; y, un 35% el de los Activos que posee la Empresa. El 10% y el 5% consideran los criterios Ventas Brutas Anuales/Ingresos Brutos Anuales y Patrimonio Neto respectivamente. Fuente: Elaboración propia.

Reconociendo la importancia cada vez más creciente de la PYME, especialmente en las políticas y acciones para enfrentar el desempleo, los Organismos Internacionales han venido fomentando estrategias de apoyo a estas manifestaciones económicas. En este sentido, también han realizado esfuerzos para lograr una definición ajustada a las realidades de los países en su área de influencia, cuyos criterios pueden verse en la Tabla 3.

Tabla 3: Definición de PYME - Organismos internacionales

ORGANISMO	AMBITO TERRITORIAL	Tipo de criterio	Empleo	Ventas	Activos
Asociación de Estados del Caribe (AEC)	Costa Caribeña	No tiene definición			
Asociación Interamericana de Integración (ALADI)	América	No tiene definición			
Banco Interamericano de Desarrollo (BID)	Mundial	No tiene definición			
Banco Mundial	Mundial	Todos los sectores	X	X	X
CARICOM	Antillana	No tiene definición			
Comunidad Andina de Naciones	Región Andina	No tiene definición			
Corporación Andina de Fomento	Región Andina	No tiene definición			
MERCOSUR	Sur América (4 Países)	Por sector y aspectos cualitativos (propiedad y evolución)	X	X	
Organización Mundial de Comercio (OMC)	Mundial	No tiene definición			
Organización para la cooperación y el desarrollo económico (OECD)	Mundial	No tiene definición. Cuando no existe en el país, utiliza la de la Unión Europea			

Continuación Tabla 3: Definición de PYME - Organismos internacionales

ORGANISMO	AMBITO TERRITORIAL	Tipo de criterio	Empleo	Ventas	Activos
Sistema Económico Latinoamericano y del Caribe (SELA)	Latinoamérica	No tiene definición			
Tratado de Comercio América del Norte	Norteamérica	Por sector	X	X	

Sólo dos organismos han concretado la uniformidad en esta materia. Estos son el Tratado de Libre Comercio de América del Norte suscrito por México, Estados Unidos y Canadá el MERCOSUR, donde participan Argentina, Paraguay, Brasil y Uruguay. Ahora bien, estas definiciones acordadas, más que la búsqueda de uniformidad en una conceptualización para el tratamiento de las PYME en toda su extensión (interna y externa), se sustentan en aspectos de carácter operativo, para facilitar el apoyo financiero de los organismos multinacionales, el mercadeo de mercancía y las preferencias arancelarias. Fuente: Elaboración propia

CONCLUSIONES

Una amplia diversidad de criterios se conjuga para definir la PYME. La literatura revisada, el análisis de la definición de los distintos países y la utilización de los criterios aplicados por los Organismos que atienden el tema, sugieren elementos comunes en las definiciones. Los criterios más utilizados son el Número de Empleados y Volumen de ventas, los mismos se encuentran presentes a nivel de autores, países y organismos. Es importante destacar, que aún cuando hay aproximación en su aplicación, los rangos considerados en estos criterios son diferentes. La coincidencia general, se enfoca en el criterio número de empleados. Sin embargo, también existe diversidad en su composición, que puede ser genérica, por sector y con topes mínimos-máximos. Se observa igualmente, que estas diferencias devienen de la aplicación práctica y contextual de cada criterio. Estos son, el nivel de desarrollo de cada país y su conformación empresarial, las características socioeconómicas, mercadológicas o tecnológicas en las cuales se da la manifestación PYME o MiPYME.

La alta complejidad para definir la PYME, proviene de su grado de diversidad. En este sentido, es necesario establecer rangos iguales entre los criterios de Números de Trabajadores y Volumen de Ventas, para permitir su clasificación mediante la aplicación de criterios estandarizados. Estos resultados permiten inferir, que es posible en futuras investigaciones, establecer los rangos más convenientes para definir la PYME en función del Número de Trabajadores y Volumen de Ventas, de manera de evitar las barreras a los financiamientos independientemente del sector o País al cual pertenecen. En este sentido, una proposición que deriva de estas conclusiones en cuanto al criterio Volumen de Ventas, es la utilización de

la Unidad Fiscal también conocida como Unidad Tributaria establecida en los sistemas tributarios de los países. Su aplicación permitirá lograr la armonización en este criterio, que ya existe en cuanto al número de trabajadores.

MIGRACIÓN Y MEDIO AMBIENTE: CONSECUENCIAS, ACIERTOS Y RETOS

Karina Concepción González Herrera, Universidad Tecnológica Metropolitana
María Teresa Gullotti Vázquez, Instituto de Estudios Universitarios

RESUMEN

El deseo de superación y la falta de una oportunidad laboral, dan pie al origen del fenómeno migratorio, que en el caso particular de Yucatán, México es mayoritariamente hacia Estados Unidos de Norteamérica. La complejidad del fenómeno migratorio y su relación con el desarrollo sustentable, permite un análisis de los aspectos económicos que inciden y se derivan de la misma. La conciencia ambiental, como un conocimiento que los migrantes comparten con su comunidad cuando retornan a su lugar de origen, es el objeto de estudio de esta ponencia. Se realizó en el Estado de Yucatán, México; en el municipio de Chacsinkin. La propuesta se genera con base en la identificación de la reproducción y aplicación de los conocimientos ambientales, así como determinar qué consecuencia tiene el flujo de remesas con respecto al manejo de los recursos naturales. El objetivo es determinar cómo los migrantes cuando retornan, pueden ser agentes de cambio en el cuidado del medio ambiente de su localidad.

PALABRAS CLAVE: Migración, medio ambiente, remesas económicas.

ABSTRACT

The desire to excel and the lack of a job opportunity, give rise to the origin of migration, which in the case of Yucatan, Mexico is mostly to the United States of America. The complexity of migration and its relationship to sustainable development, allows an analysis of economic issues that affect and are derived from it. Environmental awareness, a knowledge that migrants share with their community when they return to their place of origin, is the object of study in this paper. Was performed in the State of Yucatan, Mexico, in the municipalities of Chacsinkin. The proposal is generated based on the identification of the reproduction and application of environmental knowledge, and to determine what effect has the flow of remittances with respect to natural resource management. The objective is to determine how migrants when they return, they can be agents of change in the care of their local environment.

KEY WORDS: migration, environment, economic remittances.

INTRODUCCIÓN

El medio ambiente es todo aquello que compone el entorno, por lo que de él obtenemos los alimentos, la bebida básica que es el agua, así como materiales naturales que transformados se vuelven herramientas de trabajo. Este documento tocará el tema del medio ambiente desde la relación del ser humano con los elementos como el agua, tierra y aire a la vez que maneja las consecuencias de la interacción del hombre con estos por medio del desecho de materiales ya utilizados como la basura. Lo anterior con la finalidad de conocer los mecanismos utilizados por los migrantes en Estados Unidos de América (EUA), y la manera en como impulsivamente esta conciencia de aprendizaje en otro país es transmitido a otras generaciones, por los mismos migrantes cuando han retornado a México. En particular cómo los migrantes aprenden de manera formal o informal el cuidado del medio ambiente para las futuras generaciones, es decir cómo aprenden y transmiten sobre desarrollo sustentable

REVISIÓN LITERARIA

Los temas centrales de esta investigación son la relación del ser humano con el medio ambiente en particular con el desarrollo sustentable y la migración, fenómeno que se presenta en México con dirección a los Estados Unidos de América. A fin de relacionar estos dos temas se abordará primero la revisión literaria sobre medio ambiente y desarrollo sustentable, para luego desarrollar la relativa a migración, concluyendo con la relación de ambos temas.

El desarrollo sustentable o durable se define de manera general siguiendo el concepto originado a partir del informe Brundtland en su publicación “nuestro futuro común” en 1987

Desarrollo sustentable es el que satisface las necesidades presentes sin comprometer la capacidad de que las futuras generaciones puedan satisfacer sus propias necesidades.

(SEMARNAT, 1996; Martínez, J. 1994).

Bory-Adams, A. (2011) quién es la Jefa de la Secretaría del Decenio de las Naciones Unidas de la Educación para el Desarrollo Sostenible en la Organización de las Naciones Unidas para la Educación, la Ciencia y la Cultura (UNESCO por sus siglas en inglés), indica al respecto:

Al parecer, casi todas las sociedades del mundo están buscando alternativas económicas y financieras más sostenibles, el uso de energías renovables y la reducción de sus emisiones de carbono, así como una mayor equidad social. Ahora bien, en 2010, todos los pueblos del mundo parecen estar dispuestos a avanzar hacia un desarrollo más sostenible. Aunque parece haber acuerdo en cuanto al objetivo final, existe una amplia gama de opciones diferentes en cuanto al camino a seguir para alcanzarlo. Por ejemplo, los ingenieros centran sus esfuerzos en tecnologías más ecológicas, mientras que los abogados se focalizan en las legislaciones nacionales y los convenios internacionales. Recorridos nacionales rumbo a la Educación para el Desarrollo Sostenible. (Francia, UNESCO, 2011)

México, no es de ninguna manera ajeno al desarrollo de la conciencia ambiental, muy por el contrario, ha sido partícipe en reuniones internacionales sobre el cuidado del ambiente y tiene en su agenda política y social un compromiso por el desarrollo de la educación ambiental. Esta afirmación queda claramente de manifiesto en un comunicado de Felipe Calderón Hinojosa, presidente entre 2006 y 2012, en el que indica:

Comienzo por decir que estoy consciente de que la emisión de contaminantes y el manejo integral de los residuos sólidos es un tema urgente, que debemos actuar ahora como países, como Gobiernos. Y yo sé que no será fácil para tantas naciones diferentes encontrar un terreno común en este tema, pero garantizaremos que cada voz será escuchada y nadie quedará fuera del discurso construyendo la confianza necesaria para tener un acuerdo que se pueda trabajar con metas medibles de reducción de emisiones.

La mayoría de los estudios serios están de acuerdo que si no actuamos pronto, el impacto económico, social y en el medio ambiente será devastador, principalmente para los países en vías de desarrollo, y esto es particularmente cierto en los países en vías de desarrollo, dado que estos países son la parte más débil del cambio. Representan los lugares más susceptibles a inundaciones, huracanes o sequías.

Hoy día la humanidad tiene la oportunidad de cambiar nuestro modelo de desarrollo. Probablemente la clave para encontrar un terreno común, para encontrar un acuerdo, será desarrollar un nuevo modelo, un modelo de desarrollo que nos permita crecer en armonía con el medio ambiente, implicando una nueva Revolución Industrial basada en bajo crecimiento de carbono. (Calderón, 2010: Info rural conferencia Universidad de Columbia, USA)

México, cuenta con organismos creados para la planificación ambiental, tanto en el ámbito de la administración pública federal como de las administraciones públicas estatales. Las dependencias gubernamentales han desarrollado normatividades con la finalidad de incidir en un cambio significativo del manejo del medio ambiente.

Como reguladoras de la función ambiental, están a cargo de la planificación del desarrollo implementando acciones sobre las prioridades ambientales, a fin de establecer una adecuada relación con el medio ambiente natural considerado como totalidad. Esta consideración permite centrar la atención al medio ambiente, donde se amplían las visiones del tema ambiental al abarcar, además del control y la prevención de la contaminación, los temas de restauración ecológica, ordenamiento territorial, conservación, aprovechamiento y enriquecimiento de los recursos naturales y la formación de una conciencia ambiental.

Importantes teóricos entre los que destaca Leff (2004) presentan que *“el saber ambiental emerge de una reflexión sobre la construcción social del mundo actual, donde hoy convergen y se precipitan los tiempos históricos. Hoy vivimos en un mundo de complejidad, en el que se amalgaman la naturaleza y el desarrollo”*. Son tiempos donde emergen nuevos valores y racionalidades que reconducen la construcción del mundo. La sostenibilidad ambiental representa un criterio normativo para la reconstrucción del orden económico, como una condición para la sobrevivencia humana y un soporte para lograr un desarrollo, preferentemente a través de la formación universitaria.

Además, el abordaje desde la educación ambiental se considera positivo evaluar el carácter “ambiental” de una serie de movimientos sociales. Según Enrique Leff, los actos de conciencia y sus efectos en la organización social y en la movilización política son “ambientales” en tanto que incorporan un conjunto de valores que conforman una “racionalidad sustantiva” del ambientalismo, y en tanto que, como procesos sociales, prácticas productivas y acciones políticas, constituyen *“actos de racionalidad ambiental”* (Leff, 2004).

Leff (2004) afirma que sin esta perspectiva metodológica se corre el riesgo de, en el estudio de movimientos ambientales, reducir el campo de percepción a aquellos grupos que se autodenominan *“ecologistas”* y perder de vista el carácter ambientalista de otros movimientos campesinos, indígenas, populares que, sin reconocerse como ambientalistas ni incorporar algunas veces, de manera explícita, reivindicaciones ecológicas en sus demandas políticas, se enlazan en luchas que contribuyen a generar las condiciones para construir sociedades sustentables fundadas en los principios de una racionalidad ambiental.

La globalización dentro de la problemática ambiental

Globalización alude a realidades, como son de la magnitud y el crecimiento del comercio internacional, la importancia creciente de las inversiones extranjeras en los procesos productivos y financieros de todas las naciones, así como los efectos e implicaciones transnacionales que tienen los nuevos paradigmas tecnológicos y sus productos. La globalización también está referida a las posibilidades y perspectivas para el desarrollo de las naciones, aunque muchas de ellas no están claramente perfiladas en cuanto a su significado internacional y sus implicaciones socioeconómicas y políticas.

Lo que hoy se identifica como globalización es el resultado de largas tendencias, de la economía y políticas internacionales. La globalización, entonces es más bien un proceso histórico accidentado pero al parecer implacable.

La Fundación para el Desarrollo de la Minería en Argentina (FUNAMIN) indica que:

La globalización no comienza el día que cae el Muro de Berlín, hacía tiempo que los medios de comunicación electrónicos y las nuevas tecnologías estaban construyendo un mundo más allá de

las fronteras de los estados. Pero fue el momento en que el capitalismo y la democracia se instalaron casi definitivamente como el modo de producción y el modo de legitimación político. Ahora bien, pasemos a analizar la relación entre globalización y su importancia directa con un mundo sustentable. La globalización supone que hay que pensar que todo el globo terráqueo sin excepciones es parte del campo de acción de los emplazamientos productivos. El mundo necesita producir sus bienes y servicios en todos lados, y por ello necesita proteger todos los espacios. <http://www.fundamin.com.ar/es/medio-ambiente/43-medio-ambiente-y-globalizacion/77-medio-ambiente-globalizacion-y-sustentabilidad-una-mirada-historica-sobre-un-tema-de-actualidad-parte-i-.html>

De aquí la importancia vital, de encontrar o mantener formas culturales de cohesión social y mecanismos político-económicos que permitan a las formaciones nacionales constituidas aprovechar las oportunidades que abre la globalización. En este sentido parece indispensable que la organización comunitaria tanto a nivel local como regional, deba adquirir o redefinir y reforzar, según el caso, un sentido nacional efectivo que pueda encontrar una real traducción institucional en los estados.

La globalización repercute de manera directa en la crisis ambiental de muchos países que se traduce en deforestación, erosión y contaminación afectando elementos como suelo, agua, atmósfera, especies animales y vegetales, produciendo impactos que producen cambios atmosféricos, pérdida de biodiversidad y contaminación de mares con una afectación tanto a nivel local como global.

Esta crisis ambiental que atraviesa el planeta no puede ser entendida y analizada al margen de las políticas económicas, sociales, culturales y de política a nivel nacional y global. La magnitud de los problemas ambientales globales obliga a tomar medidas comunes entre naciones para transitar hacia un desarrollo que garantice una calidad de vida aceptable para toda la humanidad entera y garantizar la de las próximas generaciones y la protección de la biosfera.

Citando nuevamente a la Fundación para el Desarrollo de la Minería en Argentina (FUNAMIN) se encuentra que:

Si la globalización tiende a difuminar las fronteras políticas y geográficas también los estados nacionales buscan afirmar claramente su lugar y su esencia. De ahí que lo local haya tomado, paradójicamente, gran trascendencia. Las costumbres de las comunidades, las culturas aborígenes son hoy protegidas –en nuestro país muchas empresas multinacionales mineras trabajan fuertemente en preservar este tipo de patrimonio- es por eso que la globalización si bien coordina mundialmente signos homogéneos también en el mismo movimiento produce una ola de protección de las diversidades locales. Esto además se da a nivel medio ambiente Es importante señalar que una de las características fundamentales de la globalización es que a inexistencia de colisiones reales entre el derecho internacional y los derechos nacionales, o entre los derechos comunitarios y los derechos de los estados naciones. <http://www.fundamin.com.ar/es/medio-ambiente/43-medio-ambiente-y-globalizacion/77-medio-ambiente-globalizacion-y-sustentabilidad-una-mirada-historica-sobre-un-tema-de-actualidad-parte-i-.html>

Ciertas premisas comunes deben ser adoptadas y enfrentadas con responsabilidad por todas las naciones. Los países en desarrollo, como México, deben hacer más eficientes sus procesos de transformación productiva primaria, industrial y urbana, adjuntar políticas adecuadas para controlar el crecimiento demográfico y de abuso de los recursos naturales y no renovables.

Por su parte Velasco (2007), en su análisis “**Globalización, desarrollo sustentable e identidad cultural**” indica que:

La consolidación de una tendencia histórica que hace viable la creciente articulación intercultural de todas las sociedades humanas consideradas a distintas escalas, constituye un potencial de enriquecimiento asombroso de la experiencia humana en medio de la diversidad.

Desafortunadamente, esta potencialidad se ve enfrentada por la globalización neoliberal que supone un proyecto explícito de imposición hegemónica, en base a una economía cada vez más excluyente de las mayorías y minorías inasimilables al modelo dominante, el pensamiento único, el reduccionismo y la homogeneización cultural. En este contexto, los problemas ambientales han pasado a ocupar un lugar innegable en la agenda de prioridades internacionales. Pero para su abordaje, se apela a la racionalidad pretendidamente ecológica del desarrollo sustentable, noción bajo la cual subyace un campo complejo de confusión intelectual, disputas ideológicas y conflictos de interés. Mayormente el discurso de la sustentabilidad deriva sus proposiciones y sus acciones hacia la provisión de estrategias de perpetuación de los poderes establecidos.

Igualmente, haciendo del productivismo y la eficiencia en el manejo de los recursos naturales un dogma, promueve un ambientalismo tecnocrático que ignora toda referencia a la ética, las relaciones de poder y las identidades culturales. Ante las consecuencias de empobrecimiento cultural que se derivan de la difusión global de estos esquemas, igualmente degradantes del patrimonio natural, es urgente repensar la noción de identidad desde una perspectiva dinámica y de pluralismo cultural en correspondencia fecunda con los marcos ecosistémicos inherente a la culturalidad.

<http://www.ucla.edu/ve/dac/compendium/compendium10/globalizacion.htm>

La eliminación de la pobreza es una prioridad, que se debe superar mediante cambios estructurales que generen empleos y redistribuyan el ingreso. Es urgente en México la revisión de políticas agropecuarias y forestales, de energéticos y desarrollo industrial para evitar se sigan deteriorando los escasos ecosistemas forestales, con sus consecuencias en suelo, agua y especies animales y vegetales.

Es importante tener en cuenta que la sustentabilidad es la habilidad de “perdura o persistir”. Y si pasamos a un modo de pensar más cercano a la biodiversidad podemos decir que esto significa simplemente “vivir dentro de la capacidad de carga de la biosfera”. Es decir, cuidar los recursos a lo largo de toda nuestra vida: cuidar el mundo es cuidarnos.

Migración

Por otra parte se puede hacer mención que la migración es el desplazamiento efectuado por los individuos, mediante el cual atraviesan los límites político administrativos de un país, para lograr llegar a otro.

De igual forma es concebido, como todo desplazamiento de población que se produce desde un lugar de origen a otro de destino, e implica el cruce de algún límite político-administrativo o ecológico y lleva consigo un cambio de la residencia habitual, esto según Macció citado por Vivas (2007).

La migración puede clasificarse según su carácter cuantitativo en (figura 1):

Figura 1. La migración según su carácter cuantitativo

Fuente: elaboración propia con base a Michael J. Greenwood, *Research in internal migration: in US, a survey*, *Journal of economic Literature*, vol. 13, núm. 2, junio de 1975, p. 405. Citado por Herrera C, R (2006, p. 67)

También se define a la migración como “toda persona que atraviesa fronteras nacionales, cambia su residencia y permanece el suficiente tiempo viviendo en un país distinto, independientemente de la nacionalidad que posea, entraría dentro de la definición de migrante internacional” Sarrible G. (2002, p. 124).

Lo anterior permite analizar la conceptualización plasmada, que establece claramente, el cruce de las fronteras de un país con respecto a otro, para formar parte del flujo migratorio. Este flujo tiene remarcado reconocimiento cuando se presenta de manera ilegal, debido a los efectos negativos y posiblemente nocivo que se presentan para lograr el cruce. Sin embargo poco se habla del traslado cuando se realiza de manera legal (con documentos que avalen el libre tránsito, VISA). La migración abarca un periodo de estancia prolongada que va de meses a años, cuando esta se presenta hacia otros límites político-administrativos y se efectúa de manera ilegal. En especial cuando la dirección tomada es hacia EUA, la dificultad que implica el cruce fronterizo es lo que prolonga el tiempo de retorno. Pero cuando la legalidad se encuentra inmersa en el proceso, se reducen los tiempos y/o pudieran ampliarse, ya que se tiene un respaldo de la actividad a desempeñar en otro país.

En México el 89.4% de las personas que migran tienen como rumbo Estados Unidos de América, el 7% se dirige a otro país, y el porcentaje restante no logra especificar el lugar de destino, sin embargo los datos registrados por el INEGI (2010), son importantes porque ofrece información actual de la forma en cómo se presenta la migración en nuestro país.

Entre los factores que se presentan para dirigirse a EUA, se encuentra el contar con ingresos mayores a los que se perciben en la entidad y municipio expulsor por concepto de la actividad económica desempeñada, también está el emplearse u ocuparse laboralmente, debido a la falta de empleo en el municipio del cual salen las personas, siendo los factores citados los de mayor repercusión en el estudio. Las remesas enviadas a México tienen como origen el 97% de EUA, el 2% de Europa y la diferencia porcentual de otros países.

Cuando existe un fruto de la migración “las remesas”, el fenómeno tiende a acrecentarse por periodos más amplios, o éste fruto induce a retornar. Considerando también el diferencial salarial, como impulsor del fenómeno. El ingreso que por concepto de la actividad desempeñada en el país de atracción realizan los migrantes supera por mucho, los ingresos que reciben en el país expulsor, lo que se vuelve para dotarse de los alimentos, vestimenta, bienes y servicios, y otros satisfactores de primera necesidad de las personas.

METODOLOGÍA

El método general a utilizar será el Método de la encuesta, ya que será la encuesta el "método de investigación capaz de dar respuestas a problemas tanto en términos descriptivos como de relación de variables, tras la recogida de información sistemática, según un diseño previamente establecido que asegure el rigor de la información obtenida" (Buendía y otros, 1998, p.120). De este modo, puede ser

utilizada para entregar descripciones de los objetos de estudio, detectar patrones y relaciones entre las características descritas y establecer relaciones entre eventos específicos.

Tipo de investigación: El estudio es de tipo transeccional o transversal, se recogieron datos en un solo momento. El propósito del estudio es “describir las variables y analizar su incidencia e interrelación en un momento dado” (Hernández, Fernández y Baptista, p. 270, 2003).

Población Objetivo: Para la presente investigación se seleccionaron 3 municipios, ubicados en la región VI del Estado de Yucatán, como representativos del fenómeno migratorio, siendo estos Chacsinkin, Peto y Tahdziú.

Abordando de manera específica para el desarrollo del presente documento al municipio de Chacsinkin, ubicado en el cono Sur del estado de Yucatán, cuya ubicación geográfica regional es la VI .

Muestra: La muestra del presente estudio representa el 100% de la población estimada que reciben remesas, en este caso hogares que reciben remesas, siendo un total de 4, sin embargo en campo se logró identificar a mayor número de hogares que presentan ésta condición, que en total fueron 7.

Tabla 1. Índice y grado de Intensidad Migratoria en municipios de Yucatán, 2000.

Entidad Federativa/Municipio	Total de Hogares	% Hogares que reciben remesas	Total Hogares que reciben remesas
Chacsinkin	450	0.89	4

Fuente: Elaboración propia con base al CONAPO 2005.

RESULTADOS

Los resultados presentados en la muestra total de 7 encuestados, con respecto al tema ambiental en su formación laboral y finalmente al retornar a su lugar de origen la presencia de la cultura, qué mecanismo de transmisión utilizó para fomentar el cuidado ambiental.

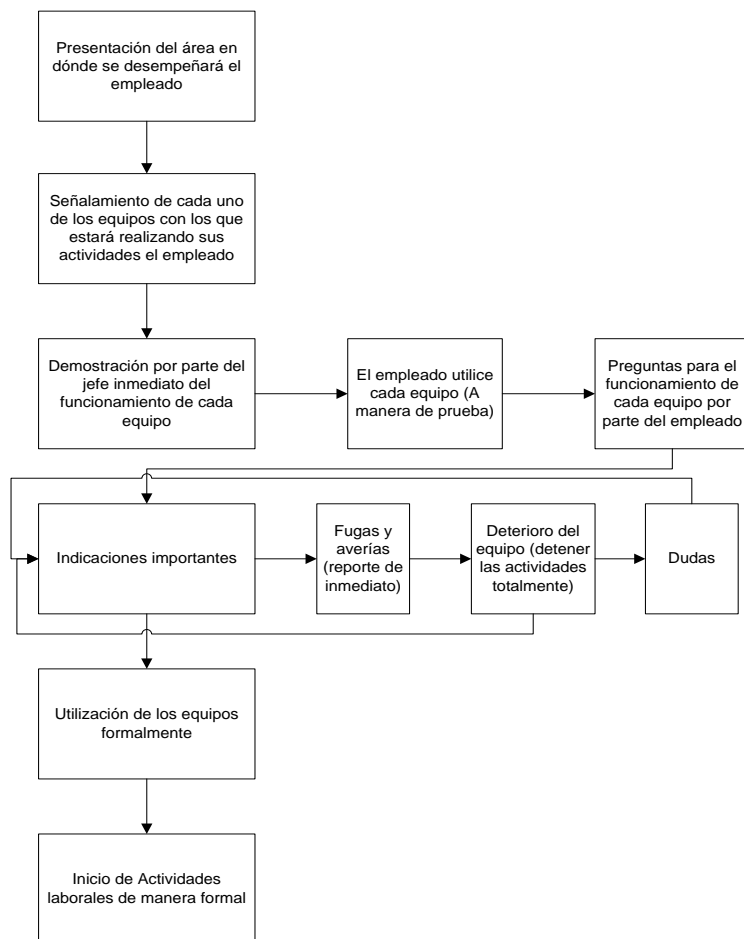

Al plantearles las interrogantes a los migrantes que han retornado al municipio de Chacsinkin y cuya actividad que se desempeñó en EUA estuvo vinculada al sector terciario, de manera específica en restaurantes, de lo cual, se logro obtener los siguientes resultados:

1. Al introducirse los empleados al ámbito laboral, se cumple con ellos los procesos que a continuación se desglosan en la imagen 1.

Siguiendo este mecanismo, se busca que el empleado, evite desperdicios de agua, adicionales a los requeridos en actividades como lavado de trastes, limpieza de mesas, pisos, etc. Con respecto a la basura deberá mantenerse cerrada y alejada de los alimentos (con carácter obligatorio), también ésta es separada al momento de dispersarse con la finalidad de que sea retirada. Si este proceso no se realiza el empleado es penalizado (descuentos en horas de salario o día completo), debido a que la empresa puede ser sancionada por las autoridades, Lo que finalmente les proporciona una cultura de mayor higiene a los empleados. Todo lo anterior mencionado por los sujetos de estudio en un 100%

La totalidad de la muestra argumentó que en el hogar que se habita en EUA, normalmente es compartido con otras personas, para disminuir el monto a pagar de manera mensual por la renta. He allí cuando la organización de la ropa, la limpieza de la misma intervienen en ese hogar. La distribución del aspirado, de la preparación de alimentos debe de ser más organizado. Por tal razón si bien la basura puede ser mayor a la de una familia de 4 elementos, esta tiene un orden y una clasificación.

Figura 2. Proceso para la integración del migrante a la empresa.

Fuente: Elaboración propia, con información proporcionada por los migrantes de retorno, Marzo de 2012.

Los migrantes no tienen el conocimiento de las leyes establecidas para el cuidado del medio ambiente en EUA, sin embargo se adaptan a las solicitudes de jefes en las empresas en donde laboran, formándose una cultura laboral que beneficia al medio ambiente, así como e complementa con una cultura de orden e higiene del lugar en donde habitan.

Cuando retornan los migrantes, tienen esa formación que durante el tiempo que habitaron en otro país les deja.

El 86% de los entrevistados señala que la adaptación de nuevo al hogar se vuelve enteramente satisfactorio, sin embargo, al pasar el tiempo, se presentan desacuerdos porque el hombre inicia con el proceso de enseñanza de cómo se debe cocinar, la forma en la cual se debe de limpiar la estufa, se evita prender leña para preparar los alimentos, el consumo del agua potable, evitando derrocharla al momento de regar la plantas. El 100% de los migrantes de retorno argumentó que las remesas no son utilizadas para el cuidado del medio ambiente, las remesas tienden a ser un complemento o el ingreso único de las familias, por tal razón su último fin será este proceso ambiental.

Algo sobresaliente identificado en el 100% de los casos de estudio es que a los migrantes cuando retornan les enoja cuando ven quemar la basura en los patios de las casas. Cosa común es que antes de partir a

EUA no le daban importancia o simplemente observaban como algo común. Sin embargo la interacción en otro país y con otras culturas les propicia, una nueva forma de pensar y de actuar.

El 100% mencionó que finalmente van indicando en su hogar la forma de separar la basura desde la cocina, patio, baño, hasta el último rincón. Sin embargo este proceso no siempre continúa y se retorna al hábito común de los pobladores en el municipio. Es decir el mecanismo de conciencia ambiental al transmitirse, si el migrante no retorna de forma inmediata, se pierde en el municipio expulsor. Lo cual se vuelve un reto en los núcleos familiares “conservar la cultura del cuidado del medio ambiente”, formación que traen los migrantes de retorno cuando se integran al municipio expulsor, situación positiva que se debe de aprovechar.

CONCLUSIONES

Para lograr una mayor transmisión de conciencia ambiental por parte de los migrantes hacia los integrantes de su hogar, se requiere que el hábito no se pierda, se continúe y se de a conocer este proceso positivo a las familias. Que de forma adicional mujeres, niños, padres de familia fortalecerán mediante pláticas y cursos que se dirigen a los pobladores mediante el programa Oportunidades y las instituciones educativas. Buscando de esta manera una mejor conciencia ambiental de sustentabilidad, para que el crecimiento económico de la localidad no se pierda y se genere un hábito, se perpetúe una cultura de cuidado y protección del entorno que rodea a los habitantes del municipio de Chacsinkin, que es rico en árboles, aire, agua. Concluyendo se puede señalar que la consecuencia de la migración es la falta de oportunidades laborales en los municipios expulsores, el acierto identificado es la cultura positiva del cuidado al medio ambiente y el reto es hacer de esa nueva cultura algo permanente en los hogares que cuentan con migrantes que han retornado, beneficiando de esta manera a todo el entorno que nos rodea.

RESUMEN

El presente trabajo se refiere al segundo reporte de investigación sobre el análisis de la variable TI utilizadas en las Mi PyMes del agro Tecomense, desde un enfoque cuantitativo. El estudio propone un modelo a la medida, basado en las necesidades locales. Para lo cual, se utiliza UML y algunas técnicas de computación.

PALABRAS CLAVE: Competitividad Comercial, Tecnología Corporativa, e-commerce, inversión, UML.

PROPOSED MODEL ON E-COMMERCE IN AGRO PACKAGE LEMON FOR TECOMÁN, COLIMA, MEXICO, VALLEY.

ABSTRACT

This paper concerns the second research report on the analysis of the IT variable used in the agro Tecomense My SMEs, from a quantitative approach. The study proposes a model to measure, based on local needs. For this purpose, using UML and some computer skills.

JEL: M15

KEY WORDS: Trade Competitiveness, Corporate Technology, e-commerce, investment, UML.

INTRODUCCIÓN

En América Latina, Fishman y Ramírez (2008), realizaron entrevistas semi-estructuradas a 75 informantes clave en Argentina, Costa Rica, Ecuador y México, para analizar la perspectiva asumida por los involucrados en los procesos de incorporación de las TIC en los sistemas educativos públicos, con numerosos problemas de eficiencia, acceso, equidad y justicia en comparación con la competitividad alcanzada por los países europeos al introducir las TIC, (Demo, 2005, TEDESCO, 2006). Las TIC, en conjunción con el modelo de triple hélice, (Porter M., 2003) ayudan a hacer que se dinamicen las estrategias para el desarrollo de los procesos educativos. Son de carácter innovador y creativo, pues dan acceso a nuevas formas de comunicación, constituyen medios de comunicación de toda variedad y ganancia de información científica, a los cuales las personas pueden acceder por sus propios medios, es decir potencian la educación, por lo cual es casi una necesidad del alumno contar con las TIC para poder llegar a toda la información posible (Gonzalez, Alfaro y Alfaro 2005).

El Valle de Tecomán, Colima, está ubicado en el municipio que lleva su nombre, el cual se encuentra delimitado al sur por la costa del océano Pacífico a 60 Km. del puerto de Manzanillo -enlace a Asia y la Cuenca del Pacífico-, a 45 Km. de la capital, Colima. Cuenta con una población urbana superior a los 112,726 habitantes, (INEGI, 2010). Sus tierras son ricas en la producción de limón, mango, papaya, sandía, melón, plátano y coco.

A la fecha, se encuentra en proceso de desarrollo el Corredor Industrial Caxitlán, del Corredor Gastronómico de las playas El Real y Pascuales, y de la Agro Industria; se pretende además, la implementación de un Clúster de Desarrollo de Software, bajo el auspicio de los tres niveles de Gobierno (AIMSI, AMITI Colima), los cuales en su conjunto, son fuertes detonadores de la economía regional, como Polos de Desarrollo Estatal (SEFOME Colima, 2005).

Analizar la variable TI desde un enfoque cuantitativo así como su utilización en las Mi PyMes del agro Tecomense en particular para el ramo de empaques, como resultado de su inversión en I+D. Proponer Planes de Acción Estratégicos para las Organizaciones en materia de TI e I+D (propuesta de modelo), en las empresas de empaque de limón del Valle de Tecomán.

REVISION LITERARIA

Internet y la Regulación de Tejido en Redes-Bruto, expone que estas dimensiones coexisten con otros hechos: el mercado de trabajo y el ascenso profesional de la mujer y las nuevas formas de trabajo (teletrabajo) que se encuentran vinculadas con el desarrollo de las nuevas tecnologías. (Brutto, 2000).

Red de Libertad en el Tejido Digital- La Internet la define como “una red mundial de computadoras que permite la comunicación directa y transparente, compartiendo información y servicios a lo largo del mundo. Su influencia social y económica es tal que hasta los pocos regímenes comunistas actuales comienzan a considerar sus grandes ventajas”. (Joyanes, 1997)

Regulación de Internet

Como lo señala Castells el debate sobre seguridad y libertad se estructura en torno a los polos: por un lado, la regulación político-jurídica de la red; por otro, la autoprotección tecnológica de los sistemas individuales. (Castells, 2001)

La Computopía-Propuesta por el profesor Yoneji Masuda, fundador de la sociedad informatizada japonesa a través de sus investigaciones en el Japan Computer Usage Development Institute, la cual consiste en una organización política universal donde toda la problemática de la humanidad está globalizada y en virtud de la cual los individuos estarán organizados a partir de una democracia participativa directa con una base tecnológica de redes de comunicación universal. (Castro, 2003).

Alternativas Territoriales-La Organización de Estados Americanos, OEA, que a su vez se subdivide en dos propuestas: la Estatal, que redime la soberanía de los Estados bajo las premisas de un orden jurídico, que ejerza un poder que le obligue y lo sancione, ejerciendo una autoridad individual sobre las personas; y la Regional que trata de regular Internet a partir de las decisiones regionales que adopten diversos grupos de naciones agrupadas por criterios de territorialidad que no representan la globalidad.(Olivares, Yohenna Vera, Jogli, Durante, Esther,2010) Confianza para Efectuar Compras por Internet-Según (Bailey, 2008). Existen dos objetivos claros de un cliente con relación a la confianza: las empresas proveedoras y su personal de ventas. Así, algunas de las características de los vendedores como la experiencia en sus funciones, la capacidad de simpatizar y ponerse en el lugar del cliente y la manera de resolver problemas ha desempeñado un papel importante en el fomento de la confianza de dichos consumidores con las empresas. (Rojas, 2009).

Como se Hace Publicidad por Internet-Un estudio realizado por International Data Corporation concluye que el volumen de ventas a través de Internet alcanzó en el año 2000 alrededor de \$ 850 billones de dólares en todo el mundo.

Búsqueda de Información-¿Cómo hacer publicidad en Internet? ¿Cuál es la manera correcta de hacerlo? No existe una fórmula mágica pero se pueden dar algunas sugerencias al respecto. (Franz del Pozo, 2000). Sin embargo, y ante tales evidencias, a muchos anunciantes les cuesta reconocer que los consumidores tienen muchas alternativas para conseguir información comercial por ellos mismos –saben dónde y cómo buscarla-, y no acaban de convencerse de que no pueden seguir planificando la publicidad *on-line* igual que en el resto de los medios como lo vienen haciendo, hasta el momento, de forma convencional. (Muela Molina, 2007).

Internet como Marco de Comunicación-La posibilidad de comunicarse y relacionarse con otras personas, a través del ordenador, se ha visto favorecida por la gran difusión de los servicios que presentan la vertiente de la Red: correo electrónico, mensajería instantánea o telefonía. (Moral, 2001) El periódico “El País”, en su edición digital ofrecía el siguiente titular: “España encabeza la pasión por el Messenger”. Y profundizaba la noticia con la siguiente información: “La mensajería instantánea por Internet atrae a un tercio de los jóvenes de entre 12 y 24 años”. España es el país del mundo con mayor proporción de internautas apuntados a los servicios de mensajería instantánea: el 62.6% de los que se conectan a la red según la consultora “COM Score”, por delante de Francia (60.3%), Reino Unido (51.9%) y EEUU (48%).

Beneficios Del E-Commerce Para Las Empresas

Presencia Global: Las fronteras geográficas o nacionales no son un obstáculo para el comercio electrónico, Internet la red mundial que actualmente soporta comercio electrónico, provee cobertura global, limitada únicamente por la disponibilidad del acceso a la red en las diferentes regiones del mundo. Horarios. Se tienen puntos de venta abiertos alrededor del mundo las 24 horas del día, los 365 días del año. Aumento de la Competitividad. La comunicación directa con los clientes permite mejor el soporte pre y post-venta. Productos y Servicio Personalizados. La interacción con los clientes le permite a los proveedores ofrecer productos o servicios a la medida, por ejemplo un suscriptor de una revista podría recibir únicamente los artículos de su interés. Eliminación de Intermediarios. Los productores pueden ofrecer en forma directa sus productos, lo que les permite un mayor acercamiento a sus clientes y obtener mejores ganancias al reducir costos. Reducción de costos. Al eliminarse la necesidad de abrir tiendas físicas en los diferentes lugares del mundo, se reducen los costos de instalación y salarios que esto implica. Estas reducciones de costos pueden trasladarse en reducciones de precio para los clientes. Nuevas oportunidades de negocio/Nuevos productos y servicios. El comercio electrónico proporciona productos y servicios completamente nuevos. Los ejemplos incluyen servicios sobre redes, servicios de directorios, creadores y diseñadores de páginas por lo que se debe de explotar esta nueva oportunidad de hacer negocios. Mercadeo. Se puede utilizar Internet como medio de comunicación publicitario. Los mensajes estarán al alcance de millones de posibles consumidores finales, a la vez se puede segmentar y dirigir un grupo concreto de clientes potenciales en cuestión de segundos. La inversión en este tipo de publicidad es relativamente menor a la publicidad tradicional y más fácil de mantenerla actualizada. Conocimiento del cliente. Se conoce el perfil del internauta a nivel mundial, destacando entre sus características como persona de nivel técnico o profesional con poder de compra, esto le permite a las empresas enfocar sus estrategias y productos. Inventarios. Aquellas empresas que solo existen en la red pueden trabajar con cero inventarios, ya que si desarrollan buenos canales de comunicación con sus proveedores, pueden asegurar la venta de productos sin necesidad de adquirirlos previamente. (MartiManent, Asociación Española de Comercio Electrónico y Marketing Relacional (AECEM), 2005)

Beneficios Para El Cliente

Comodidad. El cliente puede realizar sus compras desde su casa u oficina sin necesidad de trasladarse a la tienda. Precio. Para darse a conocer las empresas de comercio electrónico generalmente ofrecen mejores precios que las tradicionales. Economía. Al no tener que trasladarse físicamente el cliente obtiene una economía de tiempo y dinero. Opciones. Si lo que busca no lo encuentra en un sitio determinado puede trasladarse fácilmente a otros sitios web o analizar otras alternativas, ya que cuenta con una gran variedad de bienes y servicios dentro de la red. Información. Es el recurso más importante que ofrece Internet como valor agregado, las tiendas ofrecen a sus clientes mayor información sobre los productos o temas relacionados. Horarios. No tiene que sujetarse a un horario de servicio determinado, puede buscar sus productos las veinticuatro horas del día, cualquier día del año sin tener que preocuparse de los domingos o días feriados. Seguridad. Al no tener que salir de la casa u oficina evita exponerse a situaciones que puedan afectarlo física o emocionalmente. Trato Personalizado. La mayoría de los sitios proveen a los clientes de un canal para que contacte a la empresa y dé a conocer sus necesidades. Por ejemplo puede obtener mayor información sobre los productos o solicitar artículos que no encontró. Independencia geográfica. Puede realizar las compras desde cualquier parte del mundo y solicitar que los productos sean entregados donde los requiera. (MartiManent, Asociación Española de Comercio Electrónico y Marketing Relacional. (AECEM), 2005).

Dificultades

Costo del Hardware y Software. La inversión inicial suele ser muy costosa en la mayoría de los casos. Personal que atiende los pedidos. Si no son productos de formato digital que pueden viajar a través de la red, se debe contar con el personal necesario para despachar los pedidos y concretar la entrega. Envío del Producto. Si las distancias son muy largas, se pueden tardar días o semanas para que el cliente reciba sus pedidos, además el costo de envío puede incluso superar por mucho el costo del producto. Costo Financiero de la venta. Cuando se utilizan pagos en línea los entes financieros que brindan el servicio cobran un porcentaje por el uso de las tarjetas y algunas entidades realizan los pagos a las empresas hasta noventa días después de la transacción. Número de visitas y de ventas. El costo de desarrollar el sitio puede considerarse muy alto si no se logra atraer un atractivo número de clientes. Costo de publicidad. Está demostrado que no es suficiente con abrir el sitio en Internet y esperar que los clientes lleguen, es necesario utilizar otras estrategias publicitarias para dar a conocer el sitio. (Sojo Obando Saray, 2001).

Categorías De Comercio Electrónico

Empresa-empresa: comercio entre empresas / Business to business (B2B). Empresa-consumidor: comercio entre empresas y consumidores / Business to consumer (B2C). Empresa-Administración: comercio entre empresa y la Administración / Business to Administration (B2A). Consumidor-Administración: comercio entre consumidores y la Administración / Consumerto Administration(C2A).

METODOLOGÍA

Se definieron técnicas de recolección de datos e instrumentos necesarios para obtener los resultados de investigación representativos de la población. Selección de un instrumento de medición valido y confiable, que pudiera ser aplicado para obtener información de interés para el estudio y un análisis de resultados para el modelado de prototipos.

Técnica: Encuesta estandarizada, caracterizada por una observación indirecta a través de lo manifestado por las entidades encuestadas y complementada información seleccionada por los aplicadores y su observación.

Instrumento: 16 preguntas tipo Likert, distribuidas en 3 secciones (una por variable), la cual se utilizó para poder obtener datos cuantificables, reales y confiables para su posterior análisis a través de gráficos, tablas y métodos estadísticos. (Se anexa al documento).

Población y muestra: La población es e total del padrón, muestra: software de Consulta Mitofsky.

Tabla 1. Relación de los empaques de limón en el municipio de Tecomán, Colima, México.

NO.	EMPRESA	DOMICILIO
1	Comerc. De Frutas Verduzco SA	Km 15 Carr Tecomán-Estación

22	Limonos del Monte	Marte # 260

Nivel de confiabilidad: El Nivel de Confianza que se tomó para la obtención de la muestra para el sector de empaques de limón, es de 99%, con un margen de error de 1%, una precisión de $\pm 5\%$. Población y muestra total de 22 empresas de esta categoría. La confianza y el margen de error son los mismos que se tomaron para obtener la muestra de los demás niveles. Para elegir las empaques del padrón, se utilizó un muestreo aleatorio simple estratificado, tomado del Consejo Estatal de Productores de Limón de Colima, COEPLIM.

Software y herramientas: SPSS y MathLab para los análisis estadísticos y modelado de patrones, Visual Project 2000+ para la organización, registro y seguimiento del proyecto. Bases de datos, revistas, libros y jornal de consulta institucional, Algunas otras técnicas para el modelado de prototipos usados serán el UML y los DFD.

RESULTADOS

Algunos de las principales causas para la no implementación del comercio electrónico son las siguientes: Las empresas no cuentan con el equipo y personal necesario para desarrollar las ventas en internet., Los clientes de estos empaques no tienen a su alcance las tecnologías informáticas para poder comprar en línea. El precio de limón está variando constantemente por lo que se requiere estar actualizando constantemente la página web., El tipo de producto que las empresas ofrecen necesita salir al mercado a tiempo, porque de lo contrario este se deteriora y ya no puede ser vendido con la calidad que requiere.

Figura 1: WEB Site

Figura 2: Uso de redes sociales

Según las encuestas realizadas casi el 50 % cuentan con una página web, por lo que ya están a un paso para llevar a cabo el comercio electrónico. Las empresas que no tienen su sitio en Internet son debido a que aún no les ha interesado estar en la web y desconocen los beneficios que esto les puede traer a su empaque. Sabemos que en la actualidad el uso de las redes sociales es ya fundamental para que una compañía sea conocida en la red. Esto se debe a que millones de usuarios tienen cuentas de Facebook, Twitter, My Space, Windows Live Messenger, entre otras. Las Empacadoras de Limón del municipio de Tecómán, según los resultados que arrojó nuestro estudio, solo 7 utilizan estas redes sociales, esto se debe a que no les interesa anunciarse en estos sitios y llegar a otro tipo de personas en su gran mayoría jóvenes entre 15-23 años, que son los que más utilizan estos portales.

Figura 3: Tipo de redes sociales

Figura 4: Conocimiento del e-commerce

El correo electrónico de Hotmail es el más usado en las empresas de limón, lo utilizan como medio de comunicación con los clientes y otras personas. En cuanto a Facebook solo 2 empacadoras hacen uso de esta red que actualmente es la más popular en el mundo. La mayoría de los gerentes generales de los empaques de limón, no consideran una buena opción el estar alojado en estas redes sociales, ya que según ellos el trato es directamente con sus clientes ya hijos. Gran parte de las personas que entrevistamos han escuchado el término "Comercio Electrónico", lo relacionan con la compra-venta de artículos en la red, pero desconocen sus demás aplicaciones de esta tecnología. Al cuestionarlos sobre este tema de inmediato lo relacionan con la página de www.mercadolibre.com.mx.

Figura 5: Uso del e-commerce

Figura 6: Recursos humanos en TI

La mayoría no utilizan el comercio electrónico debido a que esta tecnología no la conocen a fondo. Una de las razones principales es que los clientes no cuentan con la tecnología necesaria para llevar a cabo el comercio electrónico. Muchos de ellos no cuentan con al menos una computadora, por lo que todos los trámites de negocio se hacen por medio de teléfono. Gran parte de las empresas encuestadas no cuenta con un especialista en el uso de las TIC, no existe un área relacionada con la informática en las empacadoras de Tecómán. Las personas que hacen el trabajo relacionado con las nuevas tecnologías, son los Contadores Públicos o los Administradores de Empresas. Más del 90 % contratan personal externo para realizar las funciones informáticas que requiera la empresa.

Figura 7: Razones de implementación de TI

Figura 8: Intención de uso de las empresas

En este caso la mayoría de los clientes de los empaques ya están bien definidos, por lo que aquí la implementación del comercio electrónico no se ha visto reflejada a su favor. Gran parte de las empresas dedicadas a este sector agrícola de limón, exportan su producto principalmente a los Estados Unidos, esto se debe a que es el país vecino y sobre todo el gran capital de las empresas Norteamericanas. Posteriormente Europa y Asia son los continentes a los que llega el limón mexicano, específicamente el tecomense. La no implementación del Comercio Electrónico en los empaques de Tecomán se debe principalmente a que no es necesario para la empresa, ya que según los gerentes generales, ellos emplean otro método de venta. Cerca del 85 % contestaron que Si están interesados en emplear esta tecnología en sus empaques, para que le dé un “plus” a su compañía. Como lo expresa la gráfica, gran parte de las personas encuestadas señalaron que el principal motivo es para estar a la vanguardia ante la sociedad. En la actualidad avanza la tecnología a cada instante y si las empresas no se actualizan, pueden quedarse rezagadas en el ámbito empresarial, es por ello que los dueños y gerentes expresaron su agrado en poder instalar en un futuro cercano las ventas en línea.

CONCLUSIONES

Las empacadoras de limón en el municipio de Tecomán se han estado actualizando poco a poco con la tecnología, casi el 50% cuenta con un sitio web para anunciar a la empresa y sus productos. De acuerdo a los resultados que arrojó las encuestas de nuestra investigación solo 4 empacadoras de 22 utilizan el comercio electrónico. Las personas entrevistadas señalaron varios aspectos por el cual no han implementado esta tecnología. La principal razón por la cual no se usa el comercio electrónico en las Empacadoras de Limón, es debido a que el tipo de clientes no cuenta con infraestructura informática para desarrollar compras en línea. Otra causa es el desconocimiento del tema, ya que los dueños de estas empresas no les ha interesado innovar en el uso de las nuevas tecnologías. Gran parte de ellos se

conforman con su método tradicional de vender y no intentan al menos tener página web, ya que no lo necesitan. El desarrollo del comercio electrónico, no solo en las Empacadoras de Tecomán sino también en otros sectores industriales, está todavía como un tema de bajo interés y hasta cierto punto desconocido, ya que son pocas las empresas de cada sector quienes están utilizando actualmente esta tecnología.

¿Por qué las empresas de la región no utilizan el comercio electrónico? No utilizan esta tecnología debido a la falta de información y el desconocimiento total del tema. La mayoría de las empresas creen que no son confiables las transferencias en línea.

Trabajo Futuro

Los autores recomiendan en relación a trabajos futuros, modelar planes de trabajo, como estrategia de las empresas del Valle de Tecomán, en virtud de que estas no tienen implementados planes estratégicos en TI. Y consideramos que el centro de esto, es la falta de formación de recursos humanos en la materia, aunado a una formación no suficiente en modelos administrativos modernos, amén de una cultura empresarial progresista. Recomendamos utilizar el modelo de la triple enlice de Porter, como inicio de un programa para las empresas del Valle de Tecomán.

DEMANDA INTERNACIONAL DE SERVICIOS ODONTOLÓGICOS DE HISPANOS DE EL PASO, TEXAS EN CIUDAD JUAREZ

Esther A. Enríquez-Pérez, Instituto Tecnológico de Ciudad Juárez
Eduardo F. Macías-Negrete, Instituto Tecnológico de Ciudad Juárez
Claudia Dávila García, Instituto Tecnológico de Ciudad Juárez
Alberto Cárdenas Valenzuela, Instituto Tecnológico de Ciudad Juárez
José Luis Anaya Carrasco, Instituto Tecnológico de Ciudad Juárez

RESUMEN

*La presente investigación aborda el estudio de la demanda de servicios odontológicos por parte de la población hispana que reside en El Paso, Texas. El análisis de la demanda se limitó a los factores estratégicos precio, ingreso y calidad. La pregunta de investigación de donde partió este estudio fue, ¿Cuáles son los principales factores que determinan la demanda de servicios dentales en Cd. Juárez por parte de los consumidores de El Paso Texas? El objetivo fue analizar los principales factores que determinan la demanda de servicios odontológicos en Ciudad Juárez por parte de los consumidores de El Paso, Texas. La contribución más importante fue la búsqueda de un diseño que permitiera penetrar en un mercado complejo y difícil como lo es el de los servicios dentales en Estados Unidos. El método utilizado fue el cuantitativo, no experimental, transeccional. La técnica de análisis de información usada fue la Correlación Bivariada de Pearson que se encuentra en el paquete SPSS. El estudio concluyó que de los tres factores estratégicos, el único que tuvo un fuerte impacto en la demanda fue la calidad con una correlación de 0.61 (**p=0.0) a un alfa de 0.05.*

Palabras clave: demanda, mercadotecnia, servicios dentales.

INTERNATIONAL DEMAND OF DENTAL SERVICES OF HISPANOS IN EL PASO, TEXAS IN THE CITY OF JUAREZ.

ABSTRACT

*The problem of this research is to study the demand of dental services from the Hispanic population that lives in El Paso, Texas. The analysis of the demand was limited to the strategic factors price, income and quality. The research question was: which are the main factors that determine the demand of dental services from patients of El Paso, Texas? The objective was to measure the demand of dental services from the patients in El Paso, Texas in the City of Juarez. The main contribution was the search of a marketing design to penetrate the complex and difficult market of dental services in the United States. The method used was the quantitative, non experimental and transeccional. The technique of data analysis utilized was the Pearson Bivariate Correlation found in the SPSS. The study concluded that from the three strategic main factors, the one that had a strong impact in the demand of dental services was quality with a correlation of 0.61 (a ** p value of 0.0) and an alpha of 0.05.*

KEYWORDS: demand, marketing, dental services.

INTRODUCCION

La presente investigación aborda el estudio de la demanda de servicios odontológicos en Ciudad Juárez, Chihuahua, México de la población hispana que reside en El Paso, Texas, en Estados Unidos. El análisis de la demanda se limitó a los factores estratégicos precio, ingreso y calidad. La pregunta de investigación de donde partió este estudio fue, ¿Cuáles son los principales factores que determinan la demanda de servicios dentales en Cd. Juárez por parte de los consumidores de El Paso Texas? El objetivo fue analizar los principales factores que determinan la demanda de servicios odontológicos en Ciudad Juárez por parte de los consumidores de El Paso, Texas.

MARCO DE REFERENCIA

Tendencias del mercado hispano de servicios dentales en El Paso, Texas

Gran parte de la demanda de servicios odontológicos de la población de Estados Unidos, particularmente de la ciudad de El Paso Texas, hacia los consultorios mexicanos corresponde al segmento de la población hispana. Se considera que la población hispana de Estados Unidos no cuenta con una adecuada asistencia a su salud dental. Algunos de los factores que contribuyen a la falta de servicio dental de esta población son: su situación económica, la falta de seguros dentales, el lenguaje, la cultura en el cuidado dental, las barreras culturales y los tratamientos que no son adecuados para los hispanos (Simons, 2009).

Dentro de la población norteamericana, los principales problemas de salud dental están relacionados al alto consumo de tabaco, dulces y falta de higiene bucal. Según el NCCDPHP (National *Center for Chronic Disease Prevention and Health Promotion*, 2009 citado por Lozano-Pineda, 2009, p.54) más de 7,000 personas mayormente adultos americanos mueren por cáncer faríngea y oral cada año. Por ello las visitas dentales son de suma importancia para la detección a tiempo de este tipo de problemas. Gran número de personas adictas al tabaco no acuden con frecuencia a revisiones dentales, y gran parte de estas personas son de origen hispanos (Simons, 2009).

Con respecto a cifras que demuestran la falta de cuidado dental destacan las estadísticas de los niños hispanos. Algunos estudios han demostrado que un 43% de los niños hispanos no han tenido atención dental, comparado con el 26% en niños caucásicos, lo cual se atribuye a la falta de seguro dental como principal factor (*Healthy People*, 2008, citado por Simons, 2009, p.64). Dentro de la población hispano-mexicana, algunas investigaciones han encontrado que el 17.7% de niños mexicanos no han asistido nunca al dentista, lo que agrava la situación en salud oral (Scott & Smile, 2005 citado por Simons, 2009).

En relación a la atención de problemas dentales de los niños que viven en los Estados Unidos de Norteamérica, la Clínica Dental Christina's Smile 2000 señala que "la caries dental es la enfermedad crónica más común en la niñez" la cual es poco atendida entre familias de bajos recursos. El *National Institutes of Health*, también menciona que los niños pertenecientes a familias de bajos recursos tienen menores visitas al dentista que los niños de familias económicamente más estables.

Otros factores que impactan la falta de atención dental de la población hispana en Estados Unidos es el continuo cambio de residencia de ese segmento de la población. Es muy común que este grupo de personas cambien con facilidad de vivienda ya que muchas veces el trabajo no es estable sino temporal y esto hace que miles de personas emigren a otras entidades donde hay empleo aunque éste no sea duradero, dejando a un lado la importancia de asistir periódicamente al dentista (Santi 2007, citado por Simons 2009, p.100). También se menciona que en el caso de los trabajadores migrantes solo acuden al dentista en los Estados Unidos cuando la situación es crítica, es decir, cuando se presenta un dolor o malestar bucal. Algunas veces, los trabajadores migrantes posponen su visita al dentista hasta que puedan regresar a México para atenderse con un dentista mexicano (Quandt, Preisser & Arcury, 2002; Harthorn, 1998

citado por Simons, 2009, p.111). La población hispana de Estados Unidos tampoco acude a la atención dental debido a barreras en el idioma y a la falta de dentistas latinos. (Simons, 2009).

Con objeto de ver la factibilidad que existe de que los consultorios dentales de Ciudad Juárez puedan atender la demanda de servicios dentales de la población de origen hispano del Paso Texas, se realizó un estudio comparativo de algunos costos de tratamiento de ortodoncia en las dos poblaciones y de los tratamientos odontológicos más comunes. Los resultados mostraron que en los costos de odontología en ciudad Juárez son significativamente inferiores a los costos de odontología del Paso Texas, lo que le confiere una ventaja competitiva en costos a los consultorios dentales de ciudad Juárez.

Tabla 1 Costos de odontología en El Paso, Texas en comparación con Ciudad. Juárez. Tratamiento de Ortodoncia

Ciudad	Duración	Costo	Nota
Ciudad Juárez	14 a 16 meses	1,500 dlls (total)	
		2,000 dlls (frenos arriba)	De regalo un Blanqueamiento
El Paso	14 a 16 meses	2,000 dlls (frenos abajo)	Dental

Tabla 2. Costos de odontología en El Paso, Texas en comparación con Ciudad. Juárez. Tratamiento de Blanqueamiento

Ciudad	Duración	Costo	Nota
Ciudad Juárez	2 horas	203 dlls	
El Paso	2 horas	600 dlls	

Fuente: Consultorio Dental Tisch Ruíz, 2011. *Nota: Los precios son aproximados, ya que varía según el problema de cada paciente.*

METODOLOGIA

La metodología usada para la presente investigación incluyo el método cuantitativo porque se midió el comportamiento de cuatro diferentes variables 1) demanda, 2) calidad, 3) precios de los servicios dentales y 4) ingresos de los demandantes de los servicios dentales. También, el estudio tuvo un carácter no experimental ya que no se manipulan ni controlan variables o grupos. Fue transeccional porque solo se obtuvieron datos de las variables en un solo momento. (Hernández Sampieri, 2006)

Se seleccionó como población a los hispanos mayores de 25 años debido a que su lengua es el español, además de que algunos de ellos tienen familiares o bien conocidos en Ciudad Juárez por lo que sus visitas a esta frontera son más comunes que las de un norteamericano. También, el rango de edad de 25 años en adelante fue seleccionado debido a que esta parte de la población se considera ha concluido sus estudios y por lo tanto esta económicamente activa. Dicha población fue de 282,372 de los cuales 125,460 fueron mujeres y 156,912 fueron hombres.

Para obtener el tamaño de nuestra muestra utilizamos la formula sugerida por Anderson et al. (2005):

$$n = [N p \text{ testada} (1 - p \text{ testada})/N (B^2/4) + p \text{ testada} (1 - p \text{ testada})]$$

Donde n es el tamaño de la muestra.

N es el tamaño de la población que en nuestro caso es 282,372.

p testada es la proporción para un tamaño mínimo de muestra para este caso es 0.10.

B es el error que se espera tener el cual se determino fuera del 3.5% o 0.035.

Sustituyendo los valores en la ecuación se obtuvo una $n = 293.59$ o 294

Como no se tenía la lista de toda la población se decidió tomar una muestra por interés semi-aleatoria estratificada por grupos homogéneos. Lo que se hizo fue dividir la región por centros comerciales, parques y restaurantes e ir a 10 centros comerciales que incluyeran parques y restaurantes para solicitar a personas que contestaran el cuestionario en forma anónima.

Para obtener los datos se optó por diseñar un cuestionario tipo Likert con cinco posibles opciones a contestar que mostraran el comportamiento de las cuatro variables que queríamos observar: la demanda de servicios dentales, la calidad de dichos servicios, el precio y el ingreso de los que demandan estos servicios (ver anexo 1). Para validar el cuestionario se pidió a cinco dentistas con diferentes especialidades: periodoncia, ortodoncia, endodoncia, maxilo - facial y odontopediatria para que contestaran el cuestionario y que dieran sus recomendaciones para verificar si las preguntas realmente mostraban el comportamiento de la variables que queríamos observar. A este respecto Hernández Sampieri et al. (2006) señala que la prueba piloto “consiste en administrar el instrumento a una pequeña muestra, cuyos resultado se usan para calcular la confiabilidad inicial y, de ser posible, la validez del instrumento” (p.306).

Para el análisis de datos se utilizó el Coeficiente Bivariado de Pearson y su prueba de hipótesis respectiva. Además, se quiso verificar si la calidad de los servicios era mejor en los consultorios dentales de El Paso que en los de Ciudad Juárez, y para ello se llevó a cabo una prueba de diferencia entre dos medias. Las hipótesis para las correlaciones fueron las siguientes:

$$H_0 : \rho_{xy} = 0$$

$$H_A : \rho_{xy} \neq 0$$

$$S_{XY} = S_{XY}/S_X S_Y$$

Para la prueba de hipótesis se usaron las siguientes formulas:

$$t = r_{xy} \sqrt{\frac{n-2}{1-r^2}}$$

Regla de rechazo

Rechazar H_0 si $t < -t_{\alpha/2}$ o si $t > t_{\alpha/2}$

Donde $t_{\alpha/2}$ se basa en una distribución t con $n - 2$ grados de libertad.

Adicionalmente se quiso comprobar, si la calidad de los servicios dentales en El Paso era mejor que la calidad de los servicios dentales en Ciudad Juárez. Las hipótesis para ello fueron las siguientes:

μ_{CJ} = media de la calidad de Ciudad Juárez

μ_{EP} = media de la calidad de El Paso, Texas

Por lo tanto:

$$H_0: \mu_{CJ} = \mu_{EP}$$

$$H_A: \mu_{CJ} \neq \mu_{EP}$$

Fórmula para la prueba de hipótesis:

$$Z_p = (\bar{x}_{CJ} - \bar{x}_{EP}) / \sqrt{[s_{CJ}^2/n_1 + s_{EP}^2/n_2]}$$

Rechazar H_0 si $p < \alpha$

RESULTADOS

Se realizaron las tres pruebas de correlación de Pearson para encontrar la relación que existe entre la variable independiente “demanda futura de servicios dentales” contra las variables dependientes “calidad”, “precios” e “ingreso personal”. La primera hipótesis que se llevo a cabo fue la “demanda futura” (DF) en comparación con la “calidad” (C) de los servicios dentales en Juárez. La hipótesis fue:

$$H_0 : \rho_{DF, C} = 0$$

$$H_A : \rho_{DF, C} \neq 0$$

El resultado de la correlación y prueba se muestra en la Tabla 3 el cual es el resultado directo de la correlación bivariada ejecutada en el SPSS (Statistical Package for Social Sciences, Version 17, 2010). El coeficiente de correlación de Pearson fue de 0.617** cuya relación fue estadísticamente significativa a un alfa de 0.01 con un valor de p de 0.00 ya que el valor de Z_p fue de 13.28 contra una Z_t igual a 2.57 tomada de una muestra de 300.

Tabla 3. Coeficiente de Correlación de Pearson y prueba de hipótesis de ‘Demanda Futura’ y ‘Calidad’

		Correlations	
		CalCdJuarez	DemFutura
CalCdJuarez	Pearson Correlation	1	.617**
	Sig. (2-tailed)		.000
	N	300	300
DemFutura	Pearson Correlation	.617**	1
	Sig. (2-tailed)	.000	
	N	300	300

** . Correlation is significant at the 0.01 level (2-tailed).

El valor de la correlación de Pearson entre las variables Demanda futura y Calidad fue de 0.617 y la prueba de hipótesis entre las dos variables fue significativa a un alfa de 0.01 (SPSS, 17, 2010)

La segunda hipótesis del presente estudio fue la correlación de Pearson entre la variable “Demanda Futura” y “Precio” (P).

$$H_0 : \rho_{DF, P} = 0$$

$$H_A : \rho_{DF, P} \neq 0$$

El valor del coeficiente de correlación de Pearson fue de -0.065 el cual es demasiado bajo para mostrar alguna significatividad estadística por lo que no se rechaza H_0 a un alfa de 0.01 con un valor de p de 0.264 y un tamaño de muestra de 300. Esto significa que aunque suba o baje el precio de los servicios dentales la demanda probablemente no se va a ver afectada.

La tercera hipótesis del presente estudio fue la correlación de Pearson entre la variable “Demanda Futura” e “Ingreso Personal” (IP).

$$H_0 : \rho_{DF, IP} = 0$$

$$H_a : \rho_{DF, IP} \neq 0$$

El valor del coeficiente de correlación de Pearson fue de 0.033 el cual es demasiado bajo para mostrar alguna significatividad estadística por lo que no se rechaza H_0 a un alfa de 0.01 con un valor de p de 0.569 y un tamaño de muestra de 300. Esto significa que aunque los hispanos de El Paso perciban mejores ingresos, la demanda de los servicios dentales en Ciudad Juárez no se va a ver afectada.

Finalmente se quiso probar, si la calidad de los servicios dentales en El Paso (EP) era mejor que la calidad de los servicios dentales en Ciudad Juárez (CCJ) a través de una prueba de diferencia entre dos medias poblacionales independientes. Las hipótesis para ello fueron las siguientes:

$$H_0: \mu_{CCJ} = \mu_{EP}$$

$$H_a: \mu_{CJ} \neq \mu_{EP}$$

El valor de Z_p o Z de prueba fue de -8.16 ** contra una Z_t de +/- 1.96 a un alfa de 0.05, una n de 300 y un valor p de 0.00, lo que probó estadísticamente que las dos medias poblacionales en verdad son diferentes con una probabilidad de 95%. Ello demostró que la media de la calidad de los servicios dentales en El Paso tiene mejor calidad con una media de 3.73 contra una media poblacional de 3.2 de la calidad de los servicios dentales en Juárez.

CONCLUSIONES IMPLICACIONES Y RECOMENDACIONES.

El estudio ayudó a obtener la percepción que tienen los habitantes de El Paso, Texas sobre los servicios dentales que ofrecen los consultorios de Ciudad Juárez, los cuales en general son medianamente buenos, dicho punto positivo, debe ser aprovechado para desarrollar un plan de mejora en la calidad de los servicios dentales, ya que esta variable fue la más alta y la única que fue significativa con respecto a la demanda futura de servicios dentales con una correlación de Pearson de 0.617 ** como se muestra en la Tabla 3. Los dueños de las clínicas de salud oral, deben enfocarse en mejorar sustancialmente el nivel de calidad que actualmente tienen, ya que con ello se puede aumentar considerablemente, el número de pacientes provenientes de la vecina ciudad.

Otra percepción que se escucho de los habitantes de El Paso, Texas fue que la calidad de los servicios dentales en El Paso, son mejores que los de Ciudad, Juárez ya que al comparar sus medias se probó que estadísticamente hablando la media de la calidad de El Paso fue mejor que la media de la calidad de Ciudad Juárez a un 95% y una p de 0.00 mostrado en la Tabla 5.

La contribución más importante del presente estudio fue primero que se encontró que el factor principal de competitividad es la calidad, ya que no solo lo respalda Porter (1994), sino también Deming en sus famosos 14 puntos de la calidad (1986). Segundo, el estudio también detecto diversos nichos de mercado dentro de la población hispana de El Paso, Texas, como los niños, los diabéticos y los fumadores de tabaco, que pueden ser aprovechados por las empresas de servicios dentales de Ciudad Juárez. Tercero, se determino que la principal ventaja competitiva del consultorio dental analizado en este estudio fue la integración de todos los servicios odontológicos en una sola clínica. Finalmente, se detecto que una de las más importantes estrategias competitivas a futuro provendrá de la formación de franquicias y redes de clínicas y consultorios odontológicos en esta localidad.

RESUMEN

El presente trabajo se llevó a cabo con la finalidad de relacionar la Edad, Antigüedad y Nivel de estudios con los factores de satisfacción laboral de los trabajadores operativos de una Pequeña Empresa de la industria metal-mecánica ubicada en Frontera, Coahuila. El estudio se realizó a un consenso de 33 trabajadores, aplicando un cuestionario estructurado, tipo escala de Likert, que consta de 40 reactivos correspondientes a 10 variables; para la fiabilidad del instrumento se utilizó la prueba Alfa de Cronbach, obteniéndose un coeficiente de consistencia interna de 0.89. En base al estudio previo efectuado en la misma empresa, se identificaron los factores de mayor incidencia en la satisfacción de los trabajadores; ahora, en la presente investigación se propuso conocer la relación de las 10 Variables con los factores de Edad, Antigüedad y Nivel de estudios de los operarios, calculando los Coeficientes de Contingencia. Los resultados fueron los siguientes: la Edad se relaciona con las variables Políticas, Beneficios y Comunicación; la Antigüedad reporta asociación con Comunicación, Compañeros y Políticas; mientras que el Nivel de estudios muestra relación con Supervisión, Beneficios, Comunicación y con el Trabajo en sí.

Palabras Clave: Satisfacción laboral y Clima laboral.

ABSTRACT

This work realized to relate age, and education level, job satisfaction factors for operation employees in a small size company for the metal mechanical field, located in Frontera, Coahuila. The study was made it by a consensus of 33 workers, using a structured questionnaire, Likert-type scale, consisting of 40 reagents of 10 variables, the reliability of the test instrument was used Cronbach's alpha, yielding a coefficient of internal consistency 0.89. Based on previous study performed in the same company, identified the factors of greatest impact on worker satisfaction, now in the present research was to determine the relationship of the 10 variables with the age factors, seniority and workers education level, calculating the coefficients of contingency Kendall. The results were: Age is related to the variables Policies, Benefits and Communication; the Age reported association with Communication, Partners and Policies, while the level of studies showed an association with Monitor, Benefits, Communication and Work itself.

KEYWORDS: Job Satisfaction and labor climate.

INTRODUCCIÓN

Las últimas décadas, caracterizadas por una serie de retos y cambios de diferente índole, reflejadas en el ámbito tecnológico, del conocimiento, social y económico, entre otros, las organizaciones deben, responder a interrogantes y adaptarse continuamente, para lograr la supervivencia y al éxito competitivo. La falta de satisfacción laboral inhibe el desarrollo de un trabajo creativo e innovador. Un proceso

relacionado con ello, es el relativo a la motivación laboral. La satisfacción en el trabajo como una actitud se distingue básicamente de la motivación para trabajar, en que ésta última se refiere a la clase y selección de conducta, así como a su fuerza e intensidad, mientras que la satisfacción se concentra en los sentimientos afectivos frente al trabajo y a las consecuencias posibles que se derivan de él. (Weinert, 1985).

El objetivo del presente estudio es relacionar la Edad, Antigüedad y Nivel de estudios, con los factores de satisfacción laboral de los trabajadores operativos de una Pequeña Empresa de la industrial metal-mecánica ubicada en Frontera, Coahuila, denominada “Fabricaciones mecánicas Santoyo” S.A. de C.V., la cual fue fundada en el año de 1972, que a la fecha está conformada por 35 trabajadores; su mercado meta es de tipo industrial.

REVISIÓN LITERARIA

García, D. (2010) menciona que desde 1935, Hoppock realiza las primeras investigaciones sobre la satisfacción laboral; lo que modificó sustancialmente la forma de percibir la relación entre el individuo que trabaja y su actividad laboral. De este modo, el análisis de esta variable se convirtió en un tema recurrente en el estudio del ambiente organizacional debido a sus implicaciones en el funcionamiento de las organizaciones y en la calidad de vida del trabajador.

Dentro del ámbito de las organizaciones, hoy en día existe un interés especial por el desarrollo de la gestión de los recursos humanos. Tanto la motivación como la satisfacción laboral han sido temas objeto de estudio de investigaciones, cuyos resultados han hecho aportaciones significativas para entender el comportamiento organizacional. La satisfacción laboral se constituye en uno de los productos más importantes del trabajo humano al grado de llegarse a afirmar que un trabajador satisfecho tiende a mostrar un mejor desempeño (Barraza & Ortega, 2009, citado por Jaik Dipp et al, 2010) o que un trabajador contento es un trabajador productivo (Atalaya, 1999).

Las características personales juegan un papel decisivo en la determinación de los niveles individuales de satisfacción. Estos están condicionados por la historia personal, la edad, el sexo, las aptitudes, la autoestima, la autovaloración y el entorno sociocultural donde se desenvuelve el sujeto.

Chiang y Ortega (2011) afirman que “se manifiestan una serie de definiciones que hacen referencia a la satisfacción laboral como un *estado emocional, sentimientos o respuestas afectivas*”, expuestas por diferentes autores como son Smith, Kendall & Hulin, 1969; Locke, 1976; Mueller & McCloskey, 1990; Muchinsky, 1993; Newstrom & Davis, 1993; Andresen et al, 2007. Además, agregan que otra concepto de la satisfacción laboral “va más allá de las emociones y es definida como una *actitud generalizada ante el trabajo*”, y al ser considerada una actitud supone “una evaluación que alude simultáneamente al afecto, a la cognición y a las disposiciones conductuales”; algunos autores que exponen esta definición son: Porter, 1962; Beer, 1964; Harpaz, 1983; Griffin & Bateman, 1986; Newstrom & Davis, 1993; Bravo, Peiro & Rodriguez, 1996; Davis & Newstrom, 2002; Robbins, 2004; Lee & Chang, 2008 y Barraza & Ortega, 2009, estos últimos refieren que dicha actitud “se basa en creencias y valores que el trabajador desarrolla de su propio trabajo y que necesariamente influirán de manera significativa en su comportamiento y en sus resultados”.

La motivación, según Espada (2006), citado por Ramírez, et al (2008), “es un factor emocional básico para el ser humano y para cualquier profesional”; estar motivado significa “realizar las tareas cotidianas sin apatía y sin un sobreesfuerzo adicional, aunque para unos el trabajo o las actividades de todo orden pueden representar una carga, para otros es un acicate, un revulsivo y a veces una liberación”. Por lo tanto, la motivación es anterior a la satisfacción al ser previa al trabajo, pero una vez que este se realiza, el grado de satisfacción que reporte influirá en la dinámica interactiva de la motivación; a su vez, ésta, como orientadora de la acción, incide en la satisfacción laboral en tanto se relaciona las expectativas con los

resultados de la conducta laboral y se evalúe su grado como suficiente y satisfactorio. (Ramírez, et al, 2008).

Unas de las teorías motivacionales que nos ayuda a interpretar la satisfacción laboral del personal de la Pequeña empresa objeto de estudio, es la teoría de Motivación e Higiene de Herzberg, quien hace referencia a dos factores: el de *satisfacción o intrínseco* que tienen relación directa con el contenido del puesto de trabajo como son: los ascensos, el trabajo en sí mismo, el sentido del logro, posibilidades de crecimiento, responsabilidad y reconocimiento; y el de *insatisfacción o extrínseco* también denominado *higiénico* se refiere a las condiciones que rodean al individuo al realizar su trabajo y que pueden ser psicológicamente poco saludables para el trabajador, el cual está integrado como: condiciones de trabajo, administración y políticas de la empresa, relaciones interpersonales con los compañeros de trabajo, relaciones interpersonales con el supervisor o jefe inmediato, supervisión técnica, salarios y prestaciones, seguridad en el trabajo, status y vida personal.

En las últimas décadas se ha incrementado el interés por realizar investigaciones que se centran básicamente en el análisis de dos tipos de variables precursoras de la satisfacción laboral, como lo exponen Revuelto y Fernández (2001): a) las características demográficas de los empleados y b) las características del entorno del trabajo. “Entre las primeras se ha estudiado la relación de la satisfacción laboral con la raza, el género, el estado civil, el nivel educativo, la edad, la antigüedad, el trabajo asignado etc., mientras que entre las segundas se han analizado atributos del puesto asumiendo las tesis planteadas por autores como Hackman y Oldham (1980) de que las principales fuentes de satisfacción son intrínsecas al trabajo y se derivan del contenido y del contexto inmediato en que éste se desarrolla”.

Camacho y Arias (2010) realizaron una investigación, cuyo objetivo fue identificar posibles diferencias entre la satisfacción con el trabajo y con el liderazgo, derivadas de algunas variables demográficas comunes: sexo, edad, estado civil, antigüedad, etc. Los resultados fueron que el porcentaje de hombres fue ligeramente inferior al de mujeres; las edades predominantes estuvieron entre 31 y 50 años; la mayoría estaba casada, con escolaridad de nivel profesional; y en cuanto a la antigüedad en la institución estuvo concentrada en tres rangos: 1-5, 5-10 y 10-20 años. El nivel medio de la Satisfacción con el trabajo resultó superior al de la Satisfacción con la supervisión. No se encontraron diferencias significativas por Sexo en ninguno de los dos tipos de Satisfacción. En los demás datos demográficos la Satisfacción con el trabajo produjo una diferencia significativa en cuanto al área de estudios, los profesionales en enfermería fueron los menos satisfechos y los de psicología los más satisfechos. La Satisfacción con el liderazgo reportó dos diferencias significativas: por Antigüedad en el puesto con una tendencia a la baja hasta los 30 años pero ascendente después; por área de estudios volvieron a destacar los profesionales de enfermería como los menos satisfechos; los más Satisfechos fueron los profesionales de la contaduría.

Malik (2011) llevó a cabo un estudio descriptivo-correlacional de los factores que afectan a la satisfacción laboral de 120 profesores de la Universidad de Baluchistanm, según la teoría de Herzberg que comprende factores motivadores e higiénicos. Los sujetos reportan estar satisfechos con su trabajo, sin embargo los trabajadores masculinos muestran estar menos satisfechos que los del sexo femenino. El trabajo en sí mismo fue el aspecto con mayor motivación para el profesorado, el aspecto con menor motivación fue el que se refiere a las condiciones de trabajo. En cuanto a las características demográficas de edad, años de experiencia, rango y grado, se relacionan muy poco al total de satisfacción en el trabajo.

METODOLOGÍA

El diseño metodológico corresponde a una investigación de campo, transversal, de tipo descriptivo y cuantitativa. Para efecto de la recolección de la información se rediseñó un cuestionario en base al JSS, *Job Satisfaction Survey de Spector* (1985), el cual consta de 36 preguntas en 9 variables (4 reactivos de cada variable), agregando una variable denominada *Condiciones del área de trabajo* que contiene 4

reactivos, por considerar que el cuestionario de Spector no incluye dichos aspectos importantes para tomar en cuenta; el instrumento modificado y elaborado para la presente investigación, es tipo escala de Likert, incluye una primera sección que contiene reactivos de datos generales relativos a la edad, género, antigüedad en la empresa, actividad principal, tipo de contratación y nivel de estudios y segunda sección consta de 40 reactivos correspondientes a 10 variables.

Para determinar la confiabilidad del instrumento de medición se realizó un estudio piloto, cuyos resultados fueron sometidos a la prueba de Alfa de Cronbach, obteniéndose un coeficiente de consistencia interna de 0.89. La Muestra se determinó por consenso, una vez tabulados los datos, se calcularon frecuencias, proporciones, Medias, Coeficientes de Contingencia y niveles de significancia, usando el programa SSPS (versión 17.0).

RESULTADOS

Los resultados muestran que existe relación significativa entre la Edad y las variables Políticas, Beneficios y Comunicación, lo cual indica que el trabajador tiene conocimiento y acepta las normas y reglas establecidas en la empresa, muestra conformidad respecto a las prestaciones otorgadas voluntariamente por el patrón, así como los estilos de comunicación predominante con los compañeros y el jefe. Por otro lado, se aprecia que hay una asociación entre la Antigüedad y las variables Comunicación, Compañeros y Políticas, lo cual revela que el trabajador acepta las formas de comunicación y respeta las normas establecidas dentro de la organización, percibiendo adecuadas relaciones con las personas con quienes convive en el trabajo. En cuanto al Nivel de estudios la relación es significativa con la Supervisión, Beneficios, Comunicación y con el Trabajo en sí, indicativo de que considera favorables las formas de comunicación utilizadas en la relación con directivos, jefes y compañeros, que le agrada y se siente orgulloso del trabajo que realiza considerando que este es importante, valorando las prestaciones recibidas.

En los porcentajes no hay diferencia en los tres rangos de Edad en lo que se refiere a la aceptación de reglas, normas y valores establecidos en la empresa. Hay conformidad por los bonos, premios y prestaciones otorgadas por la empresa en los trabajadores maduros quienes están de acuerdo. Las formas de comunicación que se practican con los jefes y compañeros son consideradas adecuadas en mayor proporción por los jóvenes y por los maduros. Relativo a los diferentes niveles de Antigüedad los porcentajes de respuesta de satisfacción fueron mayores al 50% en lo que respecta a la percepción de estilos de Comunicación, de la relación adecuada con los compañeros y de la aceptación de las políticas establecidas en la empresa, la cual resalta el rango de los trabajadores con menos antigüedad, en cuanto a Compañeros predomina el rango de 3 a menos de 5 años de antigüedad, mientras que en la Variable Políticas sobresalen los rangos de menos de un año, de 1 a menos de 3 años y de 5 a menos de 7 años de antigüedad. Y por último, los porcentajes en el Nivel de Estudios en relación con las 4 variables, corresponde a Carrera Comercial y a Técnico los más altos porcentajes de satisfacción con respecto a la forma de ejercer la autoridad, mientras que la conformidad por los bonos y prestaciones proporcionados por la empresa es expresada por el trabajador que no tiene estudios, los que cursaron Carrera Comercial y los que estudiaron una Licenciatura. Están de acuerdo con la forma de comunicación con jefes y compañeros en mayor proporción los que estudiaron Licenciatura y Preparatoria, mientras que el orgullo y el significado del trabajo que hacen lo manifiestan más los que cursaron Carrera Comercial y Preparatoria.

CONCLUSIONES

Por los resultados obtenidos en el presente estudio, se puede concluir que es significativa la relación entre la *Edad* y las siguientes variables: con las políticas establecidas en la empresa, sin que se presente diferencia en las respuestas de aceptación proporcionadas por jóvenes, adultos y maduros; quienes muestran más conformidad por los bonos, premios y prestaciones otorgadas por la empresa son los

trabajadores maduros a diferencia de los jóvenes y los adultos que lo expresan en menor proporción. Las formas de comunicación que se practican con los jefes y compañeros son consideradas adecuadas en mayor proporción por los jóvenes y por los maduros y en un porcentaje menor por los adultos.

De igual manera, la asociación del factor *Antigüedad* es considerada significativa con la variable *Comunicación* resaltando el grado de acuerdo en los trabajadores de menos años en la empresa, con la variable que se refiere a la relación con *los Compañeros* siendo los trabajadores que tienen de 3 años a menos de 5 años de antigüedad quienes la consideran más satisfactoria y, por último, con la variable *Políticas* establecidas dentro de la empresa presentándose más variedad en los rangos de antigüedad en cuanto a su aceptación.

Asimismo, la asociación es significativa y son altos los datos porcentuales en casi todos los *Niveles de estudios* en relación a la variable Supervisión (forma de ejercer la autoridad) en donde la mayor satisfacción la manifiestan los trabajadores que cursaron carrera Comercial y carrera Técnica, así como con la variable Beneficios (bonos, premios y prestaciones otorgadas por la empresa) mostrando mayor conformidad los trabajadores que no tienen estudios, los que cursaron Carrera Comercial y Licenciatura. También expresan acuerdo en mayor proporción los que estudiaron Licenciatura y Preparatoria respecto a las formas de comunicación y, por último, expresan mayor agrado y orgullo por el trabajo que desempeñan el cual consideran importante los que estudiaron Carrera Comercial y Preparatoria.

Al proporcionar retroalimentación a los directivos de la empresa objeto del presente estudio, se entregará un informe con los resultados obtenidos que, en general, son favorables en lo relativo a la satisfacción reportada por los trabajadores. Se incluirá, además, una propuesta con estrategias de mejora, de reforzamiento y/o de cambio así como la recomendación de efectuar un diagnóstico de clima organizacional que complemente el comportamiento de la empresa.

LA ESTRUCTURA ÓPTIMA DE CAPITAL CON RECLAMOS CONTINGENTES

María del Pilar Báez Roa, Universidad Pedagógica y Tecnológica de Colombia
Juan Sergio Cruz Merchán

RESUMEN

Uno de los debates de la investigación de la Economía Financiera se relaciona con la existencia o no de una estructura óptima de capital que aporte valor a la firma. Al respecto varios autores han estudiado el tema sin que aún sea posible un consenso. Por lo que el presente estudio pretende ilustrar desde la línea de las teorías que siguen la existencia de una estructura óptima de capital, un modelo que la determine utilizando los últimos desarrollos de valoración de la deuda, como lo son la teoría de Reclamos contingentes basado en la Teoría de Opciones. Para lo cual se sirve de información de una empresa colombiana.

PALABRAS CLAVES: Estructura de capital óptima, Deuda, Teoría de Opciones, Reclamos contingentes.

ABSTRACT

One of the debates of the research of the Financial Economy relates to the existence or not of an ideal structure of the capital that contributes value to the company. In the matter several authors have studied the topic without yet a consensus is possible. For what the present study tries to illustrate from the line of the theories that follow the existence of an ideal structure of the capital, a model who should determine it using the last developments of valuation of the debt, since they it are the theory of Claims fix quotas based on the Theory of Options. For which it is served information of a Colombian company.

KEY WORDS: optimum capital structure, debt, Theory of Options, Contigent Claim.

LA ASOCIATIVIDAD COMO ESTRATEGIA EMPRESARIAL

Gladys Yaneth Mariño Becerra, UPTC

RESUMEN

El propósito de la investigación fue la conformación de la red de productores de tomate de la provincia de Alto Ricaurte en el departamento de Boyacá. Se concluye que la asociatividad se convierte es una estrategia competitiva para el sector agrícola, se presenta como resultado principal la descripción de la metodología y el modelo de sistema integral de gestión utilizado en el proceso. El trabajo investigativo es de tipo cualitativo, de carácter inductivo, parte del estudio de caso para generalizar sobre variables vinculadas al proceso de conformación de redes empresariales para una actividad agrícola; se privilegió la metodología participación acción.

THE ASOCIATIVITY AS AN ENTERPRISE STRATEGY

ABSTRACT

The research purpose was to establish the tomato producer's chain in the Alto Ricaurte province in the Boyacá department. To conclude, the associativity becomes in a competitive strategy to the agricultural sector, and it presents the main result as a methodology description and model of management integral system used in the process. The research work is qualitative, inductive, it starts of the case study to generalize about variables related to the process of setting up business networks for an agricultural activity, it was favored the methodology action-participation.

PALABRAS CLAVES: Asociatividad, red empresarial, sistema integral de gestión

INTRODUCCIÓN

El artículo presenta resultados del proyecto de investigación “Modelo de asociatividad para generar desarrollo empresarial en Boyacá”, con los resultados, se pretende dar respuesta a uno de los interrogantes que en la actualidad se hacen los empresarios y administradores frente al manejo de una empresa; ¿qué hacer para enfrentar como empresa el fenómeno de la globalización? Las mipyme se han visto enfrentadas a un mercado abierto que ha generado en ellas inseguridad, temor y deseo de hallar soluciones para subsistir. Ante esta situación, pensadores como Michael Porter, Klaus Esser, etc. proponen como solución empresas competitivas, es así, como en el mundo empresarial se han suscitado nuevos modelos de negocio y nuevas tendencias administrativas para lograr competitividad. Dentro de la filosofía de los nuevos modelos de negocio se encuentra como eje central la cooepetencia cuyo significado “*cooperar con la competencia*” refleja la necesidad imperiosa de trabajar en equipo, compartir objetivos empresariales, aunar esfuerzos para conseguir avances tecnológicos, recursos y calidad productiva; por tanto, es urgente un cambio en la cultura empresarial de los ciudadanos, el abandono de la individualidad y pensar en la asociatividad, como mecanismo para lograr desarrollo y progreso.

La nueva dinámica de la economía a nivel mundial que prioriza la competitividad, el uso intensivo de tecnología, el avance de las comunicaciones, la calidad, la normalización de procesos, etc., evidencia la necesidad de replantear el tejido empresarial de las regiones, de tal forma que le facilite a las empresas, como colectivos, acceder a nuevos recursos que les permita competir en forma global. Ante esta nueva realidad, toma sentido el desarrollo de una cultura empresarial basada en unos valores que fundamenten la primacía del bien general, como sector, región o país; frente al bien particular de una unidad económica

individual, en otras palabras, dejar de pensar que la estrategia de éxito es acabar con la competencia sino al contrario, la estrategia es cooperar con la competencia para lograr crecimiento y desarrollo o en el peor de los casos, para subsistir. Para lograr esta cooperación es indispensable el ejercicio transparente y juicioso de la asociatividad como mecanismo de cooperación.

Según Andrés Fernando Ruiz (2001) en su artículo la asociatividad en las Pymes, se entiende por “asociatividad, a un mecanismo de cooperación entre empresas pequeñas y medianas, en donde cada empresa participante, manteniendo su independencia jurídica y autonomía gerencial, decide voluntariamente participar en un esfuerzo conjunto con los otros participantes para la búsqueda de un objetivo común” (pág. 1). Los objetivos comunes pueden ser coyunturales, tales como la adquisición de un volumen de materia prima, o generar una relación más estable en el tiempo a través de la investigación y desarrollo de tecnologías para el beneficio común o el acceso a un financiamiento que requiere garantías que son cubiertas proporcionalmente por parte de cada uno de los participantes. Perego Luis (2003) acerca de la asociatividad como estrategia empresarial plantea:

El esfuerzo conjunto de los participantes en la asociatividad puede materializarse de distintas formas, desde la contratación de un agente de compras o vendedor pagado conjuntamente, hasta la formación de una empresa con personalidad jurídica y patrimonio propio que permita acceder a financiamiento con requisitos de garantías, o para la comercialización de productos.

El término asociatividad surge como uno de los mecanismos de cooperación entre las empresas pequeñas y medianas que están enfrentando un proceso de globalización de las economías nacionales. La globalización económica está redefiniendo los procesos de manufactura al localizar las fábricas en diferentes partes del mundo, abriendo oportunidades pero también significando amenazas para las Pymes, las cuales además de verse presionadas a cambiar sus paradigmas gerenciales (Rosales, 1996) requieren diseñar nuevos mecanismos de interrelación con el entorno. (pág. 16)

Goshs (1996) destaca como características de la asociatividad las siguientes:

- ✓ Permite resolver problemas conjuntos manteniendo la autonomía gerencial de las empresas participantes: cada empresa vinculada toma sus decisiones en forma independiente.
- ✓ Puede adoptar diversas modalidades jurídicas y organizacionales: es aplicable a una amplia gama de posibilidades dentro de las actividades empresariales como el financiamiento, la inversión, y la operación en sí. Además no se dan restricciones de participación por tipo de actividad de las empresas vinculadas.
- ✓ No excluye a ninguna empresa por el tipo de mercado en el cual opera: las características de la asociatividad le otorgan a este mecanismo de cooperación inter-empresas una alta flexibilidad de afiliación, operación y ámbito de acción que puede ser empleado tanto por empresas insertadas en redes verticales u horizontales, o incluso para aquellas que no pertenezcan a ninguna red.
- ✓ Es exclusiva para pequeñas y medianas empresas: es un mecanismo de agregación de intereses orientado a las pymes, contrario a las grandes empresas que ejercen alianzas estratégicas con acuerdos específicos más no colectivos.

RESULTADOS

Proceso Conformación Red Empresarial Con Connotación Territorial

La conformación de una red empresarial se constituye en una estrategia de competitividad a través de la cual empresas independientes se asocian voluntariamente y sin perder su autonomía, trabajan en cooperación para lograr objetivos que solos no lo podrían lograr.

La connotación territorial de una red se asimila a la circunstancia de asociar empresas ubicadas en un área geográfica particular, que aportan con su dinámica productiva a una actividad económica priorizada, y que están dispuestos a posicionarla económica y socialmente. El ejercicio de la asociatividad, y en particular de las redes empresariales posibilita elevar los niveles de competitividad y por ende el desarrollo empresarial. Dentro del proceso metodológico se tuvieron en cuenta los siguientes aspectos:

Contexto De Las Redes Empresariales

Definición del ámbito Territorial de la red: determina el arraigo y procedencia de los miembros de la red, vincula una identidad política, cultural, geográfica y socioeconómica, de tal manera que permite una definición clara de su marco de referencia productivo, en cuanto a potencialidades, ventajas comparativas, limitaciones y deficiencias

Quiénes conforman una red: La conformación de la red requiere de un proceso de promoción y selección riguroso, a través del cual se da a conocer la filosofía de las redes empresariales, se busca la comprensión y aprehensión sobre el tema, se identifican los actores y líderes, y se motiva la participación y compromiso dentro del proceso.

Una adecuada definición de las características de los miembros de la red, permite homogeneidad, prevé la existencia de problemáticas comunes y facilita el logro de visiones compartidas

Generación de confianza: La generación de confianza parte de romper el hielo, es quizá uno de las etapas más exigentes dentro del proceso, en la medida que es el primer paso para la construcción de confianza, se asimila a aquella primera impresión que genera empatía o antipatía. Para el caso del proyecto para la conformación de la red de productores de tomate, este rompimiento del hielo se planteó y realizó en tres etapas:

- ✓ Primera etapa: Acercamiento individual, a través de metodología participación acción, se trabaja con cada miembro interesado, para tener un conocimiento más profundo y focalizado de las expectativas, necesidades y situaciones individuales. Esta etapa permite identificar las potencialidades de cada uno de ellos y para hacer seguimiento y evaluación dentro del proceso de consolidación de la red. Dentro de esta etapa, es de vital importancia plantear claramente la conformación de la red, sus objetivos, alcances y perspectivas, así como las responsabilidades de cada participante.
- ✓ Segunda etapa. Acercamiento grupal, una vez realizado el acercamiento individual, se realiza el acercamiento grupal que consiste en la realización de una serie de actividades, talleres y seminarios que buscan el relacionamiento de los participantes hacia la construcción de confianza.
- ✓ Tercera etapa. Acercamiento externo, hace referencia a las actividades y acciones que propician un relacionamiento de la red, en construcción, con posibles aliados estratégicos. Para el caso del proyecto se realizaron encuentros con posibles clientes.

Una vez roto el hielo, se hace necesario el desarrollo de acciones piloto. Representa el comenzar a asumir riesgos como red, identifica a todas aquellas acciones, actividades o proyectos que son propuestos, organizados y ejecutados por la red, en construcción. Según Dini (2009), estas acciones piloto son pruebas preliminares de hacer negocios juntos, permiten a través de su ejercicio conocerse en la acción, identificar las potencialidades reales en cuanto a compromiso, cumplimiento, interacción, organización y capacidad para cumplir objetivos de corto plazo como grupo

El proceso de planificación estratégica asociativa: Hace referencia al diseño del futuro deseado para la red, a partir del reconocimiento del entorno, sus oportunidades y amenazas; y a nivel interno, la identificación de las capacidades y recursos existentes, definidas como fortalezas y debilidades. Involucra la definición de las metas organizacionales misión, visión, objetivos, estrategias, diseño del negocio, determinación del tipo de organización, definición de la estructura, y determinación de planes de acción a corto, mediano y largo plazo. El proceso y resultado de la planificación estratégica asociativa, es vital para la consolidación de la red, en la medida en que todos sus integrantes sientan que sus expectativas están involucradas, que sus opiniones fueron tenidas en cuenta, que las estrategias diseñadas solucionan sus problemas y que el futuro deseado por cada uno de ellos es posible, se hará más factible.

El proceso de consolidación e independencia.: Es la etapa en la cual la red demuestra su capacidad para actuar por sí sola, requiere del empoderamiento y compromiso de cada uno de los integrantes, y del desarrollo de su autonomía para el cumplimiento de la estrategia propuesta. Se puede considerar como la fase de la implementación de la estrategia. El fin último de esta fase es la independencia, donde la red no requiere del acompañamiento de instituciones, consultores u otros agentes externos a ella.

Evaluación del proceso asociativo: Es importante realizar seguimiento y evaluación al proceso asociativo, para efectos de realizar ajustes e identificar aspectos sobre los cuales hay que enfatizar. Una herramienta utilizada es el test de habilidades proasociatividad, a través del cual se busca conocer la percepción de los miembros del grupo con respecto al clima de trabajo, expectativas y sentir sobre la participación y el liderazgo. Otra herramienta para evaluar el proceso asociativo consiste en analizar, bajo criterios de cohesión, organización, autodiagnóstico, planificación, capacidades productivas, capacidades económicas y relación con el entorno, los avances, logros y aspectos a mejorar dentro del proceso de conformación de la red; los cuales dan una visión integral de la solidez y viabilidad de la red.

Sistema Integral De Gestión Para Generar Competitividad

De manera paralela, es importante que la red estructure un sistema integral de gestión que le facilite desarrollar su actividad y elevar su nivel de competitividad.

Estrategia: En primer lugar, y como resultado del proceso de planificación estratégica asociativa, está la definición de la estrategia que se constituye en el eje central. Se entiende la estrategia como la definición de un futuro, el camino para lograrlo y la apropiación filosófica del proceso. El futuro comprende la concepción de la misión, visión, valores y definición del negocio, el camino lo determinan las estrategias, objetivos, metas y planes de acción y, la filosofía la interiorización colectiva que le da la razón de ser. La estrategia permite definir el rumbo de la empresa, orientar claramente las acciones, tomar decisiones con mayor racionalidad y efectividad, identificar y apropiar ventajas competitivas y, hacer seguimiento y control a su desempeño. Con la orientación de la estrategia, se construyen las estrategias funcionales, o ejes de acción, con visión sistémica:

CONCLUSIONES

El proceso para la conformación de redes es un reto, pues se convierte en una dinámica de replanteamiento social y colectivo que se basa en la construcción de confianza, en la revaluación de

paradigmas con respecto a la asociatividad y el trabajo en equipo; en un repensar proyectos de vida individuales y su relación con el quehacer cotidiano, pero sobre todo, en creer que la realidad se puede cambiar, y que cada individuo (empresa) posee potencialidades distintas que aportan para la construcción de un todo pero que a la vez se convierte en el elemento diferenciador, capaz de construir futuro. En un lapso de diez meses, se llegó hasta la etapa de la planificación estratégica asociativa y se logró la firma de un acta de voluntades, por parte de 14 productores, para constituirse formalmente como empresa

La metodología descrita y desarrollada a través del proyecto de investigación es aplicable a cualquier tipo de organizaciones, el factor diferenciador lo define el contexto en el que interactúa; las características de liderazgo, capacidad directiva y visión de los socios. Dentro del proceso de conformación de redes empresariales, se intervienen comunidades, se promueve un proceso de reflexión hacia autorreconocimiento como persona, como productor y como miembro de una organización, en un escenario de fuertes presiones por la competitividad. Cada miembro de la comunidad intervenida construye su auto concepto y un concepto de la comunidad que lo influye, comprende sus posibilidades para transformar la realidad propia y determina las acciones que debe emprender en el presente para provocar el futuro que desea. Producto de acciones conjuntas, de interacción y reflexión, sistemáticas y controladas se logra un nivel de afectividad y confianza entre los miembros, lo cual conduce a la consideración de que deben y pueden resolver juntos problemas comunes.

A nivel de estrategia, se construyó de manera colectiva la plataforma estratégica y funcional para la red. Se articuló el diseño organizacional, el modelo de negocio y plan de acción para implantar la estrategia. A partir del desarrollo metodológico para la conformación de la red y la aplicación paralela del sistema integral de gestión se obtuvieron resultados, de tipo empresarial, que fundamentan el valor y la importancia de la cooperación y la asociatividad como estrategia de competitividad. Los logros se convierten en herramientas gerenciales para toma de decisiones.

DISEÑO E IMPLEMENTACION DEL SISTEMA DE ADMINISTRACION DE RIESGO PARA EL LAVADO DE ACTIVOS Y LA FINANCIACION DEL TERRORISMO

CASO INTERRAPIDISIMO

Fidela de Jesús Chaparro Gómez, UPTC

Gladys Yaneth Mariño Becerra, UPTC

RESUMEN

INTERRAPIDISIMO S.A., consciente de la importancia de prevenir la utilización del servicio Giro Postal Nacional (GPN) para el lavado de activos y/o la financiación de terrorismo, dentro de un proceso de autorregulación y de responsabilidad social, adoptó voluntariamente un sistema para la prevención y control del LAFT acorde a la naturaleza de la Línea de servicio que se desea implementar. A través de la investigación se desarrollo el proceso que obtuvo como resultado el Manual de Procedimientos de prevención y control del lavado de activos y de la financiación del terrorismo SARLAFT. La investigación fue cualitativa, se enfocó en el estudio de caso, de carácter descriptivo determinó la situación actual de la empresa Inter Rapidísimo, para analizar las variables necesarias para el diseño e implementación del SARLAFT. Se utilizó la metodología participación acción, a través de encuestas, entrevistas y trabajo conjunto con los directivos, empleados y clientes de la empresa, se diseño el modelo y a medida que la empresa tomó las decisiones se inició la implementación, se realizaron jornadas de capacitación y entrenamiento.

DESIGN AND IMPLEMENTATION OF A SISTEM OF RISK ADMINISTRATION FOR THE MONEY LAUNDERING AND TERRORISM FINANCING, INTERRAPIDISIMO CASE

ABSTRACT

INTERRAPIDISIMO SA, aware of the importance of preventing the use of the National Postal Service (GPN) for money laundering and / or financing of terrorism, in a process of self-regulation and social responsibility, voluntarily adopted a system for prevention laft and control according to the nature of the line service to be implemented. Through the research process was developing as a result the Manual of Procedures for prevention and control of money laundering and terrorist financing SARLAFT. The research was qualitative, focused on the case study, descriptive determined the current status of Inter company very quickly, to analyze the variables needed for the design and implementation of SARLAFT. Methodology was used action participation through surveys, interviews and working with managers, employees and customers of the company, designed the model and as the company took the decision began the implementation, training sessions were conducted and training.

INTRODUCCION

El lavado de activos, la financiación del terrorismo y el afianzamiento de las redes delictivas, representan una gran amenaza para la estabilidad del sistema financiero y la integridad de los mercados a nivel global, razón por la cual Colombia a través de la ley 1121 de 2006 regulo la tipificación del delito de la financiación del terrorismo y modifico el régimen penal y administrativo del lavado de activos, esta ley junto con las normas internacionales, obligan a las empresas del sector real a convertirse en sujetos obligados frente a la prevención y control del lavado de activos y financiación del terrorismo. En este

contexto, la presente investigación busco como objetivo la implementación del sistema de administración del riesgo de lavado de activos y financiación del terrorismo SARLAFT en la empresa Inter Rapidísimo. La investigación es cualitativa, se enfoca en el estudio de caso. Se realizó un estudio de carácter descriptivo que determinó la situación actual de la empresa Inter Rapidísimo, para analizar las variables necesarias para el diseño e implementación del SARLAFT.

La Gestión Del Riesgo

Reto Gallati 2003 define el riesgo como “una condición en la cual existe una probabilidad de desviación del resultado deseado que se espera o se esperaba” (Pág. 8), por lo anterior con el fin de evitar esa desviación en los resultados de los objetivos es necesario realizar un proceso que permita identificar acontecimientos posibles y aplicación de medidas destinadas a reducir la probabilidad o impacto de esos acontecimientos este proceso es definido como la gestión del riesgo, con el fin de dar un instructivo a los colombianos para la gestión del riesgo, el Instituto Colombiano de Normas Técnicas ICONTEC como órgano de normalización nacional, estableció la Norma Técnica Colombiana NTC5254 la cual trata de la gestión del riesgo y tiene por objeto proporcionar una guía para permitir que las empresas públicas, privadas, o comunitarias, los grupos y, los individuos logren las siguientes condiciones:

1. Una base más rigurosa y confiable para la toma de decisiones y planificación.
2. Mejor identificación de las amenazas y oportunidades.
3. Generar valor a partir de la incertidumbre y la vulnerabilidad.
4. Una gestión proactiva y no reactiva entre otras.

Sistema De Administración Del Riesgo De Lavado De Activos Y Financiación Del Terrorismo Sarlaft

El lavado de activos y la financiación del terrorismo son dos riesgos a los que se encuentran sometidas las empresas de todos los sectores de la economía, la Superintendencia Financiera a través de la circular externa 022 de 2007 define el riesgo de lavado de activos y financiación del terrorismo como: “la posibilidad de pérdida o daño, que puede sufrir una entidad vigilada por su propensión a ser utilizada directamente o a través de sus operaciones, como instrumento para el lavado de activos y/o canalización de recursos hacia la realización de actividades terroristas, o cuando se pretenda el ocultamiento de activos provenientes de dichas actividades. El riesgo de LA/FT se materializa a través de los riesgos asociados, estos son: el legal, reputacional, operativo y de contagio, a los que se expone la entidad, con el consecuente efecto económico negativo que ello puede representar para su estabilidad financiera cuando es utilizada para tales actividades.”(Pág.4) Ante este riesgo se ha diseñado el Sistema de Administración del Riesgo de lavado de Activos y Financiación del terrorismo SARLAFT el cual es definido por Fiducoldex como “un conjunto integrado de elementos referidos como políticas, procedimientos documentación, estructura organizacional, órganos de control, infraestructura tecnológica, divulgación y capacitación relacionada con el tema, a través de los cuales las empresas responden a la amenaza de ser utilizadas para practicas delictivas como el LA/FT” (Pág.1) La circular No 002 de 2007 de la Superintendencia Financiera Este sistema para su implementación en empresas tiene 4 etapas a saber:

1. *Identificación del riesgo*: El SARLAFT debe permitir a las entidades identificar los riesgos de LA/FT inherentes al desarrollo de su actividad. Esta etapa debe realizarse previamente al lanzamiento de cualquier producto, la modificación de sus características, la incursión en un nuevo mercado, la apertura de operaciones en nuevas jurisdicciones y el lanzamiento o modificación de los canales de distribución. Para identificar el riesgo de LA/FT las empresas deben como mínimo: Establecer las metodologías para la segmentación de los factores de riesgo, Con base en las metodologías establecidas en desarrollo del literal

anterior, segmentar los factores de riesgo, Establecer las metodologías para la identificación del riesgo de LA/FT y sus riesgos asociados respecto de cada uno de los factores de riesgo, Con base en las metodologías establecidas en desarrollo del literal anterior, identificar las formas a través de las cuales se puede presentar el riesgo de LA/FT.

2. Medición o Evaluación: Concluida la etapa de identificación, el SARLAFT debe permitirle a las entidades vigiladas medir la posibilidad o probabilidad de ocurrencia del riesgo inherente de LA/FT frente a cada uno de los factores de riesgo, así como el impacto en caso de materializarse mediante los riesgos asociados. Estas mediciones podrán ser de carácter cualitativo o cuantitativo. Para medir el riesgo de LA/FT las entidades deben como mínimo: Establecer las metodologías de medición o evaluación con el fin de determinar la posibilidad o probabilidad de ocurrencia del riesgo de LA/FT y su impacto en caso de materializarse frente a cada uno de los factores de riesgo y los riesgos asociados. Aplicar las metodologías establecidas en desarrollo del literal anterior, para realizar una medición o evaluación consolidada de los factores de riesgo y los riesgos asociados.

3. Control: En esta etapa las empresas s deben tomar las medidas conducentes a controlar el riesgo inherente al que se ven expuestas, en razón de los factores de riesgo y de los riesgos asociados.

4. Monitoreo: Esta etapa debe permitir a las entidades vigiladas hacer seguimiento a los perfiles de riesgo y, en general, al SARLAFT, así como llevar a cabo la detección de operaciones inusuales y/o sospechosas. Para monitorear el riesgo de LA/FT las empresas deben como mínimo: Desarrollar un proceso de seguimiento efectivo que facilite la rápida detección y corrección de las deficiencias en las etapas del SARLAFT. Realizar el seguimiento del riesgo inherente y residual de cada factor de riesgo y de los riesgos asociados, realizar el seguimiento del riesgo inherente y residual consolidado. La consolidación debe darse entre los factores de riesgo y los riesgos asociados, asegurar que los controles sean comprensivos de todos los riesgos y que los mismos estén funcionando en forma oportuna y efectiva, establecer indicadores descriptivos y/o prospectivos que evidencien potenciales fuentes de riesgo de LA/FT, Asegurar que los riesgos residuales se encuentren en los niveles de aceptación establecidos por la empresa.

Presentacion Y Analisis De Los Resultados

A continuación se presentan los resultados del desarrollo de los objetivos, se plantea la matrices de identificación, valoración y definición de riesgos a nivel geográfica en Colombia, la matriz de factor de riesgo personas y la propuesta del Manual de Procedimientos de prevención y control del lavado de activos y de la financiación del terrorismo SARLAFT. El formato de presentación de ciñe a los requerimientos de la norma para tal fin.

Matriz De Riesgo Inherente- Areas Geograficas - Inter Rapidísimo S.A.

Para la definición de la matriz de riesgo inherente según áreas geográficas para Inter Rapidísimo, se determinaron las medidas cualitativas de consecuencia o impacto que pueden afectar a la empresa, se definieron los niveles de riesgo y la probabilidad de ocurrencia. Con esta información se calificó. Ver Cuadro 1, 2, 3

Luego se procedió a realizar el levantamiento de la información de la matriz de riesgo por zonas geográficas dentro de Colombia, para determinar el nivel de riesgo. Se determinaron los criterios que se constituyen en actividades, evidencias o reportes que dan muestra de la existencia de actividades relacionadas con el lavado de activos y el terrorismo, de acuerdo a estos criterios se analizo que eventos o circunstancias podrían afectar el riesgo dentro de la operación de la empresa Inter Rapidísimo y las causas por las cuales se podrían presentar. Así mismo se determino el impacto de la ocurrencia del evento de

riesgo, la probabilidad de su ocurrencia, y el peso relativo de cada uno de los criterios. Con esta información cuantificada se determino el riesgo inherente, calculando el promedio ponderado, realizando la sumatoria de la multiplicación del valor de la probabilidad con el peso relativo, de cada criterio. En el Cuadro No. 4. Se presenta el ejemplo para el departamento del Amazonas,

Cuadro No 1: Medidas Cualitativas de Consecuencia o Impacto

Descriptor	Ejemplo de descripción detallada	Rango
Bajo	BAJO: Baja pérdida o daño. Puede ser susceptible de una amonestación o sanción moderada de la autoridad competente, de índole pecuniario. No causa indemnización de perjuicios. No causa pérdida de clientes o disminución de ingresos por desprestigio, mala imagen o publicidad negativa. No causa daño a la integridad económica de INTER RAPIDÍSIMO S.A.	0-30
Medio	MEDIO: Pérdida o daño medio. Puede ser susceptible de una sanción más estricta de la autoridad competente de índole pecuniario. Poca o media probabilidad de procesos penales. Baja o media probabilidad de indemnización de perjuicios. Poca o media probabilidad de pérdida de clientes, disminución de ingresos por desprestigio, mala imagen o publicidad negativa. Puede producir efecto contagio entre empresas o entidades relacionadas.	31-60
Alto	ALTO: Alta pérdida o daño. Puede ser susceptible de cuantiosas multas de la autoridad competente y estrictas sanciones de suspensión, inhabilitación o remoción de administradores, oficial de cumplimiento y otros funcionarios. Alta probabilidad de procesos penales. Alta probabilidad de pérdida de clientes, disminución de ingresos por desprestigio, mala imagen o publicidad negativa. Puede colocar en peligro la solvencia de la entidad. Puede producir efecto contagio en el sector y afectar otros sectores económicos.	61- 100

Cuadro No. 2. Medidas Cualitativas de Probabilidad

Nivel	Descriptor	Rango
Bajo	RARO: Baja probabilidad de ocurrencia	1%-30%
Medio	POSIBLE: Media probabilidad de ocurrencia	31%-60%
Alto	MUY PROBABLE: Alta probabilidad de ocurrencia	61-100%

Cuadro No. 3. MEDIDAS RIESGO INHERENTE

Nivel	Descriptor	Rango
Bajo	RIESGO BAJO	1-30
Medio	RIESGO MEDIO	31-60
Alto	RIESGO ALTO	61-100

Matriz De Factor De Riesgo Personas

Teniendo en cuenta la importancia de realizar el análisis de riesgo a las personas que intervienen en la operación de la empresa, se diseño la matriz de factor de riesgo específico para empleados, dentro del proceso de Gestión Humana, subproceso selección y vinculación de personal. Contempla los requisitos, selección, promoción y vinculación de personal. La matriz se elaboró teniendo en cuenta las siguientes etapas: Etapa de identificación del riesgo, Etapa de evaluación de riesgo inherente, Etapa de control, Etapa de evaluación de riesgo residual, Plan de acción - plan de tratamiento, Auditoria y seguimiento al plan de acción, Evaluación de riesgo residual y Etapa de monitoreo

Manual De Procedimientos De Prevención Y Control Del Lavado De Activos Y De La Financiación Del Terrorismo Sarlaft

En el manual de procedimientos de prevención y control del lavado de activos y de la financiación del terrorismo SARLAFT, se concreta lo relacionado con: Políticas generales del sistema de prevención y control del la/ft, Estructura organizacional, Órganos de control, Infraestructura tecnológica, Procedimientos, mecanismos e instrumentos del sistema de prevención y control del la/ft en Inter Rapidísimo s.a., Procedimientos frente a las personas a través de las cuales Inter Rapidísimo s.a., presta el servicio de giro postal nacional, Documentación, Divulgación de la información y reportes externos e

internos, Capacitación, Plan de comunicación, Divulgación del manual y Procedimientos para la sanción de eventuales incumplimientos del sistema de prevención y control del la/ft.

CONCLUSIONES

El Sistema de Administración del riesgo del lavado de activos y financiación del terrorismo, es una herramienta gerencial fundamental para Inter Rapidísimo, dado que su operación es susceptible para este tipo de riesgo, y es evidente que su implementación redundará en un mayor control y eficiencia en el manejo de la información. Del análisis y evaluación del riesgo inherente, es relevante la ubicación geográfica del punto de recepción, se pudo determinar que los departamentos que representan mayor riesgo para Inter Rapidísimo son Meta, Arauca, Guaviare y Putumayo, y los de menor riesgo Boyacá, Sucre y Cundinamarca. Se identificaron 6 criterios y 6 riesgos potenciales dentro de la operación de Inter Rapidísimo. La incidencia de cada uno de ellos presenta un comportamiento irregular, dependiendo de la ubicación geográfica. La participación activa de propietarios, empleados y clientes en el proceso del diseño del SARLAFT, es garantía de su apropiación y validez. La implementación del SARLAFT en Inter Rapidísimo contribuye socialmente al país, se constituye en un ejemplo de transparencia y pertinencia en el manejo de los recursos. La adopción del SARLAFT en una organización obliga la creación de toda una estructura que soporte su funcionamiento y responda a las exigencias legales a nivel interno y externo. El SARLAFT, requiere de un compromiso decidido en valores principalmente por parte del personal, los procedimientos de selección, vinculación y promoción juegan papel fundamental para garantizar el éxito del proceso.

LA GESTIÓN DE INVENTARIOS EN LA CADENA DE VALOR DE LAS MICRO EMPRESAS

Suly Sendy Pérez Castañeda, UAEH, ESCS, México

María Magdalena García Bravo, UTTT, México

Lourdes Gabriela Quiroz Salas, UTTT, México

Dorie Cruz Ramírez, UAEH, ESCS, México

RESUMEN

Dada la importancia que las micros empresas fabricantes de ataúdes representan para la economía local y regional de Tlaxcoapan, Hidalgo, México, aunado a su proceso de transformación artesanal que le da mayor valor a estos productos, es indispensable la adopción de políticas gerenciales destinadas a la gestión de inventarios, como uno de los elementos fundamentales para garantizar la continuidad de las operaciones. Bajo este contexto, el objetivo de esta investigación fue buscar alternativas de mejoramiento administrativo para el activo de mayor inversión en este tipo de empresas, lo cual se hizo a través de un estudio de caso de la empresa Ataúdes San Pedro, bajo el enfoque de cadena de valor. La metodología empleada fue de tipo descriptiva, transversal y de campo.

Los primeros resultados indican que la empresa utiliza inventarios en las distintas fases de su cadena de valor; que las políticas de planificación y control para este rubro son flexibles y que existe una gestión irregular de los inventarios durante la cadena productiva; adicionalmente, las políticas de inventarios no están sistematizadas de forma precisa para su cumplimiento, más bien están determinadas por la experiencia del personal en la fabricación de ataúdes.

INVENTORY MANAGEMENT IN THE VALUE CHAIN OF MICROBUSINESS

ABSTRACT

Because of the importance of the micro manufacture business of coffins in the local and regional economy of Tlaxcoapan, Hidalgo, Mexico, coupled with its recognized traditional transformation process, is essential to adopt management policies aimed at inventory management as one of the key elements to ensure continuity of operations. In this context, the objective of this research was to find alternatives for management improvement for the greatest investment in this kind of business, which was done through a case of study of San Pedro Company, under the value chain approach. The methodology was descriptive, transversal and field.

Early results indicate that de company uses inventories at different stages of its value chain, that the planning and control policies for this ítem are flexible and there is mismanagement of inventories during the production chain; additionally, inventory policies are not systematic accurately for compliance, rather are determined by staff experience in the manufacture of coffins.
