A unit increase in the number of ships used by the navy to patrol the waters surrounding the conflict areas tends to reduce the number of insurgents by 225, holding all other variables constant. This may indicate that navy ships and personnel, although not directly involved in the armed conflict against insurgents, act as a deterrent—the presence of navy ships in the area may hinder the movement of rebels from island to island, limiting their options and effectively blocking their escape routes as government forces advance. This may force some insurgents to decamp and join the civilian population in the area in order to evade capture by the advancing army or marines. The presence of navy ships in conflict areas could also deter individuals from joining the insurgency, making recruitment more difficult, which eventually reduces insurgency strength as death and attrition take their toll on the insurgents.

CONCLUSION AND POLICY IMPLICATION

This article explored the external factors, composed of socioeconomic variables, and internal forces, composed of military-related variables, that impact armed insurgency in the Philippines. Overall, the results indicate that the counterinsurgency efforts of the government should involve both socioeconomic

development and military intervention, especially in the affected areas, to sustain, and perhaps win, the fight against insurgency.

Socioeconomic variables, such as self-rated poverty and per capita real personal consumption, have a significant impact on insurgency strength—a thousand pesos increase in per capita real personal consumption reduces the number of insurgents by 22 while a percent increase in self-rated poverty increases the number of insurgents by 644, holding all other variables constant. A more prosperous and equitable society, then, tends to reduce the number of insurgents, indicating that the Philippine government should endeavor to make socioeconomic mobility and development accessible to all.

Military-related variables, such as the budget of the armed forces and the number of its staff, army armored vehicles and non-armored trucks, and navy ships, significantly impact the number of insurgents—army armored vehicles and navy ships have the greatest impact, reducing the number of insurgents by 736 and 225, respectively. These findings support the military's modernization program to improve its war fighting capability and run a more effective and efficient counterinsurgency campaign.

Although the findings indicate that the programs and strategies of the government and the military to defeat armed insurgency are effective, the huge amount of resources involved in the fight against insurgency suggests that the military is rather inefficient. This trend may not be sustainable in the long run because the Philippines should devote more of its resources to socioeconomically productive activities, such as investments in human capital, tourism and infrastructure development, to effect a more inclusive, prosperous and equitable society, which may be the best deterrent against the armed insurgents' recruitment activities and expansion.

TAXATION THEORIES: DOES THE ISSUE OF HUMAN RIGHTS ARISE?

Puseletso Letete, University of South Africa

ABSTRACT

Taxation as a study of both economics and law has recently gained widespread interest and appealed to many students of law. These studies of taxation tend to ignore how issues of human rights norms (which arise in some of the approaches which are used to determine payment of tax) relate to the basic notions and theories of taxation (Lang 2007). The argument is that the development of taxation principles or approaches may be seen to diminish the ability of individuals, especially those with few resources, to freely determine their political status and freely pursue their economic, social and cultural development in terms of Article 1 (1) of the International Covenant on Civil and Political Rights. The article looks at the extent to which the taxation theories which are discussed can have an impact on individual's rights and how this can be addressed.

JEL: K10, K34

KEYWORDS: taxation theories; human rights; value added tax

INTRODUCTION

This article is intended to look at the basic principles of taxation; the theories which underlie the choice between income based taxation and sales expenditure taxation as types of tax systems; and the arguments which dominate the issue of the shift from direct taxation to indirect taxation. This is particularly influenced by recent developments in taxation which relate to the widespread implementation and support of value added tax (VAT- which is a type of indirect taxation) around the world.

The article further examines how human rights norms relate to taxation and how such issues can be approached within the context of taxation.

THEORETICAL BACKGROUND

Taxation is a concept which is used to refer to the means of transferring tax to government. There are different ways of undertaking the transfer of tax to government and these methods are discussed with the relevant theories. The objectives of taxation are to raise revenue for essential public financed activities and structures by the government 'without reverting to excessive public sector borrowing' (James and Nobes, 1999/2000). Secondly, taxation is used to relieve inequalities of income and wealth which may result in class differences amongst the public. Thirdly, taxation is intended to achieve neutrality in gathering resources for governments. In this sense taxation is used to ensure that the tax system as far as it is possible minimizes interference in the process of allocation of resources (Tanzi and Zee, 2001). Neutrality should be understood to mean that the tax system is not discriminatory between different kinds of taxpayers. The fourth objective of a tax system is simplicity (Emslie ed, 1994). The obligations arising from the tax system should be clear and transparent. When a tax system is simple and its administration requirements are clearly set out, it is easier to comply from the taxpayers' perspective (Hoffmann, 2003).

The various objectives of a tax system in different jurisdictions should be guided by measures which do not 'deviate substantially from international norms' and practices' as argued by Tanzi and Zee (2001). A

tax system has to take into consideration the following principles; equity, efficiency, neutrality, and certainty (Smith, 1872).

THEORIES OF TAXATION: TWO CONFLICTING THEORIES

There are two schools of thought which underlie this debate. The first school of thought supports the theory that income should be used as the indication of ability to pay tax. This is called the 'ability to pay' theory. The second school of thought is the 'benefit theory'. This theory supports the use of expenditure as the measure of an individual's ability to pay tax (Kay and King, 1990).

The Ability to Pay Theory

This theory requires that for a given level of public expenditure, the total cost of financing it should be divided among individuals according to their 'ability to pay'. This ability to pay is guided by the income which an individual earns and that determines their contribution towards public expenditure. The common measure of ability to pay is income though it is also possible to consider the use of expenditure and wealth of an individual in determining their ability to pay tax. This indicates that 'ability to pay' is measured in terms of monetary resources of an individual in the sense that income, expenditure and wealth are an indication of the use of resources which can be expressed in monetary terms.

The other school of thought in support of ability to pay theory supports the use of expenditure rather than income as a test of ability to pay. The taxpayer's ability to pay is measured by spending his earnings. This means the level of a taxpayer's expenditure is the determining factor as to whether the taxpayer is liable to pay tax or not. The fact that the taxpayer may not have income is not relevant. Tax liability arises only from expenditure taxes such as VAT which is paid by the consumer on all taxable goods and services. This means that the taxpayer who enjoys spending most of his income earnings is disadvantaged, whereas one who saves his income is likely to escape taxation according to this school of thought.

The Benefit Theory

The traditional approach towards determining the choice of the tax base was that the amount of tax which the individual has to pay has to be related to the benefit that he derives from public expenditure. According to this theory, it is crucial to determine the benefit(s) which an individual derives from the services provided by the public sector. This will be used as a guidance to determine the tax they have to pay on the basis of what they get from the public benefits. (This approach supports the theory that expenditure should be the means towards determining tax liability.)

DOES THE ISSUE OF HUMAN RIGHTS ARISE IN THE APPLICATION OF THESE THEORIES? ANALYSIS OF THE THEORIES

The analysis of the theories revolves around the notions of efficiency and equity and how those relate to the issue of human rights. Efficiency in this context refers to whether the tax enhances or diminishes the overall welfare of those who are taxed. The question here is whether individuals are under any obligation to transfer their resources to states. Any attempt to raise revenues results in a transfer of resources from individuals to states. Does this obligation not hamper the human right of an individual to choose whether to contribute or not to the resources of a state? What about the issue of whether an individual can actually 'afford' or is 'able' to contribute to the state's resources?

In view of the benefit theory, it can be argued that since this theory depends on the benefits the individual derives from the service, it will be relevant to examine the fundamental human rights instrument on whether one is mandated to contribute to the resources of a state. On this issue of the interrelationship

between taxation and human rights, Christians provides that, “we may begin with a premise that whether human rights principles ought to inform tax policy choices depends on whether the UDHR, the ICCPR, the ICESCR, or other human rights principles or agreements impose requirements or restrictions on the way states impose taxation. According to Christians (2009) an examination of these documents reveals that none contain any explicit structures on tax policy per se.

The major difference between these theories is seen in their treatment of saving. Under expenditure (consumption) tax, ‘consumption incurs the same tax liability regardless of the year in which the individual chooses to use and spend. On the other hand income tax is criticised for discriminating against saving because it results in the double taxation of savings. Savings under income tax is initially taxed as part of income in the year when it is earned and paid out to the taxpayer. This income is taxed again as part of savings (and interest thereof) in later years and classified as income to the taxpayer. Relating VAT to this argument, taxation only takes place on the use or consumption of an item.

CONCLUSION

This discussion reveals that there are different types of taxation systems which are underpinned by the two theories of income based and sales expenditure taxation. These types of taxation are influenced by the ability to pay theory and the benefit theory. This paper raises challenging issues on how to determine liability to payment of tax, whether the ‘ability to pay’ approach or the ‘benefit’ approach should be adopted. The discussion uses the examples of determining liability to tax with the use of an income tax and VAT as examples. The article also draws attention to the issue of human rights which is raised by the application of these two theories. It concludes that there is a need to consider the human rights of individuals with reference to international human rights standards and instruments in regard to taxation theories.

HOW TO USE BEHAVIORAL SCIENCE TO ENHANCE THE FUNCTIONING OF YOUR BUSINESS

Douglas A. Johnson, Western Michigan University

ABSTRACT

Behavioral science is the study and application of why people behave the way that they do. All aspects of business involve human behavior, yet an understanding of this critical topic is rarely included in managerial training. The implications of behavioral science for the management of employees and other business practices are discussed, including the drawbacks of simply trying to find the right person for the job. Alternatives will be proposed that involve creating high performers using the pre-existing employees within the organization. This paper highlights how to utilize well-established principles of human psychology to ensure training outcomes can be sustained, including factors such as aligning training and daily performance, picking the best targets for training, the pitfalls behind attractive new technologies for training, and why training can never be a final solution. Also included will be guidelines on how to use goals and measurement to drive the performance of employees rather than drive them away from the organization, with an emphasis on solutions that are cost and time efficient. Finally, the shortcomings of common incentive systems and motivational approaches will be reviewed, concluding with a discussion of how these strategies can be fixed through the proper application of behavioral science.

CULTURAL RECEPTIVITY: PREDICTING CONSUMPTION IN THE INTERNATIONAL BEVERAGE MARKET

Charles Lanier, North Carolina Department of Public Instruction
Mary Kirchner, Methodist University

ABSTRACT

The purpose of this study was to further explore the potential of the Hofstede paradigm as a predictor, and to uncover some meaningful interaction effects. Hofstede's Cultural Dimensions as predictors, rather than correlates, of consumer behavior at the national level are presented and discussed as an example. Potential for methodological application cuts across many fields.

National cultures and volume consumed were studied in these empirical analyses of the international beverage market. The purpose was to discern patterns of variability in nations' receptivity to products offered by The Coca-Cola Company, as predicted by Hofstede's six Cultural Dimensions, urbanization, and income using regression analyses. Results indicated that, including Hofstede's recently published dimension of Indulgence Versus Restraint (IVR), cultural dimensions alone predicted up to 63% of the variability in volume consumed. Predictive models containing Uncertainty Avoidance Index (UAI), Individualism (IDV), and variable interactions were worthy challengers to models including urbanization, a known correlate with product distribution and advertising.

This research should be of particular interest to any multi-national company, marketing researchers or practitioners, psychologists, sociologists, and behavioralists interested in the cultural context of acceptance. Results for BRIC countries, Mexico, Indonesia, and other nations were discussed.

KEYWORDS: Culture, Coca-Cola, Coke, Consumption, Equation, Hofstede, International, Marketing, Predict, Regression

TITLE: Cultural Receptivity: Predicting Consumption in the International Beverage Market

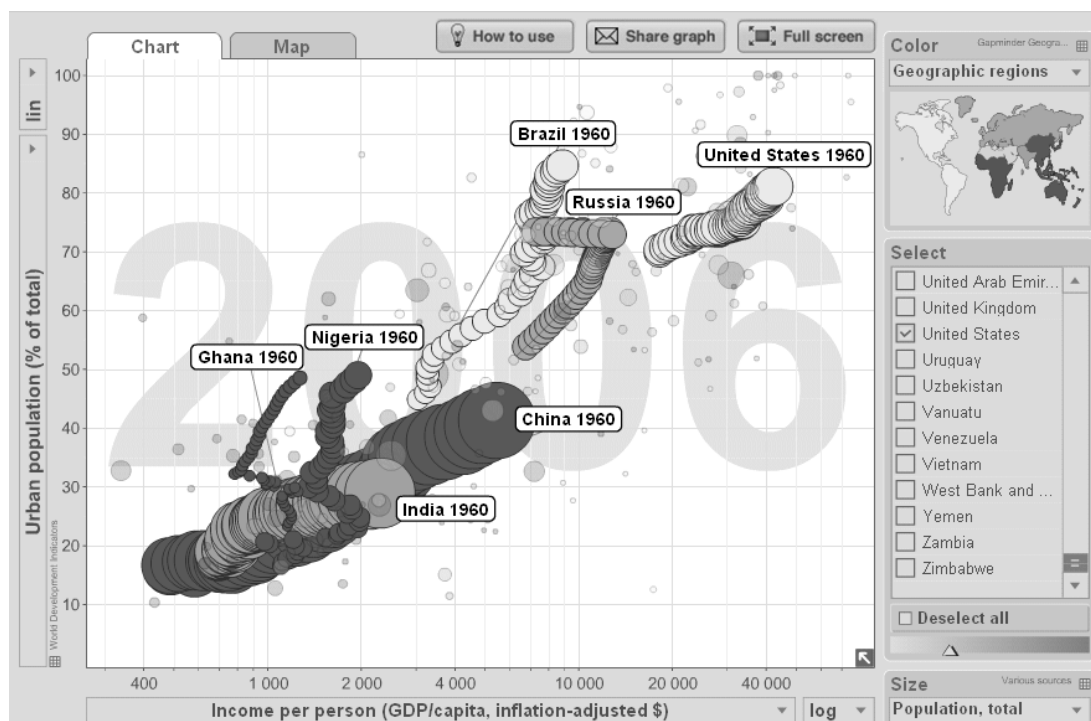

INTRODUCTION

The main objective of this study was to further explore the potential of the Hofstede paradigm as a predictor, and some meaningful interaction effects. Hofstede's Cultural Dimensions as predictors, rather than correlates, of consumer behavior at the national level were presented and discussed in simple language as an example.

De Mooij and Hofstede (2010) indicated that product performance as related to cultural dimensions was only recently introduced in scholarly literature. Furthermore, they stated that, "understanding the variations in what motivates people is important for positioning brands" (p. 94). Variable receptivity to branding, at least in the case of The Coca-Cola Company, was shown to be driven by national cultural dimensions and in some cases interactions between two or more cultural dimensions (Lanier, 2011).

Bhushan (2001) remarked that urbanization adds fuel to the fire of evolving consumer preferences because it eases the difficulty of distributing products to the masses. Something that Bhushan did not mention is that urbanization is also linked to per capita income, obvious in Figure 1, which makes affordability less of a barrier for consumers as well. Evolving beverage trends have paralleled the rapid growth of markets including the so-called BRIC countries of Brazil, Russia, India, and China. Rapid growth and market changes have also occurred in certain African nations, such as Ghana and Nigeria. Figure 1 demonstrates how growth in urban population and per capita income created these growing markets over five decades (www.gapminder.org, 2010).

Figure 1: Urban population by per capita income, 1960 to 2006.

Although culturally different, each of these countries has become more modern, urban, and economically powerful in its own way over the past 50 years. Furthermore, each has exhibited a different profile of cultural dimensions (Hofstede, 1980; www.geert-hofstede.com, 2011). Using these measures of culture, one may explore relationships between culture and the evolution of beverage markets. In fact, it may be possible to determine the cultural receptivity of a nation to The Coca-Cola Company's brands and other available beverage products.

METHODOLOGY

Examining prediction equations of the following form led to a cultural model for product volume consumed:

$$VOL = \beta_0 + \sum \beta_i H_i + \beta_7 URB + \beta_8 PCI + \varepsilon$$
, where $i = 1$ to 6, and H_i represents each of Hofstede's six cultural dimensions.

Eventually, interaction effects were examined and their role in prediction equations of the form

$$VOL = \beta_0 + \sum \beta_i H_i + \sum \beta_{ij} H_i H_j + \varepsilon$$
, where $i = 1$ to 6, $j = 1$ to 6, and each pair $H_i H_j$ represents a cross-product potentially resulting in a positive interaction effect between two cultural dimensions.

This formula can be extended further to include trios of variables. The objective of designating a model for volume consumed, potentially including interactions among Hofstede's Cultural Dimensions, was met by presenting models and discussing preferences for model selection to maximize efficiency of the prediction process.

The dependent variable represented by VOL was the per-person-volume of The Coca-Cola Company's beverages consumed in each country annually. The brands appearing in Table 1 below, and some smaller brands, were measured for 32 different countries (The Coca-Cola Company, 2010) which also were measured using Hofstede's Cultural Dimensions (Hofstede, Hofstede, and Minkov, 2010). This dependent variable, VOL, represents a measure of national receptivity to the company's products.

Table 1: A List of the Coca-Cola Company's Largest Beverage Brands

Sparkling Beverages		Still Beverages			
Coca-Cola		Coffees and Teas		Waters	
Sprite	Juices and Juice Drinks				
Diet Coke / Coca-Cola	Minute Maid	Nestea Teas		Ciel	
Light	Simply	Georgia	coffees	Dasani	
Coca-Cola Zero / Coke	Dobriy del Valle	Sokenbicha	teas	Bonaqua	/Bonaqua
Zero	Cappy	Leao / Matte Leao		Ice Dew	
Schweppes		Teas		Kinley	
Thums Up		Dogadan	teas	glaceau	smartwater
Fresca	Energy Drinks	Other Still Beverages		Sports Drinks	
Barq's					
Lift	Burn	glaceau	vitaminwater	Powerade	
Pop	Relentless	FUZE		Aquarius	
Inca Kola	NOS				
Kuat	Full Throttle				

The independent variables used to predict VOL fall into two categories: cultural dimensions and societal norms. The cultural dimensions used were described in detail by Hofstede (2010) to include Power Distance Index, PDI; Individuality, IDV; Masculinity, MAS; Uncertainty Avoidance Index UAI; Long Term Orientation, LTO; and Indulgence Versus Restraint, IVR. These dimensions have been routinely maintained, and are available for 76 countries (PDI, IDV, MAS, and UAI) or 93 countries (LTO and IVR) depending on the publication edition in which each dimension first appeared.

The societal norm measures including urbanization, URB, and Per Capita Income, PCI, were available for 205 countries. URB represents the percentage of total population living in areas defined as urban, as reported to the United Nations. PCI represents per capita income calculated using gross domestic product converted to international dollars using purchasing power parity (PPP) ratings. Data were reported in constant 2005 international dollars. In order to construct a complete dataset to be used in analyses, only the 32 countries with measures for each of the dependent and independent variables were studied. The Coca-Cola Company distributed two or more brand names within each of the 32 countries.

RESEARCH QUESTIONS AND FINDINGS

RQ1: Are national measures of cultural dimensions, urbanization, and economic success statistically significant predictors of a nation's receptivity to beverage categories?

A model using seven of the eight independent variables (without IVR) explained 61.35% of the variability in national consumption of The Coca-Cola Company's products ($F = 3.85$, $p < 0.05$). All of the correlations between independent variables and VOL were relatively low with one notable exception: Urbanization, URB, was significantly correlated with product volume, VOL, ($r = 0.7048$, $p < 0.0001$), as seen in Table 2 below. The literature indicated that urbanization contributed to mass distribution of beverage products (Bhushan, 2001), although no empirical evidence was provided. Therefore, this correlation came as no surprise, but did help to quantify and formalize the relationship between urbanization and volume consumed.

Could it be that urbanization dominates culture when predicting beverage consumption? Or that an "urban culture" exists to explain variability in the volume consumed of The Coca-Cola Company's beverages? In fact, urbanization alone accounted for 49.67% of the variability among countries' product consumption, and the model was statistically significant ($p > 0.0001$). Both the intercept and the coefficient for Urbanization were statistically significant with $p = 0.0154$ and $p < 0.0001$ respectively.

At this point, one could be satisfied that URB dominates the prediction of VOL and decide that no further study is worthwhile. However, with at least 11.68% (61.35 minus 49.67) of product consumption explained by other

variables in the full model of the first equation, and *possibly more* due to interactions between dependent variables or the addition of IVR, this question was pursued further.

Table 2: Correlations between Cultural Dimensions and the Dependent Variable, VOL

VOL	(PDI) Power Distance Index	(IDV) Indivi- dualism	(MAS) Mascu- linity	(UAI) Uncertainty Avoidance Index	(LTO) Long-Term Orientation	(URB) Urbani- zation	(PCI) Per Capita Income
Correlation Coefficient	-0.2547	0.2928	0.0985	0.3382	-0.0445	0.7048	0.3134
Probability	0.1595	0.1039	0.5917	0.0583	0.8328	<0.0001	0.0807

A FIRST CULTURAL RECEPTIVITY MODEL

The equation listed below is a first model for cultural receptivity in that it predicts volume of product consumed using *only* Hofstede's Cultural Dimensions as predictors:

$$\text{VOL} = -612.86097 + 6.02334(\text{INV}) + 0.51502(\text{LTO}) - 1.23483(\text{MAS}) + 3.49094(\text{PD}) + 6.04430(\text{UA})$$

The ANOVA in Table 3 below indicates that 45.97% of the variability in product consumption was explained by Hofstede's cultural dimensions alone. This brings into question the dominance of urbanization for predicting VOL. The model was statistically significant, and parameter estimates for IDV and UAI were also statistically significant. A model that successfully predicts 46% of variability in consumption of The Coca-Cola Company's beverage products using only cultural dimensions has been identified.

The analyses under RQ1 established several new pieces of evidence that facilitated answers to RQ2 and RQ3:

1. Urbanization was significant, accounting for 49.67% of the variability in VOL.
2. Hofstede's Cultural Dimensions alone explained *at least* 45.97% of the variability in product volume, and possibly more when interactions are considered.
3. These equations could likely be improved and refined by modifying the regression model and applying statistical techniques.

RQ2: Do interaction effects exist between cultural dimensions thereby improving prediction models of the same form when predicting receptivity?

Regressions on many possible variations of the equations given above were conducted using one, two, three, four, five, and six predictor variables. Typically the contributions of predictor variables may overlap and therefore the model's overall effectiveness is less than the sum of its parts. However, it is possible for variables to interact in such a way that the overall effect is *greater* than the sum of its parts.

For example, IDV alone explained 9% of the variability observed in VOL, and UAI explained 11% of that variability. One might expect that these two variables together predict no more than 20% of the variability observed in VOL. Surprisingly, the model with both IDV and UAI entered as predictors of VOL yielded an R^2 of 0.27, explaining 27% of the variability in VOL. This synergetic relationship is indicative of an interaction effect. There also appeared to be a rather strong interaction effect between LTO, IDV, and UAI. These three variables combined to increase R^2 by 0.21, from a sum of 20% added individually to a total of 41% when entered into the model as a trio. See Table 4.

Table 3: Linear Regression Results Using Hofstede's First Five Cultural Dimensions as the Lone Predictors

Analysis of Variance					
Source	DF	Sum of Squares	Mean Square	F Value	Pr > F
Model	5	336,147	67,229	3.23	0.028
Error	19	395,041	20,792		
Corrected Total	24	731,188			
Root MSE	144.193	R-Square	0.4597		
Dependent Mean	207.36	Adj R-Sq	0.3175		
Coeff Var	69.5376				
Variable	Parameter Estimate	Standard Error	t Value	Pr > t	
Intercept	-612.8610	318.4419	-1.92	0.0694	
PDI	3.4909	2.8768	1.21	0.2398	
IDV	6.0233	2.1000	2.87	0.0098	
MAS	-1.2348	2.4986	-0.49	0.6268	
UAI	6.0443	1.7296	3.49	0.0024	
LTO	0.5150	1.3232	0.39	0.7014	

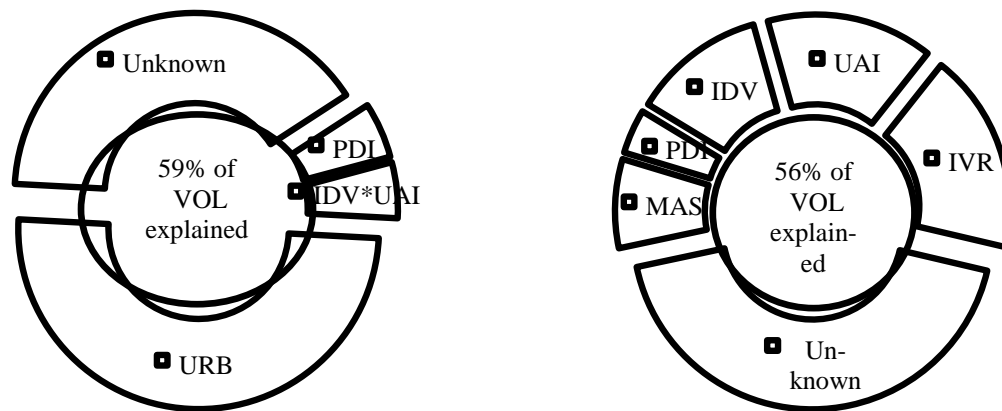

Of the 62 possible combinations of six independent variables, 11 combinations displayed a positive change in R^2 greater than the sum of individual variable contributions. These synergetic relationships resulted in increases to the R^2 statistic ranging from 1% to 21%. Table 4, displays each significant model's terms, predictor variables entered, and R^2 increase achieved due to interaction effects between each combination of variables. Although other interactions may exist and be useful, in this case two of the strongest interaction effects were pursued using cross-products of predictor variables.

Table 4: Selected Models from a Comprehensive Search for Interactions

Predictor variables	Model's R-square	Statistical Significance	Change in R ² due to interaction
IDV	9%	No	n/a
MAS	1%	No	n/a
UAI	11%	No	n/a
LTO	0%	No	n/a
URB	50%	p < 0.05	n/a
PDI, UAI	20%	P < 0.05	+3
IDV, UAI	27%	p < 0.05	+7
PDI, IDV, UAI	27%	p < 0.05	+1
IDV, MAS, UAI	27%	p < 0.05	+6
IDV, UAI, LTO	41%	p < 0.05	+21
IDV, MAS, UAI, LTO	42%	p < 0.05	+21
PDI, IDV, UAI, LTO	45%	p < 0.05	+19
PDI, IDV, UAI, LTO, PCI	45%	p < 0.05	+9
PDI, IDV, MAS, UAI, LTO	46%	p < 0.05	+19
LTO, URB	54%	p < 0.05	+4

RQ3: How can a parsimonious model be determined?

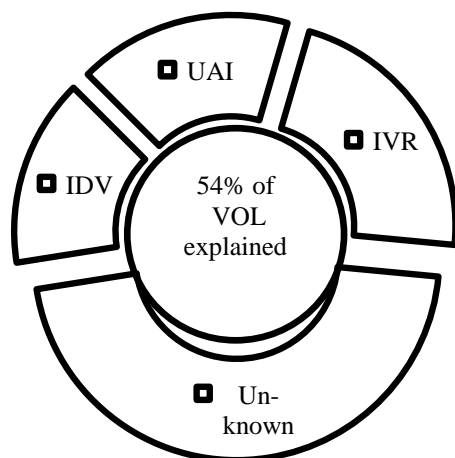

Figure 2: Models for Volume Consumed With and Without Urbanization as a Predictor

Initially, the most powerful and relatively simple variable for predicting product consumption was Urbanization, as URB alone predicted about 50% of the variability in VOL. However, an R² statistic of 0.61 was obtained when all variables were included in the regression model. Hopefully, a regression model with fewer variables could yield a similar R² and therefore be a more efficient way to predict VOL.

In fact, the addition of IVR was a huge improvement of the predictive model. The model was more highly significant, statistically speaking; had three statistically significant predictors instead of only two; and improved R^2 by 10 percentage points, an increase in predictive power of 21% from 0.4597 to 0.5582. Furthermore, prediction power increased while the number of variables in the model was reduced.

Figure 3: A Three-variable Model for Volume Consumed

CONCLUSIONS

This study has taken a broad view of the relationships between cultural dimensions and the products of one company, in one industry, and in only a few of the world's countries. However there is enough material contained within the above models, equations, and results to encourage further study of these, and other, relationships. Only some of the many potential findings, examples, and implications are given here.

Overall, analyses conducted for this study revealed some surprising results. First and foremost was the discovery that Hofstede's first five cultural dimensions *alone* predicted nearly half, 46%, of the variability observed in national consumption of The Coca-Cola Company's beverages. With the addition of IVR, the predictive power jumped to 63%. This information should be of particular interest to both The Coca-Cola Company and their competitors, but also to any multi-national company, marketing practitioners, marketing researchers, and behavioralists. This research validates Hofstede's original work for use in consumer behavior, at least at the national level, as well as for its well-recognized usefulness in studying organizational behavior.

Secondarily, the belief that urbanization was a factor in product consumption (Bhushan, 2001) was upheld. Urbanization appears to be a key factor in the distribution and consumption of products offered internationally by The Coca-Cola Company. However, it is also clear that Hofstede's cultural dimensions enhance the understanding of these relationships, and that Hofstede's dimension of Indulgence versus Restraint was at least as valuable as Urbanization.

Furthermore, interaction effects were discovered between Hofstede's cultural dimensions. In this case, Hofstede's Individuality measure appeared to interact with his Uncertainty Avoidance Index to predict product consumption. This finding alone uncovers the potential for nine more paired variables based on Hofstede's five cultural dimensions, and 14 more when using IVR. These potential interactions may facilitate research in any behavioral setting.

A case was supported for developing predictive equations for marketing purposes. Marketing is a field that is data rich, but much of the available information is not used to its fullest purpose. Opportunities abound for the marketing

researcher to glean information from the many sources of data, and produce meaningful models that enhance our understanding of human interactions. This understanding continues to evolve with new developments such as Hofstede, Hofstede, and Minkov's (2010) recent presentation of the cultural dimension Indulgence versus Restraint. Finally, it is reasonable to conclude that the evolution of tastes takes place differently in each country, and that cultural variables are at least partially, if not largely, responsible for these patterns. Beverage choices, and the evolution thereof, are dependent on the measurable cultural and societal variables researched for this study. Hofstede's cultural dimensions can and should also be used to measure beverage categories within companies, new product introductions, and to predict future directions of the global beverage market.

Taras, Kirkman, and Steel (2010) alluded to the predictive power of Hofstede's Cultural Dimensions, but concrete business examples of predictive equations and interactions between dimensions are scarce. Therefore, the practical implications of this 32 nation study should be clear for market researchers, beverage companies, and any other multinational company. Theoretical implications are clear for researchers in psychology, sociology, consumer behavior, and other fields: interaction effects between cultural dimensions deserve further study, and recently introduced IVR may be a powerful idea for better understanding culture in the context of behaviors.

MAPPING THE INTEGRATED MODERNIZATION GUIDELINES WITHIN PUBLIC ADMINISTRATION

Victor Cristian Coserin, Free International University of Moldova, Chisinau

Paul Coserin, Free International University of Moldova, Chisinau

Ioana Daniela Coserin, Free International University of Moldova, Chisinau

ABSTRACT

In the current economic and political European and global power relations due to resettlement in economically and strategically, the idea of regionalization of the international economy increasingly take shape become a new vocation embraced by more and more states are increasingly clear need redrawing the institutional architecture of European Union in anticipation of attacking the state of political union. Great European integrationist group needs stable institutions, well-structured and more legitimate democratic point of view. U.E. can not meet its new responsibilities without undertaking an institutional reform that would allow it to meet the challenges derived from the expansion and deepening.

Operation U.E. the new stage requires more transparency and complexity in decision making and with other countries, strengthening European citizenship through citizen participation in electoral process authentic European matuizarea European civil society. In the integration process are sensitive issues as employment promotion, public health, environmental and citizens. Becomes essential to effective democracy, creation of companies, the associations, unions and political parties with clear European vocation.

JEL CODES: D73, H83, J18.

KEYWORDS: public administration, development, managerial empowering, community analysts, promoting knowledge, European Union

INTRODUCTION

Cohesion and harmony arise from attachment of its citizens towards a common goal of their participation in the search and set targets for the modernization of local and central public administration.

Not be a panacea, social cooperation will help to prevent ill that threatens society, reducing individual oppositions, public hostility, demagogic pressures or passive resistance and active times.

Cohesion and harmony can correct hierarchy and will ease somewhat dependent citizens. In the conduct of investigations and systematic international comparison, International Comparative Management has developed numerous theoretical and methodological elements, which promote knowledge and use and makes retrieving and adapting valuable management systems and methods used in organizations in other countries.

Communication and social dialogue are profitable and State authorities, leading to improved collection of information, facilitating the performance of programs and projects, making to weaken the spirit of protesting and avoiding misuse or abuse of power.

Participation is the best guarantee of the acceptance of common goals and the best motivation for efficiency, but should not be only an advantage, but also an obligation.

ADOPTING A CONSTITUTIONAL EUROPEAN UNION POLICY PACT MAKERS CONCERNED WITH NATIONAL AND COMMUNITY PROFILE ANALYSTS

Genuine issue of adopting a constitutional pact European Union policy makers concerned with national and Community Profile analysts, European diplomats, and civil society for a long time. Developments on deepening and expanding economic integration process have paved the way for this sensitive issue of becoming integrative to be included on the agenda at European level. Because the complexity of such an approach required the utmost care, to rid positioned intergovernmental expanded.

In the current economic and political European and global power relations due to resettlement in economically and strategically, the idea of regionalization of the international economy increasingly take shape become a new vocation embraced by more and more states are increasingly clear need redrawing the institutional architecture of European Union in anticipation of attacking the state of political union. Great European integrationist group needs stable institutions, well-structured and more legitimate democratic point of view. U.E. can not meet its new responsibilities without undertaking an institutional reform that would allow it to meet the challenges derived from the expansion and deepening.

Management forecasting and, more recently, strategic management, the modern form-based management strategy and way of expression prediction function is based on anticipating change, their essence consists in defining the organization's mission, strategic goal setting, expressed in terms of profitability, profit growth etc., and the most appropriate strategies to achieve these objectives.

Operation U.E. the new stage requires more transparency and complexity in decision making and with other countries, strengthening European citizenship through citizen participation in electoral process authentic European matuizarea European civil society. In the integration process are sensitive issues as employment promotion, public health, environmental and citizens. Becomes essential to effective democracy, creation of companies, the associations, unions and political parties with clear European vocation.

Of course, the future can not be predicted with certainty and therefore must take account of random phenomena and to determine possible and correct spelling. Therefore, to determine significant trends that are emerging about the evolution of a phenomenon or another, long-term forecast using intuitive thinking and imagination, and deductive rigor. In contrast, short-term forecast is more quantifiable.

Application to the management company is forecasting a complex, this new form of government functioning as a self-regulating system which, through the inverse (strategic feedback) provides an evaluation in relation to projected and lead to permanent adaptation strategy public institution, so it is really a way to cope with change successfully.

STREAMLINING ORGANIZATIONAL STRUCTURE

Streamlining organizational structure, stage in which to corroborate information drawn from the two previous steps (investigation and analysis) will be highlighted directions for improving the organizational structure necessary to deliver the study. In this actions will be taken the following steps: developing measures to improve the organizational structure, which seeks to establish ways to eliminate causes of malfunctions, as well as measures to increase functionality and efficiency of the structure, testing measures to improve the structure organizational phase aimed at verifying the validity and viability of proposed solutions. It involves the type of implementation (sudden or gradual) development plan to introduce measures to improve and test the operation of improved organizational structure, record

changes in the documents formalizing the structure, which represents the final phase of the study, which seeks to formalize measures training.

The idea is catching increasingly shape the way the government adopted a real imperative faced numerous. European institutions must be designed to accommodate the increase in the number of members amid deepening the development gaps between them. Same challenges they launch and deepening integration proce-making process, which worsens the new aspects of economic and social structures and policy coherence and the specific dynamics of European cooperation. U.E.

Also include in the mandatory and critical analysis through the design and operating principles of rational organizational structure to highlight the level of agreement between the requirements of the principles of rational structure, their use, apparent deficiencies and structural components as they locates.

However, in terms of modernization, conversion from old to new information subsystem, which consists of introducing new information subsystem, monitoring its functioning, make corrections based on deficiencies noted during its actual operation.

In implementing the new subsystem can be adopted more techniques namely the pilot system conversion, the old subsystem is abandoned as soon as he decided to introduce the new, converted to parallel the two systems work together for a certain period of time after which the old is replaced, the progressive conversion, the old subsystem is moving away, being replaced with the new elements.

STRATEGIC STEP IN MODERNIZING: AUDIT OF PERFORMANCE IN PUBLIC SECTOR

We propose to modernize public management by strating with an audit of performance in public sector include: economic efficiency audit administrative activities in relation to performance management principles and practices, auditing efficiency of human, financial, other resources, including examination of information systems, way of measuring and tracking performance indicators and procedures followed by the audited entity to remedy identified performance audit on the effectiveness of the audited entity and audit objectives actual impact of the entity in comparison with its planned impact.

It considers that a performance audit is an audit of economy, efficiency and effectiveness, a combination of two of them may be a full audit which includes all three components. Performance audit examines whether "public money was well spent", mainly by examining the measures taken by auditees on the principles of economy, efficiency and effectiveness is known as the "three E" also may involve examining performance audit direct the performance achieved.

This audit often require auditor examination results in terms of economy, efficiency and effectiveness, using his professional judgment. Measuring performance against the performance objectives in accordance with the "3 E" is a must for managers at all levels.

The effectiveness of public services provided by state administration is determined by higher qualification of the personnel; since is common knowledge that public administration institutions albeit financially and materially resourceful do not obtain the estimated results precisely because they lack highly trained officers. Not even a law founded on the best of intentions will perform on the behalf of the public interest but for the instructed, specialized officers to put into practice what they have been learning through the process of constant up to date training.

The scope of review extends to auditors if you continue with the second question, that if "you did the right thing" or in other words, if measures were taken down. Auditor performance may actually find that

one of the measures chosen, is inefficient. Auditor verifies that public engagement is entirely feasible, but will still need to be cautious and not to exceed the mandate and objectives set by extending the examination procedures in the politics.

Effects would be to create in the public administration system of the European integration process is still a requirement in many EU countries, new developments countries joined the European Union is illustrative in this respect.

These measures are designed to create effects on the administrative capacity to formulate public policies with emphasis on consultation component, the system of decision making, policy planning and budget model adopted, the framework of inter-communication, and interdepartmental in within ministries, in these coordinates, the problem of public administration reform, especially in the formulation of public policies, acts and technical approach that is identified and implemented a model policy management system, in terms of the reform objectives deliberate association with the aim of integrating and internal coordination of European public policy.

The society evolved and with it also the human's professional needs. Employees want and need to be acknowledged for their valuable and extra contributions. Rewards and recognition are powerful tools for demonstrating appreciation and reinforcing those behaviors that lead to superior products, outstanding support, strong supplier relationships, and lifelong customers. Digitalized societies primary tool for providing spot rewards is new total rewards process, a resource for global compensation, benefits, variable pay, equity and rewards plus recognition program information as well as job architecture valuable information.

It is therefore necessary now more than ever, to listen and explain, to restore natural communication between social groups and their accountability to appeal to interested persons. Personal activity of members of society, whatever, not be considered as an act of little importance for society as a whole or as a subordinate act, be returned to the intrinsic value personal commitment.

Participation generates responsibility, it obliges people to engage, penalizing the refusal, absence and indifference and, consequently, could destroy the neutrality. In principle, the privilege of participating public offering, his hosts, and sometimes governing legal procedures for consultation, setting out, in some cases, even penalties against those who refuse participation in city life.

It must therefore, critical analysis of the possibilities of achieving the goals provided by the existing organizational structure, drafted a list of activities is necessary and justified in the objectives, namely: activities required to achieve the objectives, but examined exist within the organizational structure, activities , although there is, insufficient volume of work and / or inadequate staffing employment can cause partial or total failure of some dm business objectives, activities whose workload is oversized in relation to contribution to the objectives.

CONCLUSIONS

Due to the economic development and modernization, the need for goods and services increase and new requirements regarding the way in which the resources are used appear. It becomes clear that the public order expenditures are rather high for the state budget. This is the reason why all countries should manage and design their public order expenditures very rationally. Such an institution needs not only time to become operational but also financial and moral support, alongside with technical and professional compatibility. The topic of the present article deals with the identification of an assessment model for the actual expenditures on the public order in Romania.

We must understand that participation is a source of decay of power, prestige or power reduction of decision authority, since it does not cause a restriction of the decision making power, a reduction in its freedom. On the contrary, requires public participation in logical reasoning and opinions hitting the emotional, demagogic. Showing people the real difficulties through which the authority makes them understand that is to their advantage to contribute to the functioning of authorities and public services.

He became a feature of modern democracy that various forms and in various fields, increasingly more private citizens, governments, consumers, officials - in other words, many individuals and businesses - to be directly associated of state activity, which requires that such a phenomenon of this magnitude, to be analyzed and understood.

Romanian administration is not only within, but also the fruit of a political and legal system will not continue to exist unless it is supported by some stable interests if these interests will be able to integrate not only the legal strategies and options, but first place in concrete action. Provided free expression of their interests and their defense is peaceful social dialogue, which is essential for the welfare and harmonious progress of the community.

Also it requires constant critical analysis of existing information subsystem, which aims to identify the negative aspects of the organization and operation of existing information subsystem.

In this phase are analyzed: data and information circulating in the system, highlighting the unnecessary or missing, redundancies and lack of efficiency in their supply, supports informational use, circuits and information flow, documents identifying unnecessary and unreasonable circuits and flows , procedures and methods used in collecting, processing, transmission and storage of information in terms of their effectiveness. It also aims to identify cases of distortion, filtering, channel information overload, short circuit line communications and redundancy, which diminishes the effectiveness of local and central public administration.

DRIVING PERFORMANCE TROUGHOUT SEAPORT MANAGERIAL UPDATE

Paul Coserin, Free International University of Moldova, Chisinau
Ioana Daniela Coserin, Free International University of Moldova, Chisinau
Victor Cristian Coserin, Free International University of Moldova, Chisinau

ABSTRACT

Planning involves associating antirisc actions key planning elements such as direction, resources, implementation, measurement and improvement. Any innovative process involves risk. A successful innovation will lead to a better brand image, brand and reputation are vital functioning of any organization.

To cope with such situations it is advisable to develop and alternative strategies that can be applied when a rule or assumptions that have formed the basis of the adopted strategy is no longer valid. In such situations have developed alternative strategies, called contingency strategies through three steps, namely: identification of key variables underlying the adoption of the strategy and ensure its success, setting the trigger points of alternative strategies, taking into account the deviations that may take place at various key variables, before active alternative strategy, developing an appropriate plan of action to allow passage of the operative strategy has proven unsuccessful due to taking into account estimates of provisions and do not correspond new situation, a new alternative strategy (contingency) prepared in advance.

INTRODUCTION

No doubt the economic development involves changing natural environment, so that it uses environmental factors in their quality-renewable resources or not - and in that nuisance, in products, wastes are generated by human activities and discharged into the environment affects , in greater or less, sometimes irreversible ecological balance.

Monitoring and control strategies include identifying risks of producing magnitude of risk based on probabilistic calculations, their registration and inspection of their evolution based on routine inspections.

Another component of the control risk management activity is to develop a strategy for continuous identification of new categories of risk, to prevent or intervene in their minizării. Monitoring of the set objectives are benchmarks to identify new risks that may arise along the way.

In other words, economic development involves an external cost borne by the environment, whose size, becoming more evident in recent years, if not properly considered and evaluated, questioning the long term viability of the process itself itself.

Manageable risks are those risks that an organization can approach making use of its own means. in this category may be included poor accessibility planning critical operating funds. Strategic risk factors, on the other hand, are those to be treated by making substantial expenditures or changes in strategic direction.

DRIVING PERFORMANCE TROUGHOUT SEAPORT MANAGERIAL UPDATE

Relationship of interdependence and economic structures - such environment requires an integrated approach to problems of structural adjustment economic reform, restructuring requires to be considered, as it really is, as an opportunity to include measures aimed at environmental protection in strategy overall sustainable economic development.

If one accepts the assumption that the parameters of performance and environmental quality are likely to become determinants in international competition in the coming century, imposing environmental criterion in shaping the growth model can be a magnification disparities and disparities between different countries and regions.

Information is one of the most important corporate resources which require a strategy. Therefore the development of information systems needs to be based on the corporation's strategic planning objectives. Processes and procedures that support information systems need to be simplified, adaptable, and flexible to meet the changes in user requirements.

The complexity and investment of the information system will also depend on the level of management and decision making that is required.

Extending special methods of positive motivation of employees to work hard and achieve high performance. We have particular regard to motivation methods and techniques such as job enrichment, job enlargement, career plan, free distribution of shares managers bonuses for outstanding performance, etc., reducing or even waiving and behavior management techniques based on order type cazon, the exacerbation of threats and sanctions, designing and implementing management systems that contain elements that provide a strong motivation of staff. Most convincing example is management by objectives, which has as basis the correlation with performance objectives and rewards that the sanctions.

According to analysts, correctly in our view, the absence of such a criterion in the developing countries, beyond the hope of a further obstacle is a serious threat to the future of these countries, which are likely to be in a position of being unable to adapt to the demands of international competitiveness and sustainable development process.

OUTCASTING ECOLOGICAL ANTIRISC KEY PLANNING

Planning involves associating antirisc actions key planning elements such as direction, resources, implementation, measurement and improvement. Any innovative process involves risk. A successful innovation will lead to a better brand image, brand and reputation are vital functioning of any organization.

The valuable experience is recorded (stored) in electronic form (documents, databases, web pages, knowledge-based systems). In this way, we can prevent the repetition of mistakes and we can reuse it, reducing costs and, in the same time, improving consistency.

This can also help to train new staff and to preserve the company's expertise. The stored knowledge could be disseminated, through knowledge transfer or knowledge sharing.

Strategic planning is an ongoing management process. Each time, opportunities for improvement are reviewed so that you can shade more powerful new strategic direction.

The five elements of strategic planning are: the direction we want to turn our resources we need to realize the goals, implementation process to get the results proposed, with appropriate performance measurement and business improvement, enable a higher level of Performance.

All these include: people, capital, production facilities, distribution networks, information systems, finance.

It's possible that, in an environment of rapid change, such a strategy was adopted on a provisional basis could not assess when these changes do not correspond to new developments.

CONTINGENCY STRATEGIES: WHAT TO DO WHEN THE ADOPTED STRATEGY IS NO LONGER VALID

To cope with such situations it is advisable to develop and alternative strategies that can be applied when a rule or assumptions that have formed the basis of the adopted strategy is no longer valid. In such situations have developed alternative strategies, called contingency strategies through three steps, namely: identification of key variables underlying the adoption of the strategy and ensure its success, setting the trigger points of alternative strategies, taking into account the deviations that may take place at various key variables, before active alternative strategy, developing an appropriate plan of action to allow passage of the operative strategy has proven unsuccessful due to taking into account estimates of provisions and do not correspond new situation, a new alternative strategy (contingency) prepared in advance.

Even though the European Union got involved in the protection of the environment only in the 70', when this issue became of international interest, in the following decades have been taken important measures as to the improvement of the quality of life, the limitation of pollution, the introduction of the pollution prevention principle and the one of rationalization of the natural resources and also programs were adopted which represented financial instruments for the management of the projects regarding the protection of the environment from the Member States.

Note that generally puts great emphasis on positive motivation and reinforcement of individual and group responsibility in the context of achieving a favorable organizational culture change and performance.

Advantages related ancestors management tools with a strong motivation can be summarized as: enhancing the efforts of the staff organization to achieve the objectives and tasks, the expansion of management methods, development of team spirit and creativity increase staff amplification results using managerial tools.

Presently, on international level, the European Union is playing a central role in the fight against the climate changes, through an integrated policy regarding the energy and the climatic changes having as main scope an economy which respects the climate, based on the combination of the technologies and the sources of energy with low Carbon emissions, on the protection of biodiversity, the solving of the desertification issue, the abusive forest clearings and of the impact of pollution over the public health.

The systemic vision designate its entire functionality subordination organizations achieve major objectives, in terms of designing, structuring and management methods and techniques used most as integrated elements in many systems, mainly aimed at enhancing effectiveness, efficiency and overall competitiveness of the organization.

The European bodies have the role to analyze as profound as possible the modalities to integrate the adaptation to the climatic changes in the external policies and in the present financing instruments and, if necessary, to elaborate new policies. European Union needs to share its experience in this field with the

developing countries and to offer them assistance for the elaboration of their own strategies as thorough as theirs. The existing partnerships, such as the one entered with China. India and Brazil constitute an adequate basis for the widening of the European Union cooperation with the developing countries on the climatic change theme.

It must therefore, the design and use of many systems management companies complex organic based on systemic approach. The best known of these are: reengineering, management by objectives, management by budgets, managing projects, managing the product management by exception, participative management.

ENVIRONMENTAL MANAGEMENT AND PROTECTION OF THE SEA AND SEA-PORTS

Environmental management and protection of the sea and sea-ports is an issue of great importance both for the sustainable development as well as for the overall enhancement of the environment. The protection of the marine environment is an important activity which contributes to the economic development, to tourist development of the coastal areas and to sustainability.

Also it is important to promote reconsideration of most methods and management techniques by printing a systemic structural aspect constructive and operational. The main mutation which needs to be produced in the current mentality would be the one of immediately replacing the economic interest with the notion of interest regarding the conservation of the patrimony of the future generation. On this line of thinking, an economic policy needs to be conceived which, instead of submit the biosphere to the limitations given by the logics of the immediate profit, to try to organize, first of all, the proper management of the natural resources, based on which to fundament realistic environmental policies.

The expansion or construction of a seaport is often proposed as a means of spurring economic growth in an area, in addition to providing quality facilities for importers and exporters. When there are underlying environmental considerations, the speculative nature of anticipated benefits may invite determined opposition from preservationist groups, or reinforce their objections.

We empower also the stronger correlation methodological-managerial system elements together and with other elements of management decision systems, and structural and organizational information in a holistic vision focused on maximizing long-term performance, medium and short of the organization.

CONCLUSIONS

Among the many advantages of mutation set, select the following: increased managerial effectiveness tools, superior capitalization decisional and operational management methods and techniques of the strengths and increase synergies obtained within organizations.

The globalization's coordinates also have a strong and complex impact on the apparition and coming into force of the concept of economic intelligence in business activities. In this sense, we take into account the following: the intensification of economic and cultural exchanges, phenomenon which determined the compatibility of many systems of national, cultural and religious values, the phenomenon of internationalization of goods and service markets as well as the tendency of this phenomenon to spread to the level of production factors – the internationalization of capital markets or human resources, the apparition within the decisional circles, at an international, national and regional scale, of the representatives of some multinational entities – corporations, organizations, etc. – whose interests coincided, on various occasions, with those of nations and therefore tried to impose on an international scale their own interests. Such tendencies, on the one hand, contribute to the enrichment of the

globalization concept, and, on the other hand, leave their mark on the use of the concept of economic intelligence in the business world.

As a condition of proper functioning of market mechanisms, energy inputs and prices of raw materials did not include the real costs of goods taken from the medium, the regeneration or taking into account their rate of depletion, the pollution and the monopoly conditions imposed. The management utility that holds primary commodities, which led, through the effect of spreading false prices of all intermediate and final respectively.

ABSTRACT

Any company must establish a reserve fund (R) for risk, so the difference between the paid compensations (even the total demand of compensation) and the collected bonuses to fill this reserve fund with a probability less than an accepted value α (of ruin).

Of course, the main factors differentiating enterprises in terms of quotas of severity and probability index are represented by the size and economic activity of the company which determines, in turn, the degree of complexity, time and resources allocated to the assessment of risk. The risk assessment should be considered as a continuous process which involves periodic update in order to reflect the true change in working conditions and maintaining the encoding of exogenous variables.

The entire existence of an organization is marked by numerous decisions, most of them taken in conditions of uncertainty and risk. Preparing and making managerial decisions require knowing the state of implementation of previous decisions and also the functionality and compliance processes. Achieving these goals is managed through the verification of specific research activities, which give a true state of their organization structures and processes.

JEL: D81, D92, G32

KEYWORDS: conditions of uncertainty and risk, strategic guidelines, encoding variables, index, managerial update, risk monitoring.

INTRODUCTION

In terms of risks managerial performing, it should be noted, that certainty requires that a trader knows in advance the exact value of a parameter or indicator (economic, financial), while uncertainty requires knowing the future value of an indicator parameter or even as probable value.

Consequently, the operator is faced with two situations: the situation of risk and certainty. In this approach it is assumed that a parameter value or future development can be described by a law of probability distribution.

Based on estimates made, the trader may arrange, or apply the controls to manage risk. For the economic difference between risk and uncertainty is that risk can be managed by specific methods.

In the current financial crisis context, the economic environment is marked by deep uncertainty surrounding the activities of organizations. In this turbulent environment, implementing an effective risk management process and its continuous improvement allows managers to deal with these uncertainties and overcome the threats facing organizations.

If the manager's intuition can help good management of simple and repetitive processes, it proves insufficient for the complex processes taking place within organizations. Organizations are not closed systems, they operate in an often hostile environment of uncertainty which should not be ignored.

RISKS MANAGERIAL PERFORMING

Facing difficulties, many obstacles and unwillingness of investors, may diminish the sense of initiative, they are known cases where managers of firms in difficulty abandon fight opting to liquidate the business, without trying one of its maintenance through business continuity plans.

Of course, the main factors differentiating enterprises in terms of quotas of severity and probability index are represented by the size and economic activity of the company which determines, in turn, the degree of complexity, time and resources allocated to the assessment of risk. The risk assessment should be considered as a continuous process which involves periodic update in order to reflect the true change in working conditions and maintaining the encoding of exogenous variables.

Any company must establish a reserve fund (R) for risk, so the difference between the paid compensations (even the total demand of compensation) and the collected bonuses to fill this reserve fund with a probability less than an accepted value α (of ruin). To illustrate this problem (very complex in real cases) we consider a model where we have insured n policies of the same type, the paid compensation for each policy being represented by an aleatory variable X with average m and dispersion σ^2 . So, the total paid compensation by the insurer is given the aleatory variable:

$$Y = \sum_{i=1}^n X_i$$

where X and i are independent variables and likewise distributed. We consider that the tariffs system is built on the middle value's principle that is the clear premium is equal with the middle compensation.

So, in this model, the total clear premium is:

$$Pnt = M(Y) = nm$$

$$M(Y) = M\left(\sum_{i=1}^n X_i\right) = \sum_{i=1}^n M(X_i) = nm$$

where:

So, the reserve fund R is defined by the inequality:

$$P(Y - Pnt > R) \leq \alpha$$

It results:

$$P\left(\frac{Y - M(Y)}{\sqrt{D^2(Y)}} > \frac{R}{\sqrt{D^2(Y)}}\right) \leq \alpha$$

For n big, we can consider that the aleatory variable

$$Z_n = \frac{Y - M(Y)}{\sqrt{D^2(Y)}} = \frac{Y - nm}{\sigma\sqrt{n}}$$

follows a repartition $N(0,1)$, being based on theorem of central limit,

$$D^2(Y) = D^2\left(\sum_{i=1}^n X_i\right) = \sum_{i=1}^n D^2(X_i) = \sum_{i=1}^n \sigma^2 = n\sigma^2 \Rightarrow \sqrt{D^2(Y)} = \sigma\sqrt{n}$$

where:

We obtain:

$$\alpha \geq P\left(Z_n > \frac{R}{\sigma\sqrt{n}}\right) = 1 - P\left(Z_n > \frac{R}{\sigma\sqrt{n}}\right) = 1 - F\left(\frac{R}{\sigma\sqrt{n}}\right)$$

where $F(x)$ is the function of normal repartition $N(0,1)$,

$$F(x) = \int_{-\infty}^x \frac{1}{\sqrt{2\pi}} e^{-\frac{t^2}{2}} dt$$

$$\text{From } F\left(\frac{R}{\sigma\sqrt{n}}\right) \geq 1 - \alpha = F(z_{1-\alpha})$$

the function of repartition being outgrowing results

$$\frac{R}{\sigma\sqrt{n}} \geq z_{1-\alpha} \quad \text{and} \quad R \geq \sigma\sqrt{n}z_{1-\alpha}.$$

where $z_{1-\alpha}$ is quantila of order $1-\alpha$ of standardized normal repartition.

So, the minimum reserve of risk (noted R_{min}) is:

$$R_{min} = \sigma\sqrt{n}z_{1-\alpha}$$

A minimum threshold of risk reserve can be obtained also using the inequality of Cerbasev:

$$P(|Y - M(Y)| < \varepsilon) \geq 1 - \frac{D^2(Y)}{\varepsilon^2}$$

Taking $\varepsilon = t\sigma = R$ where $\sigma^2 = D^2(Y)$ is obtained;

$$P(|Y - M(Y)| < t\sigma) \geq 1 - \frac{1}{t^2}$$

Because $\{Y - M(Y) > R\} \subset \{|Y - M(Y)| \geq R\}$ results

$$P(Y - M(Y) > R) \leq P(|Y - M(Y)| \geq R) = 1 - P(|Y - M(Y)| < R) \leq 1 - \left(1 - \frac{\sigma^2}{t^2\sigma^2}\right) = \frac{1}{t^2}$$

$$\alpha = \frac{1}{t^2}$$

Taking a probability of ruin accepted, results:

$$P(Y - M(Y) > R) \leq \alpha$$

$$\text{where: } R_c = t\sigma = \frac{\sigma}{\sqrt{\alpha}}$$

$$X : \begin{pmatrix} S & 0 \\ p & q \end{pmatrix}$$

In the particular case we have:

$$m = M(X) = pS$$

$$D^2(X) = M(X^2) - M^2(X) = S^2p - p^2S^2 = S^2p(1-p) = pqS^2$$

where: $q = 1 - p$,

$$\sigma = S \sqrt{pq}$$

So, $R_{min} = S \sqrt{npq} z_{1-\alpha}$ and the risk reserve obtained using the inequality of Cerbasev is:

$$R_c = \frac{S \sqrt{npq}}{\sqrt{\alpha}}$$

Thus, management of risk is developed for the companies, which is formed of two parts: - a statistical analysis, which identifies the alternation of pre-established indicators; - modulator systems, which give answers to the observed anomalies and generate measures.

OBJECTIVES AND OPERATIONAL PROCESSES AT RISK

Currently, virtually all objectives and operational processes at risk, are leading to concerns about changing certain risk categories. Risk and trust seem to be inseparable. Feeling of security comes from a subtle balance between risk and trust.

This sentiment actually expressed confidence in the integrity or validity of other principles. Risk management as institutionalized process at the company or organization is not yet a systematic approach, and when there may be reasons of the most diverse.

Moreover, we recommend risk management strategies design optimization through system configuration retrospective analysis of the detailed field under microscope. Thus, we reiterate interdependence ante-mentioned factors, the direct effects and complex, supporting the synergistic effect between them (eg, the existence of sophisticated applications will not necessarily translate into complex products unless human needs so require).

However, going on the premise variability of risk management strategies under endogenous and exogenous individual characteristics we conclude that strategic options should be adaptable state of the concrete. Just from this point of view, we doubled the findings of local literature and European survey results that aimed to implement the risk management process in public institutions in Romania.

Linking information were underlined in these two stages have brought into focus the need to clearly divide capacity to design and implement appropriate management mechanisms generating sources of risk.

CONCLUSIONS

Accordingly, from the human operators perspective to simplify tasks and constant updating of exogenous variables generating professional risks and illnesses and also for increasing the efficiency of the system application to prevent them, it is necessary to create a software application that allows automation of many operations involved in processing results evaluation and creation of a database on assessments of the economic unit, with the possibility of tracing the evolution in time of the security level for a particular job. Access to information in real time, is a requirement of all this activity and a result of the participation of all humans within the organization.

The entire existence of an organization is marked by numerous decisions, most of them taken in conditions of uncertainty and risk. Preparing and making managerial decisions require knowing the state

of implementation of previous decisions and also the functionality and compliance processes. Achieving these goals is managed through the verification of specific research activities, which give a true state of their organization structures and processes.

Relevance and applicability of real-time decisions monitor their implementation, provided a competitive environment, often hostile, requires appropriate methods and techniques to provide the manager with full information on economic and financial situation of the organization.

Organizing an effective risk management process is a necessity for organizations wishing to operate in an environment where manager's knowledge of information on potential risks, allows taking actions to prevent negative effects and making better decisions. Implementing a risk management requires time and resource consuming, but these efforts are warranted, in time, by creating early risk warning systems, optimizing internal processes and increasing efficiency and value creation.

THE UPSURGE OF HOTELS' STRATEGIC COMPETITION AS PER THE E.U. INTEGRATION

Ioana Daniela Coserin, Free International University of Moldova, Chisinau

Victor Cristian Coserin, Free International University of Moldova, Chisinau

Paul Coserin, Free International University of Moldova, Chisinau

ABSTRACT

In the face of a highly competitive environment, it has long been considered important for a hotel to formulate a marketing competition strategy, strengthen corporate operations and upgrade quality of service. In formulating competition strategies, one must first measure the comparative performance of the entire industry, before one may understand one's advantages and disadvantages.

Considering that the processes have multiple versions is another recurrent feature's reengineering. This feature points out that in a world of changing markets, to meet the exigencies of them have to have multiple versions of the same process, each version will be adopted in relation to the requirements of market demand, the situation or different resource inputs in the process.

From this perspective, acceptance, according to which: there is no organization as such, but individuals who compose it, ie individuals customize professional, economic and social development, mainly located at a precise moment in their career, in light of its platform corporate culture management as a key tool in the birth and development of a new way to ensure consistent and profitable balance of the commercial team. So it was confirmed that an organization's own identity is created primarily by human factors which operates under the aegis of its successful teams, to access the pragmatic realization and exploitation of trade and investment opportunities.

KEYWORDS: individuals professional customize, competition strategies, upsurge, E.U. integration, resource inputs.

INTRODUCTION

In the current conditions in the future, in relation seller - buyer, sellers have lost the rule, buyers are the ones who decide what they want, when they both are willing to pay a reconfiguration process that requires new production and sales by enterprises, taking into account that each customer or customer segment wants to be treated individually.

Reasonably use the existing production potential requires greater attention to providing a scientific substantiation of output to satisfy domestic and foreign market and on this basis, have a guaranteed sale. Starting from this basic requirement, decision makers of an enterprise (company, corporation, holding company, corporation, firm, etc..) Is necessary to estimate what will be possible demand for various products, works or services that will accomplish or run on different time horizons that the short, medium and long term. To estimate scientifically application can be used with good results forecast demand.

Remodeling company must keep in mind that sharpening is a process of competition, it becomes much tougher. With trade liberalization, competition is strongly felt in all countries, which requires adoption by businesses of specific strategies, competitive prices in some markets reduced primând argument, the other the quality, after-sales services.

HOTELS MANAGERIAL UPDATE: RELATIONSHIPS BETWEEN ACHIEVEMENT AND ORGANIZATIONAL PROCESSES

The new conditions after reengineering, may be different relationships between achievement and organizational processes, compared to the past, making the process work can be distributed organizational transcending national borders in order to improve overall effectiveness of the process. According to this feature, by reengineering a company can move some of his work to suppliers, such as, for example, custody provider needs work down stocks of materials and their insurance. Similarly, the reconfiguration process debugging facilities, an enterprise may entrust the execution of the simple debugging its customers, ensuring their stocks of parts required.

In the travel and tourism industry are being introduced a variety of interrelated computer and Communication technologies. The system of information Technologies (SIT) comprises computerized reservation systems, teleconferencing, video text, videos, video brochures, computers, management information systems, airline electronic information systems; electronic funds transfer systems, digital telephone networks, smart cards, satellite printers, and mobile communications.

To substantiate the forefront output fall forecast demand, which is to obtain data on the anticipated demand for products, works or services performed by the firm. A demand forecasting future sales volume based well done and, depending on the correct estimation of their industrial production is established.

For maximum benefit from the use of policy instruments, SMEs need to adopt an active approach. By this they will anticipate and create environmental change which adapts its strategy and organization structure by changing strategies. Environmental change occurs as the primary stimulus for achieving strategic readjustments. At the same time, the organization itself may be due to environmental changes occurred.

In the face of a highly competitive environment, it has long been considered important for a hotel to formulate a marketing competition strategy, strengthen corporate operations and upgrade quality of service. In formulating competition strategies, one must first measure the comparative performance of the entire industry, before one may understand one's advantages and disadvantages.

Considering that the processes have multiple versions is another recurrent feature's reengineering. This feature points out that in a world of changing markets, to meet the exigencies of them have to have multiple versions of the same process, each version will be adopted in relation to the requirements of market demand, the situation or different resource inputs in the process.

Methods of forecasting, qualitative or subjective are those based on subjective judgment of decision makers, without the need for estimates using mathematical formulas. Of these the most common are three, namely: a) determining power sales areas, b) teaching method leading executive panel c) how knowledge of consumer opinions.

At the same time creating a human resources strategy can diminish the important influence of season phenomenon, which affects the interest of employees for this area. The human resources strategy and the performing informatics system, can determine a big improvement in the development of tourism, with multiple advantages for the employees and also fulfilling the goals of efficiency of tourism organizations.

In a competitive industry the organizations must try to develop a highly skilled workforce in order to develops and use technology. Highly educated workers will be an advantage in using improved and innovated technologies. Nevertheless, the new information technologies are likely to replace many workers, leading probable to higher unemployment. The advances made in the new technology could also determine a deskilling of the human resources which may result in a wider gap between the workers who develop new technologies and those who use them.

For example, while the hotel will introduce a management strategy, changes occur in the structure and processes and then, by their action, the company will move to a new stage that will face a new environment. according to this new environment will occur adaptation strategy that will lead to structural changes and processes and, finally, a new environmental change.

The actual occurrence of financial and economic crises and of major disorders in economic activities generated within the labor market a major unemployment rate sizing, effect which required finding new solutions in order to restore the economic equilibrium.

HOTELS KNOWLEDGE-BASED ENVIRONMENT: PROMOTING THE WORK-INTEGRATED LEARNING

Therefore the European strategies to develop a knowledge-based economy promoted the work-integrated learning policy that acts in synergy with the financial-economic cohesion policy and with the information society development initiative in order to highly capitalize new informational technologies, action that can create the socio-economic progress preconditions.

Using this method has the advantage that the estimate is based on sales contracts with customers, sales estimates can be divided territorially, types of sales and sales representative, or products. The applications of technology to the travel and tourism industry allow producers to supply new and flexible services that are cost-competitive with conventional mass, standardized and rigidly packaged options. Technology gives suppliers the flexibility to react to market demands and the capacity to combine it with other suppliers to provide new combinations of services and improve the cost effectiveness.

The technical and technological process that caused fundamental changes over labor content. When modern technique overtook the upper limit of man adapting abilities or his biologic and anatomic-physiological possibilities come into being clearly that the discrepancy between the technical level and human organism possibilities constitutes a signal for the ones that created the technique, that have neglected the human factor. In the same direction, the great complexity technique, and also its higher and higher value, underlined not only accident danger, but also the enormous human error's cost, for the material damages possible to happen.

A good planning and a sound strategy are important to the business. And business strategy must be targeted and clear. Our goal is to develop a strategy that leads to competitive advantage in an industry or market segment. Develop strategic tegiei \neg depends on the company's competitors and the industry understand the working and creating resources and capabilities resulting in a favorable position in competition.

A force that requires remodeling company in reengineering is the requirement to ensure a process of continuous change. This process must register at an accelerated pace, according to economic globalization, the increasing number of competitors and force them to launch the business market of new products with a high rate of innovation, in terms of quality and lower price.

Therefore, in order to attenuate the appeared lack of balance, the specialists attention headed, from the beginning, towards adapting the technique to humans resources, so that later, to take into consideration the problem of adapting the human resources to the modern technique.

Executive managers, the jury method is that method that estimates subjective demand and therefore the possible sales, is made by a group of people in executive management, discussions or proposals based on independent, leading to a final estimate by an analysis of upper management framework that takes into consideration the implications of the decision on production and finance company. The method has the

advantage of obtaining an estimate in a short time, team-based leadership development, and the disadvantage that hinders separation estimates territorial areas, sales branches and products.

From these analyzes can tell management what is possible or feasible in terms of strategy development. Strategy does not take place under vacuum. An organization capabilities must adapt to the opportunities coming from the external environment and is positioned to increase their chances to gain competitive advantage.

The putting into operation of such a model is meant to establish „the missing link” between the theories connected with the economy of knowledge and business practices in the economy of knowledge. The old paradigm of the management of human resources expresses a functionalist vision on the enterprise, in other words it is considered that the latter, by its „nature”, has to fulfill certain functions, the manager being obliged to act in compliance with them. The functional organization of the enterprise was generated (as mentality and practice) and divided (according to the same Taylorist principle „divides and simplify”) the functionary activities into several departments, each of them with a specific functioning.

OPERATING A BUSINESS CHARACTERIZED BY THE EMERGENCE OF ADVANCED TECHNOLOGIES

The new conditions operating a business characterized by the emergence of advanced technologies, the disappearance of a good measure of borders between national markets in terms of consumer expectations in November of products and services that currently have several choices as other time etc. require giving up the principles and modes of organization obsolete and adopt new ones proposed by reengineering, allowing to regain or to increase their competitive capacity.

Method knowledge consumer opinion is that the survey seeks opinions regarding the sale of various consumer products, or estimates of potential customers, to develop sales plans, using questionnaires sent by mail, telephone conversation etc. This method has the advantage of allowing prognostic direct knowledge of customer opinion on the strengths and weaknesses of products, which can provide a basis for product improvement or further development.

A well-configured enterprise must take into account the fact that the old mass market was divided into thousands of segments whose size is limited sometimes that of an isolated customer or customer segment each asking to be treated individually.

An important decisions by companies to enter the market some specific to a given activity is the analysis of attractiveness strategic field of activity. This analysis requires the use of the attractiveness of a specific methodology to enable the optimal final decision. Taking into account the perpetual development of human capital within this new economy we can say that the use of new technologies is an evolutionary process, which allows improving business processes, provided there is a primordial ongoing review of strategies, techniques and tools to companies who choose the path to this new digital economy.

Making process where the most logical, as a recurrent feature of the operational process, is that the reconfiguration process ensures movement without prejudice to achieve operational borders.

In the current situation, work-integrated learning is viewed as a solution of facing the European Union new integration challenges that lie within the approaches, methods, techniques of companies generated by focusing on production and use of knowledge, which provides a superior way of development, in regard of multiple facets of knowledge. The need of adjusting Romanian economic principles to the new European guidelines is founded on the pillar of accessing new world wide opportunities.

CONCLUSIONS

According to this methodology, analysis attractiveness must start from a detailed analysis of the environment that will influence business field as a social, economic, political, technological, etc.. against these factors, taking account of their influence, will develop certain assumptions or scenarios on the status and dynamics of strategic business area under the impact of environmental factors.

In developing these forecasts or scenarios will determine the size of sector instability, given the expected favorable and unfavorable trends. In assessing these trends will take random events that can cause a significant impact on market demand and the degree of profitability considered. A milestone in the industry attractiveness analysis is the assessment of market demand activity, taking into account market trends in the previous period, factors that will influence the future during this development and future growth projected for this market.

From this perspective, acceptance, according to which: there is no organization as such, but individuals who compose it, ie individuals customize professional, economic and social development, mainly located at a precise moment in their career, in light of its platform corporate culture management as a key tool in the birth and development of a new way to ensure consistent and profitable balance of the commercial team. So it was confirmed that an organization's own identity is created primarily by human factors which operates under the aegis of its successful teams, to access the pragmatic realization and exploitation of trade and investment opportunities.

in assessing the attractiveness of the industry aims also to market developments and trends in profitability. To this end we start to estimate profitability in the previous field, taking into account the pressure of competition on this market and make estimates about the future profitability of the field.

ORGANIZATIONAL METHODOLOGY REENGINEERING BY FLATTENING THE HIERARCHICAL PYRAMID -PATH TO SUSTAINABLE DEVELOPMENT-

Viorel Florescu, Free International University of Moldova, Chisinau
Marius Apetroaie, Free International University of Moldova, Chisinau
Corina Maria Ducu, Constantin Brancoveanu University, Romania, Pitesti

ABSTRACT

The trend is flattening the hierarchical pyramid by reducing the number of hierarchical levels and decentralization of decision making, organizing activities around core processes with clearly defined performance targets and not tasks, reducing the formal division of labor and the creation of multidisciplinary teams of autonomous, composed of marketing experts, engineers, economists, sociologists, managers, etc.. Integrated horizontal and not vertical as in the classic, these teams have many ways to communicate with each other without recourse to the higher level, leading to substantial reduction in the number of middle managers (middle managers).

The evolution of the argument that investment in human factor is, above all, a complex social and individual phenomenon, which ensures its interaction with different levels of essential economic structures, that is enrolling on a permanent upward trend evolution.

Moreover, the effects of globalization on world economic life sets the guidelines for promoting the dimensioning of investments in human factor, under the aegis of continuous adapting to the new economy. Strategic management in the company must evaluate the internal situation as judiciously undertaking with respect to changes that occur in the environment, the portions strengths and weaknesses and ability to respond to these changes.

KEYWORDS: hierarchical pyramid, continuous adapting, substantial reduction of managers, reengineering, sustainable development.

INTRODUCTION

Hierarchical relationships, although they remain decisive role in all organizational relations are exercised in a manner less pressing. Frequently they are associated control less rigid, more relaxing, especially when you have a strong innovation activities.

Underlying this evolution is the general increase in the level of staff training, increasing the role of creativity, the proliferation of participatory approaches, notification importance and impact of work and the satisfactions of working climate has on the quality and quantity of results obtained by each person and the company as a whole.

Realization has led companies to the gradual transition from mechanical type structures, bureaucratic, characterized by strict specialization and hierarchical well-defined ways in which man is subject to practical organization, the type organic structures, characterized by a less rigid definition stations and

structuring activities in a manner less formal, with emphasis on advisory nature links and reduce vertical prescriptions, the man and his aspirations for self are located in the foreground.

THE INCENTIVES OF MANAGERIAL SUSTAINABLE DEVELOPMENT

It follows that the internal situation assessment is necessary for corporate governance, it serving to allow the company to define their competitive position, according to party strengths and weaknesses, opportunities and vulnerabilities arising from this and the capability to act against them.

In this context, it should be pointed out that the organization, organizational structure and competencies, defines practically how to implement the policy decision in the organization and its decision exercise powers and organizational structure chosen may be useful or can stifle development of effective management.

The striking manifestation of the knowledge revolution and many mutations produced in the world economy have led policymakers, especially within the most developed countries, to address these realities in a forward looking and pragmatic vision ensuring the transition to the new economy. Therefore it was found mandatory to bring into the fore front the need of investments into human resources enlargement. Taking into consideration the labor productivity and life quality empowerment is necessary to align, globally speaking, the strategies of investing into human capital education and health. Promoting the new economy based on spin-offs design, the financial aid must support the intellectual capital progress.

We note that corporate strategy is the main force acting when top management analyzes factors such as global coverage of the organization and need relative efficiency or effectiveness.

Structure of the corporation or overhead is required to be produced in several variants. Among them is chosen based on a comparative analysis, a final solution which aims to eliminate or reduce accumulation of advantages and disadvantages presented by the original versions.

At this level, the strategy includes a portfolio approach, as they make decisions that would result in some businesses will be continued, and others abandoned. These tests fuels corporate structure choice when decisions are centralized (centralized functions, central corporate units) and decentralization (business units and resources they need to operate effectively). Instead, each business units create or refine their strategy, which impose organization and defines the conditions which will lead to choosing the business structure (such as market or technological connection).

Conditioning increased the potential efficiency of organizations innovation is reflected in the tendency to create complex organizational subdivisions dual functionality - scientific research and actual production - simultaneously performed. In some countries, this trend has led to special undertakings such as tehnopols countries. Also an expression of this development is the proliferation of management systems and product projects, which correspond to certain specific organizational forms dual functionality.

The organizational structure is recommended to be represented as an organization, expressing exactly the main expressive elements. Items are recorded in detail the organization and operation regulations and job descriptions and functions.

This group would advise the Executive Director and other business leaders in several areas. Thus, portfolio strategies could be revised to achieve the best strategic and financial results. This group could help establish benchmarks and a set of best practices in strategic planning, information management and information flows and methods of implementing the strategy.

If it is found that the company has the capability of action, which is the strength, defined as the possibility of a strategic report them in a shop, representing so-called distinctive competence that has a competitive impact.

In response to the need to enhance creativity in modern companies - especially those in leading industries - profile departments and research stations in the very structure of the tasks set time frame and budget deals in proportion of about 20% of the activity, conduct research not directly related to the company profile.

Because of this approach, apparently surprising finding lies in the diversification of research based on staff dispositions, opportunities and circumstances of each compartment, frequently with spectacular results obtained in areas other than the base, whose exploitation is extremely profitable. A well known example in this respect is 3M.

Structure can to fulfill the main function to optimize the organization's activities to the extent that reflects the objectives of the organization, state resources, organizational culture and changing environmental conditions.

ADAPTING TO REALITY AND PROJECTED REQUIREMENTS THROUGH PERIODIC REVIEW

It is therefore necessary to continue to adapt to reality and projected requirements through periodic review, to design and implement solutions tailored to organizational needs as managers and contractors of the company and its exogenous developments. In current conditions, the speed up progress in all areas, ensuring organizational flexibility becomes even more important reductions in organic management with the flexibility of the company.

Organizational methodology to harmonize the use of material resources, human, financial and information so that the implementation of the strategies and policies to establish an effective process organization, namely to ensure rational use of all resources and organization to minimize any "weaknesses" which may prove costly.

The evolution of the argument that investment in human factor is, above all, a complex social and individual phenomenon, which ensures its interaction with different levels of essential economic structures, that is enrolling on a permanent upward trend evolution. From this point of view, a fundamental function of the investment in intellectual capital is to select and provide valuable social experience for the assimilation of individual integration within the broader economic structures.

Moreover, the effects of globalization on world economic life sets the guidelines for promoting the dimensioning of investments in human factor, under the aegis of continuous adapting to the new economy.

Another objective is to attract highly skilled people in science and managerial resources that can help us innovate and gain competitive advantage. Emphasis on cutting edge technology and attract "the brightest and best" specialists in science and management is another step to obtain assurance that the organization has the capacity of resources and support necessary to implement the strategy.

Knowledge and skills of people in senior management are vital to the successful formulation and implementation strategy for the company's ability to achieve competitive advantage. Central Group focuses on developing corporate management personnel in several general areas - planning, system of incentives, marketing, leadership, change management - but also on areas characteristic for success in a particular sector - developing new products, customer service and competitive information. The purpose

of these activities is to create educational resources that profoundly influence the strategy and organizational performance over time.

Such an approach has proved particularly beneficial in the branches leading organizations, led by the computer. Approaches to organizational and economic performance of world leaders in areas such as Microsoft, are fully revealing in this regard.

FLATTENING THE HIERARCHICAL PYRAMID BY REDUCING THE NUMBER OF HIERARCHICAL LEVELS

The trend is flattening the hierarchical pyramid by reducing the number of hierarchical levels and decentralization of decision making, organizing activities around core processes with clearly defined performance targets and not tasks, reducing the formal division of labor and the creation of multidisciplinary teams of autonomous, composed of marketing experts, engineers, economists, sociologists, managers, etc.. Integrated horizontal and not vertical as in the classic, these teams have many ways to communicate with each other without recourse to the higher level, leading to substantial reduction in the number of middle managers (middle managers).

This deployment model uses two structural terms: organizational structure (corporate business) and integration. The first is defined by boxes and lines and shows the anatomy of an organization and how it uses resources and specialized groups, such as functions or divisions. in this chapter will treat the first three topics of the previous list, the elements of organizational structure and how the choice of structure depends on the strategy.

Structural Integration is closely related to clarifying responsibilities and management mechanisms or processes that are used to make it work boxes and lines. The coordination and integration workflows between functional areas are examples of operational mechanisms. Processes of knowledge transfer across borders or between units of the organization is another example of structural integration.

Strategic management in the company must evaluate the internal situation as judiciously undertaking with respect to changes that occur in the environment, the portions strengths and weaknesses and ability to respond to these changes. The capitalization of opportunities offered by the transition to a new economy are not only materialized within the awareness of market trends but also into and adapting to the new conditions within the context of dimensioning trade negotiations positive results.

The new economy organizations invest into promoting information technology under the aegis of obtaining visible beneficial results of the commercial negotiation process. From this perspective the competitive advantage of real-time ownership of key information, will make the difference and in wording fair argumentations within the negotiations in order to obtain maximum efficiency, especially in the context of digitization of business activities.

CONCLUSIONS

However, defining the role is central in implementing the strategy must do carefully fold. Modeling of this center is evidence that really put more emphasis on centralization of resources and capabilities. If successful implementation of decentralization depends more business and ability to react quickly and appropriately to customer needs and market, the corporate center concept could impede effective implementation strategy.

Thus, to optimize the efficiency and effectiveness have made an appropriate mix of centralized and decentralized tralizare. Centralization leads to efficiency and creating expertise - good resource or

capacity of all organizations cited. Decentralization leads to closer customers or markets. Decentralized units to build and use the expertise or knowledge of central resources, which can lead to slower response to customers and markets. However, excessive decentralization may impair the company's overall loss of skills leading to the central core. Have done so a balance between centralized and decentralized resources.

To the extent that corporate governance is an accurate picture of the internal situation in relation to the environment it may introduce threats and opportunities arising from this and made judicious use of resources to deal with threats or exploit opportunities. On the one hand, organizational configurations made to ensure the necessary conditions to strictly fulfill the objectives and tasks, and on the other hand, a permanent commensurate costs of țecare element of the party structure and formal organization as a whole and compare them economic effects that creates or facilitates. In determining the effectiveness of the structure should be considered primarily in relation to qualitative aspects and information influenced decisions more difficult to quantify.

TOWARDS NEW GUIDELINES WITHIN THE MANAGEMENT SYSTEMS-ENHANCING UPDATES

Marius Apetroaie, Free International University of Moldova, Chisinau
Viorel Florescu, Free International University of Moldova, Chisinau
Corina Maria Ducu, Constantin Brancoveanu University, Romania, Pitesti

ABSTRACT

This trend is essentially a clarification of the internationalization of economic activities in the methodological-managerial subsystem of the organization in the context of internationalization in general management. Analyzes conducted revealed that among the four subsystems of the organization's management, internationalization is manifested most strongly and specifically to the management tools.

It is known that the systems of consumption needs, as well as the consumption itself, represent complex categories which seem to be an expression of social, material and spiritual conditions, directions that are necessary to the human life, according to the level of development of the contemporary society, and that have lead to a major increase of the respective system of values and consumption, not only quantitatively but also in terms of quality structure, imposing new orientations and exigencies.

Also needed is improving management methods and techniques used in a particular organization based on knowing how to use these performance management tools in companies in other countries. The basis for the information forms are often acquired during economic missions and visits to other countries and the lessons learned from case studies, reflecting the performance management practice in other countries.

JEL: J53, M12, O32.

KEYWORDS: complex managerial activities, economic intelligence, necessary information, values and consumption, management methods and techniques.

INTRODUCTION

Professionalization of the benefits of implementing systems, methods and management techniques can be summarized thus: appealing to the most appropriate methodological and managerial elements in each case management, growth management rigor solutions, enhancing the effectiveness and prestige of managers, increasing the overall functionality of the organization and maximize performance economic company.

On a broader level it can be said that environment-economy relationship, according to generally accepted meanings of sustainable development must be harmonized in time and space in such a manner that will achieve a net effect. You can not miss but that in spite of the adequate reflection of environmental value, relation to the protection of the latter may require actions that restrict economic activities.

This involves a balance between negative / positive economic activity and that AEI environmental needs, which leads some experts to say, we consider fully justified, that this dilemma is actually one of the most important challenges address science and policy in the coming decades. Indeed, the fundamental problem in achieving the transition towards sustainable development is to balance an excessive price alternative in terms of the social shocks to bear the disadvantages of short-term competitiveness.

Development objectives related to environment and health, also requires investment in techniques and emission control technologies and upgrading of industries by replacing old and outdated with other

modern and less polluting. in each case will have to choose the most advantageous in terms of both cost and pollution reduction terms.

TOWARDS NEW GUIDELINES WITHIN THE MANAGEMENT SYSTEMS

The transition from a goods production economy to one based on data networks needs massive transfers of power and partially explains for the wave of financial and industrial reorganizations throughout the world, bringing forth new leaders, while the companies try to adapt themselves to the newly emerging imperatives.

In this terms we should choose the most appropriate strategy for the enterprise is complex, requiring study of environmental factors internal and external, short and long term, aiming to maximize internal resources in line with developments and possible domestic and external changes.

Designing an effective pilot requires a good information system in place, to meet current and future needs of the enterprise. Such an information system that has produced good results, may include two parts, namely: a core curriculum for all business units and some that are so organized as to meet the specific needs of different units.

The first part of the common core will be collected and stored information relating to the business, taken as a whole, reflecting economic links with various companies in the enterprise environment. Unlike the objects of this core curriculum, but in close connection with it, the second part is specific in relation to the business units they serve.

This category includes, for example, the data from the company and senior management to be taken into account by business unit management, information of interest to business unit decisions on current and future activities, information which may affect the company or business units for certain specific issues with a casual, collected only to provide information for such situations, such as, for example, the information management needs to take a decision on the adoption of diversification strategies, segmentation of integration.

A single thing must be approached axiomatically: the fact that information is the core element and the most versatile power instrument. Correctly used, information may lead to avoiding cases where physical strength or money power are resorted to, being also persuasive for those holding it, regardless the other's conscious interest. Information is power of the highest quality.

This trend is essentially a clarification of the internationalization of economic activities in the methodological-managerial subsystem of the organization in the context of internationalization in general management. Analyzes conducted revealed that among the four subsystems of the organization's management, internationalization is manifested most strongly and specifically to the management tools.

A significant portion of enterprises in our country who contribute to the achievement of production is the ones that go wrong, is viable, showing continuity in achieving good performance in relation to economic and operational adaptation and growing environmental requirements.

Management companies in this category by an appropriate strategy must always follow the enterprise to be well adapted to the requirements imposed by the market and to respond promptly in relation to the changing demands of changes taking place in markets, technologies, products .

Theoretical and methodological foundation of the international transfer of managerial tools in the forms mentioned above, it is new management science compared. In the conduct of investigations and

systematic international comparison, International Comparative Management has developed numerous theoretical and methodological elements, which promote knowledge and use and makes retrieving and adapting valuable management systems and methods used in organizations in other countries.

CONTINUITY AND ADAPTATION STRATEGIES FOR INCREASING THE ENVIRONMENTAL FACTORS

It should be noted that the application of such continuity and adaptation strategies for increasing the environmental factors require consideration of changes taking place in certain periods in the economic point, as a result of mutations that occur in the world, the technological change and the emergence of innovations in technologies and products that can change the economic and social context in which business operates.

This category of healthy firms may adopt under certain conditions any of the above types of strategies, ensuring economic performance based on the present and future of the company.

The aspects regarding the demands of the contemporary modern world with relation to the satisfaction of needs and consumption, the role of the management of commercial logistics in the context of the new exigencies concerning the consumption, including the position of the human resources in the coordinates of the new managerial concept, should be presented together.

Another category of existing businesses in our country, defined based on economic-financial diagnosis, is characterized by a temporary mismatch between the requirements of the economic environment, trends showing discontinuity in achieving economic performance.

It is known that the systems of consumption needs, as well as the consumption itself, represent complex categories which seem to be an expression of social, material and spiritual conditions, directions that are necessary to the human life, according to the level of development of the contemporary society, and that have lead to a major increase of the respective system of values and consumption, not only quantitatively but also in terms of quality structure, imposing new orientations and exigencies.

Although these companies are going through a present situation underperforming, they have the conditions necessary to break the deadlock and again viable and efficient. In this situation, an accurate diagnosis to determine if the existing situation, weak or unprofitable, are due to transient or whether the situation is poor due to factors acting permanent recruitment business which requires a Another category, which means embarking on a radical change.

SPECIAL MEASURES FOR ENVIRONMENTAL STABILIZATION

This global economic crisis requires special measures from the national economies. What is most important is implementing a strategy capable of providing guidance to macro-stabilization of the economic activity and to boost the process of upgrading the technological and productive structure of the Romanian economy, taking into account the higher build upon the national potential, but also taking into account the employment efficiency in the division of labor and global competition.

Even more significant is that, once established a strategy, it must be respected and carried through, ad litteram, with its implementing rules. Any deviation, brings us back to the baseline.

The analysis of the conceptual elements of economic intelligence starts from the premise that the respective concept implies action programs, new interfaces between the managerial methods and a new spirit that facilitates the adaptation of the enterprise to new tendencies.

Every enterprise should organize its activities from a global perspective and increase its capacity of observation and, through its employees, partners and agents, be able to foresee changes that will take place in its business environment.

All these imply that the enterprise should find and capitalize on unknown or neglected competences, taking into account hypotheses sustained by ignored employees and, therefore, promoting team work.

Category are part of the formal information to be collected and provided regularly, such as those relating to the turnover of the main competitors, the market share they hold, the degree of use of production capacities, etc., while among formalized information, but can be formalized, belong those that serve specific information requirements, such as for example the need to adopt a strategy to create and market dominance and diversification, information is not collected and transmitted regularly.

Organization receiving the international transfer of managerial tools triggers multiple positive effects: rapid implementation of performance management elements at international standards, promote technical and economic performance leading practice methods because high performance management, capacity enhancement to initiate and conduct business relationships effective international economic growth rate of reducing economic, technical, managerial, separating firms from a country in other countries.

Main ways of manifestation of this trend are: crystallization of a comprehensive set of systems, methods and management techniques, organization of special programs of knowledge, learning and use of management tools by managers and specialists in management, usage of the systems and methods management by the staff of the organization has special training in this area, call the management consultancy, general or specialist to ensure effective use of management tools.

CONCLUSIONS

Implementation, adoption and adaptation of systems, performance management methods and techniques from other countries to the concrete conditions of the organization of a country. Adaptation can be achieved exclusively by managers and business specialists and / or management with national and international consultants.

Such a phenomenon has a major impact on commerce, which therefore became more comprehensive, covering all the aspects of the policies of a country, union of countries or international communities, affecting their internal and external interests. Indeed, the commerce – because of its distribution system – became in the contemporary world a sector of considerable proportions, characterized by dynamism and a large variety.

The economic and financial crisis acts on all components of the Romanian economy. Moreover, the national economic and financial crisis generated the global crises that conjugate all levels of interest organically, social, political and ideological.

And, to underestimate this combination is to give organizations no hope, to develop strategies, reliable and sustainable, to overcome the crisis.

The involution of the contemporary economy has further limited opportunities for employment. Active population and employment got reduced, and the activity and employment rates grew and the unemployment became more and more chronic.

We propose thus placing a greater emphasis on supporting the development of initial and continuing education, increase mobility, flexibility, adaptability of work and efficient use of the unemployment insurance budget in the implementation of active measures.

Also needed is improving management methods and techniques used in a particular organization based on knowing how to use these performance management tools in companies in other countries. The basis for the information forms are often acquired during economic missions and visits to other countries and the lessons learned from case studies, reflecting the performance management practice in other countries.

Transfer systems and management methods, techniques and technologies ranging from a foreign company in a company from another country. Frequently, the transfer is made without adjustments, they covering methods and management techniques with a strong technological conditioning.

The aspects regarding the demands of the contemporary modern world with relation to the satisfaction of needs and consumption, the role of the management of commercial logistics in the context of the new exigencies concerning the consumption, including the position of the human resources in the coordinates of the new managerial concept, should be presented together.

As a result, the importance and dimensions of management systems, its dynamism and diversity, imply complex managerial activities sustained by an economic intelligence able to ensure the circulation of the necessary information.

IMPROVING PUBLICATION OUTPUT AND QUALITY

Terrance Jalbert, The Institute for Business and Finance Research

GETTING AN IDEA

1. Maintain a running list of your ideas.
2. Every time you have a few minutes, go to your list and ask yourself, in the next 30 minutes how can I advance one of these ideas.

RESEARCH PARTNERS

Selecting a Partner

1. There are advantages to working on your own.
2. Select someone with the right characteristics
 - a. Hard Worker
 - b. Willing to do their share of the work
 - c. Someone with time to conduct research
 - d. Intelligent
 - e. Mutual Interests
 - f. Cooperative
 - g. Likely to reciprocate
3. Good research partners are hard to find. Don't abuse a good research partner.

Working with a Partner

1. Start only one paper at a time with a new research partner.
2. Be patient with your research partner. They have a life and due to births, illnesses and other life events, they may not be on your schedule.
3. Recognize on some projects you will do most of the work. On others, your partner may do most of the work.
4. Use caution when selecting one of the professors from your Ph.D. program as a research partner.

How Many Authors on a Paper?

1. Two or three authors are good.
2. Four authors is not good but can be ok.
3. More than four authors looks bad.

WRITING YOUR MANUSCRIPT

Writing your Manuscript

1. Use only Microsoft Word to type your document.
2. Using free Word clones causes significant problems in the publication process.
3. Files created in another program and copied or saved as a Microsoft Word file cause significant problems in the publication process.
4. Unless the journal specifically requests otherwise, use the standard Microsoft Word equation editor.
5. Use only Microsoft spreadsheets and Microsoft

6. drawing programs.
7. Back up your files on a daily basis.

Organizing your paper

1. Organization
2. Abstract
3. Introduction
4. Literature Review
5. Data and Methodology
6. Results
7. Concluding Comments

Title

1. Descriptive and no more than 15 words.
2. Write a strong title
 - a. Strong Words:
 - i. Empirical, Evidence
 - b. Weak Words:
 - i. Analysis, Case
 - ii. Use Key Words from your Discipline
3. Think about what will look good on your vita.

Abstract

1. General Introduction to your paper
2. The goal is to precisely communicate to the reader what the paper is about.
3. Not more than 200 words
4. Do not use acronyms
5. Generally do not cite other papers in the abstract

Introduction

1. A brief introduction to the problem being addressed.
2. Include some summary statistics of the magnitude of the problem.
3. One paragraph discussion of the general state of the literature.
4. What you are going to do in the paper to advance the literature.
5. A few lines indicating how the remainder of the document is organized.

Literature Review

1. As a general rule do not cite magazines.
2. Use scholar.google.com
3. Narrow your literature review down to those articles that directly relate to the issue you are addressing in your paper.
4. Make sure that everything that you cite in the text is included in your reference section.
5. Make sure that everything you reference is cited in the body of the text.

Data and Methodology

1. Where the data was obtained from?
2. Time period covered in the analysis?
3. Frequency of the data observations?
4. Variables that the data were collected for?
5. Summary statistics.
6. Hypotheses that are being tested.
7. For regressions, specify the equation being estimated in the text of the document.
8. For Surveys indicate
 - a. Questions included in your survey? (Consider including the survey instrument as an appendix to the paper)
 - b. When was the survey conducted?
 - c. Where was the survey conducted?
 - d. What was the response rate?
 - e. What are the total number of usable observations?
 - f. Did you receive human subject research permission from your University?

Results

1. Make sure to introduce each table and figure you present in the text of your document.
2. Walk the reader through the results.
3. Select an observation in your table and explain that observation to the reader.
4. Incorporate data into MS Word tables.
5. Segregate your data when possible to get additional results,
 - a. by gender, age, country, region, year, industry, before and after a crises.

Tables

1. Don't create small one or two line tables.
2. Include information directly in the document text.
3. Combine several small tables into a single table with multiple panels.
4. Do not use exponential notation (3.2E-5).
5. Display appropriate precision
 - a. 0.0021, 1.134, 10.22, 100.6, 1,049.1, 10,432

Table Description

1. Make sure to include a 3-6 line description below your tables. The reader should be able to understand what is contained in the table without referring back to the text of the document.
2. This description is not to replace the discussion in the text, but to supplement the discussion in the text.
3. Redundancy is ok in this case.
4. Example of Table Description

*This table shows the results of the regressions on CEO compensation using data from 2004. The estimated equation is: CEO Compensation = a + b1(CEO age) + b2(years with company). The first figure in each cell is the regression coefficient. The second figure in each cell is the t-statistic. ***, ** and * indicate significance at the 1, 5, and 10 percent levels respectively.*

Concluding Comments

1. Reiterate the goal of your paper.

2. Briefly describe the test methodology and data.
3. Briefly summarize your major findings.
4. Discuss how managers might benefit from the results.
5. Discuss any limitations of your work.
6. Provide suggestions for future research.

Acknowledgements

1. Do acknowledge anyone that has helped you with the paper.
Colleagues, Administrators, Funding Agencies, Assistants, Reviewers, Editors.
It is a nice courtesy to the reviewers and editor.
2. It subtly communicates to colleagues the journal is peer reviewed.
3. Few people will be insulted if you acknowledge them but should not have.
4. Many will be insulted if you do not acknowledge them but should have.
5. Acknowledgments-Make sure to indicate that any remaining errors are the authors responsibility.
6. If someone has contributed substantially to your paper consider making them a co-author on the paper rather than just acknowledging them.

Biography

1. Your biography should indicate your employer, your publication history, contact information and any other important information.
Tom Tetertall, Ph.D. is Professor of Management at the University of East Hawaii. He is also an arbitrator for the Human Ethics Commission. His research appears in journals that include: Diversity Review, Management Styles, and Latino Business Review. He can be contacted at: University of East Hawaii, COB, 400 W. 2nd St., Kauai Hawaii, 96333, USA, email: tomt@NHI.edu.
2. Do not make your biography excessively detailed.

FORMATTING

1. Editors are looking for papers that are high quality. But they also look for papers that will not add an excessive burden to their work load.
2. They look for authors that will be pleasant to work with on revisions and in the publication process.
3. A properly formatted and written paper communicates to the editor that you will be pleasant to work with, thereby increasing your chance of publication.
4. Check the journal style guidelines to make sure you have the paper formatted properly.
5. Be sure figures and tables are editable in Word
6. Anything created or imported as an image is problematic.
7. Anything that is scanned needs to be recreated.
8. Make sure that figures and tables are legible.
9. If you are unable to edit it in MS Word it should be recreated.
10. When copying from Excel into word make sure to use the "Paste Special", "Paste as Chart" Command so it can be edited in MS Word.
11. Avoid one-sentence paragraphs.
12. Avoid one-paragraph sections.
13. If you have subsections underneath a main section, start the main section by indicating how the subsections are laid out.
14. Bullet lists do not appear well in journals.

- a. Longer lists should be placed in a table. Then reference the table in the text of the document.
 - b. Shorter lists should be incorporated directly into the text.
15. Make sure your references are formatted according to journal guidelines.
 16. Do not use text boxes
 17. Do not use section breaks.
 18. Do not use text levels

WRITING QUALITY

1. Use the grammar checker in MS Word.
2. Use an advanced writing editor:
 - a. Stylewriter **
 - b. Whitesmoke.
3. Write in third person active voice when possible.
4. Give it to a friend to read.

WORKING WITH THE EDITOR

Submissions

1. Leave your document set for 1-2 weeks between completion and submission. Give the document a final read before submission.
2. Indicate in your submission correspondence that the paper is not under review elsewhere and has not been published elsewhere.
3. Never EVER submit a document to two journals simultaneously.

Correspondence

1. Don't ask the editor every week for a status update. (every 2-3 months is sufficient)
2. If you are close to a tenure or promotion decision, do let the editor know. Editors are human and will commonly try to get the review completed prior to the promotion decision date.
3. Use submission numbers in all correspondences.
4. Be courteous when corresponding with the editor.
5. Publishing is to a certain degree political. Be willing to review papers for the journal.

Reputation

1. Our industry is small. Editors remember if you were especially easy or especially hard to work with.
2. Your reputation is very important, so make sure you leave the best possible impression, even if your paper is rejected.

Nonresponsive Editors

1. After 3 months, ask if there is any additional information you can provide.
2. After 6 and 9 months request that the editor send a reminder to the reviewers.
3. After 1 year send the editor a status check email.
4. After one year and two weeks, if the editor has not responded, send them a letter withdrawing your paper from publication consideration and try elsewhere.

REVIEWER AND EDITOR COMMENTS

1. Respond to revise and resubmit requests as quickly as possible, but take sufficient time to complete the requested changes.
2. Set the revised manuscript down for a week and reread the paper before submitting it.
3. Do not send the exact same version back to the editor without having addressed the concerns of the reviewers.
4. Do not respond rudely.
5. Prepare a document that indicates how you have addressed each of the reviewers concerns.
6. Your document should review each change that the reviewer has requested and your response to each request individually.

Reviewer Comment: In your data section please indicate the number of observations.

Author Response: Thank you for your suggestion. We have incorporated a sentence indicating the number of observations on page 22 as follows. "The data included 2,436 usable observations."

7. In the event that you are not able to address a reviewers concern. Explain carefully why you are not making the changes, and request the reviewers understanding. Acknowledge the issue in the paper and note it as a limitation, or area for future research.

ACCEPTANCES

1. Make sure to read the page proofs carefully.
2. Pay any fees due. Publishing is expensive, but it is a necessary evil. You have invested a great deal of your time in the research, the publication fee is a small part of your total investment in the project.
3. Expect some time between acceptance and publication.

REJECTIONS

1. Rejections happen.
2. Don't be discouraged by a rejection. Rejections are part of the process.
3. Make any changes that the editor and reviewers suggest and submit the paper to a different journal.

PERCEIVED IMAGE AND THE PREDICTORS OF HERITAGE TOURISM IN DOURO REGION

Luísa Alexandra Pinto, Centro de Estudos em Educação, Tecnologias e Saúde, ESTGL e ESTV, Instituto Politécnico de Viseu, Campus Viseu

ABSTRACT

This paper, addresses the issue of evaluated the perceived image service and the predictors in tourism sector. The goal of this study was to establish baseline data concerning a tourist profile and their evaluation of the stay at Douro Vinhateiro Region, a World Heritage in the North Portugal. The study attempts to investigate the relationship between the destination attributes and tourist's satisfaction, identify the relationship between satisfaction and the intention to revisit the region, as well as the attributes predictor's of the tourists' satisfaction using Ordinal Regression Analysis. The main goal of the study is contribute to the improvement of the tourism offer in the region and consequently of the country. In this sense an empirical study was conducted through a questionnaire using SERVPERF analysis with some modifications, in the summer of 2003. The profile of the tourists can be described as middle age (51-60 years), with a higher education and a income higher than 2000€ per month. Results show that satisfaction as a strong relation with the intention to revisit the region, tourists who are satisfied return. The predictor's attributes that contribute most to the overall satisfaction of tourists are the weather, accommodation and restaurant services, the regional cuisine and price.

INTRODUCTION

In 2008, according to data from the World Tourism Organization, the arrivals of international tourists totaled 924 million worldwide, 16 million more than in the previous year. The corresponding growth of 2% in international tourism occurred mainly due to the remarkable results of the first six months, since the second part of the year witnessed the increasing instability of the financial and economic systems, leading to a slow-down in the activity of the tourism sector (INE, 2009). In Portugal, tourism, conversely to the last two years, when the tourism activity has achieved a high nominal growth rhythm, the year of 2008 was marked by a slowdown in the tourism activity as a result of the basic effect of the data of previous years on one hand and due to the present world economic situation, on the other.

Portugal is traditionally a country of destination for Europe's tourism market. Between 2000 and 2008, the tourism consumption grew nominal annual average of 4.5%, meaning the end of the period, over 5.2 billion euro's compared with 2000 (Eurostat, 2008). To the same period, the value added generated by tourism increased in nominal terms, at an average annual 4.5%, corresponding to over 2.1 billion in 2008 compared to 2000. In 2006, employment in tourism represented 8.1% of total employment in the economy, more 0.1 pp than in 2005, standing at about 416 thousand individuals. Represents 8% of GDP, increasing for 17% if considered leisure and restaurants services. Since the quality of the destination present one of the major factors for growth, we pretend to this work to contribute to this growth. The purposes of the study were characterize tourist profile, identify the relationship between cultural/heritage destination attributes and the overall satisfaction of tourists who visited a cultural/heritage destination, and analyze the differences in the level of overall satisfaction of tourists' with respect to quality price relationship, intention to re-visit the region and destiny to a friend or colleague and identified predictor's attributes that contribute most to the overall tourists satisfaction.

In recent years the focus on the literature of customer satisfaction has been increasing, given the importance of this concept, which is seen as an antecedent to customer loyalty and even entrepreneurial success (Reicheld & Sasser, 1990). Thus, there are several studies on customer satisfaction in the tourism

sector which used scales of multiple attributes (Yi, 1990). Those are more recent than on other sectors, however limited and inadequate (Moreno, S. et al., 2000).

Understanding the tourists' satisfaction is extremely important for the tourism industry, mainly due to the potential effect on the future of the economy (Petrich, 2003). Satisfied tourists tend to share their positive experiences to others (word of mouth) and to buy the product repeatedly (Prebensen, 2004, Kozak & Rimmington, 2000; Kozak, 2003; Ross, 1993). This requires the evaluation of the level of tourist's satisfaction, the destination in general and the business tourist destination in question.

Having evaluated the tourist satisfaction, which is a good prediction of its intention to buy again, it is necessary to develop an appropriate strategy for relations with tourists, especially today, where there appears to be a decline in customer loyalty with tourist destinations.

The increasing importance of service quality as a means of gaining competitive advantage has led to the development and application of various techniques in order to measure the perceived quality of service in the industry of services (Parasuraman, Berry & Zeithmal, 1985, Cronin & Taylor, 1992). Most of these quantitative studies have adopted the paradigm of the expectation-disconfirmation, which explores the relationship between customer expectations prior to purchase and their satisfaction (performance) after purchase. They argued that if the performance of the product and service exceeds expectations leads to satisfaction, otherwise, if performance is below expectations leads to dissatisfaction (Oliver, 1996).

SERVQUAL developed by Parasuraman et al. (1985, 1988), based on the paradigm of the expectation-disconfirmation, remains a very popular instrument in measuring quality service, focused on the expectations. This model has been subject to many criticisms, especially with regard to the different dimensions, its psychometric properties and the nature of how expectations are formed (Babakus & Boller, 1992; Zeithaml, et al., 1993). Thus, many researchers believe that other direct methods are needed, to measure the quality of service such as SERVPERF and IPA (Importance-Performance Analysis).

The SERVPERF, is based on analysis of service quality performance. This model, developed by Cronin & Taylor (1992) and based on SERVQUAL uses a range of items which seeks to measure, using a Likert-type scale, the performance of a particular service not the difference between expectations and performance. After some studies using this method, it was concluded that it is better on explained the variance in total service quality than SERVQUAL. However, with the application of this method, we lose a lot of useful information.

The other direct method used to analyze customer satisfaction and in recent years has gained much popularity for its simplicity and diagnosis, to identify marketing strategies, and used in several areas such as tourism, leisure and recreation, education and health, is the method based on the importance-performance paradigm (Go & Zang, 1997; Guadagnolo, 1985, Joseph & Joseph, 1997, Ford et al., 1999). This method, developed by Martilla and James (1977), seeks to identify the importance of consumers in respect of certain attributes. The importance is seen as a reflection of the relative value of different's attributes used. The attributes considered less important, are those that have a minor role in overall satisfaction and the most important attributes are the Keys in building customer satisfaction (Barsky, 1995). The goal is to identify which attributes or combinations, which influence consumers to buy again the product / service. The information obtained should be used by managers to develop marketing strategies where improved performance has more influence on consumer satisfaction (Lovelock et al., 1998). It also has the advantage of identifying which attributes of services, must be maintained and those for which a significant improvement would have little impact.

METHODOLOGY

The sample population for this research was composed of tourists who visited the Douro Region in June and August, in 2003. The survey was conducted over a two-week period at four different places that are frequently visited in the Douro Region. Distribution of questionnaires was carried out only during the

daytime Respondents were approached and informed about the purpose of the survey in advance before they were given the questionnaire. Data were collected at four different places: Lamego, Vila Real, Sabrosa e Régua located in Douro Region. We used stratified proportional sampling random. A total sample size of 122 was completed. The study analyzed which cultural/heritage destination attributes were important in satisfying tourists who visited cultural/heritage destinations, and identified the relationship of satisfaction to tourists' characteristics.

The questionnaire used in this study consisted of two sections. The first section explored destination attributes affecting tourists' expectations, perceptions, and satisfaction levels in relation to a cultural/heritage destination. Respondents were requested to give a score to each of the 25 attributes on the levels of expectations and satisfactions separately using a 7-point Likert-type scale. A final question in this section was asked about respondents' overall level of satisfaction with the Douro Region (1 = extremely dissatisfied, 7 = extremely satisfied). A section of the questionnaire gathered the respondents' demographic and travel behavior characteristics. After sorting out the invalid questionnaires, data were coded, computed, and analyzed using the Statistical Package for Social Sciences (SPSS). Statistical analyses such as frequencies, descriptive, factor analysis, correlation analysis, multiple regression and Analysis of Ordinal Regression (PLUM) were used according to the respective objectives of the study. Factor analysis was conducted to create correlated variable composites from the original 36 attributes and to identify a smaller set of dimensions, or factors, that explain most of the variances between the attributes. The derived factor scores were then applied in subsequent regression analysis. The dependent variable (tourist's satisfaction) was regressed against each of the factor scores of the independent variables derived from the factor analysis,

RESULTS AND DISCUSSIONS

Out of 150 questionnaires, 122 were usable. Unusable questionnaires included missing sections either expectation or satisfaction in the survey instrument. Therefore, the data from 122 respondents were analyzed in this paper. As can be seen in Figure 1, from the 122 tourists inquires, 75% were Portuguese, 10% came from the United Kingdom, 9% were Germany's people and 7% Spanish.

Figure 1: Inquire Tourist's Nationality

Concerning demographic characteristics of the respondents we find that the gender distribution of the respondents was quite even, with 43,4% female respondents and 56,6% male respondents and 68% of those are married. The dominant age group of the respondents was 51 to 60 years (29 %), in terms of level of education, almost 59% of the respondents had a university education level. With regard to respondents' annual household income, the largest group included those with an annual household income of US €2,000 or above (54,1%). Most of the Portuguese respondents (40%) reported that they live in the south (cf. Table 1)

Total	122	100,0

Analyzing the travel behavior characteristics of the respondents in the category of the number of previous visits to the Douro Region, 68% of the respondents did have previous experience with area. With regard to the length of stay, 55,8% of the respondents stayed for 2 to 5 days. With regard to membership in a group, most respondents (64,8%) traveled with a partner, friends, and family members, whereas 35,2% of respondents traveled alone or in an organized group. Lastly, in the category of travel information's sources, the largest group of respondents (51%) traveled to this Region because of mouth to mouth references. Respondents were also questioned about their overall level of satisfaction with the Douro Region. From the research findings, 99,2% of the respondents indicated that they were satisfied, very satisfied, or extremely satisfied with the Douro Region, just one of the respondents were dissatisfied. This suggests that the Douro Region provides tourists with a satisfactory experience.

Concerning, relation price-quality of the destiny, weighing the costs and benefits of it, 89,4% of the respondents evaluated it as positive, and very positive. Finally, in terms of loyalty, it is noted that the vast

majority of tourists brings good memories of their visit to the Douro Region, more than 90% recommended the trip to a friend and return to visit this region. In order to verify the relationship between overall satisfaction and destiny recommendation to a friend, relation price-quality and the desire to re-visit the region under study, we used descriptive statistics obtained the results presented in Figures 2, 3 and 4. The results revealed a positive relation between the several satisfaction levels and trip recommendation (cf. Figure 2).

Figure 2 : Satisfaction vs Trip Recommendation

The results in figure 3, show us that overall satisfied respondents evaluate the relation quality price as positive, very or extremely positive. Concerning, overall satisfaction and re-visit the Douro Region, we found that whatever the degree of satisfaction, almost all the respondents had the intention to re-visit the region (cf. Figure 4).

Figure 3: Satisfaction vs Quality-Price Relation

In order to further understand the relationship between cultural/heritage destination attributes and identify the predictor's attributes that contribute most to the overall tourists satisfaction, the study also used Ordinal Regression Analysis (PLUM). The principal components factor method was used to generate the initial solution. To test the reliability and internal consistency of each of the attribute, the Cronbach's alpha (α). The results showed that the alpha coefficient is 0,9 for the 19 attributes. The results were considered more than reliable, since 0,50 is the minimum value for accepting the reliability test (Nunnally, 1967). From a forced varimax-rotated factor matrix, five factors with 19 variables were defined by the original 36 variables that loaded most heavily on them (loading >0.4).

Figure 4 : Satisfaction vs Intention Re-visit

The eigenvalues suggested that a four-factor solution explained 67,77% of the overall variance before the rotation. The factors with eigenvalues greater than or equal to 1.0 and attributes with factor loadings greater than 0.4 were reported. The overall significance of the correlation matrix was 0,001 with a Bartlett test of sphericity value of 829,82. The statistical probability and the test indicated that there was a significant correlation between the variables, and the use of factor analysis was appropriate. The Kaiser-Meyer-Olkin overall measure of sampling adequacy was 0,73, which was meritorious (Hair et al, 1995; Stevens, 1986). Table 1 illustrates the results of the factor analysis. The five factors were: Environment, Accessibilities, hotel and restaurant services and climate, Landscape and Hospitality and professional service and safety. The ordinal regression analysis (PLUM) was used, a procedure proposed by McCullagh (SPSS, 2004) in order to study the effect of predictor variables of different types of measurement in ordinal dependent variable. After analysis of the dependent variable, overall satisfaction with the Douro Region, held the descriptive study of the independent variables in this case the factors extracted in principal components analysis Table 2 illustrates the results to test the quality of the model: - Adjustment of the model (likelihood ratio = 114.991; $\chi^2 = 25.453$, and $p < 0.001$), which reveals that all five variables explains an adequate amount of variance in overall satisfaction.

- Measures of goodness of fit (Pearson $\chi^2 = 127.809$, $p = 0.065$; Deviance - $\chi^2 = 114.991$, and, $p = 0.237$), we can say that the model matches the data that we are studying. - Statistics of R. The regression coefficients in the variable overall satisfaction are listed in Table 2. In the analysis of regression coefficients, we used the Wald test, which assumes a distribution of chi-square, which is regarded as the most appropriate procedure to study the contribution of each predictor to the model and its statistical significance.

The factor Hotel/Restaurant services and climate, it is the only variable that possesses predict value in the explanation of the global satisfaction with the Douro region (Wald =7,73; $p=0,005$).

The higher the classification in terms of attributes regarding hotel/restaurant services and Climate the higher the global satisfaction.

CONCLUSIONS

Respondents attribute different weights to the aspects of the services found in accordance with the importance and satisfaction for each of these aspects. From the respondents that visited Douro Region, 68% of those are married. The dominant age group of the respondents was 51 to 60 years (29 %), in terms of level of education, almost 59% of the respondents had a university education level. With regard to respondents' annual household income, the largest group included those with an annual household income of US €2,000 or above (54,1%). There is a positive relationship between satisfaction and recommendation of the trip to a friend, almost all the tourists rated the relation price-quality as positive

Concerning, overall satisfaction and re-visit the Douro Region, we found that whatever the degree of satisfaction, almost all the respondents re-visit the region. The factor Hotel/Restaurant services and climate, it is the only variable that possesses predict value in the explanation of the global satisfaction with the Douro region.

Table 2: Factor Analysis Results of the Perception of Attributes in the Douro Region (N=77)

Factor	Attributes	Factor loadings	Communalities
1 - Environment	Water pollution	0.86	0.86
	Land pollution	0.84	0.79
	Air pollution	0.83	0.79
	Noise pollution	0.66	0.64
	Road accessibilities	0.83	0.80
2 - Accessibilities	Traffic	0.71	0.60
	Signposts	0.69	0.72

COMPARATIVE ANALYSIS AND ASSESSMENT OF THE IFC AND EBRD INVESTMENTS IN INTERNATIONAL TOURISM PROJECTS IN THE EUROPEAN AND CENTRAL ASIAN REGION

Elvis Mujačević, University of Rijeka

Ana Vizjak, University of Rijeka

Petar Jokić, University of Rijeka

ABSTRACT

Since 1956, International Finance Corporation (IFC) has invested over \$2 billion in 220 hotel projects in more than 80 countries. Hotels play an important role in the development of many IFC client countries, as they catalyze tourism and business infrastructure. Hotels bring great potential for job creation, growth in tax revenues, improvements in foreign exchange earnings, and opportunities for related smaller businesses. IFC supports hotel projects and companies that are commercially viable, have a positive development impact, and fit with the country's needs and tourism priorities.

The European Bank for Reconstruction and Development (EBRD) is the single largest investor in the European and Central Asia region overall, and has been a leading figure in prime real estate markets and tourism industry since its inception in 1991. In the property and tourism sector, EBRD primarily invests in high-quality, commercial real estate – including hotels, offices, retail centers, logistics and mixed-use facilities – but also in the tourism industry in general. Through its activities, the Bank seeks to support domestic and international enterprises with a range of debt and equity instruments invested directly as well as indirectly through real estate funds.

This article outlines the role of IFC and EBRD in financing projects in tourism and hospitality industry in developing countries. The purpose of this article is to make a comparison between the IFC and EBRD investments in the tourism and hospitality sector of the Europe and Central Asia. What are the ways and conditions under which the IFC and EBRD approve loans and whether these loans once they were released into circulation actually lead to a qualitative shift in the tourism infrastructure, are the questions authors want's to answer in this article.

Keywords: European Bank for Reconstruction and Development, International Finance Corporation, investments, project finance, tourism and hospitality.

INTRODUCTION

As a development bank, with a mission to promote private sector growth and job creation in the developing world, International Financial Corporation (IFC) helps clients understand the business case for social and environmental responsibility: lower costs, less political risk, better community relations, higher productivity, and brand enhancement. IFC supports hotel projects and companies that are commercially viable, have a positive development impact, and fit with the country's needs and tourism priorities. IFC seeks to partner with strong, stable firms that have a good understanding of local and regional markets and that seek our support to invest in emerging markets. IFC's tourism and hospitality hotel investments (IFC, 2007):

- Create thousands of jobs, directly and indirectly
- Generate government revenue, contributing funds for critical infrastructure and improvements to health, social welfare, and education

- Support the market for business travel: more hotel, retail, and conference capacity attracts business meetings, increasing business opportunities in a country and revenue for local small businesses
- Improve economic opportunity for small local suppliers, such as farmers, through supply chain linkages
- Generate foreign exchange
- Improve sustainable access to natural and cultural heritage sites.

The EBRD is an international financial institution that supports projects in 29 countries from central Europe to central Asia. Investing primarily in private sector clients whose needs cannot be fully met by the market, the Bank promotes entrepreneurship and fosters transition towards open and democratic market economies. The European Bank for Reconstruction and Development (EBRD) is the single largest investor in the European and Central Asia region overall, and has been a leading figure in prime real estate markets and tourism industry since its inception in 1991. In the property and tourism sector, EBRD primarily invests in high-quality, commercial real estate – including hotels, offices, retail centers, logistics and mixed-use facilities – but also in the tourism industry in general. Through its activities, the Bank seeks to support domestic and international enterprises with a range of debt and equity instruments invested directly as well as indirectly through real estate funds. (EBRD, 2011).

The remainder of the paper is organized as follows. Data selection, research methodology, and empirical models are described in Section 2. Section 3 provides analysis and interpretations of the empirical findings and Section 4 concludes the paper.

DATA AND METHODOLOGY

The tables 1 and 2 show all investment projects of the IFC and EBRD in tourism in the European and Central Asian region, taking the relevant variables into account, which were considered during the analysis. Table 1 depicts the IFC investments, whereas table 2 shows EBRD investments.

In order to perform a comparative analysis of the data presented in the tables, they will be systematized into specific categories. The categories are the following: the host country of the project, the total cost of the investment, EBRD and IFC financing (EUR), types of financing (loan types), project category according to the IFC and EBRD classification, year of publication and approval of the project, as well as the status of the investment project. The defined data will be included in the analytical process and put into a mutual relationship in order to complete a parallel comparison between the IFC and EBRD, and to draw certain conclusions from the results.

Table 1 shows that 8 projects were conducted in Europe (2 projects in Estonia) and 6 projects in Central Asia. Two of these European countries include the members of former Yugoslavia (Croatia and Macedonia). Croatia was and remains the leading tourist destination in the region, which is why the interest of Croatian private companies in further tourism investments does not surprise. Besides that, tourism is highlighted as an important strategic component in the further economic development of the Republic of Croatia. In the case of Macedonia, the investment guarantees attracting capital in the form of offering quality accommodation for business people and potential investors. The other countries (Russia, Estonia, Lithuania, Ukraine) were members of the former USSR, and the investments should help them in their further development and raising the hotel industry standard, which should generate further investment. One project is related to Poland, which was also a member of the Eastern Bloc until the fall of the Berlin Wall. It is a significant fact that the countries from the Central Asian region were as well former USSR members, and that the investments in the tourism sector are a way of trying to improve the overall economy. These countries are rich in primary raw materials (oil, gas, iron ore, etc.), and it is crucial that the potential private investment initiative is supported by high quality hotel services with

recognizable international standards. It is characteristic for all projects that the sponsors and initiators of the projects, are part of a large if not the biggest corporation and affiliation in the respective countries. The investments will surely result in new profits for the project sponsors. The questions whether these projects will offer additional benefits for the local people is an issue that should also be interesting. For this reason, the project cycle of the IFC requests that the project has to meet the criteria set by the IFC.

Table 1: IFC investments in tourism projects in Europe and Central Asia

Name of the project	Country	Total investment cost in USD	IFC financing USD	Type of financing	Category of the project	Year of the project /Status
Hotel Armenia	Armenia	36.500.000	4.000.000	up to a 25% equity interest	B	2000/closed
Park Hyatt Baku	Azerbaijan	39.000.000	25.000.000	15.000.000 A-loan 10.000.000 B-loan	B	1999/closed
Baltic Hotels	Estonia	15.500.000	5.500.000	Senior loan and quasi equity (C-loan)	B	2000/closed
Reval Hotel Group JSC	Estonia	30.700.000	10.000.000	8.000.000 senior loan; 2.000.000 equity investment	B	2000/closed
ALH	Croatia	425.000.000*	50.955.000	35.475.000 A-loan; 15.480.000 equity investment	B	2007/active
Eurasia Hotel Ltd	Kazakhstan	50.000.000	32.000.000	7.000.000 senior loan; 10.000.000 income participating loan; 15.000.000 B-loan	B	2008/closed
CEF CASPI Limited	Kazakhstan	5.700.000	2.500.000	A-loan	B	2001/closed
Hotel Lietuva	Lithuania	36.500.000	18.000.000	9.000.000 A-loan; 9.000.000 B-loan	B	2002/closed
Makedonija Turist A.D.: Grand Hotel	Macedonia	10.000.000	5.000.000	Senior loan for IFC's own account	B	1999/closed
Poland – Global Hotels	Poland	39.000.000	10.700.000	Senior loan, subordinated loan and equity	B	1999/active
Kesko –Accor Tourism Promotion Services	Russia	216.600.000	40.000.000	A-loan	B	2010/active
CONRAD	Tajikistan	37.800.000	7.000.000	A-loan	B	2009/active
Istanbul Hotel	Turkey	8.800.000	3.500.000	A-loan	B	2002/closed
Sofia Kiev Hyatt	Ukraine	50.000.000	27.500.000	14.500.000 A-loan; 13.000.000 Syndicated B-loan	B	2005/active

The table 1 shows all investment projects of the IFC in tourism in the European and Central Asian region. From the table we can see that IFC has invested in 14 projects in Europe and Central Asia region of which 8 projects are in Europe including Estonia and 6 projects are in Central Asia. The total projects cost is 1.001 billion USD while IFC financing is 242 million USD.

Table 2, which represents the EBRD investments, shows that out of a total of 13 investments in the tourism sector, as much as 11 are in Europe and only two in Central Asia. Two countries are members of former Yugoslavia, Croatia and Montenegro. Both countries have adopted tourism as a strategic determinant in the overall economic development, in their economic program. This fact is completely understandable if we observe the geographic and geomorphologic position of both countries, which together practically stretch over the entire eastern Adriatic coast. The jagged coastline and maintained landscape are a guarantee for a high competitive advantage, which promises good accommodation occupancy. The characteristic of these countries is an outdated tourism infrastructure, which cannot meet the current international standards and tourist demands. Taking this fact into account and in the case of lack of investment in the infrastructure development, the market value falls in the way that offers are of poor quality, which automatically causes a weaker demand and the loss of the market position and competitiveness. Bulgaria is in the same situation, with the exception of having a different geographical position, i.e. the sea access, as the premise for the tourism development in Bulgaria is to the Black Sea. If we take Poland into account, we see that the investments are carried out in major, urban centers. The reason for that is surely the fact that the Polish urban areas are related to the historical and cultural

heritage and attract potential tourists. Besides that, major urban areas are usually larger financial centers that attract business people. We have two projects in Russia, which are substantially different, mostly because of the locations. While one is located in the region of St. Petersburg (Zao Hotel Corporation) as a major urban area, the other project (Russian Hotel Investments) is located in several smaller regional centers, which is supposed to result in an additional revitalization of these areas. The investment in Kazakhstan is also not surprising. It is a country of exceptional natural wealth, which makes the support of the potential private investment initiative by high quality hotel services with recognized international standards, of utmost importance. Except for these mentioned initiatives in capital investment, attention should be paid to two projects of regional dimensions. These are private affiliations (TUI and ORCO), which are investing in Central and Eastern Europe. TUI as the world's leading tour operator is investing in the hotel infrastructure because this way the quality and quantity of its offer is raised and the market diversified. The ORCO affiliation also invests into hotel portfolios but as well in the construction of smaller Apart-hotels in major urban centers of the region in order to satisfy the western market and its tendency to stay in small flats/apartments in major urban centers.

Table 2: EBRD investments in tourism projects in Europe and Central Asia

Name of the project	Country	Total investment cost in USD	EBRD financing USD	Type of financing	Category of the project	Year of the project /Status
Sunny Travel Eood	Bulgaria	37.050.000	24.700.000	10.000.000 A-loan; 10.000.000 B-loan	B	2005/closed
Hilton Podgorica	Montenegro	107.215.000	34.490.000	Senior loan	B	2010/active
Sveti Stefan Hotel Complex PPP	Montenegro	130.380.000	52.096.000	A-loan; B-loan;	B	2010/active
Jadranka hoteli	Croatia	112.050.000	36.310.000	Equity financing	B	2008/active
GC Hotels & Resorts	Croatia	425.000.000	68.800.000	27.500.000 senior loan; 25.100.000 equity financing	B	2007/active
Raduga II	Kazakhstan	23.281.000	8.028.000	Senior loan	B	2005/closed
Joint Venture Halkyr CJSC	Kazakhstan	17.394.000	7.359.000	Senior loan	B	1997/closed
Dom Development SA	Poland	102.100.000	30.630.000	Mezzanine financing	B	2002/closed
ATrium Hotel Varšava	Poland	108.279.000	19.749.000	12.000.000 convertible loan; 2.500.000 subordinated loan	B	2000/closed
Russian Hotel Investment	Russia	135.043.500	45.380.000	27.100.000 senior loan; 6.000.000 equity financing	B	2010/active
Zao Hotel Corporation	Russia	26.960.000	13.783.000	10.500.000 senior loan; 3.000.000 subordinated loan	B	1998/closed
ORCO Aparthotel	Regional project	150.380.000	15.282.000	Equity financing	B	2003/closed
TUI Advance Paymants	Regional project	139.800.000	48.000.000	Revolving loan	C	2003/closed

The table 2 shows all investment projects of the EBRD in tourism in the European and Central Asian region. From the table we can see that EBRD has invested in 13 projects in Europe and Central Asia region of which 11 projects are in Europe and 2 projects are in Central Asia. The total projects cost is 1.515 billion USD while EBRD financing is 404 million USD.

Data on the amount of EBRD funding, which were available have been denominated in Euros. Given the fact, that for a realistic comparison it is necessary to decide upon one currency, we have decided to transfer the amounts from EUR into USD. Since the month and year of the financing approval were available (but not the day), the 15th of the month has been determined as the day when the relevant measure of conversion from EUR to USD was approved. Information is available on the CNB webpage, where the respective exchange rates and their mutual relationships, on the day that we have selected, can be looked up.

Figure 1: Comparison of investments in tourism projects by the EBRD and IFC; Europe and Central Asia

From the figure 1 we can see the difference between the funded projects in the tourism sector by the IFC and EBRD. IFC has participated in 14 projects in Europe and Central Asia, whereas EBRD has had part in a total of 13. It is interesting to note that the IFC has invested more in the area of Central Asia (6 projects) than the EBRD has. The reason for this can be attributed to the fact that the EBRD is more oriented to the area of Central and Southeastern Europe, while in contrast to them, the IFC is an institution that covers all the underdeveloped regions of the world.

EMPIRICAL RESULTS

We will begin the analysis with the total cost variable of the investment projects denominated in USD. The value or amount that should be invested into the project depends on its purpose. Table 1 and 2 show that both institutions share a common project. This is the ALH, or GS Hotels & Resorts in Croatia. The total value of that project was USD 425 million. IFC's largest expenses are related to the already mentioned ALH, and after that to the Kesko-Accor from Russia, which was estimated at 216,6 million dollars. The projects that follow next are Sofia Kiev Hyatt, Ukraine and Euroasia Hotel LTH, Kazakhstan worth 50 million dollars each. Park Hyatt Baku, Azerbaijan and Global Hotels, Poland have been estimated at USD 39 million. EBRD's biggest project in terms of expenses is the GS Hotels & Resorts (ALH) in Croatia. Next are the investments of the company ORCO Apart-hotel in the amount of USD 150 million, TUI Advance Payments with 140 millions, Dom Development SA with 102 millions, Russian Hotel Investments with 135 millions etc. It is interesting to note the recent investment initiatives in Montenegro, which together reach a staggering 238 million dollars. The graphical display 4 shows the difference in the value of certain investment projects funded by the IFC and EBRD. It is evident that project ALH costs the most, which is why more financial institutions have been included in the realization of the project and thus asked for help. The total costs of the projects, which were partially funded by the IFC in the observed period, are 1 billion and 10,5 million dollars. The expenses of projects in which the EBRD has participated reach 1 billion and 515 million dollars. This difference is also evident in the graphical display, where the blue bars indicate the IFC investments, and the white bars the EBRD ones.

Financing by the IFC and EBRD is subject to certain criteria and different forms of funding. This means that these institutions are never the majority shareholders in companies to which they approve funding, and they also do not participate in the management. What they do not give up is the control over the project until it achieves the status "closed". Table 1 shows that the project investments vary, some are worth more money than others. The shares are divided in the same way by the IFC and EBRD. That way we can see that the investments in Croatia, specifically into ALH are the largest at both institutions. A good comparison can be made on this example. While the IFC has spent 59.955.000 dollars on the beginning of this project, the EBRD has initially invested 68.800.000 dollars.

The next category that will comparatively analyze these two institutions is the percentage of financial participation in the projects. If we take the total investments in the tourism and accommodation sector in the European and Central Asian region into account, in which the IFC has participated during the observed period, we reach a number of 1 billion and 10 million dollars. From this total amount, the IFC has, through its own funds, syndicated loans and other ways of financing participated with a total of USD 241,2 million, which ultimately makes 24% of the investments. The private sector of countries that have initiated the projects, i.e. sponsors, have participated with 76,6% of the total costs of projects or the cash equivalent of USD 769,3 million. On the other hand, total investments in the tourism and accommodation sector in the European and Central Asian region, in which the EBRD during the observed period participated, reaches a number of USD 1 billion and 714 million. From this amount the EBRD has, through its own funds, syndicated loans and other ways of funding participated with a total of USD 452 million, which makes 21% of the investments. The private sector of countries that have initiated the projects, i.e. sponsors have participated with 79% in the total costs of the project or in the cash equivalent of USD 1 billion and 262 million. Graphical display number 2 shows these relations.

Figure 2: The ratio of invested capital by financial institutions and the private sector in the host countries of the project

The illustrated data above and the figure 2 clearly show what the average share of participation by the IFC and EBRD in the projects is.

We already indicated that IFC and EBRD do not participate in the ownership structure with a larger share than 25%, and this research has proved that. Although the EBRD has one project less than the IFC, we can see that the EBRD is investing significantly more than the IFC. The reason for that lies in the fact that the EBRD is responsible to provide funding for private initiatives from only this region, whereas the IFC operates on a global level and the area analyzed in this paper is only one of many regions, in which they invest.

The following tables show the motives, which were the generators for investments into the tourism sector for each project. Table 3 refers to the IFC investments, while table 4 is relevant for the EBRD ones.

Table 3: Project investment motives powered by the IFC

PROJECT	INVESTMENT MOTIVES
Hotel Armenia Park Hyatt Baku Baltic Hotels Reval Hotel Group JSC	Renovation Expansion and development of the Hyatt affiliation Support for the development of regional hotel affiliation Expansion, strategic development and financial restructuring of the affiliation
ALH	Rebuilding destroyed hotel infrastructure, establishing tourism as a generator of economic change
Eurasia Hotel Ltd	Development of the region through increased offer of hotel accommodation
CEF CASPI Limited Hotel Lietuva Grand Hotel – Makedonija Global Hotels Kesko-Accor	Expansion and development of the Chagala Hotel Renovation, revitalization and repositioning Modernization Development and management of a hotel chain Development of business and sports infrastructure in less developed regions of Russia
Tourist Promotion Services CONRAD Sofia Kiev Hyatt	Development Modernization Acquisition, expansion, development, business modernization

The Table 3 shows the motives, which were the generators for IFC investments into the tourism sector for each project. The following motives are dominant: construction, modernization, operationalization, reconstruction, capacity expansion, upgrade construction.

The following motives are dominant: construction, modernization, operationalization, reconstruction, capacity expansion, upgrade construction. It is important to understand the investment motives because they are always planned with a specific purpose, which further generates subordinate goals, which can be achieved by the realization of the main goal, such as employment, establishing international business standards, a deeper cooperation with local suppliers, etc.

Table 4: Project investment motives powered by the EBRD

PROJECT	INVESTMENT MOTIVES
Sunny Travel Eood	Development/modernization
Hilton Podgorica	Reconstruction/expansion/business modernization
Sveti Stefan Hotel Complex PPP	Construction/reconstruction/business modernization /business expansion
Jadmaka hoteli	Reconstruction
GC Hotels & Resorts	Rebuilding the devastated hotel infrastructure, establishing tourism as a generator of economic changes
Raduga II	Construction/work
Joint Venture Halkyr CJSC	Reconstruction/ business modernization
Dom Development SA	Construction of accommodation projects for tourism purposes
ATrium Hotel Varšava	Projecting/construction/work
Russian Hotel Investment	Development/construction/work
Zao Hotel Corporation	Construction
ORCO Aparthotel	Building Apart-hotels on attractive destinations
TUI Advance Payments	Upgrade construction and expansion of facilities

The Table 4 shows the motives, which were the generators for EBRD investments into the tourism sector for each project. The following motives are dominant: construction, modernization, operationalization, reconstruction, capacity expansion, upgrade construction.

If we compare the tables 3 and 4 we can see that the motivational moments are almost identical. Both institutions base their investments on certain criteria, which they follow strictly. The IFC and EBRD both expect certain effects from their projects, which should generate further changes and multiply positive changes to the company itself, but also for its immediate business environment.

What certainly needs to be analyzed and put into a context of comparison is the way, or the type of financing. This is specifically defined for the IFC in table 1, and for the EBRD in table 2.

Figure 3: Percentage share of loans in the total financial package (IFC)

Figure 3 shows the participation structure of every type of financing in percentages. A-loans (from IFC's own account) make up more than the half of the total amount injected into the funding of this vital sector. Other loans follow (senior loan, subordinate loan), the participation in the share capital (equity), and finally B-loans, or the syndicated loans in which commercial banks participate, taking over some of the risk.

The IFC has the following types of financing: A-loans, B-loans, Equity financing, C-loans in which we include the „senior loan“, subordinated loans, income-participating loan and the quasi equity financing. From a total of USD 242 million, USD 127 million goes to A-loans. When expressed as a percentage A-loans participate with 53% of financing. From other types of financing, of the total investment amount in the tourism sector, the B – loans equal 49 million dollars, and the other loans (senior loan, subordinated loan) and the participation in the share capital (equity) are in the amount of 66 million dollars.

We can approach the types of financing analysis for the EBRD in the same way. With the EBRD we can see that there are two basic ways of participating in investment projects. Those ways are loans and shares in the ownership structure. The revolving loan, which is represented in one investment project, can be considered a guarantee, as a form of financing, but we will also place him in one of the lines of loans.

Figure 4: Relationship between the two main forms of financing

Figure 4 shows the relationship of two basic forms of financing by EBRD and its value. As loans we will include: A-loans, B-loans, Senior loans, Revolving loans, and as shares in the ownership structure we will deal with: Equity, Mezzanine financing, convertible loan and subordinate loan.

The following two graphical displays show the relationships between certain forms of loans in these two basic groups. It is noticeable that the two strongest types of financing Senior loan and Equity financing (shares in ownership structure), together participate with almost half of the total funding. This fact makes sense if we consider that senior loans are loans of the highest ranking, where the creditor has priority of

payment in the case that something goes wrong. With shares in the capital the EBRD expects the return of the investment, and on top of that, there is constant supervision.

Figure 5: The relationship of individual loans in EBRD loans

The figure 5 shows the relationships between certain forms of loans from the two basic form of EBRD financing. From the figure 6 we can see that the Senior loan is the main form of financing investments in the form of the loan.

Figure 6: The ratio of certain loans to shares in equity

The figure 6 shows the relationships between certain forms of equity financing in two basic form of EBRD financing. From the figure 6 we can see that the equity financing is the main form of financing investments in the form of shares in ownership structure.

In order to get a clearer picture of the IFC and EBRD funding in the tourism sector of Europe and Central Asia all the mentioned facts can be illustrated through a tabular display, which will show us the exact type of financing, its amount in millions of dollars, as well as the total share which he takes in the complete picture.

Table 5: Forms of investments of the IFC and EBRD in the tourism sector for the European and Central Asian region

Form of financing by the IFC	The amount of investment by the IFC (USD millions)	% of the total investments
A – loan	127	53%
Other loans: senior loan, subordinate loan, participation in share capital –equity, income-participating loan	66	27%
B – loan	49	20%
TOTAL	242	100%
Form of financing by the EBRD	The amount of investment by the EBRD (USD millions)	% of the total investments
A – loan	40,7	9%
B – loan	40,7	9%
Senior loan	143	32%
Revolving loan	59	13%
Equity	100	22%
Subordinate loan	7,8	2%
Convertible loan	17	4%
Mezzanine loan	43	9%
TOTAL	452	100%

The table 5 again shows that the EBRD has invested significantly more into this sector during the observed period. This is a large amount of USD 210 million. The dominant type of financing with the IFC is the A-loan, with a total share of 53%, which is worth USD 127 million. The type of financing with the EBRD is the senior loan with a share of 32%, which amounts USD 143 million and equity with 225 and USD 100 million.

The next relevant variable that is worth analyzing is the categorization of the project on its impact on the environment and the social, as well as societal impact, which these projects have on the local population and beyond. IFC and EBRD have four different impact categorizations (A, B, C and FI). It is evident that all the projects are in category B except the last one, the TUI Advance Payments, which is category C (table 2). That literally means that those are projects (except TUI) that are expected to have a limited adverse social and/or environmental impact, which can be easily addressed through mitigation measures. Mitigation measures are listed for each project, which should and have to be implemented for the functionality of the project, and mostly because of the protection, security and safety of people and the environment that are directly related to the project. The importance of determining impact categories of the projects is reflected by the criteria of the IFC and EBRD which state that “the project has to meet the banking and ecological standards of the EBRD, or IFC, as well as those of the host country.”

The variable that will be analyzed next is the time frame of the investment projects. It is interesting that the first investments started 1997 in Kazakhstan, and only in 2007 in the area of former Yugoslavia (Croatia and Montenegro). Since the loans are not realized in the full amount by the EBRD and IFC and their shares are limited to 21%, and 24% there is a need for a different capital accumulation. It is generated through national and local commercial banks. Of course, since those are countries that were in transition and have just recently introduced a market economy, it was a primary issue for the development of business to develop a financial and banking system. This is why there was a long time gap between the initial investments in the financial sector and the initial investments in the tourism sector.

Table 6: Time dimension of the IFC and EBRD investments in the tourism sector of the European and Central Asian region

Institution/Year	'97	'98	'99	'00	'01	'02	'03	'04	'05	'06	'07	'08	'09	'10	'11
IFC	-	-	3	3	1	2	-	-	1	-	1	1	1	1	-
EBRD	1	1	-	1	-	1	2	-	2	-	1	1	-	3	-
TOTAL	1	1	3	4	1	3	2	-	3	-	2	2	1	4	-

Table 6 shows the investment dynamics of tourism projects for the areas of Europe and Central Asia through a time frame.

The reason why the time frame has been taken into account can be justified with the fact that all the countries that fall within the domain of the European and Central Asian region are emerging countries that were constituent parts of bigger states or unions of states of certain ideologies. If we take a look at the temporal disposition of approved financial means by the IFC we can notice that the first projects related to the tourism sector were not approved until 1999, and from the EBRD in the year 1997. Further research of the author has revealed that the overall first IFC and EBRD investments into the private sector have started in the second half of the 90-ies of the last century. The first investments were launched in the finance and insurance sector. Countries in which they invested the most were Russia, Turkey and the Ukraine. The beginning of the investments into projects and private sector by international financial institutions in these countries doesn't date before the year 1994. Taking the time frame into consideration in which countries in this region have emerged, in the beginning of the 90-ies, we come to a logical conclusion that they needed a certain time for the integration and convergence into global market frames, and economic developments of the Western, developed world, since they originated from alliances that was characterized by a closed market and a socialist economic view. At that time, private entrepreneurs emerged, who were starting their projects, probably using commercial loans of national banks. However, in order to develop the banking, and financial system, investments of the IFC and EBRD were necessary, and that's when the financing in the financial sector started, in 1996 (the Ukraine). For this reason there is a time gap between investing in the financial and tourism sector of about five years.

The last analytical process will be directed on the investment project statuses. We differentiate three categories: active or signed, closed and in the signing process or pending. It is important to note that the time dimension of starting a project does not have to be an explicit attribute to its current status. For example, an IFC project, which was started in Poland in 1999 is still active, while a project that was launched 2008 in Kazakhstan has the status closed. This difference probably stems from the contract and the loan type, which was formed at the signing of it between IFC as a lender and the sponsor of the project as a borrower.

At the EBRD however, it is the case that older projects are all closed, whereas the new ones are active/signed or in the process of signing. The conclusion that can be drawn from this is that the EBRD ensures itself well while approving a project, and does not invest in projects that do not have the potential of returning the debenture. This means that the mechanisms of the entire project cycle work more than well, and that every the borrower satisfies EBRD's expectations in every phase.

Figure 7: The relationship between the status of projects of the IFC and EBRD

From the figure 7 we can see that from the total number of IFC projects in the tourism sector for the European and Central Asian region nine have the status closed, four are active and one is pending. The situation at the EBRD is the following: eight are closed, four are active and one is in the signing process.

RATING OF INVESTMENT PROJECTS IN THE TOURISM SECTOR BY THE IFC AND EBRD

In the assessment of investment projects we will start with the business and investment evaluation by the IFC. After that the EBRD investments will be evaluated, and finally the investments will be compared to each other.

In the assessment of investment projects we will start from the importance and size that the projects take in the tourism sector in the entire investment volume of the IFC. Therefore we will use the recent annual report for the year 2010, which will be considered as a relevant measure, which can be mapped onto the previous periods since the investment structure and the disbursement by the IFC maintains a certain tendency over time.

The IFC has in the fiscal year 2010 disbursed \$ 6,8 billion from its own account, 4,9 billion went to loans, 1,6 billion on participation in the share capitals and 0,3 billions on debt securities. If we take a look at the entire portfolio in which the IFC participated it is evident that the overall payoff of the investment portfolio amounted \$ 25,4 billion (IFC, 2010).

IFC's disbursed investment portfolio is diversified by sectors and geographical regions with emphasis on a strategically high impact of the development sector, such as financial markets and infrastructure.

Figure 8: Distribution by geographical area

The figure 8 shows the distribution of disbursed investment portfolios by geographical area and sector. From the figure we can see that more than 50% of IFC investment portfolio is disbursed in Latina America and Caribbean and Europe and Central Asia.

The sector distribution for 2010 is shown in the figure 9. Due to space restrictions only 5 sectors have been included, the first four according to the share, with a touristic relevancy for this paper, while the other sectors are presented as the other.

It is evident that the tourism sector, in its entire investments, takes up little space, just 2%. Still these 2% are not negligible since this is a sector that affects future employment and unemployment directly and indirectly. Not just that, but also the increased range and quality of accommodation that should be a guarantee for respecting international standards in the sector and thus contribute that the potential investors are ensured to enjoy the accommodation on the level of world leading hotel companies that are led and managed by leading hotel operations.

In the assessment of investment projects in the tourism sector funded by the EBRD we will use the recent annual report of the EBRD, which was in 2009. In presenting some kind of assessment it is important to distinguish some things. The EBRD differentiates 4 main sectors: the corporate, energy, financial and infrastructure. Each of them is further divided into sub-sectors and thus we have (EBRD, 2010):

- Corporate – agricultural business, manufacturing, real estate and tourism as well as telecommunications,
- Energy – natural resources and energy sector,
- Financial – investing in micro enterprises, small and medium-sized through financial intermediaries and
- Infrastructure - municipal environmental infrastructure and transport.

Figure 9: Investment share by sectors

According to the figure 9 most investments are present under the finance and insurance sector (36%), followed by electricity (9%), oil, gas and mining (7%), transport and storage (5%) and finally the category of accommodation and tourism services at the 17th place out of 20 sectors with 2% of the total investments.

The sector, or sub-sector that is of our interest is the real estate and tourism one. We can see that it is part of a larger, superior sector, which is the corporate sector. For the purposes of this paper we have selected 13 projects from the sub-sector real estate and tourism, although there are 76 projects in total. However, from this number only 13 are directly connected to tourism investments. In order to perceive the size and importance that investments present in the tourism sector, we will start from the total EBRD investments since its existence, and later on divide them by the portion that each one occupies in the above mentioned 4 main sectors. Analogues to that we will get to the percentage value of the tourism sector share in the overall portfolio of EBRD's project financing, since in table 5, we have calculated the entire financial means engaged by the EBRD in the development of the presented 13 projects.

The cumulative value of all the financial investments in the 4 existing sectors from its foundation in 1991 until the last annual report in 2009 equals 147 billion Euros. EBRD's involvement amounts 47,7 billion Euros, and the remaining part of the mobilized funds is 98,8 billions. In total these funds have financed 2.835 projects (EBRD, 2010). We are interested in the part that involves the engagement of the EBRD. Looking five years back, until 2005, the share of EBRD investments amounted 4-5 billion Euros per year. In 2009 that amount increased to 7,9 billions. The reason for that is the underlined investment, which is supposed to help get out of the crises, as the EBRD declared itself. These 7,9 billion are divided into the 4 main sectors as follows (EBRD, 2010):

- corporate → 20%
- energy → 19%
- financial institutions → 39%
- infrastructure → 22%.

This distribution can be considered as significant for the entire redistribution from the very beginnings of EBRD's operations, since values eventually tend to equalize or average according to the Gaussian curve.

So, the corporate sector accounts for 20%, but we must be aware of the fact that it is constituted by 4 sub-sectors. The one that is of our interest is the sub-sector: real estate and tourism. This sector has 76 projects overall, but only 13 of them imply tourism investments in its content. If the total investment of the EBRD

in all the sectors amounted USD 68,2 billion and USD 452 million in the mentioned existing projects (table 5) we come to the result that the total participation or percentage share in the tourism sector is 0,7%.

Overall, this share does not seem to have a big importance, but if put it into context of the overall figures and the countries to which the funding was distributed to, it is of great importance after all, for the local tourism sector and the multiplication effects that will generate or have already been generated in the project cycles.

And finally when we compare the investments of these two financial institutions we come to the conclusion that the EBRD invests more. However, we cannot give such simplified conclusions. The fact that the EBRD invests only in this region should be taken into consideration, while the IFC invests worldwide, as well as that our region of interest is just one of six existing. That means that the IFC contributes more in the development of the tourism sector on a global level, whereas the EBRD limits his funding to the European and Central Asian region. In any case, these two financial institutions can be a significant figure in the development of the tourism industry due to their help, expertise and knowledge. Although the percentage of these investments is relatively small (EBRD 0,7%, IFC 2%) we cannot talk about negligible figures. Namely, the two institutions do not participate with more than a 25% share in a project, and in most cases it is even less. However, this share is sufficient to guarantee the accumulation of capital from other sources. Although the total investments (IFC USD 242 million; EBRD USD 452 million) are negligible compared to investments into other sectors, it should be noted that this capital has helped in activating additional capital in the total amount of 2 billion and 724,5 million dollars. Still, this capital has its importance and can achieve a great impact in the development of the tourism sector of the region.

CONCLUSION

The total IFC and EBRD investments and disbursements in the tourism sector are small, but it has already been pointed out that these investments also present big steps in updating and modernizing the existing tourist offer, the expansion of already existing and established hotel chains and in the process of building new facilities. We can easily conclude that there is a certain gap between the financial and business sector in the countries where the EBRD and IFC are operating. This is most evident in the financing sources which can be unfavorable and uncompetitive, or perhaps the financial structure of a country is not on the level of private entrepreneurship and vice versa. In such cases, organizations such as the EBRD or IFC can play a key role in the evolution of an investment project. First, because they are institutions that have the means, or are able to acquire them with its rating and status, and second, because means that are activated this way are significantly cheaper from any domestic commercial loan.

Such projects are carriers of the further development in terms of newly created workplaces, directly in the industry, as well as indirectly, on the level of supplying new companies. In the macroeconomic point of view new workplaces generate new income and raise the overall spending on a higher level. This type of spending should be followed by the offer so the new situation should be adapted with an increased production, which can result in increased export, and of course with the regulation of foreign trade debts and reaching an optimal balance of payments. Naturally, this is a process that requires a little longer time frame, but the theoretical settings are clear, they should just be followed.

FACTORES DE CONTINGENCIA QUE INCIDEN EN LA PROFESIONALIZACIÓN DE LAS EMPRESAS FAMILIARES DEL SECTOR SERVICIOS DE TIJUANA, B.C., MÉXICO.

María Virginia Flores Ortiz, Universidad Autónoma de Baja California
Alfonso Vega López, Universidad Autónoma de Baja California
María Marcela Solís Quinteros, Universidad Autónoma de Baja California

RESUMEN

El presente trabajo contempla una investigación para analizar los factores de contingencias que inciden en la profesionalización de las empresas familiares del sector servicios de Tijuana, B.C., México. Es importante que la gestión de toda empresa familiar logre profesionalizarse de manera gradual, ya que al inicio de su ciclo de vida tienen estructuras sencillas, basadas en el propietario, si logran sobrevivir empiezan a formalizar su estructura organizacional debido a su crecimiento contemplando nuevos departamentos e inclusive la contratación de personal ajeno a la familia, siendo la gestión y la toma de decisiones más descentralizada. Para medir los niveles de profesionalización se tomaron aquellos estados o condiciones organizativas como factores de contingencia, proponiéndose una serie de variables. Para lograr los resultados se han realizado 245 encuestas representativas a los propietarios registrados en el Sistema de Información Empresarial Mexicano, (SIEM), correspondiente a Tijuana, en Baja California, México. Se realizó el análisis estadístico de los datos a través del sistema SPSS 15.0, logrando como resultado determinar el perfil del propietario/gerente y la estructura organizativa de las empresas familiares del sector servicio.

PALABRAS CLAVES: factores de contingencia, profesionalización, sector servicios

CONTINGENCY FACTORS THAT INFLUENCE THE PROFESSIONALISM OF FAMILY BUSINESS IN THE SERVICES SECTOR OF TIJUANA, B.C., MÉXICO.

ABSTRACT

This work includes research to analyze the contingency factors that influence the professionalism of family businesses in the services sector of Tijuana, BC, Mexico. It is important that the management of all family business achieved gradually professionalized since the beginning of their life cycle are simple structures, based on the experience of the owner, if they survive begin to formalize their organizational structure due to growth contemplating new departments or even recruitment outside the family, with the management and decentralized decision making. To measure levels of professionalism took those states or organizational conditions as contingency factors, proposing a number of variables. To achieve the results have been carried out 245 surveys representing the owners of record in the Mexican Business Information System (SIEM), corresponding to Tijuana, Baja California, Mexico. We performed statistical analysis of data through SPSS 15.0 system, achieving as a result present the profile of the proprietor/manager and the organizational structure of the family business of service sector.

KEYWORDS: professionalism, family business, contingency factors, services sector

INTRODUCCIÓN

Algunos datos mencionados que reflejan la importancia que representan las empresas familiares en México se hacen mención en un estudio que realiza (García, 2011), en el que hace referencia de que en el país el 99% del total de las empresas que equivalen a unos cuatro millones, son catalogadas como micro, pequeñas y medianas empresas (OCDE, 2007; INEGI 2006). Asimismo, en el año 2006, estas empresas generaron más de la mitad del Producto Interno Bruto (PIB) nacional y emplearon a casi tres cuartas partes de la población económicamente activa. De igual manera, la importancia de las empresas familiares en México es evidente al observar que, aproximadamente nueve de cada diez compañías, son de carácter familiar. (Kulman, 1997; Belausteguigoita, 2003). De aquí la importancia de la profesionalización en las empresas familiares ya que es la base para que las actividades se lleven a cabo a través de una toma de decisiones eficiente para evaluar los resultados obtenidos, sin que esta toma de decisiones se vea influenciada por criterios familiares, que en ocasiones no siempre están alineados con los objetivos de la organización. Por lo cual se debe contar con directivos no familiares que tengan la experiencia y la educación formal para administrar la empresa. Debido a la rapidez del entorno cada vez más competitivo en el que se desenvuelven las empresas familiares por los cambios tecnológicos, las tecnologías de información, lo complejo de los mercados debido a la globalización, provocan que los contextos actuales sean altamente competitivos, todo esto hace que estas organizaciones busquen profesionalizar su gestión incorporando profesionales o profesionalizar a su equipo de trabajo directivo.

A medida que la empresa familiar se desarrolla en contextos globalizados y complejos, le resulta más difícil a la familia el poder ocupar los puestos claves y que a la vez tengan todas las competencias para enfrentar los desafíos a los cuales se enfrenta, por lo cual es preponderante profesionalizar a la organización ya sea a través de capacitar internamente a los miembros de la familia que participan en la gestión de la administración e incorporando profesionales externos a esta gestión ocupando posiciones claves por sus competencias. El profesionalizar implica que tarde o temprano la empresa familiar deberá tomar la decisión de incorporar directivos profesionales, con capacidades, habilidades y la suficiente experiencia para enfrentar los desafíos de los mercados y la competencia, permitiendo su desarrollo y continuidad y que pretendan subsistir y crecer en los mercados actuales.

REVISIÓN LITERARIA

La Profesionalización De La Empresa Familiar

Es un hecho que una de las fallas de la empresa familiar se encuentra en dos aspectos que resultan fundamentales: la falta de una apropiada gestión de los recursos y su limitada capacidad para desarrollar estrategias competitivas. (Rueda, 2011), hace mención que se debe reconocer que los fundadores y empleados vinculados al entorno de la empresa familiar son en su gran mayoría trabajadores expertos en procesos operativos, la fuerte carencia en el aspecto administrativo empresarial se ha convertido en debilidad. Roman (2009), hace referencia que la diversidad de definiciones de empresa familiar es tal que ha llegado a afirmarse que existen tantas de éstas como número de autores que tratan el tema (Croutsche y Ganidis, 2008). La heterogeneidad conceptual resultante ha surgido de los límites más o menos amplios que se establecen a las familias propietarias, el porcentaje de control que la familia propietaria debe poseer, el número de familias que poseen ese control y/o la duración requerida para que una firma pueda ser considerada como de familia (Croutsche y Ganidis, 2008; Sharma, 2004). Asimismo Roman (2009), menciona que una definición integral de empresa familiar establece que éstas son una síntesis única de los siguientes elementos: a) control sobre la propiedad (15% o más) por parte de dos o más miembros de una familia o asociación de familias; b) influencia estratégica de los integrantes de la familia en la dirección de la empresa; c) interés por las buenas relaciones familiares; d) interés en la continuidad de la empresa de generación a generación (Poza, 2004). El modelo de los tres círculos (Tagiuri y Davis, 1982), es uno de los que han sido más empleados para describir distintas situaciones actuales y futuras de las empresas familiares. En este modelo cada círculo representa un grupo de personas, con particulares características

en relación con la empresa familiar, y las intersecciones de los círculos los grupos de personas que poseen dos o tres de las tres características identificadas por el modelo. Según coincidan en mayor o menor grado los tres círculos, es decir, estos se superpongan como atraídas por una fuerza centrípeta, algo que suele ocurrir en primera y segunda generación, o se distancien como separados por una fuerza centrífuga, como acostumbra a pasar en empresas familiares de gran tamaño, se estará frente a distintos tipos de empresas familiares, con características muy diferentes, por el número de protagonistas que en ellas trabajan o con ellas tienen relación, por los distintos roles que desempeñan y sus diferentes intereses, así como por el contenido de las relaciones y actitudes que entre unas y otras personas se dan.

Por lo tanto de acuerdo con Meroño (2009), las empresas familiares tienen como particularidad la implicación de la familia en la propiedad y gestión. Estos aspectos condicionan el funcionamiento y los objetivos de la organización. Pero que, en cualquier caso, son empresas y deben regirse por leyes económicas, esto quiere decir que debe prestarse la máxima atención a las cuestiones empresariales. Tal es así que gestionar adecuadamente los aspectos familiares tiene por fin menoscabar las reglas de funcionamiento de cualquier empresa. En este contexto es imprescindible fijar como objetivo la profesionalización de la gestión (Meroño, 2009). Con frecuencia se entiende erróneamente que profesionalizar consiste en incorporar a las responsabilidades directivas a personas ajenas a la familia, por tanto, es preciso definir lo que significa profesionalización que no es otra cosa que disponer de unos directivos y unos sistemas de gestión que permitan las decisiones y el funcionamiento más eficaz y eficiente. Y por supuesto la independencia de la pertenencia a la propiedad familiar. (Meroño, 2009).

Profesionalización En La Gestión De Las Empresas Familiares

Con una más amplia, se define la gestión profesional como aquella que, por un lado, cuenta con una dirección capacitada con independencia de su pertenencia a la familia propietaria y, por otro lado, con un sistema de gestión adecuado. (Meroño, 2009). El primer elemento que se analizara es el perfil del propietario/gerente y el segundo elemento la estructura organizacional, tomando en cuenta, el tamaño de la empresa, su antigüedad, su proporción en cuanto al número de empleados que tiene y la dirección si es por la familia o por un directivo ajeno a la familia. Por lo cual se puede definir a la profesionalización como el grado óptimo alcanzado por una empresa cuando sus sistemas organizativos y sus procedimientos de trabajo están bien desarrollados y sistematizados. Esto quiere decir que sus estructuras organizacionales, sus métodos de conducción y el manejo de personal están diseñados acorde a los objetivos de la organización y sometidos a una rigurosa evaluación. (Girardo, 2001).

Los factores de contingencia, son aquellos estados o condiciones organizativas que están asociados al uso de ciertos parámetros de diseño. Los factores a los que vamos a referirnos pueden clasificarse de la siguiente manera: a) Perfil del propietario/gerente. La figura del propietario resulta fundamental para analizar la gestión de cualquier empresa sobre todo, en las de menor tamaño puesto que centralizan muchas funciones y la toma de decisiones. En el caso de las empresas familiares. b) Estructura organizativa. El tamaño de la empresa, tomando en cuenta su antigüedad, su proporción en cuanto al número de empleados que tiene y la dirección si es por la familia o por un directivo ajeno a la familia ya que entre más grande sea la organización, más compleja será su estructura es decir, más especializadas estarán sus tareas, más diferenciadas sus unidades de trabajo y su componente administrativo. De tal manera que en una estructura burocrática, existe la especialización del trabajo, se requiere la definición de la jerarquía de autoridad, reflejándose en una técnica estructura para planificar y formalizar el trabajo, así como el crecimiento y desarrollo de la empresa. El diseño organizativo en las empresas familiares debe preocuparse por contemplar un estructura que le permita el control y la toma de decisiones tanto desde una perspectiva de negocio como familiar. (Meroño, 2009)

MÉTODO

La metodología de investigación es cuantitativa. La investigación cuantitativa se aplica para el levantamiento de encuestas, a través de cuestionarios a los propietarios según una muestra finita de la población total de las empresas familiares del sector servicios. Se procesará la información recabada con aplicación del programa estadístico SPSS para el análisis descriptivo e inferencial.

Problemática Y Justificación

En el escenario actual de la economía mexicana, se encuentran un número significativo de empresas familiares, en las que de acuerdo a las características del tiempo presente, en donde la turbulencia es muy agresiva, producto de la inestabilidad política, que ha incidido en lo económico, aunado a la poca formación de sus gerentes con respecto a los conocimientos gerenciales que hoy en día se requieren, algunas empresas han cerrado y otras se encuentran estancadas, lo que conlleva a que se tomen las medidas y acciones adecuadas para contrarrestar los efectos de las variables de contingencias del entorno. La profesionalización de las empresas familiares en México, así como en Tijuana, B.C. es tan importante, ya que su existencia puede depender de dicho factor. Muchas empresas, al iniciar la producción de bienes o servicios, deben contemplar y considerar los diferentes factores que inciden en su negocio. En una primera etapa, el propietario abarca todas las áreas de desarrollo de su empresa, pero llega un momento en el cual es necesaria la profesionalización de la misma y debe poner énfasis en la especialización de tareas para un correcto y sustentable desarrollo. Lo anterior, generalmente es obviado por los empresarios, ya que el trabajo cotidiano, les resta tiempo en temáticas de gestión de su empresa y la mayoría de las veces no cuentan con los conocimientos necesarios.

Objetivos

Objetivo General. Analizar los factores de contingencias, tales como el perfil del directivo y la estructura organizativa para determinar cuáles inciden en el proceso de profesionalización de las empresas familiares del sector servicios de Tijuana, B.C., México Objetivo Específico. Determinar si los factores de contingencia tales como el perfil del directivo y la estructura organizativa inciden en la profesionalización de las empresas familiares del sector servicios.

Muestra

Para ello, consideraremos los factores de contingencia como variables independientes y la profesionalización como un parámetro de diseño con un valor dependiente, suponiendo por consiguiente que la profesionalización representa el elemento “contingente” con la situación de la organización. Para el presente trabajo se eligió una muestra de 245 propietarios de las empresas familiares del sector servicios, registrados en el Sistema de Información Empresarial Mexicano, correspondiente a delegación Tijuana, Baja California. A los propietarios se les aplicó un cuestionario conformado con 41 preguntas relacionadas al tema de estudio. Una vez recopilada la información de los cuestionarios se procedió a la elaboración de una de base de datos en SPSS y posteriormente se procedió a la captura de la información, para luego realizar el respectivo análisis para su interpretación. Se utilizó una escala de medición con una escala de *likert*. Se elaboraron los cuadros, que nos permiten un análisis de la situación actual de la profesionalización en las empresas del sector servicios. Determinación de la Muestra. Para el presente trabajo se eligió una muestra de 245 propietarios de empresas familiares del sector servicios del Sistema de Información Empresarial Mexicana (SIEM) Marzo 2010, Tijuana, Baja California. Factores que se consideraron en el cálculo de la muestra: Tabla 1. Total de Empresas según SIEM, Marzo 2010.

En el caso de que sí se conozca el tamaño de la población entonces se aplica la siguiente fórmula:

$$n = \frac{Z^2 pq^N}{NE^2 + Z^2 pq}$$

Donde: n es el tamaño de la muestra; Z es el nivel de confianza; p es la variabilidad positiva; q es la variabilidad negativa; N es el tamaño de la población; E es la precisión o el error. El diseño de la muestra es resultado de la identificación de una población total de 289 empresas familiares, registradas en el Sistema de Información Empresarial Mexicano (SIEM) de Marzo 2010, de Tijuana, Baja California. México, y de la consideración del porcentaje de presencia sobre la población total, dando como resultado 241 empresas, como se muestra en la Tabla 1. Los factores que se tomaron en cuenta en el cálculo de la muestra, es que la población se considera con características homogéneas, además, de contarse con una población finita, ya que el número de empresas familiares es conocido y la representatividad de la muestra está determinada por un error permisible de 0.05, con un nivel de confianza del 95% y $p = q = 0.5$.

Tabla 1: Total de Empresas de acuerdo al SIEM, Marzo 2010.

	Población	Muestra
Total de empresas	289	241

La tabla muestra que el total de empresas registradas, integran una población de 689, la población se considera con características homogéneas y se contó con una población finita, porque se conoce el número de empresas familiares, dando como resultado que la muestra esperada es de 245 empresas.

Validación Del Instrumento

A los propietarios se les aplicó un cuestionario conformado con 41 preguntas, el cual fue validado relacionado al tema de estudio. Se utilizó una escala de medición con categorías de respuestas de opción múltiple. Se elaboraron los cuadros que permiten un análisis de los factores que inciden en el proceso de profesionalización de las empresas familiares. La validez del cuestionario se determinó mediante el coeficiente de confiabilidad de *Alfa-Cronbach*, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .80, un grado de confiabilidad aceptable (ya que esta por arriba .60 y de 0.70, puntuación mínima aceptable.).

Tabla 2: Análisis de Fiabilidad

Alfa de Cronbach	No. de elementos
.873	41

En la tabla se muestra la validez del cuestionario se determinó mediante el coeficiente de confiabilidad de Alfa-Cronbach, por medio del programa SPSS: el resultado arrojado por dicho programa fue de .80, un grado de confiabilidad aceptable (ya que esta por arriba .60 y de 0.70, puntuación mínima aceptable.). Fuente: elaboración propias con datos del spss (2010)

RESULTADOS

Análisis de Factores de Contingencias de Área y Distribución Geográfica

Asimismo, en la Tabla 3, se presenta la ficha técnica de la investigación, en donde se muestra la información más relevante en cuanto al universo objeto de estudio, que son las empresas familiares del sector servicios que cuenten con dos o más empleados, el ámbito de la investigación es el Municipio de Tijuana, B.C., con un muestreo aleatorio simple estratificado, encuestándose a 245 empresas, con un error muestral de $E = \pm 5\%$ para un nivel de confianza del 95% y $p = q = 0.5$, aplicándose una encuesta presencial por empresa, respondiendo el propietario, gerente o un directivo de la empresa, se aplicó un cuestionario de 41 preguntas, relacionadas con la situación de la empresa familiar.

Tabla 3: Ficha Técnica Encuesta Por Muestreo Empresas Familiares del Sector Servicios

Trabajo de Campo	Inicio: 29 de Agosto de 2010 Final: 26 de Octubre 2011
------------------	---

Universo Objeto de Estudio	Empresas familiares del sector servicio con dos o más empleados pertenecientes al sector servicios, de Tijuana, B.C.
Ámbito	Municipio de Tijuana, B.C., México
Selección de unidades muestrales	Muestreo aleatorio simple estratificado
Muestra	245 encuestas
Error Muestral	$E = \pm 5\%$ para un nivel de confianza del 95% y $p = q = 0.5$
Selección unidad muestral	Una encuesta por empresa, responde el propietario, gerente o algun directivo de la empresa.
Tipo de entrevista	Presencial
Cuestionario	Estructurado, 41 preguntas relacionadas a la situación de las empresas familiares del sector industrial

Esta tabla contiene la ficha técnica en la cual se refleja el muestreo realizado a las empresas familiares del sector servicios, resumiendo la información más importante como el Universo objeto de estudio, el ámbito, selección de unidades muestrales, la muestra utilizada en la investigación, el error muestral, selección de unidad muestras de una encuesta por empresa, el tipo de entrevista siendo esta presencial y la estructura del cuestionario aplicado de 41 preguntas.

En la Tabla 4. Se muestra la información acerca de la representatividad de la distribución del tamaño de la muestra, atendiendo el criterio del tamaño y el sector al que pertenecen las empresas familiares en Tijuana, B.C., de acuerdo a la clasificación publicada en el Diario Oficial de la Federación de 2009, siendo dos categorías las de mayor representatividad; las microempresas (con un rango de empleados de hasta 10 trabajadores) representando el 99.60% y las empresas pequeñas (con un rango de 11 a 50 trabajadores) representan un 0.40% de la población.

Tabla 4: Distribución de la Muestra las Empresas Familiares del Sector Servicios

De acuerdo al Tamaño (%)	Porcentaje del tamaño de la muestra
Microempresa	99.60%
Empresa Pequeña	0.40%
De acuerdo al sector de actividad (%)	100%

En la tabla se muestra el porcentaje de la distribución de la muestra de las empresas familiares del sector servicios, de acuerdo al tamaño, representando un 99.60% (con un rango de empleados de hasta 10 trabajadores) las microempresas y el 0.40% (con un rango de 11 a 50 trabajadores)

En la Tabla 5. Se determina la antigüedad de las empresas, considerando los años que tienen establecidas y operando. Se suele considerar como punto medio a una empresa familiar con menos de 30 años de vida, para realizar la transición del poder del fundador a una segunda generación, por lo cual para la distribución de las empresas de la muestra se establecieron tres categorías de acuerdo a Meroño (2009): 1. Empresas Jóvenes (hasta 15 años de antigüedad), 2. Empresas consolidadas (de 16 a 30 años de antigüedad), 3. Empresas Maduras (con más de 30 años de antigüedad). Dando como resultado que las empresas familiares encuestadas, son empresas jóvenes, ya que promedio tienen una antigüedad de 8.9 años y representan el 99.60% de la muestra.

Tabla 5: Antigüedad de Empresas Familiares del Sector Servicios

De acuerdo al Tamaño	Antigüedad (promedio)	Porcentaje del Tamaño de la Muestra
Microempresa	8.9 años	99.6%
Empresa pequeña	10 años	0.40%
De acuerdo al sector de actividad (%)		100%

En la tabla se muestra la antigüedad de las empresas familiares del sector servicios de acuerdo al tamaño siendo el porcentaje más representativo el de las Microempresas con el 99.60% con una antigüedad de 8.9 años y solo el 0.40% representan a las empresas pequeñas con una antigüedad de 10 años, por lo tanto son empresas jóvenes.

A continuación se presentan los criterios utilizados para la estimación de la proporción de empresas familiares del Sector Industrial, de manera que se encuestaron 245 empresas del sector servicios por el

número de empleados contratados, siendo estas de la localidad y de carácter familiar como se muestra en la Tabla 6.

Tabla 6: Estimación de Proporción de Empresas Familiares del Sector Servicios por Empleados

Empleados	Población	Muestra
1 a 3	160	65.30%
4 a 6	75	41.0%
7 a 9	9	15.38%
10 a 18	1	5.98%
Total	245	100%

Esta tabla muestra la estimación de proporción de empresas familiares que fueron encuestadas, en base al número de empleados con que cuentan, dando como resultado que el 65.30% son empresas que tienen de 1 a 3 empleados y el 41.0% de las empresas encuestadas de 4 a 6 empleados.

Asimismo en la Tabla 7, se muestra la estructura organizativa por variables de contingencia del sector servicios representando un 59.98% las empresas que son dirigidas por miembros de la familia siendo estas microempresas y jóvenes en cuanto a su antigüedad. Y las de menor proporción con un 40.02% con la participación de directivos no familiares.

Tabla 7: Estructura Organizativa por Variables de Contingencia del Sector Servicios

Dirección de la Empresa Familiar por miembros de la familia	Empresa de dirección familiar	Dirección de la Empresa familiar por directivos no familiares	Empresa de dirección por directivos no familiares
Propietario	34.69%	Directivo No Familiar	11.03%
Directivo Familiar	8.57%	Asesor	2.45%
Esposa(o)	4.48%	Encargados	26.54%
Hijo	12.24%		
Total	59.98%		40.02

Esta tabla muestra la estructura organizativa por variables de contingencia del sector servicios de acuerdo al tipo de dirección de la empresa familiar, dando como resultado que el 59.98% de las empresas su dirección está a cargo de algún miembro de la familia y el 40.02% la dirección de la empresa es dirigida por un miembro ajeno a la familia.

En la Tabla 8, se muestran los resultados del perfil del propietario/gerente por variables de contingencias, la presencia femenina en las empresas dirigidas por los miembros de la familia es de un 54.24%, y la presencia de los hombres en estas organizaciones es del 62.80% y la dirección familiar por los miembros de la familia es de un 59.80% y los miembros de la familia que la dirigen tienen un rango promedio de edad de 45-50 años de edad con una antigüedad promedio de 4 a 6 años en el puesto y el nivel de estudios universitarios es de 37.51%, siendo menor en cuanto a las empresas dirigidas por directivos ajenos a la familia representada por un 62.43%.

Tabla 8: Perfil del Propietario/Gerente por Variables de Contingencia del Sector Servicios

Perfil del propietario/gerente 245 encuestados	Mujer 88	Hombre 157	Dirección familia propietaria	Edad Rango 40-45 años	Antigüedad Rango 4 – 6 años	Estudios Universitarios
Según el tipo de dirección familiar por miembros de la familia	54.24%	62.80%	59.80%	55.50%	51.02%	37.51%
Según la dirección de la empresa familiar por directivos no familiares	45.76%	37.20%	40.02%	44.50%	48.98%	62.43%
Total	100%	100%	100%	100%	100%	100%

En esta tabla se muestra el perfil del propietario/gerente en cuanto a las variables de contingencias de sexo representando un 54.24% la participación de las mujeres en la dirección de la empresas dirigidas por miembros de la familia y un 45.76 las que se encuentran en las empresas dirigidas por directivos no familiares, asimismo el 59.80% de los propietarios/gerentes son los que dirigen la empresa familiar y el 55.50% está dentro del rango de los 40-45 años de edad promedio, con una antigüedad en el puesto de 4 a 6 años y solo el 37.52% de los directivos de la empresa familiar en la cual la dirección es asumida por algún miembro de la familia cuenta con estudios universitarios.

En las empresas familiares que son dirigidas por directivos no familiares cuentan con una menor presencia de gerentes externos y es algo que debe ser analizado por las empresas. Ya que los directivos no

familiares aportan una interesante ventaja como es la posibilidad de que la propiedad les exija resultados por su gestión sin interferencias familiares. (Meroño, 2009).

CONCLUSIONES

Para que las empresas familiares sobrevivan, es importante que realicen la profesionalización de su gestión, por lo cual los puestos directivos deben estar ocupados por personas con los requerimientos solicitados, habilidades, capacidades y la experiencia necesaria, independientemente si son miembros de la familia o directivos ajenos a la familia. Solo que contar con profesionales externos, pasa a ser una necesidad en un determinado momento por el crecimiento de la empresa, porque va a llegar un punto en el cual el propietario no va a poder administrar de manera eficiente la organización, como es el caso de las empresas familiares del sector servicios que las empresas en un 40.02% son dirigidas por directivos ajenos a la familia y con estudios universitarios. La presencia de la mujer en la dirección tanto de la empresa familiar dirigida por algún miembro de la familia o en la que es dirigida por directivos no familiares es minoritario, solo siendo 88 el total de propietarios/gerentes las que ocupan estos puestos, siendo un menor la proporción las que ocupan un puesto gerencial.

Aun así, continua siendo mayor la presencia de los hombres tanto en las empresas de dirección familiar como en las empresas que son dirigidas por directivos ajenos a la familia, el rango de edad entre ambas es el mismo ya que es de 40 a 45 años en promedio, teniendo también una antigüedad en el puesto de 4 a 6 años en promedio dado lo joven de las empresas familiares del sector servicios. Cabe resaltar que el nivel de estudios universitarios es menor en las empresas familiares cuya dirección es familiar, pero es importante que las empresas familiares tomen en cuenta la contratación de personal directivo ajeno a la familia con una preparación profesional, ya que resultan un recurso valioso cuando estas organizaciones se tornan complejas. Por cual el resultado obtenido es que son las empresas las de mayor complejidad las que su personal directivo es ajeno a la familia con una representatividad del 62.43%.

En cuanto a su estructura organizativa las empresas familiares al inicio de su ciclo de vida tienen estructuras sencillas, basadas en el propietario, si logran sobrevivir empiezan a formalizar su estructura organizacional debido a su crecimiento contemplando nuevos departamentos e inclusive la contratación de personal ajeno a la familia, siendo la gestión y la toma de decisiones más descentralizada. Por lo tanto las empresas familiares del sector servicio aun tienen estructuras sencillas basadas en la gestión y en la toma de decisiones de su fundador, siendo microempresas con un máximo de 10 empleados, representando el 99.60% de las empresas familiares de este sector, por lo cual son empresas jóvenes con un promedio de antigüedad de 8.9 años. Asimismo de acuerdo a lo anterior las decisiones sobre la estructura organizacional de las empresas familiares del sector servicios centran la tomada de decisiones en el propietario y al tratarse de microempresas y siendo de dirección familiar representando un 59.98%, por lo cual estas no han formalizado su estructura organizativa. Por último se puede concluir que al analizar los factores de contingencia se determina que el perfil del propietario/gerente y la estructura organizativa inciden en la profesionalización de las empresas familiares del sector servicios.

DISEÑO DE UNA HERRAMIENTA DE DIAGNÓSTICO FINANCIERO PARA EMPRESAS DEL SECTOR REAL BASADO EN ANÁLISIS DE ÍNDICES ESTÁNDAR (ÍNDICE-PADRÃO): CASO DE APLICACIÓN

John Willmer Escobar Velásquez, Pontificia Universidad Javeriana Cali
Artemio Gnerre, LS LexJus Sinacta – Legal & Tax Advisors

RESUMEN

Este trabajo presenta los resultados del proyecto de investigación “Diseño de una herramienta para el análisis financiero de empresas del sector real utilizando la metodología de Índices Estándar (índice-padrão)”. La problemática de la investigación esta relacionada con el desarrollo de una herramienta para realizar benchmarking financiero utilizando criterios estadísticos. La herramienta propuesta considera análisis de indicadores en las categorías de rentabilidad, solvencia, liquidez, estructura y endeudamiento. La metodología empleada de índices estándar (índice-padrão) permite la comparación de indicadores financieros de una compañía en particular con el respectivo índice estándar del sector. La herramienta propuesta permite asignar una calificación cualitativa de excelente, bueno, satisfactorio, regular, malo o débil para un indicador en particular, una categoría o la compañía en general. Los resultados obtenidos de la investigación confirman la importancia y la potencialidad del uso de una herramienta de este tipo para realizar benchmarking a nivel empresarial

PALABRAS CLAVE: Diagnóstico Financiero, Indicadores Financieros, Índices Estándar (índice-padrão).

DESIGN OF A FINANCIAL DIAGNOSTIC TOOL FOR COMPANIES OF REAL SECTOR BASED ON ANALYSIS OF STÁNDAR RATES (ÍNDICE-PADRÃO): CASE OF APPLICATION

John Willmer Escobar Velásquez, Pontificia Universidad Javeriana Cali
Artemio Gnerre, LS LexJus Sinacta – Legal & Tax Advisors

ABSTRACT

This paper presents the result of the research project “Design of a financial tool for companies of real sector by using the methodology of standard indicator (índice-padrão)”. The research problem is to develop a tool for making financial benchmarking by using statistical criteria. The proposed tool considers an analysis of profitability, of solvency, of liquidity and of debt structure. The standard indicator methodology (índice-padrão) allows the comparison of financial indicators of a company with the relevant standard industry indicator. In addition, the proposed tool allows assigning a qualitative rating of excellent, of good, of satisfactory, of fair, of poor or of weak for a particular indicator, a category or a company. The results of the research confirm the importance and the potentiality of use a tool for enterprise benchmarking.

KEYWORDS: Financial Diagnostics, Financial Indicators, Standard Indicator (índice-padrão).

LA RELACION DE LA CULTURA ORGANIZACIONAL CON LA SATISFACCION Y EL COMPROMISO DE SUS MIEMBROS: CASO GEN H HERBALIFE

Mónica María Muñoz Cornejo, Universidad Autónoma De Querétaro

María Luisa Leal García, Universidad Autónoma De Querétaro

Minerva Candelaria Maldonado Alcudia, Universidad Autónoma De Querétaro

RESUMEN

La globalización y el desarrollo tecnológico colocan a la organización en el centro de las transmisiones y variaciones culturales aceleradas, las cuales son explicitadas en normas, valores, mitos y ritos colectivos que son transmitidos, representados y asimilados por los actores que la conforman. Dichos cambios obligan a los individuos a aprender otros comportamientos tanto relacionales como técnicos, y se plantea, entonces, que las organizaciones están sometidas a una triple realidad cultural, lo transmitido, lo aprendido y lo inscrito, en esta combinación de procesos, de interacciones e intercambios, lo que permanece, lo que llega del exterior y lo que cambia, nos permite hacer una lectura de la cultura de la organización. (Sainsaulieu, 1995). En este sentido, dado que la cultura organizacional es un concepto que ha predominando en los espacios productivos y ganando capital importancia, el objetivo del presente estudio es el de analizar el valor de la cultura organizacional como función social específicamente en una empresa con estrategias empresariales de compensación y mercadeo. Con la finalidad de encontrar una explicación al fenómeno de organizaciones con esta estrategia que ha generado una vasta conceptualización por sus procesos organizativos, conocimientos, permanencia y su gran expansión y crecimiento a nivel mundial.

THE RELATIONSHIP OF ORGANIZATIONAL CULTURE AND SATISFACTION WITH THE COMMITMENT OF MEMBERS: IF GEN H HERBALIFE

SUMMARY

Globalization and technological development placed the organization at the center of the transmissions and accelerated cultural variations, which are explicit in norms, values, myths and rituals that are broadcast collectives represented and assimilated by the actors within it. These changes force individuals to learn other behaviors both relational and technical, and considers, therefore, that organizations are subject to a threefold cultural reality, what is transmitted, learned and recorded, this combination of processes, interactions and trade, which remains, what comes from outside and what changes we can make a reading culture of the organization. (Sainsaulieu, 1995). In this sense, given that organizational culture is a concept that has been predominant in the productive spaces and crucial win, the objective of this study is to analyze the value of organizational culture as a social function specifically in a company with business strategies compensation and marketing. In order to find an explanation to the phenomenon of organizations with this strategy that has generated a broad conceptualization of organizational processes, knowledge, persistence and its great expansion and growth worldwide.

INTRODUCCIÓN

Dado que la cultura organizacional es un concepto que ha venido predominando en los espacios productivos y ganando capital importancia para entender a la organización como tal, el objetivo del presente trabajo fue el de analizar en un momento histórico particular, la función social de desempeña la cultura organizacional en el sistema multinivel denominado “Gen H Querétaro Herbalife”. Todo ello, con el propósito de encontrar una explicación al fenómeno de organizaciones multinivel reconocidas internacionalmente, que han generado una vasta conceptualización en sus procesos organizativos, conocimientos, permanencia y sobrevivencia como empresas y que han destacando en el mundo de los negocios por el desarrollo de una estrategia de distribución eficiente para ofrecer una amplia gama de productos y servicios.

REVISION DE LITERATURA

El Interés Organizacional Por El Concepto De Cultura

El término cultura ha establecido analogías o metáforas que hace referencia a entidades, sociedades, organismos vivos o mecánicos en las que se comparte un cúmulo de valores, creencias, rituales, actitudes, comportamientos, normas, intereses, necesidades y sentimientos entre los actores que la integran, moldeando una identidad a una sociedad. De cierta manera, la cultura es como un iceberg: posee aspectos visibles e invisibles, es un conjunto unido de maneras de actuar; modos de vida, costumbres, instituciones, sistemas, métodos y técnicas; de maneras de pensar filosofías, ideologías, religiones, creencias, valores y de maneras de sentir; deseos, memoria colectiva, arquetipos, que son aprehendidas, compartidas y transmitidas por una colectividad que se reconoce a sí misma.

Contiene artefactos físicos, enunciados de misión, orientaciones normativas, así como creencias básicas que dirigen el pensamiento, los sentimientos, las percepciones y los comportamientos de las personas en la cultura, (Solís, 1994). Se puede concluir, que el fenómeno de la cultura muestra alta complejidad, es el modo particular de hacer las cosas en un entorno específico, por lo que sido el motivo central para los científicos sociales. Hoy por hoy interesa en el estudio de las organizaciones, porque ofrece una perspectiva privilegiada para observar la organización en profundidad, entender mejor la vida organizacional y la relevancia de dicha cultura en el rendimiento de la organización. (Sackmann, 1997).

La Cultura Organizacional Ante La Globalización Y Los Mercados Internacionales

La economía mundial ha vivido momentos jamás imaginados como resultado del proceso de globalización, en consecuencia las organizaciones, se han visto forzadas a adaptarse a este proceso a fin de responder de la mejor manera a las nuevas exigencias de los clientes, cada vez más internacionales y más conscientes de las infinitas posibilidades que tienen para satisfacer sus expectativas (Porter, 1990). Para Yip (1992) existen cuatro tipos de impulsores del mercado, del costo gubernamentales y competitivos los cuales han contribuido a la existencia de este fenómeno, que deberán tenerse en cuenta en cada decisión de negocios que se quiera implementar. Sumado a los anteriores, se agrega el fuerte impulso que han tenido las comunicaciones mundiales, en particular la utilización del sistema de Internet que ha revolucionado el mundo e incidido gradualmente en el comportamiento de los mercados (Anderson, M. y Choobineh, 1996).

Esta realidad mundial supone un emergente y a veces extraño ambiente socio-cultural para el marketing caracterizado por: una mayor e incesante diversidad, un mayor y progresivo conocimiento y una mayor y creciente turbulencia en los negocios (Achrol, 1991). Este entorno, está contribuyendo para que se susciten cambios culturales sustanciales al interior de las organizaciones, mismos que se originan por nuevos hábitos de compra de los clientes, el consumo de los usuarios y las creencias y valores que en el

mercado se van construyendo. En otras palabras, hacia el interior de las organizaciones, se han orientado comportamientos, mitos, rituales, símbolos, creencias, supuestos y sobre todo valores que le permitan a la organización colocar al cliente en el centro de todas sus actividades, conocer a sus actuales y futuros competidores, coordinar adecuadamente las actividades en su interior, para que la dinámica organizacional interna genere las circunstancias que faciliten su constante adaptación a los requerimientos del entorno que le rodea el ambiente y los constantes cambios que el mercado va sufriendo.

La Cultura Organizacional Y Su Vínculo Con La Orientación Al Mercado

En el ámbito de los estudios organizacionales, no sólo es importante explicar y pronosticar resultados dentro de las organizaciones, sino también, analizar y medir su desempeño para llegar a entender por qué algunas organizaciones se posicionan mejor que otras y siguen siendo competitivas en su entorno. El concepto de cultura organizacional se ha asociado con el desempeño superior de la empresa (Peters y Waterman, 1988), con la mayor productividad (Ouchi, 1981), con el mejoramiento de la moral y las elevadas tasas de rentabilidad de la inversión. Sin embargo, fue en la década de sesenta con los trabajos de Levitt (1960), Drucker (1961), McNamara (1972), Kotler (1977), Houston (1986), Webster (1988) y Deshpande y Webster (1989), cuando se estudia el concepto de mercado inmerso en la cultura organizacional, como estrategia principal de desarrollo de mercados internacionales. Por más de tres décadas, los académicos especializados en mercadotecnia han enfatizado que la organización cuya preocupación es la orientación al mercado se verá beneficiada y tendrá un desempeño superior (Pulendran, Speed & Winding, 2000).

Narver y Slater (1990) inician el trabajo de orientación al mercado con base en un enfoque cultural, consideran que las organizaciones deben de tener tres elementos que en su conjunto son la orientación al mercado: orientación al cliente la cual tiene que ver con la comprensión y creación de valor a los compradores meta, orientación a la competencia, señala que es necesario entender las fortalezas y debilidades de corto plazo y las capacidades y estrategias de largo plazo tanto de los actuales como de los potenciales competidores y coordinación interfuncional que se refiere a la utilización coordinada de los recursos para dar valor al cliente en término de dos criterios de decisión: impacto a largo plazo e impacto en la rentabilidad, además deberán construir y mantener una relación de mutuo beneficio con sus clientes.

La Cultura Organizacional Y Su Relación Con El Mercado Multinivel

El vínculo orientación al mercado y cultura organizacional, se convierte en un proceso social de intercambio de comportamientos, valores, creencias y supuestos necesarios para que en su interior se pueda generar un dinámica de trabajo con la cual se estimule la creación de valores superiores para sus compradores, y consecuentemente obtener un desempeño continuo superior para las organizaciones (Kholi y Jaworski, 1990; Webster, 1988; Shapiro, 1988).

En este sentido, numerosas organizaciones han desarrollado estrategias estructurales altamente adaptativas entre las que destacan el mercadeo multinivel. Según datos de la Federación Mundial de Asociaciones de Venta Directa, WFDSA, que representa a la industria de la venta directa en el ámbito mundial y también incluye la Federación de Asociaciones Europeas de Ventas Directas y que agrupa a 58 países. Reporto que la industria creció en su número de vendedores en cerca del 336% entre 1987 y 1997, que en 2001 las ventas al menudeo a nivel mundial, por parte de sus miembros, representaron más de US\$105,000 millones de dólares a través de más de 61 millones de representantes de ventas independientes. La siguiente tabla muestra los datos de ventas de 52 de los 58 países, y sirve de referente para apreciar los volúmenes de venta de cada país.

Se sabe que existen más de 2,000 compañías de redes de distribución en todo el mundo y que esta industria de escala mundial, crece a tasa que van entre el 20 y 30 por ciento cada año (Tapia, 2004). Las

siguientes dos gráficas de barras mostradas en la Tabla 1.2 se muestran como se han incrementado las ventas (en Miles de Millones de Dólares) y cuanta gente se ha involucrado en las ventas directas, desde 1998 a 2007.

Tabla 2: 1 Referente sobre los volúmenes de ventas del sistema multinivel desglosado por países.

Estados Unidos	29.600	26.06%

Tabla 2: 2 El incremento las ventas multinivel en miles de millones de dólares y el número de personas involucradas en las ventas directas, desde 1998 a 2007.

Fuente: Asociación Mexicana de Ventas Directas (2008)

Además, en ellas se puede apreciar que el número de personas involucradas en ventas directas creció de 9.7 a 15 millones de personas. Esto es un crecimiento acumulado de 55% en estos diez años. Cabe señalar que México es el segundo país de América Latina (después de Brasil) con mayor número de ventas de consumo (3.604 billones de dólares norteamericanos); por encima de Italia (3.05 billones), Malasia (2.6 billones), Taiwán (2.1 billones) y Reino Unido (3.427 billones) para el año 2008. Según datos de la Asociación Mexicana de Ventas Directas (AMVD, 2008), de los países que cuentan con empresas de venta directa que corresponden a un sistema Multinivel en América Latina destacan México, 56%, Colombia, 53%, Chile, 40%, Argentina, 26% y Centroamérica, 25%. Según la AMVD las ventas directas en México en 2008 se estima fueron de \$46,700 millones de pesos, un crecimiento de ventas directas del 5% con respecto al año 2007. Respecto a la información de mexicanos dedicados a la venta directa, se detalla (Tabla 2.3), que el 80% de los vendedores directos independientes son mujeres.

El 77% son casados, en unión libre o divorciados. El 30% con cuatro dependientes económicos, el 78% viven en zonas residenciales urbanas y en con estudios que fluctúan en proporciones del 31% con primaria, 28% con secundaria y 26% con preparatoria. La venta directa ha sido elegida en 47% por personas que tienen entre 35-49 años, seguida por un 26% con un rango de edad de 50 a 65 años.

Finalmente, el mercadeo multinivel es una estrategia comercial que se ha utilizado desde varias décadas y es considerada una de las industrias de mayor crecimiento a nivel mundial. (Bartlett, 1999).

METODOLÓGIA

Los métodos de investigación cuantitativa hacen referencia al estudio e investigación de fenómenos observados, nos brindan una visión descriptiva de las actitudes, opiniones y conductas de una población determinada que se encuentra bajo investigación, a través del análisis deductivo de una muestra. Los resultados obtenidos por medio de esta clase de procedimientos pueden ser generalizados a la población o universo de estudio, debido a que han sido diseñados de tal manera que garanticen su objetividad, legitimidad y validez (Arias, 1991) y la interpretación de esa indagación empírica permitirá elaborar una idea o un patrón de determinado fenómeno (Taylor, 1996). Para respaldar la presente investigación, la estrategia metodológica adoptada fue el método de estudio de caso (Yin, 1984), a veces llamado también monografía. Por definición, este tipo de investigación apunta a describir o estudiar sólo un objeto o un caso, y no busca conocimientos universalmente válidos. El método de estudio de caso, al igual que otras metodologías, pueden servir para propósitos exploratorios, descriptivos y explicativos (Yin, 1994). Constituye una óptima herramienta metodológica empleada para describir exhaustivamente la ocurrencia de un problema o un fenómeno dentro de un contexto definido por el investigador. Las herramientas metodológicas utilizadas en este estudio fueron el análisis documental, entrevista y observación directa.

Universo de Análisis

La empresa del sistema multinivel seleccionada para su estudio, denominada Gen H Herbalife Querétaro, es una comunidad de la empresa HERBALIFE iniciada por la señora Amet Sepúlveda Ugalde, su líder.

Objetivos

1. Analizar del concepto de mercado inmerso en la cultura organizacional como estrategia principal para crear una ventaja competitiva dentro de las organizaciones.
2. Analizar el modelo organizacional de sistema multinivel como estrategia comercial para afrontar los desafíos del mercado cambiante.
3. Identificar las variables culturales que le permiten a los modelos organizacionales multinivel hacer frente exitosamente a los desafíos del mercado cambiante.

Hecho Social

Los modelos organizacionales multinivel poseen variables culturales como su estructura, las interacciones y los procesos de socialización entre los actores que les permiten hacer frente de manera exitosa a los desafíos del mercado cambiante.

RESULTADOS Y CONCLUSIONES

En la investigación se presenta las siguientes conclusiones obtenidas de la observación directa, la recolección documental y las entrevistas, mismos que contribuyen a explicar el fenómeno estratégico del sistema multinivel:

En este tipo de empresa se centra su éxito económico: en la expansión del mercado, en el volumen de ventas y las cifras de negocios, la capacidad de autofinanciamiento, la rentabilidad.

Se cimienta en una economía de variedad y capacidad para diversificar sus productos y servicios y con ello responder a las exigencias evolutivas de los consumidores y de la competencia.

Para lograr éxitos comerciales esta empresa establecen un fuerte compromiso de su personal, es decir, conquistan a sus agremiados para que logren a cualquier precio sus objetivos de venta.

En esta empresa o establecimientos de pequeño tamaño, se definen como comunidades pioneras en torno de fundadores carismáticos.

Existe en ella una fuerte cultura respecto al espíritu pionero, espíritu de familia y los valores profesionales; los cuales constituyen el verdadero cimiento de una organización colectiva.

Se enfatiza el éxito de una especie de contrato social en el que predomina el espíritu de empresa en donde la contribución de los socio-actores en disponibilidad, movilización responsabilidad, competencia y en fidelidad corresponde una retribución en autonomía, en experiencia de oficio y en reconocimiento simbólico como una garantía del empleo y del estatus socio profesional.

Se gesta una cultura de empresa compartida la cual se cimienta en el éxito económico y la expansión comercial apoyada sobre los esfuerzos de todos sus actores para el desarrollo de la empresa.

Su funcionamiento interno se distingue por la importancia de una regulación cultural que genera normas colectivas, pero también relaciones negociadas.

Transmite valores de éxito económico, respeto humano, calidad en el trabajo, progreso social en la gestión humana.

Logra una integración durable, el reconocimiento como persona, valora el autodidactismo y la promoción interna como motor de la expansión.

En torno a un proyecto de desarrollo de empresa sus actores negocian su lugar a través de un contrato tácito en el que intercambia el acceso a un reconocimiento individual por el respeto a las normas profesionales de la organización.

Respecto al trabajo la dinámica consiste en poner en práctica todo el potencial individual para lograr el desarrollo profesional de los actores.

La empresa es considerada un lugar de pertenencia en la que se brinda y desarrolla la integración a un ámbito de protección colectivo y personal.

La trayectoria es considerada como dinámica constante de crecimiento en términos de proyecto personal.

La posición de la empresa en la sociedad global es la referencia explícita del trabajo realizado.

La función de la historia de la evolución de la empresa es una experiencia cotidiana y constante.

Se caracteriza por el sello del fundador como figura mítica

Existe un estrecho vínculo entre la socialización con el mercado

La empresa se considera una comunidad de acción y el cliente como proyecto individual y empresarial.

La legitimación de la autoridad se consolida por la experiencia, las decisiones, su función en la promoción, la vigilancia y el apego a las normas, la animación de un trabajo colectivo, la gestión de la autonomía y a la capacidad para ser un líder.

En la finalidad del trabajo, intervienen elementos de observación tales como la creación de un experto, la producción y el desarrollo, la integración en una estructura de relaciones, la adquisición de un estatus social y la subsistencia y la utilidad social.

En cuanto a las finalidades de la empresa, trabajan para lograr la rentabilidad, el desarrollo empresarial, la seguridad del empleo, la misión de servicio público, la promoción social, la capacitación, el desarrollo del comercio; contribuyendo así, al desarrollo local y a la integración de los individuos en una comunidad de trabajo.

En cuanto a las actitudes hacia el trabajo, existe el apego o compromiso al trabajo, que se refiere al carácter emocional que se desarrolla respecto al trabajo, y la implicación de la actividad, que es más sobre el grado de movilización y compromiso que inciden en la función.

Los líderes, por su parte, van más allá de su función patriarcal, encarnan la historia de la compañía bajo la tradición, concibiendo en el pasado la manifestación de inicios míticos sobre el origen de la empresa; cuyo objetivo va encaminado a reforzar la cohesión entre los empleados.

La accesibilidad de los líderes es un elemento moral que distingue este tipo de empresa, y se ve como un símbolo de reconocimiento práctico y gratificante.

La relación directa y la accesibilidad de los líderes son reconocidas como fundamentales para la movilización en esta empresa comunitaria y a pesar de un importante desarrollo de la compañía a través de los años, el intercambio interpersonal sigue siendo constituido en principio, con los métodos de gestión adaptados a la altura de la empresa.

Los empleados, ven y perciben la accesibilidad de los líderes y las relaciones sociales como una muestra distintiva en su compañía, una práctica valorada y de reconocimiento simbólico muy fuerte, como miembro de la “familia” y como individuo con cualidades personales dentro del colectivo (cualidades personales).

Los líderes-ejecutivos lejos de resguardarse en su poder jerárquico y de centrarse en la elaboración de una estrategia a largo plazo; favoreciendo el contacto directo con los miembros de su empresa, permaneciendo regularmente accesibles a todos y situándose a disposición de la gente.

El patrón estratégico de crecimiento de la empresa, en los últimos treinta años, señala que la oportunidad del mercado impone una redefinición frecuente de los objetivos y de las finalidades mismas de la producción, aunado la elaboración de objetivos legítimos a los clientes basados en su salud y bienestar y para los trabajadores de mismos.

Algunas de las características de este patrón estratégico de desarrollo son las siguientes:

Una definición del negocio articulado alrededor de las innovaciones en el campo del cuidado del peso y de la salud de los clientes considerados como el proyecto final de la empresa.

La construcción de figura mítica alrededor de su fundador la empresa de una alrededor de su fundador Mark Hughes, y la conservación de su memoria a través de la Fundación Familia Herbalife y de la institucionalización del día Mark Hughes, celebrado anualmente para continuar con su legado.

La vocación global de la empresa manifiesta en una constante expansión por un crecimiento en diferentes continentes, países y ciudades.

La conformación de un grupo de expertos de renombre mundial como Consejo Consultor Médico que fortalezca su imagen y le permita el acceso a innovaciones en sus productos.

El desarrollo de una organización flexible cimentada en la escalera de éxito de sus integrantes

La presencia de una capacidad financiera con su introducción en la Bolsa de Valores de Nueva York.

La manifiesta presencia en actividades relacionadas con la sociedad que contempla donaciones, financiamiento de proyectos a universidades, despliegue en actividades deportivas y amplia vinculación con los medios masivos de comunicación.

Este estudio de caso, abre al campo a valiosas enseñanzas, aun conociendo las limitaciones que tiene, contribuye a dar respuestas a nuevos fenómenos tales como los modelos de enseñanza de la cultura corporativa, la relación empresa-sociedad, las dinámicas de las relaciones entre los actores, el desarrollo de referencias culturales que orientan a su acción, las culturas de trabajo de los actores-socios, los espacios de identificación, los comportamientos de ajuste colectivo, la cohesión y el dinamismo de las estructuras sociales que se construyen y le dan sentido al quehacer laboral, la identidad colectiva y profesional de la cultura de la empresa, la incorporación de valores para acrecentar la efectividad organizacional. Mediante la técnica de la observación participante puede conocer y analizar las formas y los procesos a los que se adhieren los actores en una labor organizacional para su posterior explicación a la luz de diversas teorías. Este tipo de investigaciones permitió un acercamiento a una de las distintas formas de gestión administrativa, el sistema de comercialización de tipo multinivel, que ha demostrado a lo largo de la historia ser exitoso y efectivo para distribuir productos y servicios directamente a los consumidores; además de, brindar nuevas oportunidades de trabajo a distintos segmentos sociales, culturales y económicos. Finalmente, este estudio abre nuevas posibilidades a valorar en las organizaciones de nuestro país.

DESARROLLO TEÓRICO SOBRE EL LIDERAZGO AUTÉNTICO

Erwin Navarrete Andrade, Universidad Central de Chile
Jorge Alvial Pantoja, Universidad Austral de Valdivia

RESUMEN

Las empresas participan de escenarios donde deben lidiar con diferentes desafíos en términos socio-económicos, culturales, políticos, medioambientales y de alta competencia en el mundo de los negocios. Muchos de los recientes escándalos corporativos que han sucedido en nuestro país, han dejado impresiones bastante desfavorables acerca de los líderes, y del estilo de liderazgo implementado a la hora de enfrentar este tipo de contingencias. Esta situación es de suma urgencia, y exige comportamientos adecuados en términos éticos y morales, que sean útiles, como normas de ejemplo, para que otros las sigan. Es precisamente por esta razón, que nace el interés en describir y estudiar el liderazgo auténtico y su desarrollo. Para cumplir este propósito, este documento tiene la intención de explorar las raíces teóricas y fundamentos que sustentan las concepciones actuales de esta nueva forma de liderazgo. La literatura sugiere varias formas de aplicación y adopción del liderazgo. Investigadores sostienen y creen que los líderes auténticos, son la solución para la crisis de liderazgo que existe en el mundo actual y moderno de los negocios. Estos líderes poseen atributos que abarcan y otorgan un alto sentido a la integridad, su carácter moral y auto-disciplina, con un propósito claro, una preocupación por los demás, la confianza, la esperanza, el optimismo, valores positivos, y un alto sentido de entrega para con los demás. .

PROCESOS DE SALUD-ENFERMEDAD (FÍSICA Y MENTAL) DE LOS TRABAJADORES EN UNA EMPRESA DE AUTOPARTES

Ma. Luisa Leal García, Universidad Autónoma de Querétaro, México
Mónica María Muñoz Cornejo, Universidad Autónoma de Querétaro, México
Minerva Candelaria Maldonado Alcudia, Universidad Autónoma de Querétaro, México

RESUMEN

El trabajo muestra cuales son las repercusiones en la salud física y mental de los trabajadores a partir de la exposición a ciertas condiciones de trabajo (riesgos y exigencia) en una de las empresas más importantes de México, dedicada a la fabricación de autopartes. Se describe el proceso de trabajo de la empresa y los nuevos modelos administrativos bajo los cuales se organiza la actividad laboral. El estudio que se llevó a cabo fue de tipo observacional, transversal y analítico, en el que se tomaron en consideración varios factores o variables del proceso de trabajo que tienen posible relación con los daños a la integridad física y mental. Se retomó la propuesta metodológica diseñada en la Maestría en Ciencias de la Salud en el Trabajo de la Universidad Autónoma Metropolitana- Xochimilco, denominada "Programa de Evaluación y Seguimiento de la Salud Laboral" (PROESSAL), que permitió observar: las condiciones de seguridad e higiene del centro de trabajo, el perfil de riesgos y exigencias, el perfil patológico y el mapa de riesgo. Finalmente, se proponen alternativas de intervención que mejoren o modifiquen las condiciones de trabajo y, con ello, la salud de los trabajadores.

Palabras clave: procesos salud-enfermedad, física-mental, trabajadores

ABSTRACT

The study show what are the implications for physical and mental health workers from exposure to certain conditions (risks and demand) in one of the most important companies in Mexico, dedicated to the manufacture of auto parts. It describes the working process of the company and the new administrative models under which organized labor activity. The study was conducted was an observational, transversal and analytical, which took into consideration several factors or variables of the work process with possible relation to damage to physical and mental. The proposed methodology was re designed in the Master of Science in Health at Work Universidad Autónoma Metropolitana-Xochimilco, entitled "Assessment and Monitoring Program of the Occupational Health" (PROESSAL), which allowed us to observe: the safety and health workplace, the risk profile and requirements, the pathological profile and the risk map. Finally, we propose alternative interventions that improve or modify the conditions of work and thus the health of workers.

KEY WORKS: health and disease processes, physical-mental, workers.

INTRODUCCIÓN

La modernización económica y social en la que se ha visto incluido nuestro país, ha traído como consecuencia cambios en las condiciones de vida y de trabajo de amplios sectores de la población. Estas transformaciones en el ámbito productivo, muestran también sus efectos en la salud de los trabajadores y en los perfiles de salud-enfermedad, los cuales empiezan a ser investigados no sólo desde sus aspectos biológicos e individuales, sino como producto de los procesos de trabajo. Esta investigación muestra cuáles son los principales riesgos y exigencias a los que se ven expuestos los trabajadores de una de las empresas más importantes de México, dedicada a la fabricación de autopartes, con nuevos modelos de producción acordes a los requerimientos mundiales y al mismo tiempo y cuáles son las repercusiones

que se observan en la salud física y mental de los trabajadores. La pregunta de investigación que se plantea es: ¿Qué relación existe entre las condiciones de trabajo (riesgos y exigencias) en una empresa de autopartes y los daños a la salud física y mental de los trabajadores? Para dar respuesta a la pregunta, se llevó a cabo un estudio de tipo observacional, transversal y analítico, considerándose diversos factores o variables del proceso de trabajo que tienen posible relación con los daños a la integridad física y mental. Se tomó la propuesta metodológica diseñada en la Maestría en Ciencias de la Salud en el Trabajo de la Universidad Autónoma Metropolitana- Xochimilco, denominada “Programa de Evaluación y Seguimiento de la Salud Laboral” (PROESSAL), que permitió observar: las condiciones de seguridad e higiene del centro de trabajo, el perfil de riesgos y exigencias por áreas y puestos, el perfil patológico y el mapa de riesgo, Finalmente se proponen alternativas de intervención que mejoren o modifiquen las condiciones de trabajo y, con ello, la salud de los trabajadores.

REVISION LITERATURA

Las enfermedades ocupacionales ocurren ante la exposición del trabajador a agentes capaces de producir daños a la salud. “La investigación en el campo de las enfermedades ocupacionales se esfuerza por poner de manifiesto la relación entre dosis altas de exposición, y alteraciones en la salud” (Cortez, 2001). Según la OIT en su último informe publicado en el 2002, cada año en el mundo 270 millones de trabajadores sufren accidentes de trabajo; 160 millones contraen enfermedades profesionales y la cantidad de obreros muertos en su puesto de trabajo supera los dos millones por año. Traducidos estos datos en cifras, representan una pérdida del 4% del Producto Interno Bruto (PIB) mundial (mil 251.353 millones de dólares estadounidenses) debido al costo del ausentismo, de las enfermedades, incapacidades y a las prestaciones. Para considerar la magnitud de pérdidas en el PIB mundial, consideremos que son veinte veces superiores a toda la ayuda oficial a los países en desarrollo. Juntas, las enfermedades cardíacas y las enfermedades músculo-esqueléticas son responsables de más de la mitad de los costos atribuibles a las enfermedades relacionadas con el trabajo (OIT, datos del 2002).

En la Unión Europea cada año se pierden 150 millones de días laborales como consecuencia de los accidentes de trabajo y los costos realizados por la industria en materia de seguros se elevan a 20 billones. En Francia cada año mueren 780 asalariados, más de dos por día. (OIT datos del 2002). En el mundo, se producen alrededor de un millón trescientos cincuenta mil trescientos accidentes de trabajo, lo que corresponde a 3 mil 700 víctimas diarias; lo anterior indica que por jornada de ocho horas hay 8 heridos por minuto. En Estados Unidos las empresas deben pagar cada año 170.9 billones de dólares en gastos relacionados con las lesiones y enfermedades profesionales (OIT datos del 2005).

Según el Anuario de la Indemnización del Trabajador de 1995 (NIOSH 2005), en casi la mitad de los estados de la Unión Americana ya se permiten las demandas de indemnización laboral por los problemas emocionales y de invalidez debido al estrés en el trabajo. Sin embargo, los tribunales continúan reacios a confirmar ese tipo de demandas debido a lo que ellos consideran “condiciones normales de trabajo” o simplemente trabajo arduo. En Japón, Uehata (1989) utilizó la palabra “karoshi” (muerte por exceso de trabajo), que comprende fallecimientos o incapacidades laborales de origen cardiovascular (como accidente cerebro vascular, infarto al miocardio o insuficiencia cardíaca aguda) que pueden producirse cuando el trabajador con una enfermedad arteriosclerótica hipertensiva se ve sometido a una fuerte sobrecarga de trabajo. Más recientemente, en Madrid el periódico español El País publicó el 13 de enero de 2006 en su sección de economía una noticia que puede constituirse en un apoyo en materia laboral. El encabezado menciona: “Un juez califica de accidente laboral el suicidio de un hornero. La sentencia señala que el trabajador padecía estrés en su empleo”. Con respecto a los datos en México, por su parte, la Coordinación de Salud en el Trabajo del Instituto Mexicano del Seguro Social, en su Estadística Nacional de Accidentes y Enfermedades de Trabajo 2008, enlista a la cabeza la industria de la transformación, con 411 mil 179 accidentes de trabajo y 3 mil 681 enfermedades profesionales (Tabla 1).

Con respecto a los datos en México, por su parte, la Coordinación de Salud en el Trabajo del Instituto Mexicano del Seguro Social, en su Estadística Nacional de Accidentes y Enfermedades de Trabajo 2008, enlista a la cabeza la industria de la transformación, con 411 mil 179 accidentes de trabajo y 3 mil 681 enfermedades profesionales (Tabla 1).

La ansiedad, la depresión y los trastornos psicómicos en nuestro país son alteraciones psíquicas muy comunes entre la clase trabajadora, en cierta medida asociados a las condiciones laborales. El proceso de trabajo está ligado a una serie de riesgos y exigencias que sumados dañan poco a poco el bienestar de los trabajadores. Este proceso origina en los individuos un psicotrastorno que altera toda la vida emocional y de relación. (Guerrero y Santoyo 1992). Los trabajadores tienen el derecho de controlar la aplicación de las normas para la prevención de los accidentes y las enfermedades profesionales y de promover la elaboración y aplicación de todas las medidas encaminadas a vigilar su salud física y mental (Basaglia, 1974). En México, la Secretaría del Trabajo y Previsión Social (2003) tiene como objetivo principal promover en los centros productivos del país la mejoría de las condiciones físicas y ambientales en que se desempeña el trabajo, para contribuir al beneficio mutuo de los trabajadores y de las empresas.

La Ley Federal del Trabajo, cuya última reforma fue aplicada el 23 de enero de 1998, en su título noveno, sobre Riesgos de Trabajo, incluye 44 artículos (472 a 515). Específicamente en el artículo 513 expone la tabla de enfermedades de trabajo. La última, señalada con el número 161, reconoce sólo la neurosis como enfermedad profesional para ocupaciones como “pilotos, aviadores, telefonistas y otras actividades similares” En el artículo 514, sobre la tabla de valuación de incapacidades permanentes, de un total de 409 incapacidades identifica con el número 405 la incapacidad por enajenación mental como resultado de algún accidente o riesgo de trabajo, con un 100% de incapacidad. Dicha Ley, que ha sido considerada como una de las más completas en Latinoamérica, sólo contempla riesgos físicos para identificar posibles accidentes de trabajo y enfermedades profesionales, es decir, hace caso omiso de las exigencias y de la organización y distribución del trabajo. Además de la neurosis, no incluye otro tipo de trastornos y alteraciones mentales derivadas de la actividad laboral, tales como estrés, fatiga o hastío psíquico, entre otros. La finalidad de este estudio es poder contribuir de alguna forma en la investigación sobre estos aspectos de salud laboral y en la instrumentación de programas preventivos para los trabajadores.

La Empresa de Estudio

La empresa de estudio está dedicada a la fabricación de sistemas de escape y convertidores catalíticos para automóviles, camionetas, camiones y partes de repuesto. Es proveedora de equipos originales de empresas armadoras como Chrysler de México, Ford Motor Company, Volkswagen de México y General Motors de México. Mantiene exportaciones directas a Estados Unidos, Canadá Centro y Sudamérica.

Asimismo, realiza exportaciones indirectas mediante sistemas de escape instalados en vehículos ensamblados en México para exportación.

La empresa tiene programas de capacitación continua; de higiene y seguridad en el trabajo; de actividades deportivas, culturales y recreativas que contribuyen al desarrollo y mejoramiento tanto del adiestramiento y capacitación como de las condiciones de vida del trabajador. Sin embargo, aun cuando no se presenta en la planta una severa problemática de salud, sí se detectan manifestaciones de malestar físico y emocional entre los trabajadores de algunos departamentos, que posiblemente disminuyan su capacidad de trabajo y su productividad.

Áreas y Puestos de Trabajo

La empresa tiene una estructura organizacional muy esbelta o sencilla; cuenta con un director general y dos tipos de direcciones: Administrativas y Operativas. Las primeras son las responsables de la provisión de materiales, respaldo administrativo de los diferentes programas de mantenimiento, producción y abastecimiento; logística en los procesos; contacto y trabajo con proveedores; implementación de programas de producción y ventas; capacitación y desarrollo de los recursos humanos, etc. Las de carácter operativo están organizadas como tres unidades de negocios llamadas: unidad de negocios de Chrysler Daimler y Volkswagen; unidad de negocios de Ford y General Motors; y unidad de negocios de repuestos o refacciones. Cada una de las unidades de negocios está conformada por células de trabajo en donde se fabrican las piezas universales para mofles de todo tipo de marcas automotrices y cada unidad de negocio es responsable de la producción, mantenimiento del equipo, ingeniería, manufactura, procesos, planeación, calidad y control presupuestal. Como parte de sus fundamentos y valores, la empresa cuenta con una misión y una filosofía que marcan su “personalidad” y rumbo. Éstas se incluyen a continuación, de forma textual como se encuentran en el manual de bienvenida a los trabajadores de nuevo ingreso.

Filosofía De La Empresa: “Somos una empresa donde el ser humano es parte vital y nuestra filosofía se basa en la participación, desarrollo y calidad de su personal. Estamos orientados hacia la excelencia y realizamos cada actividad con todo cuidado y esmero. Estamos comprometidos a satisfacer con calidad las necesidades y requerimientos de nuestros clientes, tanto internos como externos.

Los beneficios generados por nuestra empresa se distribuyen entre los que participamos: inversionistas, personal, clientes, proveedores y sociedad en general. Estamos comprometidos en la búsqueda de soluciones a los problemas de contaminación ambiental producidos por vehículos automotores.

Filosofía De Calidad: Somos una empresa orientada hacia la calidad total en la que cada actividad se realiza con todo cuidado y esmero. Nuestros esfuerzos están dirigidos a una mejora continua que satisfaga las necesidades de nuestros clientes. En nuestra empresa por calidad entendemos los siguientes principios:

- Calidad de Vida: formar y mejorar la calidad de vida del personal en el ambiente familiar e industrial.
- Calidad de Trabajo: mejorar la calidad de trabajo en el diseño, manufactura del producto y servicio.
- Calidad del Producto: mejorar la calidad funcional y la tecnología de los productos que fabricamos.

METODOLOGÍA

Hipótesis: Existe relación entre los procesos de salud-enfermedad (física y mental) y las condiciones laborales (riesgos y exigencias) de los trabajadores en una empresa del ramo automotriz. Existe una mayor problemática (física y mental) entre los obreros que en el personal administrativo.

Población: Se estudió a 320 trabajadores, entre ellos 9 mujeres, de un total de 338 (253 obreros sindicalizados y 85 empleados de confianza). Este grupo representa el 94.7% del total de la población, el cual quedó conformado por 240 obreros sindicalizados (75%) y 80 empleados de confianza (25%) de la población participante. Esta distribución refleja claramente que el mayor número de trabajadores se concentra en la población de obreros, cuyas actividades se realizan directamente en la planta.

Instrumentos: Las fuentes de información que se utilizaron fueron primarias (intervención directa a través de encuestas y entrevistas con la población de estudio), y secundarias (documentación proporcionada por el departamento de recursos humanos sobre nómina, antigüedad, ausentismo, historial médico, de capacitación, etc.) Encuesta del Programa de Evaluación y Seguimiento de la Salud Laboral (PROESSAL) (Noriega, Franco, Martínez, Villegas y Alvear, 2000).

RESULTADOS

Descripción de la Población

De un total de 338 trabajadores (253 obreros sindicalizados y 85 empleados de confianza) se encuestó al 94.7%, es decir 320 personas (240 obreros sindicalizados y 80 empleados de confianza). Esta población representa al 75% de obreros y al 25% de empleados. La manera como se distribuye la población refleja claramente que el mayor número de trabajadores se concentra entre los obreros, cuyas actividades se realizan directamente en la planta. De la población encuestada (311 casos) el 2.8% (9 casos) fueron mujeres y el 97.2% hombres, lo que muestra que las empresas de autopartes y metal-mecánicas emplean principalmente trabajadores del sexo masculino por las características de la actividad que se realiza.

Con relación al estado civil, el 24% de la población es soltera, el 69% casada y el 7% vive en unión libre. El 72% tiene familia (hijos) y el 28% no tienen hijos. Con relación a la edad, el 23% de la población tiene entre 18 y 25; el 33% entre 25 y 30 años; el 20%, entre 30 y 35 años; y el 24% de 35 años en adelante. Lo anterior indica que se trata de una población joven donde más de la mitad cuenta con una edad entre los 18 y 30 años. Con respecto a la antigüedad que los trabajadores tienen en la empresa, exponen que casi un tercio de la población en estudio tiene menos de un año, y poco más del 50% del personal tiene menos de 4 años de antigüedad, mientras que el 48% tiene más de 4 años laborando. El alto porcentaje de personal con menos de un año de antigüedad, se explica por el crecimiento reciente de la empresa, que requirió la contratación de un grupo fuerte de trabajadores sin experiencia, que se fueran formando con los obreros con mayor tiempo laboral.

Perfil de Riesgos y Exigencias

Se entiende por riesgos a aquellos elementos potencialmente nocivos en los centros laborales derivados de los medios de producción, el objeto y los instrumentos de trabajo; mientras que por exigencias se entienden las necesidades específicas que impone el proceso laboral a los trabajadores como consecuencia de las actividades que desarrollan y de las formas de organización y división técnica del trabajo en el centro laboral. De esta manera, los riesgos y exigencias son los componentes derivados de los elementos del proceso laboral que pueden, potencialmente, crear daños a la salud siendo las manifestaciones fisiológicas y psíquicas las formas en que se expresan esos elementos en los trabajadores y que pueden ser nocivas o no, es decir crear o no daños a la salud.

La empresa cuenta con una serie de estudios especializados en medidas de seguridad laboral, así como con una serie de controles y registros sobre ruido, vibraciones, ventilación, etc. Sin embargo, las exigencias resultado del trabajo mismo y el impacto que éstas tienen sobre la salud de los trabajadores en ocasiones pasan desapercibidas, por formar parte intrínseca de la actividad.

Tabla 2: Principales Riesgos Y Exigencias

riesgo o exigencia	casos	tasa de exposición (por 100 trabajadores)
1. Cubrir una cuota de producción	277	87
2. Un estricto control de calidad	233	73
3. Ruido	231	72
4. Rotación de Turnos	219	68
5. Humos	202	63
6. Una jornada semanal mayor de 48 horas	200	63
7. Mucha concentración para no accidentarse	200	63
8. Realizar trabajos pendientes en horas o días de descanso o vacaciones	189	59
9. Trabajo nocturno	185	58
10. Un trabajo repetitivo	177	55
11. Calor	177	55
12. Realizar una tarea muy minuciosa	165	52
13. El conjunto de tareas que realiza se repite por lo menos entre medio minuto y cinco minutos	160	50
14. Radiaciones de soldar	155	48
15. Falta de ventilación	146	46
16. Otros	2,560	800
	5476	1711
TASA DE MORBILIDAD		

Fuente: Encuesta individual PROESSAL, Junio 2011 Principales riesgos y exigencias a los que se ven expuestos los trabajadores en general
*Tasa por 100 trabajadores

Analizando el Tabla 2, se puede apreciar que en general cada trabajador se ve expuesto a 17 riesgos o exigencias, lo que representa una tasa de exposición sumamente alta y significativa. Llama mucho la atención que en esta empresa a diferencia de los estudios realizados en otros ámbitos y referidos previamente, las exigencias asociadas a la organización del trabajo, son las que adquieren mayor importancia para los trabajadores, y únicamente el ruido, el calor y los humos, típicos en este sector, aparecen entre los 15 más importantes, con porcentajes de exposición por arriba del 50%. Esta exposición diferencial se corresponde sin lugar a dudas con las formas novedosas de organizar el trabajo en esta empresa. El cubrir una cuota de producción y mantener un estricto control de la calidad del producto, representan las tasas de exposición de riesgo más altas para los trabajadores (87 y 73 respectivamente). Esto implica un alto nivel de exigencia y, por consecuencia, de estrés en el trabajador.

Con respecto al ruido, éste se encuentra ubicado en el tercer lugar, marcando que de cada 10 trabajadores 7.2 están expuestos, lo que constituye un factor de alto riesgo para propiciar padecimientos como hipoacusia o sordera parcial y/o total. Sobresale el alto número de trabajadores que rota turnos (68%). La rotación es semanal de acuerdo a la organización del trabajo en la empresa. También se puede apreciar que más de 6 trabajadores de cada 10, se somete a una jornada mayor de 48 horas, donde se requiere mucha concentración para no accidentarse. En el mismo cuadro se evidencia también, que un porcentaje alto de trabajadores (59%), requieren realizar los trabajos pendientes en horas o días de descanso o vacaciones; estos factores aumentan el nivel de exigencia y ponen claramente en riesgo la salud física y la integridad mental de los trabajadores. Aunado a los factores anteriores, el realizar tareas minuciosas, repetitivas, con exposición a radiaciones por soldar y con poca ventilación, pueden estar propiciando condiciones adversas para la salud, ya que aparecen entre los 15 principales riesgos y exigencias a los que se ven expuestos los trabajadores.

Perfil Patológico

Sobre el perfil patológico encontrado en los trabajadores de la empresa, se seleccionaron los 10 padecimientos más frecuentes que superaron la tasa de 10 por cada 100 trabajadores, como lo muestra el Tabla 3

Tabla 3: Perfil Patológico General

diagnóstico	casos	tasa (por 100 trabajadores)
Trastornos del sueño	91	28
Fatiga	65	20
Conjuntivitis crónica	58	18
Rinofaringitis de repetición o crónica	54	17
Pterigión o pingüécula	54	17
Trastornos musculoesqueléticos	45	14
Lumbalgia	40	12
Amigdalitis de repetición o crónica	37	12
Cefalea tensional	36	11
Hipoacusia o sordera	34	11
Otros	155	49
TASA GENERAL DE MORBILIDAD	669	209

Fuente: Encuesta individual PROESSAL, Junio 2011 Perfil patológico general agrupado por padecimientos en los que se incluyen diversos síntomas y signos y algunos se diagnostican como enfermedades específicas *Tasa por 100 trabajadores

La tasa de morbilidad general es de 209 es decir cada uno de los trabajadores de esta empresa presenta en promedio al menos 2 enfermedades o trastornos. Como bien se puede apreciar, el principal problema de salud lo constituye el trastorno del sueño, derivado posiblemente de la rotación de turnos que ocurre cada semana, presentándose como segundo padecimiento la fatiga. En este caso también es posible que exista una constante del trabajo extra o jornada semanal mayor a 48 horas, en donde la fuerza de trabajo no se alcanza a recuperar en un día o dos del cansancio producido por el exceso de horas laboradas.

La conjuntivitis crónica y el pterigión o pingüécula pueden deberse a las partículas que se encuentran en el aire producto de las radiaciones ultravioletas e infrarrojas que producen humos y gases, o posiblemente sean producto del uso constante de la computadora.

La rinofaringitis de repetición crónica puede ser resultado de la falta de ventilación combinada con el cambio brusco de temperatura al salir del turno, ya que se trabaja en forma constante por varias horas y el cuerpo se somete a una temperatura superior al que experimenta fuera de la planta. Otros trastornos que presentan tasas menores son los trastornos musculoesqueléticos con el 14%, el 13% lumbalgia, el 12% amigdalitis de repetición crónica, el 11% cefalea tensional y un 11% sufre de hipoacusia o sordera. Estos dos últimos podrían guardar cierta relación con la exposición al ruido.

CONCLUSIONES

Existe una relación estrecha entre las condiciones laborales (riesgos y exigencias) y el perfil de morbilidad y de psicotrastornos de los trabajadores que laboran en la empresa, siendo la tasa de morbilidad general de 209, es decir, cada uno de los trabajadores de esta empresa presenta en promedio al menos 2 enfermedades o trastornos. De éstos, las mayores manifestaciones de los riesgos y trastornos se presentan en el personal que trabaja en el área de producción. Entre los 15 principales factores de riesgo y exigencias laborales, se contemplan 10 exigencias, en donde cubrir una cuota de producción y mantener un estricto control de la calidad del producto, representan las tasas de exposición de riesgo más altas para los trabajadores (86 y 73 respectivamente). Esto implica un alto nivel de exigencia y, por consecuencia, de estrés en el trabajador. En el perfil patológico general se aprecia que el principal problema de salud lo constituye el trastorno del sueño, derivado posiblemente de la rotación de turnos que ocurre cada semana, presentándose como segundo padecimiento la fatiga. En este caso también se identificó estar asociado con el trabajo extra, o jornada semanal mayor a 48 horas.

Tabla 4 Minerva Candelaria Mapa De Riesgo Por Área De Trabajo

<p>EXIGENCIAS:</p> <ul style="list-style-type: none"> * Realizar trabajos pendientes en horas o días de descanso * Cubrir una cuota de producción * Una jornada semanal mayor de 48 horas <p>RIESGOS:</p> <ul style="list-style-type: none"> * Ruido * Cambios bruscos de temperatura * Falta de ventilación <p>DAÑOS A LA SALUD:</p> <ul style="list-style-type: none"> * Trastornos psíquicos o mentales * Enfermedades irritativas de los ojos * Trastornos derivados del esfuerzo físico y de las posiciones incómodas forzadas sostenidas <p>PROPUESTAS Y MEDIDAS PREVENTIVAS:</p> <ul style="list-style-type: none"> * Entrenamiento e higiene postural y técnicas de relajación en el lugar de trabajo * Instalación de protectores para computadoras * Instalación de toma de aire adicional * Reestudiar metas de producción * Mejorar sistema de ventilación 	<p>EXIGENCIAS:</p> <ul style="list-style-type: none"> * Cubrir una cuota de producción * Rotación de turnos * Un estricto control de calidad * Mucha concentración para no accidentarse * Trabajo nocturno * Una jornada semanal mayor de 48 horas * Un trabajo repetitivo <p>RIESGOS:</p> <ul style="list-style-type: none"> * Ruido * Humos * Calor * Radiaciones de soldar * Gases o vapores <p>DAÑOS A LA SALUD:</p> <ul style="list-style-type: none"> * Trastornos psíquicos o mentales * Enfermedades irritativas de los ojos * Enfermedades irritativas de las vías respiratorias superiores * Trastornos derivados del esfuerzo físico y de las posiciones incómodas forzadas sostenidas * Fatiga patológica <p>PROPUESTAS Y MEDIDAS PREVENTIVAS:</p> <ul style="list-style-type: none"> * Entrenamiento e higiene postural y técnicas de relajación en el lugar de trabajo * Instalación de tomas de aire adicional * Instalación de hidrantes y alarmas de humo * Establecer pausas de trabajo periódicas * Rotación de turnos cada mes en los 2 turnos matutino y vespertino * Reestudiar las metas de producción o bien contemplar la posibilidad de contratar más personal * Establecer sistema de incentivos y reconocimiento sobre el uso adecuado del equipo y medidas de seguridad. * Realizar campañas periódicas sobre seguridad e higiene

Exigencias, riesgos, daños a la salud, propuestas y medidas preventivas

El perfil patológico general por grupos de diagnóstico, muestra que los trastornos mentales (como la depresión, la ansiedad y los trastornos del sueño) presentan las tasas más altas, presentándose en más de la tercera parte de la población. Si se suma esta tasa con los trastornos psicósomáticos adquieren mayor relevancia, ya que se presentan los padecimientos que tienen un origen común, es decir situaciones generadoras de estrés, en más de la mitad de la población trabajadora (tasa de 56% por 100 trabajadores).

La importancia de estos resultados, es que esta problemática trasciende el ámbito laboral para manifestar su impacto en la vida personal y familiar del trabajador, quien busca solucionar sus problemas en forma individual, sin darse cuenta de que se encuentra enfermo por causas propias del trabajo que desarrolla y que, de haber sido detectadas a tiempo podrían haberse evitado. La relevancia de este estudio, estriba en señalar que existen trastornos a la salud, producto del trabajo, que impactan la salud física y la integridad mental de los trabajadores y que requieren ser atendidas dentro de los centros de trabajo -o bajo la responsabilidad de éstos-, y no relegarlas a la búsqueda de soluciones individuales por parte del trabajador quien ha sido sujeto de riesgo, sin saberlo, de un proceso de trabajo que daña de forma irreversible su salud.

DISEÑO DE UNA METODOLOGÍA PARA LA TOMA DE DECISIONES DE INVERSIÓN EN PORTAFOLIO DE ACCIONES UTILIZANDO LA TÉCNICA MULTICRITERIO AHP: CASO MERCADO BURSÁTIL COLOMBIANO

John Willmer Escobar Velásquez, Pontificia Universidad Javeriana Cali
Andrea Carolina Jaramillo, Universidad del Valle Palmira

RESUMEN

Este trabajo presenta los resultados del proyecto de investigación “Diseño de una metodología para la toma de decisiones en portafolio de acciones en el mercado bursátil colombiano utilizando la técnica Multicriterio AHP”. La problemática de la investigación esta relacionada con el diseño de una metodología para la toma de decisiones de inversión en portafolio de acciones en el mercado bursátil considerando criterios de riesgo y rentabilidad. La metodología empleada en la investigación incluye la integración de las técnicas tradicionales de decisión de inversión en portafolio de acciones junto con la técnica multicriterio AHP (Analytic Hierarchy Process). Dicha técnica permite evaluar un número de alternativas bajo criterios cualitativos y cuantitativos de manera jerárquica. La metodología propuesta se ha adaptado para la solución del problema de selección de portafolio de acciones en el mercado bursátil Colombiano. Los resultados obtenidos muestran la importancia y eficiencia de la metodología propuesta para encontrar un equilibrio adecuado entre rentabilidad y riesgo.

DESIGN OF A METHODOLOGY FOR MAKING INVESTMENT DECISIONS IN EQUITY PORTFOLIO BY USING THE AHP MULTICRITERIA TECHNIQUE: STOCK MARKET COLOMBIAN CASE

John Willmer Escobar Velásquez, Pontificia Universidad Javeriana Cali
Andrea Carolina Jaramillo, Universidad del Valle Palmira

ABSTRACT

This paper presents the results of the research project “Design of a methodology for decision making in equity portfolio in the Colombian Stock Market by using the AHP multicriteria technique”. The problem of the research is related to the design of a methodology for making investment decisions in equity portfolio in the stock market by considering risk and profitability criteria. The research methodology includes the integration of traditional techniques for making investment decisions in equity portfolio with the AHP (Analytic Hierarchy Process) methodology. This technique allows evaluating a number of alternatives with qualitative and quantitative criteria in a hierarchical way. The proposed methodology has been adapted to solve the problem of choice an equity portfolio in the Colombian stock market. The results show the importance and efficiency of the proposed methodology to find an appropriate balance between profitability and risk.

KEYWORDS: Equity Portfolio, Multicriteria Techniques, Analytic Hierarchy Process (AHP), Colombian Stock Market.

GANANCIA EN LA ENAJENACION DE UN BIEN INMUEBLE (CASA HABITACION) DE UNA PERSONA FISICA EN LA REGION DE SAN QUINTIN

RESUMEN

Los contratos representan una parte muy importante en la enajenación de bienes inmuebles en México, por ello es conveniente tener bien definido que es un contrato, al cual definimos como un acuerdo de voluntades para crear o transmitir derechos y obligaciones. Los contratos producen efectos, estos pueden ser: la obligatoriedad, la intangibilidad, relatividad, oponibilidad y la seguridad de estos. Ahora bien los contratos pueden terminar por la frustración del mismo o por la extinción de sus efectos, por frustración nos referimos cuando pudiera quedarse sin efecto un propósito contra la intención de quien quería llevarlo a cabo, y por extinción por terminación o vencimiento de los plazos. Ahora bien al referirnos a la ganancia estamos hablando del ingreso que recibe el enajenante llámese vendedor el cual es muy importante y más aun está exento de pagar impuestos y / o contribuciones al gobierno federal en un 100%. La propuesta derivada del presente estudio, parte de la necesidad que tiene la población del valle de san quintín de conocer este tipo de estrategia fiscal en virtud de que existe mucha desinformación a este respecto, y más aun la importancia que reviste el guardar los recibos de pago por los servicios que nos prestan las diferentes empresas paraestatales que existen en país y por consiguiente en el valle de san quintín municipio de Ensenada, Baja California México.

PALABRAS CLAVE: Bienes Inmuebles. Ganancia en Enajenación. Generalidades de los contratos.

GAIN ON DISPOSAL OF REAL PROPERTY (HOME ROOM) OF AN INDIVIDUAL IN THE REGION OF SAN QUINTIN

The contracts represent an important part in the sale of real estate in Mexico, so it is desirable to have well-defined is a contract, which we define as a genuine agreement to create or transfer rights and obligations. Contracts effects, these include: mandatory, intangibility, relativity, and enforceability of such security. But contracts may end the frustration of the same or the extinction of its effects, out of frustration we mean when we could stay without effect against the intended purpose of those who wanted to carry it out, and sunset termination or expiration of the terms. But when referring to the gain we are talking about the income received by the alienator seller call it which is very important and even more are exempt from paying taxes and / or contributions to the federal government at 100%.The proposal arising from this study, part of the need of the population of San Quintín to know this kind of tax strategy pursuant which there is much misinformation in this regard, and even more the importance of keeping receipts payment for services rendered to us by the various parastatals that exist in the country and therefore in the San Quintín Valley town of Ensenada, Baja California Mexico.

KEYWORDS: Real Estate. Gain on Disposal. Overview of contracts.

Ganancia En La Enajenación De Un Bien Inmueble (Casa Habitación) De Una Persona Física En El Valle De San Quintín

INTRODUCCIÓN

De acuerdo a lo publicado por la Asociación Nacional de Notariado una de las situaciones que más ha provocado que las personas no cuiden la documentación necesaria, con la que más adelante puedan acreditar como exentar el impuesto a pagar por el enajenante es la falta de información al respecto ya que la información en el artículo 109 fracción XV inciso a de la Ley del Impuesto sobre la Renta es muy clara: La casa habitación del contribuyente, siempre que el monto de la contraprestación obtenida no exceda de un millón quinientas mil unidades de inversión y la transmisión se realice ante fedatario público. El segundo párrafo de este mismo artículo explica aun más dicha situación ya que dice la exención será aplicable siempre que en los últimos cinco años inmediatos anteriores a la fecha de enajenación de que se trate el contribuyente no hubiera obtenido la exención prevista en este inciso a y manifieste bajo protesta de decir verdad, dicha circunstancia ante fedatario público ante quien se lleve a cabo la operación. Todavía el tercer párrafo del tan mencionado artículo 109 fracción XV inciso a nos da aun mas libertad, en virtud de que nos amplia mas el horizonte en cuanto a que nos explica:

El límite establecido no será aplicable cuando el enajenante demuestre haber residido en su casa habitación durante los cinco años inmediatos anteriores a la fecha de su enajenación en los términos del reglamento de esta ley. Y hacemos mención al reglamento del impuesto sobre la renta, en virtud de que este nos da a conocer en el artículo 130 los documentos con los cuales se exenta la enajenación, y son los siguientes: Credencia de elector expedida por el Instituto Federal Electoral, los comprobantes de los pagos efectuados por la prestación de los servicios de energía eléctrica y de telefonía fija, y finalmente Los estados de cuenta que proporcionan las instituciones que componen el sistema financiero o por casa comerciales o de tarjetas de crédito no bancarias, además nos aclara que dicha documentación deberá estar a nombre del contribuyente, su cónyuge o de sus ascendientes o descendientes en línea recta.

Problemática

En el Valle de San Quintín las personas han tenido que enfrentar diversas situaciones adversas de manera empírica, ya que sus contadores no cuentan con la asesoría y capacitación necesarias para superar los obstáculos que se les presenten, aunque existen en la localidad programas de fomento, estos no han sido suficientes, pues se limitan a ciertas áreas específicas y durante periodos limitados de tiempo. La necesidad manifiesta de las personas, de contar con la asesoría y capacitación enfocada a su desempeño fiscal, ha motivado la realización de campañas de promoción, que aplicando su metodología, obtenemos un diagnóstico fiscal, el cual nos proporciona los principales indicadores que debemos considerar al momento de planear las estrategias a seguir. El presente estudio se realizó en el valle de San Quintín el cual forma parte del municipio de Ensenada, Baja California, México. Esta población está conformada por habitantes que se dedican principalmente a actividades agrícolas, servicios y comercio.

MARCO TEÓRICO

Toda persona que de acuerdo con la Constitución política de los Estados Unidos Mexicanos, sea mexicano, está obligado a participar en la contribución del ingreso, para financiar el gasto publico del país. Dicha obligación está contemplada en la fracción IV del artículo 31 que al efecto dice: Son obligaciones de los mexicanos entre otras, contribuir para los gastos públicos, así como de la federación, como el Distrito Federal o del estado y municipio en que residan, de manera proporcional y equitativa que dispongan las leyes. Tomando en cuenta lo anterior se desprenden dos aspectos importantes la proporcionalidad y la equidad a la que se les ha dado la categoría de principios, que pueden explicarse en los siguientes términos: Principio de Proporcionalidad: Respecto a este principio se debe considerar la capacidad contributiva del sujeto pasivo, es decir, que los sujetos obligados al pago de un impuesto deberán hacerlo en la medida de su capacidad económica. Así las personas que obtienen ingresos elevados tributarán mas de los que tienen menos. Principio de Equidad: De acuerdo a este principio se establece de forma medular la igualdad de los sujetos pasivos de un mismo tributo, ante una misma ley

tributaria. La finalidad de establecer de proporcionalidad y equidad es que las contribuciones deben ser de acuerdo a la capacidad contributiva del contribuyente.

La contribución es un tributo contemplado en efectivo o en bienes que se paga a un organismo público, a cambio de determinados servicios, que si bien repercuten en beneficio de toda la colectividad se concretan en determinadas particularidades. Ahora bien las contribuciones se clasifican según el Código Fiscal de la federación en Impuestos, Aportaciones de Seguridad social, Contribuciones de mejoras y derechos, las cuales a continuación definimos: Impuestos: Son contribuciones establecidas en ley que deben pagar las personas físicas y morales que se encuentran en la situación jurídica o de hecho prevista por la misma y que sean distintas de las aportaciones de seguridad social, contribuciones de mejoras y derechos. Aportaciones de Seguridad Social: Son las contribuciones establecidas en ley a cargo de personas que son sustituidas por el estado en el cumplimiento de obligaciones fijadas por ley en materia de seguridad social o a las personas que se beneficien en forma especial por servicios de seguridad social proporcionados por el mismo estado. Contribuciones de Mejoras: Son las establecidas en ley a cargo de las personas físicas y morales que se benefician de manera directa por obras públicas.

Derechos: Son las contribuciones establecidas en ley por el uso o aprovechamiento de los bienes de dominio público de la nación, así como por recibir servicios que presta el estado en sus funciones de derecho público, también son derechos las contribuciones a cargo de los organismos públicos descentralizados por prestar servicios exclusivos al estado. Respecto al momento de causación el artículo 6 del Código Fiscal de la Federación, dispone que las contribuciones se causen conforme se realizan las situaciones jurídicas o de hecho, previstas en las leyes fiscales vigentes durante el lapso en que ocurran.

Es decir las contribuciones se determinaran conforme a las disposiciones vigentes en el momento de su causación, no obstante les serán aplicables las normas sobre procedimiento que se expidan con posterioridad. La determinación de las contribuciones a cargo de los contribuyentes, salvo disposición expresa en contrario. En caso de que corresponda a las autoridades fiscales hacerlo, los contribuyentes les proporcionarán la información necesaria dentro de los 15 días siguientes a la fecha de su causación.

Por último vamos a mencionar algunos Efectos que consideramos importantes dentro de los contratos como son: La Obligatoriedad, que es el primer efecto que produce un contrato, consiste en su carácter obligatorio ya que ninguna de las partes puede sustraerse de lo que contrato (Gómez Cotero 2009).

Intangibilidad del contrato: No puede una de las partes por voluntad unilateral, disolver o modificar el contrato, salvo casos específicamente previstos en la ley, como son la revocación de la donación (Gómez Cotero 2009). Relatividad del contrato: Consiste en que los efectos del contrato solo aprovechan o perjudican directamente a las partes. Los terceros, por regla general de los contratos, sin embargo existen casos en que pueden ser afectados por dichos efectos tales como: los causahabientes a título universal, los causahabientes a título particular, y los acreedores quirografarios (Gómez Cotero 2009). Oponibilidad del contrato : Es importante distinguir entre efectos directos y efectos reflejos, los primeros son aquellos de los que hablamos en el punto anterior de relatividad del contrato, en tanto que los segundos derivan de los contratos con efectos reales, los cuales son oponibles frente a terceros siempre y cuando cumplan ciertos requisitos: Es necesario su inscripción ante el Registro Público de la propiedad y Comercio; Si un inmueble fue enajenado a diversas personas y no en copropiedad, prevalece la enajenación que primero se haya inscrito en el Registro Público, y si no se realizó tal inscripción, prevalece la fecha más antigua, y si no prevalece a favor de quien tenga la posesión, además si un mismo crédito fue Cedido a favor de varios cesionarios, prevalece la cesión que primero se haya notificado al deudor (Gómez Cotero 2009).

Ya para finalizar mencionaremos que los contratos terminan por frustración del mismo o por extinción de sus efectos, en el primer caso significa quedar sin efecto un propósito contra la intención de quien quería llevarlo a cabo, y se presenta cuando falta alguno de los elementos de existencia del contrato: el consentimiento u objeto y se trata de un contrato inexistente; cuando el contrato este afectado de nulidad absoluta, misma que se presenta si el contrato recae sobre un objeto imposible o ilícito, y cuando haya falta de capacidad en alguna de las partes. Frente a estos tres casos de frustración la Suprema Corte de Justicia de la Nación establece: Que en nuestro derecho no hay contratos nulos de pleno derecho, sino que

en todos los casos se necesita la declaración judicial; que las diferencias entre nulidad e inexistencia de los contrato son puramente académicas (Gómez Coteró 2009).

Por extinción o terminación diremos que si un contrato que se ha celebrado válidamente y ha empezado a producir sus efectos, puede dejar de producir estos o extinguirse a consecuencia de hechos o acontecimientos posteriores a dicha celebración y que constituyen propiamente los medios de terminación del contrato. El vencimiento cuando se establece un plazo para la terminación del contrato y cuando este se presenta, generalmente el contrato termina. La muerte de uno de los contratantes, hay contratos en los que la muerte de uno de ellos pone fin al contrato, como sucede en el mandato (Gómez Coteró 2009).

METODOLOGÍA

El presente estudio se realizó en el valle de San Quintín el cual forma parte del municipio de Ensenada, Baja California, México. Esta población está conformada por habitantes que se dedican principalmente a actividades agrícolas, servicios y comercio. La identificación de las necesidades de asesoría, capacitación y evaluación sobre su desempeño fiscal se realizó mediante la aplicación de encuestas a un margen de personas de la zona rural antes mencionada. La encuesta fue realizada mediante un instrumento tipo cuestionario de 10 preguntas que consideraban los indicadores de necesidades de mejoras fiscales y de identificación de intereses para la realización de un diagnóstico fiscal de sus necesidades de información. Al identificar las necesidades y disposición de dichas personas con necesidades de conocer la situación fiscal de sus inmuebles, se realizaron en una primera etapa 15 diagnósticos fiscales, los resultados se agruparon en porcentajes de respuesta para cada uno de los indicadores.

RESULTADOS

De las personas encuestadas se obtuvieron los siguientes resultados: En un inicio al cuestionar a las personas sobre su disposición a que se les realizara un diagnóstico de desempeño fiscal, mediante la aplicación de una serie de preguntas básicas de facilidades fiscales, obtuvimos un 60% de interés, en que fueran evaluadas. De las personas interesadas en que se les realizara las preguntas de facilidades fiscales un 11.42% cuenta con estudios profesionales, un 17.14% cuenta con un nivel preparatoria o bachillerato, el 17.14% cuenta con el nivel de secundaria, el 31.42% cuenta con un nivel primaria, el 20% con un nivel de primaria trunca y el 2.85% se manifiesta sin estudios.

CONCLUSION Y RECOMENDACIONES

Con el presente caso de investigación podemos concluir que las personas del valle de San Quintín, del municipio de Ensenada, Baja California, México, muestra una necesidad evidente de recibir una adecuada asesoría y capacitación que les facilite un funcionamiento de manera eficiente, planteándose objetivos y planes de conocer las facilidades fiscales con las que se cuenta. Proporcionar una asesoría profesional oportuna a las personas, puede beneficiar no solo a nivel municipal sino a nivel nacional económicamente hablando y de esta manera estas personas estar mejor preparadas y porque no buscar empleo como es la zona del valle de San Quintín. En un esfuerzo por atender estas necesidades de manera continua, se seguirán dando a conocer las facilidades fiscales a las personas de la localidad, por personal capacitado, esto con el propósito de ser una opción de ofrecer apoyo a la comunidad que pertenecemos.

CAMBIO CLIMATICO: ENLACE SOCIO ECONOMICO Y COMERCIAL GENERALIZADO, PARA MEXICO

Adriana Patricia Soto Aguilar, Benemerita Universidad Autonoma De Puebla
Elías Sosa Sánchez, Benemerita Universidad Autonoma De Puebla

RESUMEN

Las consecuencias de las inundaciones por el frente frío número 9 en la zona sur sureste del país ocasionaron, pérdidas económicas, comerciales, laborales, de educación e infraestructura, así como de carácter social, que traspasaron el ámbito regional hasta llegar a ser un problema con implicaciones nacionales: inflación, desabasto, prácticas especulativas y efectos mundiales en la producción de petróleo. Los problemas climatológicos son ya una constante en la economía del país a lo cual la población y autoridades correspondientes no están aún preparados.

ABSTRAC

The consequences of flooding by the front number 9 in the south east of the country caused economic loss, business, labor, education and infrastructure, and social, that pierced the regional level to become a problem with national implications: inflation, shortage, speculation and global effects in the production of oil. The weather problems are now a constant in the economy of the country to which the population and authorities are not yet ready.

METODOLOGIA

El presente reporte de investigación representa 7 meses, (2010-2011), de investigación de campo, en la zona sur sureste del país y tiene como objetivo demostrar que las afectaciones naturales del cambio climático, no se quedan en un ámbito regional, trascienden a un proceso socio económico-comercial generalizado de carácter multisectorial, con efectos secundarios nacionales e internacionales. El referente de estudio son las inundaciones, por el frente fríos, en la zona sur sureste del país, durante 2010-2011. La delimitación territorial de la zona de estudio comprende la región de la Chontalpa la cual contempla los municipios de Cárdenas, Huimanguillo, Conduacán y Paraíso, del Estado de Tabasco y los municipios de: Coatzacoalcos, las Choapas, Minatitlán, Agua Dulce, del Estado de Veracruz. Para el presente trabajo de investigación se delimitó una muestra representativa de 127 ciudadanos de las regiones afectadas que ostentaran algún cargo público ó privado y que su actividad profesional-laboral tuviera representatividad económica en la zona afectada.

La recopilación de datos fue a través de los instrumentos de cédula de encuesta y entrevista. Los entrevistados y encuestados, (sujetos de estudio), son ingenieros y administrativos de Pemex “petroquímica básica” de los complejos: Cangrejera, Pajaritos, Morelos y quienes proporcionaron el material fotográfico aéreo. Estos representan el 40% de la muestra total, el 20% restante lo encabezan, docentes de la región afectada: Instituto Tecnológico Superior de las Choapas, Instituto Tecnológico Superior de Minatitlán y del Tecnológico Superior de la Venta Tabasco. EL otro 10% de la muestra lo comprende los empleados de las empresas: CELANESE y Grupo MASECA, el 3% corresponde a profesionistas del sector salud (ISSSTE) y por último 7 % ganaderos. El 47% de la población entrevistada fueron varones y el 53% restante son mujeres.

Terminos Usados

Contingencia; situación fuera de la normalidad acostumbrada. *Especulación*.-proceso económico comercial mediante el cual se generan alza en el precio de los productos y prácticas de acaparar la mercancía, *Inflación*.-subida generalizada de precios, *Costos*.-sumatoria de los precios de las unidades requeridas durante el proceso de producción y comercialización. *Oferta*.-producción de mercancías y/o servicios destinados al mercado, *demanda*.-bienes adquiridos por la población para cubrir necesidades.

RESULTADOS

A finales de 2010 y época de lluvia en 2011, que inundó la región, de la Chontalpa, la cual cubre los límites entre el Estado de Veracruz y Tabasco, El presente estudio muestra las consecuencias económicas, sociales, comerciales, de educación e infraestructura. Como lo es la especulación, inflación y escases de bienes básicos, así como el incremento de actos de vandalismo, en un 10%, los daños en viviendas llegaron a un 35% y en infraestructura carretera 69%, fue afectada, incluyendo el parque vehicular de la ciudadanía y transportistas, en un 15%. El trabajo de campo muestra las afecciones de salud más comunes entre los habitantes, durante el periodo de inundación y posterior a ésta. Dicho micro estudio permite conocer una realidad más cercana de los pobladores afectados y versiones que se escapan del ámbito gubernamental.

METHODOLOGY

This research report represents 7 months (2010-2011), field research in the area southeast of the country and aims to demonstrate that the effects of natural climate change, do not stay in a regional transcend to a socio-economic multisectoral general commercial, with side effects and abroad. The benchmark study are floods, cold front, in the south east of the country during 2010-2011. The territorial limits of the study area includes the region which includes Chontalpa the towns of Cardenas, Huimanguillo Conduacán and Paraiso, Tabasco State and the municipalities of Coatzacoalcos, the Choapas, Minatitlan, Agua Dulce, the State of Veracruz. For the present research work outlined a representative sample of 127 citizens in the affected regions which will hold public office or private and that his business and labor have economic representation in the affected area. Data collection was through survey instruments and interview card.

Interviewees and respondents (study subjects) are Pemex engineers and administrative "basic petrochemicals" complexes: Cangrejera, Pajaritos, Morelos, and who provided the photographic material by air. These represent 40% of the total sample, the remaining 20% lead, teachers of the affected region: Technological Institute of Choapas, Minatitlan Technological Institute and Superior Technology For Sale Tabasco. THE otro10% of the sample comprising the employees of businesses and Group CELANESE MASECA, 3% are professionals in the health sector (ISSSTE) and finally 7% farmers. 47% of the surveyed population were male and 53% are women.

Terms Used: Contingency. - Situation outside the usual normality. *Especulación*. trade-economic process which is generated by the rise in the price of products and practices of hoarding the commodity-*Inflación*. general increase in prices, *Costos*.-sum of the price of the units required during the production process and marketing. *Oferta*.-production of goods and / or services for the market, *demanda*.-property acquired by the population to meet needs.

RESULTS

In late 2010 and rainy season in 2011, which flooded the region, the Chontalpa, which covers the boundaries between the state of Veracruz and Tabasco, The present study shows the economic, social, commercial, education and infrastructure. As it is is speculation, inflation and commodity shortages and increasing acts of vandalism by 10%, damage to homes reached 35% and 69% in road infrastructure was

affected, including vehicle fleet of citizenship and carriers by 15%. The field work shows the most common health conditions among the inhabitants, during the flood period and subsequent thereto. This micro study provides a reality known nearest affected villagers and versions that are beyond the government level.

Consecuencias Sociales-Económicas Para La Población Afectada

En materia social, las personas entrevistadas indicaron que el rubro en donde se vieron afectados en mayor cuantía fue en su trabajo. Los desastres naturales ocasionaron cambios en la rutina laboral a los cuales no estaban acostumbrados, otro punto recurrentemente señalado fue los continuos descuentos en nóminas injustificados, aun sabiendo el grado de contingencia vivida por la población. Esto a su vez ocasionó especulación e incertidumbre en material laboral debido a que se encuentran bajo contrato ó por obra determinada. El segundo elemento de inconformidad, fue el aumento desmedido del vandalismo y la delincuencia, en un 10% más, situación común para los habitantes, en época de inundaciones.

El estudio de campo realizado muestra que un 28% de la población entrevistada sufrió algún daño material en su vivienda, el rango de consecuencias padecido por domicilio comprende un rango del 30% al 65% por casa habitación, lo cual implicó destinar parte de sus ingresos ó ahorro para la avería de viviendas y parque vehicular afectado. Un 3% de la población entrevistada señaló haber recurrido a préstamos, en sus centros laborales, para atender la situación de emergencia. Al inundarse las zonas comerciales, se generó automáticamente procesos especulativos en mercancías de primera necesidad, hasta los bienes intermedios y complementarios, incluyendo el condicionar la compra de artículos básicos. El desabasto de los principales insumos de consumo humano, no se hizo esperar, generando procesos inflacionarios incluyendo el incremento en el precio de productos nativos de su región ó de cosechas pasadas, las personas entrevistadas narran el incremento en víveres comercializados a través de lanchas, el cual llegó a subir hasta un 50%.

La situación de especulación, acaparamiento y procesos inflacionarios no se quedaron en el ámbito regional, los efectos económicos y comerciales se trasladaron al ámbito nacional. Hay que recordar que los estados de Veracruz y Tabasco son productores importantes de materias primas, productos agrícolas y ganaderos para el país, por lo que la repercusión económica social y comercial de una inundación ó desastre natural no es de carácter local también le compete al ámbito nacional. Otro padecimiento señalado por la población en periodo de inundación y posterior a este, es la mala calidad del agua originando padecimientos de diarrea y tifoidea, con respecto al consumo de agua embotellada, de las empresas locales, se indica que no hay confianza en el tratamiento del agua y procedencia de la misma. A esto se le une una cadena más, el riesgo de consumir alimentos contaminados ó en mal estado, por las contingencias fluviales. Después del periodo de inundaciones la acción más común por parte del gobierno es la fumigación masiva en los municipios afectados por vía aérea. La población señala que es un mal necesario, por un lado se da la prevención de más enfermedades y por otro lado las constantes fumigaciones están ocasionando cuadros severos de alergias a los componentes químicos, en habitantes cercanos a pastizales fumigados. Enfermedades más comunes en orden de importancia, mencionados, por los encuestados son: dengue, enfermedades intestinales, picaduras de animales, hongos en piel y cabello (micosis), alergias y por último enfermedades del área visual.

Antes de terminar este apartado y pasar a la siguiente sección quiero compartir una respuesta que me llama mucho la atención "*La población ya está acostumbrada*. En esta región contantemente sufrimos de inundaciones debido a que los ríos de Chiapas, Tabasco y norte de Veracruz, desembocan en el Golfo de México"(Trabajador del Grupo GRUMA-MASECA, se omite el nombre por secreto de confidencialidad). Esto me lleva a la siguiente reflexión: Hoy en día los desastres naturales son más frecuentes, tal parece que la población se está acostumbrando, el problema radica en el grado mayor de destrucción, con el que se presentan estos fenómenos naturales y que la población que no lo padecen lo

observe como un problema ajeno, siendo que la repercusión no se queda en el ámbito local. El daño a la madre la naturaleza nos cobra facturas sociales, económicas, y de salud con niveles impredecibles de desastre que no es posible recuperar en el corto plazo, en el mediano plazo la recuperación está siendo condicionada por la inestabilidad económica y crisis recurrentes que vive el país. *Lo peor de esto es que nos estamos acostumbrando?*

Daños En Infraestructura Carretera Local Y Nacional

Los encuestados indicaron en este rubro, que la mayor afectación se dio en las avenidas de sus comunidades y postes de energía eléctrica. Como segundo punto de importancia mencionan los daños en la infraestructura carretera de la zona, indican que después del desplome del puente Tonalá el pasado 17 Julio la única conexión alterna, se encontraba ubicada en la carretera federal Cárdenas – Coatzacoalcos, con las inundaciones se cerró el paso de esta vía alterna y con esto el paso al sureste del país donde se localizan los pozos petroleros de extracción. Los entrevistados expresaron que después del derrumbe del Puente Tonalá, el transporte se incrementó en un 20 por ciento, por el desvío carretero, lo que implica más erogación en diesel, pago de casetas por 200 kilómetros más para poder llegar zonas petroleras de extracción ubicados en los municipios de Villahermosa, Tabasco. A este problema se le agregó la cancelación de las corridas de transportistas: ADO, SUR, AU, Transporte Sotavento y líneas locales que conectan a las dos entidades mencionadas. Observar el siguiente material fotográfico:

Fotografía No:

Fotografía No: 2

Como se puede observar en las fotografías se pierde el camino por las inundaciones ocasionando en el peor de los casos la pérdida total de las unidades.

Transportacion

En materia de transportación, cuando se le pregunto a la población entrevistada, cuales habían sido las consecuencias presentadas el común de las respuestas englobaron los siguientes comentarios: Durante el periodo de inundación, las vías de comunicación se limitaron hasta un 80%. Al bajar los niveles de agua, los costos de transportación aumentaron 50% debido a la falta de parque vehicular y/o daños en las unidades. Se crearon vías alternas de transportación de ciudadanos comunes con automóviles propios, así como los pescadores que vieron la oportunidad de rentar el transporte naviero. Se procedió a la cancelación de los viajes de negocios, comercio, laborales, capacitación y turísticos, en algunos casos las empresas transportistas no hicieron efectivo la devolución del costo del boleto, argumentando que el problema no estaba en sus manos. A su vez se dejaron de transportar materias primas, alimentos y combustible requeridos por el resto del país. El transporte de carga valorizo la mercadería, hasta un 50%, en función a la ley de la oferta y la demanda. Para la zona de la Chontalpa en Tabasco, la actividad económica es la primaria. Los habitantes se dedican a la cría de ganado bovino, porcino y avícola, en un

60%, el otro 40% restante lo comprenden las actividades de extracción petrolera. Usted puede observar en las siguientes tomas aéreas el nivel de inundación que se sufrió el único camino a Villahermosa, Tabasco (fotografía no. 1, 2, 3) Fotografía No. 1: tramo federal a carretera Villahermosa, Tabasco, Fotografía No. 2 carretera a Cárdenas, tabasco, Fotografía No. 3 tramo las Choapas..

Sector Educacion

Pasando a otro tema analizado en esta investigación una de las temáticas abordadas durante las entrevistas fue el sector educación, la mayoría de la información fue proporcionada por los docentes de los siguientes planteles educativos: Instituto Tecnológico Superior de las Choapas, Instituto Tecnológico Superior de Minatitlán y del Tecnológico Superior de la Venta Tabasco quienes señalan lo siguiente: Para el municipio de las Las Choapas, se alertó de la contingencia antes de las lluvias y llegada de los frentes fríos, las actividades no fueron normalizadas en su totalidad hasta que bajaron en forma natural el nivel del agua. Para el resto de la zona afectada, se suspendieron labores oficiales, debido a que muchas familias continuaban en contingencia, varias escuelas que sirvieron de albergue como es el caso de los planteles con mayor capacidad estudiantil Los docentes entrevistados indicaron que los programas de estudio se vieron interrumpidos en los tiempos programados, desencadenando un retraso en la educación de esta zona, en comparación con el calendario oficial. A esto se le une la contingencia nacional por influenza.

Las escuelas que sufrieron daños en su infraestructura, modificaron los lugares de enseñanza, por otro lado, no se ha recuperado el mobiliario y equipo escolar, incluyendo el material bibliográfico. En los planteles escolares, se presentaron alumnos con brotes de infecciones en la piel, generando focos de infección en los propios salones de clase. Los maestros señalan que los servicios educativos alternos a sus centros laborales como son los comercios donde su clientela principal son los estudiantes y docentes, también se vieron afectados por la inundación, los comercios que no sufrieron percance alguno tardaron cerca de un mes en normalizarse. Las papelerías, librerías, medios de transporte, ciber café, cafeterías, fotocopiadoras, pensiones para estudiantes, son parte de los comercios afectados.

Con respecto a la reactivación de las actividades escolares, estas se vieron nuevamente retrasadas, ahora necesariamente, por las acciones epidemiológicas: aplicación de vacunas en escuelas afectadas incluyendo aquellas que sirvieron de albergues, fumigaciones en todos los planteles escolares, para evitar la propagación del dengue. También se llevaron a cabo entrenamientos a estudiantes, docentes y administrativos para implantar la planta coloidal que sirve para desinfectar los depósitos de agua, así como las instrucciones para la aplicación de pomadas anti micosis, implementados por Secretaría de Salud, Protección Civil, Secretaría de Desarrollo Social y Medio Ambiente, Armada y Ejército Mexicano. Por último los maestros de educación a distancia también vieron interrumpido el ciclo escolar debido al corte de energía eléctrica provocado por las inundaciones.

Petroquímica Basica y de Extraccion

Como es sabido, la zona sur sureste del país tiene como actividad económica la extracción y procesamiento del petróleo, en este apartado los trabajadores entrevistados de Pemex, arrojan la siguiente información: La contingencia en la zona sureste del país implicó para PEMEX la suspensión temporal de la producción en los diversos campos del activo, antes de las inundaciones la producción promedio de petróleo que era de 60,000 barriles de petróleo, mensuales, durante las inundaciones la producción bajo a 16,000 barriles de petróleo. Actualmente (finales de diciembre 2011), se tiene una producción de 40,000 barriles de petróleo, 20 mil barriles menos al promedio indicado. Datos proporcionados, por el área de estadística e información del Complejo Petroquímico Cangrejera, Coatzacoalcos, Veracruz, 7 de diciembre, 2011. Ante la falta de caminos terrestres, PEMEX, tuvo que implementar la transportación de personal por vía aérea, para reactivar la producción, incrementando así los costos de operación y consecuentemente el incremento en el precio del barril de petróleo.

El robo de equipo se hizo presente en los diversos campos de perforación de Pemex y pozo escuela, desvalorizando el capital de la zona y el atraso de las actividades extractivas, “Los presupuestos, llevan tiempo en ser autorizados por PEMEX, área central y hacer efectivo las pólizas de seguros”, a lo anterior se suman los gastos en la rehabilitación de caminos inundados y condicionamiento de nuevos accesos a los campos (nuevo equipo, tiempo extra y maquinaria de reemplazo). Observar fotografías, 7 y 8.

El personal de confianza, sindicalizado, transitorio y de compañía quedó inactivo en las instalaciones afectadas, para algunos trabajadores, la consecuencia inmediata fue el rezago en las nóminas de pago y la suspensión de trabajos a contratistas, en este rubro cabe hacer mención que no solo se vio afectado PEMEX: Petroquímica Básica, también empresas nacionales e internacionales que llevan a cabo contratos con la paraestatal. Otra consecuencia fue el ausentismo del personal debido al cierre de carreteras (1500 empleados). Dato otorgado por el Departamento de personal del complejo petroquímico Pajaritos, Coatzacoalcos, Veracruz, 12 de diciembre, 2010. Los puertos comerciales de Dos Bocas, Tabasco y Coatzacoalcos, Veracruz, ligados directamente con la movilización de petróleo y sus derivados, se cerraron a la navegación. Se dejó de transportar alrededor de 66 mil barriles de petróleo (Área de superintendencia, central marítima Dos Bocas, tabasco.)

Fotografía No. 8

Perdidas Economicas Y Comerciales Del Grupo Maseca

La presente información fue proporcionada por los jefes de departamento de Atención a clientes y Recursos Humanos del grupo MASECA, planta ubicada en Chinameca, al sur del estado de Veracruz, e se mencionan los daños que sufrió la empresa mexicana: Las ventas de la planta MASECA, son en promedio mensual 14, 500 toneladas, la venta mensual promedio al estado de Tabasco es de 3, 700 toneladas, días perdidos en venta, 14, el 26% de la producción total de la empresa, se dejó de producir, por la contingencia local. El grupo MINSA sufrió el desabasto de las materias primas que necesita para la producción local. Las inundaciones provocaron que algunos transportistas que prestan sus servicios al Grupo Maseca tuvieran que renegociar los sobrepagos. Un camión de carga sencillo, de tres ejes, consumió alrededor de 150 litros más de diesel, por el cambio de rutas. El Grupo MINSA registro (2) robos de unidades de transporte y unidades a fondo perdido (1) de sus prestadores de servicio. Otras consecuencias fueron las merma en las reservas de alimentos y granos existentes, así como la necesidad de reponer existencias (reservas) de la producción, así como la disminución en la demanda de alimento para ganado que el grupo MASECA vende a los ganaderos de la zona, por la pérdida de cabezas de ganado

Fotografía No.9

Fotografía No. 10

PARTICIPACION GUBERNAMENTAL Y PÉRDIDAS DEL SECTOR GANADERO

Los ganaderos de la región que accedieron a las entrevistas señalan que el apoyo gubernamental solo radicó en acciones de corto plazo, por ejemplo: La entrega de despensas, agua, y toneladas de cal, son transitorios así como las consultas médicas, que solo se otorgan durante el periodo de contingencia, las micosis, y alergias son enfermedades que llevan más tiempo en ser controladas. Las acciones gubernamentales más comunes en zonas ganaderas son las Instrucciones para aplicar el cloro en pozos de agua, el problema radica en que los focos de contaminación se expanden con el descenso del nivel del agua. Los ganaderos entrevistados señalan que no cuentan con seguros gubernamentales para cubrir contingencias, el problema no solo consiste en las cabezas de ganado perdido sino en la disminución de agua en la zona de pantanos, lleva cerca de un mes estar es su estado normal.

No hay lugar para que el ganado que se salvo pueda pastar. Por otro lado los compradores de ganado, tardan en recuperar la confianza en la carne ofertada. La demanda nacional se trasladó hacia el norte del país y mercados internacionales. A esto se le une un problema dual: Los pantanos que no son fumigados traen enfermedades al ganado al igual que el exceso de químicos durante las fumigaciones. Los costos del servicio médico zootecnista y medicamentos recetados se vieron incrementados. Como ejercicio final del presente artículo señalo parte del informe generado por las autoridades estatales y federales para observar realidades e información distintas a un mismo fenómeno natural, genere usted las conclusiones pertinentes al caso de estudio: “En apoyo a esas comunidades participan 79 elementos de la Armada de México, cinco vehículos, cuatro embarcaciones menores y un helicóptero, habiendo entregado desde la puesta en marcha del Plan Marina un total de 2 mil 334 despensas, 7 mil 175 litros de agua potable, 288 litros de cloro, 587 cobertores y 200 colchonetas, así como diversos víveres, además de la evacuación de 194 personas. se contabiliza un total de 151 comunidades dañadas por las fuertes lluvias de los últimos días. En cuanto a daños a la infraestructura rural del estado, el Sistema Estatal de Protección Civil reporta 24 mil 225 hectáreas de producción agropecuaria dañadas, de las cuales 5 mil 830 corresponden al Plan Chontalpa, 10 mil hectáreas de pastizales, lo que afecta a 44 mil cabezas de ganado de 876 productores. También se dañaron tres tramos de carretera y siete puentes derrumbados, así como 235 escuelas afectadas, además de iglesias y un número indeterminado de viviendas dañadas. En la agricultura se dañaron 1650 hectáreas de caña, arroz y maíz en la cual se estima 10 millones de pesos pérdidas para los productores”.

CONCLUSIONES GENERALES

La reactivación de la economía regional tardará meses en volver a la normalidad, los productos de la región presentan una tendencia alcista en los precios derivados por escases, prácticas especulativas y de acaparadores, así como el incremento en el costo de transportación y precios del petróleo. El presente estudio nos demostró que las consecuencias de los desastres naturales no se quedan en un ámbito local trascienden a instancias nacionales incluso más allá de nuestras fronteras, lamentablemente el estudio también nos muestra que los gobiernos y ciudadanos aun no estamos preparados para responder ante un fenómeno de alto impacto, otro punto que se deja entrever en este estudio de campo es la mala y poca infraestructura en las autopistas, carreteras y puentes nacionales los cuales aún no cuentan con mínimas normas de calidad, en sus diseños y materiales, la prueba está en el derrumbe del puente Tonalá entre los límites del estado de Veracruz y Tabasco, meses antes de las inundaciones, no es posible contar con sólo con una vía alterna federal cuando hablamos de un país inmerso en procesos de comercio internacional y globalización. Esto nos deja una enseñanza hay que estar preparados ante las contingencias ambientales, lo que antes era una eventualidad para el país se está convirtiendo en una constante de carácter mundial, con mayores niveles de destrucción. Antes de concluir el presente artículo quiero agradecer a la población entrevistada del sureste del país y quien tan amablemente proporcionó la información presentada y en

especial a los trabajadores de PEMEX Petroquímica Básica y exploración, por el apoyo en la obtención del material fotográfico.

ESTUDIOS DEL DESEMPEÑO PROFESIONAL DE LOS EGRESADOS DE LA CARRERA DE ADMINISTRACIÓN DE LA FECA UJED EN UNA DÉCADA DE ESTUDIOS DE EGRESADOS 1996-2006

María Brenda González Herrera, Universidad Juárez del Estado de Durango
Ernesto Geovani Figueroa González, Universidad Juárez del Estado de Durango
José Alberto Bustamante Curiel, Universidad Juárez del Estado de Durango

RESUMEN

La práctica profesional está sujeta a una amplitud de variaciones en función de los cambios científicos y tecnológicos, de las demandas de los sectores de la producción, de las empresas que la desarrollan y de los cambios axiológicos y sociales relacionados con la profesión. Los estudios de seguimiento de la población graduada parten del supuesto de que la actualización de los planes de estudio universitarios no puede hacerse al margen de la realidad social y económica de cada momento histórico, ni del desarrollo interno y contextual de cada país. Debido a que la sociedad y la economía son dinámicas, las universidades tienen que desarrollar metodologías para entender e interpretar el contexto laboral, social y económico para que, en forma periódica, hagan los cambios pertinentes a sus planes de estudio y programas de educación continúa. Es importante que las instituciones educativas formadoras de licenciados en administración generen competencias para saber cómo utilizar la capacidad organizativa y creativa de los trabajadores para atender los objetivos de la organización así como los problemas de la complejidad de su sociedad.

PALABRAS CLAVE: Administración educativa, desempeño profesional, estudios de egresados.

PROFESSIONAL PERFORMANCE STUDY OF GRADUATES OF THE MANAGEMENT CARRER IN FECA UJED A DECADE OF GRADUATE STUDIES 1996-2006

ABSTRACT

The practice is subject to a range of variations depending on the scientific and technological changes, the demands of production sectors, companies that develop and axiological and social changes related to the profession. Follow-up studies of the population graduated assume that the updating of college curricula can not be done outside the social and economic reality of each moment in history, or internal development and context of each country. Because society and the economy are dynamic, universities must develop methodologies to understand and interpret the work context, social and economic order that, from time to time, make the appropriate changes to their curricula and continuing education programs. It is important that educational institutions graduates forming generate management skills for how to use organizational and creative ability of workers to meet the objectives of the organization and the problems of the complexity of their society.

KEY WORDS: Educational administration, professional performance, studies of graduates.

INTRODUCCIÓN

Existe un vínculo entre el grado de desarrollo del conocimiento, las tecnologías asociadas a ese desarrollo y las demandas e intereses sociales prevalecientes, por lo que el perfil de la persona que egresa de un plan de estudios queda determinado por estos factores, como se verá a continuación. El perfil del egresado se conforma de los conocimientos, habilidades, actitudes y valores necesarios para el adecuado desempeño profesional; esto es, de todos los requisitos cognoscitivos, actitudes y éticos para que haya un apropiado desempeño en relación con las tareas, funciones, actividades y acciones que debe realizar el graduado en un momento histórico particular. El perfil del egresado tiene dos componentes; el perfil profesional y el perfil académico. Por medio del perfil profesional se proporcionan al estudiantado los conocimientos, capacidades, habilidades y actitudes necesarios para un satisfactorio desempeño práctico. A través del perfil académico se apoya una formación en la dimensión ética, social y política, con el fin de que el estudiantado incremente su conciencia crítica y consolide una actitud socialmente responsable.

Esta investigación se presenta organizada como sigue. En la sección de revisión literaria encontraremos argumentos que sustentan los estudios de egresados, su utilidad en cuanto a la aplicación para la mejora de planes de estudio y el funcionamiento de las instituciones de educación superior y su objetivo en el plano social en el cual se establecen, posteriormente se presenta la metodología utilizada, en donde se especifica el análisis transversal descriptivo que se realizó a través del estudio del seguimiento de los egresados de la Facultad de Economía, Contaduría y Administración de la Universidad Juárez del Estado de Durango utilizando el cuestionario planteado por la Asociación Nacional de Universidades e Instituciones de Educación Superior y la comparativa en diez años de aplicar el instrumento, seguidamente se presentan los resultados del estudio y al final se concluye con las observaciones generales, las limitaciones y se muestran futuras líneas de investigación.

REVISIÓN DE LITERATURA

Dado que en la era de la información el concepto que viene permeando a la administración es el de la complejidad donde se maneja tópicos sobre como el administrador actúa en un ambiente inestable, en constante modificación y turbulento (Axelrod, Cohen, 2000; Agostinho, 2003), es importante que las instituciones educativas formadoras de licenciados en administración conozcan cuales son los nuevos desafíos del administrador y los formen en el saber cómo utilizar la capacidad organizativa y creativa de los trabajadores para atender los objetivos de la organización, en la alta complejidad de las múltiples relaciones en una sociedad globalizada y en los nuevos abordajes administrativos que consigan responder a los problemas de la complejidad del mundo actual. Para ello es necesario que las instituciones educativas formadoras de licenciados en administración conozcan el desempeño profesional de sus egresados. Glazman (2001), establece que los programas de docencia se manifiestan en tres niveles: el perfil del egresado, el plan de estudios y los procesos educativos. Todos estos aspectos inciden en el cumplimiento de las condiciones para que la educación superior sea de calidad, pertinente y equitativa.

Por perfil del egresado se entiende la formación general que ofrecen las instituciones de educación superior. Se sustenta en una propuesta curricular que refleja los fines y principios de la universidad y tiene que ver con el desempeño que se espera en la práctica de la disciplina y en el ejercicio profesional, por esa razón, representa la síntesis de los resultados formativos más importantes de la institución educativa. Está constituido por las actitudes, valores, actividades, procedimientos, características, funciones y papeles por la práctica profesional y social. En términos generales, el perfil del egresado es una representación del sujeto que las instituciones de educación superior buscan formar. Es el resultado de la forma en que dichas instituciones conciben los ámbitos sociales, profesional y académico y constituye una importante fuente para formular el plan de estudios, ya que define los marcos filosófico, educativo y cultural de la formación. El perfil debe, por lo tanto, proveer que el egresado al adquirir los conocimientos y habilidades en las prácticas de determinadas áreas, cuente con los elementos que le permitan resolver los distintos problemas de un campo específico de actividad. En México cerca de 11 mil 500 recién egresados de licenciatura, 40 por ciento del total de quienes terminaron su carrera en el 2001, no

encontraron trabajo, revela el Centro Nacional de Evaluación para la Educación Superior (Ceneval). En su Encuesta Pública del Salario de los Profesionistas Recién Egresados señala que dentro del 60 por ciento restante, que sí encontraron empleo unos 17 mil 200 jóvenes profesionistas, 29 por ciento lo hacen en una actividad ajena a su formación, 32 por ciento tiene salarios mensuales de entre 2 mil y 5 mil pesos, 29 por ciento gana por abajo de 2 mil pesos mensuales y sólo 10 por ciento es decir, mil 720 egresados gana más de 7 mil pesos. Por carreras, son los médicos y los ingenieros químicos, recientemente graduados, los que encabezan la lista de profesionistas mal pagados, con menos de 2 mil pesos.

Pero peor les va a los farmacéuticos: 70 por ciento de ellos no encuentra trabajo. En el caso de los abogados, el Ceneval apunta que encabezan la lista de entre las profesiones que tienen un empleo, en 92 por ciento de los casos, con salarios entre los 2 mil y por arriba de los 7 mil pesos mensuales. El estudio lo realizó el centro entre 28 mil 666 jóvenes de 270 universidades públicas y privadas en el año 2001 y se aplicó a jóvenes que presentaron el Examen General de Egreso de la Licenciatura (EGEL), que es considerado como una opción de titulación o de certificación de estudios de calidad en la mayoría de universidades mexicanas, y solamente en 25 opciones o especialidades profesionales, tales como la Administración, Contaduría, Veterinaria, Farmacéutica, Psicología, Agronomía, Enfermería, Computación, Odontología, Turismo y Pedagogía. Por ello, aclara el Ceneval, no se pueden hacer generalizaciones a partir de las cifras anteriores, debido a que no se trata de muestras estadísticamente válidas, pero que sí reflejan un desajuste entre la oferta y la demanda de profesionales. Es evidente que las instituciones educativas, en especial la educación superior, necesitan modernizar su estructura académica, la pertinencia y flexibilidad de sus planes y programas de estudio, así como promover el seguimiento de sus egresados y vinculación con el entorno social y económico. Se podrán asegurar que el sistema escolar contribuya a que los egresados que se inserten en el mercado de trabajo perciban sueldos acordes con su formación profesional y resolverse así los desajustes que enfrentan nuestros jóvenes y la sociedad en su conjunto. (Martínez, 2003).

METODOLOGÍA

Los estudios del desempeño profesional de los egresados son de tipo cuantitativo con un alcance de la investigación descriptiva de campo no experimental transversal ya que las muestras se recopilaron en un momento dado. Para obtener la información se ha aplicado el cuestionario sugerido por la Asociación Nacional de Universidades e Instituciones de Educación Superior. Se conservaron las dimensiones y variables pero únicamente para la investigación se seleccionan algunas variables que tienen relación con el desempeño profesional. Se utilizó el paquete estadístico para ciencias sociales SPSS para el procesamiento de la información. La población objeto de estudio se determinó en base a los bloques generacionales determinados por el departamento de Planeación de la Universidad, quedando recabados en bases de datos de: del año 1996 al 2000, del 2001 al 2003 y del 2005 al 2006. La generación del año 2004 no se estudia debido a la baja representatividad de la muestra. Se realizó un muestreo aleatorio simple, se eligieron individuos de la población de estudio, de manera que todos tuvieron la misma probabilidad de aparecer, hasta alcanzar el tamaño de muestra deseado. Se realizó partiendo de listas de la población, y eligiendo individuos aleatoriamente. Para la determinación del tamaño de muestra se considerará la fórmula para poblaciones finitas, de acuerdo como enseguida se presenta:

$$n = \frac{NZ_{\alpha}^2 pq}{d^2(N-1) + Z_{\alpha}^2 pq}, \quad \text{donde:}$$

N = Tamaño de la población

Z_{α} = Representa el nivel de confianza, con $Z_{\alpha} = 1.96$

pq = Proporción. Por lo que para una proporción máxima $p = 0.05$ y
 $q = 1 - p = 1 - 0.05 = 0.95$

d = Error muestral máximo.

$d = 0.04$

n = Tamaño de muestra.

Sustituyendo los valores en la fórmula para la determinación del tamaño de muestra tenemos en cada periodo lo siguiente:

Tabla 1: Muestra de los egresados por períodos

periodo	tamaño de muestra
1996 - 2000	57
2001 - 2003	35
2005 - 2006	69

En esta tabla se describe la muestra de jóvenes egresados de la carrera de Administración de la Facultad de Economía, Contaduría y Administración de la Universidad Juárez del Estado de Durango.

RESULTADOS

Aplicando la metodología descrita se obtiene que Según en la investigación la mayor parte de los egresados de la licenciatura en administración de la FECA de la UJED son de sexo femenino sin embargo no hay una diferencia significativa con los egresados de sexo masculino, por lo que se concluye que tanto hombres como mujeres tienen aspiraciones similares en cuanto al estudio de la licenciatura en administración, además todos concluyen sus estudios teniendo entre 23 y 36 años de edad, sin embargo las edades predominantes al graduarse son de 25 o 26 años, por lo tanto puede decirse que la mayoría de las personas que concluyen sus estudios de nivel superior son aquellos que tuvieron una formación académica continua. Más del 80% de los egresados de la Licenciatura en Administración de Empresas de la FECA se encuentran trabajando, sin embargo la mayoría de ellos son empleados, lo que refleja la falta de iniciativa y creatividad, así como de recursos para generar nuevas empresas.

En los periodos de 1996-2000 y 2001-2003 la mayor parte de los licenciados en administración ocupan puestos como gerente o director de área, jefe de oficina, sección o área y supervisor, es decir se dedican a actividades realmente relacionadas con su carrera, sin embargo en el periodo comprendido de 2005 a 2006 hubo un incremento muy significativo a ocupar puestos de asistentes, auxiliares o ayudantes, es decir a actividades que no requieren de estudios superiores y cuya remuneración es muy baja. En general respecto a la descripción del desempeño profesional la mayoría de los egresados de la licenciatura en administración de la FECA va de satisfactorio a muy satisfactorio ya que la mayoría de ellos alcanzan éstos grados en aspectos como en la realización de ideas propias y reconocimiento profesional alcanzado. Los Licenciados en Administración de Empresas entrevistados se encuentran satisfechos o muy satisfechos con la puesta en práctica de los conocimientos adquiridos durante la licenciatura. Los egresados de la carrera en Administración de Empresas de la FECA pueden también coordinar equipos de trabajo multidisciplinarios, ya que se encuentran muy satisfechos en éste aspecto, lo cual refleja capacidad de mando y dirección. Las personas entrevistadas están muy o totalmente satisfechas con la posibilidad de responder a problemas de trabajo, es decir tienen buena capacidad de razonamiento y de aplicación de conocimientos adquiridos durante sus estudios.

CONCLUSIONES

Aunque los resultados en la encuesta muestran buenos resultados en relación a los conocimientos adquiridos y su aplicación en el campo laboral de los egresados, también cabe resaltar que las respuestas están encaminadas al puesto que actualmente desempeñan, sin embargo se nota un decremento en el nivel jerárquico del puesto alcanzado y eso no define si en un puesto superior el desempeño sería aún satisfactorio. Por otro lado los datos obtenidos durante la investigación también reflejan que los egresados de la licenciatura en administración de empresas enfrentan mucha exigencia sobre conocimientos computacionales, es decir conocimientos sobre software especializados, aplicación del conocimiento (diagnostico, planeación, evaluación), encontrar soluciones, búsqueda de información pertinente y actualizada (áreas que obtuvieron las calificaciones no malas pero más bajas al resto en relación a satisfacción en su desempeño) y habilidades administrativas por lo que se concluye que este trabajo de investigación hace notar las áreas a mejorar en los programas educativos y hacer de estas áreas de competencia para los profesionistas. Los licenciados en administración según sus expresiones no requieren conocimientos especializados ni lengua extranjera alguna, sin embargo se sabe que actualmente es una competencia que permite ser competitivo a nivel global. Una limitación expuesta es la falta de información para correlacionar si los empleadores en donde se desempeñan los egresados están de acuerdo con dichos resultados, por lo tanto una investigación continuación de estos estudios pudiera correlacionar el estado actual de los egresados con las necesidades actuales de los empleadores y saber si la Institución como tal contribuye de buena manera al proceso social holístico.

ADMINISTRAR LA UNIVERSIDAD VIRTUAL, UNA EXPERIENCIA REAL

Yannet Liliana Mesa Medina, Fundación Universitaria Católica del Norte
Nelson Darío Roldán López, Fundación Universitaria Católica del Norte

RESUMEN

La Fundación Universitaria Católica del Norte es una universidad virtual; se caracteriza por su modelo de educación virtual que obviamente impacta sus funciones sustantivas de docencia, extensión, investigación, internacionalización/proyección social. Esta Institución es de carácter privada, reconocida por el Estado colombiano mediante Resolución 1761 de 1997 aprobada por el Ministerio de Educación Nacional, y perteneciente a la Diócesis de Santa Rosa de Osos, en el norte del Departamento de Antioquia. La virtualidad como impronta institucional, y ratificada por la persistencia de sus directivas, a lo largo de casi 15 años de vida institucional, demandó necesariamente ajustar la gestión administrativa-financiera para garantizar la sostenibilidad, punto de equilibrio y cumplimiento de la misión fundacional: llevar educación integral a las casas y contextos donde viven y laboran los estudiantes, con mediación de tecnologías de información y comunicación, TIC. Además, le correspondió adaptarse, sin desbordar o desconocer, el marco normativo educativo colombiano, y empresarial, a pesar de los naturales vacíos aún persistentes en esas materias. En suma, se está frente a una innovación administrativa-educativa. Socializar la experiencia de gestión administrativa-financiera de esta institución educativa virtual, como una forma de transferencia de conocimiento es lo que anima esta ponencia.

PALABRAS CLAVE: educación virtual, empresa virtual, tecnologías de información y comunicación (TIC), teletrabajo.

MANAGING THE VIRTUAL UNIVERSITY, A REAL EXPERIENCE

ABSTRACT

The North Catholic University Foundation is a virtual university, characterized by its virtual education model which obviously impacts its functions of teaching, extension, research, internationalization / outreach. This institution is private in nature, recognized by the Colombian government in 1997 by Resolution 1761 adopted by the Ministry of Education, and belongs to the Diocese of Santa Rosa de Osos, in the northern department of Antioquia. E-learning as an institutional mark, and ratified by the persistence of its policies, has over 15 years of institutional life, necessarily demands administrative and financial management to ensure sustainability, a point of balance and fulfilling the founding mission: to bring comprehensive education and contexts to houses where students live and work, with the mediation of information and communication technologies, ICT. In addition, it adapted, without overlapping or ignoring the Colombian education policy framework and business despite the natural gaps that still persist in these areas. In short, they are facing administrative and educational innovation. Socializing the administrative experience and financial management of the virtual school as a way of transferring knowledge is what motivates this paper.

KEYWORDS: E-learning, virtual company, information and communication technologies (TIC), teleworking.

INTRODUCCIÓN

Contexto: La Empresa Educativa Virtual

Cuando finalizaba la última década del siglo XX, los fundadores y directivos de la naciente Fundación Universitaria Católica del Norte tomaron la decisión de crear la primera institución de educación superior virtual de Colombia, ellos también definieron tácitamente el reto de administrar de otra forma la empresa educativa virtual. En efecto, 15 años después de esa decisión, la experiencia de administrar dicha organización virtual, coincide con las reflexiones de Rojas (2006, p.82) —citado por Calderas, González de Celis, de Barcia & Chacón (2010, p.129)— en el sentido de enfrentar una nueva forma de gerencia caracterizada por la comprensión y respuesta de los cambios sociales y humanos.

Todo ello, caracterizado por un mundo embebido dentro del desarrollo veloz de las tecnologías de información y comunicación y telecomunicaciones. La Fundación Universitaria Católica del Norte es una institución de educación superior colombiana, perteneciente a la Diócesis de Santa Rosa de Osos en el Norte del Departamento de Antioquia. Ella es de carácter privado, aprobada y reconocida por el Ministerio de Educación Nacional, MEN. Esta Institución se caracteriza por el modelo de educación virtual apoyado naturalmente en tecnologías de información y comunicación, TIC, que adquieren sentido pedagógico-didáctico y comunicativo-creativo en el proceso de enseñanza-aprendizaje. En consecuencia, define la metodología virtual como la creación de ambientes de aprendizajes, mediante TIC convenidas, para generación de conocimientos pertinentes que se aplican, impactan y transforman los contextos de interés de estudiantes, docentes y administrativos. Es un modelo abierto, flexible y pertinente centrado en las necesidades identificadas y ritmos de aprendizaje de quien aprende, y que permite procesos intencionados de interacción, colaboración y cooperación en la adquisición de aprendizajes y conocimientos. En adición a lo anterior, el modelo de educación virtual de esta Institución responde naturalmente a las funciones sustantivas de docencia, investigación, extensión e internacionalización, así como a la demanda de la sociedad y comunidad a la que se debe.

En tres lustros de vida institucional hay presencia de estudiantes y docentes en 91 municipios del Departamento de Antioquia, en 27 Departamentos de Colombia, y en 17 países del mundo (Angola, Argentina, Brasil, Cabo Verde, China, Ecuador, Egipto, España, Estados Unidos, Guatemala, Israel, Italia, México, Perú, Reino Unido, República Dominicana y Venezuela). Con base en lo anterior, desde la experiencia de la Fundación Universitaria Católica del Norte, la empresa educativa virtual es una respuesta con sentido humano ante la demanda y necesidad de formación de personas en habilidades y destrezas requeridas por el mundo globalizado para la inserción en la denominada nueva economía que según Epper (2004, p.13) es impulsada por la tecnología, las telecomunicaciones y el avance de la ciencia. Es una puesta en escena de personas competentes que creativamente dimensionan, entienden y gestionan formas, estructuras organizativas flexibles y horizontales, que se apoyan necesariamente en las posibilidades edu-comunicativas y de gestión de una infraestructura tecnológica personalizada que dé respuesta a las necesidades de la organización educativa virtual. En concreto, el modelo educación virtual como marca institucional condiciona transversalmente la gestión administrativa en cuanto a responder efectivamente al reto de garantizar la sostenibilidad y punto de equilibrio (Jiménez Múnera & Mesa Medina, 2012) y cumplimiento de la misión fundacional, con base en procesos institucionalizados, talento humano experto, y el alcance de la tecnología utilizada.

Este enfoque coincide con Calderas, González de Celis, de Barcia & Chacón (2010, p.123) cuando aducen que la empresa virtual demanda cambios de importancia en el ámbito organizacional que reclaman ser realizados de forma sistemática; y además, caracterizada y centrada en el cliente, desde la definición de valor y la tecnología integradora (Rojas, 2006, p.136) que hace posible dicha empresa virtual.

REVISIÓN DE LITERATURA

La empresa educativa virtual, y la gestión administrativa que ella demanda, es aún tema inexplorado e investigado, y por tanto, la inquietud sobre cómo administrar aquello que no se ve sigue siendo abierta a nuevas respuestas, posibilidades y experiencias. Es ideal que las propuestas investigativas articulen diferentes tipos y enfoques investigativos, preferencialmente niveles empíricos y la sistematización de experiencias en esa materia. El primero involucra a los investigadores como observadores directos de los fenómenos que ocurren dentro de una empresa educativa virtual; y el segundo, es la oportunidad de creación de teorías y explicaciones argumentadas desde las prácticas mismas.

De otra parte, persiste la tendencia a administrar lo virtual del mismo tenor que la organización física, de lo cual se infiere la urgente necesidad de apertura y cambio cultural de rectores, administradores y gerentes, para confiar, emprender y aprender a administrar también de forma ubicua con base en las posibilidades de las TIC. Todo lo antes indicado es una inferencia de los autores, luego de la literatura revisada. No obstante, en esa exploración de literatura se destaca la reflexión de Calderas, González de Celis, de Barcia & Chacón (2010) al referirse a la empresa virtual en un entorno empresarial denominada nueva economía, que demanda estructuras organizativas más flexibles e inteligentes. También, el encuadre de la educación apoyada en TIC expresada por Epper (2004). De Luis Rodolfo Rojas (2006), Ferrer (2010) y Jiménez Múnera (2005) aportan cada uno los retos y desafíos de administrar, y administrar bien, en la denominada era de la información y del conocimiento. Adicional a lo anterior, hicieron parte de las fuentes (primarias) de consulta las personas que han vivido la experiencia de administrar y gestionar la empresa educativa virtual como es el caso de la Fundación Universitaria Católica del Norte, para lo cual fueron entrevistadas.

METODOLOGÍA

Esta reflexión articuló las conclusiones y reflexiones derivadas de la literatura revisada, con la experiencia en educación virtual, y en consecuencia de administración de la empresa educativa virtual, de la Fundación Universitaria Católica del Norte. Para ello, las personas de esa Institución fueron entrevistadas, y exhortadas a documentar las prácticas como contribución a la gestión del conocimiento. Dada esta metodología libre, el resultado o producto es un resumen de la sistematización de la experiencia en materia de administración y gestión de la empresa educativa virtual como es la Fundación Universitaria Católica del Norte, que dé respuestas aproximadas a cómo administrar lo que no se ve.

RESULTADOS

Administrar Lo Que No Se Ve

La labor virtual no permite ver físicamente reunidos en un sitio a quienes la ejercen, ni tampoco medir el tiempo de su presencia en un sitio de trabajo específico, según escribió Jairo Jiménez Múnera (2005, p.111) quien para la fecha ejercía como Director Administrativo de la Fundación Universitaria Católica del Norte. Esta aseveración ratifica el reto de administrar una organización de educación superior descentralizada en cada estación de trabajo —computadores, dispositivos móviles— de directivos, personal administrativo y docentes, quienes están en lugares geográficos y contextos diferentes, pero conectados mediante las tecnologías utilizadas y convenidas. Y agrega Jiménez Múnera que las características de esta Institución motivan, por parte de cualquier humano, una serie de preguntas relacionadas con las implicaciones del proceso administrativo aplicado a una empresa educativa virtual; esas inquietudes y respuestas aún parciales, desde la experiencia de esta Institución se presentan a continuación. Una primera inquietud planteada se refiere justamente a ¿cómo se mide el tiempo trabajado en lo virtual?, y desde el análisis realizado de los autores y experiencia en administrar la organización educativa virtual, se pueden colegir las siguientes posibilidades de respuestas: a) La naturaleza virtual de

la Fundación Universitaria Católica del Norte permite que todos sus docentes sean teletrabajadores, al igual que un 70 por ciento de los empleados con funciones administrativas.

El concepto de teletrabajo es una modalidad laboral realizada por una persona desde lugares distintos y distantes de la empresa y apoyado en tecnologías de información y comunicación convenidas. b) No es por cumplimiento de horarios, sino por los resultados validados de los proyectos acometidos y contenidos en un plan de acción matriculado ante la correspondiente dirección de planeación y articulado necesariamente con el plan de desarrollo. c) Para el caso de esta Institución, se adopta como parte de la cultura organizacional el principio de flexibilidad laboral de los empleados, lo cual demanda trabajo en equipo y colaboración, al tiempo. d) Se sensibiliza y capacita al empleado y docente en el manejo efectivo del tiempo, cultura de la comunicación, apropiación y uso de las utilidades, servicios y herramientas tecnológicas dotadas por la Institución.

Una segunda inquietud trata de resolver los ¿cómo supervisar un empleado que no tiene horario fijo, ni fecha en el calendario?, y las posibles respuestas parciales son: a) Se regula e institucionaliza una intranet como punto de encuentro y disposición de la actividad institucional, de los planes de acción, informes, avances, resultados de los proyectos que desarrollan cada área. b) Se realiza trimestralmente revisión y seguimiento de los avances y logros de los proyectos contenidos en los planes de acción de acuerdo con las metas fijadas. c) Se promueven de forma permanente procesos de comunicación horizontal entre dependencias y personas para el trabajo colaborativo y cooperativo. d) Evaluación de desempeño y plan de mejoramiento de mejoramiento. e) Las Direcciones de Pastoral y Bienestar Institucional y Gestión Humana desarrollan programas y estrategias de bienestar para el acompañamiento tendientes a garantizar la satisfacción y calidad de vida del empleado (teletrabajadores, docentes, administrativos). De acuerdo con lo anterior, es necesario indicar que la Institución adopta y adapta el proceso administrativo clásico en sus fases de Planeación, Organización, Ejecución, Coordinación, Control y Evaluación en esta empresa virtual (Jiménez Múnera & Mesa Medina, 2012). La experiencia ha permitido deducir que la administración como ciencia o arte universal tiene unos principios adaptables a cualquier tipo de empresa o institución. En adición a lo anterior, los diferentes modelos de gerencia —Administración Estratégica; Administración por objetivos, entre otros— son adaptables también a una empresa educativa tipo universidad virtual. En consecuencia, es posible demostrar el logro de los objetivos misionales y garantizar la sostenibilidad y crecimiento con cualquiera de dichos modelos sin que diferencie la efectividad de uno u otro.

La fase de Planeación se considera punto clave en la empresa educativa virtual, por cuanto reclama anticiparse y presupuestar la demanda de servicios y productos requeridos por la comunidad universitaria en desarrollo de las funciones sustantivas de docencia, investigación, extensión e internacionalización. Adicional, en esta fase se considera el acatamiento y respeto del marco normativo educativo y empresarial colombiano, sin desbordarlos o desconocerlos, pesar de los naturales vacíos aún existentes en esas materias. En relación con la fase de Organización, es la consecuencia inmediata de la Planeación del servicio educativo virtual y administrativo institucional.

La organización, entonces, se concreta en acciones de matrícula y registro académico, formalización de la contratación docente con la respectiva asignación académica (docencia e investigación); y finalmente, acceso a cursos en plataforma para estudiantes y docentes. Según Múnera Jiménez (2005, p.114) lo organizativo también hace referencia a la utilización de canales de comunicación, fidelidad, eficacia y eficiencia de la infraestructura tecnológica para la gestión educativa y administrativa de la organización educativa virtual, que requiere también cuantificarse de forma preferencial. Las fases de Ejecución, Coordinación, Control y Evaluación en esta empresa virtual se concretan en el celo por articular los desempeños, avances, productos y desarrollos de todas las dependencias de acuerdo con al Plan de Desarrollo, los objetivos estratégicos y las metas propuestas.

Un aspecto central de la administración de la empresa educativa virtual es el cuidado que demanda la gestión de los recursos financieros justamente para garantizar la sostenibilidad y punto de equilibrio (Jiménez Múnera & Mesa Medina, 2012) antes referido. Con razón Jiménez Múnera (2005, p.117) recalca que

Los recursos que permiten desarrollar una empresa educativa virtual son de un volumen muy significativo al comienzo, pues los equipos requeridos y las licencias de software son costosas, sobre todo si se trata de una obra gigantesca en sus alcances. Sobre esta base, la Fundación Universitaria Católica del Norte se propuso como visión y misión ser líder en la formación virtual, llevar y mantener ocho programas de educación superior de pregrado, una especialización y el bachillerato virtual. Ello constituyó (incluso todavía) un reto enorme que económicamente no podría ser costeadado por la comunidad universitaria, ni por la Diócesis de Santa Rosa de Osos como entidad pionera y mecenas del proyecto.

¿Quién, entonces, podría patrocinar tan especial y benigna idea de una universidad virtual? Quedaban dos opciones: el Estado y la empresa privada. En un principio, el Estado colombiano apoyó la idea mediante una donación, pero fue la empresa privada la que continuó apoyando esta hazaña, y para que la obra esté en pie hoy en día, han sido fundamentales los auxilios y donaciones de varias instituciones.

No obstante la sostenibilidad no está garantizada plenamente aun cuando se cuente con una infraestructura tecnológica confiable, talento humano experto, y un portafolio de productos y servicios educativos virtuales, porque la dinámica natural y preocupación de la educación superior en cualquier país es garantizar la permanencia y fidelización de estudiantes en los programas profesionales por ellos escogidos. Adicional, porque en la educación virtual ronda también el fantasma de la deserción. Así las cosas, se requieren decisiones y estrategias que aporten a enriquecer y actualizar el portafolio de servicios y productos virtuales de calidad. Así las cosas, desde la experiencia de esta Institución se abordan las siguientes estrategias y líneas de trabajo: a) Fortalecimiento de la extensión universitaria mediante convenios y alianzas con otras universidades o empresas. b) Énfasis en la calidad y mejoramiento continuo en la gestión institucional, desempeño del personal administrativo y docente, calidad de ambientes de aprendizajes virtuales. c) Alianzas y programas con el Estado para la formación y capacitación. d) Programas con planes de estudios que contengan áreas y cursos comunes. e) Programas de formación y capacitación a la medida y necesidades de la empresa. f) Investigación aplicada en diferentes líneas derivadas de la educación virtual. g) Diseño y producción de contenidos digitales y ambientes de aprendizajes virtuales para la formación y capacitación de diferentes públicos — en este aparte, se considera el diferencial de los materiales educativos para fines educativos y formativos y aquellos por demanda comercial (*E-learning*)—. h) Matrículas de estudiantes trimestrales o de forma permanente. i) Estrategias de mercadeo educativo mediante diversos medios.

Perfil Del Talento Humano Para Administrar La Empresa Educativa Virtual

El perfil, habilidades y destrezas ideales del administrador y demás talento humano que demanda hoy una universidad virtual, comienza con disponer de personas con mentalidad abierta (actitud) para laborar desde cualquier lugar del mundo con base en las TIC convenidas (computador y dispositivos móviles con acceso a internet), más allá de la oficina de ladrillos y cemento. Es decir, personas capaces de laborar también en la opción del teletrabajo, que aporten a la consecución los objetivos institucionales (Calderas, González de Celis, de Barcia & Chacón, 2010, p.138).

En la estructura administrativa se requieren profesionales que conozcan muy bien el funcionamiento de las empresas educativas; y preferencialmente con la experiencia debida como educadores en varios cargos y niveles de formación (Jiménez Múnera & Mesa Medina, 2012). Asimismo, se requieren

administradores con capacidades, aptitudes y destrezas en lo relacionado con los sistemas informáticos, apropiación y uso de TIC, tanto empresarialmente como en las modalidades de formación educativa. Por tanto, el talento humano requerido es un equipo interdisciplinario de personas que desde sus disciplinas, saberes y responsabilidades agregan valor y construyen diariamente la verdadera universidad virtual. Se requiere, entonces, una nómina conformada por ingenieros de sistemas, administradores de empresas, pedagogos, licenciados en educación, comunicadores sociales expertos en TIC, psicólogos, trabajadores sociales, entre otras disciplinas. En suma, talento humano creativo e innovador comprometido y convencido de trabajar con y desde las TIC utilizadas, de forma colaborativa y cooperativa para construir y crecer cada día con la empresa educativa virtual.

De acuerdo con este apartado y de manera general se presenta a continuación las habilidades y destrezas demandadas del perfil del administrador y empleado de la empresa educativa virtual: a) Competencias demostradas en el uso y apropiación de tecnologías de información y comunicación. b) Ser creativo y propositivo para agregar valor al desempeño personal y profesional. c) Trabajar de forma colaborativa y cooperativa con la (s) persona (s) y dependencia (s), o equipo de trabajo asignado. d) Habilidades comunicativas (oral, escritural) demostradas para interactuar de forma rápida, oportuna, eficiente y eficaz. e) Capacidad de liderazgo en planeación, desarrollo y evaluación de proyectos. f) Capacidad para resolver problemas, y toma de decisiones. g) Respeto por la propiedad intelectual, apartado derechos de autor, y promoción a la generación de conocimiento con base en la investigación propiamente dicha. h) Capacidad de laborar en el sitio de trabajo asignado por la Institución o en la modalidad teletrabajo.

CONCLUSIONES

Esta travesía a través de la experiencia administrativa de la organización educativa virtual deja a la comunidad académica e interesados en el tema, un conjunto de reflexiones que la Fundación Universitaria Católica del Norte entrega como transferencia y apropiación social del conocimiento. En tal sentido, se esbozan de manera general esas reflexiones a modo de conclusiones como lecciones aprendidas, retos y desafíos, así:

Lecciones Aprendidas

Esta reflexión sistematizada de administrar la empresa educativa virtual, caso Fundación Universitaria Católica del Norte, deja lecciones aprendidas del siguiente tenor: a) La universidad virtual es más accesible en lo económico, y en lo logístico para el perfil de estudiante joven-adulto. No así la más fácil de financiar como empresa. b) Demanda la adopción de alternativas laborales como el teletrabajo dada la naturaleza de la universidad virtual, como en el caso Fundación Universitaria Católica del Norte que toda la planta de docentes labora bajo esa figura contractual, así como un alto porcentaje de sus empleados administrativos —70 por ciento— o en jornadas y horarios escalonados (dos veces a la semana se desplazan hasta la oficina). c) El modelo educación virtual condiciona transversalmente la gestión administrativa en cuanto a responder efectivamente al reto de garantizar la sostenibilidad y punto de equilibrio de la organización educativa. d)

La infraestructura y dotación tecnológica es costosa y se vuelve obsoleta en muy corto tiempo, razones por las cuales es indispensable decidir un modelo (educativo y administrativo) para invertir en la tecnología que mejor responda a las necesidades identificadas. e) La administración moderna de la empresa educativa virtual no se puede desligar de un mercadeo estratégico centrado en el estudiante y sus necesidades de educación y formación para la vida y a lo largo de la vida. f) La universidad virtual llega hasta donde vive y labora el estudiante en su contexto cercano, por tanto, la metodología evita en algo el desplazamiento y migración hacia los centros urbanos y grandes ciudades donde se concentra la mayor oferta educativa. g) La universidad virtual tiene que focalizarse en su gestión educativa y administrativa que la haga viable y sostenible en el tiempo, por eso, es recomendable tercerizar la tecnología

—plataformas (LMS, CRS), *data center*, servidores, entre otros servicios—. h) La calidad de formación de la universidad virtual es similar a las que ofertan programas y servicios educativos en metodologías presencial y a distancia. i) Es indispensable presupuestar la formación y capacitación permanente del talento humano de la Institución para actualizar o mejorar las habilidades y destrezas (competencias) en tópicos propios de la educación y gestión de la organización educativa virtual. j)

La deserción es el mayor enemigo del desarrollo y sostenimiento de organización educativa virtual. k) El diseño y producción de materiales educativos virtuales difieren en forma, extensión, estrategias metodológicas y didácticas, y técnicas cuando los fines son educativos y formativos, que cuando el objetivo es comercial o respuesta empresarial tipo *e-learning*. l) La premisa de la calidad tiene que ser el objetivo estratégico transversal de la universidad virtual. m) Investigar y aplicar para actualizar e innovar nuevas formas y creación de ambientes de aprendizajes mediados por TIC. n) Los muros y columnas de la universidad virtual son su modelo virtual, los procesos de interacción entre las áreas y comunidad de estudiosos que componen la organización. Todo ello soportado por una infraestructura tecnológica robusta y confiable que permita cumplir cabalmente las funciones sustantivas de docencia, investigación, extensión/proyección social e internacionalización. o) Es menester que los planes de estudio de los programas de educación virtual ofrecidos, contemplen cursos comunes con la exigencia y calidad debida. Y p) La universidad virtual es real; es la universidad del presente y es futuro.

Retos Y Desafíos

El análisis y reflexión antes desarrollado deja a la comunidad de interesados en temas de educación, administración y TIC, los siguientes retos y desafíos: a) Se hace necesario un cambio de cultura y mentalidad en un amplio sector académico y del Estado que considera como única ágora de conocimiento el aula y metodología tradicional basada en la transmisión de información docente-estudiante. En suma, romper el paradigma de más de 2.000 años de enseñanza aprendizaje presencial. b) Una buena administración de la empresa educativa virtual tiene que proponer estrategias innovadoras y exitosas en procura de retener y fidelizar al estudiante y demás talento humano experto en los menesteres de la virtualidad. c) Considerar las enormes posibilidades de la empresa educativa virtual como la universidad de la inclusión y de oportunidades para personas con discapacidad o residentes en lugares donde las tradicionales instituciones no llegan por cuestiones de distancias físicas o porque esos contextos no son rentables para la mayoría de esas instituciones. c) Diseñar programas, metodologías y estrategias retadoras para que la universidad virtual forme integralmente seres humanos que impacten y solucionen problemas en los contextos cercanos donde viven y laboran. d) Dimensionar la universidad virtual como plataforma de formación de seres humanos para la inclusión en la denominada nueva economía caracterizada por las tecnologías y telecomunicaciones de última generación. e) Aún es necesario que la universidad virtual aporte a la alfabetización de los nuevos “analfabetos digitales” de este siglo XXI de acuerdo con las tendencias y convergencias del mundo digital y globalizado.

BIOGRAFÍA

Yannet Liliana Mesa Medina es Administradora de Empresas Públicas Municipales y Regionales (ESAP, Colombia), Administradora de Empresas (Fundación Universitaria Católica del Norte), y Especialista en Gerencia Financiera (CEIPA, Colombia), a 2012 se desempeña como Directora Financiera de la Fundación Universitaria Católica del Norte. Su dirección para contactos y comunicaciones es la Carrera 21 No. 34B-07, Santa Rosa de Osos, Antioquia, Colombia, correo electrónico ylmesam@ucn.edu.co

Nelson Darío Roldán López es Comunicador Social Periodista, Especialista en Pedagogía de la Virtualidad y candidato a Magíster en Educación (convenio Universidad Católica del Norte y Fundación Universitaria Católica del Norte). A 2012 es el Coordinador de Gestión del Conocimiento de la Fundación Universitaria Católica del Norte. Su dirección para contactos y comunicaciones es la Carrera 21 No. 34B-07, Santa Rosa de Osos, Antioquia, Colombia, correo electrónico ndroldan@ucn.edu.co

LA INTERACCIÓN DE FACTORES DEL MODELO DE VIDEOCONFERENCIA Y SU INFLUENCIA EN EL PROCESO DE ENSEÑANZA-APRENDIZAJE

Erika Patricia Alvarez Flores, CESUES

RESUMEN

Dados los nuevos contextos de interacción entre docentes y estudiantes que han emergido en la educación en los últimos años, se han estimulado una serie de nuevos recursos para el aprendizaje, entre ellos la videoconferencia. Esta investigación pretende corroborar la contribución en la calidad del proceso de enseñanza –aprendizaje que tienen los distintos factores estructurales, organizacionales, curriculares y técnicos que intervienen en el proceso de videoconferencia, específicamente en el ámbito de educación superior. El estudio se realizó de noviembre de 2010 a febrero de 2012 en una universidad pública del noroeste de México, con la participación de 73 docentes y 23 estudiantes. El estudio se basa en el diseño descriptivo y cualitativo, utilizando un cuestionario, entrevistas y el método de observación para la recolección de datos. Los resultados obtenidos indican que todos los elementos del ambiente donde se lleva a cabo el proceso de comunicación, no sólo los factores relacionados con la tecnología, intervienen activamente para la calidad de la educación. Si se cuenta con los elementos adecuados es posible lograr resultados más favorables en el proceso enseñanza-aprendizaje.

ABSTRACT

Given the new contexts of interaction between teachers and students that have emerged in education in recent years, observed a number of new learning resources including videoconferencing. This research aims to confirm the contribution that have the different structural, organizational, curricular and technician factors involved in the process of videoconferencing, on the quality of teaching-learning process in the environment of higher education. The study was conducted from November 2010 to February 2012 at a public university in northwestern Mexico, with the participation of 73 teachers and 23 students. The study is based on descriptive and qualitative design, using questionnaire, interviews and observation method for data collection. The results obtained indicate that all elements of the environment where the communication process take place, not only related to technology factors, contributed in the quality of education. If we have the right elements is possible to achieve more favorable results in the teaching-learning process.

INTRODUCCIÓN

La globalización y la revolución de las tecnologías de comunicación han acelerado la transformación de la educación en las últimas dos décadas. Desde que han emergido las nuevas tecnologías de la información y comunicación, éstas han estimulado nuevas oportunidades de educación, aportando nuevos recursos para el aprendizaje de los contenidos, así como nuevos contextos de interacción entre docentes y estudiantes, cambiando con ello la forma en que las instituciones enfocan su desarrollo y evaluación.

La videoconferencia está aportando un enfoque innovador en la mejora de la calidad de la educación y la pone a disposición de un público más amplio. El modelo de videoconferencia involucra una serie de factores que interactúan entre sí, además se debe considerar que los individuos tienen diferentes concepciones de aprendizaje. En los últimos dos años, el Centro de Estudios Superiores del Estado de

Sonora (CESUES) ha proveído en el área docente la oportunidad de utilizar la técnica de videoconferencia para el proceso de enseñanza-aprendizaje. No obstante, el establecimiento del modelo de videoconferencia puede tener diferentes resultados según la interacción de los factores involucrados en él. En este camino tomando como base el modelo de referencia de Lawson and Comber (2010), hacemos una importante distinción de la influencia de cada uno de los distintos factores en el proceso enseñanza-aprendizaje. Para tal propósito, nos enfocamos fundamentalmente en medir el grado de involucramiento de las partes del proceso en la prestación del servicio de videoconferencia y la satisfacción adquirida en el proceso enseñanza-aprendizaje a través de este medio tecnológico, desde el punto de vista de la interrelación de cuatro factores: estructural, organizacional, curricular y técnico.

El contenido del trabajo de investigación está organizado de la siguiente manera: En la sección de revisión literaria se muestra información relacionada con los sistemas de videoconferencias y se describe el proceso de implementación de la tecnología en CESUES. En el apartado de la metodología se plantea el tipo de estudio, características de participantes y los instrumentos utilizados para la medición. En la siguiente sección, se muestra la interacción de los diferentes factores y su efecto para la utilización de videoconferencia en el desarrollo académico de docentes y estudiantes. Finalmente, en las conclusiones se presenta un análisis más profundo de los resultados obtenidos.

REVISIÓN LITERARIA

Sistema De Videoconferencia

La videoconferencia es una tecnología que permite una comunicación bidireccional y en tiempo real sin la necesidad de trasladarse a un punto de reunión específico. A través de ella se ofrece simultáneamente una misma información a interlocutores de distintos sitios del mundo. Esta característica ha hecho que sea un medio excelente para apoyar a la enseñanza convencional en la distancia, facilitando el aprendizaje a través del diálogo de docentes y estudiantes sin desplazamiento alguno. El proceso educativo a través del sistema de videoconferencia se basa en distintas formas de conexión, en los modos de interacción de los enlaces con los que se cuentan, según el equipo tecnológico y accesorios instalados en cada punto de reunión o sede y de las estrategias pedagógicas utilizadas para ello. La adecuada utilización de la tecnología en la videoconferencia tiene gran efecto en la calidad de la comunicación. No obstante, el éxito de la videoconferencia en la educación puede depender de otros factores no específicamente relacionados con la tecnología (Kendall and Oaks, 1992).

Videoconferencia En CESUES

Como una estrategia para lograr los objetivos que se plantean en el modelo Educativo ENFACE, el Centro de Estudios Superiores del Estado de Sonora capacita a sus docentes en diversas metodologías y técnicas de aprendizaje basadas en el marco de competencias profesionales. Por lo que, en el mes de agosto del 2010, se lleva a cabo el equipamiento de las salas para ejecutar la videoconferencia multipunto, considerando como nodo o punto de conexión principal al área de Rectoría y como nodos receptores a las unidades académicas. El equipo auxiliar consta de pantallas, cámaras, y micrófonos además de una conexión a Internet robusta que permita la interconexión entre los distintos sitios.

METODOLOGÍA

El estudio se basa en dos enfoques: Se consideran, de acuerdo a Hernández, *et al* (2006) las diversas situaciones, eventos y hechos así como las relaciones existentes entre las diferentes categorías planteadas. Y, por otro lado, de acuerdo a Giroux y Tremblay (2004), se enfatiza el estudio en la conducta humana, específicamente entre las relaciones y comportamientos de los sujetos.

Recolección de Datos: Se realiza un diseño descriptivo para examinar los dogmas y actitud de los receptores e instructores hacia el uso de la videoconferencia en el proceso enseñanza-aprendizaje. Se han seleccionado los métodos de observación, encuesta y entrevista semiestructurada para establecer relaciones de asociación. La encuesta y entrevista fueron aplicadas a estudiantes, a docentes y a instructores de los cursos a distancia. Específicamente 70 docentes quienes están distribuidos en las cinco unidades académicas, 23 estudiantes, personal técnico y de enlace.

Marco Contextual: El Centro de Estudios Superiores del Estado de Sonora es una institución descentralizada, con personalidad jurídica y patrimonio propio. Cuenta con cinco unidades académicas ubicadas en las ciudades de San Luis Río Colorado, Hermosillo, Navojoa, Magdalena y Benito Juárez. La institución ofrece un total de 16 Licenciaturas y 5 Maestrías. Su población docente se conforma por un total de 365 docentes de tiempo completo, los cuales se encuentran en constante capacitación para mejorar los procesos de formación.

RESULTADOS

En Relación A Factores Estructurales

Enfocándonos en los factores estructurales, los resultados revelan que el 74% de los docentes encuestados, consideran que encontraron a este medio tecnológico capaz de propiciar una mayor interacción instructor-participante que la que concebían; sintiéndose integrados y familiarizados con él. El 34% de éstos manifiestan que esta interacción le ha permitido realizar un adecuado intercambio de información e ideas. Por su parte, el 87% de los estudiantes concebían una mayor dificultad de interacción instructor-participante. Logrando al final del curso que sólo el 26% de los estudiantes se sintieran integrados y familiarizados con el sistema. Reduciendo la calidad del proceso de aprendizaje. El 49% de los docentes identifican que un elemento clave para una adecuada interacción en la videoconferencia es el número de participantes envueltos en ella por sitio; especificando como cantidad adecuada de 20 a 25 participantes, ya que un número superior tiende a propiciar la distracción entre ellos, perdiendo el sentido del curso. El 93% de los docentes y el 95% de los estudiantes se apoyaron en el material establecido en la Plataforma institucional en cada una de las sesiones, logrando con ello una mejor interpretación de la información proporcionada por el instructor.

En Relación A Factores Organizacionales

En este enfoque, los resultados revelaron que el 90% de los estudiantes participantes y el instructor del curso manifestaron que el proceso de aprendizaje se vio afectado por la mala coordinación del área habilitada para las sesiones de videoconferencia. No obstante, el 48% de los estudiantes determinan que la buena calidad de videoconferencia, cuando se llevaron las sesiones, estuvo influenciada por la adecuada estructuración de contenido del curso. El 59% de los docentes participantes del diplomado han determinado que cuando no se efectúa una estructura del curso adecuadamente para el tiempo estipulado de las sesiones, se incrementan considerablemente las actividades extra-escolares, desmotivándolos a llevar capacitación a través de este medio.

Por otro lado, el 83% de los docentes, el 86% de los estudiantes e instructores han considerado que la participación de un enlace en los sitios de recepción de la comunicación es un elemento clave para el desarrollo de la sesión ya que permite un mejor control de participantes e intercambio de otros materiales o documentos necesarios para la conducción de los temas. Así mismo, el hecho de preparar y utilizar distintos materiales de apoyo durante las sesiones que despierten la atención y motiven hacia el tema que se está tratando, se hace imprescindible para el 47% de los docentes encuestados, ya que este hecho ha propiciado mayor interés sobre la temática del curso. Mientras que el 13% de los docentes manifestaron que las narraciones de algunos de los instructores eran demasiadas monótonas y algunos materiales de

video no se escuchaban correctamente, propiciando distracción y en definitiva reduciendo con ello su interés en la clase. De acuerdo a los instructores, estos especifican que para lograr tener éxito deben ser capaces de poder planear, organizar y controlar un curso a través de este medio antes de iniciar con él. Además, que una reducción en la calidad del proceso se registra cuando existe una mala coordinación de actividades entre la persona que funge como enlace del sitio y el instructor.

En Relación A Factores Curriculares

Respecto a este factor, los resultados muestran que el 65% de los docentes participantes e instructores determinan que es relevante estar familiarizados con las nuevas competencias tecnológicas del sistema de videoconferencia a utilizar antes de considerar ser instructores a través de este modelo; y así crear oportunidades para una mejor interacción con los alumnos, ya que una inexperiencia en relación al equipo propiciaría un uso ineficaz de la tecnología. Aunado a esto, el 20% de los docentes indican que no sólo debe estar el instructor debidamente capacitado en la tecnología de videoconferencia si no también demostrar habilidades para presentar la información a través de distintos medios. El 73% de los docentes participantes consideran que este tipo de modalidad si es apto para cursos con temas tanto teóricos como prácticos. En cambio, solo el 35% de los estudiantes están de acuerdo con ello. Sin embargo, el 53% de los docentes hacen hincapié que tiende a ser más favorable para cursos del área de conocimiento sociales-administrativos. En relación a qué contextos debe aplicarse esta modalidad, los instructores concuerdan que a toda área del conocimiento.

En Relación A Factores Técnicos

La investigación ha confirmado que tratar de proveer un ambiente virtual que permita la mayor interacción instructor-participante y transmisión de conocimientos depende altamente del establecimiento adecuado de elementos técnicos. En este sentido, el 6% de los docentes observaron que la dinámica de la sesión fue interrumpida por problemas técnicos desconocidos para ellos, reduciendo el tiempo establecido para el aprendizaje. La eficiencia de la videoconferencia no sólo puede verse reducida por este hecho, ya que el 30% de los docentes creen que esta modalidad si es una buena opción siempre y cuando las características del equipo auxiliar sean óptimas. Es decir, se requiere pantallas y cámaras que permitan video más legible para ello y para ver el trabajo de otras sedes participantes.

Por otro lado, el 91% de los estudiantes del curso especifican que el instructor ajustó su forma de enseñar (para ser visto y oído) a la tecnología establecida en la sala de la unidad académica Hermosillo. A pesar de ello, confirman que el instructor requiere tenga a su alcance otro medio electrónico con el que pueda manipular directamente el material que está siendo proyectado, con el fin de alcanzar una mayor comprensión específicamente de los temas prácticos. Una limitante para el desarrollo óptimo de esta modalidad fue la conectividad y velocidad de transmisión de datos en la red otorgada al inicio del primer diplomado. De acuerdo a los instructores, estos problemas técnicos generaron muchas especulaciones, variables que interfirieron en el proceso de aprendizaje.

CONCLUSIONES

La investigación se ha realizado con el fin de examinar la interacción de cuatro distintos factores que intervienen en el modelo de videoconferencia y cómo influyen éstos en el proceso enseñanza-aprendizaje, específicamente en el marco del modelo educativo ENFACE del Centro de Estudios Superiores del Estado de Sonora (CESUES). Los resultados extraídos han dado a conocer que la efectividad de esta tecnología de comunicación en la educación si está altamente influenciada por la interrelación de los factores estructurales, organizacionales, curriculares y técnicos. Es posible obtener resultados positivos en el proceso de enseñanza-aprendizaje, solo se requiere contar con los elementos adecuados para lograrlo. Antes de llevar la capacitación a través de este medio, solo un bajo porcentaje de participantes percibían

las ventajas de este modelo de comunicación en el proceso de enseñanza-aprendizaje. Sin embargo después de la capacitación, se incrementa el porcentaje de participantes que se sienten integrados y familiarizados con el medio, manifestando que no tienen ninguna dificultad de comunicación con el instructor pese a la distancia física entre ellos. Los participantes (tanto docentes como estudiantes) corroboraron una serie de elementos requeridos para que se desarrolle con calidad el proceso de enseñanza-aprendizaje a través de videoconferencia.

En definitiva, la interrelación de los distintos factores que intervinieron en el modelo de videoconferencia con los estudiantes de la unidad académica Navojoa, propició un bajo desempeño en el proceso de aprendizaje. Sin embargo, la presencia de más elementos favorables en la capacitación a docentes generó resultados positivos en su aprendizaje. Dando a conocer que no sólo se debe centrar meramente en la transmisión de la información si no que además se debe considerar todo el marco en el que se desarrolla el proceso de comunicación educativa.

LA AUDITORÍA ADMINISTRATIVA PARA MEJORAR LA COMPETITIVIDAD DE LAS MICRO Y PEQUEÑAS EMPRESAS DEL VALLE DE SAN QUINTÍN

Lizzette Velasco Aulcy, UABC
Rafael Espinoza Torres, UABC
Seidi Iliana Pérez Chavira, UABC
Luis Alberto Morales Zamorano, UABC

RESUMEN

En México las micro y pequeñas empresas representan alrededor del 90% de las empresas mexicanas, creando ocho de cada diez empleos y en lo que se refiere al Producto Interno Bruto, éstas empresas generan más del 50% con sus operaciones, es por esto que se hace de especial interés atender las necesidades de las micro y pequeñas empresas mexicanas. Se han manifestado dificultades relacionadas con la capacidad de los directivos relacionada a las actividades de control, de planteamiento y evaluación de objetivos, que les permitan ser competitivos. Debido a estas necesidades, presentamos una propuesta de implementar la metodología de la auditoría administrativa como una herramienta para obtener un diagnóstico administrativo que impulse el mejor funcionamiento y desarrollo empresarial competitivo de micro y pequeñas empresas del Valle de San Quintín, B.C. La propuesta derivada del presente estudio es que se lleve a cabo la auditoría administrativa por comités formados dentro de las asociaciones o agrupaciones dedicadas a la atención y apoyo de dichas empresas, asimismo impulsar el desarrollo de programas de apoyo dentro de las universidades, considerando las necesidades manifestadas por los micro y pequeños empresarios del Valle de San Quintín en el municipio de Ensenada, Baja California, México.

PALABRAS CLAVE: Auditoría Administrativa, Competitividad, Micro y Pequeñas Empresas.

ADMINISTRATIVE AUDIT FOR IMPROVING THE COMPETITIVENESS OF MICRO AND SMALL COMPANIES OF SAN QUINTIN VALLEY

ABSTRACT

In Mexico, the micro and small companies account for about 90% of Mexican firms, creating eight of ten jobs and in regard to the Gross Domestic Product, these companies generate over 50% with their operations, so that special interest makes the needs of micro and small enterprises in Mexico. Difficulties have been raised regarding the ability of management activities related to monitoring, assessment and objective approach, allowing them to be competitive. Because of these needs, we present a proposal to implement the administrative audit methodology as a tool for diagnosis administrative drive the best performance and competitive business development of micro and small businesses in the San Quintin Valley, B.C. The proposal arising from this study is to be carried out by committees of management audit within the associations and groups dedicated to the care and support of these companies also promote the development of support programs within universities, considering the needs expressed by micro and small entrepreneurs in the Valley of San Quintín in the municipality of Ensenada, Baja California, Mexico.

KEYWORDS: Administrative Audit, Competitiveness, Micro and Small Companies.

Problemática

En el Valle de San Quintín las micro y pequeñas empresas han tenido que enfrentar diversas situaciones adversas de manera empírica, ya que sus administradores no cuentan con la asesoría y capacitación necesarias para superar los obstáculos que se les presentan, aunque existen en la localidad programas de fomento y desarrollo de estas empresas, no han sido suficientes, pues se limitan a ciertas áreas específicas y durante periodos limitados de tiempo. Respecto de la empresa de propiedad familiar, se distinguen dos características naturales. 1) La propiedad, así como las decisiones más importantes, se centralizan en un miembro de la familia y 2) las relaciones sociales entre los familiares son complejas y afectan la gestión y destino del negocio. Esto nos lleva a notar la gestión dependiente de las actitudes de los miembros organizacionales, propiciando un funcionamiento insuficientemente sistematizado (De La Garza, Ayup, Chein 2009). Como lo mencionamos anteriormente, motivados por las necesidades de estas empresas de contar con información oportuna para la solución de sus problemas de funcionamiento, nos dimos a la tarea de investigar a los micro y pequeños empresarios del Valle de San Quintín ubicado en la zona rural del municipio de Ensenada, Baja California, México, para identificar la problemática de su negocio y obtener la información básica necesaria para estar en posibilidades de ofrecer diversas alternativas de solución a sus problemas y mejoramiento en cuanto a competitividad de su negocio.

Se propone a la auditoría administrativa como herramienta de utilidad para el control y desarrollo empresarial de las micro y pequeñas empresas, ya que utilizando su metodología se pueden detectar problemas específicos de las empresas y con ello hacer las propuestas de solución que propicien un desempeño eficiente y una mejora continua.

METODOLOGÍA

El presente estudio se realizó en el Valle de San Quintín el cual forma parte del municipio de Ensenada, Baja California, México. Esta población está conformada por habitantes que se dedican principalmente a actividades agrícolas y comercio al por menor. La identificación de las necesidades de asesoría, capacitación y evaluación sobre su desempeño organizacional se realizó mediante la aplicación de encuestas a las micro y pequeñas empresas de la zona rural antes mencionada. La encuesta fue realizada mediante un instrumento tipo cuestionario de 35 preguntas que consideraban los indicadores de necesidades de mejoras administrativas y de identificación de intereses para la realización de un diagnóstico administrativo de sus empresas. Dicho cuestionario se aplicó a 315 empresarios del Valle de San Quintín. En una primera etapa se identificaron las necesidades de los micro y pequeños empresarios, ofreciéndoles algunas soluciones y visualizando su disposición para la realización de las auditorías administrativas de sus negocios, que les permitieran solucionar su problemática operativa y fomentar las estrategias que les propiciaran una ventaja competitiva en el mercado.

Al identificar las necesidades y disposición de los micro y pequeños empresarios, se realizaron en una primera etapa 35 auditorías administrativas, en una segunda etapa se realizaron 68, se ha continuado con la realización por etapas alcanzando 157 auditorías administrativas, los resultados se agruparon en porcentajes de respuesta para cada uno de los indicadores.

RESULTADOS

De las empresas encuestadas se obtuvieron los siguientes resultados: Como se muestra en la Figura 1. En un inicio al cuestionar a los microempresarios sobre su disposición a que se les realizara un diagnóstico de desempeño organizacional, mediante la aplicación de una auditoría administrativa, obtuvimos un 74%

de interés en que su empresa fuera revisada. En comparación, los pequeños empresarios están en un 90% interesados en que se realice el diagnóstico administrativo que les permita una mejora competitiva.

Figura 1: Disposición de los micro y pequeños empresarios en que se les realice la Auditoría Administrativa.

En la Figura 2: Se muestra que de las empresas interesadas en que se les realizara el diagnóstico administrativo encontramos que un 93.2% de las empresas cuentan solamente con hasta 3 empleados, un 3.95% con 7 a 10 empleados y un 2.85% con 11 a 14 empleados.

Figura 2: Cantidad de empleados de las micro y pequeñas empresas auditadas.

Las actividades económicas de las micro y pequeñas empresas revisadas se encuentran dedicadas en un 73.45% al comercio al por menor y en un 26.55% al sector servicios. Como se detalla en la Figura 3: Se plasma la antigüedad de las micro y pequeñas empresas se integra de la siguiente manera, un 48.57% con más de cinco años, un 22.85% de menos de 6 meses, un 17.14% de uno a tres años, un 8.59% de tres a cinco años y un 2.85% de siete meses a un año.

Figura 3: Antigüedad de las Micro y Pequeñas Empresas auditadas.

CONCLUSIÓN Y RECOMENDACIONES

Con el presente caso de investigación podemos concluir que las empresas del valle de San Quintín, del municipio de Ensenada, Baja California, México, muestran una necesidad evidente de recibir una adecuada asesoría y capacitación que les facilite un funcionamiento de manera eficiente y competitiva, planteándose objetivos y evaluando los resultados obtenidos durante su desempeño. Recomendamos la aplicación de la metodología en la auditoría administrativa presentada, en los programas sociales, ya que podría ser utilizada por los organismos gubernamentales encargados de atender las necesidades de capacitación y desarrollo empresarial. Siendo una herramienta eficaz para crear una ventaja competitiva que permita la permanencia y fortalecimiento de la presencia en el mercado de las micro y pequeñas empresas.

DICTAMEN SOBRE EL RENDIMIENTO ACADÉMICO DERIVADO DE LOS PROBLEMAS DE LECTURA EN ESTUDIANTES DE ADMINISTRACIÓN DE LA UJTL

Carlos Alberto Cano Plata, Universidad de Bogotá Jorge Tadeo Lozano

RESUMEN

En este artículo se pretende mostrar los resultados del diagnóstico de la realidad de la lectura en los estudiantes del Programa de Administración de Empresas de la Universidad Jorge Tadeo Lozano. Se plantean cuestiones relacionadas con la lectura como elemento sustancial por parte del docente para poder entender, interpretar, analizar la realidad de su disciplina y la integralidad de su profesión, para de esta manera dictaminar su rendimiento académico. En el artículo se pretende mostrar aspectos derivados de una investigación que sobre el tema en particular se realizó identificando aspectos tales como las representaciones sociales sobre la lectura, su promoción y sus relaciones con las funciones históricas del programa como garante del acceso a la cultura escrita, para así responder la pregunta sobre el nivel de lectura de los estudiantes.

PALABRAS CLAVE: Nivel de lectura, programa, análisis, interpretación, comprensión

ABSTRACT

This article aims to show the results of the diagnosis of the reality of reading in students of Business Administration Program at the University Jorge Tadeo Lozano. Are questions related to reading as a substantial part of the deponent to understand, interpret, analyze the reality of their discipline and integrity of their profession, to thereby dictate their academic performance. The article aims to show results derived from research on the subject in particular was conducted to identify issues such as social representations about reading, its promotion and its relationship to the historic functions of the program as a guarantee of access to literacy, order to answer the question about the reading level of students.

JEL: A22, A23

KEYWORDS: Reading level, program, analysis, interpretation, understanding

INTRODUCCIÓN

En este artículo se pretende mostrar los resultados parciales del diagnóstico de la realidad de la Lectura en los estudiantes del Programa de Administración de Empresas de la Universidad Jorge Tadeo Lozano. Se plantean cuestiones relacionadas con la lectura como elemento sustancial por parte del docente para poder entender, interpretar, analizar la realidad de su disciplina y la integralidad de su profesión, para de esta manera dictaminar su rendimiento académico. En el artículo se pretende mostrar aspectos derivados de una investigación que sobre el tema en particular se viene adelantando identificando aspectos tales como las representaciones sociales sobre la lectura, su promoción y sus relaciones con las funciones históricas del programa como garante del acceso a la cultura escrita, para así responder la pregunta sobre el nivel de lectura de los estudiantes.

OBJETIVO

Realizar un diagnóstico de la realidad de la Lectura en los estudiantes del Programa de Administración de Empresas de la Universidad Jorge Tadeo Lozano.

METODOLOGÍA

Corresponde a una investigación analítica con validación empírica, pues es parte de la construcción de un referente teórico, con un significativo rigor académico, la cual involucra metodología de tipo cualitativa frente al primer objetivo específico, y cuantitativa con respecto al segundo. Estudiantes del programa de Administración de Empresas en los últimos cinco años, se seleccionó la muestra por conveniencia

- Universidad de Bogotá Jorge Tadeo Lozano, Sede Bogotá
- Para la medición Se realizó un estudio de tipo descriptivo-transversal para determinar los hábitos de lectura en estudiantes universitarios del Programa de Administración de Empresas de la universidad Jorge Tadeo Lozano (Sede Bogotá), el cote va has el mes de Agosto del año 2010. De un universo de 288 alumnos se seleccionó una muestra por conveniencia de 190 alumnos, a los cuales se les aplicó un instrumento evaluativo tipo cuestionario con el propósito de realizar un diagnóstico de la realidad de la Lectura e Identificar y evaluar los indicadores utilizados para determinar el nivel de Lectura.
- Se aplicó un cuestionario denominado "Encuesta: Situación de la Lectura en los Estudiantes del Programa de Administración de Empresas".

MARCO DE REFERENCIA

En la actualidad existe un número significativo de definiciones en torno al concepto de lectura, ellas son múltiples y acertadas, debido a que en cada una de ellas se vislumbran una serie de categorías que ofrecen aspectos diferentes sobre esta capacidad que es exclusiva de los seres humanos, siendo bastante complejo su análisis. Para Ralph Staiger(1998), "la lectura es la palabra usada para referirse a una interacción, por lo cual el sentido codificado por un autor en estímulos visuales se transforman en sentido de la mente del autor". En el mismo sentido, l Solé I define: "leer es un proceso de interacción entre el lector y el texto, proceso mediante el cual el primero intenta satisfacer los objetivos que guía a su lectura".

De tal manera podríamos decir que la lectura es proceso continuo de comunicación entre el autor o escritor del texto y el lector. Es expresado a través de una variedad de signos y códigos convencionales que nos sirven para interpretar las emociones, sentimientos, impresiones, ideas y pensamientos. Además es la base esencial para adquirir todo tipo de conocimientos científicos; sin tener ningún dominio de los mencionados códigos y signos no tendríamos la menor idea de prescribir a un papel. Tintiya, (2007). Por otra parte en el diccionario de la Real Academia de la Lengua Española encontramos al siguiente definición para "escribir" es: "representar ideas por medio de signos y más especialmente la lengua hablada por medio de letras"; "figurar el pensamiento por medio de signos convencionales"; "la escritura es la pintura de la voz" De conformidad con esta definición se deduce entonces que la escritura es una forma de expresión y representación prescrita por medio de signos y códigos que sirven para facilitar, y mejorar la comunicación. Este varía según al grupo social donde se practica, además va ligado juntamente con el lenguaje pertinente, por medio de la diversidad en cuanto al uso de las materiales naturales y artificiales. Tintiya, (2007).

“La ignorancia no es el mayor de los males ni el más temible; una vasta extensión de conocimientos mal digeridos es cosa peor” (Platón, citado por Zubiría, 2005).

Merani (1969), realiza una reflexión sobre aquella educación técnica que no fomenta el pensamiento abstracto y reflexivo, desde la función del lenguaje:

“Y si el pensamiento abstracto, reflexivo es condición humana por excelencia, y comienza a estructurarse en función del lenguaje, ¿puede la escuela ser positiva si no desarrolla fundamentalmente este aspecto, hoy disminuido por el afán de educar técnicamente?” (Merani, 1969, citado por Zubiría, 2005).

Resulta relativamente fácil hacer apología al fortalecimiento de los procesos de lectura (y escritura) en los estudiantes, dado que se ha escrito mucho sobre el tema. Por ejemplo, Atorresi (Atorresi, s/f) señala la lectura como una puerta de acceso a la cultura escrita y que ello a su vez fortalece los procesos de Socialización, Conocimientos, Información, etcétera, en los estudiantes. Dicha autora también hace énfasis en el carácter de la lectura como un potente instrumento de aprendizaje, dado que resulta necesaria para el aprendizaje de todas las disciplinas.

Desde una perspectiva orientada hacia el papel de la lectura en los procesos formativos, Zubiría, (2005) sostiene que “mientras la universidad no asuma un trabajo sistemático, curricular y planificado en el desarrollo de las competencias interpretativas y argumentativas, no podrán disminuir los niveles de fracaso académico que actualmente presenta”. A su vez, este mismo autor señala la lectura como “el mejor criterio para pronosticar el éxito académico”, haciendo referencia a las conclusiones del estudio: “El Niño Cubano” (Gutiérrez, López y Arias, 1973, referenciado por Zubiría, (2005). En esta investigación se dan diferentes conceptos al término, pero se reconoce el siguiente:

“ (...) proceso interactivo de comunicación en el que se establece una relación entre el texto y el lector, quien al procesarlo como lenguaje e interiorizarlo, construye su propio significado. En este ámbito la lectura se constituye en un proceso constructivo al reconocerse que el significado no es una propiedad del texto, sino que el lector lo construye mediante un proceso de transacción flexible en el que conforme va leyendo, le va otorgando sentido particular al texto según sus conocimientos y experiencias en un determinado contexto” (Gómez at-el, 1996).

Es así entonces como el acto de leer se convierte en un capacidad compleja, de carácter superior y como fue mencionado anteriormente exclusiva de los seres humanos, donde se comprometen diversas dificultades que comparten una serie de procesos psicológicos, biológicos afectivos y sociales llevándola a establecer relaciones particulares con lo leído encaminándolo a una adquisición cognoscitiva. Arenza y García, (1975). Es relevante destacar que la percepción de lectura que se menciona en los párrafos anteriores es diferente a la tradicional, hace énfasis en la actividad que despliega el lector y reconoce su papel activo para construir el significado del texto.

Desde esta perspectiva constructivista, el acto de leer se convierte en una acción eminentemente social y trascendental para reconstruir, construir, criticar, ampliar, sintetizar, analizar, consolidar, comprender y conocer los nuevos saberes de la humanidad de manera importante para que los seres humanos se imaginen el mundo apropiándose luego de él dándole un significado propio Coll (1991) trata de hacernos entender que con la lectura se puede encontrar respuesta mediante fórmulas cognitivas e intelectuales que nos permiten relacionar, criticar e incluso separar en muchas oportunidades las ideas expuestas, pero además no solo es aceptar el propósito, sino proponer y mejorar lo pretendido, entendiendo en todo su contexto lo que se ha cuestionado o valorado, y dárselo a conocer a los demás de acuerdo con nuestra forma de pensar, identificándonos y a veces contraponiendo nuestro criterio frente a otros hombres, y de esta manera alimentar nuestra manera de saber. Coll (1993) dice que la lectura de una u otra manera sirve para aprender y luego transmitir lo aprendido (enseñar), mostrándose como uno de los procesos más importantes a ser considerados para sacar adelante con éxito cualquier tipo de estudio.

“La lectura es el proceso de captación, comprensión e interpretación de cualquier material escrito”. Por lo tanto la eficacia depende de la necesidad, estímulos y conocimiento así como del desarrollo que sobre este

se tenga (García 2000). Es entonces reconocida universalmente la lectura, como una característica que toda población desea conseguir y es una señal del nivel de educación alcanzado por ésta. Esto se ve reflejado en las diferentes fechas que latino américa ha designado para conmemorar y difundir los hábitos de lectura. En el caso particular de la lectura universitaria, se puede comprobar que los hábitos en este sentido son más por necesidad de la formación específica (carrera o profesión) que por una situación de carácter voluntario o de esparcimiento, tampoco como algo que sea propiciado por otras variables de la formación educativa y conceptual de la persona.

¿Por qué fue pertinente un estudio sobre hábitos de lectura? Fue conveniente en parte por expuesto anteriormente y como respuesta a inquietudes del programa por conocer los ámbitos de lectura de los estudiantes de administración de empresas, para determinar su condición y formación específica en un contexto crítico así como en condiciones de su formación y perfeccionamiento intelectual y sistemático. Toda vez que no existe estudio similar en esta área universitaria. Con la información aquí generada se sientan las bases preliminares de una línea de investigación sobre el tema, sustentada en el poco análisis que se ha hecho al respecto, teniendo en cuenta que el administrador requiere conocimientos generales como profesional integral en literatura, pensamiento y poesía, ya que en su ejercicio profesional interactúa permanentemente con personas y en ellos reflejará que es un profesional integral. Una vez señalado con claridad en concepto de lectura, se analizará a continuación cuales son las exigencias y problemáticas en el contexto educativo universitario desde una visión globalizante y su problemática en el contexto universitario amparada en los nuevos paradigmas mundiales, haciendo especial énfasis en el programa de administración de empresas de la Universidad de Bogotá Jorge Tadeo Lozano (UJTL).

RESULTADOS

5.1 Características académicas y sociales de los encuestados.

Una vez analizado lo arrojado por la encuesta se pudo establecer que el 41% de la población encuestada corresponde al género femenino. El promedio de edad de los estudiantes del programa de administración de empresas de la UJTL está en 22.18 años, así mismo se pudo identificar que el 57% de la población encuestada se encuentra trabajando actualmente, este último dato puede tener alguna implicación que serán analizadas más adelante. Frente en estrato socio económico en el cual se encuentran ubicados los estudiantes del programa de Administración de empresas los vemos reflejado en el Figura No. 3.

Al hacer el análisis se puede establecer que el 38% de los estudiantes pertenecen al estrato 3, mientras que en los estratos 4 y 5 se concentra el 49% de la población estudiantil del programa y solo el 11% corresponde a los estratos 1 y 2. En el estrato 6 aparecen reportados el 4%. En estos resultados vemos un dato interesante y tiene que ver con la concentración de los estudiantes de los estratos altos (4, 5, 6) que corresponde a un 53% del total de la población, mostrando que al programa ingresan en su mayoría estudiantes con un nivel de ingresos superior al que por lo general se trata de mostrar

Figura 3: Estrato socio económico

III Indicadores básicos:

Porcentaje de lectores frecuentes y ocasionales: El porcentaje de grandes lectores (más de 12 libros al año) es de 2.1%: el de lectores medios (entre 5 y 12 libros al año) es de 23.7%, el de lectores ocasionales (entre 2 y 4 libros al año) es de 52.1%, y el de no lectores (entre 0 y 1 libro al año) es de 22.1%. Ver (Figura 4). En estos resultados vemos la poca cantidad de libros que los estudiantes leen en el año, existiendo una concentración significativa del 74.2% de estudiantes que leen poco (lectores ocasionales) o no leen. Es preocupante esta situación si consideramos que el estudiante promedio ve alrededor de 5 materias en el semestre queriendo indicar que los docentes ponen a leer pocos libros a sus estudiantes.

Figura 4: Porcentaje de lectores frecuentes y ocasionales

Número de libros leídos en el último año: El promedio de de libros leídos en el año es de 3.68. Ubicándose dentro del porcentaje de pocos libros leídos. (Figura 5) Número de libros leídos en el último año

Figura 5: Número de libros leídos en el último año

Horas de lectura semanal: El promedio de horas dedicadas a la lectura fue de 4,14 horas por semana. Bajo si se trata de estudiantes universitarios, esta puede ser una de las razones por las cuales los estudiantes tienen un rendimiento bajo. (Figura 6). Horas de lectura semanal:

Figura 6: Horas de lectura semanal

III Otros indicadores cualitativos. Motivos para la lectura: El 33 % manifestó que lee libros principalmente porque le agradaba la lectura, y el 60% señaló que sólo leía libros por razones diferentes del gusto por la lectura, tales como exigencias del estudio, el 6% por requerimientos del trabajo y el restante 1% otras razones ajenas al gusto por la lectura. Al realizar el análisis correspondiente se puede identificar que no existe una relación directa entre el porcentaje de estudiantes que manifiestan el agrado frente a la lectura, con respecto al número de horas dedicadas a la lectura, ni tampoco frente al número de libros leídos en un año. (Figura 7)

Figura 7: Motivos que impulsan a la lectura

Materia del último libro leído: El 32.63% no recuerda el título ni el autor del último libro leído de literatura. El 97.4% refirió haber leído al menos un libro en el año. De ellos, el 63.7% leyó por lo menos uno referente a la carrera o asignaturas de ésta; el 36.3% manifestó haber leído libros de narrativa (novelas); el 20.5% leyó ensayos, el 16.8% biografías, el 10% historietas. Estos resultados reflejan el poco interés por parte de los estudiantes del programa de administración hacia la lectura; bien por temas diferentes a las de su formación (poesía, historia, arte, Narrativa, biografías, etc...) o por lecturas correspondiente a su profesión. (Figura 7).

El 78% de los estudiantes entrevistados manifestó que, en el último año, aparte de leer libros referentes a las asignaturas de la carrera, leía libros de diferente contenido (Figura 7). Cabe destacar también que el 19% manifestó que sólo leyó libros de administración, y que el 3% manifestó no haber leído ninguna clase de libros. (Figura 7). *Materia del último libro leído:* El 32.63% de los encuestados no recuerda el título, ni el autor, ni hace cuánto tiempo leyó un libro de literatura.

Figura 8: Materia del último libro leído

51.3 Otros indicadores cualitativos.

El 34% de los estudiantes entrevistados utilizó la opción de preferencia por alguna clase de libros en especial. En este grupo de estudiantes, se destacan aquellos que prefieren los libros con temas de administración (49%), seguido por los libros de narrativa. Los demás géneros propuestos como alternativas en las respuestas no sobrepasan el 6%. (Figura 9)

Figura 9: Materia del último libro leído

escuchar música, 3.81 horas a actividades de internet no necesariamente relacionadas con el estudio, 3.57 horas a ver televisión, 0.55 horas a cine, 0.47 horas a deportes y a leer solamente dedican 0.59 horas al día.

CONCLUSIONES

Se puede concluir de acuerdo con los resultados arrojados por la encuesta y analizados éstos que gran parte de los estudiantes del programa de administración de empresas corresponden o se ubican dentro de los estratos altos (4, 5, 6). Así mismo se puede identificar que un el 57 % de la población encuestada se encuentra laborando, convirtiéndose este aspecto en una de las posibles razones por las cuales los estudiante dedican poco tiempo a la lectura. Los resultados arrojados en el estudio son bastante preocupantes frente a los hábitos de lectura de los estudiantes del Programa de administración de empresas, ya que parte del éxito profesional depende de la capacidad de análisis, interpretación, comprensión, crítica y aplicación de la información, así como parte de su formación integral, por lo general esto se logra con la lectura, estos resultados son coherentes con los arrojados por el estudio PISA 2009. Se ve la poca cantidad de libros que los estudiantes leen en el año, existiendo una concentración significativa del 74. 2% de estudiantes que leen poco (lectores ocasionales) o no leen. La situación se complica si consideramos que el estudiante promedio ve alrededor de 5 materias en el semestre queriendo indicar que los docentes ponen a leer pocos libros a sus estudiantes, no incentivan el hábito de la lectura y esto es una de las posibles consecuencias del bajo rendimiento académico que se ve reflejado en el promedio de notas de los estudiantes del programa.

Podemos identificar que no existe una relación directa entre el porcentaje de estudiantes que manifiestan el agrado frente a la lectura, con respecto al número de horas dedicadas a la lectura, ni tampoco frente al número de libros leídos en un año. Considerando que se trata de estudiantes universitarios y de acuerdo con los resultados arrojados por la encuesta, se puede por lo tanto señalar que el promedio de horas dedicadas por los estudiantes en el programa a la lectura semanal es muy bajo 4,14 horas, si ponemos en consideración que el estudiante ve 5 materias en promedio al semestre, esta puede ser una de las razones por las cuales el rendimiento académico de los estudiantes no es buen y el reflejo el poco número de libros, artículos y otros documentos que los profesores no colocan a leer durante el semestre.

Al indagar los motivos por los cuales leen los estudiantes encontramos que el 33 % manifestó que lee libros principalmente porque le agradaba la lectura, y el 60% señaló que sólo leía libros por razones diferentes del gusto por la lectura, tales como exigencias del estudio, el 6% por requerimientos del trabajo y el restante 1% otras razones ajenas al gusto por la lectura.

Estos resultados reflejan el poco interés por parte de los estudiantes del programa de administración hacia la lectura; bien por temas diferentes a las de su formación (poesía, historia, arte, Narrativa, biografías, etc...) o por lecturas correspondiente a su profesión. El 78 % de los estudiantes entrevistados manifestó que, en el último año, aparte de leer libros referentes a las asignaturas de la carrera, leía libros de diferente contenido. Cabe destacar también que el 19% manifestó que sólo leyó libros de administración, y que el 3% manifestó no haber leído ninguna clase de libros.

Es de suma importancia destacar el hecho de que en los estudiantes encuestados no existe mucha motivación para desarrollar actividades de lectura con material diferente al de temas administrativos. Entre los encuestados, aquellos que señalaron preferencias por algún tipo de lecturas, el mayor porcentaje se concentra en lecturas sobre administración (49%), seguido de narrativa (novelas) con un 22%. Otros géneros literarios como biografías, ensayos y poesía suman un total de preferencias del 14% (6%, 5% y 3% respectivamente). Ello evidencia que aparentemente no existe una necesidad de evolucionar en el conocimiento, ya que sólo un porcentaje relativamente bajo de la muestra estudiada comparte sus necesidades académicas de lectura con las necesidades generales de conocimiento y esparcimiento propiciados por la literatura general. Se recomienda fomentar más los hábitos de lectura en los estudiantes universitarios, en función de cultivar el desarrollo de seres humanos integrales y objetivos en vista de un futuro altamente multidisciplinario y globalizado.

GRUPOS ESTRATÉGICOS: SU INFLUENCIA EN EL DESEMPEÑO DE LA INDUSTRIA BANCARIA VENEZOLANA Y SU RELACIÓN CON LA COBERTURA GEOGRÁFICA

Sandra L. Flores M., Universidad Politécnica de Madrid
José O. Flores G., Universidad Ezequiel Zamora

RESUMEN

Para determinar los grupos estratégicos de la industria bancaria venezolana y su influencia sobre el desempeño en el sector, así como su relación con la cobertura geográfica, se mostraron 52 entidades financieras. La información se obtuvo de los balances generales y de los estados de resultados correspondientes al primer semestre del año 2008. Antes de la aplicación del análisis cluster a las 8 variables que integran la dimensión alcance de la estrategia, se realizó un análisis de componentes principales para determinar la relación entre estas variables; mientras que para distinguir las estrategias que caracterizaron a los grupos se compararon los resultados de alcance de la estrategia de cada grupo con el promedio de la industria, y se reforzó con pruebas de medias. Los principales resultados fueron: 1) Los bancos siguen patrones de conducta estratégica diferentes, 2) Los grupos estratégicos combinan patrones de conductas. Se obtuvieron cinco grupos estratégicos: Banca conservadora, Banca comercial, Banca minorista, Banca pública corporativa y Banca pequeña corporativa. 3) Las diferentes estrategias adoptadas por los bancos no se expresaron en una diferenciación en los niveles de resultados económicos y financieros, 4) Los grupos bancarios llevan a cabo una estrategia de cobertura geográfica relacionada con su estrategia financiera.

PALABRAS CLAVE: grupos estratégicos, banca, desempeño, cobertura geográfica.

STRATEGIC GROUPS: ITS INFLUENCE ON THE PERFORMANCE OF THE BANKING INDUSTRY VENEZUELAN AND ITS RELATIONSHIP WITH THE GEOGRAPHICAL COVERAGE

ABSTRACT

To determine strategic groups venezuelan banking industry and its influence on performance in the sector and its relationship to geographic coverage, 52 financial institutions were sampled. The information was obtained from the balance sheets and income statements for the first half of 2008. Before applying cluster analysis to the 8 variables that comprise the scope of the strategy dimension, we conducted a principal components analysis to determine the relationship between these variables, whereas to distinguish strategies that characterized the groups were compared the results scope of the strategy of each group with the industry average, and was reinforced by means tests. The main findings were: 1) Banks are different patterns of strategic behavior, 2) strategic groups combined patterns of behavior. They were five strategic groups: conservative banking, commercial banking, retail banking, corporate public banks and Small corporate banking, 3) The different strategies adopted by banks are not expressed in a differentiation in levels of economic and financial results, 4) Banking groups carry out a strategy concerning geographical coverage your financial strategy.

KEYWORDS: strategic groups, banking, performance, geographic coverage

EFICIENCIA TÉCNICA DE INSTITUCIONES PÚBLICAS DE EDUCACIÓN SECUNDARIA UBICADAS EN BARINAS, VENEZUELA. PERIODO ESCOLAR 2009-2010

Hernando J. Garzón, Universidad Nacional Experimental Politécnica de la Fuerza Armada
Sandra L. Flores M., Universidad Politécnica de Madrid
José O. Flores G., Universidad Ezequiel Zamora

RESUMEN

El crecimiento demográfico y, en parte, la política educativa, han elevado la demanda de servicios educativos impulsando la necesidad de incrementar la eficiencia en la utilización de los recursos aplicados en este el sector, desde la perspectiva de la Economía de la Educación. Por ello, con el objetivo de analizar la eficiencia técnica de instituciones públicas de educación secundaria, se estimó la función de producción mediante el modelo DEA. Se recabó información del período escolar 2009–2010 de 76 instituciones educativas ubicadas en siete municipios del estado Barinas, Venezuela. Se consideraron dos productos y cuatro insumos en un modelo orientado a los productos. Los principales resultados indican que: 1) En promedio, la eficiencia técnica global fue de 74,0%, desglosada en una eficiencia técnica pura de 78,7% y una eficiencia de escala de 94,7%; 2) La función de producción se ajusta a rendimientos constantes a escala, con un 14,5% de instituciones eficientes y 3) Según las metas del plan, formulado para la muestra de instituciones educativas, la matrícula agregada se puede elevar de 40.955 a 58.584 estudiantes (43,0%) y la tasa de graduación de bachilleres de 14,5% a 20,0 (43,0%), manteniendo igual los niveles actuales de insumos aplicados en dichas instituciones.

PALABRAS CLAVE: DEA, eficiencia, instituciones públicas y educación secundaria.

TECHNICAL EFFICIENCY OF SECONDARY EDUCATION PUBLIC INSTITUTIONS LOCATED IN BARINAS, VENEZUELA. 2009-2010 SCHOOL YEAR

ABSTRAC

Population growth and, in part, educational policy, have steadily increased the demand for educational services, particularly in the state of Barinas driving the need to increase the efficient use of resources applied in this sector, from the perspective of the Economics of Education. Therefore, in order to analyze the technical efficiency of public institutions of secondary education, we estimated the production function by the DEA model. It sought information from the 2009-2010 school period of 76 educational institutions located in seven municipalities of Barinas, Venezuela. Two products were considered and four inputs to a product-oriented model that was solved with the software Win4deap. The main results indicate that: 1) On average, the overall technical efficiency was 74.0%, broken down into pure technical efficiency of 78.7% and scale efficiency of 94.7%, 2) The production function educational institutions is in line with constant returns to scale, with a 14.5% efficient educational institutions and 3) According to goals of the plan, formulated for the sample of educational institutions, tuition can raise aggregate of 40,955 to 58,584 students (43.0%) and high school graduation rate from 14.5% to 20.0 (43.0%), maintaining current levels as inputs applied in these institutions

KEYWORDS: DEA, efficiency, public institutions and secondary education.

LA BANCARIZACIÓN EN COLOMBIA FRENTE AL COSTO DE LOS SERVICIOS FINANCIEROS

José Rodrigo Cática Barbosa, Universidad del Tolima
Mercedes Parra Alviz, Universidad del Tolima

RESUMEN

En este artículo se describe el estado actual de la bancarización en Colombia y los elevados costos de los servicios financieros de la Banca Colombiana, que afectan el cumplimiento de las metas o necesidades de bancarización. Los bajos niveles de bancarización en Colombia frente a los niveles en otros países, es una preocupación constante de las autoridades económicas, que se han visto obligadas a tomar drásticas medidas y a establecer límites en los cobros de los servicios de los Bancos Colombianos. El estudio se desarrolla a partir de un recorrido por las estadísticas de bancarización o penetración financiera en Colombia y el análisis del costo de dos de los productos más usados del sistema, como son las Cuentas de Ahorro y el crédito de consumo mediante la Tarjeta de Crédito. Los resultados muestran que los costos por el acceso a estos servicios, medidos de manera porcentual, superan la tasa máxima de usura en Colombia y confirma lo que se ha venido especulando en torno a los bajos niveles de bancarización por diferentes motivos, entre ellos, el elevado costo de los servicios, que los usuarios denominan como abuso por parte de las entidades bancarias.

PALABRAS CLAVE: Bancarización, Servicios, abuso, costo, Tasa.

FINANCIAL DEEPENING IN COLOMBIA VERSUS THE COST OF FINANCIAL SERVICES

SUMMARY

This article describes the current state of the banking process in Colombia and the high costs of the financial services in the Colombian banking system which affect the accomplishment of the goals or the necessity of a wider banking system. The low levels of penetration of the banking system in Colombia versus the high levels in other countries are a permanent concern of the economic authorities, so they have been obligated to take hard measures in order to establish limits to the charges for the Colombian banks' services. This study is developed from statistics of the financial penetration in Colombia and a cost analysis of two of the most used products such as the saving accounts and the consumption credit with credit cards. The results show that the cost of using these services, measured by percentage, is higher than the usury rate in Colombia and confirm what had been so far a speculation about the reasons for the low levels of penetration of the banking system such as the high cost of services, which are denominated by the clients as an abuse performed by the banks.

KEY WORDS: Banking system, services, abuse, cost, rate.

INTRODUCCIÓN

Está claro que la baja bancarización es uno de los tantos impedimentos para el desarrollo de algunos países de América latina. Colombia ocupa el puesto 47 en profundización financiera entre 57 países de la región, situación que se la atribuye a causas como el entorno tributario del sector bancario con el impuesto del 4x1000, la tasa de usura y desde luego el costo de los servicios financieros que más ha tomado fuerza entre un gran número de analistas, autoridades económicas y por supuesto la población

colombiana. El presente artículo se estructura como sigue. Se presenta una revisión de literatura en la que se describen aspectos básicos del ahorro, su concepto elemental, el estado actual de la profundización financiera en Colombia y los conceptos de autoridades y analistas económicos en torno al elevado costo de los servicios financieros. Seguidamente se describe la metodología para establecer el costo de los dos servicios más usados en Colombia. Posteriormente se muestran los resultados de la medición del costo real de los dos servicios financieros que miden la Bancarización o profundización financiera y finalmente se presentan las conclusiones del estudio.

REVISIÓN DE LITERATURA

En las distintas opciones de literatura económica y financiera poco es lo que se detalla sobre la bancarización en Colombia y menos sobre los aspectos que la afectan, especialmente en lo que tiene que ver con el costo de los servicios financieros. Las más notables preocupaciones se centran en el ahorro. Para Sánchez (1998), “los choques de las variaciones en los impuestos, las importaciones de bienes de consumo, el crédito y los ingresos laborales sobre la tasa de ahorro de los hogares tiene una influencia de carácter transitorio, por consiguiente; es de esperarse que vuelva a los niveles que tenía antes de las transformaciones de que fue objeto la economía en los años 90”. Sin embargo, el concepto de ahorro por sí solo no corresponde al componente principal de la bancarización en Colombia. De acuerdo con Markuse Robert (2009), el ahorro es la parte de un sueldo o de una renta que no se destina al consumo. En efecto, lo ahorrado puede destinarse a un cumplimiento de pensión de retiro, a una emergencia para reservas (como problemas de salud) o a un fondo que servirá para la compra futura de un bien que el ahorrista todavía no está en condiciones de adquirir.

En el marco de la conferencia “Desarrollo Financiero en América Latina: logros y desafíos” y “Desarrollo Financiero en América Latina y el Caribe: la ruta hacia adelante”, desarrollada el día 7 de Diciembre del año 2011, se divulgó el estudio sobre servicios financieros en América Latina realizado por la CAF, en el que se concluye que la baja bancarización que se refleja en América Latina es un gran impedimento para el desarrollo económico de la región.

Figura 1: Porcentajes de Encuestados con Cuenta bancaria en Países Seleccionados

Fuente: CAF 2010

Según los resultados presentados por la CAF en la Figura 1, se observa que el nivel de bancarización en Colombia; medido por el número de personas con al menos una cuenta bancaria, se ubica en un 43,8% frente a un promedio para América latina de 51,3%. Esta cifra difiere de manera significativa respecto a la

cifra reportada por ASOBANCARIA para el mismo periodo (Septiembre de 2010) y que según la entidad en Colombia el 59% de la población mayor de edad contaba con al menos una cuenta bancaria, tal como se muestra en la Figura 2.

Figura 2: Población Adulta con Cuentas de Ahorro en Colombia

Fuente: DANE – ASOBANCARIA

Si se pretendiera medir la bancarización en Colombia desde el nivel de utilización de otros productos financieros como el crédito de consumo a través de la tarjeta de crédito, la realidad sigue siendo un tanto preocupante como lo muestra la Figura 3.

Figura 3: Población Adulta con Tarjeta de Crédito en Colombia

Fuente: DANE – ASOBANCARIA

El debate que se está dando en la actualidad en torno al tema de la bancarización es válido, sano y conveniente para el país, y no se trata de introducir trabas, distorsiones o crear entelequias, como lo han declarado en diferentes escenarios los gremios y analistas defensores de los intereses del sector financiero. Estos manifiestan la inconveniencia de la reciente autorización que el Gobierno obtuvo del Congreso, introducida en la ley de reforma tributaria, para dictar las normas que deben observar las instituciones financieras en la determinación de las tarifas que cobran por sus servicios, lo cual, expresan, pondría en peligro la meta de aumentar el crecimiento potencial de la economía a 6% anual, ya que no se contaría con una adecuada financiación y no se lograría el objetivo de la actual administración de bancarizar a los más pobres de Colombia”. Lo que se ha quedado un poco corto en los distintos escenarios de discusión es el análisis técnico que merece acompañar estas afirmaciones. La discusión se torna precisa cuando Ubarra Valdés (2005) afirma: “Lo que demuestra la banca comercial es una visión muy corta al

tratar de obtener la máxima rentabilidad a corto plazo, pero ahorcando al empresario y a sí misma a mediano plazo”. Esta rentabilidad se obtiene desde luego mediante los elevados costos de las tarifas y por supuesto por los altos márgenes de intermediación con los cuales opera la Banca en el contexto local e internacional.

METODOLOGÍA

Para comprender de manera sencilla el costo de los servicios financieros en Colombia que sustentan los bajos niveles de bancarización, a continuación se efectuará un análisis sobre dos importantes productos y servicios de captación y colocación que absorben la gran mayoría de costos objeto del actual debate en nuestro país. Estos servicios corresponden a las cuentas de depósitos de ahorro y al crédito de consumo desde las tarjetas de crédito. En lo que respecta a la cuenta de Depósitos de ahorro, se estiman los costos de su manejo con un titular que devenga el salario mínimo y se estimarán cuatro de los diez costos en los cuales se puede incurrir al manejar este tipo de producto. Mientras que para el cálculo del costo de una tarjeta de crédito, se simula el uso de la misma con un monto promedio de operación a un plazo de doce meses. Los costos asociados a los dos productos tomados como referencia, se han cuantificado promediando los costos de todos los bancos del Sistema Financiero Colombiano.

RESULTADOS

El Costo Real De Una Cuenta De Depósitos De Ahorro En El Sistema Financiero Colombiano

En la Tabla 1 se puede apreciar los cobros que efectúan las distintas entidades financieras.

Tabla 1: Tarifas De Los Servicios Asociados A Las Cuentas De Ahorro

PROMEDIOS	\$ 5.688	M.V.	\$ 47.876	24	\$ 6.915	M.V.	\$ 1.427	\$ 1.497

En esta tabla se describen los costos en una misma unidad de tiempo (M.V.) y se describen los respectivos promedios del mercado.

De igual forma, para consolidar el análisis de costos, se ha efectuado un cálculo del costo promedio de las tarifas o cobros de las entidades financieras. Es decir; para el mes de Septiembre del presente año, el costo promedio de cuota de manejo por la cuenta de ahorros de las entidades objeto de análisis (véase Tabla 2) correspondió a \$5.689 M.V. (mes vencido), el costo de cada colilla o formulario físico para efectuar depósitos o retiros se situó en \$1.964 en promedio, la cuota de manejo por tarjeta débito de la cuenta de ahorros fue de \$6.917 M.V. (mes vencido) en promedio y el costo por consignación nacional en oficina diferente a la de radicación de la cuenta correspondió a \$8.391 por operación (consignación). Los demás costos se pueden observar en la Tabla referenciada anteriormente.

Para continuar con la medición del costo real de las cuentas de depósitos de ahorro, se simula la apertura de una cuenta de ahorros de un colombiano cualquiera que devenga el salario mínimo y que por razones aún desconocidas está obligado a efectuar la apertura de una cuenta de ahorros, en la mayoría de los casos en la entidad financiera que determina su patrono. Los costos asociados a esa cuenta y que para efectos prácticos se simularán en el presente ejercicio se relacionan en la Tabla 3. Por último, para estructurar la simulación se toma como periodo de operaciones un año completo.

Tabla 3: Parámetros Para La Medición De Costos De La Cuenta De Ahorros

VARIABLES DE COSTOS	SE COMPUTA?	TARIFA	OPERAC./MES
Monto de apertura y consignación mensual		\$ 599.200	1
Costo talonario (Valor cada colilla)	NO	\$ 1.964	2
Costo cuota de manejo cuenta de ahorros	SI	\$ 5.689	1
Cuota de manejo tarjeta débito	SI	\$ 6.917	1
Costo consulta de saldos mismo cajero	SI	\$ 1.427	2
Costo retiro del mismo cajero	SI	\$ 1.497	2
Monto de cada retiro		\$ 275.000	
Tasa DTF		4,85%	e.a.
Tasa mensual		0,40%	

Se describen los valores de las principales variables que se involucran en el análisis de costos. Se omiten los demás costos asociados a la cuenta de ahorros.

En la Tabla 4 se simula el depósito mensual del salario del trabajador, los dos (2) retiros mensuales por valor acumulado de \$550.000 y se reflejan los costos asociados a las operaciones efectuadas.

Tabla 4: Movimientos De La Cuenta Y Costos Asociados

La tabla muestra los movimientos que se simulan en la cuenta de ahorros, los costos asociados a estos movimientos u operaciones y el saldo de la cuenta en cada periodo.

Los distintos movimientos, así como los costos asociados a las operaciones del cuentahabiente, se traen a pesos de hoy o a valor presente y se acumulan para medir el impacto de los costos. Bajo esta técnica se puede afirmar que \$5.689 de cuota de manejo de la cuenta de ahorros al final del primer mes, se convierten en \$5.666 a pesos hoy (en el punto cero) a una tasa de descuento correspondiente a la DTF. De la misma manera \$5.689 de cuota de manejo del segundo mes, se convierten en \$5.644 de hoy. Tal como se muestra en la Tabla 5.

Tabla 5: Movimientos Y Costos Asociados A La Cuenta De Ahorros A Pesos De Hoy

MES	CONSIGNACIONES	RETIROS	COSTOS POR LOS SERVICIOS A PESOS DE HOY				COSTOS TOTALES
			Cuota manejo Cta. Ah.	Cuota manejo T.D.	Consulta saldo	Costo retiros	
0	\$ 7.008.936	\$ 6.433.436	\$ 66.542	\$ 80.906	\$ 33.376	\$ 35.018	\$ 215.842
1	\$ 596.840	\$ 547.834	\$ 5.666	\$ 6.889	\$ 2.842	\$ 2.982	
2	\$ 594.489	\$ 545.676	\$ 5.644	\$ 6.862	\$ 2.831	\$ 2.970	
3	\$ 592.147	\$ 543.526	\$ 5.622	\$ 6.835	\$ 2.820	\$ 2.959	
4	\$ 589.815	\$ 541.385	\$ 5.600	\$ 6.808	\$ 2.809	\$ 2.947	
5	\$ 587.492	\$ 539.253	\$ 5.578	\$ 6.782	\$ 2.798	\$ 2.935	
6	\$ 585.177	\$ 537.129	\$ 5.556	\$ 6.755	\$ 2.787	\$ 2.924	
7	\$ 582.872	\$ 535.013	\$ 5.534	\$ 6.728	\$ 2.776	\$ 2.912	
8	\$ 580.577	\$ 532.906	\$ 5.512	\$ 6.702	\$ 2.765	\$ 2.901	
9	\$ 578.290	\$ 530.807	\$ 5.490	\$ 6.675	\$ 2.754	\$ 2.889	
10	\$ 576.012	\$ 528.716	\$ 5.469	\$ 6.649	\$ 2.743	\$ 2.878	
11	\$ 573.743	\$ 526.633	\$ 5.447	\$ 6.623	\$ 2.732	\$ 2.867	
12	\$ 571.483	\$ 524.559	\$ 5.426	\$ 6.597	\$ 2.721	\$ 2.855	

Los movimientos y costos descritos en la tabla se convierten a pesos de hoy o a pesos del periodo cero para efectos de compararlos en una misma unidad de medida.

Si se resta al valor presente de los depósitos el valor presente de los retiros, se establece que el banco mantuvo en su poder en promedio de \$575.500, sobre los cuales se pagaron en promedio \$215.842 pesos de costos por servicios a pesos de hoy. Esta relación permite cuantificar un costo sobre los recursos del tarjetahabiente equivalente al 37,51%. Sin embargo; esta tasa corresponde a un costo a pesos de hoy o de manera anticipada del 37,51% que en términos vencidos es equivalente al 60.01% efectivo Anual como se muestra en la Tabla 6.

Tabla 6: Costo Real de manejar una cuenta de Ahorros

CONCEPTO	VALOR
FLUJO DE DEPÓSITOS Y RETIROS	\$ 575.500
COSTOS SERVICIOS	\$ 215.842
COSTO % ANUAL ANTICIPADO	37,51%
COSTO % ANUAL VENCIDO	60,01%

Costo total a pesos hoy

Sí la tasa máxima de usura se encuentra en 1.5 veces la tasa de interés corriente, que equivale para la fecha del presente estudio al 20,09% efectivo anual, es evidente que lo que está cobrando el banco por el manejo de la cuenta supera la tasa mensual vigente en la economía Colombiana. La banca podrá tener otras explicaciones a esta argumentación. Ante lo cual elaboremos el siguiente análisis con menor rigor: Supongamos entonces que se compara el valor total (costo) de los servicios del primer mes (\$18.453) con el primer depósito (\$599.200) y aún así el costo de los servicios significa el 3,08% mensual. Esta tasa convertida al año corresponde al 43,90% efectivo anual, que supera la tasa máxima de usura. Desde luego que el término de usura se aplica únicamente para intereses, pero para el cliente todos los cobros siguen siendo un costo. Numerosas manifestaciones se han dado en el mundo entero cuando de criticar el abuso de los bancos se trata. Sin ir muy lejos, vale la pena citar el caso de la niñera que en Noviembre del año 2011 obligó al Bank Of América a reversar la decisión de cobrarle por el manejo de su dinero.

El Costo Real De Una Tarjeta De Crédito En El Sistema Financiero Colombiano

En la tabla 7 se puede apreciar la tasa de interés efectivo anual y la cuota de manejo que cobran las distintas entidades financieras por el uso de las tarjetas de crédito.

Tabla 7: Costos Reales Asociados A Las Operaciones Con Tarjeta De Crédito

El valor de la cuota de manejo de la tarjeta Visa se ha convertido a su equivalente T.A. (Trimestre Anticipado) en todas las instituciones bancarias.

Asumiendo una operación por valor de \$500.000 a la tasa promedio de interés corriente del 26,54% que cobran los bancos, el tarjetahabiente (poseedor de la tarjeta) deberá pagar una cuota mensual de \$47.225 para cancelar los \$500.000 tal como se aprecia en la Tabla 9.

Tabla 9: Costos Real De Operaciones Con Tarjeta De Crédito

PERIODO	VALOR OPERACIÓN	CUOTA PERIÓDICA	CUOTA MANEJO	RESÚMEN DE FLUJOS
0	-\$ 500.000		\$ 43.802	-\$ 456.198
1		\$ 47.225		\$ 47.225

12		\$ 47.225		\$ 47.225
COSTO MENSUAL				7,31%
COSTO ANUAL				133,30%
TASA MÁXIMA DE INTERÉS CORRIENTE				29,09%

La tabla muestra el resumen de flujos y el costo que hace equivalente los flujos de pagos al flujo inicial de la operación

Al efectuar el análisis de costo real teniendo en cuenta que el tarjetahabiente recibe \$500.000 del Banco y por ese monto debe cancelarle al banco una cuota mensual de \$47.225 más la cuota de manejo trimestral anticipada de \$43.802, ese flujo de recursos representa de manera precisa una tasa mensual equivalente al 7.31%, que en términos de tasa efectiva anual equivale al 133.3%. El costo real de la tarjeta supera de manera significativa la tasa de interés corriente máxima permitida y que corresponde al 29,09% efectivo anual para la fecha del 11 de Noviembre año 2011, fecha en la cual se efectúa el presente estudio.

Otras Manifestaciones Que Sustentan La Verdadera Situación De Elevados Costos De Los Servicios Del Sistema Financiero Colombiano

Es importante referenciar inicialmente las palabras del papa Benedicto XVI cuando muestra su preocupación por la situación del sistema financiero mundial:

- El Papa Benedicto XVI dice que: "Es un error considerar que el mercado es capaz de autorregularse" y mediante documento presentado a la prensa afirma que es necesario "La reforma del sistema financiero internacional en la perspectiva de una autoridad pública de competencia universal", reza el título del documento, del que no se conoce aún el contenido, "La crisis financiera mundial demostró la fragilidad del sistema económico actual y de las instituciones a ellas conectadas", declaró el Papa en abril del año 2011.

Para el jefe de la Iglesia Católica, es "un error considerar que el mercado es capaz de autorregularse, sin necesidad de una intervención pública y sin referencias morales internacionales", escribió.

Desde el contexto nacional a continuación se citan solo algunas manifestaciones en torno a los elevados costos del sistema financiero:

- Para Arrieta y Ruíz (2011) "Movimientos como el de los "Indignados" y "Ocupemos a Wall Street", el cual nació en Nueva York y se extendió por el resto de Estados Unidos, son de los más reconocidos por llevar a cabo marchas masivas, las cuales se han producido en más de 950 ciudades pertenecientes a 100 países del mundo.

En este tipo de protestas participan actores de todo tipo, como: desempleados, músicos, hombres, mujeres de distintas edades y, sobretudo, jóvenes. En Estados Unidos, por ejemplo, algunos han manifestado frustración y hartazgo por la falta de acción en Washington, un elevado desempleo, falta de oportunidades y corrupción. Dicen que hay que poner fin a la desigualdad y ¡el trato especial que reciben los bancos y las corporaciones a expensas del ciudadano promedio!".

Según algunos expertos, consultados por LR (Diario La República) este tipo de protestas juveniles son más una tendencia, teniendo en cuenta la propagación y repercusión que ha tenido la iniciativa alrededor del mundo.

Claudia Soraya Jaimes, directora de Investigaciones de la Universidad del Sinú, Elías Bechara Zainúm, Seccional Cartagena, explicó que se está marcando una tendencia con este tipo de movimientos y que no es solo un acto de moda. Para la investigadora "Este tipo de marchas también se ha realizado en nuestro país y no solamente aquí, sino también en varios lugares de América Latina y Centroamérica. Ya no solamente, se lucha por el derecho fundamental a la educación. En Colombia los jóvenes universitarios reclaman por otros derechos, como el de la salud y las acciones por mejorar la calidad de vida. Cada vez más se le está dando una solidez a todos los movimientos", manifestó Claudia Jaimes.

- El vicepresidente de Colombia, Angelino Garzón, manifestó en un seminario sobre defensa de los derechos de los consumidores, organizado por la Superintendencia de Servicios Financieros (2011) "la necesidad de revisar los costos que cobran las entidades financieras". Al respecto, Angelino Garzón cuestionó el sistema bancario de Colombia. Dijo que las observaciones hechas en días pasados por el ministro de Hacienda, Juan Carlos Echeverry, sobre los abusos de los bancos en sus cobros por los servicios, deben tomarse "de manera tranquila y desprevenida".

Al intervenir en Bogotá en el encuentro sobre Responsabilidad Social Empresarial, dijo que los cobros de los bancos por los servicios que prestan a sus usuarios son de los más altos, comparados con los de otros países. Garzón (2011) "yo lo digo por mi propia experiencia cuando fui embajador en Ginebra, en la Unión de Bancos Suizos nos cobraban por todos los servicios 10 francos suizos al mes".

Garzón aseguró que la reflexión del Ministro de Hacienda "vale la pena analizarla y tenerla en cuenta, porque aquí se trata de que todos ganemos como debe ser en una democracia".

El funcionario propuso que los bancos cobren una tarifa única mensual por los servicios que presten, "esto nos permitiría a los usuarios tener reglas de juego más claras".

Otras voces se han referido al llamado reciente del ministro de Hacienda a la banca, sobre los altos costos de los servicios financieros y plantean que se podría estudiar un cobro diferencial, de acuerdo con el estrato del usuario, siempre beneficiando a los clientes de menores ingresos y que mueven bajas cantidades de dinero en sus cuentas de ahorro. En su mayoría, solo reciben la consignación quincenal o mensual de su salario, pero les resulta muy costoso hacer retiros,

transferencias u otras operaciones a través de la red bancaria o por medio de los cajeros automáticos.

Los bancos han señalado que están dispuestos a estudiar el tema y a buscarle salidas. Ahora, la posición de apoyo del Vicepresidente al llamado que hizo el Ministro de Hacienda, aviva la polémica y abre las puertas al debate.

Los Resultados De Los Bancos En Colombia

Los resultados de los bancos confirman lo que todos reclaman en diferentes manifestaciones. Sus utilidades superan de manera abrupta los resultados de los demás establecimientos financieros. A Septiembre de 2011 las utilidades llegaron a los \$4,3 Billones de pesos colombianos, una cifra que resulta de los intereses cobrados por las operaciones de intermediación y los cobros por las distintas operaciones que realizan sus clientes. Estos resultados se muestran en la Tabla 10.

Tabla 10: Utilidades de Los establecimientos Financieros de Colombia

TIPO DE INTERMEDIARIO	SALDOS A SEPTIEMBRE DE 2011				
	ACTIVOS	INVERSIONES	CARTERA	PATRIMONIO	UTILIDADES

CONCLUSIONES

- El sistema financiero se desborda en sus cobros y se evidencia cuando los costos por los servicios frente a los montos promedio de manejo supera la tasa máxima de usura.
- La banca desarrolla una actividad de intermediación en la cual se materializa una situación atípica a las relaciones entre empresa proveedor. Es decir, la banca es la única empresa que cobra por usar la materia prima (dinero) recibida de sus proveedores (clientes) en el momento en el cual cualquier ciudadano entrega recursos al banco en calidad de ahorros.
- La tasa de interés que reconocen los bancos por sus depósitos de ahorro, que no sobrepasan el 2% efectivo anual, ni siquiera reconocen el costo del dinero a través del tiempo (inflación de 3,5% efectivo anual según expectativas del BR). Pero el cobro (costo) por las operaciones que realizan los bancos si supera la tasa máxima de usura.
- Los bancos cobran el uso de un dinero que corresponde a quien lo usa (el cuentahabiente o ahorrador).
- El costo de las tarjetas de crédito supera de manera significativa la tasa máxima de usura cuando en el costo se incorpora la cuota de manejo que cobran los bancos.

- La banca podrá afirmar que nunca cobra por un préstamo (tarjeta de crédito) por encima de la tasa máxima de usura, pero la realidad es otra cuando el costo que realmente se calcula en un crédito involucra los intereses corrientes y las cuotas de manejo que de manera periódica cobran los bancos.
- Está comprobado que las manifestaciones nacionales e internacionales por los abusos del sistema financiero, no son un capricho de masa sino por el contrario el evidente rechazo al elevado costo que significa cualquier relación con el sistema financiero; especialmente con los bancos.
- Debe el estado a través de sus instrumentos constitucionales y legales proteger a los consumidores financieros de los abusos del sistema financiero.
- El margen de intermediación (diferencia entre la tasa de colocación y la tasa de captación) de los bancos llega aproximadamente al 27,09%. Es decir, mientras los bancos cobran intereses a sus clientes a una tasa máxima del 29,09% efectivo anual, solo reconocen a los ahorradores en promedio el 2%. ¿Será que no es suficiente este margen para atender los costos operacionales de los bancos?,
- Las abultadas utilidades de los bancos son en gran medida el resultado de los cobros excesivos a los clientes por las distintas operaciones que estos realizan.
- Se confirma lo que distintas autoridades y analistas han manifestado en torno al abuso de la banca con sus clientes.
- Los bajos niveles de bancarización en Colombia son el fiel reflejo del costo para acceder a los servicios financieros.

POLÍTICA DE INTERNACIONALIZACIÓN EN INSTITUCIONES DE EDUCACIÓN SUPERIOR EN MÉXICO

Alma Beatriz Navarro Cerda, UABC
Patricia Moctezuma Hernández, UABC

RESUMEN

Los efectos de la globalización en la educación superior ha sido un tema de interés que ha tomado mayor fuerza a partir de las conferencias mundiales realizadas en Francia. No obstante los cambios organizacionales en las instituciones de educación superior asociadas a la internacionalización obedecen a diferentes contextos tanto políticos como sociales, donde su principal propósito es tener capacidad de respuesta ante las complejidades de cada región. Este trabajo explora desde una perspectiva de administración pública las diferentes políticas de gobierno que se han implementado para incentivar la internacionalización de la educación superior en México asimismo desde un enfoque de redes de políticas se hace especial énfasis en el caso de las instituciones de educación superior de Baja California para contrastar la política federal con los efectos locales.

PALABRAS CLAVE: Políticas de Educación Superior, Globalización e Internacionalización

INTERNATIONALIZATION POLICIES IN HIGHER EDUCATION INSTITUTIONS IN MEXICO

ABSTRACT

On behalf of the conferences in France, the effects of Globalization in Higher Education have been a subject of major interest that has taken more and more strength. Nonetheless the organizational changes in higher education institutions associated to Internationalization, respond to political and social contexts, where there main goal is having the response capacity towards the particular necessities in each single region. This work explores from a public administration approach the different government policies that have been implemented to encourage the Internationalization of Higher Education in Mexico. Also from a policy network approach a special emphasis is made of Baja California Higher Education Institutions to contrast federal policy with local effects.

KEY WORDS: Higher Education Policies, Globalization and Internationalization

INTRODUCCIÓN

Las diversas políticas educativas en México a nivel superior se han orientado principalmente en dos ejes: el primero de ellos se caracteriza por la necesidad de incrementar la matrícula y el segundo eje por la consecución y mantenimiento de la calidad educativa. Ambos con el propósito de responder a la visible problemática de falta de cobertura así como a la necesidad de responder a entornos cada vez más complejos, percibiendo que la calidad educativa debe de ir acompañada tanto de pertinencia de los programas como de la diversificación asociada a los diferentes sectores productivos de cada región (Moctezuma, 2003). No obstante que estas problemáticas persisten en el diseño e implementación de las políticas educativas a nivel superior, se observa que en ese proceso se han ido incorporando otros

elementos asociados al fenómeno de la globalización, como un instrumento de adaptación donde la internacionalización de la educación superior mexicana se hace tangible a través de prácticas transfronterizas y locales (Navarro, 2012).

Este fenómeno se ha dado aun cuando no ha habido una política implícita sobre la internacionalización, en un marco de convergencia donde las IES se auto promueven tanto nacional como internacionalmente por otros incentivos como son la creación de prestigio institucional y mayor obtención de recursos públicos. La metodología utilizada de tipo cualitativa ya que el trabajo explora desde una perspectiva de administración pública y con un enfoque de redes de política, las diferentes políticas de gobierno que se han implementado para incentivar la internacionalización de la educación superior en México haciendo especial énfasis en el caso de las instituciones de educación superior de Baja California para contrastar la política federal con los efectos locales.

REVISIÓN LITERARIA

Las universidades actúan en contextos diferentes asociados a su capacidad de asimilación de los procesos globales (Knight, 2005). De ahí que las diversas aportaciones de internacionalización contienen elementos vinculados con aspectos sociales y de calidad, derivado de la demanda y presiones sociales. Desde la visión de Warner (1992) existen diferentes motivos e imperativos que incentivan la orientación de la agenda de las universidades hacia la internacionalización, asociados a la competitividad internacional, los modelos de auto-desarrollo de procesos de apertura comercial en las fronteras y la transformación social incentivadas por el conocimiento adquirido por los estudiantes en el marco de equidad y justicia de los sistemas democráticos modernos. Knight (1994) entiende la internacionalización como un proceso continuo y cíclico, compuesto por seis etapas. La propuesta sugiere que la internacionalización es entendida como un ciclo que incentiva la toma de conciencia de las IES en los compromisos adquiridos ante la sociedad y reafirma la mejora continua a través de la evaluación del proceso.

Davis (1995) identifica factores externos e internos. El modelo organizativo que propone, sugiere el establecimiento de elementos como la planeación, el financiamiento y evaluación de las actividades internacionales, a partir de ejes de organización ad hoc y sistémica. Rudzki (1998) plantea un modelo para la internacionalización de la educación superior considerando la planeación estratégica como un elemento básico, pues identifica cuatro tipos de actividades. Su modelo indica que la institución debe proveer elementos suficientes para mantener una conexión externa cultural, logrando con ello la adaptación de las IES a los cambios del mundo y concentrando sus esfuerzos en las actividades de movilidad estudiantil y académica. Van der Wende (2002) propone un enfoque que contiene objetivos, políticas, estrategias, actividades y efectos sobre las instituciones a través de un esquema que enfatiza la correlación entre la política nacional y la institucional, para definir una política que favorezca la implementación de estrategias para la movilidad estudiantil y académica en las IES. Los modelos anteriores son considerados como las primeras propuestas, de ahí que actualmente la implementación y adaptación en cada institución de educación superior parta de sus propias necesidades y prioridades sustantivas. Partiendo del modelo de Knight sobre el ciclo que incentiva la toma de conciencia institucional se considera que ésta se da a través del fortalecimiento institucional y su nivel de concientización sobre la política institucional implementada de las universidades para su internacionalización.

METODOLOGÍA

Partiendo de una metodología cualitativa con una perspectiva de administración pública y enfoque de redes. Se realizó una síntesis sobre las principales políticas federales de educación superior por sexenio. Y para contrastar la política federal con lo local, en el caso bajacaliforniano, se definió la muestra intencionada, tomando como referencia las instituciones de educación superior que hayan implementado dentro de sus actividades sustantivas estrategias que promuevan la internacionalización de su institución,

por ello, se tomaron en cuenta la Universidad Autónoma de Baja California (UABC) y el Centro de Enseñanza Técnico y Superior (CETYS). De estas instituciones se consideró como principal indicador el tamaño de la participación de los alumnos de licenciatura en experiencias de movilidad con IES extranjeras. Con la información colectada se creó una base de datos, la cual utilizando el instrumento de UCINET sirvió para generar una red que muestra la “centralidad” en las relaciones de las IES muestra con los otros países.

RESULTADOS

Los primeros rasgos para la internacionalización de la educación superior, se pueden percibir a partir la Conferencia Mundial de la Educación Superior en París en 1998 y 2009, donde los tomadores de decisiones de los países con mayor poder en el mundo, asumieron la existencia de una problemática en materia educativa. Derivando en diversas sugerencias para poder minimizar dicha problemática. En ese sentido diversos autores sugieren que la internacionalización de la educación superior es un instrumento que puede ayudar en el corto plazo con el impacto en los estudiantes, personal académico, el contenido y diseño de los programas educativos así como en el largo plazo sobre la calidad de la educación, teniendo impacto en el perfil de los egresados y sobre el posicionamiento de las instituciones. (Talancon, 2007). En el caso mexicano se puede percibir que las políticas educativas han ido orientadas hacia la búsqueda de la calidad (ver Tabla 1), sin embargo, de forma paralela con la consecución del objetivo de alcanzar niveles altos de calidad, las externalidades que han generado las presiones, se pueden observar a través de expresiones derivadas de la internacionalización como son la colaboración y cooperación entre IES ya que estas buscan garantizar la calidad del servicio educativo, generando practicas de movilidad estudiantil a nivel licenciatura.

Tabla 1: Políticas de educación superior por periodo sexenal en México 1982-2012.

Periodo	Presidente	Política	Cambio institucional
1982-1988	Miguel de la Madrid	-La evaluación de la educación superior en México, 1984.	Se enfatizaban los <i>controles de calidad y eficiencia</i> para acceder a <i>nuevas formas de financiamiento</i>
1988-1994	Carlos Salinas de Gortari	-Aportaciones de la ANUIES para la educación Superior, 1989. -Se crea la CONAEVA en 1990. -Propuestas de Lineamientos para la evaluación de la educación Superior.	1994 La internacionalización. Con motivo del Tratado de Libre Comercio de Norteamérica (México, Estados Unidos y Canadá) Practicas formales a partir del establecimiento de convenios.
1994-2000	Ernesto Zedillo Ponce de León	-Crecimiento de Universidades Tecnológicas, -Crecimiento de la matrícula de posgrado. -Continuidad al Programa de Mejoramiento del Profesorado	En 1994 fue creado el Programa Nacional de Superación del Personal Académico, que otorga becas para académicos en servicio que deseen realizar estudios de posgrado. Creación de CENEVAL con el objeto de fortalecer la calidad educativa. Creación e implementación del programa PRONAD.
2000-2006	Vicente Fox Quezada	Desarrollo Social y humano con énfasis en educación de vanguardia.	Participación y colaboración con organismos internacionales para la realización de estudios comparados.
2006-2012	Felipe Calderón Hinojosa	-Crecimiento de Instituciones de Educación Superior	Búsqueda de la calidad de competencia internacional en todos los niveles de la educación superior. Recomendaciones OECD.

Elaboración propia en base a información de los planes nacionales de desarrollo, los informes de gobierno de México y Luengo (2003), disponible en http://www.anuies.mx/e_proyectos/pdf/04_Las_reformas_en_la_Educacion_Superior_en_Mexico.pdf y Brunner (1994), disponible en <http://bibliotecavirtual.clacso.org.ar/ar/libros/argentina/cedes/brunner.rtf> . Esta tabla muestra cual ha sido en terminos generales la orientación de las políticas de educación superior en México y la adopción de los principales rasgos característicos.

En el caso de Baja California, se tomó como referencia la Universidad Autónoma de Baja California (UABC) y el Centro de Enseñanza Técnico y Superior (CETYS), pertenecientes al régimen público y privado respectivamente. En el actual sexenio se concibe la búsqueda de la calidad de competencia internacional, como una tarea sustantiva, y asociado a que la internacionalización es un elemento de la calidad, en el periodo 2010-2 la movilidad estudiantil desarrollada por ambas instituciones se orientó en

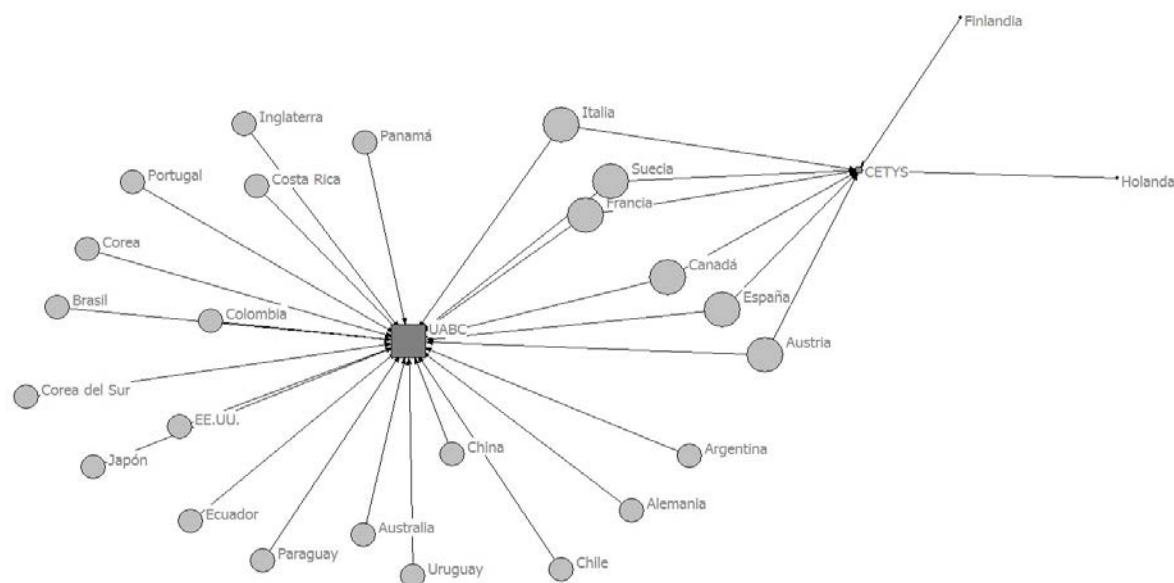

mayor medida hacia España. Cabe señalar que únicamente se utilizó la información disponible en las páginas de internet oficiales de cada institución.

Figura 1: Movilidad Estudiantil periodo 2010-2 UABC y CETYS.

En esta Figura se muestra cual ha sido el nivel de participación de ambas instituciones, la UABC está representada por el color más oscuro que a la vez muestra mayor participación en los países de habla hispana, asimismo CETYS, que está representada por el color claro, muestra una importante participación en España y presencia mayormente en países con lenguas extranjeras.

Figura 2: Nivel de centralidad basado en dos actores UABC y CETYS con otros países.

Esta figura muestra cual es el nivel de centralidad que tiene cada Institución analizada en el periodo 2010-2. Donde se puede observar que la participación de la UABC con otros países es mayor que CETYS, de tal forma que el nodo que las representa se diferencian por su tamaño. Asimismo el tamaño de los nodos referentes a los países están determinados por el nivel de importancia que tienen en la participación de la movilidad de estas universidades con sus universidades, por ejemplo en el caso de Italia, Suecia y España, el tamaño del nodo que los representa es más grande ya que están relacionados con los dos actores.

CONCLUSIONES

Los impactos de las políticas federales en materia educativa son percibidos a través de la capacidad institucional que tienen las IES, de generar sus propios convenios de participación con otras IES extranjeras, de ahí que desde el sexenio foxista se percibe la necesidad de colaborar con organismos internacionales para la búsqueda de la calidad. En el actual periodo resalta la toma de conciencia sobre la necesidad de la calidad por la competencia internacional, lo cual en el caso bajacaliforniano, las IES muestra, expresan una necesidad de atención hacia la sociedad cada vez más compleja. Por ello se concluye que los impactos en las políticas locales coinciden en tiempo con el diseño de la actual política federal, esto, de acuerdo con la revisión literaria debido a que los logros de cada universidad son resultado tanto de un proceso de toma de conciencia institucional, de planeación estratégica, de factores externos e internos (Knight 1994, Rudzki 1998, Davis 1995, Van der Wende 2002) y del diseño de su política. El aporte del enfoque de redes de política señala que la UABC perteneciente al régimen público han potencializado mayormente las prácticas de movilidad estudiantil en Baja California. Mientras que CETYS, como institución privada ha hecho grandes esfuerzos por generar prácticas de movilidad. Finalmente se observó que existen rasgos que promueven la internacionalización a través de la calidad educativa. Como es el caso de las recomendaciones hechas al Programa Sectorial de Educación 2007-2012 de México por parte de la Organización y Cooperación para el Desarrollo Económico (OCDE). De ahí que las políticas internas de cada institución determinan su sistema de administración que auspicie las prácticas para la internacionalización y de ello dependerá el éxito o no de su institución en este proceso.

CLIMA LABORAL: LA INFLUENCIA DE LA SUPERVISIÓN, LOS FACTORES ORGANIZACIONALES Y LA PREDISPOSICIÓN DE LOS EMPLEADOS

Jorge Hernández Palomino, Instituto Tecnológico de Ciudad Juárez

José de Jesús Espinoza, Instituto Tecnológico de Ciudad Juárez

Manuel Aguilar Arellano, Instituto Tecnológico de Ciudad Juárez

RESUMEN

Esta investigación analiza con un diseño cuantitativo experimental la influencia de la supervisión, los factores organizacionales y la predisposición de los empleados en empresas pyme de México. Para realizar el análisis, se utilizó el Modelo de Agresión General (GAM) de Anderson y Bushman. Para la prueba de las hipótesis se realizó análisis de regresión múltiple. Los resultados de este estudio sugieren que la supervisión abusiva y un clima de agresión en el trabajo tienen un efecto directo en la intención de participar en agresiones en el trabajo en comparación a la supervisión positiva y un clima organizacional no agresivo. El presente estudio provee apoyo empírico para la hipótesis de investigación, de cómo las provocaciones de los supervisores y las señales agresivas en la empresa tienen un efecto directo en participar en las agresiones. Las implicaciones prácticas de los resultados son sujetas a discusión. Las futuras investigaciones podrán analizar el uso de otros escenarios para manipular la percepción de los abusos en la supervisión. Otras investigaciones pueden realizarse en diferentes tiempos y otro tipo de industrias y poder replicar el presente estudio. Son presentadas para este propósito las limitaciones del presente estudio.

PALABRAS CLAVE: Clima organizacional, supervisión, factores organizacionales.

INTRODUCCIÓN

La agresión en el trabajo es una epidemia creciente en las organizaciones. Es de suponer que la mayoría de los empleados son propensos a experimentar formas de agresión no física, en el lugar de trabajo como se observó, hablando en un tono de enojo, y detrás por la espalda en algún momento de sus carreras (Glomb, 2002; Keashly, Trott, y MacLean, 1994). Pero también, la mayoría de los comportamientos agresivos en el lugar de trabajo tienden a ocurrir entre compañeros en el mismo nivel en la organización (Baron y Neuman, 1998). Los intercambios agresivos, también puede tener lugar entre los más altos puestos de la jerarquía de la organización en contra de sus subordinados (Tepper, 2007). En sí los supervisores que son demasiado críticos, exigentes y duros con sus subordinados tienden a impulsar más la agresión en el lugar de trabajo, para incitar a la agresión en represalia a sus subordinados (Bies y Tripp, 1995). La agresión en el lugar de trabajo en cualquier forma; puede tener graves repercusiones para los objetivos de la organización, debido a malos tratos que suscitan resultados, tales como depresión, ansiedad, disminución de la vida y la satisfacción en el trabajo, incluyendo las quejas psicósomáticas (Cortina y Magley, 2003). Pueden existir consecuencias graves para las organizaciones que incluyen reducción de la productividad y el aumento de casos de ausentismo, la rotación; provocando situaciones o acciones legales (Rayner, Hoel, y Cooper, 2002).

La investigación empírica ha demostrado que no todos los individuos responden a la incidencia de la supervisión abusiva de una manera uniforme y que sus percepciones y el comportamiento posterior están influenciados por factores individuales y situacionales (Tepper, 2007). Las diferencias individuales como

la personalidad agresiva, la autoestima y el auto-monitoreo han señalado que es importante tomar en cuenta las predisposiciones hacia la agresión. Los estudios recientes han demostrado que en las organizaciones donde las normas hacia la desviación y la percepción de injusticia en acordes con las políticas y procedimientos, así como los modelos agresivos de rol son frecuentes, los empleados son más propensos a involucrarse en actos de agresión en el lugar de trabajo (Aquino, Tripp, y Bies, 2006).

En este sentido, los factores organizacionales pueden ser responsables de crear y mantener un "clima de agresión en el lugar de trabajo", donde las normas de comportamiento aceptables incluyen la hostilidad, la adversidad y el trato injusto. A pesar de la línea emergente de investigación dedicado a la comprensión de la agresión en el lugar de trabajo, pocos estudios han investigado el cómo las percepciones del clima organizacional pueden influir en el comportamiento agresivo en las organizaciones (Robinson y O'Leary-Kelly, 1998; Spector, Coulter, Stockwell y Matz, 2007). Una característica de la investigación sobre clima organizacional y la satisfacción laboral es que, habitualmente los estudios se llevan a efecto en grandes corporaciones y con empleos que implican algún tipo de mando. En tal sentido, no hay estudios efectuados en pequeñas y medianas empresas. Sin embargo la realidad económica de nuestro país es bastante diferente, puesto que la gran mayoría de las organizaciones productivas, entran en la categoría de pequeñas y medianas empresas; es decir, aquellas que poseen menos de 250 empleados. De ello se desprende que pueden existir diferencias significativas tanto en el clima como en la satisfacción y por ende en la relaciones entre ambos constructos, tomando en cuenta la función y el tamaño de la organización que se estudie. En las pequeñas y medianas empresas, al contar con un número reducido de personas; la presión, el control y las relaciones formales e informales, presentan características diferenciales con respecto a las existentes en las grandes empresas. Este estudio tiene como objetivo principal presentar los resultados del estudio sobre el clima organizacional y la satisfacción laboral, en el que se relacionan los dos constructos y sus dimensiones, con la particularidad de que dicho estudio se efectuó entre las pymes del estado de Chihuahua, México.

REVISIÓN DE LITERATURA

El concepto de la agresión en el lugar de trabajo puede tomar muchas formas en el contexto organizacional (Snyder, 1974). A lo largo del tiempo, una variedad de conceptualizaciones han surgido para describir las diversas formas en que se incluyen etiquetas tales como las conductas antisociales de trabajo (Robinson y O'Leary-Kelly, 1998), las conductas de represalia (Skarlicki y Folger, 1997), la agresión interpersonal (Glomb y Liao, 2003), la desviación en el lugar de trabajo (Robinson y Bennett, 1995), la supervisión abusiva (Tepper, 2000), y la agresión general en el lugar de trabajo (Baron y Neuman, 1998). Algunos teóricos coinciden en cada una de las etiquetas del constructo de la agresión general en el lugar de trabajo (Bowling y Beehr, 2007), pero difieren en varias dimensiones en relación con sus autores, los objetivos, la gravedad de las acciones, la intencionalidad y consecuencias (Snyder, 2005). La agresión en el lugar de trabajo, por lo tanto, puede definirse como cualquier forma de comportamiento que se lleva a cabo por un empleado, con la intención de hacer daño a la organización o a sus miembros (Baron y Neuman, 1998; Geddes y Baron, 1997). Por otra parte, esta conceptualización incorpora actos voluntarios de la desviación que violan importantes normas de la organización, que pueden ser dirigidos a los individuos o a la propia organización (Robinson y Bennett, 1995). Puede ser causada por factores, ya sea dentro o fuera del dominio de la organización (O'Leary-Kelly, Griffin y Glew, 1996). Buss (1995), establece que la taxonomía proporciona una base para la comprensión del amplio espectro de comportamientos agresivos que pueden manifestarse en el lugar de trabajo.

Por lo tanto, todos los actos de agresión, teóricamente se pueden clasificar en varios conjuntos de dicotomías: verbal-física, directa e indirecta, activo-pasivo, y abierta-encubierta. La agresión verbal crea daño a través de palabras, mientras que la agresión física causa un daño a través de hechos o actos. La agresión directa se lleva a cabo en situaciones cara a cara, cuando el perjuicio se entrega directamente a la víctima, mientras que la agresión indirecta consiste en infligir daño a través de las acciones de los demás

o los ataques a los objetos de valor de la víctima. La agresión abierta revela la identidad del agresor y sus intenciones, mientras que la agresión encubierta oculta la identidad de los agresores y sus intenciones (Baron y Neuman, 1998; Bjorkqvist, Osterman, y Lagerspetz, 1994).

Una de las dificultades más importantes que tiene que superar la PYME en general y particularmente en referencia a la PYME mexicana es sus prácticas informales de gestión de los recursos humanos. Existe una combinación muy valiosa de experiencia, equipo de capital, conocimientos técnicos y cultura laboral en México, los cuales no han sido aprovechados por estas organizaciones en beneficio de la competitividad y productividad (Hernández, Espinoza y Aguilar 2012).

METODOLOGIA

Esta investigación es de campo y utiliza un diseño experimental. La información obtenida se generó a partir de los estudios realizados entre 384 empleados de empresas pyme de Ciudad Juárez. Las pequeñas y medianas empresas (Pymes), que representan el 97% de las empresas en México, son las que tienen más problemas hoy en día y son las que requieren más asesoría. Estas empresas tienen personal altamente calificado, solo que las prácticas de gestión de personal y clima organizacional han afectado sus operaciones. Los dirigentes en las pymes han intentado administrar el personal de manera empírica, sin ninguna formalidad, ya que no se cuenta con una guía para administrar al personal y ajustar la cultura organizacional. En orden de recolectar la información, el instrumento Modelo General de Agresión (GAM, por sus siglas en inglés), fue utilizado. Anderson y Bushman de (2002) crearon el Modelo General de Agresión (GAM) y fue utilizado como la base teórica para el estudio actual, ya que se centra en la "persona en la situación" para explicar el comportamiento agresivo (p. 34). El GAM es un modelo integrador que incorpora las principales propuestas de los cinco teorías de la agresión: la teoría cognitiva neosociación (Berkowitz, 1989), teoría del aprendizaje social (Bandura, 1977), teoría del guión (Huesmann, 1986) la teoría de la excitación de transferencia (Zillman, 1983), y la teoría de la interacción social (Tedeschi y Felson, 1994). De acuerdo con el GAM, el efecto combinado de la "persona en la situación", describe un episodio o una interacción social permanente para la agresión.

MUJERES EN LA ADMINISTRACIÓN DE LA EDUCACIÓN SUPERIOR EN AMÉRICA LATINA ¿ESTÁN TODAS LAS QUE SON O SON TODAS LAS QUE ESTÁN?

Carmen Leticia Jiménez González, Université de Montréal
Michel Laurier, Université de Montréal

RESUMEN

En los últimos años, las universidades se han visto en la necesidad de adecuar sus procesos para adaptarse a la nueva dinámica del contexto, el enfoque de administración a corto y mediano plazo es hoy una realidad de la crisis económica mundial. Una administración efectiva en este campo, amerita una máxima prioridad. A este respecto mujeres y hombres compartimos responsabilidad más no oportunidad. Los números en América Latina hablan del alentador crecimiento en la matrícula y graduación universitaria de mujeres en las últimas décadas de más del 50% del total de inscritos y graduados. Sin embargo el panorama laboral no es el mismo, los datos de la UNESCO marcan que existen claras desigualdades en cuanto al acceso de las mujeres a puestos de dirección, pues a medida que es mayor el reconocimiento y prestigio de la actividad laboral es menor la representación femenina. Es importante entonces plantearnos un cambio de actitud que requiere de acciones en diferentes frentes. En lo que respecta a las universidades, es necesario establecer estrategias y políticas dentro, que den un nuevo orden a la administración vista desde una perspectiva de equidad de género. El presente documento forma parte de la revista de literatura de la tesis doctoral de la autora..

INTRODUCCIÓN

El reto del presente documento tiene como objetivo más allá de un artículo de opinión o exposición de resultados, más bien un texto de reflexión, que facilite la discusión sobre la participación de las mujeres en la Administración de las Instituciones de Educación Superior que, por su condición, es necesario visualizar desde distintos ángulos y bajo la perspectiva de las mujeres.

No se pretende de ninguna forma elaborar un ensayo crítico sobre los procesos administrativos que rigen en las IES, la finalidad es dar una mirada, acotada si bien es cierto, sobre los espacios que se han logrado y los retos a los que se enfrentan muchas mujeres que quieren y pueden participar de esta monumental tarea de educar y generar talento en las universidades y que tanta falta le hace a nuestras sociedades latinoamericanas. Este estudio se concentra en la búsqueda de indicadores y números de cuatro áreas específicas matrícula, graduaciones, participación laboral y altos puestos directivos de las mujeres, de tal forma que permita dar fundamento a los estudios más profundos sobre las el liderazgo femenino y su participación en la administración de las IES.

REVISIÓN LITERARIA

En los últimos años, las universidades como la mayoría de empresas y gobiernos se han visto en la necesidad de adecuar sus procesos para adaptarse a los nuevos eventos del contexto, el enfoque de administración a corto y mediano plazo es hoy una realidad de la crisis económica mundial, ahora los líderes se preparan para hacer frente a un nuevo panorama económico mucho más dinámico que años atrás. Ello debe ocasionar su transformación en organizaciones que innovan y aprenden de sus propias experiencias y desempeño. Hoy más que nunca se plantea el reto de crear un ambiente donde los mejores cerebros, ideas y liderazgo puedan prosperar. En este contexto, el factor determinante y más importante

de la competitividad de un país es su talento, las capacidades y habilidades humanas, la educación y la productividad de su fuerza de trabajo (Zahidi & Herminia, 2010) La enseñanza superior es el campo tradicional de los líderes de la sociedad y de la mano de obra especializada. Actualmente la educación de un estudiante en nuestras aulas representa una inversión para el país, esta educación debería ser retribuida mediante una efectiva contribución personal al desarrollo cultural, social y económico de una nación. A este respecto mujeres y hombres compartimos responsabilidad.

Al respecto de la participación femenina se sabe que en muchos de los países desarrollados las mujeres representan ahora más de la mitad de las generaciones graduadas en las universidades y en muchas economías emergentes, las brechas de género en la educación superior se están cerrando dramáticamente, así las mujeres constituyen una gran parte de la reserva del talento disponible para las naciones por lo tanto la competitividad de una nación se puede ver relacionado con el sí y cuándo se aprovecha el talento de las mujeres. La formación profesional tiene un papel clave en la segregación en el mercado laboral de América Latina, pese a que en las últimas décadas se dio un acelerado incremento de los niveles educativos de la población y en particular de las mujeres jóvenes.

Tabla 1: Número de matriculados por País

País	1975	1995	2004	2008
Argentina	579,736	1'054,145	2'026,735	2'208,000
Brasil	1'089,808	1,661,034	4'163,733	5'958,000
Chile	149,647	327,074	567,114	753,000
México	562,056	1'420,461	2,236,791	2'623,000

Fuente: extracto de datos de la tabla del mismo nombre en el Informe CINDA educación Superior 200(CINDA, 2007)7 y 2011

La tabla anterior muestra la clara evolución de la matrícula en la educación superior durante los últimos 30 años. Se observa por ejemplo países que han duplicado su matrícula. Las tasas brutas de matrícula reflejan un incremento en el número de estudiantes en los últimos treinta años en más de seis veces, mientras que a nivel global este incremento es prácticamente tres veces de 9% a 26%. CINDA informe 2011(Brunner & Ferrada, 2011)

Tabla.2: Matrícula total en educación superior y porcentaje de mujeres inscritas

País	Matrícula total (en millones) 2004	Matrícula femenina 2004	Matrícula total (en millones) 2008	Matrícula femenina 2008
Argentina	2,	58%	2.208	60%
Brasil	4.1	55%	5.958	56%
México	2.3	52%	2.623	50%
Chile	.5	48%	753	49%

Fuente: UNESCO, Global Education Digest 2006, Informes IESALC 2006, Informes sobre la educación superior en América Latina 2006 extracto de datos citado por Informe de educación Superior en Iberoamérica 2007: 103 Compendio mundial educación 2010

Expresada en números absolutos, la matrícula alcanza niveles masivos de manera evidente en los países con mayor población como lo es el caso de Brasil, México y Argentina. De forma representativa la matrícula femenina sobrepasa el 50% en la mayoría a excepción de Chile con un 48%. El crecimiento de la matrícula terciaria se acelera a partir de los años 90, es cuando se registra un incremento significativo de mujeres inscritas. En términos generales, el número de mujeres matriculadas en instituciones de educación superior aumentó prácticamente dos veces más rápido que el de los hombres. De esta forma hoy más de la mitad de la población estudiantil en la zona de América Latina y el Caribe corresponde al sexo femenino. A nivel de educación terciaria, en dos de cada tres países que reportan datos, las tasas femeninas de matrícula superan las de los hombres. Lo anterior se corrobora en el informe de de la UNESCO(2011, p. 29) que apunta que la Tasa de paridad de género en la educación terciaria para América latina en 2008 es de 0.98 El Índice de Paridad entre los Generos (IPG) es una medición utilizada para evaluar las diferencias de género en los indicadores de educación. Se define como la razón entre el

valor correspondiente al sexo femenino y el correspondiente al sexo masculino para un determinado indicador. Un IPG con valor 1, significa que no hay diferencia entre los indicadores de niñas y niños, es decir son idénticos. La UNESCO (2003) ha definido un valor IPG entre 0,97 y 1,03 (después de redondear) como el logro de la paridad entre los géneros. Esto permite algún error de medición si bien no implica una posición sobre la aceptabilidad de un nivel determinado de disparidad. El informe CINDA señala una tasa bruta de ingreso a la enseñanza superior por parte de los países de América latina en un 20% y un 60% en el nivel de los programas universitarios.

Tabla. 3: Número anual de graduados de educación superior y porcentaje de mujeres graduadas

País	Total graduados IES 2005	Mujeres 2004	Total graduados IES 2008	Mujeres 2008
Argentina	79,649	60%	236,000	65%
Brasil	497,589	63%	917,000	63%
Chile	64,364	50%	87,000	56%
México	339,450	52%	420,000	58%

Fuente: extracto sobre la base UNESCO, *Global Education Digest 2006* y UNESCO Institute for statistics, *education Database 2006*. Informe CINDA 2011 Sobre base Unesco *Compendio Mundial 2010*

En términos globales el volumen de personas que se gradúan es proporcional a la población general, sin embargo se aprecia que en el caso de los países representados en la tabla las tasas de graduación de las mujeres son más altas que las de los hombres. Es posible rescatar la afirmación de Arcelia Valcárcel (2011) “Contamos hoy con la generación de mujeres mejor preparadas de la historia” sin embargo las barreras persisten. En el ámbito laboral el panorama se presenta mediante el incremento en la participación de la mujer en la fuerza laboral, al respecto la OIT señala en su reporte de 2007:

“El número de mujeres en la fuerza laboral del mundo es mayor que nunca antes, pero persiste la insalvable brecha de género. De acuerdo con este informe se ha registrado el número más alto de mujeres que participan en el mercado laboral, incluyendo tanto aquellas que tienen empleo como las que están buscándolo en forma activa. Las estimaciones de la OIT indican que en 2006 había 2,9 mil millones de trabajadores en el mundo, de los cuales 1,2 mil millones eran mujeres. El informe también destaca que 47,9 por ciento de las mujeres que trabajan están en situación de empleo remunerado y asalariado, una mejoría frente al 42,9 por ciento de 10 años atrás”.

GINEBRA (Noticias de la OIT) Estudio de la OIT advierte sobre la feminización de la pobreza http://www.iidh.ed.cr/comunidades/DerechosMujer/noticia_despliegue.aspx?Codigo=3947a laboral (Miércoles, 07 de Marzo de 2007) consultado el 28 de febrero 2012

En el caso de América Latina, la tasa de participación laboral de las mujeres alcanzó, para finales de los años noventa un 44.7% (Valenzuela & Reinecke, 2000), y en 2008 se elevó al 52.5% (Conde, et al., 2011, p. 14). En tanto las oportunidades de empleo para las mujeres crecen a un ritmo superior que las oportunidades para los hombres: la ocupación femenina en la región crece a una tasa anual de 4.43%, en tanto la masculina incrementa en un 2.94% (Abramo & Valenzuela, 2006). En datos reciente el reporte de The Corporate Gender Gap 2010 se revisa la participación laboral de las mujeres en 20 países del mundo, destacando Estados Unidos el cual reporta un 56%, seguido de España con un 48% y Canadá con un 46%, en lo que respecta para América Latina representada por México con un 36% y Brasil con 35% de mujeres empleadas por país. Dicho reporte señala también la importancia de la disminución de la brecha de paridad hombre y mujer laborando ya que esto puede tener fuertes repercusiones económicas para economías desarrolladas lo que por ejemplo aumentaría el PIB de los EE.UU. hasta en un 9%, en la zona del euro en un 13% y en Japón de un 16%. Replicando la fórmula en los países emergentes y de América Latina hasta con un 10% de repercusión en su economía (Zahidi & Herminia, 2010). Apoyando los porcentajes anteriores, Barsh (2008) en los resultados de su investigación pone de manifiesto una fuerte correlación estadística entre los número de mujeres trabajando en y la salud financiera y el desempeño de las organizaciones. El resultado final: las empresas obtienen mayores beneficios de un equipo más diverso y sus resultados se ven gratamente favorecidos al tener es sus equipos directivos un

mayor número de mujeres. Sin embargo a pesar del adelanto en la carrera de las mujeres en cuanto a su inserción laboral, en lo que respecta a su acceso a puestos de liderazgo el progreso parece haberse estancado. El porcentaje de mujeres en los consejos y los equipos de alto ejecutivo sigue estancado en alrededor del 15 % en muchos países, y de los directores ejecutivos de “Fortune 500” solo el 3% son mujeres (Barsh, 2008). En el ámbito de la educación superior es importante señalar que existe poca información, no se cuenta con indicadores que de fe de la presencia o ausencia de mujeres en puestos directivos esto es destacado por Olavarría (2011) en solicitud de la OUI donde además señala como resultado de su investigación que solo una de cada cuatro rectores es mujer, y una mujer de cada ocho directores de facultad o departamento. Organización Universitaria Interamericana que trabaja a través del Colegio de las Américas (COLAM) las redes de Universidad y Género. Para mayor referencia ver programa EMULIES Espacio de Mujeres Líderes en la Educación Superior de las Américas. De este modo vale reafirmar que la contradicción presencia vs.

ausencia de la mujer en determinados espacios de la vida laboral y educativa en la que por un lado crece su participación pero por otra su ejercicio en el liderazgo se ve detenido (Barberá, 2002), tal y como menciona Joan Williams profesora de la Universidad de Washington, citada por Clancy (2009) “las mujeres cada vez han ido engrosando la fuerza de trabajo. Hoy grandes cantidades de mujeres se encuentran laborando, pero como los árboles de una montaña, se ven menos en la medida en que se asciende al pasaje ejecutivo, hasta que se alcanza una suerte de límite arbóreo en donde hacia la cúspide ya no se encuentran más ejemplares.”

METODOLOGÍA

Para el desarrollo del presente documento se llevó a cabo la revisión de investigaciones realizadas sobre la administración de las Instituciones de Educación Superior, que incluyeran en sus estudios la participación de las mujeres, o el papel que estas desarrollan en dichas instituciones, se eligieron cuatro países de América Latina por su representatividad. Se buscaron principalmente cuatro indicadores que representaran de una forma cuantitativa dicha participación. De esta forma se obtuvieron datos de matrícula, como indicador de acceso a la educación por parte de las mujeres. Número de mujeres graduadas para verificar la perseverancia y continuidad, a fin de verificar capacitación para el desempeño laboral. En tercera instancia se buscaron índices de inserción laboral para obtener un panorama de la participación de las mujeres en el ámbito económico. Finalmente se indagó sobre el número de mujeres en el ejercicio del poder desde la administración en general de las empresas y desde lo particular en las Instituciones de Educación Superior. Todo lo anterior con la intención de dar pie a tener una visión global de la situación de las mujeres que son y administran la educación superior en las altas esferas.

RESULTADOS

Si bien en el acceso a la educación y formación de las mujeres se ha habido un cambio de escenario evidente, representado con arriba de un 50% en la matrícula y un 58% en graduaciones y adicionado con cerca de un 60% de inserción en el campo laboral no parece no traducirse toda vía en una mayor presencia en las IES pues según Olavarría solo 1 de cada cuatro altos directivos es mujer y el número va en decremento en el ámbito de las ciencias y la investigación (Lafortune, 2008) o la administración (Bonder, 2004; Gutiérrez, Bañuelos, Flórez, & Suárez, 2004; Olavarría, 2011); las barreras se siguen representando un reto difícil para las mujeres, así en las IES los nombramientos y prácticas de acceso continúan siendo discriminatorias (Pont, Cárdenas, & Ramírez, 2008) no puede esperarse que el número de mujeres en la dirección de la educación superior aumente, mientras que en relación con los hombres, solo algunas pocas ocupen cargos académicos, administrativos indispensables para llegar a puestos de dirección. Hay que recordar que el acceso y la representación que el desempeño de cargos directivos entraña, independientemente de mayor prestigio y reconocimiento social, representa también la oportunidad de visibilidad y presencia en el terreno institucional que permite mayor influencia en la

decisiones medulares, uno medio importante para mejorar el acceso de otras mujeres al poder, así como la introducción de diferentes concepciones de lo que significa liderar y administrar instituciones educativas, las acciones de las mujeres en este ámbito así como sus modos de hacer la labor, sin duda resulta enriquecedora para el ámbito académico (Escolano, 2009). UNESCO (2011) (Brunner & Ferrada, 2011)

CONCLUSIONES

Es indispensable contar con programas que apoyen el desarrollo de las mujeres en las IES, que las impulsen a desarrollar capacidades directivas y de gestión en puestos administrativos y de alta dirección. Pero esto solo se logrará con la unión de esfuerzos como el desarrollado por la OUI a través de su Espacio de Mujeres Líderes de La educación Superior de las Américas que con un programa completo incide en el área de investigación, de formación, y de difusión y cooperación en la búsqueda de nuevas formas de trabajar en las instituciones desde una perspectiva de género. Se piensa que es casi imposible implementar nuevas políticas dadas la extrema oposición que despiertan al plantearse, y sugieren primero un cambio de actitud. Sin embargo la experiencia demuestra que si esperamos a modificar actitudes, nunca lograremos cambiar las reglas. No obstante si logramos cambiar las normas, las actitudes se irán transformando. El cambio de actitud requiere de acción en diferentes frentes.

En la vida familiar, personal y laboral. En lo que respecta a las instituciones, es necesario establecer políticas dentro que den un nuevo orden a la administración vista desde una perspectiva de equidad de género, para lo cual es indispensable la participación de las propias mujeres dejando de **estar** para pasar a **ser** parte de un proyecto de cambio en la administración educación superior. Generalmente se señala que *ser*, como verbo de la *intemporalidad*, atribuye cualidades consideradas como *permanentes*, independientes de toda circunstancia, mientras que *estar*, verbo de la *temporalidad*, las considera como *transitorias o accidentales*, determinadas por alguna circunstancia. Es necesario que en los puestos de decisión y administración de las IES no solo *estén* mujeres es necesario que *sean* mujeres con ese sentido de intemporalidad las que puedan compartir el poder junto con los hombres, solo así se puede maximizar el potencial de competitividad y desarrollo, cada país tiene que luchar por la equidad de género, es decir dar a las mujeres los mismos derechos, responsabilidades y oportunidades que a los hombres. Dice Peter Drucker que las Instituciones educativas “...no proveen bienes o servicios, ni controlan actividades de la sociedad. Su producto no es un par de zapatos ni una reglamentación efectiva, si no un Ser humano cambiado. Estas organizaciones son agentes de cambio humano. Su producto es un paciente curado, un niño que aprende, un muchacho transformado en un adulto que se respeta a sí mismo, una vida humana eternamente cambiada.”(Drucker, 1992). Todo nuestro agradecimiento a la **Organisation Universitaire Ineramiéricaine** OUI (por sus siglas en francés) por su valioso apoyo, económico y de acceso a la información.

PRACTICAS DE GESTION DEL TALENTO HUMANO EN EMPRESAS DEL VALLE DEL CAUCA.

Juan Carlos Aguilar Joyas, Universidad Autónoma de Occidente

RESUMEN

Los saberes acumulados por una organización en su proceso de desarrollo y crecimiento, y la forma como los utilice, constituyen la ventaja competitiva de mayor impacto en este mundo globalizado; es por ello que, para establecer un diferenciador competitivo, el secreto radica en el nivel de formación y gestión que la organización establezca para su Gestión del talento humano (GTH). Partiendo de esta premisa, se desarrolló la investigación para conocer las prácticas de 25 empresas locales respecto a la gestión del talento humano, logrando evidenciar los enfoques, modelos aplicados y el rol desempeñado por las áreas de gestión humana como socias estratégicas del negocio, suponiendo de esta manera, el cambio de un enfoque operativo hacia uno que agregue valor. Igualmente, se logran identificar los principales retos que han enfrentado estas empresas, mostrando que por ejemplo, las relaciones laborales, los programas de bienestar, la medición de la efectividad del talento humano y los procesos de subcontratación son aspectos sensibles en muchas las empresas colombianas. Estos resultados plantean que, para mantenerse competitivas, las organizaciones deberán preocuparse por mejorar sus prácticas con el fin de atraer, desarrollar y retener un talento humano que cada vez es más escaso y diverso.

PALABRAS CLAVES: Talento humano, estrategia, prácticas de talento humano, desarrollo de personas.

HUMAN TALENT MANAGEMENT PRACTICES IN VALLE OF CAUCA COMPANIES

ABSTRACT

Knowledge accumulated by companies in their processes of growth and development, and the way in which there are used, form these the competitive advantage of biggest impact in this globalized world; for this reason, the secret in developing a bigger differentiator to compete is in the secret of the knowledge that the organization wants for their Human Recourses Management. Starting in this point, a research was developed to gather information on 25 local companies and their Human Resources practices, successfully showing that focus applied models and the role played by human resources areas as business partners, supposed that in this way, the change from an operative model to one that adds value. On the other hand, the principal challenges where identified for the present and the future that these companies face showing that for example, the industrial relations, welfare programs, measuring the effectiveness of human resources and outsourcing processes are aspects sensible for many Colombian companies. This results show that, to be able to keep being competitive, organizations should worry about to improve their practices in a more competitive way, and attract, develop and retain human talent that each time is more diverse and few.

KEY WORDS: human talents, strategy, human talent practices, development of people.

INTRODUCCION

La gestión del talento humano en las empresas colombianas se lleva a cabo de una manera muy diversa, como resultado de las diferentes regiones, tipos y tamaños de empresas. Esta investigación presenta un contexto de cómo algunas de las empresas de la región del Valle del Cauca, y en especial de la ciudad de Cali abordan las prácticas de la gestión del talento humano, analizando los elementos los restos a los que se enfrentan, el rol como socio estratégico del negocio y sus procesos. Con el fin de conocer hasta que punto las tendencias administrativas han permeado a las empresas de la región y que acciones de apoyo se podrían determinar se inicio este trabajo de investigación con el objeto de conocer las prácticas y el rol de las áreas de talento humano como elementos fundamentales para el desarrollo de la empresa.

Los resultados de la investigación permiten evidenciar que se ha avanzado en cuanto a las practicas utilizadas para el desarrollo del talento humano frente a la competitividad y tendencias del mercado, pero estas empresas igualmente se encuentran frente a grandes desafíos para la gerencia del talento humano en el sentido de fortalecer su orientación estratégica y la medición del valor que agregan a la organización. A partir de las anteriores consideraciones y buscando contribuir con elementos relevantes para el desarrollo de esta área en las empresas de la región se identifican mecanismos o instrumentos de referenciación que potencien el mejoramiento continuo de sus estrategias

REVISIÓN LITERARIA

En la actualidad, existen tres elementos que distinguen con claridad a una gestión estratégica del Talento Humano (GTH), son: la consideración del talento humano como el elemento decisivo en la competitividad de las organizaciones, el enfoque sistémico o integrador en la GTH y la necesidad de que exista coherencia o ajuste entre la GTH y la estrategia organizacional. Lo anterior confirma que hoy en día no se debe visualizar a las personas como recursos organizacionales, objetos serviles o meros sujetos pasivos del proceso, sino como socios estratégicos, entes diversos, activos que provocan las decisiones, emprenden las acciones, crean la innovación en las organizaciones y generan ventaja competitiva (Barney, y Wright. 1998). son personas dotadas de características y puntos de vista propios y sobre todo, heterogéneos, sin embargo todo este talento por si solo no es garantía de mejoras inmediatas y tangibles en la organización o grupo, ya que los resultados y beneficios solo se logra con un a gestión eficaz de la fuerza de trabajo (Jayne y Dipboye. 2004) liderada por la gerencia de recursos humanos quienes deben estar involucrados en la gestión de los procesos de cambio y mejoramiento de la capacidad organizacional (Shahrabi, 2011) Dado que en la actualidad las áreas de gestión del talento humano desempeñan un rol mas participativo e importante en la planeación y estrategia de la organización, es de esperar que estas áreas apliquen todo su conocimiento y se conviertan en socios estratégicos en el desarrollo de su plan estratégico y el de la empresa.

En consecuencia, se espera que las áreas de talento humano de las organizaciones empiecen a genera valor a esta, respaldando la creación de capacidades organizacionales, aumentando el capital intelectual de la empresa para asegurar la eficiencia de los procesos que le son propios para dejar de tener un enfoque interno para asumir un enfoque externo, esto es, de hablar un lenguaje de los recursos humano a hablar un lenguaje de los negocios, preocuparse por los problemas críticos de la empresa y buscar la manera de aportar a su solución desde la acción de las personas y que la organización “mejore su eficacia y eficiencia de manera ética y socialmente responsable” (Werther y Davis. 2008)Autores como Dave Ulrich (1997) habla de la función estratégica de los departamentos de recursos humanos cuando hablaba de convertir la estrategia en acción desde los departamentos que gestionan personas. Actualmente el talento humano se ha convertido en el valor diferencial por excelencia en las organizaciones, lo que sabe una organización y cómo lo usa constituye la única ventaja competitiva. Es por ello que cada vez más las organizaciones giran en torno a las personas con talento y sus necesidades porque lo que diferencia a una empresa de otra es su capital humano y lo fundamental es saber gestionar ese talento.

Aspectos Generales Del Valle Del Cauca

El departamento del Valle del Cauca está ubicado al suroccidente de Colombia y cuenta con una extensión territorial de 22.140 Km². La participación preliminar en el año 2009 del Departamento en el PIB nacional, fue del 10,1% y tiene una población, según datos reportados por el censo 2005 de 4.161.425 habitantes, su capital es Santiago de Cali que tiene una población proyectada al 2011 de 2.291.000 habitantes siendo la tercera ciudad del país.

METODOLOGÍA

El proyecto se desarrolló aplicando una metodología cuantitativa, con la finalidad de conocer las prácticas de gestión del talento humano en las empresas objeto de estudio, así como la correlación entre dichas prácticas y la estrategia del negocio. El tipo de estudio fue descriptivo y con técnica estadística de muestreo aleatorio simple. La información se obtuvo por medio de un cuestionario aplicado a una población de 25 empresas de diferentes sectores de la economía, siendo un 60% empresas de la ciudad de Cali. El cuestionario contenía información respecto a los aspectos propios de área como por ejemplo: El rol como socio estratégico del negocio, los retos y los procesos en la gestión del talento humano. Dado los diferentes tamaños de las empresas, los elementos muestrales fueron r jefes de recursos Humanos, asistentes de recursos humanos y directores administrativos. El análisis estadístico de la información fue de tipo descriptivo dejando un espacio para su tratamiento causal en estudios posteriores.

RESULTADOS

Habilidades Como Socio Del Negocio

La gestión estratégica del talento humano en las organizaciones de hoy está fundamentada en trabajar en el desarrollo de habilidades como socia del negocio. Se trata entonces de su capacidad para de conocer el negocio, ayudar a diseñar y consolidar la estrategia de la organización, entenderla, identificar los aportes que deberán realizar para lograrla y tener clara su misión como generadora del talento que la empresa requiere. Durante el desarrollo de la investigación se encontró que las metodologías utilizadas para alinear las prácticas de gestión del talento humano con la estrategia de la organización son: La planeación estratégica y el alineamiento con los objetivos de las otras áreas cada una con un 48% y llama la atención que dentro de las prácticas administrativas alternas esta el uso Balance score card con solo el 4%.

El 40% de las empresas (11) donde las áreas de gestión humana no están integradas al proceso de medición estratégica del negocio son empresas que se caracterizan por: no tener claridad acerca de la prioridades a mediano plazo en cuanto a la gestión del talento humano en la empresa, el 81% de ellas no mide el valor agregado que genera el área de gestión humana, la mayoría (81%) no cuentan con un plan estratégico de gestión humana. Lo anterior muestra la dificultad que aún se tiene para establecer indicadores de gestión humana, y aún más para identificar la relación existente entre las acciones del área y su impacto en la estrategia y los resultados de la empresa

La investigación midió el tipo de participación de las áreas de gestión humana en los procesos estratégicos de cambio, donde se destaca que el 38% manifestó haber participado en reestructuraciones, el 37% en desarrollo de competencias de liderazgo, el 14% en fusiones o adquisiciones y el 11% en el direccionamiento del negocio. De los datos anteriores se puede concluir que la importancia estratégica del área de gestión humana en estas empresas no es determinante y se orienta más bien a la implementación de acciones de procesos internos y se sustenta el resultado puesto que en cuanto a la dedicación de esfuerzos de las áreas de Gestión Humana, el 44% de las empresas dedican más del 51% del tiempo a la ejecución de labores operativas. Frente a la toma las decisiones en materia retributiva las respuestas indican una muy poca influencia del área de gestión humana en este componente de amplia importancia

estratégica para cualquier empresa. Como métrica para establecer el desarrollo estratégico de la gestión humana se preguntó si la empresa cuenta con un plan estratégico de gestión humana y al respecto el 52 % afirmó que no tiene y el 48% si cuenta con un plan formal de Gestión Humana.

Los resultados pueden sorprender al observar la puntuación relativamente baja que se recibe en este aspecto, dado el rol esperado de colaborador estratégico. Sin embargo, podría deberse a que la mayoría de las empresas de la investigación ya cuentan con un plan estratégico corporativo y en él pueden poseer componentes de gestión humana. Frente a las debilidades del área de Gestión humana, en las empresas indicaron que las principales son: no medir el impacto de la gestión 32%, la alta dedicación operativa 27%, la incapacidad de medir el valor agregado 18 %, no actuar como socia del negocio 9%, la falta de alineación con la estrategia de la organización 9% y finalmente la incapacidad para ser vocera de la gente 5% Tabla 1. Si la alta dirección minimiza el papel que tiene la gente, en términos de sus contribuciones al éxito general de la organización, las competencias asignadas a los departamentos de gestión humanas serán poco importantes o de escaso impacto y, en consecuencia, se llevarán a cabo solamente las actividades más rutinarias (Dolan S., Valle R., Jackson S., Schuler R, 2007)

Tabla 1: Principales debilidades del área de gestión humana de la empresa.

Debilidades	Peso
No se mide el impacto de la gestión	32%
La alta dedicación operativa	27.0%
Incapacidad para medir el valor agregado.	18.0%
El área no actúa como socia del negocio	9.0%
La falta de alineación con la estrategia de la organización	9.0%
La incapacidad para ser vocera de la gente	5%

Se puede decir, entonces, que frente a esta muestra de empresas, el papel de las áreas de gestión humana como socias del negocio no ha ganado importancia estratégica, ya que su actuación se centra más en la implementación de políticas y funciones operativas. Ser socio estratégico supone el cambio de un enfoque operativo hacia uno que agregue valor, determinada también por el conjunto de decisiones y acciones directivas en el ámbito organizacional que influyan en las personas, buscando el mejoramiento continuo, durante la planeación, implantación y acompañando los procesos de cambio surgidos de las continuas fuerzas que afectan a las organizaciones en un entorno cada vez más complejo

Retos En La Gestión Del Talento Humano

En este aparte de la investigación se parte por conocer cuáles son los retos o desafíos que han enfrentado las empresas desde su creación, actualmente y cuales consideran a futuro, con el fin de determinar las preocupaciones en cuanto a la gestión del talento humano

Retos desde su creación: Los resultados muestran que no existe una unanimidad notable de los retos desde su creación. Como describe la Tabla 2, los tres asuntos elegidos por la mayoría de las empresas para representar los más importantes fueron: las relaciones laborales (13.5%), programas de salud y bienestar (10.8%), los aspectos relacionados con el aprendizaje y desarrollo (9.5%) y la regulación legal (9.5%). Como muestra importante de las preocupaciones que existen, se observa que estas empresas han dedicado gran parte de su actividad al desarrollo de las relaciones laborales, mostrando su interés por los factores de tipo legal y contractual.

Retos actuales: Frente a esta situación la tabla 2, muestra que la subcontratación con el 9.7% se perfila como uno de los principales retos dado que muchas empresas han optado por este mecanismo como una señal de modernidad económica y competitividad, para tener una mayor flexibilidad en la gestión de recursos humanos y optimizar la estructura de costos de la empresa, pero también trae consigo grandes

riesgos para los trabajadores como la inestabilidad laboral, el sentido de pertenencia frente a la organización y la falta de protección en seguridad social.

La medición de la efectividad de los recursos humanos con un 8.1% es un tema nuevo e interesante que se encuentra entre los tres más importantes asuntos para la empresa, debido a que acentúa la necesidad que tiene la organización de medir sus resultados, no sólo en términos de gestión operacional, sino también en términos de visión estratégica para la empresa. La compensación con un 8.1% es uno de los tres asuntos más importantes hoy debido a factores de flexibilización salarial, situación económica de las empresa y la competitividad global en la lucha por atraer y retener a los mejores empleados.

Los Retos A Futuro

La encuesta muestra que las empresas consideran que la selección e implementación de tecnología de recursos humanos con un 13.3% Tabla 2 es uno de los mayores retos en la gestión del talento humano y puede ejemplificarse a través del uso de la tecnología de la información y la continua automatización que, si bien se puede asociar con el ahorro de tiempo y dinero, debe reflejar la necesidad que los directivos de gestión humana expresan con frecuencia, para mejorar su gestión y asumir una función más estratégica en la empresa. Este resultado concuerda con lo planteado por (Dessler y Varela, 2009) donde expresan que los gerentes de recursos humanos en la actualidad se interesan en aspectos de la tecnología, le ética y la certificación profesional La medición de la efectividad de los recursos humanos con un 9.12% es otro de los principales retos a futuro al igual que la movilidad internacional de empleados con 9.12. Esta última se puede explicar dada la escasez de talento calificado, llevando a que las áreas de gestión humana busquen nuevos talentos en diferentes partes del mundo Al hacer un recorrido por los retos desde su creación, los actuales y a futuro, las empresas encuestadas creen que un asunto vital para ellas en cuanto a la gestión del talento humano es y será la medición de efectividad del recurso humano, se destaca también la importancia de los aspectos referentes a los programas de salud y bienestar, la gestión de cambio, el desarrollo del liderazgo y la disponibilidad de una fuerza laboral calificada. Tabla 2.

Tabla 2: Principales retos en gestión de RRHH a los que se enfrenta la empresa.

Retos	Desde su creación	Actual	A futuro
Programas de salud y bienestar	10,8%	5,6%	6,7%
Gestión de cambio	5,4%	7,3%	8%
Compensación	6,8%	8,1%	1,3%
Bonificaciones para empleados	5,4%	7,3%	2,7%
Medición de la efectividad de RRHH	2,7%	8,1%	12%
Selección e implementación de tecnología de RRHH	1,4%	4%	13,3%
Relaciones laborales	13,5%	6,5%	0%
Desarrollo de liderazgo	5,4%	7,3%	8%
Aprendizaje y desarrollo	9,5%	8,1%	0%
Regulación legal/regulatorio	9,5%	4%	8%
Efectividad organizacional	6,8%	4,8%	8%
Subcontratación	2,7%	9,7%	4%
Personal: Movilidad internacional de empleados	0%	1,6%	12%
Reclutamiento y disponibilidad de fuerza laboral calificada	8,1%	6,5%	6,7%
Retención de personal	8,1%	7,3%	2,7%

Los Procesos En La Gestión Del Talento Humano (GTH)

Se presentan aquí los resultados de los aspectos organizacionales que afectan directamente el desarrollo de la GTH y los procesos básicos del área como son la incorporación, el desarrollo y la compensación.

Aspectos Organizacionales

El 68% de las empresas cuentan con un plan estratégico formal, que les ha posibilitado clarificar su misión, su visión y sus valores corporativos; base fundamental de las culturas organizacionales imperantes, distinguidas por el compromiso con los valores, la confianza, la lealtad y la equidad. Muchas de ellas han realizado cambios en su cultura para adecuarse a las estrategias definidas; sin embargo, la mayoría no realizan evaluaciones periódicas de clima organizacional, aspecto relevante para analizar la fortaleza de la cultura organizacional, pues es la percepción que los empleados tienen de la organización y sus interrelaciones. Se pudo determinar que el 48% de las organizaciones consultadas realiza mediciones periódicas del clima organizacional, mientras que el 52% de las empresas no lo efectúa.

A su vez, cuando se le pregunta a los gerentes acerca de cuáles son los factores que en mayor medida impactan el clima organizacional se obtuvo que los de mayor relevancia son la motivación, relaciones interpersonales, trabajo en equipo, compensación adecuada, recompensas y reconocimientos, entre otros, como se muestra en la siguiente figura. La gestión por competencias en las organizaciones de la región ha tenido una dinámica interesante, pues el 64% de las empresas participantes han implementado un modelo de competencias, lo que muestra un interés desde distintas áreas de la organización por desarrollar procesos innovadores. Otro de los aspectos abordados fue el relacionado con la Responsabilidad Social Corporativa, encontrándose que muchas de las empresas realizan acciones aisladas dirigidas a sus diferentes grupos de interés así: los empleados (auxilios educativos, programas de bienestar y de salud ocupacional, capacitaciones); los proveedores (programas para beneficiar al cliente); el medio ambiente (programas de reciclajes, utilización de materias primas biodegradables, manejo integral de residuos, manejo racional de recursos); la comunidad (donación de recursos para fundaciones, escuelas y obras de infraestructura); entre otras y que son comunicadas a través de diferentes tipos de informes como el balance social. A finales del siglo pasado se presentaron varios cambios en la gestión de talento humano en las organizaciones, influenciada en gran medida por la necesidad de las empresas de sobresalir en un mercado cada vez más competitivo, lo que las llevó a redefinir su rol y para lograrlo se vieron en la necesidad de delegarle a terceros gran parte de sus funciones administrativas y en este momento el outsourcing o tercerización llega a la gestión del talento humano para brindarle la posibilidad de desarrollar a cabalidad su nuevo papel de aliado estratégico del negocio. De acuerdo a esto se indagó acerca del uso del outsourcing para los procesos de gestión humana y estos fueron los resultados Tabla 3.

Tabla 3: Proceso del área de gestión del talento humano tercerizados

Proceso	Esta tercerizado	Le interesa tercerizar
Selección	17.9%	8.3%
Capacitación	15.4%	16.7%
Administración de nómina	12.8%	8.3%
Salud ocupacional	12.8%	12.5%
Desarrollo personal	10.3%	8.3%
Seguridad industrial	7.7%	16.7%
Bienestar y clima laboral	7.7%	8.3%
Compensación y beneficios	5.1%	4.2%
Comunicación organizacional	5.1%	0.0%
Outplacement	2.6%	4.2%
Inducción	2.6%	12.5%

Incorporación

Pese a la situación económica de algunos sectores económicos en la región, el flujo de empleados en las empresas encuestadas presentó el siguiente comportamiento durante los tres últimos años: en el 44% de las empresas permaneció igual, en un 35% de ellas aumento y solo disminuyó en el 4% de las mismas.

Se encontró que respecto a los procesos de reclutamiento la fuente más utilizada son las recomendaciones y referencias y las principales limitaciones que encuentran en los candidatos que aspiran a un puesto son; la experiencia, el conocimiento del entorno del negocio, las competencias del ser, la disponibilidad de horarios el manejo de personas. En los procesos de selección, los métodos son definidos por el área de gestión humana y las capacidades específicas para el puesto son los aspectos más importantes para su elección.

Desarrollo

Esta investigación identificó las acciones que las organizaciones objeto de estudio están realizando en materia de formación y desarrollo de su talento humano. El primer aspecto abordado es que la formación está dejando de ser una actividad operativa para convertirse en un factor estratégico, de importancia relevante para el desarrollo organizacional. Un 56% de las organizaciones encuestadas manifestó tener un plan estratégico de capacitación, que orienta los esfuerzos en este aspecto. También es importante destacar que de las 15 empresas que admiten contar con un plan estratégico de capacitación, solo el 21,4% tienen a su vez un plan de carrera y un plan de formación; lo que podría indicar que en muchas ocasiones se desarrolla un plan estratégico muy completo, que no es aterrizado y del cual no se derivan los planes operativos, que deberían permitir el logro de los objetivos definidos en el plan maestro.

Es claro que si para las empresas el establecimiento de los programas de formación es un aspecto importante en su desarrollo, deben destinar recursos para ello, ya sean propios o cofinanciados con entidades como el SENA (Servicio Nacional de Aprendizaje). Se encontró que el 32% de las empresas ofrecen menos del 10% de sus programas de capacitación en convenio con el SENA; y el 24% más del 30%. Lo anterior permite evidenciar que aunque existen posibilidades de convenios para desarrollar capacitaciones de diversa índole, las empresas no acuden mucho a éstos, sobre todo las empresas de menos de 50 empleados. En lo referente a los temas predominantes en las capacitaciones, se encontró que la mayoría de empresas participantes (47,6%) forman en conocimientos técnicos, el 31% en lo relacionado con los comportamientos y competencias deseadas, el 9,5% en habilidades directivas y el 4,8% en idiomas. Cuando se aborda además el tema de las herramientas que las empresas utilizan para evaluar el desempeño, se tiene que a pesar de existir variados métodos como escalas gráficas, selección forzada, investigación de campo, incidentes críticos, listas de verificación, evaluación participativa por objetivos y evaluación 360° entre muchos otros; se tiene que un 68% de las empresas participantes cuentan con un método bien sea que les permite evaluar las tareas desempeñadas, o evaluar criterios relevantes para la empresa o realizar una evaluación por competencias. El resto de las empresas lo hacen de manera informal o simplemente no cuentan con una herramienta que les permita evaluar el desempeño de los colaboradores.

Compensación

Hablar de compensación implica considerarla uno de los procesos más determinantes en la gestión organizacional y de la gestión del talento humano. Las empresas participantes dieron cuenta de los sistemas de compensación que han implantado, destacando que el sistema más utilizado para retribuir tanto al nivel directivo, como medio y operativo es el sistema tradicional o salario fijo mensual. Así, el 36% de las organizaciones utiliza este sistema de compensación para el nivel directivo, el 16% una combinación entre el sistema tradicional y variable y el otro 16% mezcla el tradicional, variable y flexible. Es decir que la tendencia es utilizar cada vez más el sistema de compensación variable para compensar a los directivos de la organización, pues generalmente son ellos más que ningún otro empleado, quienes son compensados de acuerdo a su desempeño, traducido en el logro de los objetivos organizacionales. También es importante abordar lo relacionado con la o las personas que toman las decisiones en materia retributiva en las empresas participantes. Al indagar en este aspecto, se encontró que en el 44% de las empresas son los directores de negocio, es decir los gerentes generales quienes

definen lo relacionado con la compensación. En menor proporción aparece el propietario o la familia en el 28% de las empresas; y el departamento de gestión del talento humano en el 16% de las empresas, Figura 1.

Figura 1: Area responsable en la organización de tomar las decisiones en materia retributiva

CONCLUSIONES

Las siguientes son las conclusiones que a nivel general arrojó la investigación respecto de las tendencias que están orientando las prácticas de Gestión Humana. Las empresas objeto del estudio fueron en su mayoría micro, pequeñas y medianas empresas, ubicadas en la ciudad de Cali y que a pesar de que cuentan con un plan estratégico formal, que les ha posibilitado clarificar su misión, su visión y sus valores corporativo, no tienen definido un plan estratégico de gestión humana. La participación estratégica de las áreas de Gestión del Talento Humano en los procesos donde se deciden las estrategias organizacionales está disminuyendo y mantiene su rol en la implementación de políticas como las de selección, capacitación, compensación y evaluación del desempeño.

La observación de los resultados respecto a las debilidades, permite deducir que existe una relación directa entre la incapacidad para agregar y medir valor con la amenaza de reducción de personal de las áreas. En la medida en que los dueños y la alta dirección de las organizaciones perciben a las áreas de Gestión humana como primordialmente operativas (hecho a su vez generado por la falta de medición de impacto), va haciendo carrera la tendencia que mira los procesos que manejan las áreas como no esenciales y sujetos de reducción y tercerización.

La capacitación en las empresas está ganando en importancia, ya que no solo se tiene un plan formal de capacitación, sino que esto es acompañado de formadores internos y se tienen sistemas que ayudan a controlar y gestionar la calidad de la misma. La empresa pequeña no puede competir con las más grandes del sector en cuanto a compensación monetaria, es por eso que sus esfuerzos para retener su talento humano se basa en establecer un buen clima de trabajo y políticas especiales de promoción para que las desarrollen dentro de la organización. Las limitaciones en la consecución del personal dejan ver que la experiencia, el ajuste a la cultura de la empresa, el conocimiento del sector, el compromiso y las relaciones del manejo de personal son fundamentales para cubrir cargos en diferentes niveles de la organización. Llama la atención que el desarrollo de competencias de liderazgo y el manejo de idiomas no se muestra como críticas a la hora de contratar personal.

Pese a la disponibilidad y al uso de técnicas y herramientas relacionadas con la gestión del talento humano, los temas referentes con la diversidad organizacional y ciudadanía corporativa no han sido desarrollados plenamente en estas empresas y en general en Colombia. Las áreas de Gestión Humana tienen el desafío de asumir un rol de consultoría organizacional interna que ofrezca soluciones integrales a las necesidades y problemas del grupo de clientes internos, convirtiéndose en socios de los resultados de la gente. Vincular la Gestión del Talento Humano con la solución de problemas críticos de la

organización, como la formulación y ejecución de la estrategia y las percepciones de desempeño organizacional, aunado a la necesidad de aportar para el aprovechamiento del potencial del talento humano, es el panorama a enfrentar en el futuro.

LAS ACCIONES SOCIALES EN EMPRESAS CON RESPONSABILIDAD SOCIAL

Jorge Roberto Volpentesta, Universidad de Buenos Aires

RESUMEN

La investigación propone como objetivo general profundizar el conocimiento sobre las características de las acciones que las empresas realizan dentro de programas de Responsabilidad Social Empresarial con los grupos de interesados (stakeholders) que se encuentran en la comunidad o sociedad, desde una perspectiva organizacional, pretendiendo esclarecer cuáles son las causas y/o circunstancias que determinan y explican el diseño de actividades tan disímiles que van desde las caracterizadas por un dirigismo centralizado propio de la aplicación de la lógica empresarial y en las cuales se trabaja desde un escritorio “para los otros”, hasta aquellas que desde sus inicios implican e involucran a los destinatarios de esas acciones generando verdaderas acciones “con los otros”. El interés por este conocimiento se fundamenta en que cada vez más empresas están llevando a cabo acciones o programas de intervención en el campo social, pero no siempre esas actividades resultan efectivas considerando el impacto social que provocan. Analizar los procedimientos utilizados, las circunstancias organizacionales, las causas estructurales y procesales y la lógica que impera en el diseño de esas acciones puede ayudar a justipreciar, a priori, su efectividad y potenciales resultados, facilitando el desarrollo de un posible modelo que oriente sobre los fundamentos necesarios para llevar a cabo intervenciones sociales exitosas.

THE SOCIALS ACTIONS IN COMPANIES WITH SOCIAL RESPONSIBILITY

ABSTRACT

As general aim, the investigation suggests to deepen the knowledge about the characteristics of the actions that companies have with the stakeholders groups of the community and society, inside programs of Corporate Social Responsibility. From an organizational perspective, the objective is to establish which are the causes or/and circumstances that determinate and explains the designs of diverse activities that goes from the ones that are characterized by a typical centralized dirigisme of the business logic application, in which people works “for the others”, to those activities that, since the beginning, implies and involves the people who carry out those actions, generating a real work “with the others”. The further interest in this knowledge it is based on the fact that every time are more the companies who implement interventional actions or programs in the social field, but taking into account the social impact that these actions triggers, they are not always highly effective. Analyze the processes used, the organizational circumstances, the structural and procedural causes, and the ruling logic in the design of those actions, can help, in a first instance, to justify their effectiveness and potential results, making easier the development of a possible model that provides a guide about the necessary fundamentals to achieve successful social interventions.

TURISMO DE SALUD, VENTAJA COMPETITIVA PARA EL ESTADO DE SONORA : CASO ESPECÍFICO- REACTIVACIÓN DE LA ASOCIACIÓN DE TURISMO MÉDICO DEL ESTADO DE SONORA

Denisse Gómez Bañuelos, CESUES
Adriana Edith Morales Gonzalez, CESUES
Adrialy Perez Gaxiola, CESUES
Laura Elena Woolfolk Gallego, CESUES

RESUMEN

El turismo médico es un nicho poco explotado en nuestro país. En Sonora tenemos la ventaja de contar con hospitales y centros de alto nivel que ofrecen atención especializada de calidad a bajo precio. Los costos de los procedimientos médicos y quirúrgicos en México son entre 50% a 80% más económicos que en Estados Unidos. El principal objetivo de la asociación será integrar a profesionales, instituciones de salud y servicios complementarios para impulsar el turismo en el estado de Sonora.

PALABRAS CLAVES: Turismo de salud, turismo médico, asociación de Turismo Médico

HEALTH TOURISM, COMPETITIVE ADVANTAGE FOR THE STATE OF SONORA-SPECIFIC CASE: REACTIVATION OF THE MEDICAL TOURISM ASSOCIATION OF THE STATE OF SONORA.

ABSTRACT

Medical tourism is an untapped niche in our country. In Sonora we have the advantage of counting with hospitals and centers that offer high quality and skilled care at low prices. The costs of medical and surgical procedures in Mexico are between 50% to 80% cheaper than in United States. The main objective of the association will be integrate a professionals, healthcare and complementary services to boost tourism in the state of Sonora.

KEY WORDS: Health tourism, Medical tourism, Medical Tourism Association.

INTRODUCCIÓN

El turismo y la salud son dos conceptos estrechamente relacionados; ambos inciden directamente en la economía de los países y son parte importante de las políticas públicas a cargo de los gobiernos. Actualmente, el área de la salud es uno de los sectores en mayor crecimiento. Esto se debe principalmente, a que cada día hay más personas mayores y la expectativa de vida de la población es mayor, lo que trae como consecuencia, que los problemas de salud de este segmento de la población, también estén aumentando, como las enfermedades crónicas degenerativas: hipertensión, diabetes, enfermedades cardíacas, problemas de colesterol y triglicéridos, cáncer, artritis, obesidad y muchas otras, las cuales aparecen típicamente después de los 40 años. Actualmente, las principales causas de muerte se deben en su mayor parte a enfermedades del corazón y la diabetes. Por otro lado, tenemos el desarrollo de riesgos relacionados con estilos de vida poco saludables, dentro de los que destacan el tabaquismo, el consumo excesivo de alcohol, la mala nutrición, el consumo de drogas y las prácticas sexuales inseguras. Los expertos prevén que en los próximos años, el mercado internacional del turismo de salud se disparará, a medida que más ciudadanos estadounidenses y de otros países, cansados de los altos precios, busquen alternativas más baratas para sus problemas de salud, según estimaciones de organizaciones

fronterizas. En este escenario, viajar a otro país para obtener un cuidado médico más conveniente se está convirtiendo en una práctica con alto crecimiento. Si a esto agregamos la creciente tendencia de aprovechar estos viajes como una oportunidad para disfrutar de unas vacaciones, complementando los tratamientos médicos con ocio, obtenemos una demanda aún mayor para el servicio y una oportunidad aún más interesante. La asociación de Turismo Médico en Sonora, pretende potencializar, estrechar el vínculo y desarrollar estrategias de ordenamiento para el desarrollo de Sonora a través del turismo de salud.

REVISIÓN LITERARIA

Distinción Entre Turismo De Salud Y Turismo Médico.

El *turismo de salud* se basa en la oferta turística de recreación termal y ocio saludable. Entre los establecimientos que ofrecen esta clase de servicios de salud se encuentran especialmente balnearios, spa, centros de meditación, centros espirituales, etc. El *turismo medico* es el término usado para describir la práctica rápidamente creciente de viajar fuera del lugar de residencia para someterse a cirugías (atención profesional), tratamientos médicos y/o estéticos por un cuidado médico más barato. Incluyendo al segmento de la población, cada vez más preocupado por mejorar su apariencia física. Tratamientos que generalmente no son cubiertos por los seguros de Estados Unidos, Canadá o Europa, por lo que el diferencial de precios en tratamientos profesionales, puede ser el incentivo para viajar a Sonora para atenderse

Situación Del Turismo Médico En El Mundo

La globalización, la reducción del poder adquisitivo de la población y el alto costo que ha alcanzado la atención médica en países industrializados como Estados Unidos, Gran Bretaña, Japón y China, ha propiciado que economías emergentes vean al turismo de salud como un importante nicho de negocios. Varios países europeos han modificado sus políticas de salud debido a los problemas económicos existentes, excluyendo los servicios de salud, como tratamientos dentales, operaciones de estética, cirugía ocular con láser, cirugía de próstata, entre otros de la cobertura del seguro médico. Por estas razones, los europeos han comenzado a buscar sus tratamientos en los países donde las tasas de servicios de salud son relativamente más bajas. Durante el 2007, unos 751 mil estadounidenses buscaron soluciones médicas en el exterior. Según la Secretaría de Turismo, se estima que para el 2012 la cifra alcanzará los 1.6 millones de estadounidenses, debido a la crisis que enfrenta en la actualidad el sistema de salud de Estados Unidos, por lo que México tiene grandes posibilidades de crecimiento en este rubro. En los últimos 10 años, países como la India, Tailandia, Taiwán, Filipinas, Malasia, Turquía, Singapur, entre otros han perfilado una creciente oferta de viajes y servicios hospitalarios de tercer nivel para extranjeros, mercado que tradicionalmente era atendido por Houston, la Habana, Cali y Caracas.

Certificación JCI

Joint Commission International (JCI) es el líder mundial en la acreditación de organizaciones de atención de la salud. La acreditación y certificación JCI es el proceso probado que las organizaciones médicas necesitan para ayudar a garantizar un entorno seguro para sus pacientes, el personal y las visitas. Este proceso voluntario muestra el compromiso de las organizaciones para mejorar en forma permanente la seguridad del paciente. En México existen 9 hospitales certificados y 40 más están en proceso de certificación.

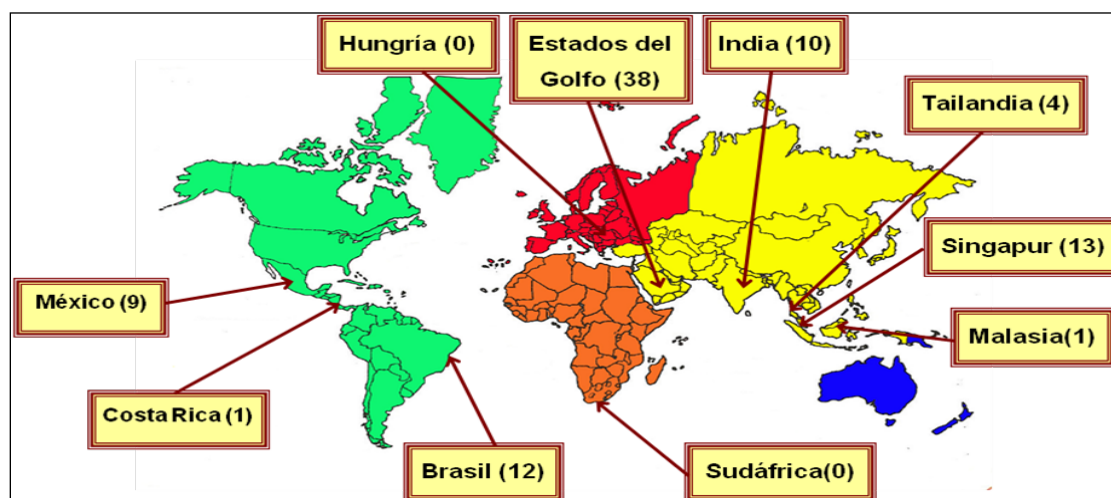

El turismo médico es un nicho poco explotado en nuestro país. Frente a Estados Unidos o Canadá, México tiene la ventaja de contar con hospitales y centros de alto nivel que ofrecen atención especializada a precios mucho más accesibles. De los nueve hospitales en México, que cuentan con la certificación JCI, uno de ellos se encuentra en Hermosillo, Sonora. A continuación se muestra una figura donde se muestran

los países acompañados del número de hospitales certificados por JCI.

Tabla 1: Hospitales con certificación JCI en México: Elaboración propia.

HOSPITAL	UBICACIÓN
Hospital Y Clínica OCA, S.A. de C.V.	Monterrey
The American British Cowdray Medical Center IAP - Observatorio Campus	Cd. de México
The American British Cowdray Medical Center IAP - Santa Fe Campus	Cd. de México
Christus Muguerza Alta Especialidad	Monterrey
Clínica Cumbres	Chihuahua
Hospital México Americano, SC	Guadalajara
Hospital CIMA	Monterrey
Hospital San José Tec de Monterrey	Monterrey
Hospital CIMA	Hermosillo

Tabla 2: Número de certificaciones JCI de los países competitivos en turismo de salud en el mundo: Elaboración propia.

El turismo de salud en México

La realidad indica que muchos pacientes internacionales están escogiendo países tan lejanos como India y Tailandia para realizar distintos tratamientos médicos, esto se debe, en parte, a los esfuerzos que han venido realizando los gobiernos nacionales del sudeste asiático, Europa oriental y el medio oriente, en lo referente a mejora en sus instalaciones médicas, capacitación de su personal, certificación de sus servicios y precios competitivos, sin dejar de mano la promoción que hacen de la calidad en sus servicios.

Ante esta realidad, los estados de la república deberán trabajar conjuntamente en el desarrollo de alianzas y esquemas de cooperación internacional en la promoción, consolidación y fortalecimiento del turismo médico en México y en toda América Latina. Dicho lo anterior, las asociaciones médicas y hospitalarias de los ocho estados del país que poseen la mayor oferta de servicios médicos enfocados a atraer turismo internacional trabajan en la integración de la Confederación Mexicana de Turismo Médico. La intención es competir a escala internacional con una sola marca como país y consolidar a México como el principal

destino en el mundo para este segmento de visitantes. Los estados participantes son Sonora, Quintana Roo, Baja California, Colima, Tamaulipas, Guanajuato, Jalisco y Distrito Federal. Ventajas competitivas para desarrollar el turismo de salud en Sonora

Tabla 3: FODA de las ventajas competitivas de Sonora en Turismo de Salud: Elaboración propia.

FORTALEZAS	DEBILIDADES
<p>Servicios de calidad a precios accesibles. Alta capacitación de doctores e infraestructura médica disponible Diversidad de destinos y atractivos turísticos, así como la calidez de la gente sonorense. Apoyo gubernamental para promover el turismo médico Ubicación geográfica, cercanía con Estados Unidos y Canadá.</p> <p>OPORTUNIDADES</p> <p>Incremento en la demanda de servicios de salud de países con poblaciones adultas (EEUU, Europa y Canadá) Bajos costos de los viajes internacionales El ritmo de vida acelerado incrementa la demanda del turismo de salud</p>	<p>Bajo nivel de coordinación entre los distintos actores del sector (hoteles, agencias de viajes, hospitales..) Falta de acreditaciones y regulaciones apropiadas para hospitales El cliente percibe el país como antihigiénico La falta de políticas de precios uniformes en los hospitales / clínicas</p> <p>AMENAZAS</p> <p>Fuerte competencia de países como la India, Tailandia y Singapur. Baja inversión en infraestructura de salud. Altos índices de Inseguridad en nuestro país.</p>

Objetivo De La Asociación De Turismo Médico En Sonora

Con la finalidad de promover, supervisar y facilitar el desarrollo del turismo de salud en Sonora se plantea la reactivación de la Asociación Sonorense de Turismo de Salud, cuyo objetivo principal de nuestras oficinas será ofrecer servicios gratuitos para que durante su viaje pueda utilizar servicios médicos y de salud y al mismo tiempo aprovechar de espacios recreativos, culturales y de diversión, que juntos serán la mejor experiencia. Algunos de los servicios ofrecidos por la Asociación de Turismo Médico serán: la información de hospitales, médicos; la coordinación de grupos con necesidades especiales en servicios médicos, estéticos, relajación; el servicio gratuito de reservaciones de hotel con tarifas especiales; información de la ciudad, atracciones y eventos especiales; cupones de descuentos en compras, restaurantes; venta de boletos de avión y transportación terrestre, entre otros.

Acciones a realizar para reactivar la Asociación de Turismo Médico de Sonora.

Las acciones previstas para reactivar la Asociación serán la creación de una página de internet; campaña de promoción en Estados Unidos y Canadá; gestionar la creación de un carril especial en la garita de Nogales, para el transporte de pacientes; crear una revista de turismo de Salud en Sonora; ayudar y capacitar a las clínicas y hospitales de Sonora, para que logren certificarse y sean reconocidos por las aseguradoras de Estados Unidos y Canadá; incidir para que el turismo médico y de salud en Sonora, deje de ser un proyecto y se convierta en una estrategia nacional de desarrollo e impulso económico.

Consolidación de la Asociación de Turismo Médico de Sonora

En sus inicios, la Asociación Estatal de Turismo Médico estará concebida como un foro abierto para la discusión y el desarrollo de sinergias entre los agremiados, trabajo que podría concretarse mediante la promoción y posicionamiento de la región como el destino “ideal” para realizar tratamientos médicos, con respecto a otras áreas geográficas; generación de confianza en el paciente internacional, resaltando los altos estándares internacionales con los que cuenta la medicina en Sonora y reforzando la imagen del Estado; colaboración entre el gobierno nacional, regional y local e instituciones privadas; creación de un “cluster” para impulsar el turismo médico; colaboración, intercambio y cooperación regional entre hospitales, clínicas, universidades, centros de estudios e investigación; realización de programas de capacitación y entrenamiento; implementación de programas de certificación internacional para ser reconocidos por las aseguradoras extranjeras.

CONCLUSIÓN

Actualmente la Asociación de Turismo Médico no se encuentra funcionando, debido a que durante el sexenio pasado fue creada y no tuvo el apoyo suficiente por el gobierno y aun existía desconocimiento por parte de la sociedad sonorenses sobre los beneficios del turismo médico para la región. Cabe mencionar, que fue un esfuerzo de personas y empresas interesadas en el desarrollo de la actividad turística relacionada con tratamientos médicos de la más diversa índole. Nació como una iniciativa que busca sumar a los diversos actores involucrados en el llamado Turismo de Salud o Turismo Médico. Además funcionaba como un foro abierto para la discusión y el desarrollo de sinergias entre los agremiados. Es por eso, que consideramos que debe retomarse el proyecto y reactivar la asociación de Turismo Médico, para impulsar este importante y creciente nicho de mercado, que ayudaría a la economía del estado y del país. Sonora cuenta con ventajas competitivas que hacen que sea el lugar ideal para desarrollar el turismo médico y la Asociación ayudaría a integrar a profesionales, instituciones de salud y servicios complementarios, para impulsar el Turismo de Salud en nuestro estado.

LA INSERCIÓN LABORAL DE LOS EGRESADOS DE LA LICENCIATURA EN ADMINISTRACIÓN DE EMPRESAS TURÍSTICAS DE LA UNIDAD ACADÉMICA HERMOSILLO, A TRAVÉS DE LA BOLSA DE TRABAJO DEL CENTRO DE ESTUDIOS SUPERIORES DEL ESTADO DE SONORA

Denisse Gómez Bañuelos, CESUES.

Adrialy Perez Gaxiola, CESUES.

Laura Elena Woolfolk Gallego, CESUES

RESUMEN

En este trabajo de investigación se intenta dar a conocer un panorama general sobre los factores que influyen en la inserción laboral de los egresados de LAET del CESUES de la UAH, desde el punto de vista de los empleadores y de los mismos egresados, objetivo general de la investigación. El trabajo lleva por nombre “La inserción laboral de los egresados de la Licenciatura en Administración de Empresas Turísticas de la Unidad Académica Hermosillo, a través de la bolsa de trabajo del Centro de Estudios Superiores del Estado de Sonora”. Esta información ofrece un marco de referencia desde la perspectiva por un lado de 32 empleadores que tienen en común haber entrevistado al menos en una ocasión, a egresados de LAET y por otro lado a 45 egresados que tienen en común estar inscritos en la bolsa de trabajo del CESUES HERMOSILLO. El estudio arroja que en el 66% de los casos que se ha entrevistado a un egresado de LAET el proceso culmina con la contratación, ya que los empleadores consideran que los egresados cuentan con las competencias básicas para desarrollar su trabajo, así como cualidades de actitudes tales como: ganas de trabajar, adaptabilidad, pro activos, éticos y profesionales. Es conveniente señalar que aun cuando los empleadores están conformes con la formación profesional de los LAET consideran que estos requieren una educación mas profunda en algunas áreas tales como el dominio de idiomas, aspectos financiero-contables, área de ventas, manejo de sistemas empleados en agencias de viajes y en temas relacionados con alimentos y bebidas, es conveniente señalar que hicieron especial hincapié en la pertinencia de los planes académicos. En la consulta aplicada a los egresados se detecto que el 84% de los encuestados se encuentran laborando en áreas afines a su campo de estudio, logrando su colocación en un tiempo promedio que va de 3 a 6 meses a partir de su fecha de egreso. Es conveniente resaltar que aun cuando el 89% de los encuestados se siente satisfecho con la formación profesional recibida emiten una serie de recomendación en pro de mejorar el perfil de egreso de los LAET, siendo estas, mayor relación entre la teoría y la práctica, contenidos temáticos actualizados y pertinentes, impartición de materias en inglés u otros idiomas y mayor acceso al uso de tecnologías.

PALABRAS CLAVES: Inserción laboral, egresados, empleadores, perfil de egreso, perfil laboral u ocupacional, perfil del puesto, competencias ocupacionales

THE LABOR INSERTION OF GRADUATES OF THE DEGREE OF TOURISTIC BUSINESS ADMINISTRATION OF THE ACADEMIC UNIT OF HERMOSILLO, THROUGH THE LABOR EXCHANGE OF THE CENTRO DE ESTUDIOS SUPERIORES DEL ESTADO DE SONORA

ABSTRACT

This work of investigation try to present a general panorama about the factors that influence in the labor insertion of the graduate of LAET of the CESUES Hermosillo, from the same point of view of the employers graduate, general mission of this investigation. The work takes by name “The work insertion of graduates of the Degree of Touristic Business Administration of the Academic Unit of Hermosillo, through the labor exchange of the Centro de Estudios Superiores del Estado de Sonora”. This information offers a reference frame from the perspective on the one hand of 32 employers that they have common to have interviewed at least in an occasion, to graduate of LAET and on the other hand to 45 graduates that they must common be enrolled in employment agency work of the labor exchange of CESUES. The study thought that in 66% of the cases that has been interview to graduates of LAET the process culminates with the hiring, since the employers consider that the graduates count whit the basic competitions to develop their work, as well as qualities of attitudes such as: desire to work, adaptability, pro active, ethical and professional. He is advisable to indicate that even though the employers are in agreement with the professional formation of the LAET consider that these require a deep education but in some areas such as the dominion of languages, aspects financier-accountants, area of sales, handling of systems used in travel agencies and subjects related to foods and drinks, is advisable to indicate that they made special emphasis in relevance of the academic plans. During the consultation applied to the graduates was detected that 84% of interviewees are working in areas related to their field of study, making their placement in an average time ranging from 3 to 6 months from date after school. It is worth noting that although 89% of interviewees satisfied with the training received emit a series of recommendations towards better exit profile of LAET, these being, greater relationship between theory and practice, content update and relevant theme, teaching materials in English or other languages and greater access to technology use.

KEYWORDS: Job placement, graduates, employers, graduate profile, labor or occupational profile, job profile, occupational skills

INTRODUCCIÓN

El presente trabajo de investigación cuyo título es “La inserción laboral de los egresados de la Licenciatura en Administración de Empresas Turísticas de la Unidad Académica Hermosillo (UAH), a través de la bolsa de trabajo del Centro de Estudios Superiores del Estado de Sonora”, tiene como objetivo general, determinar las causas que inciden en la inserción laboral de los egresados de la Licenciatura en Administración de Empresas Turísticas, (LAET), a través de la bolsa de trabajo del Centro de Estudios Superiores del Estado de Sonora, (CESUES).

Los objetivos específicos de este análisis son:

- Identificar los conceptos relacionados en el proceso de contratación
- Determinar las vacantes de trabajo solicitadas durante el periodo 2007-2, 2008-1, 2008-2 y 2009-1, cuyos requerimientos del puesto correspondan al perfil de egreso de un LAET.
- Identificar los índices de colocación de los egresados de la LAET, a través de la bolsa de trabajo del CESUES UAH, durante el periodo del 2007-2, 2008-1, 2008-2 y 2009-1
- Con base en los perfiles de los puestos solicitados para los egresados de la LAET, proporcionar un diagnóstico que permita identificar el porque de los índices de colocación.

En muchos sectores de la sociedad se ha expresado que el recurso más valioso de las organizaciones son las personas, por lo que la formación de capital humano es uno de los factores esenciales del progreso y crecimiento de las naciones. Algunos países que han tenido éxito en materia económica, se debe en buena

parte a que sus modelos educativos están vinculados con la economía y el progreso socioeconómico, lo que supone que al tomar políticas de educación convergen los intereses de los diferentes sectores de la sociedad construyendo un ambiente propicio para el desarrollo de los objetivos de cada nación (Rodríguez, 2001:3). El enfoque de este trabajo de investigación, va acorde a la teoría del capital humano, derivada de los modelos planteado y descritos por *Gary Becker*, donde describe la importancia que tiene la efectiva vinculación entre los sectores educativos, privado y gobierno para el desarrollo de correctas políticas económicas. El Centro de Estudios Superiores del Estado de Sonora es el objeto de esta investigación, institución educativa pública de nivel superior. Al igual que muchas universidades la obligación del CESUES, no termina solo con otorgar un título, si no va más allá, por lo que es necesario hacer una investigación que permita evaluar la calidad en la formación del producto forjado, saber si este se colocó en un puesto de trabajo, en cuánto tiempo, qué tipo de puesto de trabajo, evaluar el nivel de educación que se les brindó a los alumnos y determinar si éste fue pertinente.

Es importante mencionar que el presente estudio podrá servir como referente para la reestructuración y pertinencia de los planes académicos de la institución. Como ya se menciona al inicio de este apartado, este trabajo se ubica en el Centro de Estudios Superiores del Estado de Sonora, Unidad Académica Hermosillo, y la temporalidad que abarca son los periodos del 2007-2, 2008-1, 2008-2 y 2009-1, ya que serán los periodos sobre los cuales se realizará el análisis de los perfiles del puesto, empresas solicitantes del servicio y candidatos promovidos. Nuestra investigación, por otra parte, se centra en las empresas que solicitaron a la bolsa de trabajo, egresados de la carrera de LAET de la UAH, durante los periodos señalados en el párrafo anterior.

METODOLOGÍA DE LA INVESTIGACIÓN

Tipo Y Nivel De Investigación

Para detectar y determinar los factores que inciden en la inserción laboral de los egresados de la Licenciatura en Administración de Empresas Turísticas, hemos tomado en cuenta, que no obstante que el trabajo se basa en una recopilación de datos estadísticos que lo categorizan como trabajo cuantitativo, también nos hemos apoyado en el método cualitativo ya que fue necesario interpretar los datos para poder visualizar y entender las causas del comportamiento de la inserción de egresados de LAET, que presenta la bolsa de trabajo del CESUES Unidad Académica Hermosillo.

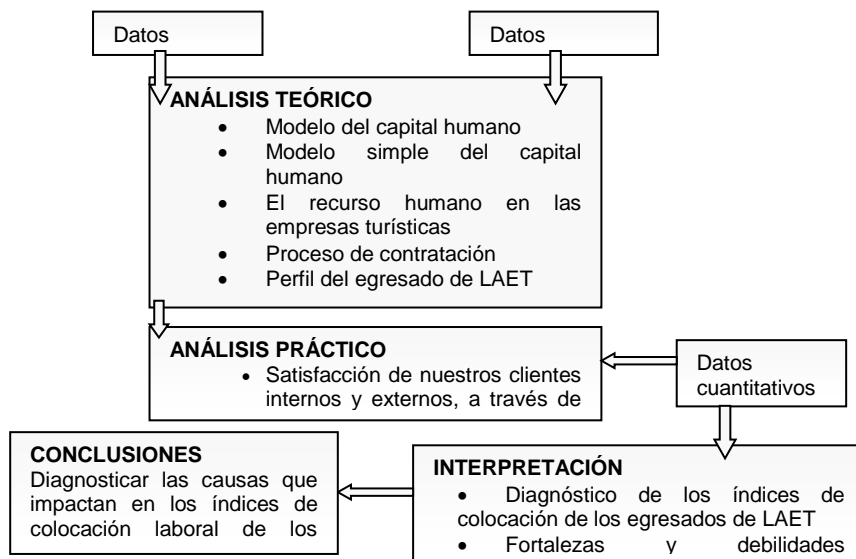

El trabajo consta de tres partes. El apartado uno, es teórica-analítica y tiene como objetivo discutir y describir diferentes conceptos que impactan al tema de investigación, tales como, modelo del capital humano, el recurso humano en las empresas turísticas, proceso de contratación, perfil del egresado de LAET, perfil del puesto. El Apartado dos, es práctica-analítica ya que se realizó una investigación en los documentos que maneja la bolsa de trabajo del CESUES. En este caso se llevó a cabo la aplicación de un cuestionario con la intención de medir los índices de satisfacción de nuestros clientes (internos, egresados, externos, empresas). El apartado tres, constituye una sección interpretativa que tiene como finalidad exponer los resultados obtenidos en la segunda parte y exponer las fortalezas y debilidades resultantes de la investigación. La figura 1 muestra los pasos de la metodología empleada en la tesis, adoptándose el modelo que presenta Mariza Aguirre 2008 en su trabajo de "Gestión hotelera orientada a la protección del ambiente y su impacto en la imagen de la empresa. El caso de Hermosillo, Sonora, México".

Población Y Muestra

Para la presente investigación se considera la definición de perfil del puesto o análisis del puesto de Cecilia García quien señala que la descripción del puesto proporciona un parámetro para medir qué tanto coincide un candidato con el trabajo a desempeñar. También será objeto de nuestro estudio el perfil laboral y/o el perfil ocupacional descrito en el documento diseño de cargas 2006, de la siguiente manera,

“Un perfil ocupacional, también es una descripción muy usada en las Instituciones Educativas, en donde se describen las habilidades que los estudiantes adquieren al finalizar su trabajo académico”. Una vez definida la unidad de análisis, se delimitó la población que va a ser sujeta a estudio y sobre la cual se pretende generalizar los resultados. Así, una población se define como el conjunto de todos los casos que concuerdan con una serie de especificaciones (Hernández 2006: 238).

Figura No. 1: Esquema De La Metodología Empleada En La Tesis

Fuente y elaboración Mariza Aguirre Fimbres 2008

Para la población objeto de éste estudio se tomaron en cuenta los 75 perfiles del puesto que presentó el área de bolsa de trabajo del CESUES, los cuales encajan dentro del período de estudio que va del 2007-2 al 2009-1, cuyo perfil profesional solicitado fue el de un egresado de la Licenciatura en Administración de Empresas Turísticas, también fueron objeto de estudio 271 perfiles profesionales promovidos en las vacantes antes señaladas, quienes están inscritos en la bolsa de trabajo del CESUES. Los pasos del análisis práctico y la interpretación se describen a continuación: en la realización del diagnóstico de satisfacción del cliente se elaboró, un cuestionario que se aplicó a 75 empresas que solicitaron el servicio de bolsa de trabajo y a 45 prospectos que fueron promovidos (as) en las vacantes. Las encuestas se aplicaron durante el período comprendido del 25 de junio al 19 de agosto del año 2010; logrando la plena colaboración en el estudio de 32 de los 75 establecimientos mencionados, mismos que constituyen el 42% del universo. También fueron objeto de estudio 271 perfiles profesionales promovidos en las vacantes antes señaladas, logrando la colaboración de 45 egresados, lo que constituye el 17% del universo.

Instrumentos De Recolección De Datos

La información se obtuvo con la aplicación de un cuestionario cuyo propósito es identificar los factores que inciden en la contratación o no, de los egresados de LAET promovidos en las vacantes, así como conocer las experiencias y sentimientos de los candidatos promovidos en las vacantes, con el fin último de tener una retroalimentación del proceso de promoción y colocación llevado a cabo por el área de bolsa de trabajo de la Unidad Académica Hermosillo. El instrumento utilizado para identificar los factores que inciden en la contratación o no de los egresados de LAET promovidos en las vacantes laborales será aplicada por una parte, a las empresas solicitantes del servicio de bolsa de trabajo, contiene 14 preguntas, donde las preguntas 1, 2, 6 y 7 son preguntas abiertas, las preguntas 3, 5, 8, 9, 10 y 13 hacen referencia a una escala de valor; las preguntas 4 y 11 tienen como opción de respuesta SI o No, y por último las preguntas 12 y 14 son de opción múltiple. Hemos decidido enfatizar en el presente estudio, sobre aquellas

preguntas que indican una escala de valor, debido a la naturaleza de la investigación, pues entre los objetivos que pretendemos se encuentra, determinar las causas que inciden en la inserción laboral de los egresados de la carrera de turismo, a través de la bolsa de trabajo del CESUES.

Por otra parte el cuestionario que fue aplicado a los egresados de LAET, objeto de este estudio, se compone de 14 reactivos, donde la pregunta 1 y 6 son preguntas abiertas, las preguntas 2, 4, 5 y 8 son preguntas de opción múltiple, la pregunta 3, 10 y 13 tienen como opción de respuesta SI o NO y por último las preguntas 7, 9, 11, 12 y 14 hacen referencia a una escala de valores. En el presente estudio hemos decidido enfatizar en aquellas que indican una escala de valor. Debemos de hacer la aclaración que de los 75 empleadores entrevistados se logró la participación de 32 de ellos, es decir, el 42% de ellos, también fueron objeto de estudio los 271 egresados promovidos en los puestos solicitados por los empleadores antes mencionados, logrando la colaboración de 45 egresados, lo que constituye el 17% del universo.

CONCLUSIONES

Se pudo observar en los resultados de la investigación, que más de la mitad de los empleadores encuestados han contado con colaboradores egresados de LAET; los encuestados que han contratado egresados de LAET se muestran satisfechos con su desempeño laboral, ya que consideran que la formación profesional es aceptable. Las razones a favor de la decisión de contratar egresados de LAET son múltiples, entre ellas destacan cualidades de actitud y aptitud; como disponibilidad, puntualidad, formalismo, pro actividad, responsabilidad, ganas de trabajar y actitud de servicio; mientras que en las competencias de aptitud predomina el dominio básico de los temas relacionados con turismo, hotelería, técnicas de cocina y el manejo de programas computacionales, tales como Excel, Word, power point, corel entre otros. Aún cuando los encuestados se encuentran relativamente satisfechos con la formación profesional de los egresados de LAET, consideran que estos cuentan con algunas áreas que pueden ser áreas de oportunidad, siendo estas el dominio del idioma inglés, conocimientos más especializados en las áreas de hotelería, turismo, alimentos y bebidas, contabilidad y finanzas; también mencionan como factor de oportunidad, las áreas de agencias de viajes; por otra parte los empleadores requieren que la educación de los LAET maneje temas relacionados con el área de ventas.

En el comparativo del desempeño laboral de los egresados de LAET con egresados de otras instituciones educativas, los empleadores manifiestan que los egresados del CESUES tienen un desempeño laboral similar que los egresados de carreras afines de otras instituciones educativas. A cerca de la opinión de que si los cambios en los planes educativos de la carrera de LAET a lo largo de los años, han impactado en que los alumnos egresen mejor preparados, externaron que no sienten cambio en la formación profesional de los egresados de LAET entre una generación y otra.

Por otra parte mencionan que las competencias genéricas que requieren los egresados del CESUES se encuentran la ética, trabajo en equipo, adaptabilidad a nuevas situaciones, el auto control, la creatividad; por otra parte expresan las competencias que son imprescindibles para el desempeño de su profesión, tales como la mercadotecnia, las relaciones humanas y las relaciones públicas, contabilidad-finanzas, el idioma inglés, eventos, banquetes, alimentos y bebidas, agencias de viajes. De la misma manera manifiestan que el principal medio que utilizan para reclutar egresados de LAET, fue a través de la Bolsa de Trabajo de CESUES, aun cuando el 33% de los egresados encuestados señalan que se enteraron de su trabajo actual a través de recomendaciones. En la investigación se tomó en cuenta el punto de vista de 45 egresados, con la finalidad de investigar, entre otras cosas, si se encuentran trabajando, así como conocer sus experiencias y sentir respecto a la educación recibida en el CESUES. Podemos observar que el 84% de los encuestados se encuentran trabajando, y sus trabajos están directamente relacionados con su carrera.

Las situaciones que influyeron para que se pudieran insertar en el mercado laboral, fueron entre las más comunes, aprobar la entrevista de trabajo, estar titulado y recomendaciones personales. Las competencias profesionales de mayor peso para que se les contratara fueron los conocimientos técnicos, el dominio del

idioma inglés y conocimientos intelectuales, el tiempo promedio que tardaron para colocarse en el mercado laboral fue de 3 a 6 meses. Aún cuando los egresados se encuentran satisfechos con la formación profesional recibida en el CESUES, consideran que existen áreas de mejora que requieren una mayor especialización tales como, el idioma inglés, en los temas relacionados con bares, repostería, eventos, banquetes, también expresaron que se sienten débiles en los temas de proyectos de inversión, investigación y en áreas relacionadas con el manejo de personal y manejo de sistemas computacionales; hicieron especial hincapié en el dominio de otro idioma diferente al del inglés. Mencionan que las habilidades que han tenido que utilizar con mayor frecuencia a lo largo de su vida profesional son aspectos relacionados con la puntualidad, el formalismo, la buena presentación, el manejo de sistemas computacionales, así como habilidades para dirigir y coordinar, la creatividad y la expresión oral y escrita. Los egresados que aún no se encuentran trabajando expresaron que esto se debe a ofertas de trabajo poco atractivas y que no cuentan con la experiencia profesional requerida por las vacantes, también anunciaron que la carrera es poco conocida. Por otra parte revelaron que el panorama laboral actual para un egresado de LAET del CESUES es regular, aún cuando estos se sienten mejor preparados que egresados de otras instituciones educativas con perfiles afines a los LAET del CESUES.

RECOMENDACIONES

Se propone se incluya en el plan de estudio de los LAET del CESUES, materias que refuercen las áreas de finanzas, contabilidad, alimentos y bebidas, agencias de viajes, e idiomas, se considera necesario se realicen evaluaciones de las primeras generaciones que presiden a cada uno de los cambios en planes académicos, con la finalidad de conocer el punto de vista en cuanto a la calidad de egreso, tanto de los empleadores como de los egresados. Es conveniente se haga especial hincapié en las materias que fomentan en los alumnos la ética, los valores, el trabajo en equipo, el auto control y el auto empleo.

Se recomienda fortalecer el área de bolsa de trabajo de la institución con actividades tales como: mayor vinculación con el sector productivo a través de visitas personalizadas a las empresas, participación activa de la institución en cámaras y asociaciones, tanto locales, nacionales e internacionales, la creación de un comité de vinculación institucional, que se encargue de evaluar la pertinencia de los planes académicos, este deberá estar conformado por empleadores, egresados, docentes y directivos de la institución; es recomendable la realización de ferias de empleo donde se promuevan a los egresados del CESUES.

Se ve conveniente que se emprenda una campaña publicitaria del CESUES enfocada a promover en el mercado laboral a sus egresados y posicionar la marca CESUES. Se observo la necesidad de que se establezca un programa institucional que permita crear una cultura en los alumnos de visitar el área de bolsa de trabajo de la institución con la finalidad de que se inscriban a esta al enviar su curriculum vía correo electrónico, también es conveniente se les imparta a los alumnos próximos a egresar un curso de capacitación que les permita contar con mas y mejores herramientas que fácilmente su pronta inserción laboral. Se recomienda una reestructuración al programa de prácticas profesionales actual de la institución donde los periodos de prácticas de los alumnos sean más parecidos a estancias, durante su último semestre con la finalidad de que comiencen a venderse a las empresas.

Se observó la necesidad de que se realicen acciones encaminadas a ampliar la visión laboral de los egresados de LAET con la finalidad de que busquen en otras ciudades, estados, países, oportunidades laborales en campos diversos que competan a su formación profesional y laboral tales como, áreas de alimentos y bebidas, eventos, banquetes, guías turísticos, mercadotecnia turística, ecoturismo, turismo de salud, tours, ventas, entre muchas otras áreas donde se pueden desenvolver que van mas allá de solo trabajar en recepción de un hotel. Por último quisiera comentar la necesidad de crear en el alumno una cultura emprendedora, que les permita desarrollar su espíritu de auto empleo, creando empresas turísticas.

LA GERENCIA EMPRENDEDORA VENEZOLANA DESDE LA PERSPECTIVA DE SUS ACTORES

Albanelis Campos Coa, Universidad de Oriente
Yoselina Rondón García, Universidad de Oriente

RESUMEN

Esta investigación tiene como finalidad elaborar Referentes Teóricos que describan a la gerencia emprendedora en Venezuela dentro del contexto de los nuevos cambios que existen actualmente. El escenario donde fue focalizada la investigación fueron las empresas de servicios ubicadas en la zona metropolitana del estado Anzoátegui, considerando como informantes claves a los emprendedores de estas empresas que cuentan con un perfil construido intencionalmente por la investigadora, y de las experiencias exitosas de los emprendedores que participaron en el 1^{er} Foro de Emprendedores realizado en Venezuela "Venezuela a Prueba de Crisis". Esta es una investigación de tipo cualitativo, sustentada en el paradigma interpretativo comprensivo, el paradigma de la complejidad y el método fenomenológico; el proceso de recolección de información consistió en la aplicación de entrevistas semiestructuradas a los actores seleccionados y grabaciones de las experiencias exitosas de emprendedores venezolanos. Para el análisis de la información y construcción de los Referentes Teóricos se utilizó la Teoría Fundamentada de Glaser y Strauss. En la reflexión final se obtuvieron tres constructos que describen la gerencia a emprendedora venezolana: la familia como la razón de ser del emprendedor, el espíritu emprendedor y el emprendedor transformador de los medios productivos y de servicios.

PALABRAS CLAVE: gerencia emprendedora, emprendedor, emprendedurismo, categorías, principios teóricos.

THE ENTERPRISING VENEZUELAN MANAGEMENT FROM THE PERSPECTIVE OF HIS ACTORS

ABSTRAC

This investigation it has as purpose elaborate Theoretical Modals that they describe to the enterprising management in Venezuela inside the context of the new changes that exist nowadays. The scene where the investigation was focused they were the companies of services located in the metropolitan zone of the Anzoátegui State, considering to be key informants the entrepreneurs of these companies who rely on a profile constructed intentionally by the investigator, and of the successful experiences of the entrepreneurs that they informed in 1er Entrepreneurs' Forum realized in Venezuela "Venezuela to Test of Crisis". This one is an investigation of qualitative type, sustained in the interpretive comprehensive paradigm, the paradigm of the complexity and the phenomenological method; the process of compilation of information consisted of the application of interviews semistructured to the selected actors and recordings of the successful experiences of Venezuelan entrepreneurs. For the analysis of the information and construction of the Theoretical Modals there was in use the Grounded Theory of Glaser and Strauss. In the final reflection three constructs were obtained describing the Venezuelan entrepreneurial management: the family as the reason for the entrepreneur, entrepreneurship and the entrepreneur transforming the means production means and services.

KEYWORDS: enterprising management, entrepreneur, entrepreneurship, categories, theoretical principles.

INTRODUCCIÓN

En la actualidad la ciencia, la tecnología y la comunicación ha avanzado a gran velocidad convirtiéndose en parte de la cotidianidad, los adelantos científicos tecnológicos y la globalización dan origen a la creación de nuevas herramientas gerenciales, para afrontar la complejidad de los nuevos contextos, trayendo como consecuencia que las organizaciones que anteriormente manejaban un concepto clásico de la organización mecanicista tiendan a cambiar hacia una tendencia de organización más orgánica, más humana y más flexibles, la actitud emprendedora dentro y fuera de estas empresas es sumamente importante para gerenciar los cambios, para de esta manera afrontar los cambios del entorno y poder adecuarse a las nuevas tendencias de la postmodernidad. Frente a este panorama de cambios las empresas están presentando un proceso de transformación profundo, requiriendo de profesionales y ejecutivos emprendedores, flexibles, tolerantes a la incertidumbre con la cual se mueven los negocios en la actualidad, este emprendedor debe ser una persona dotada de visión holística, integral fundamentada en valores. Además, estos emprendedores deberán ser ejecutivos con gran iniciativa y tener sentido de la oportunidad, capaz de hacer que proyectos o ideas despeguen “*de cero*” y efectivamente tengan éxito.

Venezuela no escapa a la realidad de estos cambios de contexto originados por los adelantos tecnológicos e innovadores, aunado a que recientemente han surgido una serie de cambios políticos, económicos y sociales que afectan de manera directa a la creación de nuevas empresas. En la presente investigación se trata de descubrir la estructura compleja o el sistema de relaciones que conforman una realidad psíquica o social humana en la cual está inmerso el emprendedor en Venezuela, con la finalidad de generar referentes teóricos que describen a la gerencia emprendedora en Venezuela.

En lo que respecta a la organización de la investigación: En la sección de la literatura se plantean los fundamentos teóricos que sustentan la investigación. Posteriormente se presenta la metodología utilizada, la cual comprende la orientación ontoepistémica del método a investigar: paradigma, tipo, diseño y método de la investigación, técnicas de recolección de información, criterios de selección del informante clave y la teoría a utilizar para el análisis e interpretación de la información. Seguidamente se presenta resultado preliminar de la investigación, de la codificación abierta y la codificación axial, luego los resultados finales que serían las teorías que emergen del proceso de análisis de la información y por último las conclusiones que serían las reflexiones sobre la investigación.

REVISIÓN DE LITERATURA

Desde principios del siglo XVIII Chantillón empleaba la palabra emprendedor para identificar aquellas personas que tomaban la responsabilidad de poner en marcha y llevar a término un proyecto. Say consideraba al emprendedor un líder completo que atraía a otras personas, con el objetivo de construir organizaciones productivas. En el siglo XX Schumpeter (1911) Había creado la “Teoría del Desarrollo Económico”, luego creó un modelo del emprendedor como el protagonista del proceso de “Creación Destructiva”. Según Knight (1921) los emprendedores eran considerados como parte fundamental en la función empresarial, ya que eran las personas capaces de asumir riesgos y de convencer a los inversionistas dudosos a invertir recursos en un negocio, además es capaz de establecer claramente la diferencia entre riesgo e incertidumbre, Audretsch (2004) consideraba que la unidad de análisis de una empresa no era ésta, sino el emprendedor, además éste debe tener ciertas características especiales según Turapuez (2008) El emprendedor juega un papel importante en el crecimiento económico de un país, ya que las naciones que presentan altos niveles de crecimiento económico son consideradas como las que mejores políticas económicas están desarrollando, tal como lo plantean Tamayo y Calle (2005), Rusque (2005) y Galindo (2006), al igual que la formación de emprendedor debe hacerse de acuerdo a las

exigencias de las comunidades, no solo es importante la formación de muchas empresas, sino el hecho de que éstas sobrevivan con el tiempo, Sánchez (2003). Estudios realizados por GEM (2005-2007) indica que Venezuela es uno de los países con más alto porcentaje de emprendimientos y de que gran parte de las nuevas empresas no sobreviven después de los primeros 3 años de su puesta en marcha, por lo que esta investigación decide indagar la estructura compleja y el sistema de relaciones que conforman la realidad en la cual está inmerso el emprendedor Venezolano. Según Cruz (2010) existen estrategias específicas a seguir para eliminar los peligros asociados a la crisis y evitar caer en la trampa del “esperar a que las cosas mejoren”, afirma que la actitud es una de estas estrategias y que el éxito de una empresa no es más que el éxito de las personas que la conforman.

METODOLOGÍA

La presente investigación es de tipo cualitativo, enmarca dentro del paradigma interpretativo comprensivo y el paradigma de la complejidad, el método utilizado es el método fenomenológico, ya que se estudiará al emprendedor venezolano, se estudiarán las experiencias vividas, su realidad interna y personal obtenida de boca del mismo emprendedor (Martínez, 2004), se realizaron entrevistas semiestructuradas a los emprendedores seleccionados de acuerdo a un perfil intencional, estas entrevistas se analizaron utilizando la Teoría Fundamentada de Glaser y Strauss (1967) que consiste en realizar primero una codificación abierta, segundo una codificación axial la cual agrupa las categorías producto de la codificación abierta en categorías madre, y por último la codificación selectiva donde se contrastan los puntos de vista de los emprendedores entrevistados, los emprendedores exitosos, los teóricos del emprendedurismo y los investigadores, el resultado serían los Constructos Teóricos.

RESULTADOS

Aplicando la metodología descrita en la fase anterior se obtuvieron: en la codificación abierta una serie de códigos relacionados con los puntos de vista de los emprendedores, en la codificación axial cuatro categorías: teleológicos – epistemológicos – axiológicos – praxiológicos y por último en la codificación selectiva los tres Constructos Teóricos: La Familia como la Razón de ser del Emprendedor, El Espíritu Emprendedor es el Motor del Crecimiento y El Emprendedor Transformador de los Medios Productivos y de Servicios.

CONCLUSIONES

A pesar de que el país está atravesando por una serie de cambios políticos, económicos y sociales, esto ha representado un reto para la gerencia emprendedora ser capaz de transformar una idea en negocio, sobrepasando las dificultades de estos cambios y saber tolerar las presiones inherentes vigentes en su contexto social, económico y tecnológico. En los discursos de los informantes reflejan esa capacidad que tienen los emprendedores de tener una idea, un sueño, una visión de negocio y de manera constante y perseverante, asumiendo los riesgos necesarios con la convicción de que van a tener éxito, la ponen en marcha.

DESARROLLO ECONOMICO PARA UN MUNDO DINAMICO AFRONTANDO TIEMPO EXPONENCIALES ES HORA DE INVERTIR PARA DESARROLLAR

Andreina Hernandez-Tilano, Ciudad Universitaria

ABSTRACT

En el reciente periodo se ha observado un auge sin precedentes del poder de la técnica, del volumen de los bienes y servicios producidos y de los intercambios comerciales. Se ha comprobado asimismo, una profunda transformación en las pautas de consumo y modos de vida de una mayoría de los habitantes de los países industrializados y una minoría de los que viven en los países del Tercer Mundo; es decir aun cuando la globalización ha integrado a las poblaciones consumidoras del mundo, el progreso material no se ha deslizado y muchos menos generalizado hacia los países subdesarrollados. Cuando se habla de desarrollo es inevitable pensar en la calidad de vida de los ciudadanos y plantearse las diferencias entre un país y otro y plantearse además el desarrollo para el futuro de las generaciones venideras. Por eso tomamos del análisis del profesor Ignacy Sachs en la Cumbre Mundial sobre Desarrollo Social de Copenahe 1995 la siguiente reflexión:

"El desarrollo, hoy más que nunca, es el objetivo común de la humanidad... Es cierto que hemos necesitado varios decenios para aprehender la complejidad de ese proceso... En primer lugar, el desarrollo debe permitir materializar todas las posibilidades del primer protagonista y último destinatario de ese proceso, es decir, el ser humano, no sólo el que vive hoy, sino también el que vivirá mañana, sobre la tierra. Un desarrollo humano sostenible..."

El presente ensayo se abordará entonces tomando en cuenta la necesidad de avanzar en nuevos paradigmas de desarrollo, como lo son: las relaciones entre los aspectos económico, ecológico y social, la reglamentación democrática de las economías mixtas, la redefinición de la función del Estado, y la ciencia y la técnica al servicio del desarrollo social

Estrategias Abordadas En Las Economías Latinoamericanas

Las estrategias de desarrollo utilizadas por los países del tercer mundo han estado determinadas por las teorías economisistas donde el crecimiento económico es el pilar central para el desarrollo, ya que sus frutos se deslizarían automáticamente hacia otros sectores de la sociedad. Como funcionaria eso? Según algunos enfoques, como el del Banco Mundial (2007), concluyen que el gasto público en infraestructura, educación y salud tiene efectos positivos en el crecimiento de las naciones, pero al igual se debe pensar en invertir en factores productivos, se debe ahora aumentar el crecimiento económico y explotar su potencial. Ante un mejor desempeño, el país concita mayores expectativas entre los ciudadanos y los motiva para la cooperación e inversión en el mercado interno

El crecimiento económico requiere en principio centrarse en los pilares de la política macroeconómica: las metas de inflación, un tipo de cambio flotante y el mantenimiento de un superávit fiscal primario, es decir, que los ingresos superen el gasto antes del pago de intereses, y al igual es importante crear confianza en el entorno internacional y crear unos intereses de estado indiferentes a las tendencias económicas de algún grupo social que detenta el gobierno. El fortalecimiento de las políticas macroeconómicas se traduce en una nueva capacidad de resistencia, del incentivo de independencia y creación de un mercado interno estable y a su vez de cooperación internacional, para el afianzamiento del crecimiento económico y a su vez del desarrollo, contribuyendo unos países con otros para así hacer un mejor aprovechamiento de los potenciales de cada nación; esto se debe a que la mejora de las finanzas

públicas, la reducción de la deuda externa, el aumento de las reservas internacionales, ayuda a prevenir cualquier situación desprevénida y afrontar los posibles repercusiones negativas de una crisis internacional, como ha sucedido en distintos momentos de la historia. Cuando ocurrieron los shocks internacionales de 1982, 1998 y 2001, la región latinoamericana se encontraba en una posición más sólida para poder contrarrestar los efectos de la recesión mundial; esta vez, muchos gobiernos y bancos centrales pudieron amortiguar el impacto en el producto y el empleo, incrementando el gasto público y reduciendo las tasas de interés, y permitiendo al mismo tiempo la depreciación del tipo de cambio.

Así, con la depreciación de la moneda, América Latina logró afrontar los shocks externos sin experimentar una fuerte sacudida inflacionaria ni trastornos generalizados en el sistema financiero; pero por lo general son países dependientes que se ven afectados por las contracciones de las potencias, de los países que generan el PIB más alto, con alto nivel de desarrollo. No obstante, a pesar del potencial las economías latinoamericanas, aun siguen siendo subdesarrolladas, entendiéndose por subdesarrollo cuando se tiene en comparación con otros países, una estructura productiva atrasada, las condiciones de vida de la población son limitadas, se tiene dependencia con el mercado internacional y desigualdad económica.

Estrategias En El Mundo Actual: Dinamico Y Exponencial Invertir En Evolucion

Debido a la amplitud del tema y a un fin específico, el desarrollo perdurable en el tiempo, enfocaré este tema macro a un caso específico y del cual soy parte como venezolana, los problemas del desarrollo económico en Venezuela. A mi entender lograr un crecimiento económico sostenido es, en principio, una vía para alcanzar los objetivos sociales, más, se debe acortar la brecha entre los resultados económicos y sociales. Hablamos de un verdadero desarrollo cuando se logra progresar simultáneamente en tres sectores: el económico, el social y el ecológico.

El país requiere de una estrategia que integre dos variables profundamente correlacionadas al desarrollo económico sustentable con el desarrollo social, en tal sentido los países del tercer mundo, especialmente las economías latinoamericanas, deben hacer frente simultáneamente a tres problemas; necesitan estabilizar sus economías, crear desde el principio el conjunto de las instituciones indispensables para el funcionamiento de las economías orientadas al mercado y, por último, reestructurar a fondo los mecanismos de producción para aumentar su eficacia, su competitividad en los mercados internacionales y su calidad con respecto a la gestión del medio ambiente.

Si tomamos en cuenta las propuestas de “ajuste social” del profesor Sachs deberíamos insertar a la población venezolana como productora y consumidora en una economía en expansión, pero fomentando la capacidad endógena, por medio de la educación y el intercambio de conocimientos, que signifiquen una sólida base para elevar la calidad de vida. Esto debe permitir la creación de nuevos empleos, fundamentalmente en las regiones menos desarrolladas del país. Se destaca esta necesidad de educación, de inversión al capital humano como un pilar para el logro del desarrollo, muy en el caso particular de Venezuela crear una conciencia social que valore y trabajen en función al progreso.

Por otra parte el acceso a los avances científicos, tecnológicos, financieros, comerciales y culturales en general, base indispensable del crecimiento económico y social sustentable, deben estar al alcance de quien sea capaz de utilizar los instrumentos que los interconectan e interpretan la información que fluye a una velocidad extraordinaria. En este sentido, parte importante del contenido social de un plan de desarrollo económico le corresponde al Estado, creando las infraestructuras tecnológicas y formativas de la sociedad para que todos los ciudadanos logren esa capacitación, base de su elevación de calidad de vida. El Estado también deberá crear, mantener y desarrollar instituciones oficiales de estadística, información y bases de datos sobre tecnología e investigación de operaciones, de mercado y mercadeo, que presten apoyo logístico y de información a las empresas que deseen establecerse o tengan posibilidades de crear ventajas competitivas.

En cuanto a la eficacia productiva, el Estado deberá ser muy activo en el establecimiento de las condiciones para que las empresas puedan crear y desarrollar ventajas competitivas, fundamentalmente en la dotación de infraestructuras básicas, energía en general, vialidad, seguridad, salud, etc., creando centros y programas de aprendizaje, capacitación, entrenamiento y desarrollo de personas y empresas; fomentando la tecnología para desarrollar las habilidades básicas para generar ventajas competitivas y promoviendo la participación efectiva de las empresas en estos programas, no sólo desde el punto de vista financiero, sino muy especialmente desde el punto de vista operacional.

El sector financiero, por su lado, debe canalizar el ahorro hacia la inversión y evitar su traslado a sectores insolventes y a la especulación financiera y cambiaria. En cuanto a la intervención del Estado se entiende que todo mercado debe estar regulado por el Estado, especialmente si se quiere que la economía de mercado cumpla también una función social. El envite en los próximos años será encontrar formas verdaderamente democráticas de regular las economías mixtas. En definitiva hay que lograr un equilibrio entre el Estado y el Mercado. En lo que respecta al aspecto ecológico, el Estado debe intensificar todas las medidas de protección del medio ambiente, y luchar por un cambio radical en los patrones de consumo con alcance mundial, así mismo explorar alternativas de ganar por partida doble; en la investigación de técnicas de producción ecológicas como ejemplo los diferentes casos de reciclado, la llamada agricultura regenerativa y, sobre todo, las estrategias energéticas, que permiten a la vez reducir considerablemente el consumo de energías fósiles y ahorrar recursos financieros. Se expusieron opiniones para incentivar el desarrollo, pero es necesario pensar en el principal problema económico; el aumento progresivo de las necesidades de las personas ante la escasez de los recursos existentes, ante las progresivas necesidades que quieren ser satisfechas, ahora y a futuro nos vemos en la obligación de invertir en pro al avance ante el dinamismo mundial, y poder crear un desarrollo evolutivo ¡hay que empezar desde ahora a invertir en evolución, para poder confrontar los cambios que vienen!

GEOGRAFÍA Y MERCADOS FINANCIEROS

Linda Margarita Medina Herrera, Tecnológico de Monterrey CCM

Ernesto Pacheco Velázquez, Tecnológico de Monterrey CCM

RESUMEN

En este artículo se analiza la estructura de los árboles de expansión mínima que se construyen a partir de los precios de los principales índices mundiales. Se encuentra que el vértice central tiene una gran dependencia del huso horario. Se encuentra, además, que los índices en Europa Occidental, Norteamérica y Asia forman grandes conglomerados; los índices en Sudamérica y Europa Oriental forman un bloque menos fuerte, y los índices de los países de África no forman conglomerados.

GEOGRAPHY AND FINANCIAL MARKETS

ABSTRACT

This paper analyzes the structure of minimum spanning trees constructed from the prices of the main global indices. It is found that the central vertex is highly dependent on the time zone. It also found that indexes in Western Europe, North America and Asia form large conglomerates, the indexes in South America and Eastern Europe form a block less strong than those mentioned above, and the indexes of Africa are linked to various economies.

INTRODUCCIÓN

Los mercados financieros son el mecanismo que permite a los diversos agentes económicos el intercambio de activos financieros. Mientras más grande sea el número de títulos financieros negociados, más amplio será un mercado financiero y por tanto, más importante. El progresivo interés de las empresas por participar en este tipo de mercados tratando de buscar fuentes de financiamiento ha hecho crecer de manera importante a los diversos mercados financieros en el mundo. El fenómeno de globalización ha impulsado una estrecha relación entre los diferentes mercados mundiales, lo que ha tenido como consecuencia que las crisis financieras en diversos países impactan en forma inmediata a la mayoría de estos mercados. Desde hace unos veinte años se ha venido desarrollando una literatura paralela que entiende los mercados financieros como sistemas que son influenciados por una gran cantidad de información en tiempo real. Esta literatura estadística se ha denominado Econofísica y ha tratado, especialmente, de establecer estructuras jerárquicas, taxonomías y simular el proceso aleatorio de los valores o los tipos de cambio de diversas acciones o monedas con el objeto de analizar el grado de correlación que existe entre las acciones y los diferentes mercados financieros (Mantegna, 1999; Bonano, 2001; Ortega, 2005; Medina, 2010; entre muchos otros). En este trabajo se analiza la estructura jerárquica y la dinámica de las relaciones existentes entre los principales índices financieros mundiales. El objetivo de este trabajo es analizar las principales correlaciones entre los índices financieros y señalar las diversas conexiones y jerarquías dentro de ellos. Para ello, hemos utilizado a los árboles de expansión mínima (MST) y las medidas más importantes en las redes.

REVISIÓN DE LA LITERATURA

Los trabajos fundamentales en redes financieras aparecen a finales de los ochenta, el concepto de grafos en el ambiente de mercados financieros fue introducido por Mategna, Bonano y otros (1989) como un método para encontrar arreglos jerárquicos de acciones a través del estudio de conglomerados de compañías. Los árboles de expansión mínima han sido usados para optimizar portafolios (Bonano, 2004) usando el hecho de que los activos del portafolio óptimo de Markowitz están prácticamente todo el tiempo en las ramas externas del árbol. Algunas medidas topológicas han sido definidas, con el fin de caracterizar los árboles y clasificar los vértices dependiendo de sus distancias a un vértice especial que simula el centro de masa del árbol (M. Barthélemy, A. Barrat, R. Pastor-Satorras, 2005). Algunos estudios empíricos han mostrado que estas medidas son altamente susceptibles a las crisis del mercado y que clasifican los sectores económicos de acuerdo a su importancia relativa en el árbol (Medina, L. Mansilla, R., 2007; y Medina, L. Díaz, B., 2011).

Árboles De Expansión Mínima

Un árbol de expansión es una gráfica de N nodos (o vértices) unidos por N-1 arcos que permiten ir de un vértice a otro y que se construye a partir de la matriz de correlación C_{ij} , de tamaño NxN, de los precios de cierre de los índices de los diferentes países seleccionados (N=45 en nuestro estudio). La matriz se construye de acuerdo con la fórmula:

$$C_{ij} = \frac{1}{T} \sum_{t=1}^T \delta x_i(t) \delta x_j(t) \quad (1)$$

donde T es el número de días cotizados (longitud de las series de tiempo) y $\delta x_i(t)$ son los rendimientos normalizados de cada índice. El rendimiento $\delta X_i(t)$ del índice financiero $S_i(t)$ se define como $\delta X_i(t) = \ln S_i(t + \Delta t) - \ln S_i(t)$. Para poder detectar similitudes en el patrón de los rendimientos en diferentes países, es necesario normalizar los rendimientos utilizando la media $\langle X_i(t) \rangle$ y la varianza (volatilidad) empírica de cada serie. De esta manera:

$$\delta x_i(t) = \frac{\delta X_i(t) - \langle \delta X_i(t) \rangle}{\sqrt{\delta X_i^2(t) - \langle \delta X_i(t) \rangle^2}} \quad (2)$$

Para construir el árbol de expansión mínima, se usará la distancia euclidiana $d_{ij} = \sqrt{2(1 - C_{ij})}$. Debido a que $-1 \leq C_{ij} \leq 1$, se tiene que $0 \leq d_{ij} \leq 2$.

Existen diferentes medidas y parámetros que nos permiten una primera caracterización estadística de los árboles. Estas medidas son:

Grado del vértice: El grado del vértice i, es el número de nodos que están conectados directamente al nodo i, esto es, el número de elementos que integran la vecindad de i, $(V(i))$.

Fortaleza del vértice: la fortaleza del vértice s_i se define como:

$$s_i = \sum_{j \in V(i)} d_{ij} \quad (3)$$

La fortaleza del vértice integra la información de su conectividad y de la importancia de los pesos de sus vértices conectados.

Nivel del vértice: El nivel v_{ij} es la suma de los arcos que hay que pasar sobre el árbol para ir del vértice i al vértice j.

El Promedio de ocupación: es la distancia promedio del vértice v_i a los demás vértices, esto es:

$$l(v_i) = \frac{1}{N} \sum_{j=1}^n v_{ij} \quad (4)$$

El nodo con promedio de ocupación más baja es el centro de masa del árbol.

El vértice central: El vértice central se usa como punto de referencia en el árbol, contra el cual la posición de los demás vértices es relativa. Hay un poco de arbitrariedad en la elección del vértice central, sin embargo los criterios anteriormente mencionados (el vértice de mayor grado, el vértice de mayor fortaleza y/o el centro de masa) pueden ayudar a escoger al mejor candidato.

El Árbol Empírico

Las series de tiempo que conforman la base de datos para este estudio están formadas por los precios de cierre diario de 45 índices: América del Norte (6), América del Sur y el Caribe (7), Europa Occidental (8), Europa Oriental (7), África (6), Asia y Australia (11) en el periodo comprendido entre 01/01/2005 y 27/09/2011.

País	Índice	Grado	Fortaleza	Prom. de ocupación
USA 2	S&P500	4	1.92	4.6
UK	FTSE 250	4	3	2.85
Francia	CAC 40	12	7.7	2.4
Hong Kong	HSI	6	5.31	2.81
Australia	AS51	5	4.89	3.29

Tabla 1. Esta tabla muestra los índices que obtuvieron los valores óptimos por región. El CAC40 es el vértice con mayor grado y fortaleza y menor promedio de ocupación, lo cual lo convierte en el vértice central del árbol.

Los índices que obtienen mejor clasificación corresponden al CAC 40 de Francia, el HSI de Hong Kong, el AS51 de Australia y el S&P500 de USA. Cada uno de ellos lidera un conglomerado geográfico importante. De acuerdo al grado, fortaleza y promedio de ocupación, el vértice central es el índice CAC 40. El grado y la fortaleza del vértice pueden ser influenciados no sólo por variables económicas y financieras sino por cuestiones geográficas y horario de apertura de las bolsas.

La Fig. 1: Muestra el árbol de expansión mínima de los índices financieros. El centro de masa del árbol se lo disputan Francia y Hong Kong.

Fig.1. El árbol de expansión mínima muestra a Francia como vértice central y cinco conglomerados geográficos. El conglomerado central está liderado por el CAC40 de Francia.

En el árbol se distinguen claramente tres grandes conglomerados: el de América del Norte, liderado por S&P500 de USA, el de Europa Occidental liderado por CAC40 de Francia y el de Asia y Australia liderado por HSI de Hong Kong. Un cuarto conglomerado, corresponde a países Sudamericanos, que parecen tener más influencia de los índices Europeos que de los Norteamericanos (excepto por Jamaica y Venezuela, quienes muestran comportamientos atípicos al resto de los países de esta región). Los países

de Europa Oriental también forman un pequeño conglomerado alrededor de los índices de los países de Europa Occidental. Los índices de países Africanos no forman conglomerados. Resulta también interesante de que el árbol de expansión muestra una fotografía de los principales conglomerados que es parecida a un mapamundi tradicional, esto es, el orden en que aparecen es: Asia – Europa – América. Dado que la correlación de las bolsas es establecida de acuerdo a la fecha (y que los días inician en los países asiáticos) se decidió hacer la suposición de que los días iniciasen en Europa o en América. Los árboles resultantes de estas suposiciones son los siguientes:

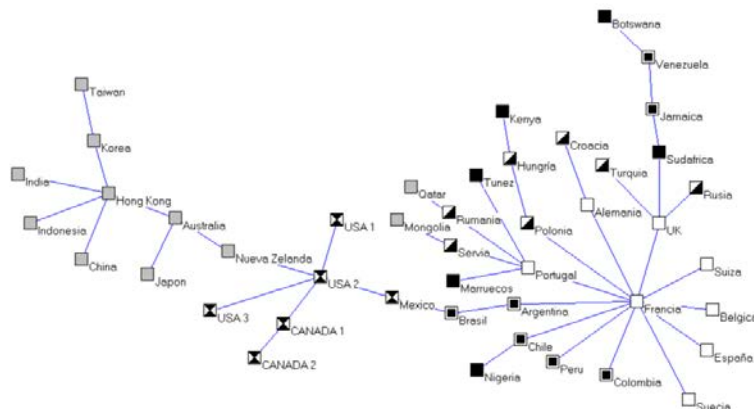

Fig.2. El árbol de expansión mínima suponiendo que los días inician en Europa. Los cinco conglomerados por región se mantienen, pero el vértice central cambia y está entre el CAC40 de Francia y el S&P500 de USA

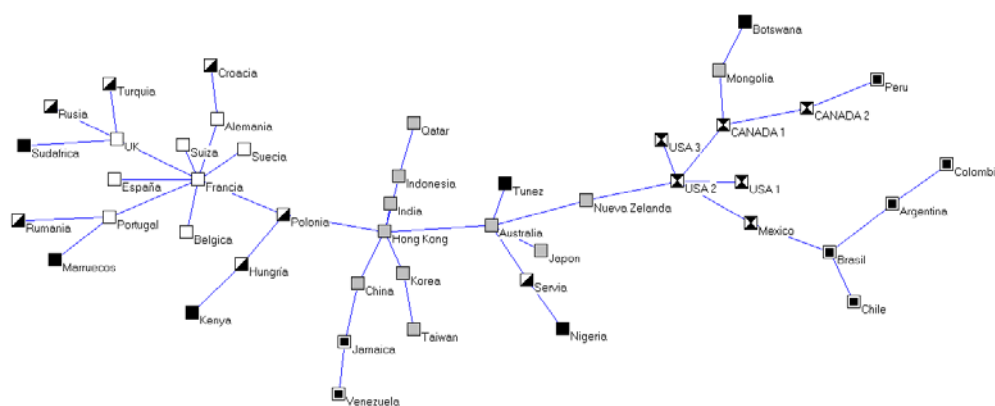

Fig.3. El árbol de expansión mínima suponiendo que los días inician en América. Se mantienen los conglomerados, el vértice central se mueve a Hong Kong.

Como puede ser observado, en cada una de las gráficas el árbol refleja un mapamundi que inicia en el huso horario supuesto. Esto hace que cuando el huso horario inicia en Europa, América aparezca en el centro de la figura; y cuando el huso horario inicia en América, las bolsas asiáticas serán las que se encuentren en el centro. En cada una de las figuras es notoria la formación de los grandes conglomerados (bolsas asiáticas, bolsas europeas y bolsas norteamericanas). En cada una de ellas, las bolsas de los países de Europa Oriental aparecen ligadas a las bolsas de Europa Occidental. En la segunda figura, el conglomerado de bolsas pertenecientes a países sudamericanos está nuevamente unido a las bolsas europeas, mientras que en la tercera figura, estas bolsas aparecen ligadas al comportamiento de las bolsas que pertenecen a países de América del Norte. La bolsa mexicana y la bolsa brasileña aparecen siempre unidas, y regularmente son el punto de encuentro entre los países de Norteamérica y Sudamérica. La

bolsa jamaicana y la bolsa venezolana muestran comportamientos atípicos al resto de las bolsas sudamericanas. Las siguientes tablas nos presentan un análisis de los valores de la fortaleza, el grado y el promedio de ocupación de las principales bolsas:

País	Índice	Grado	Fortaleza	Prom. de ocupación
USA 2	S&P500	4	1.9166	4.5964
Francia	CAC 40	12	7.6999	2.4013
UK	FTSE 250	4	2.9977	2.8501
Hong Kong	HSI	6	5.3110	2.8089
Australia	AS51	5	4.8890	3.2859

Tabla 2. Esta tabla muestra los índices que obtuvieron los valores óptimos por región cuando suponemos que el día inicia en Europa. El CAC40 es el vértice con mayor fortaleza y menor promedio de ocupación, lo cual lo convierte en el vértice central del árbol.

País	Índice	Grado	Fortaleza	Prom. de ocupación
USA 2	S&P500	5	2.8761	3.64433
Francia	CAC 40	8	4.0586	3.27234
UK	FTSE 250	4	2.9970	3.72105
Hong Kong	HSI	6	5.3103	2.73841
Australia	AS51	5	4.8888	2.86205

Tabla 3. Esta tabla muestra los índices que obtuvieron los valores óptimos por región cuando suponemos que el día inicia en América. El HSI es el vértice con mayor fortaleza y menor promedio de ocupación, lo cual lo convierte en el vértice central del árbol.

Basándose en estas tablas, S&P500 es la bolsa líder en la región de Norteamérica, CAC40 es la bolsa líder en Europa y el HSI es la bolsa líder en Asia. Dependiendo el huso horario, el vértice central podría ubicarse en Hong Kong o Francia.

CONCLUSIONES

El índice CAC40 o el índice HSI podrían ser los vértices centrales del árbol dependiendo del huso horario. El árbol muestra tres grandes conglomerados, que coinciden con sectores geográficos en Asia, Europa y Norteamérica. Es posible distinguir dos conglomerados más en las regiones de Sudamérica y Europa Oriental. Los índices de las bolsas de los países africanos no forman conglomerados. Los conglomerados son liderados por el CAC 40 de Francia, el HSI de Hong Kong y el S&P500 de USA, siendo los índices de mayor influencia entre los estudiados.

LAS PYMES: EL CUARTO SECTOR DE LA ECONOMIA

Romeo Ruiz Mandujano, Instituto de Estudios Universitarios

RESUMEN

Este artículo muestra la importancia que en México tienen, las Micro, Pequeñas y Medianas Empresas en la economía nacional, sin embargo se menciona la urgente necesidad de que este modelo de organización tenga que reinventarse en medio de la actual globalización para ser consideradas como entidades económicas importantes, con características propias, sociales, de naturaleza familiar y con objetivos claros y precisos cuyo propósito sea sostenerse en el mercado global con un fin social de dar prosperidad a las familias mexicanas y a miles de comunidades sobre todo aquellas que se encuentran legalmente constituidas en las zonas rurales de nuestro país. La Pymes cuentan con la más amplia gama de giros productivos, comercializadoras y de servicios; las cuales en su actividad autónoma también se relacionan con las cadenas comerciales, con autoridades de los distintos niveles, con organizaciones sociales, regionales, cámaras de comercio, sectores económicos, pero su condición actual les obliga a padecer la influencia de la globalización y son sometidas por diversos factores externos e internos minimizando con ello sus posibilidades de desarrollo y consolidación. Por lo que deben comprender que para una mayor competitividad y mejora es necesario contar con una adecuada División del Trabajo, un diseño organizacional acorde a sus necesidades desde su constitución, una estructura que conduzca y limite la Autoridad y Responsabilidad, Disciplina, Unidad de Mando, Unidad de Dirección, visión, planeación, organización, control e integración. Todo ello para un Empoderamiento responsable y con una definida Jerarquía, Orden, Equidad y Estabilidad en un marco de legalidad y con los conocimientos modernos de la tecnología y la profesionalización en su Administración. Todo ello les permitirá constituirse como el Cuarto sector de la Economía Mexicana.

PALABRAS CLAVES: Reinención, Nuevo modelo organizativo, Planeación, Organización, Control, Dirección e Integración.

SMES: THE FOURTH SECTOR OF THE ECONOMY

ABSTRACT

This article shows the importance that the Small and Medium Enterprises have in México, in the national economy. However, it also mentioned the urgent need for this model of organization has to reinvent itself amidst the current globalization to be considered as important economic entities, with its own characteristics, social, nature familiar with clear and precise purpose of which is sustained in the global market with a social purpose of bringing prosperity to the Mexican families and thousands of communities especially those that are legally established in the rural areas of our country. The SMEs have the widest range of production money, marketing and services, which in their autonomous activity are also associated with retail chains, with authorities at different levels, social organizations, regional chambers of commerce, economic sectors but its present condition forces them to suffer the influence of globalization and are subject to various external and internal factors thereby minimizing their chances of development and consolidation. So you must understand that for greater competitiveness and improvement is necessary to have a proper division of labor, organizational design that suits your needs from its constitution, a structure that will lead and limit the Authority and Responsibility, Discipline, Unity of Command, Management Unit, vision, planning, organization, control and integration. All this for a responsible empowerment and a definite hierarchy, order, equity and stability in a legal framework with modern knowledge and technology and professionalism in its management. This will allow them to establish itself as the fourth sector of the Mexican Economy

KEYWORDS: Reinvention, new organizational model, Planning, Organization, Control, Management and Integration.

INTRODUCCION

El problema del fracaso de las Pymes ha sido una ausencia de profesionalización en sus actividades administrativas y la constitución de las mismas, lo cual impacta profundamente en la economía nacional, en el patrimonio de las organizaciones que en la mayoría de los casos son familiares y en la parte social por ser grandes fuentes generadoras de empleos y bienestar sobre todo aquellas que se encuentran constituidas en zonas rurales de México. Se requiere primeramente Pymes consolidadas en su estructura y administración interna para incentivar realmente y de manera permanente la economía nacional con un nuevo orden legal, administrativo y social que de vida a un nuevo paradigma económico con rostro humano en esta nueva civilización. Para ello es importante y urgente instrumentar acciones al interior de las Pymes que les permita ser más competitivos y con ello crear sus propias condiciones que fortalezcan su desarrollo y consolidación. Actualmente la problemática que enfrentan las Pymes en México es generado en gran parte desde su propia creación, gestión, administración y desarrollo lo que provoca otros problemas; entre ellos su permanencia en el mercado, la ausencia de fuentes de financiamiento, la falta de posicionamiento empresarial en la sociedad y en consecuencia permiten el auge y fortalecimiento que cada día asumen las grandes firmas empresariales que con mayor intensidad se expanden en un mayor número de localidades del país. Aunado a su problemática interior se suman tanto la ausencia de claridad de políticas públicas acorde a sus necesidades como el proceso de fiscalización y control gubernamental que ponen en riesgo tanto su capital invertido pero sobre todo su permanencia.

LA GLOBALIZACION

La Globalización como un proceso de creciente internacionalización e interdependencia del capital financiero, industrial, humano, comercial, da vida a nuevas relaciones económicas, políticas y sociales, así como al surgimiento de nuevos productos, mercados, procesos distributivos, productivos y de consumo más competitivo con una rápida expansión y uso de la tecnología sin precedente. En consecuencia el mundo de hoy es una sociedad compuesta de organizaciones de distintos tamaños las cuales a su vez tienen vida propia y social, son personas con identidad y con un alto impacto en el entorno en el que se desenvuelven. Todas ellas se encuentran constituidas por recursos que les permite articular su actividad de manera coordinada y con objetivos específicos. Ante estos acontecimientos globales, es imprescindible reconocer la importancia que tiene para la producción de bienes o servicios una adecuada y profesional administración al interior de las organizaciones como un efectivo proceso de desarrollo de sus actividades, habilidades y competencias que le permitan cumplir con sus objetivos, la cual debe además de comprenderse como un proceso continuo y de mejora constante en la Planeación, Organización, Dirección, Control e Integración de sus actividades involucrando varios factores, entre ellos conocimientos, técnicas pero también emociones por parte de quienes intervienen en él. En síntesis la globalización es un fenómeno que ha llegado a convertirse en un paradigma para el mundo, ante ello las Pymes requieren de esa urgencia de transformación para su permanencia en el mercado.

MEXICO Y SUS SECTORES ECONOMICOS

México, país localizado en América del Norte cuenta con profundas riquezas naturales, económicas, turísticas, culturales y su ubicación geográfica y colindancias con países como Estados Unidos, Guatemala, Belice y el Golfo de México, Océano Pacífico y el mar del Caribe le permite contar y brindar además una amplia actividad económica y diversa para quienes lo habitamos. Es por ello que las organizaciones o empresas que conforman nuestro territorio están diseñadas y encaminadas a la

producción de bienes y servicios mediante la obtención, transformación e intercambio de recursos las cuales por su actividad productiva y ocupacional se clasifican y pertenecen a sectores económicos denominados; primarios, secundarios y terciarios, que a su vez están integradas por diversas ramas productivas como lo son principalmente el agropecuario, industrial y el de servicios respectivamente. Sin embargo en los últimos años ha retomado gran interés miles de organizaciones denominadas Pymes que se han constituido y que a pesar de que realizan actividades económicas de las sectorizadas constituyen la columna vertebral de la economía nacional por su alto impacto en la generación de empleos y en la producción nacional, los cuales representan el 97% del total de las empresas constituidas en nuestro país.

SITUACION ACTUAL DE LAS PYMES

La actual condición de este modelo de organización no soporta mantenerse por mucho tiempo en el mercado y no resistan por lo general periodos largos de crisis o afectaciones económicas; sociales, familiares por lo que se hace necesario reconocer las debilidades internas que enfrentan para convertirlos en fortalezas. Primeramente es fundamental que el propio modelo se reinvente, desde su creación asumiendo figuras jurídicas asociativas acorde a sus necesidades de cada, lo que les permitirá en un nuevo marco Jurídico ser una verdadera empresa y les garantizara permanencia empresarial a los Por otra parte Internamente deben reconocer y reconocerse como empresas fuertes que mas que asistencialismo lo que se requiere es una profunda profesionalización de sus actividades administrativas, habilidades técnicas y un aspecto importante deberá ser la concientización de los emprendedores económicos de este tipo de organización que se da nacimiento a un ser social y económico como una actividad emprendedora en momentos esperanzadores y no como hasta hoy que nacen como producto de la ausencia de empleos, oportunidades y representa más que una oportunidad, una salida a la problemática, lo que ocasiona condiciones desfavorables a la hora de desarrollarse porque se crean en un entorno precipitado que tampoco les permite constituirse con un plan de negocios más profundo y profesional en el entorno empresarial, ya que cuentan con grandes fortalezas y habilidades naturales de su fuerza de trabajo y son amplios conocedores tanto de su mercado como de sus técnicas que en su mayoría fueron heredados al paso del tiempo, pero requieren aprovecharlo mediante la implementación de modelos de capacitación, reclutamiento, adiestramiento que les permita transmitir a futuras generaciones de manera profesional sus conocimientos como medio de permanencia en el mercado y de mejora de oportunidades.

CONCLUSIONES

El proceso de constitución y administración al interior de las Pymes deben estar orientados y encaminados principalmente para alcanzar sus objetivos mediante una mejor Planeación, Organización, Dirección, Control e integración de sus actividades. Ello conllevara a contar al igual que las empresas grandes con una misión y visión del negocio, ya que son entes económicos, sociales y jurídicos que tiene vida, que deben contar con una estructura diseñada a su necesidad y que estén integradas y conformadas por personas que interactuando en grupo logran los objetivos de la empresa. Esto permitirá en mejores condiciones coordinar de manera profesional y con un mejor aprovechamiento los recursos técnicos, humanos, materiales, financieros entre otros con la finalidad de posicionarse y obtener mayor productividad y competitividad. La profesionalización en la administración de cualquier organización sobre todo en las Pymes contribuye a que la empresa además de realizar sus funciones, conserve y rinda frutos el patrimonio familiar y continúe brindando oportunidades laborales en las comunidades rurales o urbanos según sea el caso, para ello adicionalmente se necesita involucrarlos en equipos tecnológicos más eficaces y eficientes de trabajo en condiciones más estables para que desarrollen sus actividades. A pesar de que la situación actual de la economía global exige más competencia muchos administradores y dueños al mismo tiempo, de este tipo de empresas, pequeñas y medianas son reacios a invertir recursos para un plan de mejora, por lo que muchas de sus actividades se desarrollan con una deficiente planeación, las cuales llevan a resultados insatisfactorios, tanto para la empresa como para el cliente. Las

pymes deben implementar varias modificaciones y ajustes a su práctica actual de administración para lograr que las fases de planeación, organización, dirección, control e integración sean más completas, profesionales e integrales. Actualmente nos corresponde vivir una etapa distinta e histórica en el mundo por lo que definir planear y estructurar se convierte en una necesidad y reto para quien decida ser un verdadero emprendedor por la vasta y diversa competencia e información a la cual tenemos acceso; por ello es importante comprender que el trabajo de hoy, constituye un rasgo distinto a la actividad humana de hace años y que como denominador común e imprescindible para la existencia de la vida social es necesario que todo proceso del hombre y de las instituciones sean desarrollados y se fundamenten en el trabajo profesional, especializado y administrado como verdaderos valores de transformación

Romeo Ruiz Mandujano es Licenciado en Derecho por la Universidad Nacional Autónoma de México, cuenta con la Maestría terminada en Administración por el Instituto de Estudios Universitarios, grado de excelencia académica. Labora en México en una Institución de Asistencia Privada denominada “Fundación Rafael Donde “en el puesto de Director General Zona Sureste de la República Mexicana. Ha participado como conferencista en varios centros educativos de Estados de la República Mexicana en temas organizacionales y financieros. Recientemente participo en la pasantía de “Micro finanzas” en Bogotá, Colombia y ha sido articulista de periódicos de circulación nacional “El financiero en Línea “y locales “Heraldo de Chiapas “, así como autor de su reciente libro publicado y presentado en México denominado “Temas Diversos “, entre otras actividades sociales y culturales.

EL PROCESO DE INTEGRACIÓN DE LAS NUEVAS TECNOLOGÍAS A LOS PROCESOS EDUCATIVOS.

Janet Ortiz López, Universidad de Vigo

RESUMEN

En el contexto del proceso de la globalización y flexibilización productiva, la educación ha cobrado una creciente importancia en el debate académico y teórico. En los distintos ámbitos sociales han aumentado las oportunidades de acceso a la información y al conocimiento y el acelerado desarrollo de las Tecnologías de la Información y Comunicaciones (TIC), han incrementado exponencialmente esta evolución. Desde esta perspectiva, y ante esta nueva realidad la educación y la formación profesional se han convertido en pilares de las reformas políticas, sociales y económicas que se están construyendo para el futuro próximo. La atmósfera social creada por el mercado tecnológico provoca entre los ciudadanos una actitud de aceptación acrítica hacia las computadoras y todo tipo de artefactos tecnológicos basados en aplicaciones digitales. Pero este ambiente también promueve el surgimiento de otras voces que señalan las consecuencias negativas en la equidad, en la alineación individual, y se destacan los peligros, amenazas y consecuencias que vienen acompañadas con la adopción de la tecnología.

PALABRAS CLAVE: Educación, Tecnología, Exclusión, Sociedad y Globalización.

THE PROCEDURE FOR INTEGRATING NEW TECHNOLOGIES INTO EDUCATIONAL PROCESSES.

ABSTRACT

In the context of the globalization process and flexibilization of production, education has become increasingly important in academic and theoretical debate. In different social areas opportunities have increased access to information and knowledge and the rapid development of Information and Communications . Technologies (ICT) have increased this development in an exponential manner. From this perspective, and for this new reality, education and training have become pillars of the politics, society and economy under construction for the near future. The social atmosphere created by the technology market among citizens, gave rise to an uncritical attitude toward computers and all kinds of technological devices based on digital applications. But this environment also promotes the emergence of other voices that point out the negative impact on equality in individual alignments, and highlights the dangers, threats and consequences that come with the adoption of this technology.

INTRODUCCIÓN

Hay quienes creen que caminamos a la total individualización y privatización de la vida como producto de la explosión tecnológica, mientras hay quienes reivindican la posibilidad de una sociedad solidaria, donde los proyectos colectivos seguirán vigentes. Resolver estas incógnitas compete en nuestras sociedades a quienes reflexionan sobre su desarrollo, presente y futuro. De allí que resulte necesario

conocer cómo se conforma el universo cultural, el conocimiento y el modo de percepción del mundo de los sujetos.

También se intenta enfocar la educación en lo que se refiere a su carácter instrumental y didáctico, aprovechando los abundantes medios y diseñando programas educativos para una generación que nació con las nuevas tecnologías y comunicaciones. La búsqueda de concepciones pedagógicas para enfrentar nuevos retos en el uso de esas herramientas tecnológicas y para indagar acerca de un proceso de enseñanza y aprendizaje alternativo en el marco de la globalización, es el propósito de este trabajo.

Los efectos políticos derivados de la implantación de sistemas tecnológicos “...han sido observados por los analistas como tendencias de largo plazo ubicadas en los estudios sobre tecnología y poder que ha proliferado gracias a la implantación y consolidación de sistemas tecnológicos de alto rendimiento.” (Medina, 2000).

Como consecuencia de lo anterior las repercusiones sobre la vida cotidiana de algunas personas y sectores sociales que si bien no están modificando el entorno cultural propiamente dicho, sí están dejando huellas en sentido de cruzamientos de múltiples dimensiones discursivas, cognitivas y conductuales. Además, las relaciones entre las tecnologías de la información y comunicaciones y las escuelas están bajo la influencia de un contexto de cambio. Sin embargo, se intenta distinguir aquello que depende de factores objetivos de transformación y de aquello cuya naturaleza es puramente persuasiva.

La implicación de la tecnología en la vida cotidiana, en la ciencia y la cultura en general, es enorme y crece cada día. No obstante, hasta ahora la pedagogía en general y los sistemas educativos no le han prestado suficiente atención a dicha cuestión. En este artículo se analizan las razones de quienes consideran necesaria la dimensión tecnológica en la educación.

Es claro entonces, que las comunidades educativas se enfrentan con la disyuntiva de asimilarse al torrente de innovaciones tecnológicas sin un soporte didáctico que les permita llevar a cabo los procesos de enseñanza y aprendizaje utilizando esas tecnologías en su justa dimensión. La transformación de la forma de enseñar y aprender así como una serie de actividades de la vida cotidiana tienen implicaciones sociales a las que se debe dar respuesta.

Es por ello que las Tecnologías de la Información y Comunicación, en adelante TIC, son motivo de una intensa y extendida exploración sobre sus efectos en la industria, el currículo y los efectos de las nuevas relaciones sociales en los diversos campos productivos y culturales.

El indagar los efectos del uso de herramientas para la educación resulta de observar al proceso de enseñanza aprendizaje como una entidad viva, que tiene una dinámica propia y que cambia continuamente. En la educación no es fácil predecir. Es importante entonces realizar estudios precisos del estado de las cosas, de las dificultades por las que atraviesan las comunidades ante nuevos agentes que intervienen en el proceso. Esto nos lleva a la conjetura principal del trabajo en el sentido de que no hay cambios sustanciales en el uso de las herramientas tecnológicas. No son significativas para el proceso de enseñanza aprendizaje ni han representado modificaciones sustanciales en la escuela. Pero con su irrupción, han ejercido influencia sobre algunos administradores educativos y en las políticas públicas relativas a la educación se ha priorizado el uso de las tecnologías como recurso educativo dejando a un lado los aspectos formativos y esenciales de la docencia.

La educación desempeña un papel crucial al contribuir a que los actores sociales se adapten a los procesos de cambio económico, político y cultural, así como a impulsar el desarrollo del capital humano requerido para el crecimiento de los países. La capacidad de los sistemas de educación y formación para cumplir

estos papeles depende de si las instituciones escolares son capaces de responder a las transformaciones que tienen frente a sí.

El dilema consiste en la renovación de modelos que no solo operativicen las funciones educativas elementales, sino que además contemplen problemas que tienen resolución a largo plazo.

Es por ello que una de las dificultades centrales a enfrentar es el de la exclusión. De acuerdo con Ruiz Durán, "... este masivo flujo de información y conocimiento, implica un complejo proceso con un alto grado de incertidumbre, y existe el riesgo de polarizar a las respectivas sociedades entre los que tienen acceso e incluso pueden evaluar e interpretar este conocimiento y los que están excluidos del mismo. La capacidad de acceso, y con base en ello, de comprender y crear, constituye la función básica de la educación" (Ruiz D. 2001: 11).

Bajo este argumento, la interrogante que aquí se expone es si las dimensiones de recursos tecnológicos serán suficientes para cubrir las necesidades educativas y lo más importante, si esos recursos contribuirán al desarrollo cognitivo de los alumnos, al enriquecimiento de habilidades básicas, de aptitudes, a la mejora de vínculos comunicativos, al fortalecimiento de las identidades culturales y de las redes de actores en las comunidades educativas.

REPLANTEAR EL QUEHACER PEDAGÓGICO

La pregunta que se desprende de este trabajo es ¿cuál es el modelo pedagógico que demandan las nuevas TIC y la sociedad de la información? El giro que se vive en las sociedades actuales y la transición de la era postindustrial a un escenario global pautado por lo informacional, demandan un nuevo sistema educativo. Esta sería una primera respuesta "...más que una reforma de la enseñanza, es necesaria una revolución del pensamiento, en la elaboración de nuestras construcciones mentales y en su representación. En pos de esas finalidades, la conjunción de las nuevas tecnologías con métodos transdisciplinarios es la que puede ofrecer una inteligencia estratégica y a la vez estrategias inteligentes..." (Picardo, 2002:22). Esta revolución del pensamiento que implica una verdadera transformación educativa no puede sustentarse en los enfoques pedagógicos tradicionales; en efecto, los grandes cambios educativos empiezan en el aula, en una relación pedagógica definida entre el docente y sus estudiantes.

Las teorías o corrientes pedagógicas han oscilado en enfoques, más o menos centrados en el docente o en el estudiante; sin embargo, las sociedades se debaten en la transición para llegar a constituirse en "Sociedades informacionales", "Sociedades del conocimiento" o "Sociedades del aprendizaje", sustentadas en la vorágine de las nuevas tecnologías de la información y ante estos retos es necesario replantear el quehacer pedagógico para formar al ciudadano de estas posibles sociedades.

En cuanto a la adecuación de los sistemas educativos, el Siglo XXI, indica que se ofrecerán recursos sin precedentes tanto a la circulación y al almacenamiento de informaciones como a la comunicación. Además demandará a la educación una doble exigencia que puede parecer casi contradictoria: la educación deberá transmitir, masiva y eficazmente, un volumen cada vez mayor de conocimientos teóricos y técnicos evolutivos adaptados a la globalización cognoscitiva, porque son las bases de las competencias del futuro. Pero deberá hallar y definir orientaciones que permitan no dejarse sumergir por las corrientes de información más o menos efímeras que invaden los espacios públicos y privados, y conservar el rumbo en proyectos de desarrollo individuales y colectivos. En cierto sentido, la educación se ve obligada a proporcionar las cartas náuticas de un mundo complejo y en perpetua agitación y, al mismo tiempo, la brújula para poder navegar por él.

En una hora de navegación – cuyo costo es igual a una cerveza, una cajetilla de cigarrillos u otro gasto similar – podemos acceder a un mundo insondable de información que enriquece nuestros conocimientos, bien sea para preparar una clase o para complementar una tarea. El problema crucial de nuestra realidad

educativa puede tener dos vertientes: por un lado, el “desconocimiento” de cómo utilizar la información en el proceso enseñanza-aprendizaje, yendo mucho más allá de los tradicionales libros de texto, e incorporar otras fuentes de información más “seculares” o menos tradicionales; y por otro lado, la falta de “conocimiento” sobre el uso de nuevas tecnologías de la información y comunicaciones, concretamente uso de internet.

Estos escenarios demandan una nueva arquitectura educativa que apunte y apueste al aprendizaje de por vida, lo que implica reivindicar la hipótesis educativa enseñar a aprender y sobre todo utilizar adecuadamente la información en el proceso de enseñanza-aprendizaje. Los docentes y estudiantes deben asumir un nuevo rol de “mediadores” entre la experiencia humana y la información existente y sobre todo caer en la cuenta que la formación debe ser punto de partida y de llegada en el proceso de enseñanza aprendizaje.

En un mundo de inequidades, los cambios curriculares provocados por las TIC generan modelos educativos que se fundamentan en los instrumentos más que en lo pedagógico así como las nuevas orientaciones en la política informática.

El problema de la inequidad y la exclusión, impide el desarrollo de propuestas educativas pedagógicas en general para la aplicación de proyectos a largo y mediano plazo en relación a las nuevas tecnologías, lo que conduce a una errónea planificación y a una fallida distribución de recursos para las escuelas.

Una planificación educativa debe reconocer las carencias que padecen los sistemas educativos, en particular los referidos a los sectores sociales excluidos. Pero aun reconociendo esta realidad que resulta evidente, los residuos de esta problemática generarán entre otras circunstancias, mayores resistencias tanto al cambio como a la implementación de nuevas estrategias didácticas para la enseñanza y el aprendizaje.

El uso propagandístico de las TIC que hacen algunos administradores escolares al adquirir el equipo y descuidar deliberadamente o no, los aspectos didácticos, conduce a un abandono de una perspectiva centrada en lo social y en lo cultural. ¿Qué efecto tiene entonces una planificación basada en las nuevas tecnologías en donde quedan atadas al diseño curricular el conjunto de recursos y de la retórica en moda útiles para la plataforma política del gobierno en turno, pero vaciadas de contenido en cuanto a lo esencialmente pedagógico?, ¿la educación mediática y los nuevos modelos didácticos en donde el papel del profesor es el facilitador del aprendizaje podrán encarar y eventualmente resolver los problemas actuales de los sistemas educativos?

El mundo en que vivimos parece depender cada vez más del conocimiento científico y tecnológico. Sin embargo, la forma en que nos relacionamos con este conocimiento no es siempre igual en los países en vías de desarrollo que en los países desarrollados. En tal sentido, surge la preocupación sobre la educación en todo este proceso.

La ciencia y la tecnología han terminado por transformar numerosos espacios de las sociedades contemporáneas. Son innegables los beneficios que de tal transformación se obtiene, pero también son numerosos los riesgos que han surgido de tan vertiginoso desarrollo. Esta doble condición obliga a que la ciencia y la tecnología deban de ser vistas como una actitud crítica, ya que no siempre son los mismos impactos los que se presentan en los diversos sectores sociales.

DESIGUALDAD Y SOCIEDAD DE RIESGO

Se atribuye a la ciencia y a la tecnología grandes efectos sobre la sociedad, en particular en el campo de las tecnologías de la producción y de la información y en el de la biotecnología. Una conjetura vinculada

al tema, consiste en que frente al avance de la tecnología diversos sectores han quedado a la zaga y ello representa un enorme desmentido al determinismo tecnológico que pregona una supuesta igualdad social promovida por la expansión de recursos informáticos. En el plano educativo, representa un nivel de riesgo en la medida en que los excluidos carecerán de preparación para el trabajo y acceso a la cultura.

El problema se ubica en la inequidad que divide a los sectores y en la planificación educativa: reciben más los que ya tienen y se quedan pendientes los que nunca les llegan. Con relación al internet, por ejemplo, solo el 20% más rico de la tierra dispone del 93% del uso total de este medio. Ya desde 1995 la distribución mundial de hosts conectados a internet era tan desigual como cualquier otro ámbito social; casi el 70% pertenecía a América del Norte, el 21% a Europa Occidental y el resto a los demás países. (Rosaslanda, 1998).

El asunto de la exclusión se convierte entonces en un problema central, se destaca el relacionado con los recursos, si ya con problemas alcanzan para satisfacer las necesidades básicas de la mayor parte de la población, difícilmente se podrán destinar a planes que incluyen necesariamente adquisición de equipo, cableado, instalación y mantenimiento de sistemas de comunicación, capacitación, salarios, etc. lo que implica no solo insuficiencia crónica sino eventualmente contribuirá a ahondar las diferencias entre los que disponen de la infraestructura y los que no la tienen.

Otro problema a enfrentar para las políticas de informática es sin duda el aspecto cultural. En este rubro se destacarían las dificultades tales como el uso y la adaptación de artefactos fuera de consenso entre la población, la introducción de hábitos que afectarán las redes sociales en comunidades y la cada vez más creciente implantación de dispositivos y sistemas que irrumpen en el entorno, modificando costumbres y supliendo arbitrariamente formas y mecanismos de comunicación e intercambio.

En mi opinión, la informática, las nuevas tecnologías de información y comunicación y todos los avances en ciencia y tecnología, deberían formar parte de estrategias encaminadas a fortalecer ámbitos comunitarios, allanar desigualdades y no ahondar diferencias entre quienes cuentan con conocimiento y recursos de informática y quienes se encuentran, por su voluntad o no, al margen de los avances tecnológicos. Es por eso que aquellos con ingresos, educación y contactos, en sentido literal, tienen un acceso barato e instantáneo a la información, el resto se queda en un camino incierto, lento y costoso.

En América Latina, considerada como una región inequitativa en términos de riqueza, requiere un fuerte desarrollo científico – tecnológico para ayudar a contrarrestar la creciente miseria, se reporta un reducido nivel de atención en ciencia, y el poco que existe se estima que está centrado solo en grupos minoritarios de población, agravando así la desigualdad (UNESCO, 2011).

El propósito de una educación comprometida es que contribuya a que los sistemas tecnológicos sirvan realmente para la construcción de formas satisfactorias de vida personal y comunitaria; que la educación en tecnología nos forme para participar en la definición de tales sistemas tecnológicos, compatibles con un orden social que disminuya las desigualdades sociales. La competencia mediática implica también entender cuáles son las nuevas claves educativas que necesitamos para poder desentrañar el fenómeno científico – tecnológico contemporáneo, en medio de la globalización, desde nuestra condición de países en vías de desarrollo.

Ahora bien estos nuevos escenarios requieren de una nueva configuración a fin de poner en marcha líneas estratégicas para llevar a cabo la implementación de las TIC en los sistemas educativos.

EL QUEHACER DOCENTE ANTE LAS NUEVAS REALIDADES

Un papel crucial para comprender qué es lo que sucede y puede suceder con las TIC involucradas en la educación, se refiere a la atención de las políticas educativas. Desde mi perspectiva, serían tres los ámbitos que merecen atención en ese quehacer pedagógico. Uno: los recursos, focalizando aquellos

aspectos que se refieren a los espacios y el equipamiento. Dos: la capacitación docente en donde se destaca el nuevo rol del facilitador. Tres: la desvinculación sociocultural misma que representa un problema sensible ante la enorme carga de significantes contenidos en los nuevos códigos de los patrones de pensamiento tecnológico.

Con relación a la infraestructura, es ya conocida la precariedad existente en las escuelas. Todas, incluyendo las privadas que se jactan de tener un equipamiento más que suficiente, padecen de la rápida obsolescencia de los equipos por razones de sobra conocidas. De manera que, por ejemplo para Tomás Miklos “es más peligrosa una educación sin sentido que una sin instrumentos”. Es decir, los administradores deberán preocuparse más por establecer estrategias didácticas y pedagógicas tendientes a la formación de los alumnos que a dotar de computadoras a los salones de clase porque se corre el riesgo de dar prioridad a los artefactos que a la formación de los alumnos y con ello se conduce a una educación instrumentalista.

Y está claro que las nuevas tecnologías requieren un nuevo tipo de alumno; más preocupado por el proceso que por el producto, preparado para la toma de decisiones y elección de su ruta de aprendizaje. En definitiva dispuesto para el auto aprendizaje, lo cual abre un desafío a nuestro sistema educativo, centrado en la adquisición y memorización de información, y la reproducción de la misma en función de patrones previamente establecidos.

En cierta medida estos nuevos medios, reclaman la existencia de una nueva configuración del proceso didáctico y metodológico tradicionalmente usado en nuestros centros, donde el saber generalmente recae en el profesor y la función del alumno es el de receptor de informaciones. Ello plantea un cambio en los roles tradicionales desempeñado por las personas que intervienen en el acto didáctico. Este es el segundo punto de atención, que lleva al profesor a alcanzar dimensiones más importantes, como la del diseño de situaciones instruccionales para el alumno.

Lo que estamos comentando conduce a plantear que las nuevas tecnologías aportan un nuevo reto al sistema educativo y es el pasar de un modelo unidireccional de formación, donde por lo general los saberes recaen en el profesor o en su sustituto el libro de texto a modelos más abiertos y flexibles, donde la información situada en grandes bases de datos, tiende a ser compartida entre diversos alumnos. Por otra parte, según los defensores de la educación virtual: “se rompe la exigencia de que el profesor está presente en el aula, y tenga bajo su responsabilidad un único grupo de alumnos”. De acuerdo con esta idea, se intenta romper en definitiva con la llamada educación presencial e incentiva el sistema a distancia. La pregunta es que si las instituciones educativas están preparadas para ese salto cualitativo porque se ha demostrado la ineficiencia de la educación a distancia en las telesecundarias de nuestro país y que programas como EDUSAT (educación vía satélite) no han tenido los logros que se habían fijado. Es por ello que, en el camino del conocimiento de los impactos de las nuevas tecnologías es importante considerar políticas de formación y actualización de docentes en TIC teniendo en cuenta qué es lo que actualmente acontece con ellas en la relación pedagógica cotidiana.

La reflexión educativa sobre el maestro viene proponiendo un nuevo rol. Al respecto la Agenda Educativa de Naciones Unidas afirma: “El maestro es cada vez más un facilitador del aprendizaje, un mediador calificado entre múltiples oportunidades educativas y las motivaciones y expectativas de los estudiantes” (Gómez B. 1998: 229).

El maestro como facilitador y mediador supone una relación cooperativa más estrecha entre estudiantes y profesores. La diferencia generacional que existe a favor de los jóvenes en la habilidad tecnológica puede dificultar la relación pedagógica con maestros no siempre bien entrenados en el uso de las nuevas tecnologías, pero también puede ser una oportunidad para compartir aprendizajes, para invertir los roles enseñanza-aprendizaje y fomentar un clima de exploración cooperativa entre profesores y estudiantes.

No solo existe una aceptación, sino una generalizada recomendación para la noción del maestro como facilitador. El maestro funda su autoridad en la posesión de textos que maneja y domina. De pronto se percata que esos textos, artículos, documentos, reportes de investigación y demás escritos se encuentran al alcance de los alumnos gracias al internet. La convergencia tecnológica que ha irrumpido con internet obliga a los docentes a reconsiderar la mediación en términos de un incremento en las funciones de complejidad que reclaman los nuevos esquemas didácticos.

Otro problema se refiere a concebir a la ciencia y la tecnología desvinculadas de su orientación socio-cultural. Al estar frente a una educación basada solamente en la instrumentación de información, donde se pierden de vista los componentes aledaños a los procesos educativos y se convierte paulatinamente en entrenadora de sujetos destinados a la producción directamente, el aspecto formativo queda en un segundo plano.

La experiencia internacional muestra que la tecnología por más compleja sofisticada y accesible que sea requiere un contexto de apropiación. Las TIC desvinculadas de proyectos educativos planificados, de experiencias organizadas o de intenciones pedagógicas y sistemáticas tienen pocas posibilidades de generar innovaciones para mejorar la calidad educativa.

Porque la docencia no es sólo un asunto de competencia instrumental, tiene que ver con la relación social en que se implanta y en este sentido, la mejor tecnología puede fallar en un medio de relación pedagógica precaria. Entonces la manera en como los profesores entienden el quehacer educativo supone que no se reduce al manejo de recursos sino que implica el compromiso de actualización para adaptar incluso una nueva didáctica.

Es apenas iniciático el recorrido que tiene la implantación de políticas y experiencias informáticas en la educación y aún escaso el trayecto investigativo que se tiene en el tema, cualquier adelanto en el intento de comprender el escenario de las prácticas significantes de los jóvenes con las TIC nos puede permitir generar y fortalecer procesos de reconocimiento y potenciación de sus posibilidades educativas. Los nuevos objetivos tecnológicos como el internet cada vez más se extiende a los otros sectores de la población y no sólo en el nivel de cobertura, sino también, y fundamentalmente, a través de la generación de vínculos con las racionalidades sociales y tecnológicas que ellas implican.

Finalmente observaremos cómo ciertos centros escolares han venido modificando su currícula con la finalidad de dar relevancia a las nuevas tecnologías y con ello aparentar actualizaciones pero que en realidad se trata de cambios superficiales.

Las transformaciones que a lo largo del siglo XX sufrió nuestra manera de pensar sobre la ciencia, y sobre el quehacer de los científicos, puede identificarse como el segundo motor de la revolución en la educación de las disciplinas científicas. Las ideas de pensadores como Popper, Jun, Lakatos y Feyerabend han sacudido la visión inductivista tradicional sobre la construcción del conocimiento científico y han abierto la puerta a la discusión y a la reflexión sobre la ciencia como forma válida de conocer el mundo. Su impacto sobre la educación de las ciencias se ha dado en varios niveles, desde su selección y organización de los contenidos, hasta el desarrollo y puesta en práctica de modelos y estrategias didácticas en el aula. Es gracias a los esfuerzos de estos partidarios que la búsqueda y promoción de la “alfabetización científica y tecnológica” de todos los estudiantes se ha convertido en meta central de la mayoría de los planes y programas de estudio a todos los niveles.

En muchos sectores sociales en el país no cuentan con las capacidades suficiente como para integrarse a los procesos tecnológicos debido a las abundantes creencias que aún persisten.

No obstante son pocos los programas en curso en proporción con las necesidades del sistema educativo que apoyen la incorporación de las TIC a la escuela pública. Sobre todo si tenemos en cuenta que muchas veces se les considera como la panacea para enfrentar los graves problemas de calidad y equidad de la educación. Por ello vale la pena hacer una revisión somera del estado de las orientaciones que en materia de nuevas tecnologías se han desarrollado en los últimos años hasta revisar la situación actual.

Las expectativas de utilización de recursos tecnológicos nos colocan en la necesidad de establecer lineamientos didácticos acerca del uso de la nueva etapa de la enseñanza y el aprendizaje. Es ya frecuente que nuestros alumnos recurren a la investigación utilizando la computadora pero en algunas ocasiones de manera inadecuada.

El uso de la computadora como auxilio de nuestro trabajo académico es sólo una herramienta. Quizá es por la apabullante campaña a favor de los artefactos tecnológicos que impide muchas veces evadirse de subyugación que ejerce en especial a la población joven. Para los docentes no hay la menor duda que la utilización de la computadora dificulta la elaboración de la crítica, inhibe la creatividad y el placer por conocer se diluye por la velocidad con la que se pueden realizar las tareas.

En la actualidad para hacer las tareas escolares algunos alumnos recurren a las enciclopedias en disco compacto o a internet y aplican aquella máxima del *mayor beneficio con el menor esfuerzo*. De esa manera se realizan las tareas escolares utilizando la computadora y aplicando solo algunos comandos, el trabajo se entrega y punto.

Según varios autores, la computadora ha incentivado vicios en lugar de alentar vías de salida a problemas en el aprendizaje. Y lo preocupante es que en el plano escolar ello se incrementa y las instituciones no han asumido la responsabilidad de hacerle frente a la irrupción de las TIC.

Los pregoneros de la tecnología no advierten que el mal uso de esas valiosas herramientas puede conducir a un rumbo precisamente adverso a lo que se desea lograr.

CONCLUSIONES

La incorporación de la tecnología computacional en la educación debe enfocarse atendiendo a dos aspectos importantes: el papel de mediador del docente en el uso de herramientas computacionales y las políticas educativas que se encaminan hacia nuevas formas de aprender y enseñar, en donde las herramientas novedosas intentan suplir al profesor y pretenden la educación no presencial. Por ello es de capital importancia que la educación que busque incorporar a las TIC deba contemplar los aspectos pedagógicos que sostengan una educación de calidad buscado lo formativo más que lo instrumental.

Algunos de los retos de la sociedad que la ciencia debería asumir como suyos en los próximos años tienen que ver, por ejemplo, con atender el crecimiento de la población, con la urgencia de asegurar un bienestar general, con la satisfacción de las crecientes necesidades básicas y las aspiraciones de los que serán cinco mil millones de pobres en el mundo en menos de veinte años, con el aprovisionamiento de empleos frente a cambios tecnológicos, entre otros. Pero en América Latina se requiere un fuerte desarrollo científico – tecnológico para ayudar a contrarrestar la creciente miseria, se reporta un reducido nivel de atención de ciencia, y el poco que existe se estima que está centrado sólo en grupos minoritarios de población, agravado así la inequidad (UNESCO, 2011).

A la luz de la situación, se comprende que los usos actuales de internet tiendan a imitar las prácticas educativas existentes. Sin embargo, algunos planificadores educativos guardan la esperanza de que la adopción generalizada de esa tecnología propicie el alejamiento de formas tradicionales de aprendizaje y el desarrollo de modelos alternativos. Una condición esperada dependerá de las oportunidades que se

proporcionen a educadores y alumnos para practicar la herramienta y de las iniciativas que se tomen para investigar su efectividad.

Convendrá recordar que como educadores, y asumiéndome yo misma en ese papel, tenemos la responsabilidad de articular los cambios sociales y culturales originados por los nuevos avances tecnológicos en base a criterios axiológicos, de conocimiento científico e interpretaciones objetivas y no en meras expectativas de a mayor tecnología, mayor progreso. En el caso de internet, esta articulación implica el ejercicio de nuestra capacidad crítica para sobrepasar la validez de los argumentos esgrimidos en su favor. Especialmente la capacidad de la herramienta para permitir el rápido acceso a cantidades masivas de información, ya que el aprendizaje humano no depende de las cantidades masivas de información sino de su relevancia y elaboración en un individuo determinado.

La educación virtual tiene efectivamente su lado positivo en tanto que acerca al usuario; ofrece posibilidades de consulta inmediata a materiales docentes y lo más importante no posterga el evento académico facilitando la comunicación en el instante. Sin embargo su contraparte, la educación presencial aun no resuelve sus propios problemas añejos ya, como para acarrear los mismos de a la virtualidad.

Otro de los retos fundamentales para la educación será el replantear la visión y adopción que se hace de las nuevas tecnologías como herramientas inermes, instrumentos incuestionables para someterlos al escrutinio social y considerar el resultado de su uso como un producto que a su vez también es un insumo para la producción de conocimientos y no como en la forma tradicional en que se ha adoptado que se trata de una utilidad en sí misma.

CAUSAS QUE GENERAN INCIDENCIAS DURANTE EL TRASLADO VIA TERRESTRE DE CARGA CONTENERIZADA EN EL PUERTO DE MANZANILLO, COLIMA, MEXICO

Óscar Bernardo Reyes Real, Universidad de Colima
Aurelio Déniz Guizar, Universidad de Colima
Jesús Otoniel Sosa Rodríguez, Universidad de Colima

RESUMEN

La investigación tiene como propósito mostrar las causas que generan incidencias durante el traslado vía terrestre de carga contenerizada, cuáles son las incidencias generadas por estas causas, Identificar los afectados por estas incidencias, proponer algunas soluciones para evitar incidencias y averiguar los sujetos que intervienen, a fin de poder determinar la posible solución, siendo importante esto para mejorar la competitividad de las empresas, trayendo un beneficio al aumentar su capacidad y disminuyendo costos extras que recaen en el precio de la mercancía. La exploración de la información fue a través de una investigación de campo y se llegó al siguiente resultado: Qué las causas generadoras de diversas incidencias como tiempos muertos, retrasos y/o demoras, apareciendo principalmente por la saturación del puerto, la falta y/o retraso en la entrega de documentos y la mala o falta de comunicación entre los involucrados, congestión vial y averías en las unidades, ocasionándose principalmente en el proceso de despacho, lo que genera el retraso en la entrega final de las mercaderías y consecuentemente gastos innecesarios.

PALABRAS CLAVE: Causas, incidencias, traslado, carga contenerizada, puerto, competitividad, costos.

CAUSES THAT GENERATE INCIDENCES DURING THE TRANSFER VIA TERRESTRIAL OF LOAD CONTENERIZADA IN THE MANZANILLO PORT, COLIMA, MEXICO

ABSTRAC

The investigation must like intention show the causes that generate incidences during the terrestrial transfer via of contenerizada load, which they are the incidences generated by these causes, Identifying the affected ones by these incidences, to offer some solutions to avoid incidences and to find out the subjects that take part, in order to be able to determine the possible solution, being important this to improve the competitiveness of the companies, bringing a benefit when increasing its capacity and diminishing extra costs that fall to the price of the merchandise. The exploration of the information was through an investigation of field and it reached the following result: What the generating causes of diverse incidences like idlings, delays and/or delays, appearing mainly by the saturation of the port, the lack and/or delay in the document delivery and bad or the lacking one of communication between the involved ones, road congestion and failures in the units, causing itself mainly in the office process, which consequently generates the delay in the final delivery of merchandises and unnecessary expenses.

KEY WORDS: Causes, incidences, transfer, contenerizada load, port, competitiveness, costs.

INTRODUCCIÓN

Dentro de la cadena del transporte, el puerto es el eslabón que permite el intercambio comercial entre el mar y la tierra; en definición un puerto es el conjunto de obras, instalaciones y servicios que proporcionan el espacio de aguas tranquilas necesarias para la estancia segura de los buques, mientras se realizan las operaciones de carga, descarga y almacenaje de las mercancías y el tránsito de viajeros. En general, las funciones de un puerto son: comercial, intercambio modal del transporte marítimo y terrestre, base del barco y fuente de desarrollo regional. Entre las funciones de índole específica se encuentran: actividad pesquera, de recreo y de defensa. México tiene una gran actividad económica para la que ha desarrollado una importante infraestructura portuaria. Aunque cada una de las costas del país tiene capacidad para recibir embarcaciones, la importancia de un puerto es considerada a partir de su capacidad de administración integral, y de operación. Los puertos Mexicanos operan a través de un sistema de concesiones del gobierno federal, llamada Administración Portuaria Integral (API) , en la actualidad existen 97 puertos, de los cuales los 16 principales son administrados por La Secretaría de Comunicaciones y Transportes, aunque existen otros tres operados por el Fondo Nacional del Fomento al Turismo (FONATUR) como son Cabo San Lucas, Baja California Sur, Ixtapa- Zihuatanejo, Guerrero y Huatulco, Oaxaca. Los puertos del país reciben y envían diariamente miles de toneladas de bienes, cuyas operaciones representan ingresos para el gobierno federal a través de las API's. Sin embargo, es necesaria una continua inversión en los puertos ya que se requieren servicios logísticos, que hagan posible desde el ingreso de la mercancía, hasta su despacho al destino final, por tanto, se desarrollan estrategias para su recepción, vigilancia, servicios administrativos, almacenamiento, y transportación.

La carga contenerizada es la que más se moviliza en los puertos de México, analizando la carga contenerizada se nota muy claramente los efectos de la política económica y comercial. El movimiento de la carga, vía contenedores, se constituye en el instrumento de transporte que ha revolucionado la logística a nivel mundial, ya que mediante este recipiente de veinte pies de largo o cuarenta pies de longitud, puede moverse todo tipo de carga. Este diseño posibilita movilizar la carga sin corte ni interrupciones, facilitando el proceso de logística y aminorando los tiempos de traslado de un barco a un camión o viceversa. De esta manera la invención del contenedor en los primeros años de la década de los ochenta revolucionó el movimiento de carga internacional, a través de los puertos y facilitó que los puertos de México se incorporen al proceso de comercio que se realiza con el transporte de contenedores.

Ahora bien, la unidad de medida para el volumen de carga contenerizada es la identificada con las siglas TEU (acrónimo del término en inglés Twenty-foot Equivalent Unit) que representa la unidad de medida de capacidad del transporte marítimo en contenedores. Una TEU es la capacidad de carga de un contenedor normalizado de 20 pies. Las dimensiones exteriores del contenedor normalizado de 20 pies son: 20 pies de largo x 8 pies de ancho x 8,5 pies de altura; equivalentes a 6,096 metros de largo x 2,438 metros de ancho x 2,591 metros de alto. Su volumen exterior es de 1.360 pies cúbicos equivalentes a 38,51 metros cúbicos. Su capacidad es de 1165,4 pies cúbicos equivalentes a 33 metros cúbicos. El peso máximo del contenedor es 24.000 kg aproximadamente, pero restando la tara o peso en vacío, la carga en su interior puede llegar a pesar 21.600 kg.

Aparte del contenedor de 20 pies, que se computa como una TEU, hay otros tamaños y tipos de contenedores. Los de uso más frecuente son de 40 pies; existen otras variantes del contenedor que se calculan como equivalentes a 2 TEU ó 1 FEU (Forty-foot Equivalent Unit). Bajo esta perspectiva, el análisis exclusivamente de carga contenerizada, que se mide en TEU's y que se moviliza por los puertos de México, registró en el período 2009 un record de 1' 110,356 TEU,s. La composición total de la carga operada por el puerto de Manzanillo se concluye que es la carga contenerizada, basta señalar que en el año 2011 la carga contenerizada que se movió por el puerto de Manzanillo fue de 1, 763,000 TEU's cantidad que respecto del año 2010, fue superior en un 16.67%, equivalente a una diferencia de 252,000 TEU's mas que en el año 2010, esta situación también se ve reflejada en el movimiento que en datos de lo

que va del año se han obtenido pudiéndose señalar que en el mes de Enero de este año se han movido la cantidad de 142,613 TEU's, cantidad que respecto del mes de Enero del año 2011 es superior en un 12.91% con una diferencia de 16,313 TEU's

El transporte de mercancías vía contenedores mantiene un constante crecimiento en el comercio mundial, es ampliamente utilizado en el concepto intermodal, exigido por las necesidades logísticas en la reducción de las manipulaciones, la disminución del tiempo total del transporte y, especialmente, la calidad del servicio en evitar o, por lo menos, reducir los daños a las mercancías transportadas. El servicio de carga contenerizada permite a los clientes un medio logístico óptimo y factible para el transporte de sus mercancías, ya que este proporciona seguridad y buen manejo de la misma, y garantiza el óptimo desarrollo de la cadena logística planeada por el importador.

Sin embargo todo este proceso puede llegar a ser interrumpido por varios factores tanto naturales, los cuales por su índole no pueden ser controlables, como factores afectantes en lo relativo al personal humano, que tienen presencia en las diferentes etapas del proceso de entrega de la mercancía desde su arribo al puerto de Manzanillo hasta su destino en el interior del país, pasando por los diversos agentes de comercio, y afectando tanto a importador, exportador, y en parte, al agente aduanal. Por lo que el blanco de la investigación es determinar cuáles son las causas que generan incidencias durante el traslado de carga contenerizada en el puerto de Manzanillo, Colima, México.

REVISIÓN LITERARIA

El comercio es una actividad igual de longeva que la propia humanidad. En el momento en que un individuo tuvo el control o la posesión de alguna cosa que otro individuo deseaba o necesitaba, nacieron las relaciones de intercambio. Los primeros intercambios que se realizaron fueron mediante el trueque, la mayoría de las veces se veían limitados por el carácter de perecedero de los bienes objeto de intercambio y por la nula existencia en ese momento de los medios para su transporte. Tiempo después la fuerza humana se substituyó por el uso de animales o bestias de carga que permitió un mayor movimiento e incremento en el volumen de los intercambios. Ya evolucionada esta etapa, el barco permitió al ser humano llegar aun más lejos, impulsando el intercambio comercial con otros pueblos. Impulso que se vio ampliado con el invento de la caldera de vapor (barcos de vapor y ferrocarriles). El motor de combustión Interna, por su parte, fue el precursor del motor de reacción tan común en nuestros días.

En función de todo lo mencionado queda expuesto lo importante del transporte, ahora bien para Portales (2008:12) el transporte "Es el movimiento de personas materiales o productos, desde el punto donde se producen, cultivan o elaboran, a otro donde se consumen, transforman, manufacturan, distribuyen o almacenan. El objetivo del transporte es poner productos a disposición de usuarios, para su utilización, en el momento en que estos sean requeridos; por tanto, podemos afirmar que la mayor utilidad del transporte, es el valor que agrega al producto por el hecho de moverlo del lugar de origen a aquellos en que sea requerido (utilidad de uso y tiempo)". Para una corporación o empresa, el transporte es mucho más que un concepto de la teoría, es un factor de ventaja o desventaja competitiva, al dar la oportunidad de posicionar sus productos con la oportunidad debida en un mercado determinado, en las mejores condiciones posibles de precio y tiempo. El transporte es una parte importante de la logística como parte de la cadena de suministros, el inicio de logística se podría encontrar desde los primeros grupos humanos, donde las familias o individuos guardaban su comida en un cierto período de año en cuevas para poder disponer de ella en los inviernos en un claro intento de control de inventario. Dichas cuevas (almacenes) tenían que ser apropiadas y accesibles. El desarrollo de la logística ha ido en paralelo con el desarrollo de la humanidad, sin embargo ha jugado un papel decisivo durante la I y II Guerra Mundial, alcanzando su aplicación. La logística moderna tiene su origen en el ámbito de la ingeniería militar que se ocupa de la organización del movimiento de las tropas en campaña, su alojamiento, transporte y avituallamiento. El Barón de Jomini, teórico militar que sirvió en el ejército de Napoleón I y del Zar de Rusia a principios del

siglo XIX, elevó la logística al rango de las tres ramas principales del Arte de la Guerra junto a la estrategia y la táctica, según estableció en 1838 en su obra *Précis de l'Art de la Guerre: Des Principales Combinaisons de la Stratégie, de la Grande Tactique et de la Politique Militaire*. Tras la Segunda Guerra Mundial, los profesionales que habían gestionado la logística militar se incorporaron al mundo empresarial y las técnicas logísticas evolucionaron rápidamente.

Sin embargo no debe confundirse el término logística con transporte, ya que si bien es cierto que la logística puede ser llevar las cosas donde se necesita que estén, no es lo mismo que transporte, ya que aunque importante es el transporte, la logística es mucho más amplia. Según Bowersonx y Closs (Cit. por Long, 2010), la logística requiere la coordinación de muchas actividades que controlan y rodean el transporte, incluyendo diseño de la red de contactos, información, transporte, inventario y almacenamiento. Como ya se menciona para la logística un elemento importante es el transporte, resultando imperativo señalar las modalidades usualmente empleadas: El transporte de larga distancia y el transporte local, el transporte de larga distancia, denominado también transporte de aproximación, tiene como finalidad el situar grandes cantidades de productos desde la fábrica o almacén central a los diferentes centros regionales de distribución, o en su caso, a depósitos. Por su naturaleza suelen emplearse camiones de gran tonelaje que hay que utilizar de forma eficaz y eficiente con objeto de abaratar el costo unitario de las unidades transportadas.

La decisión del tipo y características de los vehículos a emplear va a depender de una serie de condicionantes como son: Peso y volumen de la carga transportada, características del producto transportado, tales como medios de contención empleados, peligrosidad, requerimientos isotérmicos, etcétera, condicionantes operativos, tales como ruta a seguir, carreteras utilizadas, limitaciones de velocidad, legislación de transporte, etcétera, características de los clientes/puntos de destino, sobre todo en lo relativo a facilidades en muelles de descarga, servicios añadidos en el transporte e imagen comercial que la empresa quiera dar. Por el contrario, el llamado transporte local suele hacerse con vehículos ligeros, como furgonetas, capaces de moverse con rapidez y flexibilidad a través del medio urbano.

En cualquier caso, calcular correctamente la dimensión de la flota de transporte que se va a utilizar, cuando se trabaja con medios de propios, es uno de los retos más importantes a conseguir en la logística de distribución. En relación al transporte, en México el autotransporte estuvo normado y regulado por el Estado durante más de cinco décadas. La intervención gubernamental no se limitó a definir los requisitos legales para que una empresa pudiera constituirse como tal, o a elaborar programas para la creación de infraestructura, sino a influir artificialmente sobre las reglas del mercado (oferta y demanda), estableciendo las tablas de tarifas que servían como base para el cálculo de los fletes, es decir, a igualdad de mercancía, peso y distancia, igualdad de flete, independientemente de la calidad del servicio o de la empresa prestadora del mismo. Bajo tal esquema proteccionista, se observaron los siguientes fenómenos: Existencia de un mercado de vendedores (transportistas), inexistencia de competencia entre prestadores de servicio, inexistencia de calidad en el servicio, flota vehicular obsoleta.

Afortunadamente el Estado, respondiendo tanto a presiones internas (de exportadores, agentes aduanales, transportistas, etc.), como externas (de nuestro vecino y principal socio comercial Estados Unidos de América), abandonó este proteccionismo en 1989, excepto para químicos, tóxicos y explosivos, para los que sigue existiendo una regulación especial. Actualmente, las negociaciones entre demandante del servicio y transportista se realizan en función del número de embarque, su frecuencia, origen y destino, peso y dimensiones, tipo de mercancía, etc. Los transportistas y los agentes de carga se esfuerzan por ofrecer el mejor servicio, porque existe una competencia intensa. Un concepto que también cobra relevancia es el de tráfico, según Ruibal (Cit. por Portales, 2008) tráfico es el transportar el producto adecuado, en la cantidad requerida, al lugar acordado y al menor costo total para satisfacer las necesidades del consumidor en el mercado internacional justo a tiempo y con la calidad total.

Es importante definir en función de la idea del transporte y tráfico de bienes los conceptos de medio de transporte y carga, el primero de los mencionados se puede decir que son las unidades físicas a través de las cuales se lleva a cabo el traslado de los bienes o el conjunto de los bienes, los medios de transporte pueden ser: Avión, buque, ferrocarril, tráiler, etc., respecto del segundo de los conceptos se puede definir como el conjunto de bienes, productos o mercancías, protegidas por un embalaje apropiado que facilita su movilización, sobre este respecto lo que a la postre nos interesara es lo relativo a la carga que es transportada a través de contenedores o carga unitarizada o contenerizada.

Las necesidades de mantener y mejorar el comercio internacional han hecho posible que se desarrolle en el tiempo nuevas formas y técnicas para el transporte de carga. Si ponemos el retrovisor observaremos que la innovación en métodos de unitarización va ocupando una posición que lleva a las empresas de transporte a mejorar sus potencialidades, por ejemplo: En los años sesenta un buque de carga general típico cargaba 12.000 toneladas con una tripulación no inferior a 40 personas y su limitante principal para el comercio mundial era el cruce del canal de Panamá. Hoy se piensa en buques POST PANAMA y operaciones de trasbordo. Desde finales de esa década del sesenta, el comercio internacional y la carga contenerizada, han crecido ostensiblemente y de manera sincronizada. Estos métodos de transporte han venido creando mayores volúmenes de comercio y viceversa, reduciendo en forma considerable los tiempos y costos del transporte marítimo de carga.

Uno de los principales beneficios de la contenedorización ha sido la habilidad de la industria naviera para reducir efectivamente las tarifas en los fletes. Las acciones relacionadas con el manejo del contenedor tienen diferente grado de especialización hasta alcanzar un tipo de contenedor adecuado para cada necesidad. No solo el comercio lícito se ha visto beneficiado con la aparición y crecimiento en el uso de estos recipientes utilizados como nuevas técnicas de transporte; También se generó una oportunidad para las cadenas delictivas que operan en el mundo, puesto que los métodos usuales para el tráfico de sustancias o mercancías ilícitas comprenden la utilización de los embalajes, envases o empaques de los productos que se intercambian en el comercio exterior; Otro método es el de efectuar cambios a la mercancía transportada. En ambos casos los delincuentes requieren efectuar modificaciones a la estructura de los contenedores, a sus máquinas o a sus dispositivos de cierre y seguridad.

Resulta a todo esto necesario establecer teóricamente que es un contenedor; El contenedor es una gran caja de metal en la que pueden estibarse todo tipo de mercancías para ser manejadas como una sola unidad. El recipiente es consistente, con puertas o paneles laterales desmontables, normalmente provistos de dispositivos (ganchos, anillos, soportes, ruedas) para facilitar la manipulación y estiba a bordo de un medio de transporte aéreo, marítimo o terrestre sin cambio de embalaje desde el punto de partida hasta el punto de llegada. Su capacidad no debe ser inferior a un metro cúbico y es destinado a facilitar el acarreo de mercancías embaladas o no, por una o más modalidades de transporte, sin necesidad de proceder a operaciones intermedias de recarga. Debe de poseer una estructura permanente cerrada, rígida y suficientemente resistente para ser usada repetidamente, y estar provisto de dispositivos que faciliten su manejo, ya sea al ser manipulado de un medio de transporte a otro o al pasar de una a otra modalidad de transporte. Las dimensiones y tipos de se encuentran normalizadas para facilitar su manipulación.

En resumen el contenedor es un elemento del equipo de transporte donde se pueden distinguir las siguientes características: Es de carácter permanente, y por consiguiente lo suficientemente fuerte como para ser usado repetidamente, diseñado especialmente para facilitar el transporte de mercancías por uno o más modos de transporte sin necesidad de volver a cargar las mercancías, provisto de dispositivos que permiten su fácil manejo, particularmente su transferencia de un medio al otro, que tiene un volumen de un metro cúbico o más. Con la llegada del contenedor, comienza el declive de la carga general que hasta dicho momento era el tipo de transporte más importante de mercancías por vía marítima. La estandarización de los espacios de carga en los buques portacontenedores, facilita las operaciones de carga y descarga, dando más rapidez y menos tiempo de estancia en puerto. Así mismo, la estandarización

del contenedor afecta no solamente a los buques, sino que influye directamente en las terminales portuarias de contenedores, terminales de contenedores transportados por vía férrea, depósitos de contenedores, plataformas para el transporte de contenedores por carretera, etc., en definitiva aportando un ventajoso estándar al transporte multimodal, con todas las ventajas de ahorro de costes y tiempo, en detrimento del transporte de mercancías en régimen de carga general, lento y de mayor coste.

Los contenedores suelen estar fabricados principalmente de acero, pero también los hay de aluminio y algunos otros de madera contrachapada reforzados con fibra de vidrio. En la mayor parte de los casos, el suelo es de madera, aunque ya hay algunos de bambú. Interiormente llevan un recubrimiento especial anti-humedad, para evitar las humedades durante el viaje. Otra característica definitoria de los contenedores es la presencia, en cada una de sus esquinas, de alojamientos para los twists locks, que les permiten ser enganchados por grúas especiales, así como su trincaje tanto en buques como en camiones.

El primer transporte de mercancías con contenedores fue el 26 de abril de 1956. Corrió a cargo de Malcom MacLean que hizo el trayecto desde Nueva York a Houston.

METODOLOGIA

El objetivo principal de esta investigación es conocer cuáles son las causas que generan incidencias durante el traslado vía terrestre de carga contenerizada en el puerto de Manzanillo, Colima, México. Resulta interesante resolver algunas cuestiones: ¿Cuáles son las posibles causas que se relacionan con la generación de las incidencias en el traslado vía terrestre de carga contenerizada que se realiza en el puerto de Manzanillo, Colima, México? ¿Cuáles son en la actualidad las principales incidencias relacionadas con el traslado vía terrestre de carga contenerizada a partir de su internación al recinto fiscal del puerto de Manzanillo, Colima, México? ¿Cuáles son los principales actores que intervienen en el comercio exterior que se realiza por el puerto de Manzanillo, Colima, México, relacionados con la generación de las incidencias que se generan en el traslado vía terrestre de carga contenerizada? ¿Quiénes son los principales afectados por las incidencias que se generan durante el traslado vía terrestre de carga contenerizada en el puerto de Manzanillo, Colima, México? Además se pueden enlistar algunos objetivos específicos que se cumplirán al término de la investigación: Establecer cuáles son las incidencias que se generan derivado del traslado via terrestre de carga contenerizada en el puerto de Manzanillo, Colima, México, identificar a los afectados por la generación de estas incidencias, identificar a los sujetos que intervienen en la generación de estas incidencias y proponer una posible o posibles soluciones para evitar la generación de estas incidencias. El cumplimiento de los objetivos planteados, así como la resolución a las preguntas elaboradas para la investigación, conducen una hipótesis general. Durante el traslado vía terrestre de carga contenerizada de mercancías existen causas que generan incidencias y por consiguiente el retraso, demoras y afectaciones económicas negativas para los importadores y/o exportadores de mercancías que realizan operaciones en el puerto de Manzanillo, Colima, México.

En el transcurso de la investigación se determino la cantidad de agencias navieras con servicio de transporte terrestre y empresas que prestan el servicio de transporte de carga vía terrestre ubicadas en el municipio de Manzanillo, Colima, México y al tenerlas plenamente identificadas se siguió el método inductivo, ya que se planteo que durante el traslado vía terrestre de carga contenerizada se generan incidencias que impactan negativamente la llegada a destino final de las mercancías y por consiguiente afectaciones económicas para los importadores y/o exportadores que realizan operaciones de comercio exterior por el puerto de Manzanillo, Colima, México, situación que podría ser aplicada en general en cualquier otro tipo de organización para identificar estas situaciones y que su desempeño sea eficiente.

La investigación tendrá un enfoque cuantitativo ya que para comprobar la hipótesis, el estudio se basará en el instrumentos de medición aplicado, dicho instrumento es un cuestionario que se podrá tabular de manera estadística, a través de herramientas informáticas como el Excel. Cabe hacer mención que la información analizada fue obtenida de una encuesta que se aplicó a las agencias navieras con servicio de

transporte terrestre y empresas que prestan el servicio de transporte de carga vía terrestre en el municipio de Manzanillo, Colima, México que es de 12 y 60 respectivamente, sobre la cual se realizara el estudio estadístico. Es importante señalar que a fin de determinar la muestra se utilizo la fórmula de muestra de poblaciones finitas, considerando un universo finito cuando la población objeto de estudio es menor a 500000. La investigación de campo se realizó durante el 2011.

La población a la que se le aplicó la encuesta se determino en base al padrón de agencias navieras con servicio de transporte terrestre y empresas que prestan el servicio de transporte de carga vía terrestre del sitio web de la Administración Portuaria Integral de Manzanillo (APIMAN), de lo anterior se desprende una población de 12 agencias navieras con servicio de transporte terrestre y 60 empresas que prestan el servicio de transporte terrestre de carga, dando un total de una población de 72, de los cuales nuestra muestra constó de 61 entidades a aplicarles la encuesta. Las personas a las que se les aplicó la encuesta fueron los empleados de las agencias navieras con servicio de transporte terrestre y empresas que prestan el servicio de transporte de carga vía terrestre que tienen como característica principal el estar en contacto directo con la información de las incidencias y sus principales causas.

Se elaboró un cuestionario de 45 preguntas que apoyo a saber cuáles son las principales causas que generan incidencias durante el traslado vía terrestre de carga contenerizada en el puerto de Manzanillo, Colima, México, la forma en que afecta tanto a las mercancías como al cliente importador y/o exportador así como las medidas implementadas encaminadas a resolver dichos problemas. El muestreo que se llevo a cabo para realizar las encuestas será el muestreo estratificado, que deriva del muestreo aleatorio, ya que es el que más conviene para responder las preguntas de investigación. El muestreo estratificado, consiste en que, los elementos de la población son primeramente clasificados por el investigador en distintos subgrupos, o estratos, sobre la base de una o más características importantes. Es decir, se clasificaran diferentes tipos de organizaciones, como agencias navieras con servicio de transporte terrestre y empresas que prestan el servicio de transporte de carga vía terrestre.

RESULTADOS

Con base en la información proporcionada por el padrón de agencias navieras con servicio de transporte terrestre y empresas que prestan el servicio de transporte de carga vía terrestre del sitio web de la Administración Portuaria Integral de Manzanillo (APIMAN), se aplicaron un total de 61 cuestionarios. Con base en la investigación de campo realizada, se puede determinar el estado de las agencias navieras con servicio de transporte terrestre y empresas que prestan el servicio de transporte de carga vía terrestre en el 2011, referente a cuáles son las principales causas que generan incidencias durante el traslado vía terrestre de carga contenerizada en el puerto de Manzanillo, Colima, México. Después de haber realizado la investigación correspondiente, de haber tabulado y graficado los datos y finalmente haber realizado el análisis y la respectiva interpretación de los datos se han obtenido los siguientes resultados: Se puede observar que la incidencia que en mayor medida se presente son los tiempos muertos, los cuales se generan principalmente por la saturación del puerto con el 21% de las respuestas dadas por los encuestados, la falta y/o retraso en la entrega de documento necesarios para su despacho durante la revisión aduanera con el 13% de la información recopilada y la mala y/o falta de comunicación entre la empresa transportista, agente aduanal y el importador o exportador con el 11% de lo respondido, cuyos principales generadores son la empresa transportista, agente aduanal y las autoridades aduaneras con el 60%, 18% y 8% respectivamente de lo obtenido de las respuestas; Es trascendente hacer notar que parte importante de las incidencias son ocasionadas en el recinto fiscal.

Dentro de las principales incidencias que se presentan durante el transporte de la carga también se encuentra el retraso y/o demora de la carga siendo esta de las que más afectaciones generan, ocasionándose en su mayoría por congestión vial dentro del recinto portuario y las averías en las unidades. Presentándose principalmente estas incidencias durante el proceso de despacho en donde un

50% según lo contestado se presenta durante el proceso de modulación de la documentación aduanera de importación y/o exportación y un 42 % de lo respondido ubica la generación de estas incidencias al momento de realizar las maniobras dentro y por cuenta del recinto fiscalizado.

También se puede percibir que ante un aumento en el volumen de movimientos de carga en el puerto de Manzanillo en las diferentes periodos del año se genera mayor numero de tiempo muertos, retrasos y/o demora de la carga, los periodos con mayores incidencias identificadas durante un año son: Diciembre con el 21% de las respuestas, semana santa (aproximadamente las dos primeras semanas del mes de Abril en México) con el 18% y la temporada de lluvias (del mes de Junio al mes de Septiembre de cada año en Manzanillo, Colima) con un 11% de lo contestado; Sumándose a todo esto, también existen retrasos que se generan por causas imputables a las autoridades derivado del tiempo de respuesta que se tarda derivado de la comisión de errores o infracciones por parte del agente aduanal con motivo del despacho aduanero de las mercancías obtuvo el 83% en los resultados de las encuestas.

Así también se identifico cuales son las mercancías que por su traslado generan mayor numero de incidencias traducidas en tiempos muertos, retrasos y/o demoras durante su transporte, estas mercaderías son carga peligrosa 15%, químicos 13% y juguetes 13%; De la misma manera la mercancía que más se demora en la revisión aduanera son los químicos con resultado del 23%, calzado con el 18% y la mercancía o carga peligrosa en un 14% de las respuestas; Además de que los encuestados opinaron que la mercancía más difícil de manipular es la carga peligrosa con un 33% de los resultados, químicos con el 21%, llantas y maquinaria con el 8% de las repuestas obtenidas para ambas mercaderías, por otro lado y al contrario se opino que la carga más fácil de transportar es la cartonería, mercancía liviana y rollos de tela con el 26%, 13% y 9% respectivamente de las respuestas que se generaron. Quedando en evidencia que las mercancías más problemática son los químicos y la carga peligrosa.

Es importante señalar que también se generan incidencias derivadas de la coordinación del transporte, y de acuerdo a la investigación estas irregularidades se les atribuyen a la falta de comunicación con un 41%, falta de planeación según el 15% de las respuestas de todos los entes involucrados; De la misma manera los principales responsables de las irregularidades en la coordinación del transporte son: La agencia transportista o empresa transportista en un 40%, agencia aduanal con un 30% de las respuestas y todos los entes involucrados con el 10% de lo expresado. Se pudo identificar con esta indagatoria de campo que al existir tiempos muertos durante el traslado vía terrestre de la carga contenerizada, se generan por tanto las consiguiente pérdidas, las principales perdidas son en dinero (demoras/almacenamiento) con un 82% de las respuestas, cuyos montos pueden variar según el 9% de los encuestados, ahora bien en relación a los montos de las pérdidas se afirmo que estas se dan en función de los 10 mil a 20 mil pesos según el 5% de los encuestados; Además existen sanciones cuando se incurren en los tiempos muertos, estas sancione son el pago de demoras con un 39 % de las respuestas, pago de maniobras en un 11% de lo obtenido en la encuesta y el no pago de la cuenta de gastos o facturas por parte de los clientes en 7% de las veces; de igual forma se generan pérdidas económicas que se traducen en sanciones que son impuestas por parte de las diferentes autoridades, estas perdidas se generan principalmente por el exceso de peso de la carga en un 42% de las veces, por el exceso de velocidad con un 29% de las respuestas y por negligencia del operador en un 23% de acuerdo a lo contestado.

Asimismo se pudo identificar que existen sanciones o consecuencias cuando hay demoras durante el traslado de mercancías en donde el 74% de los encuestados afirmo esta situación y el 26% señalo que no se generaban ningún tipo de sanción.

En relación a lo anterior el 69% de los encuestados afirmo haber sido objeto de sanción por el incumplimiento en el transporte de las mercancías, es decir por no haber entregado a tiempo a su destino, y por el contrario 31% señalo nunca haber recibido sanción.

Se puede observar contundentemente que el 100% de los encuestados señalan que si logran eliminar los tiempos muertos durante el traslado por la vía terrestre de la carga contenerizada se mejorara la calidad del servicio prestado, sin embargo esta situación no tiene una fácil solución, ya que de esta indagatoria se ha observado que la principal incidencia generadora de los tiempos muerto es la saturación del puerto, además de la falta de comunicación que es uno de los factores que contribuyen a la generación de las irregularidades en la coordinación del transporte, igualmente los conductores no reciben la capacitación adecuada para poder entregar las mercancías en tiempo y forma, situación que es expresada en un 54% de los encuestados, llegando a la conclusión que las incidencias en el traslado de mercancía afecta claramente también a los importadores y/o exportadores y aumentan los costos de la cadena logística, encareciendo así todo el proceso y como consecuencia el producto final.

Por último los encuestados citan algunas propuestas para poder minimizar o eliminar los tiempos muertos en el transporte de carga contenerizada estas propuestas son: Agilización de los tramites con 13% de las respuestas, que las unidades se encuentren en buen estado y previniendo errores con un 10% de los resultados obtenidos, asimismo, los encuestados creen que con la utilización de estos recursos se pueden reducir en gran medida los tiempos muertos, la cual es la principal incidencia que se genera, junto con los retrasos y/o demoras en el traslado por la vía terrestre de la mercancía que se transporta por contenedor derivado de las causas ya detalladas.

CONCLUSIONES

En la actualidad el comercio exterior ha ido en aumento por lo que las exigencias en cuanto a la logística también se han incrementando; sin dejar de señalar que por el aumento en el intercambio comercial se ha incrementado de igual manera las incidencias en mercancías contenerizadas, por lo que surge la necesidad de investigar cuáles han sido las causas principales que dan origen a dichas incidencias, quiénes son los principales afectados y finalmente establecer algunas recomendaciones que coadyuven a la disminución de incidencia en mercancías contenerizadas. En base a lo anterior y a la indagatoria que se efectuó, se establece una conclusión general, que parte del hecho de que las causas generadoras de las principales incidencias que son los tiempos muertos, retrasos y/o demoras ocasionados a lo largo de la logística de importación y/o exportación de mercancías son la saturación del puerto, la falta y/o retraso en la entrega de documentos necesarios para su despacho durante la revisión aduanera y la mala o falta de comunicación entre la empresa transportista, agente aduanal y el importado o exportador, congestión vial y averías en las unidades, presentándose principalmente estas causas durante el proceso de despacho aduanero de las mercancías, ocasionando el retraso y/o demoras y los tiempos muertos durante el traslado por la vía terrestre de la carga contenerizada afectando por consiguiente la entrega final de las mercaderías y consecuentemente gastos innecesarios a los principales actores que intervienen en el despacho de las mismas, asimismo se identifico a los principales actores que influyen en la generación de estas incidencias como son: la empresa que presta el servicio de transporte o transportista, agente aduanal y autoridades aduaneras; haciendo notar que una parte importante de las incidencias son ocasionadas en el recinto fiscal.

Una vez analizado los resultados de la investigación y su relación con el problema planteado y cada una de sus causas, y dado que dentro de las incidencias que se ven en el traslado de la carga contenerizada la que más relevancia toma son los tiempos muertos, retrasos y/o demoras. Se puede expresar que el lugar donde se presentan las incidencias durante el traslado vía terrestre de la carga contenerizada es el recinto fiscal, Ahora bien la gestión logística que es evidente y utilizada en el puerto de Manzanillo es la denominada “push” o en español “empujar”, aplicada cuando la carga se presenta dentro del recinto fiscal y los recintos fiscalizados, que consiste en que si el barco empuja los contenedores al recinto fiscalizado, el recinto fiscalizado debe empujar los contenedores hacia ruta fiscal y a modulación, sin embargo, en la mayoría de las ocasiones ésta serie de empujones se generan al mismo tiempo, y aunado a ello considerando que la autoridad aduanera no cuenta con la capacidad de infraestructura y humana para realizar la revisión de la gran cantidad de mercancía que se introduce por el puerto de Manzanillo hacia el

resto del país, se ocasiona un cuello de botella al saturar la ruta fiscal y los andenes de revisión de la plataforma del primer reconocimiento aduanero.

Para dar una solución a esta situación se puede proponer la utilización de la estrategia o gestión logística de jalar en lugar de empujar, la autoridad aduanera al con el conocimiento de su capacidad de gestión y del numero de contenedores que puede atender al día, podría en base a este sistema de gestión logística establecer los límites para la extracción de carga de cada recinto fiscalizado, y así la autoridad aduanera jalaría solamente el número de contenedores que pudiera atender, evitando la saturación del sistema logístico en el interior del puerto y con esto evitaría los tiempos muertos, las demoras y retrasos en el traslado de la carga que se mueve por la vía terrestre a través de contenedor por el puerto de Manzanillo, Colima. La teoría de los términos de negocios empujar y jalar o Push-Pull se originó en la logística y gestión de la cadena de suministro, pero también son muy utilizados en la comercialización. Un Push-Pull es un sistema que describe el movimiento de un producto o la información entre dos sujetos. En los mercados de los consumidores por lo general "tira" de los productos o información que la demanda de sus necesidades, mientras que los oferentes o proveedores "empuja" hacia ellos los consumidores. En el caso específico de la operación del puerto de Manzanillo, Colima, México, los recintos fiscalizados o mejor conocidos como empresas de operación portuaria empujan más de lo que la autoridad aduanera puede tirar es por eso que se da la saturación.

Sin ser óbice a lo anterior, según Reyes (2006:116) señala que los procedimientos aduaneros deben de promover la simplificación y eficiencia del despacho de las mercancías, con el objeto de eliminar cargas costosas que perjudiquen la competitividad del comercio exterior mexicano. Sin embargo como se mostro en el apartado de resultados la autoridad aduanera en Manzanillo es uno de los actores que generan los retrasos en la operaciones de los importadores y/o exportadores que realizan operación por el puerto de Manzanillo, Colima, México, ya que sus operaciones de comercio exterior ciertamente se han visto, más que beneficiadas, afectadas por el proceder de esa autoridad.

Como se ha podido constatar, las principales afectaciones que se desprenden de una operación ineficiente son del tipo económico, no obstante los programas que se han implementado para el mejoramiento de la operación aduanera como el de Aduana modelo y el Plan de Modernización de las Aduanas. Otro aspecto importante que pudiera ser objeto de atención a fin de tratar de disminuir los tiempos muertos son los sujetos que realizan o están dentro de la cadena de importación y/ exportación, ellos son necesarios para poder llevar a cabo dichos procesos, pero la falta de organización, comunicación u otros factores, ocasionan incidencias que afectan a la mercancía. Derivado de lo anterior fue contundente lo expresado dentro del instrumento por cuenta de los involucrados en la generación de estas incidencias expresando que todos estos malos entendidos fuente de problemas se pueden solucionar con la una actuación más ágil por parte de las autoridades aduaneras al momento de las revisiones, comunicación constante entre agencia aduanal y agencia transportista o empresa de transporte, una buena planeación de la logística, capacitación adecuada a los operadores del transporte de las mercancías y por último trabajo conjunto de los actores participantes en el traslado vía terrestre de carga contenerizada en el puerto de Manzanillo, Colima, México. Como se ha constatado, con este trabajo de investigación de campo se comprobó la hipótesis planteada, en la cual se afirma que durante el traslado vía terrestre de carga contenerizada de mercancías existen causas que generan incidencias como: los tiempos muertos, retraso y/o demoras y por consiguiente afectaciones económicas negativas para los importadores y/o exportadores de mercancías que realizan operaciones en el puerto de Manzanillo, Colima, México.

LA COMUNICACIÓN EN LA EMPRESA FAMILIAR, PRINCIPAL ELEMENTO EN LA PRESERVACIÓN DE LA ARMONÍA FAMILIAR

Hilario Díaz Guzmán, UPAEP
Estela Carolina Fuentes García, UPAEP

RESUMEN

La empresa familiar se ostenta como el principal sostén de la economía mundial. Sin embargo, su peculiar estructura, -conformada por los sistemas familiar y empresarial-, torna compleja su gestión. A diferencia de las empresas no familiares que basan su éxito solo en la rentabilidad, las organizaciones familiares lo sostienen en su armonía familiar a la par de su rentabilidad. La armonía y la comunicación son de los pilares más fuertes de la empresa familiar y están estrechamente ligadas, siendo la segunda la que coadyuva a preservar la primera. De esta manera, la comunicación se convierte en más que una simple herramienta de gestión, para transformarse en un proceso vital para las empresas familiares. Para el presente trabajo de investigación se encuestaron a 342 empresas familiares de manufactura, comercio y servicios de Tehuacán. Los resultados encontrados muestran que el sistema de comunicación en las empresas familiares de Tehuacán es bueno pero poco formal, aunque este último rasgo no afecta de manera significativa en su armonía. Se observó que la comunicación y la armonía, van mejorando conforme aumenta el tamaño de la empresa, siendo el protocolo familiar, el instrumento que más contribuye a esta mejora en las empresas estudiadas.

COMMUNICATION IN THE FAMILY-OWNED BUSINESSES: MAJOR ELEMENT IN THE PRESERVATION OF FAMILY HARMONY

ABSTRACT

Family business is a vital force in the global economy. Family-owned business is composed of two overlapping subsystems: family and business. But family business management becomes complex because family and business domains often have conflicting sets of needs and values. Family business success often means: harmony for family and growth/profitability for business. Harmony and communication are the strongest pillars of the family-owned business and are closely linked, the second helps to preserve the former. Communication becomes more than just a management tool to become a vital process for family businesses. This is the first statistical study of family businesses in Tehuacan. The survey sample covers 342 family businesses in manufacturing, trade and services in Tehuacan city. The results show that communication in family businesses of Tehuacan is good but somewhat formal, although this last feature does not affect significantly their harmony.

ANÁLISIS DE LA ADMINISTRACIÓN FINANCIERA EN LAS EMPRESAS DE LA ALIANZA CARROCERA DEL DEPARTAMENTO DE BOYACÁ - COLOMBIA

Mónica Bibiana González Calixto, UPTC

RESUMEN

Las empresas de la Alianza Carrocera del Departamento de Boyacá, buscan obtener una mayor competitividad, dada la rivalidad actual con empresas del exterior. Por esta razón el análisis de la administración financiera, se ha definido como una necesidad urgente, para establecer estrategias que permitan mejorar las decisiones administrativas con base en metas y estrategias alineadas, desde todas las áreas empresariales. La administración financiera en estas empresas actualmente se encuentra debilitada, principalmente por la poca atención y conocimiento que se tiene de sus funciones y herramientas para su adecuada ejecución.

PALABRAS CLAVE: Administración Financiera, Alianza Carrocera.

ABSTRACT

Alliance companies Carrocera Boyaca Department, looking to get more competitive, given the current rivalry with foreign companies. For this reason the analysis of financial management has been defined as an urgent need for the establishment of strategies to improve management decisions based on goals and strategies aligned, from all business areas. Financial management in these companies is now weakened, primarily by the little care and knowledge we have of its functions and tools to their proper implementation.

JEL: G30

KEYWORDS: Financial Management, Alliance Carrocera.

INTRODUCCIÓN

El sector carrocerías en el departamento de Boyacá, ha sido identificado como sector líder de la productividad y la competitividad de la región central de Colombia dentro del marco de las políticas nacionales. Sin embargo la mayoría de las empresas del sector son pequeñas y se han visto amenazadas por fuertes competidores tanto nacionales como internacionales. Por esta razón Gobierno, Universidad y Empresa buscan la fórmula que permita al sector continuar jalonando la economía del Departamento. Dada esta situación cinco de las diez empresas carroceras de Boyacá, que están en funcionamiento (Carrocerías Logos, Industrias Tecnicar, Ergobus Colombia, Industrias Titán y AGV), junto con una empresa de plásticos y poliuretanos (GBS) y algunos socios estratégicos que aportan capital y conocimiento, decidieron crear una Alianza. La finalidad de la Alianza es crear sinergias, especializarse y poder competir. La alianza, que se materializa con la creación de una Sociedad por Acciones Simplificada (SAS), se constituye en el primer paso para lograr un mayor posicionamiento de las empresas regionales, aprovechando el gran conocimiento que tienen estos empresarios.

Una de las principales debilidades observadas en las empresas de la alianza carrocera es la escasa interpretación de la información financiera, principalmente lo relacionado con administración, planificación y control financiero, lo cual deteriora la definición de planes y estrategias competitivas coherentes con sus recursos y capacidades financieras.

La falta de diagnóstico, análisis y una adecuada administración financiera, impide determinar los factores controlables y no controlables que afectan la competitividad, la creación de valor, el prestigio institucional y el cumplimiento de la misión; igualmente propicia el desconocimiento de la situación del negocio, empobrece el proceso de planeación y desorienta las metas de las empresas generando una falta de coordinación entre lo que desean y lo que realmente logran. Por lo tanto, se adelanta la presente investigación, que busca hacer un análisis fundamentado, real y confiable de la situación y administración financiera de las empresas que conforman la alianza y ser un referente para la toma de decisiones y la planeación estratégica de la misma.

REVISIÓN DE LITERATURA

La administración Financiera es una de las tres áreas de estudio de las finanzas, las otras dos son: Inversiones y mercados financieros e intermediarios (Mascareñas, 1999). La administración Financiera ha presentado una rápida evolución, principalmente por los grandes cambios del entorno, haciendo mayor énfasis en la estrategia de la empresa, tomando decisiones de inversión, financiamiento y administración de activos. Van Horne & Wachowicz (2002). Weston y Copeland (1994) y Block & Hirt (2001), la definen de acuerdo a las funciones y responsabilidades de los administradores financieros: inversión, financiamiento y decisiones de dividendos. Esta definición incluye la ejecución de actividades relacionadas con la planeación y preparación de pronósticos y la interrelación del administrador financiero con los demás administradores de la empresa; Besley & Brigham (2009, p. 5), enfocan a la administración financiera en las decisiones que toman las empresas, respecto de sus flujos de efectivo. Gitman (2007, p. 11) la relaciona con el análisis y la planificación financiera, las decisiones de inversión y financiamiento y los efectos de sus flujos de efectivo sobre el valor de la empresa.

La importancia de la administración financiera radica en que la mayoría de las decisiones de la empresa son medidas en términos financieros y en que todos los directivos de la empresa requieren conocimientos del proceso de toma de decisiones financieras en su área, para poder justificar y obtener los recursos necesarios en sus actividades empresariales (Brigham & Houston, 2001; Gitman, 2007); Así, el administrador financiero, participa en la implementación de la estrategia empresarial, para lograr el crecimiento y la competitividad, (Gitman, 2007). Por lo tanto, la función financiera es fundamental para el éxito empresarial y se encuentra muy cerca de los niveles altos de decisión empresarial. (Weston y Copeland. 1994). Bernardello, Gotelli & Tapia (2008), le dan una importancia significativa a la función financiera en la toma de decisiones estratégicas y la denominan gestión financiera, que lleva a cabo tareas basadas en el valor económico-social de la organización, encaminadas al cumplimiento de la misión, objetivos y visión de la empresa. Las finanzas y la estrategia de la empresa, se deben alinear, primero porque el éxito de la estrategia en gran parte se debe al alcance de las metas financieras, en cuanto a rentabilidad, flujo de caja y valor; segundo, porque los programas que se implementan para lograr las metas de la empresa, deben en su totalidad, contar con los recursos financieros disponibles (León, 2009, p. 24). Adicionalmente, la administración financiera contribuye a la estructuración de políticas en todos los campos donde hay capital, tanto de inversionistas como de terceros. (Ortiz, 2005, p. 5).

METODOLOGÍA

Esta investigación es de tipo no experimental con enfoque cuantitativo y cualitativo de modelo mixto. El tipo de investigación es exploratorio y descriptivo, dado que se inicia en un proceso de conocimiento del sector y de las empresas de la alianza carrocería del departamento de Boyacá, bajo los criterios de observación fijados y evaluados en el estudio. La muestra está constituida por el total de la población, correspondiente a las 6 empresas de la alianza del sector carrocería. Estas empresas se caracterizan por ser pequeñas, de acuerdo al número de trabajadores que emplean y a la ley 905 de 2004.

El proceso investigativo y la recolección de la información se llevará a cabo en cinco fases. Este avance de investigación, presenta en primer lugar los fundamentos teóricos necesarios para el estudio y en segundo lugar los resultados obtenidos en la primera fase y parte de la segunda. Incluye la recopilación, organización y análisis de los documentos (económicos y de competitividad en Colombia), estudios y políticas gubernamentales, que sirven de apoyo para contextualizar al sector carrocerero de Boyacá. Presenta una breve descripción del entorno empresarial del Departamento de Boyacá, con el fin de profundizar en el sector carrocerero, compilando los esfuerzos de las entidades públicas y privadas para su fortalecimiento. Destaca la importancia de la Alianza Carrocera de Boyacá y de los retos que tiene el sector y establece algunas primeras acciones de mejoramiento, como guía para crear posiciones estratégicas. Las siguientes fases del proyecto que están en ejecución son:

Parte de la segunda fase que comprende el análisis interno de cada empresa desde los siguientes criterios de observación: administración, planificación y control financiero. La información obtenida se examina, sistematiza y se realizan los cálculos necesarios para cada criterio de evaluación. Luego se analiza la información y los indicadores obtenidos, para obtener la descripción de la situación financiera actual de cada empresa, sus debilidades y fortalezas financieras. La fase tres agrupa la información de los diagnósticos financieros de cada una de las empresas y realiza los cálculos complementarios que permitan determinar la situación actual financiera de la alianza en conjunto. En la fase cuatro, se comparan los resultados del análisis financiero con indicadores estandarizados existentes para el sector a nivel nacional y/o internacional, buscando la información de referentes nacionales o internacionales relacionadas con el análisis y realizando un análisis integrado de las empresas involucradas que permita evaluar los resultados del análisis en conjunto con los referentes encontrados. La fase cinco aporta a cada empresa y a la alianza carrocera, recomendaciones para mejorar su gestión financiera, de acuerdo a los resultados obtenidos y a cada criterio de observación

RESULTADOS

En las dos primeras fases, se han realizado reuniones con las entidades gubernamentales y las empresas de la alianza para determinar parámetros requeridos en la investigación; se aplicó una entrevista a profundidad con el gerente de la alianza Carrocera para determinar la situación real del sector desde los empresarios y se sistematizaron los estados financieros de las 6 empresas. El resultado de esta primera parte es la descripción del entorno económico-financiero de las empresas de la alianza carrocera.

Para determinar el estado del sector carrocerero, la ONUDI realizó un análisis presentado en el año 2010, que refleja la necesidad de generar alianzas entre las empresas del sector y constituye una base importante de información pero igualmente presenta oportunidades de investigación. Este estudio, define la actividad del sector carrocerero como “Diseño, fabricación, ensamblaje y reparación de carrocerías para el transporte de pasajeros (buses, busetones y busetas)” (2010, p. 2); igualmente el estudio refleja que actualmente el sector se encuentra implementando la norma NTC 5206; las empresas del sector también se encuentran certificándose de acuerdo con la norma ISO 9001:2008; un alto porcentaje de las empresas todavía utiliza técnicas artesanales y se presenta poca innovación en el proceso, el producto y el uso de materiales sustitutos. La rentabilidad no alcanza el 2%, debido a cargas laborales, impuestos, seguridad social, sobre oferta de productos y variación en la demanda. Existe presión para que las empresas reduzcan sus costos, aumenten la calidad y reduzcan los márgenes de rentabilidad.

CONCLUSIONES

El sector carrocerero de Boyacá, impulsa la economía de la región, dado que es fuente de empleo, tanto directo como indirecto, pues requiere de insumos de otros sectores. Por lo tanto este sector tiene grandes retos para mejorar su posicionamiento y competir con las empresas internacionales que ya entraron al país con sus productos; tiene oportunidades y fortalezas que le permiten ser más competitivo, y puede lograrlo

apoyándose en todas las políticas, estrategias y acciones que desde la Nación, el Departamento de Boyacá, las Universidades, Cámaras de Comercio, Comisiones Regionales, SENA, CREPIB y demás entidades colaboradoras se han desarrollado. La alianza carrocerera de Boyacá, puede ser competitiva y permitir la sostenibilidad de sus empresas asociadas, pero para lograrlo debe buscar innovación, calidad, servicio y precio. Las empresas de la Alianza Carrocerera, tienen debilidades en su administración financiera, pues carecen de planeación y estrategias financieras alineadas a las metas de la organización. Los estados financieros suministrados, no presentan la información completa y esto dificulta un adecuado análisis financiero; las decisiones de tipo financiero son tomadas en el corto plazo, respondiendo a situaciones coyunturales, pero dejando de lado los objetivos de largo plazo de las empresas y descuidando el control financiero. Quien realiza el análisis financiero en ocasiones es el contador o el mismo propietario, pero sin una metodología y uso de herramientas, sino de manera intuitiva.

LA ESTRUCTURA ORGANIZACIONAL EN LAS PEQUEÑAS EMPRESAS CONSTRUCTORAS DE PUEBLA, MEXICO

Rafaela Martínez Méndez, Benemérita Universidad Autónoma de Puebla
Antonieta Monserrat Vera Muñoz, Benemérita Universidad Autónoma de Puebla
José Gerardo Serafín Vera Muñoz, Benemérita Universidad Autónoma de Puebla

RESUMEN

En esta investigación se presenta un análisis acerca de la forma en que se estructuran organizacionalmente las pequeñas empresas constructoras, ubicadas en el Estado de Puebla. A fin de conocer su complejidad, centralización y formalidad, se revisaron diversos autores relacionados con el tema como sustento teórico para posteriormente tomar algunos elementos que se analizaron a través de la aplicación de un cuestionario con una muestra de 44 pequeñas empresas constructoras. El objetivo de esta investigación es determinar el tipo de estructura organizacional que se utiliza en las pequeñas empresas de la construcción ubicadas en el estado. Por lo tanto, la investigación da respuesta a la siguiente pregunta: ¿Cómo es la estructura organizacional que predomina en las pequeñas empresas constructoras de la localidad?

PALABRAS CLAVE: Estructura, complejidad, centralización, formalidad, pequeña empresa constructora

THE ORGANIZATIONAL STRUCTURE IN THE SMALL CONSTRUCTION COMPANIES OF PUEBLA, MEXICO

ABSTRAC

In this research an analysis is presented of how the small construction companies are structured from an organizational stance at the State of Puebla. In order to know their complexity, centralization and formality several authors who are involved in this issue were taken into consideration as theoretical support. Later some elements were taken into account by means of the application of a questionnaire to a sample of 44 small construction companies. The focus of this research is to determine the type of organizational structure that is used in those companies. Therefore, the research question is: How is the organizational structure that prevails in those companies?

KEY WORDS: Structure, complexity, centralization, formality, small construction company.

ESTUDIO EXPLORATORIO DE VARIABLES A TRAVÉS DE ANÁLISIS ESTRUCTURAL MICMAC EN LA PRESTACIÓN DEL SERVICIO EN LA ADMINISTRACIÓN PÚBLICA MUNICIPAL DE MONTERREY MÉXICO

RESUMEN

Durante muchos años se ha intentado subsanar las graves deficiencias de la Administración Pública municipal en los países con una economía en transición, como es el caso de México. Situación que a pesar de que la administración pública municipal cuenta con avances en capacitación, modernización y parámetros de medición del servicio, aún tiene graves rezagos sistémicos y problemáticas como: conflicto de intereses, procedimientos lentos, prepotencia e infraestructura deficiente, entre las quejas más recurrentes de los ciudadanos de la ciudad de Monterrey respecto de la prestación del servicio por parte de la administración pública municipal; debido a ello, se realizó un estudio exploratorio de variables a través del sistema MICMAC (análisis estructural), es mediante este estudio que se plantea encontrar las variables más impactantes en las que la administración debería realizar acciones correctivas en la prestación del servicio del municipio de Monterrey, México.

Palabras clave: Administración Pública municipal, análisis estructural caso Monterrey, Servidores Públicos.

ABSTRACT

It has been an attempt during a long period of time to better the deficiencies within the public administration in countries with a transitional economy such as Mexico. Even though in Mexico as advanced in administrative concepts (training, modernization and measurement for the service), there is too much to do in matters like: conflict of interests, slow procedures and deficiencies in facilities. Such is the case of the local administration in Monterrey, Nuevo León, Mexico. An exploratory Study was hold thru the most frequent complaints from citizens from Monterrey. The MICMAC system was used to find the weight of each variable to determine the critical variable to work with. The goal is to seek for corrective action plans to better the quality in the public administration of the municipal government in Monterrey, Nuevo Leon, Mexico.

KEY WORDS: Municipal Public Administration, Structural Analysis (MICMAC), the case of Monterrey, Civil Service.

INTRODUCCIÓN

En el presente estudio exploratorio, primero se realizará una aproximación al estado de la situación de la administración pública municipal, posteriormente se identificarán los constructos que darán pie al estudio del análisis estructural mediante el sistema MICMAC (análisis de prospectiva), en el se identificarán las variables más significativas en las que el sistema de administración pública del municipio de Monterrey debe poner especial atención con el objetivo de disminuir la percepción negativa de los ciudadanos respecto a la atención prestada por parte de los servidores públicos municipales.

Estado De La Situación De La Administración Pública Municipal

En México se ha buscado promover distintos esfuerzos con el objetivo de incorporar la cultura de la medición de desempeño en el ámbito municipal, frente a este panorama, el municipio de Monterrey se vio en la necesidad de adoptar nuevas y mejores formas de organización y de procedimiento en la conducción del servicio, esto debido a las múltiples acusaciones de ineficacia, negligencia e irresponsabilidad generadas por el agotamiento del sistema administrativo; es por ello que se implementaron acciones como las mas recientes:

- Instituto Nacional para el Federalismo y el Desarrollo Municipal INAFED (Órgano desconcentrado de la Secretaría de Gobernación).
- Centro de atención de quejas y denuncias contra Servidores Públicos.
- SIDEM, Sistema para la medición del desempeño municipal de Monterrey.

Una de las vías para obtener información sobre el servicio municipal es la página de Transparencia Nuevo León que realiza análisis sobre la percepción ciudadana respecto de los servicios municipales. Este es otro de los factores que impulsan la elección de la calidad en el servicio en el presente análisis como variable de estudio, ya que es en este rubro en donde se reporta la mayor incidencia de quejas en la página de transparencia ciudadana Nuevo León, obteniendo los siguientes datos:

Tabla 1: Principales rubros de quejas.

Principales rubros de quejas	%
Falta de actitud de servicio	28%
Tiempo de respuesta	25%
Prepotencia	8%
Tiempo de espera	8%
Estado de las Instalaciones	6%
Conflicto de interés	5%
Falta de respeto	3%
Falta de información de requisitos	3%
Otra	14%

Fuente: www.nl.gob.mx/?P=transparencia

A continuación se presenta el estudio exploratorio usando el método estructural MICMAC.

EL MÉTODO ESTRUCTURAL MICMAC

El método MICMAC busca analizar de manera cualitativa las relaciones entre las variables que componen un sistema dentro de una empresa, organización, sociedad, país etc. Es parte del análisis estructural y se apoya en el juicio cualitativo de actores y/o expertos que son parte de un sistema. El objetivo del Análisis Estructural MICMAC es identificar las principales variables, influyentes y dependientes; así como las variables esenciales para la evolución del sistema (Godet, 1997). A continuación se presentan las variables que se consideraron en este estudio exploratorio:

Falta de Actitud de Servicio (FaltActSer)

Tiempo de Respuesta (TiempoResp)

Prepotencia (Prepoten)

Tiempo de Espera (TiemEspera)

Estado de las Instalaciones (EstdeInst)

Conflicto de Interes (ConfdeInte)

Falta de Respeto (FalRespet)

Falta de Información de Requisitos (FalInfReq)

Por cada pareja de variables, se planteó la pregunta siguiente a un grupo de más de 10 expertos: ¿existe una relación de influencia directa entre la variable i y la variable j ? si es que no, anotamos 0, en el caso contrario, nos preguntamos si esta relación de influencia directa es, débil (1), mediana (2), fuerte (3) o potencial (3*) de acuerdo con Godet (2007, p.64). El análisis MICMAC provee una matriz y un gráfico nombrado Plano de Influencia y Dependencia de las variables del sistema de estudio y las categoriza en: Variables de entorno, variables reguladoras, palancas secundarias, variables objetivo, variables clave, variables resultado, variables autónomas y variables determinantes de acuerdo con Godet (2007). La interpretación del gráfico Plano de Influencia y Dependencia permite una lectura completa del sistema según resulten ser las variables motrices o dependientes. Es decir, para cualquier variable su valor estratégico estaría determinado por la suma de su valor de motricidad y de su valor de dependencia. $En = mn + dn$. Godet (1997).

RESULTADOS

A continuación se explicarán la posición de las variables en el plano de influencia y dependencia directas, así como la identificación de cada variable en el plano: Variables Determinantes. Se encuentran en la zona superior izquierda del plano de influencia y dependencia, son las variables que según su evolución a lo largo del periodo de estudio se convierte en frenos o motores del sistema. Estas pudieran ser propulsoras o inhibitoras del sistema. El objetivo es que sean propulsoras y determinen las conductas adecuadas del sistema. En el estudio no resultaron este tipo de variables. Variables Entorno. Son las variables con escasa dependencia del sistema, pueden ser consideradas un decorado del sistema, se encuentran en la zona media de la parte izquierda del plano de influencia y dependencia. El objetivo es complementar su valor agregado al sistema. En el estudio no resultaron este tipo de variables.

Variables Reguladoras. Son las variables situadas en la zona central del plano de influencia y dependencia, se convierten en llave de paso para alcanzar el cumplimiento de las variables clave. Determinan el buen funcionamiento del sistema en condiciones normales. Se sugiere evaluar de manera consistente y con frecuencia periódica estas variables. - ConfdeInte (Conflicto de Interés) Palancas Secundarias. Son las variables complementarias a las variables reguladoras, actuar sobre ellas significa hacer evolucionar las variables reguladoras que a su vez afectan a la evolución de las variables clave. En el plano de influencia y dependencia se encuentran ubicadas debajo de las reguladoras. En el estudio no resultaron este tipo de variables. Variables Objetivo. Son las variables que se ubican en la parte central a la derecha en el plano de influencia y dependencia. Es muy dependiente y medianamente motriz, de ahí su carácter de tratamiento como objetivos, puesto que en ellas se puede influir para que su evolución sea aquella que se desea. En el estudio no resultaron este tipo de variables.

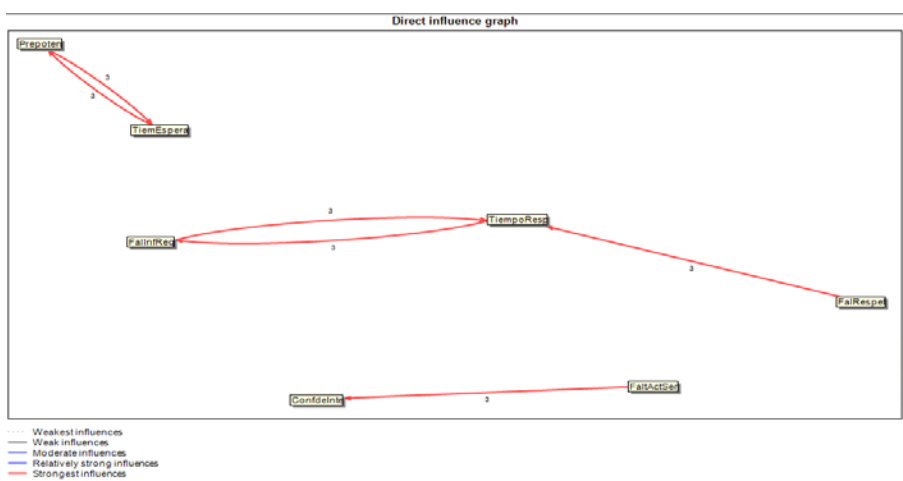

Variables Clave. Son las variables que se encuentran en la zona superior derecha del plano de influencia y dependencia, también nombradas variables reto del sistema. Son muy motrices y muy dependientes, perturban el funcionamiento normal del sistema; estas variables sobre determinan el propio sistema, son por naturaleza inestables y se corresponden con los retos del sistema. En resumen deben continuamente tener retos que propicien el cambio del sistema a un nivel más óptimo, son las que mantienen lubricado el sistema: - FaltActSer (Falta de Actitud de Servicio), - TiempoResp (Tiempo de Respuesta), - Prepoten (Prepotencia), - TiemEspera (Tiempo de Espera), - FalRespet (Falta de Respeto), - FalInfReq (Falta de Información de Requisitos).

Variables Resultado. Son variables que se caracterizan por su baja motricidad y alta dependencia; se encuentran en la zona inferior derecha del plano de influencia y dependencia, y suelen ser junto con las

variables objetivo, indicadores descriptivos de la evolución del sistema. Se trata de variables que no se pueden abordar de frente, sino a través de las que dependen en el sistema. Estas variables requieren un seguimiento y monitoreo estrecho que permita verificar la efectividad del sistema en general. En el estudio no resultaron este tipo de variables.

Variabes Autónomas. Son variables poco influyentes o motrices y poco dependientes, se corresponden con tendencias pasadas o inercias del sistema o bien están desconectadas de él. En el plano de influencia y dependencia se encuentran en la zona inferior izquierda. No constituyen parte determinante para el futuro del sistema. Se constata frecuentemente un gran número de acciones de comunicación alrededor de estas variables que no constituyen un reto. Hay que alinear estas variables a la planeación estrategia. Se sugiere dar más valor a esas variables. En este momento son poco influyentes en el sistema. EstdeInst (Estado de las Instalaciones)

Figura 2:Influencias Directas entre variables

Fuente. Elaboración propia en software LIPSOR-EPITA-MICMAC.

En esta figura 2 podemos observar que la variable prepotencia y la variable tiempo de espera se corresponden. También se corresponden la variable tiempo de respuesta y la variable falta de información de requisitos. Es decir estos conjuntos de variables se retroalimentan mutuamente. Por otra parte la variable falta de respeto impacta directamente la variable tiempo de respuesta y la variable falta de actitud de servicio impacta a la variable conflicto de interés.

En esta figura 4 podemos observar la lista de variables ordenadas según su dependencia en el sistema. Esto nos permite valorar la dependencia que consideraron el conjunto de expertos que tenían dichas variables en el sistema.

REFLEXIONES FINALES

El objetivo principal de este artículo fue encontrar las variables que tienen mayor incidencia en la prestación de servicio para encontrar estrategias que logren impactar de manera positiva la realización de dichos servicios públicos municipales y con esto lograr aportar a mejores niveles de gobernabilidad estatal en Nuevo León. En ese sentido las figuras 1, 2, 3, y 4 nos dan diferentes perspectivas de la importancia de las variables de estudio.

Por otra parte se logró presentar a la prospectiva como disciplina y como método, además de demostrar su validez y eficacia para generar información estratégica para la toma de decisiones, así como para el diseño, elaboración e implementación de actividades de mejora continua en los sistemas de trabajo. Los programas de prospectiva, como toda herramienta, requieren una capacidad de análisis importante por parte de los usuarios. Sin este análisis, una utilización demasiado mecánica del programa MICMAC puede enmascarar las verdaderas cuestiones y conduciría a contradicciones importantes o a falsas creencias. Es necesario seguir profundizando y explorar más variables, ya que los ciudadanos del municipio de Monterrey exigen una mejor actuación del gobierno, por lo que son cada vez más conscientes de las acciones que generan la mala gestión.

PRINCIPALES FACTORES DE FORMACIÓN FAMILIAR EN EL DESARROLLO DE LAS HABILIDADES GERENCIALES DE LOS ADMINISTRADORES DE EMPRESAS. CASO: EMPRESAS DE CONFECCIÓN EN EL MUNICIPIO DE TUNJA-BOYACÁ (COLOMBIA)

Mónica Bibiana González Calixto, UPTC

Oscar Alejandro Bernal Caro, USTA

Janeth Patricia Gonzalez Martínez, UPTC

RESUMEN

La investigación terminada presenta los principales factores de formación familiar en el desarrollo de las habilidades gerenciales, a través del análisis de seis casos aplicados en administradores de empresas de confección del municipio de Tunja (Boyacá-Colombia). Con el enfoque cualitativo, se utilizó entrevista semiestructurada al administrador, a uno de sus trabajadores y a un familiar. Los principales factores en mención encontrados, fueron: valores, patrones, conductas o habilidades, actividades realizadas en el hogar y normas y roles. Los administradores-empresarios participantes del estudio, han sido formados en el seno familiar, con grandes fortalezas en la creación y administración de empresas, la diversidad de actividades y responsabilidades que desde niños debieron asumir, los valores de respeto, honestidad y persistencia transmitidos, las habilidades que desarrollaron en la práctica de los negocios de sus padres (quienes en la mayoría de los casos eran empresarios) y el cumplimiento de normas y roles bien definidos. El estudio permite confirmar la gran importancia de la familia como institución formadora, que contribuye al desarrollo de habilidades del niño y que luego se verán reflejadas en las habilidades directivas del adulto, quien al recibir una mezcla adecuada de los factores aquí mencionados, puede llegar a ser un administrador exitoso.

PALABRAS CLAVE: Formación familiar, habilidades gerenciales, empresa.

ABSTRACT

The completed investigation presents the main factors of family formation in the development of management skills, through analysis of six case managers applied to clothing companies in the municipality of Tunja (Boyaca, Colombia). With the qualitative approach, semistructured interview was used to the administrator, one of his workers and a relative. The main factors found in question were: values, patterns, behaviors or skills, home activities and rules and roles. Administrators, entrepreneurs in the study, have been trained in the family, with great strengths in the creation and administration of companies, the diversity of activities and responsibilities as children have taken on the values of respect, honesty and persistence transmitted, the developed skills in business practices of their parents (who in most cases were employers) and compliance with rules and roles clearly defined. The study confirms the importance of family as a training institution, which contributes to the development of skills of the child and then be reflected in the managerial skills of the adult, who receives a proper mixture of the factors mentioned here, can reach be a successful manager.

KEY WORDS: Family training, management skills, business.

INTRODUCCIÓN

Según la literatura encontrada, el desarrollo de habilidades directivas se ha dejado en manos de programas universitarios con enfoques administrativos; en Colombia no se encuentran estudios y teorías que permitan establecer los factores de formación familiar en el desarrollo de habilidades gerenciales de los administradores de empresas, esto explica en parte que las familias, no son conscientes de la gran oportunidad que tienen para fortalecer a sus hijos en habilidades gerenciales, ni de las debilidades existentes en el establecimiento de las mismas. La familia como principal institución formadora y transmisora de valores, hábitos y costumbres entre otros factores, contribuye a los aprendizajes básicos y juega un papel determinante en el desarrollo de habilidades del niño.

Por otra parte, las habilidades gerenciales que se han considerado más relevantes son: las comunicaciones interpersonales, el manejo de conflictos, el trabajo en equipo, liderazgo y motivación, análisis de problemas y toma de decisiones, las cuales guardan gran relación con las habilidades que desarrolla el niño en el seno familiar; esta relación representa una oportunidad para conocer factores determinantes en la formación del directivo. A partir de nuestra experiencia como docentes en escuelas de administración y dadas las diferencias en el desarrollo de habilidades gerenciales, que se perciben desde los primeros semestres, en los estudiantes de administración; nos preguntamos si existen factores de formación familiar, que determinen en la persona, presentar desde muy temprana edad este tipo de habilidades. En este sentido, el estudio es de utilidad para algunas universidades y entidades interesadas en fortalecer la gestión administrativa en las empresas de la región.

REVISIÓN LITERARIA

En cada organización el administrador es aquella persona que soluciona problemas, dimensiona recursos, planea su aplicación, desarrolla estrategias, diagnóstica situaciones, etc. Cada uno de estos aspectos es exclusivo de esa organización y por lo tanto un administrador que ha tenido éxito en una organización puede no tenerlo en otra (Chiavenato, 2000). Estos administradores, al igual que la mayoría de las personas han tenido una familia. El tema de la familia ha sido tratado ampliamente por diferentes autores dentro de las ciencias sociales y en especial la antropología, la sociología y la psicología. El presente estudio aborda el concepto de familia desde la sociología con un enfoque administrativo. En el caso de América, y de acuerdo con Therborn (2004), vale la pena destacar que aún existen fuerzas patriarcales en las regiones andinas de América Latina, que se relacionan con el poder, influencia y superioridad del padre, tanto en los hijos como en la esposa. De esta manera las actitudes, habilidades y comportamientos de un directivo en Tunja, deben ser diferentes a las que se manifiesten en los directivos de otras regiones, pues su formación se basa en valores, normas, contextos, estructuras familiares y pensamientos diferentes. Para Therborn (2004) la familia, “es una institución definida por normas para la constitución de la pareja sexual y de la filiación inter-generacional. Las instituciones se pueden definir como estructuras de normas donde se fija y mantiene un juego de roles sociales” (CEPAL, 2007, p. 32).

La empresa es también una institución, pues en ella interactúan personas, que bajo normas y roles logran los objetivos organizacionales. Shepard, Southard y Brent (2008), proporcionan una fuente importante de teoría en el tema de familia para la presente investigación; ellos plantearon que la familia satisface la necesidad de procrear y socializar a los hijos; permite al niño aprender los patrones culturales que le facilitan la participación en la sociedad; dentro de su estructura se pueden llevar a cabo actividades de tipo económico, religioso, político y educativo; ayuda a regular el comportamiento sexual, determina la clase social y proporciona apoyo moral y afecto.

Igualmente mencionan que en la familia existe el aprendizaje por observación denominado modelado siendo uno de los modos más importantes en que el niño aprende a participar en la sociedad. Gutiérrez

(2000), explica que “La institución de la familia constituye un campo desde el cual se divisan y dentro del cual se proyectan todas las instituciones de la comunidad en sus fallos y aciertos”. Para Whetten & Cameron, (2005), las habilidades directivas son los bloques constructivos sobre los que descansa la administración efectiva, estas habilidades, forman el vehículo mediante el cual la estrategia y la práctica de la administración, las herramientas y las técnicas, los atributos de la personalidad y el estilo trabajan para producir resultados eficaces, en las organizaciones; su relevancia no está limitada únicamente al trabajo, sino que también se aplican a la vida en áreas como la familia, amigos, organizaciones de voluntariado y la comunidad. Los autores plantearon las diez habilidades directivas que más se repetían en los directivos analizados y encontraron que todas eran del tipo conductual. Dichas habilidades directivas fueron organizadas en tres grupos, interpersonales y grupales. La presente investigación, acepta que las habilidades directivas se pueden aplicar en el área familiar, pero supone que además la familia tiene un papel más importante que se relaciona con estas habilidades y que consiste en transmitir factores de formación determinantes en el desarrollo de las mismas.

METODOLOGÍA

Se aplicó investigación con enfoque cualitativo de tipo exploratorio, con la utilización de la metodología de casos, que según Yin (1989), es una herramienta valiosa de investigación que permite medir y registrar la conducta de las personas involucradas en el fenómeno estudiado. Se usa el método inductivo tratando de encontrar nuevas formas de enfocar y entender la realidad, interpretando y comprendiendo la perspectiva de los participantes de la realidad social. Se utilizó el caso múltiple de múltiples unidades, tomando seis casos, realizando un comparativo de los diferentes criterios de análisis, que pueden variar entre administradores. El estudio está dividido en cuatro fases. En la primera fase se identificó el problema y se generaron las proposiciones. La segunda fase, concluyó con la presentación de la propuesta de investigación. En la tercera fase, se obtuvo información por medio de la observación, descripción, entrevista y reflexión. La cuarta fase, condujo al proceso de comprobación de las proposiciones, para lo cual se realizó categorización, triangulación y ordenamiento conceptual, “organización de los datos, en categorías (o a veces clasificaciones) discretas, según sus propiedades y dimensiones y luego al uso de la descripción para dilucidar estas categorías” (Strauss y Corbin, 2002, p. 21).

El estudio se limitó a la formación que le ha dado al directivo la familia que lo gestó y no a la familia que actualmente el directivo haya conformado. Para ubicar a los administradores se seleccionaron empresas de confecciones de Tunja. Los administradores seleccionados debían haber ocupado su cargo en la empresa por un mínimo de un año y ser de origen Cundi-boyacense. Se aplicaron entrevistas semi-estructuradas a directivo, trabajador y familiar. Adicionalmente se desarrolló un protocolo de observación directa, se revisaron estudios previos relacionados con objeto de la presente investigación y textos seleccionados mediante la revisión bibliográfica. Los datos se analizaron bajo tres dimensiones emergentes: familia, habilidades gerenciales y Administrador-empresario.

RESULTADOS

Las empresas en donde se desempeñan los administradores del estudio, son empresas pequeñas, que tienen entre 2 y 20 empleados, dedicadas a la confección de ropa deportiva, de trabajo y uniformes escolares. Cuatro son empresas familiares y dos personales, todos los entrevistados eran al mismo tiempo administradores y propietarios del negocio.

Dimensión Familia

Todos los padres de los administradores, se unieron en matrimonio católico y en dos de los casos se habían divorciado. La autoridad en el hogar la tenía primero el padre y luego la madre (RG, HG), solamente uno de los administradores expresó que la autoridad la tenía la madre; en dos casos (FG, OG)

la autoridad era compartida y en otro se involucraba y delegaba autoridad al hermano mayor, después de los padres. Una de las principales características encontradas en los casos, es que en la mayoría, los padres del administrador eran empresarios (RG, FG, PG, OG), las familias eran numerosas y humildes (FG, PG, DG, HG) y en menor cantidad de estrato medio (RG,OG); en algunos casos, provenían del campo y se dedicaban a la agricultura y a la ganadería (RG, DB, FG). En relación con los factores de formación familiar se encontraron valores, patrones, actividades realizadas en el hogar y normas y roles; los cuales fueron analizados y triangulados entre estamentos y con marco teórico.

Dimensión Habilidades Gerenciales

En cuanto a las habilidades personales, los trabajadores expresan conductas de sus jefes como ser comprensivos con los permisos (HT, DT), manifiestan sentir el apoyo del jefe en su vida personal (DT), mencionan que todos los días aprenden algo del jefe (FT) y que les dan cierta confianza en el desarrollo de su trabajo para que todo salga bien (FT, RT, HT). De igual manera se analizó el manejo de estrés y solución de problemas. En el nivel de habilidades interpersonales, se estudió la motivación y manejo de conflictos. En relación a las habilidades grupales, la delegación de autoridad se realiza pero bajo supervisión y con poca confianza, las iniciativas por parte de los empleados se tienen en cuenta y se analizan, sin embargo, la decisión final siempre está centralizada en el gerente (HT). En esta sección también se consideró facultamiento y delegación, trabajo en equipo y cambio positivo.

Dimensión Administrador-Empresario

Diferentes motivos han existido para que los actuales administradores tengan el “negocio”. Aunque los gerentes entrevistados expresan que la facilidad de crear el negocio y algunas situaciones coyunturales los motivaron a hacerlo, la razón de fondo para todos, es la herencia y aprendizaje que obtuvieron en el seno familiar, con la ayuda y las responsabilidades asignadas por sus padres dentro del negocio y en el hogar (RG, FG, OG, PG, DG, HG).

CONCLUSIONES

La familia como principal institución formadora y transmisora de valores, conductas, patrones, normas y roles, contribuye en el aprendizaje y desarrollo de habilidades en el niño, que en el futuro le permiten desenvolverse de forma competente a la hora de dirigir y estar al frente de una organización. En el seno familiar de los administradores estudiados, se desarrolló la capacidad de trabajo y esfuerzo, la disciplina, el trabajo en equipo, la independencia, la puntualidad, el ingenio y el manejo de recursos, la delegación y el facultamiento; las cuales son habilidades y conductas aplicables a la vida empresarial; por lo tanto, se afirma que la formación familiar posibilitó el aprendizaje de estas habilidades que son fundamentales y determinantes en el desempeño empresarial de los administradores.

El estudio permitió conocer las oportunidades de formación de habilidades gerenciales que tienen las familias en relación a los cinco factores encontrados: valores, patrones, conductas o habilidades, actividades realizadas en el hogar y normas y roles. Una debilidad encontrada que puede ser objeto de investigación y formulación de estrategias para mejoramiento en la formación familiar, es el trabajo en equipo o conformación de alianzas con otras empresas. Estos resultados podrán ser utilizados para lograr una mayor competitividad empresarial.

LA SUPERVISIÓN, SU IMPACTO EN LA RENTABILIDAD FINANCIERA DE LAS PYMES. SECTOR MANUFACTURERO

Luis Alfredo Argüelles Ma, Universidad Autónoma de Campeche, México
Román Alberto Quijano García, Universidad Autónoma de Campeche, México
Mario Javier Fajardo, Universidad Autónoma de Campeche, México
Deneb Elí Magaña Medina, Universidad Juárez Autónoma de Tabasco, México

RESUMEN

Investigación descriptiva y correlacional, cualitativa y cuantitativa, realizada en 11 pequeñas y medianas empresas del sector manufacturero, de San Francisco de Campeche, Campeche, México. Aborda la rentabilidad financiera – variable dependiente -, relacionándola con la supervisión –variable independiente-, generada desde la perspectiva del control interno de las organizaciones. Gran número de entidades cierran operaciones, al no obtener los resultados financieros esperados, las publicaciones existentes apuntan falta de supervisión, sustentada en sistemas eficientes y confiables. Su objeto es proporcionar al empresario, elementos que lo orienten para tomar decisiones adecuadas. Se investigan los aspectos más significativos de la supervisión, que impactan en la rentabilidad financiera. Se sigue la teoría del control interno bajo el Informe C.O.S.O. (COMMITTEE OF SPONSORING ORGANIZATIONS) (Coopers & Lybrand, 1997), componente de supervisión; y el indicador de rentabilidad financiera, consolidado en la investigación de González, Correa y Acosta (2002). El trabajo de campo es desarrollado desde julio del 2008, los datos se correlacionan a través del programa Statistical Package for the Social Sciences (SPSS.18), identificando los que mejor explican la relación de la rentabilidad financiera – supervisión, significando el coeficiente dado. El resultado, es confiable para pronosticar la rentabilidad financiera de las pymes, tomando como sustento la supervisión, propiciando su crecimiento.

PALABRAS CLAVE: supervisión, rentabilidad financiera, pymes

SUPERVISION, IMPACT ON THE FINANCIAL PROFITABILITY OF PYMES. MANUFACTURING SECTOR

ABSTRACT

Descriptive and correlational research, qualitative and quantitative, carried out in 11 small and medium enterprises in the manufacturing sector, San Francisco de Campeche, Campeche, Mexico. Addresses the financial profitability - dependent variable -, relating to supervision, independent variable, generated from the perspective of internal control in organizations. A large number of operations closed institutions, getting no expected financial results, the literature suggest a lack of supervision, based on efficient and reliable systems. Its purpose is to provide the employer, the guide elements to make proper decisions. We investigate the most significant aspects of supervision, that impact financial profitability. It follows the theory of internal control under the COSO Report (Committee of Sponsoring) (Coopers & Lybrand, 1997) supervision component, and the indicator of financial profitability, consolidated in the investigation of Gonzalez Correa and Acosta (2002). The fieldwork is developed since July 2008; the data are correlated through the Statistical Package for Social Sciences (SPSS.18), identifying those to better explain the relationship of financial profitability - supervision, meaning the coefficient given. The result is reliable to predict financial profitability of pymes, taking as support the supervision, promoting its growth.

KEYWORDS: supervision, financial profitability, pymes

INTRODUCCIÓN

Entre las causas más comunes que contribuyen al fracaso de las PYMES, se encuentra en segundo término: la falta de estructura adecuada en la organización (Castillo y Ampudia, 2005). Por lo general el empresario que se encuentra al frente de la PYME, desconoce la necesidad de tener controles, supervisados correctamente, que le permitan anticiparse a los problemas, comúnmente se observa que los administradores, son sorprendidos en situaciones que pudieron anticiparse de contar con una supervisión adecuada del sistema de control interno. En el caso de Lefcovich (2003), la información inexacta, poco confiable y fuera de tiempo, conduce a no adoptar las prevenciones en tiempo, además de tomar pésimas decisiones, asimismo, la supervisión, como parte del control interno, es fundamental para no cometer errores, que conduzcan a la desaparición de la empresa.

La rentabilidad, se ha convertido en el indicador financiero común para medir el nivel de acierto o fracaso en la gestión empresarial (González, Correa, Acosta. 2002). Permite evaluar la eficacia de la estrategia utilizada, y comparar sobre la posición competitiva de una organización, en el entorno socio-económico que se desenvuelve. Esta investigación tiene como finalidad, el conocer la importancia del uso de la supervisión, como componente del sistema de control interno en las PYMES campechanas, sector manufacturero, así como sus herramientas y estrategias necesarias para lograr su rentabilidad y por ende sean atractivas a la inversión nacional o extranjera. En su secuencia se muestra: la revisión de la literatura en la que se basan los fundamentos teóricos de la supervisión como parte del control interno, así como los planteamientos matemáticos para alcanzar la rentabilidad financiera en las organizaciones. Siguiendo con la metodología, se obtienen datos cuantitativos y cualitativos, que identifican la variable dependiente y la independiente, respectivamente, los resultados plantean el grado de asociación entre ambas, y las conclusiones a las que se llegan.

REVISIÓN DE LA LITERATURA

EL informe C.O.S.O. relativo al control interno, publicado en inglés en los Estados Unidos de Norteamérica en 1992, es una respuesta a los inquietudes de conceptos, definiciones e interpretaciones existentes en cuanto a este tema, plasma la tarea realizada durante más de cinco años por el grupo de trabajo de la TREADWAY COMMISSION, NATIONAL COMMISSION ON FRAUDULENT FINANCIAL REPORTING creada en 1985 bajo la siglas COSO (COMMITTEE OF SPONSORING ORGANIZATIONS), con el objeto de definir un nuevo marco conceptual del control interno, capaz de reagrupar la multiplicidad de definiciones existentes. La traducción del informe, se confirió al Instituto de Auditores Internos de España, y, Coopers & Lybrand, S.A., quienes la presentan en 1997 (Coopers & Lybrand. 1997). El control interno lo define este informe, como el proceso llevado a cabo por el consejo de administración, la dirección y todo el personal de la organización, a fin de proporcionar un grado de seguridad razonable en la consecución de los siguientes objetivos: 1. Eficacia y eficiencia en las operaciones, 2. Confiabilidad de la información financiera, y 3. Cumplimiento de las leyes y normas que sean aplicables. El control interno consta de cinco componentes interrelacionados, derivan del estilo gerencial y se integran al proceso de dirección. Estos componentes se aplican a todas las empresas, las pequeñas y medianas pueden implantarlo en forma distinta que las grandes. Los componentes son: 1. Entorno de Control, 2. Evaluación de Riesgos, 3. Actividades de Control, 4. Información y Comunicación, y 5. Supervisión. En este contexto, la supervisión, se convierte en el elemento importante, al monitorear los sistemas de control y valorar su calidad de desempeño en el tiempo; no basta con haber diseñado e implantado un esquema de control, si no es verificado periódicamente para medir su efectividad, y proponer la mejora continua.

La rentabilidad, es el indicador financiero más habitual a la hora de medir el nivel de acierto o fracaso en la gestión empresarial (González, Correa y Acosta. 2002), posibilita evaluar, a partir de los valores, la eficacia de la estrategia implantada, y efectuar comparaciones acerca de la posición competitiva con el entorno. Propone un estudio de carácter explicativo, para identificar los factores de rentabilidad como diferenciación entre las empresas, y como variable de la solvencia y crecimiento empresarial. Señala que la importancia de la rentabilidad, como condición necesaria, aunque no suficiente, para el mantenimiento de la supervivencia de la empresa a largo plazo, queda confirmada, desde el punto de vista empírico, un elevado número de trabajos la presentan como una variable explicativa fundamental, para mantener el equilibrio financiero de la organización. En este trabajo se destaca que la variable que aporta mayor cantidad de información para diferenciar las empresas en función a su rentabilidad es la estructura financiera, presentan una dependencia de la financiación ajena. Existe abundante información que se refiere al control interno y la rentabilidad financiera, pero sin vincularlos para encontrar posibles asociaciones, y, el camino a identificar causas probables del crecimiento de las organizaciones. Es la pretensión de este trabajo de investigación.

METODOLOGÍA

La muestra analizada, se obtiene del Sistema de Información Empresarial en México (SIEM.2008) que arroja que existen 633,573 empresas en México, de las cuales 5,644(0.89%) se ubican en el Estado de Campeche y las restantes 627,908 (99.11%) en los demás estados. Para Campeche 239 (4.23%) son pequeñas, 53 (0.94%) medianas, 5,334 (94.51%) micros y 18 (0.32%) grandes. De las pequeñas, 181 son del sector manufacturero y 58 de diversos sectores, de las medianas, 39 son manufactureras y 14 de otros. De la población manufacturera, se excluyen las empresas de la construcción, por ser un sector con características muy particulares, y se toman las restantes: 32 pequeñas y 7 medianas, de éstas, únicamente las del municipio de Campeche por ser el más representativo a nivel de índice de empresas por población económicamente activa: 27 pequeñas y 5 medianas. Como característica final de la muestra, las pequeñas y medianas empresas cuyos ingresos anuales son de \$500,000.00 en adelante resultan: 9 pequeñas y 2 medianas, seleccionándose todas (100%) para el proceso de investigación. La investigación cualitativa, que se refiere a la supervisión como variable independiente “X”, se realiza a través de los cuestionarios Meycor COSO AG, aplicados a los tres niveles de la organización: Alta Dirección, Gerencia General y Gerencias Operativas, arroja resultados identificados como : Malo, Bueno/Regular y Bueno. Estos datos serán convertidos a escala cuantitativa por el software Meycor COSO AG. Véase Tabla 1

Tabla 1: Correspondencia de valores cualitativos a cuantitativos

Valor cualitativo	Valor cuantitativo
Bueno	3.00 – 4.0
Bueno/Regular	2.00– 2.99
Malo	1.0 – 1.99

Fuente: MEYCOR COSO AG

La rentabilidad financiera, identificada como la variable dependiente “Y”, parte de la obtención de los estados financieros necesarios: el Estado de Posición Financiera (Balance General) y el Estado de Resultados (Estado de Pérdidas y Ganancias) al cierre del ejercicio 2009. De ellos se extraen: activo circulante, inventarios, pasivo circulante, pasivo total, capital contable, utilidad de operación, activo total y utilidad neta, y se le aplica el modelo de rentabilidad financiera, cuya expresión es:

Formula 1: Modelo Financiero.

$$RF = \frac{\text{Beneficios Despues de Impuestos}}{\text{Fondos Propios Promedio}}$$

Fuente: Elaboración propia.

Las variables cualitativas y cuantitativas se someten a pruebas estadísticas para obtener el coeficiente de correlación de Pearson, utilizando el software: Statistical Package for the Social Sciences (SPSS.18).

RESULTADOS

Siguiendo la metodología aplicada, en las 11 pequeñas y medianas empresas, se caracteriza el comportamiento de la supervisión –componente del control interno- (variable independiente cualitativa), se aplica la fórmula matemática de la rentabilidad financiera (variable dependiente cuantitativa), datos con los que se obtiene el coeficiente de correlación de Pearson, cuyo resultado es -0.644, significativo al 0.05 de nivel de riesgo asociado, al ser su población diferente a cero; y que explica el grado de asociación de las variables, siendo una correlación perfecta negativa. La Tabla 2, presenta las caracterizaciones de la supervisión, su valuación, así como los índices de rentabilidad para la población muestral. En la Tabla 3 se presentan los datos que arroja el coeficiente de correlación de Pearson, utilizando el SPSS (versión 18).

Tabla 2: Caracterización de la Supervisión e Índice de Rentabilidad Financiera

Empresas	Supervisión	Conversión	Rentabilidad financiera
1	BUENO REGULAR	2.39	0.58
2	BUENO	3.58	0.61
3	BUENO	3.43	0.36
4	BUENO	3.84	-0.25
5	BUENO	3.57	-0.19
6	BUENO	3.15	0.37
7	BUENO	4.00	-0.16
8	BUENO	3.74	0.03
9	BUENO REGULAR	2.41	0.42
10	BUENO	3.31	-0.16
11	BUENO	3.40	0.09

Los resultados de la tabla 2 muestran que de las 11 empresas encuestadas 2 (18.2%) su percepción es en bueno-regular, con valor cuantitativo que va de 2.39 a 2.41, y 9 (81.8%) es bueno, con valor cuantitativo que fluctúa entre 3.15 a 4, que depende del grado de riesgo y entorno en el que se aplica la supervisión. Asimismo, al aplicar el modelo de rentabilidad financiera para todas, se obtienen resultados que fluctúan de -0.16 a 0.61, representando que por cada peso invertido en la empresa se tienen tanto pérdidas como utilidades cuyos importes están topados en los máximos y mínimos señalados. Fuente: Elaboración propia.

Tabla 3: Correlación de Pearson

		RENTABILIDAD FINANCIERA	SUPERVISION
RENTABILIDAD FINANCIERA	Correlación de Pearson	1	-.644*
	Sig. (bilateral)		.032
	N	11	11
SUPERVISION	Correlación de Pearson	-.644(*)	1
	Sig. (bilateral)	.032	
	N	11	11

* La correlación es significativa al nivel 0,05 (bilateral). En esta tabla se muestra el resultado del Coeficiente de Correlación de Pearson, derivado de la aplicación del SPSS (versión 18), que arroja -0.644, correlación perfecta negativa, significativa al 0.05 de nivel de confianza, al ser la población muestral diferente a cero. Fuente: Elaboración propia.

CONCLUSIONES

Como análisis de los resultados alcanzados, se concluye que es factible considerar a la supervisión como un indicador de pronóstico, para alcanzar la rentabilidad financiera esperada en las pequeñas y medianas empresas, del sector manufacturero en Campeche, que les permita coadyuvar a la toma de decisiones para su desarrollo y crecimiento económico. Esta conclusión es posible aseverarla, al observar en la población muestral que las variables de supervisión y rentabilidad financiera, guardan una asociación perfecta negativa, significativa al ser valores diferentes a cero, e indican que en la medida que se optimicen con

eficiencia y eficacia los recursos destinados a la supervisión, los resultados financieros irán mejorando paulatinamente, en forma proporcional. La metodología se aplicó en el sector manufacturero, pero se propone su replica en todos los sectores económicos del país.

ABSTRACT

El problema que aborda la presente investigación es diagnosticar las estrategias competitivas actuales y potenciales de la Agencia Aurea Publicidad y llevar a cabo un benchmarking con la Agencia de Publicidad Emery Group. En el marco teórico resaltan dos elementos que se sugieren para la elección de una estrategia, el primero es conocer la estructura del sector en el que compite la empresa, pues como menciona Porter (1991) "...los sectores difieren notablemente en la naturaleza de la competencia" (p. 64); otro aspecto que se sugiere analizar es el posicionamiento que ocupa la empresa en cuestión dentro del sector en el que se ubica, pues este nos dará a conocer el lugar que ocupa la empresa dentro de la mente del consumidor. Se utiliza el método no paramétrico de Mann-Whitney-Wilcoxon para comparar las estrategias tanto internas como externas utilizadas y sus resultados reflejados en sus clientes. Las variables de las estrategias externas fueron: entrega a tiempo, atención a clientes, precios, variedad de productos, disposición de la empresa para invertir en tecnología, capacitación e innovación, la trayectoria de la empresa en el mercado y calidad del servicio que ofrece. Se concluye que Emery sobresale en los aspectos relacionados con las estrategias internas.

PALABRAS CLAVE: Competitividad, estrategias de mercado, benchmarking.

INTRODUCCION

El problema que aborda la presente investigación es que en la actualidad el mercado de las agencias de publicidad en Ciudad Juárez, Chihuahua está altamente competido, ya que existe un gran número de agencias que ofrecen servicios en donde la calidad y los precios son igualados fácil y constantemente. Por ello es importante que las agencias de publicidad establecidas evalúen sus estrategias competitivas actuales y potenciales para determinar si les están proporcionando alguna ventaja competitiva sostenible. Las preguntas de investigación que se plantearon fueron dos: 1) ¿Las estrategias de mercado utilizadas por Aurea Publicidad le están dando alguna ventaja competitiva sostenible? y 2) ¿Son los factores internos de la Agencia de Publicidad Aurea los responsables de que las estrategias de competitividad actuales no estén dando los resultados esperados? El objetivo que persigue el presente proyecto es detectar y evaluar las estrategias competitivas potenciales que pudieran generar ventajas competitivas sostenibles para la agencia Aurea Publicidad. Además se comparan las estrategias competitivas de la Agencia Aurea Publicidad y las de la Agencia de Publicidad Emery como un benchmarking.

REVISION LITERARIA

Es importante señalar, que las empresas tratan de definir y establecer un método para competir en un sector que sea rentable y a la vez sostenible a través de su estrategia competitiva. No existe una estrategia universal y solo podrán alcanzar éxito al emplear aquellas estrategias que se adapten al sector en particular y a las técnicas y activos que la empresa posea. Resaltan dos elementos que se deben considerar para la elección de una estrategia: el primero es conocer la estructura del sector en el que compite la empresa, pues como sostiene Porter (1991) "los sectores difieren notablemente en la naturaleza de la competencia" (p. 64); otro aspecto que se sugiere analizar es el posicionamiento que ocupa la empresa en

cuestión dentro del sector en el que se ubica, pues este nos dará a conocer el lugar que ocupa la empresa dentro de la mente del consumidor. El conocer realmente y a profundidad estos aspectos, le proporcionara un mayor margen de reacción a la empresa, ya sea frente a la competencia o para reaccionar ante un cambio de su entorno, que es lo que está pasando en la comunidad donde se encuentran estas empresas, para transformar esos cambios y utilizarlos para bien de estas organizaciones.

METODOLOGIA

El método que se utilizo para llevar a cabo la presente investigación fue el método cuantitativo no experimental ya que no se manipulan las variables, fue de corte transversal porque solo se tomaron datos una sola vez, y como estrategia de investigación se utilizo el estudio de caso que fue el que mejor se adecuo a nuestro diseño porque se espera describir profundamente una unidad de análisis que represente sus cualidades y trate de encontrar las variables que la afectan en un momento determinado (Hernández Sampieri et.al., 2007). Es importante señalar que un estudio de caso se considera “una investigación empírica que investiga un fenómeno contemporáneo dentro de su contexto, especialmente cuando los límites entre los fenómenos y el contexto no son claramente evidentes” (Yin, 1994, p. 13).

La población que se considero para llevar a cabo el presente proyecto fueron dos empresas del giro de publicidad: Aurea Publicidad en Juárez, Chihuahua y Emery Publicidad en el Paso Texas. La empresa de publicidad Aurea cuenta con cinco empleados bajo su nomina, los cuales conforman los departamentos de Creatividad, Administración y Gerencia. Es importante señalar que no fue necesario obtener una muestra debido al tamaño tan pequeño de la población de solo 14 personas. Para la recolección de los datos se diseñaron dos tipos de cuestionarios, uno para los empleados y otro para los clientes de las dos empresas (ver Apéndice I). Las variables que se midieron fueron los factores externos e internos. Dentro de los factores externos se midieron: 1) puntualidad en la entrega de trabajos, 2) atención a clientes, 3) precios, 4) variedad de productos, 5) disposición de la empresa para invertir en tecnología, capacitación, e innovación, 6) la trayectoria de la empresa en el mercado y 7) la calidad del servicio que ofrece. En cuanto a las variables internas, estas cubrieron las áreas de: 1) metas y valores organizacionales para medir que tanto se reconoce la misión, visión y objetivos, 2) recursos humanos para ver que tanto desarrollan los perfiles de puesto y que tanto se capacita a sus empleados, 3) tecnologías de información e innovación para medir el grado en que las empresas invierten en nuevas tecnologías, y 4) procesos y servicios al cliente para medir los procesos de producción y calidad del servicio al cliente.

La finalidad de comparar a las dos agencias de publicidad fue encontrar si las estrategias que están empleando les están siendo efectivas, es decir, si les están generando alguna ventaja competitiva. Para llevar a cabo este análisis se considero la mezcla de ciertos factores tanto internos como externos, los cuales fueron tomados del ranking de las mejores agencias de publicidad que utiliza la revista Merca2.0 (2010, p. 32-50), al igual que los puntos que considera Porter (2007, p. 57) para saber si una empresa es competitiva para el establecimiento de sus estrategias genéricas.

Para evaluar la confiabilidad y validez del instrumento se llevo a cabo una prueba piloto donde se pidió a tres especialistas en el área de publicidad que evaluaran si lo que se preguntaba realmente describía nuestras variables internas y externas (Hernández Sampieri et. al., 2005). Asimismo, se les pidió que dieran su juicio en cuanto a la claridad y consistencia de las preguntas. La técnica de análisis de datos que se uso fue la prueba no paramétrica de Mann-Whitney-Wilcoxon. A diferencia de la prueba paramétrica de dos medias para poblaciones independientes donde se requieren que los datos sean de intervalo y que se distribuyan normalmente, la prueba de Mann-Whitney-Wilcoxon (MWW) solo requiere que la escala de datos sea al menos ordinal (Anderson et. al., 2004). De acuerdo a lo anterior las hipótesis estadísticas son:

H₀: las dos poblaciones son idénticas.

H_a: las dos poblaciones no son idénticas.

Existen dos cálculos diferentes cuando se usa la prueba de MWW, para muestras menores de diez y para muestras mayores de 10. Para este caso como tenemos muestras de 9 y 5 se usaron las siguientes formulas para muestras pequeñas:

$$T_U = n_1(n_1 + n_2 + 1) - T_L \dots\dots\dots(1)$$

Donde T_L es el valor critico inferior y se calcula con los valores de n_1 y n_2 para alfa 0.01 y 0.05 de la Tabla de Valores de T_L para la prueba de Mann-Whitney-Wilcoxon (Anderson et. al., 2004, Apéndice A-28). Y n_1 es el tamaño de la muestra de la población 1 y n_2 es el tamaño de la muestra de la población 2. Y T_U es el valor critico superior el cual se calcula con la formula antes mencionada. La regla de rechazo de H_0 se da si:

$$\text{Sumatoria Aurea} < T_L \text{ o si Sumatoria Emery} > T_U \dots\dots\dots(2)$$

ANALISIS DE DATOS.

Para analizar los datos de una forma muy sencilla y simple comparamos siete variables a través de siete hipótesis utilizando la prueba de Mann-Withney-Wilcoxon como se explico en la sección anterior. Las primeras cuatro hipótesis incluyen los factores internos y las otras tres incluyen los factores externos o de los clientes de las dos agencias.

Hipótesis Internas O De Los Empleados.

La primera hipótesis se enuncio de la siguiente manera:

H₀₁: Aurea y Emery se comportan idénticamente en cuanto a que los empleados y gerencia conocen y practican la Misión, Visión, Valores y Políticas de clientes y proveedores.

H_{a1}: Aurea y Emery no se comportan idénticamente en cuanto a que los empleados y gerencia conocen y practican la Misión, Visión, Valores y Políticas de clientes y proveedores.

Sustituyendo en la fórmula 1 obtuvimos $T_U = 5(5+8+1)-22$ $T_U = 48$ Es importante señalar que el valor de $T_L = 22$ se obtuvo de la Tabla de Valores de T_L para la prueba de Mann-Whitney-Wilcoxon con un alfa de 0.05 para $n_1 = 5$ y $n_2 = 8$ (Anderson et. al., 2004, Apéndice A-28). Asimismo, cabe señalar que una de las personas no pudo contestar el cuestionario porque estaba de vacaciones en el momento en que se efectuó la encuesta por lo que $n_2 = 8$.

Tabla 1. Diferencia de la variable “conocen la misión, visión y políticas” entre Aurea Y Emery.

Fundamentos de las empresas					
Entrevistado	Aurea Puntos	Lugar	Entrevistado	Emery Puntos	Lugar
A	21	4.5	A	24	1
B	18	10.5	B	23	2
C	20	7	C	16	13
D	21	4.5	D	17	12
E	22	3	E	19	9
			F	18	10.5
			G	20	7
			H	20	7
Sumatoria		29.5			61.5

Calculo de las sumatorias jerarquizadas para la prueba MWW al 0.05

Como se observa en la tabla 1, al jerarquizar y sumar los valores para cada agencia vemos que la sumatoria de Aurea fue 29.5 que es mayor que T_L que vale 22 pero que la sumatoria de Emery fue 61.5 que si es mayor que T_U ya que vale 48. Por esto último y siguiendo la regla de rechazo de H_0 podemos

sostener que estadísticamente las dos poblaciones son distintas con un alfa de 0.05. En cuanto a la segunda hipótesis que se refiere al análisis de Recursos Humanos la hipótesis fue:

H_{02} : Aurea y Emery conocen sus perfiles y capacitan a su personal de igual manera.
 H_{a2} : Aurea y Emery conocen sus perfiles y capacitan a su personal de diferente manera.

Sustituyendo los valores en la ecuación 1 y calculando tenemos que $T_U = 5(5 + 8 + 1) - 22 = 48$. Es importante señalar que los valores críticos de T_L y T_U permanecerán constantes en todos los cálculos por lo que no los vamos a repetir en las demás hipótesis. Como 39 fue la sumatoria de Aurea y 52 fue la sumatoria de Emery vemos que el 52 se sale de los límites críticos de $T_L = 22$ y $T_U = 48$ por lo que rechazamos H_0 y podemos decir que las poblaciones de Aurea y Emery son estadísticamente distintas con un alfa de 0.05.

En cuanto a la tercera hipótesis que ahora se refiere al área de tecnología de información e innovación la hipótesis fue:

H_{03} : Aurea y Emery desarrollan las nuevas tecnologías y las innovan de igual manera.
 H_{a3} : Aurea y Emery desarrollan las nuevas tecnologías y las innovan de distinta manera.

Después de calcular las sumatorias para Aurea que fue 33.5 y Emery 57.5 podemos ver que el 57.5 se sale de los límites críticos de $T_L = 22$ y $T_U = 48$ por lo que rechazamos H_0 y podemos decir que las poblaciones de Aurea y Emery en cuanto a las nuevas tecnologías e innovación son estadísticamente distintas con un alfa de 0.05.

La cuarta hipótesis fue enunciada de la manera siguiente:

H_{04} : Los procesos de producción y servicio al cliente de Aurea y Emery son idénticos.
 H_{a4} : Los procesos de producción y servicio al cliente de Aurea y Emery no son idénticos.

De igual manera que hicimos en hipótesis anteriores se calcularon las sumatorias de los valores jerarquizados de MWW cuyos valores fueron para Aurea 44.5 y para Emery 46.5. Evidentemente, 46.5 queda entre los límites críticos de 22 y 48 por lo que no rechazamos H_0 pudiendo concluir que no hay evidencia de que las poblaciones sean distintas a un alfa de 0.05.

Hipótesis Externas O De Los Clientes.

La muestra de los clientes entrevistados de ambas agencias (14 en total, 7 de Aurea y 7 de Emery) en general se conformo por la misma cantidad de elementos tanto del género masculino como femenino; sin embargo, se pudo visualizar que había menos mujeres en Aurea (2) que en Emery (4), mientras que había casi el doble de hombres en Aurea (5) que en Emery (3) (ver tabla 2).

Tabla 2: Datos de los clientes de Aurea y Emery por género

<i>Femenino</i>		<i>Masculino</i>	
Aurea	Emery	Aurea	Emery
2	4	5	3

Fuente: Aurea y Emery.

También es interesante observar que mientras que Aurea está orientada hacia satisfacer las necesidades de la pequeña y mediana empresa, Emery está orientada hacia la mediana y gran empresa como se puede observar en la tabla 3.

Tabla 3: Datos de los clientes de las Agencias Aurea y Emery por tipo de empresas.

Micro (1-10)		Pequeña (11-30)		Mediana (31-100)		Grande (101-mas)	
Aurea	Emery	Aurea	Emery	Aurea	Emery	Aurea	Emery
0	0	3	1	4	5	0	1

Fuente: Aurea y Emery

La quinta hipótesis se refiere al análisis del área de los elementos estratégicos y la hipótesis se enuncio de la siguiente manera:

H_{05} : Las características que consideran los clientes para contratar los servicios de Aurea y Emery son idénticos.

H_{a5} : Las características que consideran los clientes para contratar los servicios de Aurea y Emery no son idénticos.

Tabla 4: Prueba de comparación de la variable de los elementos estratégicos de Aurea y Emery

Elementos estratégicos.					
Entrevistado	Aurea		Entrevistado	Emery	
	Puntos	Lugar		Puntos	Lugar
A	10	2.5	A	9	5
B	4	13.5	B	6	11
C	7	9	C	6	11
D	4	13.5	D	8	7.5
E	9	5	E	11	1
F	9	5	F	6	11
G	8	7.5	G	10	2.5
Sumatoria	56				49

Calculo de las sumatorias jerarquizadas para la prueba MWW al 0.05.

Una vez obtenidas las sumatorias de los datos jerarquizados de ambas agencias y sabiendo que $n_1 = 7$ y $n_2 = 7$ procedimos de nuevo a sustituir los valores en la ecuación 1 como se muestra en la Tabla 4:

$$T_U = 7(7 + 7 + 1) - 37 \text{ Calculando una } T_U = 68$$

Como tanto el 56 como el 49 que fueron calculados en la tabla 4 están dentro del 37 y 68 por lo tanto aceptamos H_0 y concluimos que los elementos estratégicos para contratar los servicios de ambas empresas son idénticos con un alfa de 0.05.

La hipótesis sobre aspectos como tiempos de entrega, calidad y retroalimentación del servicio al cliente quedo como sigue:

H_{06} : El cumplimiento de las fechas de entrega, la calidad del trabajo y tiempos de retroalimentación son idénticos tanto en Aurea como en Emery.

H_{a6} : El cumplimiento de las fechas de entrega, la calidad del trabajo y los tiempos de retroalimentación no son idénticos ni en Aurea ni en Emery.

Una vez que se obtuvieron las sumatorias de los datos jerarquizados de MWW para las dos agencias Aurea con 45.5 y Emery con 59.5 y habiendo calculado $T_L = 37$ y $T_U = 68$ anteriormente vemos que las dos sumatorias se encuentran dentro de los valores críticos por lo que aceptamos H_0 y concluimos que el cumplimiento de las fechas de entrega, la calidad del trabajo y los tiempos de retroalimentación son idénticos en las dos agencias con un alfa de 0.05. La última hipótesis fue sobre el servicio otorgado por ambas agencias la cual fue enunciada de la manera siguiente:

H₀₇: El servicio prestado a los clientes es idéntico en Aurea y en Emery.

H_{a7}: El servicio prestado a los clientes no es idéntico en Aurea y en Emery.

Una vez que se obtuvieron las sumatorias jerarquizadas para Aurea y Emery cuyos resultados fueron 50 y 55 respectivamente y sabiendo que $T_L = 37$ y $T_U = 68$ calculados anteriormente vemos que las sumatorias se encuentran dentro de los valores críticos, por lo que no rechazamos H_{07} y concluimos que el servicio prestado a los clientes es idéntico tanto en Aurea como en Emery con un alfa de 0.05.

CONCLUSIONES, RECOMENDACIONES, IMPLICACIONES Y LINEAS FUTURAS DE INVESTIGACION.

Antes de entrar de lleno en las conclusiones, es importante señalar que se tuvieron dos limitaciones en el proceso de esta investigación: una en cuanto a la validación del instrumento de recolección de datos y otra de tipo metodológica. En cuanto a la validación del cuestionario usando el piloto se pensó que no era suficiente y que teníamos que usar el coeficiente de Cronbach (Field, 2005) para la validación, pero como el tamaño de la población fue tan pequeño que nos fue difícil llevar a cabo dicha prueba. Se sabe que cuando se usa el método de estudio de caso, la generalización de los resultados se vuelve complicada porque solo son validos para situaciones extremadamente similares (Hernández Sampieri, 2007). En términos generales Aurea y Emery utilizan las mismas estrategias competitivas comerciales; sin embargo, como Emery tiene mejor fundamento en sus factores internos dentro de sus estrategias competitivas se esperaba que hubiera una diferencia significativa en los factores externos entre las dos agencias, cosa que no se probó en esta investigación. Ello significa que aunque Aurea no esté tan bien cimentada en cuanto a sus valores y políticas, sus clientes están tan satisfechos como los de Emery ya que no hubo diferencias significativas entre las dos agencias en cuanto a los factores externos.

A raíz de los resultados obtenidos es evidente que Emery está mejor posicionada en el mercado que Aurea debido a que en los cuatro factores internos analizados entre las dos empresas de publicidad, Emery probó llevarlos mejor a cabo que Aurea. En la primera hipótesis, se probó que los empleados y gerentes de Emery conocen y practican su misión, visión y políticas mejor que los empleados de Aurea. En la segunda hipótesis, se probó que los empleados de Emery conocen mejor sus perfiles y capacitan a su personal de una manera más eficaz que los de Aurea. También, se demostró que Emery desarrolla las nuevas tecnologías y las innova de una manera más eficiente que Aurea.

Finalmente, en la cuarta hipótesis se probó que los sistemas de los procesos de producción y servicio al cliente de Emery son mejores que los de Aurea. Lo extraño en este estudio es que si los factores internos de Emery son estadísticamente mejores que los de Aurea, lógico es esperar que los factores externos sean mejores en Emery que en Aurea. Sin embargo, como ya vimos anteriormente, los resultados mostraron que los clientes de Emery están igual de satisfechos que los de Aurea. En las hipótesis 5, 6 y 7 vimos que 1) las características que consideran los clientes para contratar los servicios de Aurea y Emery son idénticos, 2) el cumplimiento de las fechas de entrega, la calidad del trabajo y los tiempos de retroalimentación también son idénticos tanto en Aurea como en Emery y 3) el servicio prestado a los clientes es igual en Aurea que en Emery. Quizá la respuesta a esa paradoja resida en que en esta investigación se preguntó sobre la percepción que tienen los clientes acerca de las dos agencias de publicidad sin preguntarles a los gerentes sobre los estados de pérdidas y ganancias de las dos organizaciones. Esto nos complementaria con mejor detalle cual agencia es más competitiva y porque. Ese sería probablemente motivo de otra investigación que se sale del objetivo que persigue el presente estudio. Para Aurea, sin embargo, es claro que sus oportunidades de posicionarse en este mercado se encuentran en desarrollar y robustecer sus factores internos, ya que si lo hace muy probablemente llegue a estar mejor posicionada que Emery. La razón es muy sencilla, Aurea tiene igual de satisfechos a sus clientes que Emery sin desarrollar sus factores internos, un escenario muy probable es que si Aurea desarrollara sus factores internos fuertemente, sería de esperar que Aurea satisficiera mejor a sus clientes que Emery. Es importante considerar la observación que hace Woldenberg (2009) de que hoy en día “el valor de las organizaciones ya no radica únicamente en la forma en que se presentan los productos a sus

clientes, sino la capacidad de la empresa de conectarse con sus consumidores, adelantándose a las necesidades, gustos y preferencias, en pocas palabras: Innovando.” (p. 115) y no solo de la empresa, sino que la serie de temas relacionados con el recurso humano busque capacitar y mejorar la calidad de trabajo y de vida de todos los miembros de la organización mediante la capacitación y consideración de la opinión del líder y de estas para la elaboración de los planes y estatutos que han de guiar a la empresa hacia el éxito en el mercado. La contribución más importante del presente estudio al campo de la administración en general y al campo de la competitividad en particular es su carácter holístico o sistémico y su metodología de comparación para el mejoramiento continuo.

La primer contribución tiene que ver con lo holístico del análisis que prácticamente incluyo todos los aspectos importantes de la organización de una agencia de publicidad. Aquí es importante señalar que se intento incluir el aspecto financiero de las organizaciones, pero por lo delicado que es en estos momentos de inseguridad, decidimos no llevarlo a cabo. La segunda contribución es más metodológica y tiene que ver con la comparación de la Agencia de publicidad Aurea con su “Benchmarking” que es la Agencia de Publicidad Emery, metodología que aunque no es del todo nueva en la literatura de las ciencias de la ingeniería, si es de uso reciente en las ciencias de la administración (Evans and Lindsay, 2008).

CARACTERIZACIÓN DE LOS TRABAJADORES DE LAS EMPRESAS MAQUILADORA LOCALIZADAS EN TEHUACÁN PUEBLA, MÉXICO

María Antonieta Monserrat Vera Muñoz, Benemérita: Universidad Autónoma de Puebla
Rafaela Martínez Méndez, Benemérita Universidad Autónoma de Puebla
Gerardo Serafín Vera Muñoz, Benemérita Universidad Autónoma de Puebla

RESUMEN

En este trabajo se presenta un análisis de las particularidades de los trabajadores que prestan sus servicios en las empresas maquiladoras de la confección de ropa, ubicadas en Tehuacán, Puebla. Para lo cual, se parte de la revisión de algunos autores que han realizado estudios acerca de las maquiladoras de la frontera norte de México. La muestra fue 383 trabajadores, se aplicó un cuestionario de 20 preguntas; es importante señalar que la investigación de campo se realizó en dos etapas; en la primera se aplicaron 183 cuestionarios y en la segunda se aplicaron 200 cuestionarios.

El objetivo de esta investigación es analizar las particularidades de los trabajadores que prestan sus servicios en las empresas maquiladora de la confección de ropa localizada en Tehuacán. La investigación da respuesta a la pregunta ¿Cuáles son las características de los trabajadores que prestan sus servicios en tales empresas?

PALABRAS CLAVE: Género, rotación de la mano de obra, condiciones laborales.

CARACTERIZATION OF ASSEMBLY PLANTS WORKERS LOCATED AT TEHUACAN AT THE STATE OF PUEBLA, MEXICO

ABSTRACT

In this paper an analysis is presented of the particularities of people who work at the assembly plants garment located at Tehuacan. In doing so, a revision is done by some authors who have done some research about the assembly plants in the northern Mexican border. The sample was 383 workers, a twenty question test was applied. It is important to point out that the field work was done in two stages: in the first one 183 questionnaires were applied, and in the second one 200. The main objective of this research is to analyze the particularities of workers who work at the assembly plants garment in that place. The research question is: What are the characteristics of those workers?

KEY WORDS: Genre, labor rotation, working conditions.

ESTUDIO DE MERCADO PARA LA CREACIÓN DEL CENTRO DE DESARROLLO TECNOLÓGICO - SECTOR DE AUTOPARTES PARA CARGA Y PASAJEROS DE BOYACÁ (COLOMBIA)

Mónica Bibiana González Calixto, UPTC

Yilber Manuel García Isaza, UPTC

RESUMEN

Colciencias define los Centros de Desarrollo Tecnológico como estructuras institucionales que impulsan la transferencia de conocimiento aplicado y tecnología a través de la innovación y el desarrollo y la prestación de servicios tecnológicos; su objetivo es incrementar la productividad y competitividad de las empresas. Así, Gobierno, Empresas y Universidades del Departamento de Boyacá, propusieron la creación de un Centro de Desarrollo Tecnológico (CDT), extendido a la industria del transporte terrestre y fabricación de autopartes para carga y pasajeros, con el fin de buscar solución a la problemática de la normalización tecnológica y a las necesidades de soporte técnico, capacitación, Información, Investigación, Innovación y Desarrollo en dichos sectores. La primera etapa para la creación del CDT, consistió en el estudio técnico, sin embargo, aunque los resultados obtenidos son necesarios, no son suficientes para ejecutar el proyecto, dado que no se cuenta con la información más importante para emprender cualquier empresa, aquella que brinda el cliente. En este sentido, es necesario hacer un estudio de mercado para determinar las necesidades reales de las empresas del sector, sus preferencias y capacidades de adquisición de servicios del CDT; aspectos relacionados con la oferta, la proyección de las ventas, los servicios, su precio, promoción y su distribución. Este avance presenta la información relevante obtenida en la primera etapa, que se constituye en base para la realización del estudio de mercado, así como el estado del arte y las bases teóricas para su desarrollo.

PALABRAS CLAVE: Mercado, oferta, demanda, precio, distribución, servicios, ventas.

ABSTRACT

Colciencias defines the technological development centers and institutional structures that promote the transfer of applied knowledge and technology through innovation and development and technological services and aims at increasing productivity and competitiveness of enterprises. Thus, Government, Companies and Universities of the Department of Boyacá, proposed the creation of a Technology Development Center (TDC), extended to the trucking industry and manufacture of auto parts for freight and passengers, in order to seek solutions to the problems technological standardization and the needs of technical support, training, Information and Research, Innovation and Development in these sectors. The first step in the creation of TDC, was in the technical study, however, although the results are necessary, not sufficient to implement the project, since there is not the most important for any business undertaking, one that provided by the customer. In this sense, it is necessary to do a market study to determine the real needs of companies, their preferences and capabilities of the TDC acquisition of services, issues related to the offer, the projection of sales, services, price, promotion and distribution. This development presents the relevant information obtained in the first stage, which constitutes the basis for the study of market and state of the art and the theoretical basis for its development.

EMPRENDIMIENTO INCLUSIVO DENTRO DE LA PROYECCIÓN SOCIAL UNIVERSITARIA: EL CASO DE LA UNIVERSIDAD DEL TOLIMA, COLOMBIA

Juan Fernando Reinoso Lastra, Universidad del Tolima, Colombia

Mario Enrique Uribe Macías, Universidad del Tolima, Colombia

RESÚMEN

Si el desarrollo de un país está directamente relacionado con el emprendimiento por oportunidad (informe GEM), siendo aquel que surge como resultado de un trabajo de formación y estudio en la persona, con la mayor probabilidad de crear empresas sostenibles, es necesaria, una acción universitaria más incluyente con entornos próximos que presentan un alto grado de emprendimiento por necesidad, lo cual, los hace altamente vulnerables a nuevas condiciones del contexto. Aunque el emprendimiento empresarial surge como una alternativa del gobierno para generar crecimiento sostenible (Plan Nacional de desarrollo, 2010) al cual se le dedican recursos y atención para acelerar el desarrollo nacional, de manera generalizada, en Colombia, no existen políticas o acciones educativas universitarias dirigidas a grupos sociales externos a las Universidades, los cuales representan una mayoría de la población (sector informal 50,8% para el trimestre móvil marzo - mayo de 2011, según el Dane). Siendo que la mayoría de universidades e instituciones de educación superior colombianas tienen unidades de emprendimiento para motivar el emprendimiento por oportunidad en sus estudiantes, su proyección social, es fundamental para realizar la misma acción en comunidades donde el emprendimiento por necesidad no permite un mejor nivel de vida.

PALABRAS CLAVE: emprendimiento por oportunidad, emprendimiento por necesidad, proyección social.

INCLUSIVE ENTREPRENEURSHIP IN SOCIAL PROJECTION OF THE UNIVERSITIES: THE CASE OF THE UNIVERSITY OF TOLIMA, COLOMBIA

ABSTRACT

If the development of a country is directly related to opportunity entrepreneurship (GEM report), that arises out of a training and formation of the person, being most likely to create sustainable enterprises, it is necessary, an university action more inclusive in environments that have a high degree of entrepreneurship by necessity, which makes them highly vulnerable to changing conditions on the context.

Although entrepreneurship is emerging as an alternative government to generate sustainable growth (National Development Plan of Colombia, 2010) to which it devote attention and resources to accelerate national development, in Colombia, there are no university educational policies or actions aimed at social groups outside the universities, which represent a majority of the population (informal sector is the 50.8% for the quarter March to May 2011, according to Dane). Since most Colombian universities have entrepreneurship units motivating opportunity entrepreneurship in their students, their social projection is essential to perform the same action in communities where entrepreneurship by necessity does not permit a higher level of life.

EFFECTO DEL CONOCIMIENTO CULTURAL EN LA PERCEPCIÓN DE LOS AUDITORES: CONTROLES INTERNOS Y FRAUDE

Carmen Ríos Figueroa, Universidad de Puerto Rico

RESUMEN

La globalización ha eliminado barreras comerciales entre los países. Sin embargo, la diversidad de culturas ha surgido como un reto para los que administran o trabajan en empresas multinacionales que están localizadas en diferentes países. Dada la situación expuesta, esta investigación examina cómo el conocimiento cultural del país en el que está localizada una empresa afecta la percepción de los auditores en un ambiente de planificación de una auditoría (controles internos y la posibilidad de riesgo de fraude). El análisis de esta investigación utiliza dos de las dimensiones de Hofstede (1980, 2001) para predecir los efectos de las diferencias culturales: distancia de poder y visión a largo plazo. Los resultados del análisis de contenido y del análisis estadístico utilizado (Análisis binomial con una prueba Z) demostraron que el conocimiento cultural de un país puede influir en la percepción de los auditores sobre la confiabilidad de los controles internos y la posibilidad de fraude cuando planifican una auditoría.

PALABRAS CLAVES: Cultura, control interno, fraude, auditor visitante, distancia de poder, visión a largo plazo

EFFECTIVIDAD DE LOS PROGRAMAS DE FOMENTO A LAS EXPORTACIONES DE LAS EMPRESAS DEL ESTADO DE COLIMA QUE PARTICIPAN EN EL MERCADO EXPORTADOR

Manuel Rubio Maldonado, Universidad de Colima
Aurelio Deniz Guizar, Universidad de Colima
Hugo Cesar Asunción de Jesús Guzmán, Universidad de Colima

RESUMEN

Actualmente la apertura comercial hacia nuevos nichos de mercado y la demanda de productos mexicanos, han hecho que las empresas vivan inmersas en el escenario de la globalización, por tal motivo el gobierno federal ha implementado programas de fomento a las exportaciones para apoyar a las empresas en su proceso de comercialización de sus productos en el mercado internacional, para lograr el posicionamiento de sus productos. Estos programas que se emiten por medio de la Secretaría de Economía se ven envueltos en un sinfín de trabas administrativas y en la funcionalidad de la información. Por lo que en base a esta investigación de campo se determinaron las principales ventajas y desventajas basado en la implementación de estos programas. Se identificó la estructura interna y con ello los más utilizados son IMMEX; ALTEX Y PROSEC, así como las razones por las que no son utilizados por la falta de información y la excesiva tramitación y en función a ello se comprobó su efectividad en el sector exportador. El objetivo de la investigación es analizar la efectividad de los programas de fomento a las exportaciones de las empresas del estado de Colima que participan en el mercado exportador durante el periodo 2006-2010.

PALABRAS CLAVE: Programas de fomento, empresas exportadora, mercado internacional.

EFFECTIVENESS OF PROGRAMS TO PROMOTE EXPORTS OF STATE FIRMS PARTICIPATING IN COLIMA EXPORT MARKET

ABSTRACT

Currently trade openness to new niche markets and demand for Mexican products that companies have to live immersed in the scenario of globalization, for that reason the federal government has implemented programs to promote exports to support enterprises in the process of marketing their products in the international market, to achieve the positioning of their products. These programs are issued by the Ministry of Economy are caught up in endless red tape and functionality of the information. So based on this field research identified the main advantages and disadvantages based on the implementation of these programs. It identified the internal structure and thus the most used are IMMEX; ALTEX and PROSEC and the reasons are not used by the lack of information and excessive processing and function it seemed to work in the export sector. The objective of this research is to analyze the effectiveness of programs to promote exports of firms in the state of Colima involved in the export market during the period 2006-2010.

KEYWORDS: Development programs, Export firms, International market

INTRODUCCIÓN

El sector exportador en Colima ha enfrentado transformaciones profundas durante las dos últimas décadas, el continuo proceso de urbanización, las tendencias del mercado mundial han influido de manera decisiva en la estructura del sector exportador. La producción adquiere un carácter mucho más comercial donde la competencia impone estándares de calidad y servicio, obligando a las unidades productoras a una continua modernización en sus procesos productivos, así como a la diversificación de productos y nichos de mercado. Se considera que existe una gran importancia en su utilización para el desarrollo económico de las empresas, su posicionamiento a nivel internacional, ya que depende de la cantidad de exportaciones que realice para que llegue a tener un renombre respecto a otras empresas, y no solo eso, sino también de ello depende la estabilidad económica del Estado de Colima. Mediante esta investigación se busca tener un amplio conocimiento de los diversos programas de apoyo existentes así como las generalidades de cada uno y a qué sector va dirigido. También se pretende que la información recabada pueda lograr mayor interés en las empresas que no han utilizado los programas de apoyo a las exportaciones y se fomente su utilización. Se considera que esta información es de gran importancia porque en la actualidad las empresas buscan ser más competitivas, y estos programas pueden servir como herramienta básica para que logren sus objetivos. Al realizar esta investigación se espera encontrar la realidad de lo que son los programas de apoyo a las exportaciones.

Al mismo tiempo se espera conocer cuál es la situación real de dichos programas en el ámbito de las empresas exportadoras, así como saber si los productores que anteriormente han utilizado estos apoyos están conformes con los resultados que han obtenido de ellos y en base a esto saber si están dispuestos a seguir utilizándolos. “En la actualidad los programas de fomento a las exportaciones (*IMMEX; ALTEX Y PROSEC*) están orientados a promover la productividad y la calidad de los procesos que elevan la competitividad de las empresas y permiten su incorporación adecuada al mercado mundial. Lo anterior, con base en la reducción de cargas arancelarias para los insumos, partes y componentes que se incorporarán en el producto de exportación y la simplificación de trámites administrativos por parte del Gobierno Federal (SE, 2011).” Los programas se encuentran dirigidos a todas aquellas empresas que poseen experiencia exportadora o que presenten potencialidad para exportar y que estén interesadas en optimizar su proceso exportador, mediante la mejora de sus procesos internos y la formación en Comercio Exterior. “Su objetivo es promover la sociedad empresarial para impulsar el desarrollo competitivo de las Pymes con miras a mejorar la inserción de éstas en los mercados del mundo (SE, 2011).” Hoy en día estos programas sirven para mitigar los efectos de la crisis financiera global, que ha propiciado una reducción en las ventas de la mayoría de las empresas y que causó perjuicios a los productores.

Objetivo general: analizar la efectividad de los programas de fomento a las exportaciones de las empresas del estado de Colima que participan en el mercado exportador durante el periodo 2006-2010, con el propósito de aportar elementos que contribuyan a fortalecer las mejoras prácticas institucionales en la materia.

Hipótesis de investigación: La efectividad de los programas de fomento a las exportaciones les genera una ventaja competitiva con la frecuencia y utilización de estos, por lo tanto la falta de información y excesiva tramitología impide el acceso a sus beneficios de estos, al total de empresas exportadoras del estado de Colima.

REVISION LITERARIA

Desde hace dos décadas las pequeñas empresas exportadoras del Estado de Colima se encuentran en un proceso de apertura creciente al mercado exportador. Es de recordar que en México la PYMES representan un 97% y ocupan más del 50% de la población económicamente activa, y generan una cuarta parte del Producto Interno Bruto (Morales. 2006, p21). La falta de capacitación, innovación tecnológica,

financiamiento, entre otros aspectos, ha generado que estas empresas enfrenten múltiples obstáculos para participar competitivamente en los mercados internos y externos (Montero & Muñoz 2007).

. Para lograr incursionar y mantenerse en las esferas de la economía global, estas Firmas deben considerar la productividad y la competitividad como parte de sus objetivos estratégicos (Charruca, E. J. Barrutia & J. Landeta 1995). La productividad es el empleo eficiente de los recursos técnicos, materiales y humanos para producir bienes y servicios de calidad (Sánchez, 2008), representando la relación entre cantidad y calidad del producto o servicio. La calidad es la ausencia de deficiencias y constituye el cúmulo de características que satisfacen al cliente (Juran, 1990). El sector exportador representa un factor económico muy importante tanto para los colimenses como para el país. Por lo tanto para obtener un mejor desarrollo y crecimiento económico a través del sector exportador es importante resaltar las ventajas competitivas con las que cuenta el estado de Colima (Porter, 2004), cuenta: con variedad de productos agroindustriales, la cercanía a uno de los puertos más importantes del país y los apoyos gubernamentales a la exportación necesarios; sin embargo, en los últimos años, no sólo su potencialidad productiva ha venido en decremento, sino también su capacidad para mejorar el bienestar de calidad de vida de los trabajadores. Así, en esta investigación se considera importante llevar a cabo el análisis de los programas de apoyo al sector exportador Colimense que limitan o impulsan la participación de éste en el mercado internacional y determinar su efectividad para identificar los programas de mayor impacto y cuáles no se utilizan y porque qué razón. Los programas de fomento a las exportaciones exigen a las empresas altos estándares de calidad y productividad, pero estos factores no deben ser su camino al éxito en el mercado de exportación, sino no, deben a su vez buscar ser competitivas, produciendo y mercadeando sus productos en mejores condiciones de precio, calidad y oportunidad que sus rivales (Porter, 2004).

Además las empresas colimenses que compiten en este sector deben tener la capacidad de ofrecer productos o servicios que reúnan las condiciones que demanda el mercado doméstico y el extranjero, sin embargo, nada de lo anterior se puede conseguir si quienes dirigen estas organizaciones no ejercen un auténtico liderazgo (Saavedra S.F). Estos programas son de gran utilidad puesto que brindan una oportunidad a los productores mexicanos, para que estos realicen sus exportaciones con ayuda gubernamental y bajo el amparo del gobierno mexicano.

De acuerdo a Sanchez (2009) “Dichos programas incentivan a los productores para que se decidan a ofertar y comercializar sus productos en el extranjero y con ello eleven su competitividad tanto nacional como internacional. Los programas de fomento a las exportaciones también sirven para reducir el impacto en los costos de operación de las empresas. “En la actualidad los programas de apoyo para las exportaciones no son tan aprovechados o utilizados como es debido, pero esto no significa que no estén funcionando, ya que hay muchas empresas que sí hacen uso de ellos y han conseguido exportar no solo a un país sino a varios y con ello han logrado romper barreras comerciales, y al mismo tiempo han aumentado la competitividad internacional del país (Zurita, 2004).. Dentro de la utilización de los programas de fomento para las exportaciones de productos Mexicanos se derivan dos principales vertientes tanto las posibilidades de crecimiento y prosperidad que representan para las empresas y la falta de administración y demostración de inconsistencia por parte del Gobierno Federal para mejorar las oportunidades tanto fiscales, administrativas o de producción que brinda cada programa y del mismo modo aumentar la utilización de estos por parte de las nuevas Empresas emergentes. Aunque existe la posibilidad y mentalidad de lograr un desarrollo económico a nivel mundial por parte de las Empresas Mexicanas en base a los programas de apoyo o sin ellos, debemos estar consientes de todo lo que influye en la economía que afecta el entorno de desarrollo de las empresa y por ende del País. (Dolan, L. Simon & Soto e. 2003). “En primer lugar la dificultad de penetrar en los mercados internacionales, tanto por las condiciones difíciles de éstos, como por la casi inexistente tradición exportadora industrial del país. En segundo lugar, la falta de una promoción empresarial adecuada que imposibilita el acceso a mercados en donde existe demanda de los productos mexicanos; esta promoción no se hace, en parte por el hábito de concurrir al mercado norteamericano. En tercer lugar, el hecho de que muchas de las exportaciones no

sean manejadas por productores mexicanos, sino por empresas extranjeras, principalmente norteamericanas, que limita las posibilidades de modificar el destino final de las ventas y causa, entre otras, el fuerte volumen que observa el comercio indirecto (Secretaría de Economía, 2011).”

Así los programas de fomento a las exportaciones tratan de minimizar y reconocen que existen fallas en los mercados que dificultan a estas empresas la consecución de sus objetivos de mejora empresarial, entendidas éstas como “... aquellas situaciones en donde el libre mercado por sí sólo no tiene como resultado una situación óptima y eficiente para la sociedad. En estos casos, el gobierno, a través de impuestos, transferencias o regulaciones, puede contribuir a reducir o eliminar dichas fallas” (USAID-Fundación IDEA, 2009). En este sentido, los programas gubernamentales de fomento a las exportaciones deben enfocarse en dos objetivos fundamentales: Minimizar las fallas de mercado que obstaculizan su desarrollo, y proveer un beneficio económico a las empresas; resultando que los programas se financian con recursos de los contribuyentes, y buscan incidir en el desarrollo económico y social del país (USAID-Fundación IDEA, 2009).

METODOLOGÍA

En la última década del siglo pasado y en la década reciente de este siglo en donde la participación de México en el sector exportador ha sido productiva y ha impulsada con varios programas de fomento se han desarrollado diversas formas y criterios para evaluar el cumplimiento de los programas gubernamentales dependiendo de los objetivos específicos de la evaluación y de los investigadores e instituciones involucradas. Haciendo hincapié que en el 2007 se publicaron en México los *Lineamientos Generales para la Evaluación de los Programas Federales de la Administración Pública Federal* (Diario Oficial de la Federación, 30 de marzo del 2009), los cuales son obligatorios para las dependencias y entidades de la Administración Pública responsables de los programas federales.

La presente investigación se enmarca en la búsqueda y acopio de datos de fuentes primarias ya que se obtuvo a través de investigaciones específicas, principalmente por el instrumento de encuestas y la entrevista, además se utilizó la fuente secundaria consultando a las oficinas de fomento económico de los gobiernos municipales y a la delegación de la Secretaría de Economía del estado de Colima, publicaciones oficiales de la Secretaría de Economía, del portal de Promexico, etc. Para procesar la información se utilizaron métodos cuantitativos de los resultados obtenidos de las encuestas.

Se analizaron bajo métodos estadísticos y hechos observables con la finalidad de controlar las variables y medir los resultados. De acuerdo a la SE, (2010). De un total de 70 empresas del sector exportador solo 20 tienen programas de fomento a la exportación como son ALTEX, PROSEC E IMMEX, a las que se les aplicó la investigación. Este trabajo se auxiliará del método deductivo, ya que parte de lo general a lo particular que se aplica a la realidad de la actividad exportadora de las empresas colimenses (Hernández s. r. & Fernández c. c. 2006).

Técnicas a utilizar en la investigación: Visitas domiciliadas a las empresas seleccionadas del padrón de la Secretaría de Economía, aplicando la encuesta y observación directa al empresario de la situación que guarda su apoyo a la exportación de su empresa

Valor metodológico: basada en el “Manual de las buenas prácticas para programas de apoyo a pequeñas y medianas empresas (USAID-fundación IDEA, 2009). Se determinaron 4 factores que engloban las principales características de la utilización de los programas de fomento a las exportaciones de las empresas exportadoras del estado de Colima durante el período de 2006-2010, que se describen a continuación:

- En la investigación de campo se pretende dar respuesta al primer factor sobre la ventaja económica de contar con estos apoyos.

- El segundo factor se aplica sobre la falta de información y conocimiento de estos.
- El tercero responde a la frecuencia con que se solicitan.
- Así, el cuarto factor analiza que tanta tramitación hay que cubrir para acceder a estos programas y debido a la excesiva burocracia esto afecte el por qué pocas empresas los utilicen.

Valor práctico: Se enfoca principalmente a la utilización y opinión de las empresas que les dan uso en función de los cuatro factores antes mencionados, para que dejen el antecedente para que en una futura investigación proponer estrategias para su mejora continua.

Fortaleza de infraestructura colimense: A nivel internacional, la ubicación geográfica del Estado, sus condiciones climatológicas y el contar con el puerto más importante del pacífico mexicano representan ventajas estratégicas para las empresas exportadoras. “El puerto de Manzanillo es un puerto de transbordo –puerto Hub- ideal para los países de Centro y Sudamérica, así como para la costa oeste de los Estados Unidos de Norteamérica y Canadá(Gobierno del estado libre y soberano de Colima. 2008).” cuenta con un recinto portuario de 437 hectáreas en total, dividido en dos polígonos, que comprende zona de agua, más de 5,000 metros de muelles en 30 posiciones de atraque; 2.6 hectáreas de zonas de almacenamiento techado; 43 hectáreas de patios de usos múltiples; con terminal de hidrocarburos, pesquera y turística, así como un moderno centro de emergencias. Para el desalojo adecuado y seguro de las mercancías se encuentra equipado con 17.1 kilómetros de vías férreas con servicio de tren de doble estiba y 6.2 kilómetros de vialidades. El movimiento interno de cargas se realiza a través de quince terminales e instalaciones especializadas, las cuales son operadas por inversionistas nacionales y extranjeros con recursos tecnológicos de punta. La capacidad dinámica de carga del puerto es de 18.2 millones de toneladas para el manejo y almacenamiento de diversos productos, en 2006 registró un movimiento anual de 1’249,000 Teu’s. Para los próximos años se espera un crecimiento exponencial a un ritmo anual superior a 17%.

Ventajas Competitivas Del Puerto

- “Ubicación geográfica estratégica que le facilita desplazar mercancías a los principales centros comerciales e industriales de la zona Occidente, del Bajío y Centro de México.
- Cercanía con los países situados en la región de la Cuenca del Pacífico que promueve el desarrollo de un servicio marítimo frecuente entre México y Asia.
- Apoyo a los puertos estadounidenses de Los Ángeles y Long Beach, que presentan problemas logísticos por congestión.
- Más de 130 hectáreas de superficie de reserva para el desarrollo de nuevas instalaciones y terminales en la zona norte (proyecto en desarrollo fecha estimada de terminación 2015) (API 2011).
- Autopistas y red ferroviaria en condiciones excelentes que conectan directamente con importantes puntos nacionales e internacionales simplificando la instauración de corredores terrestres y hermanamientos con puertos interiores.
- Servicio de ferrocarril de doble estiba en ruta fija, único en México, brindando mayor seguridad en el transporte de carga contenerizada.

- Aduana y recintos fiscales modernos que contribuyen a la fluida circulación de la mercancía que ingresa al puerto.
- Condiciones climáticas favorables para la navegación que le permiten operar las 24 horas del día los 365 días del año.
- Apertura e incentivos por parte del Gobierno del Estado de Colima para la inversión nacional y extranjera.
- Tecnología de punta en sus instalaciones y terminales que erigen al puerto por quinto año consecutivo como el líder nacional en manejo de carga.
- En la entidad operan dos centrales termoeléctricas con una capacidad efectiva de generación de 1,900 Mw., las cuales producen el 70 por ciento del total de energía generada por la división occidente.
- La red eléctrica estatal tiene una longitud de 6,337 Km. La red de alta tensión en 115 KV y 69 KV en el Estado tiene una longitud de 702 Km. La red que corresponde a las líneas de mediana tensión en 34.5 KV, 23 KV y 13.8 KV mide 3,696 Km. y las líneas de baja tensión tienen una longitud de 1,939 Km.(API, 2010).

Proyectos En Desarrollo

“Actualmente en Colima se están invirtiendo grandes capitales en el desarrollo de importantes proyectos en el sector energético para almacenamiento y transporte de gas LP y gas natural así como en la generación de energía eléctrica, que beneficiarán a más de 10 estados de la región centro-occidente e impulsarán la competitividad para el desarrollo del país. Desarrollo del segundo puerto denominado Cuyutlán con el doble de capacidad de la antes mencionada.(Gobierno del estado de Colima, 2010)

RESULTADOS

Factor 1: La Ventaja Económica De Contar Con Estos Apoyos.

La utilización de estos programas es fundamental cuando se inicia en un sector tan agresivo como es el exportador, por lo que se determinó que el 25% de las empresas encuestadas creen que al utilizar un programa de apoyo obtienen un incremento en su competitividad y por ende se puede deducir que existe un buen funcionamiento de dichos programas, puesto que el 50% de las empresas encuestadas si utilizan un programa de apoyo para realizar sus exportaciones. Utilizados proporcionalmente de acuerdo al giro de las empresas y la principal área de trabajo, el 74% se dedican a la comercialización de productos, el 16% se dedican a la transformación de estos y solo el 10% se dedican a los servicios.

Factor 2. Falta De Información Y Conocimiento De Estos.

La disponibilidad de información clara y oportuna sobre los programas disponibles y los requisitos para acceder a los mismos, representa un servicio necesario para contribuir a su promoción y difusión; se trata de un tema relevante el que se corroboró con los resultados obtenidos al observar que el 50% de las empresas encuestadas consideran que la principal razón por la cual no se utilizan los programas de fomento, es que existe falta de información entorno a los esquemas, procesos, registros, regularizaciones y requisitos que integran el proceso de acreditación ante la Secretaría de Economía para que una empresa

pueda tener dichos programas, el 30% considera que la principal razón es que no cuentan con el tiempo suficiente para solicitar los apoyos y el 20% de las empresas considera poco atractivo solicitar dichos apoyos. Aunado a esto, la falta de seguimiento por parte de la entidad encargada de la administración de los programas para conocer la magnitud de la aportación que el programa genere a la empresa, para así poder realizar actualizaciones, modificar requisitos o dar de baja ciertos programas por falta de funcionalidad hacia la empresa y su objetivo de exportación. En este contexto el 100% de las empresas consideran que la promoción que el gobierno implementa para dar a conocer los programas no es la suficiente.

Factor 3. Uso De Los Programas.

Aun cuando la incursión de las empresas del Estado de Colima en el comercio exterior no han logrado los resultados deseados, su actividad en el mercado internacional va en aumento, esto se corroboró con la investigación de campo con la que se determinó que el 70% de las empresas al utilizar los programas de apoyo si han podido ingresar y posicionarse en el sector exportador y por ende esto refleja un crecimiento en la economía del estado. Esto se constató con información de la SE, (2010) en donde el total de las PYMES exportadoras pasó del 1.6 en 2006 al 14% en 2010. Así mismo, se identificó que sus principales limitaciones internas y externas para exportar son: Falta de crédito preferencial, altos costos de fletes, insuficiente capacidad productiva y valor agregado diferenciado (Observatorio PYME 2010).

Así mismo se determinaron los motivos por los cuales las empresas están interesadas en solicitar un programa de apoyo a las exportaciones, al 39% les interesa obtener un programa de apoyo para aprovechar los beneficios fiscales, al 30% por que se pueden realizar exportaciones con mayor facilidad, al 25% para incrementar la productividad de la empresa, el 3% para aprovechar la oportunidad que el gobierno brinda y al 3% por la recomendación de otro productor o empresa que aplicó un programa. De igual forma se determinó la utilización de los programas de fomento a las exportaciones: el programa IMMEX con un 61%, seguido del ALTEX con un 31%, el PROSEC con un 8% y el programa que no se utiliza es el ECEX.

Factor 4. Tramitación.

Las aportaciones que se pudieron detectar por parte emanadas de los empresarios encuestados fue en razón de la información que el gobierno debería implementar para publicitar los programas de apoyo adecuadamente y que mejoras se pudieran aplicar; el 15% comenta que a la administración de los programas les hace falta una reestructuración del proceso de trámites y servicios que ofrece el gobierno, 30% comentaba que la falta de atención que el gobierno muestra hacia los programas y hacia la economía de las empresas es un problema cada día más grande, lo cual debería ser al contrario, la atención debe de ser personalizada y la información proporcionada debe ir en base al giro de la empresa. Otro 30% de los empresario comentaban que la gran falta de información oportuna y precisa era el punto clave para el desperdicio de los programas, ya que no se conocían las principales aportaciones que ofrecen para las empresas y por último con un 25% la falta de veracidad y precisión en los tramites da como resultado el bajo índice de obtención de los programas.

CONCLUSIÓN

El principal objetivo de esta investigación fue determinar a través de una investigación de campo, la efectividad de los programas de fomento a las exportaciones por las pequeñas y medianas empresas del Estado de Colima en el periodo 2006-2010. Los programas de fomento para las exportaciones consisten

en una serie de beneficios fiscales y administrativos que otorga el gobierno federal para las empresas mexicanas. En este sentido se comprobó que los utilizados por las empresas del Estado de Colima son: PROSEC, IMMEX Y ALTEX mismos que tienen la finalidad de aumentar la productividad y competitividad de las Pymes. Ahora bien, haciendo hincapié a la función del Gobierno Federal, no solo es otorgar los programas de fomento, sino que debe poner más empeño en darlos a conocer para que cada día sean más las empresas que recurran a ellos, y a la vez que disminuyan la excesiva tramitación y el tiempo de respuesta, ya que eso ha resultado un factor determinante para que sólo 20 de las 70 empresas que exportan acudan a la instancia respectiva para que implementen estos programas de fomento. Con lo anterior no quiere decir que los programas de apoyo sean malos, en lo absoluto, resultan de gran utilidad cuando son utilizados debidamente, efecto que no se da en todos los casos. Se puede decir que resultan ser un arma de doble filo, ya que, en la mayoría de los casos aportan facilidades a los productores y exportadores, pero también otras veces resultan ser factor para que estos se confíen y se estanquen sin buscar resultados más allá de tales programas. Como se pudo observar, en esta investigación de campo se corrobora la hipótesis planteada en la que se analizó la efectividad de los programas de fomento a las exportaciones al generar una ventaja competitiva al utilizarlos con frecuencia. Asimismo, la falta de información y excesiva tramitación impide que 50 de las 70 empresas no participen de los beneficios que brindan estos programas.

ADMINISTRACION ESTRATEGICA Y LA POSICION FINANCIERA EN CONSTRUCTORAS FAMILIARES DE CAMPECHE, MEXICO

Román Alberto Quijano García, Universidad Autónoma de Campeche
Deneb Elí Magaña Medina, Universidad Juárez Autónoma de Tabasco
Luis Alfredo Argüelles Ma, Universidad Autónoma de Campeche

RESUMEN

Actualmente en la ciudad de Campeche, México se genera un desarrollo económico que exige a sus empresas familiares formular planes estratégicos independientemente del sector al que pertenezcan para concretar sus objetivos a largo plazo e integrarse a un mundo empresarial en constante evolución. Este estudio es de tipo descriptivo porque se mide o recoge información sobre las variables que participan en el problema sujeto a estudio como nivel de conocimiento de la administración estratégica, y sus posibles ventajas; así como los indicadores que integran la posición financiera; el diseño es no experimental transversal ya que se recolectaron datos en un solo momento en su contexto natural, mediante entrevistas a los socios fundadores. El objetivo fundamental de esta investigación es evaluar la percepción del socio fundador respecto a la administración estratégica y su incidencia en la posición financiera de las organizaciones; los resultados señalan el escaso conocimiento de los administradores respecto a la misma como herramienta para el diseño de estrategias de posicionamiento y permanencia en el mercado, lo que se refleja en la situación financiera de las empresas, pues aquellas que han destacado lo han logrado gracias al empirismo y la capacidad individual del socio fundador.

PALABRAS CLAVE: Administración estratégica, Análisis financiero, Planeación

STRATEGIC MANAGEMENT AND FINANCIAL POSITION IN FAMILY BUILDING COMPANIES IN CAMPECHE, MEXICO

ABSTRACT

Nowadays in Campeche city, Mexico is generated an economic development that requires to its familiar businesses to formulate strategic plans independently of the sector they belong to realize their long-term objectives and integrate to a business world in constant evolution. This study is descriptive-type because it measures or recollect information about the variables involved in the problem studied as the level of knowledge of strategic management and its possible advantages as well as the indicators that integrate the financial position; the design is non-experimental transversal because the data was collected in one single moment in its natural context, through interviews with the founders. The main objective of this study is to evaluate the perception of the founder partner about strategic management and its incidence on the financial position of the businesses; the result show little knowledge of the managers about the same as a tool for designing of positioning strategies and permanence in the market, what it is showed in the financial position of the businesses, the ones that have been highlighted was due to empiricism and individual capacity of the founder partner.

INTRODUCCIÓN

Antecedentes

Las empresas familiares emergen de la iniciativa del socio fundador y conforme la empresa crece y la familia también, se va complicando su rumbo, su establecimiento y su permanencia (Chua, Chrisman y Chang 2004). Por un lado la empresa familiar es un campo de unión donde armonizan las preferencias de los integrantes, se reconoce a una autoridad y la confianza ha de ser mutua; en contrasentido puede ser un marco de desunión familiar, ya que una sola persona impone su voluntad, los intereses personales frenan el objetivo principal de la empresa, los enfrentamientos familiares se canalizan al ámbito profesional pudiendo generarse un desorden destructivo con resistencia al cambio (Alvarez, 2002).

Planteamiento del Problema

En el sector construcción, participan empresas familiares que manejan grandes cantidades de recursos económicos, humanos y tecnológicos sin embargo nacen, se desarrollan y desaparecen junto con la energía productiva del socio fundador y no logran, en la mayoría de las ocasiones, alcanzar sus objetivos inicialmente diseñados para el largo plazo (Horcasitas, 2001). La industria de la construcción es considerada prioritaria para la economía de los países, y su permanencia y desarrollo es primordial para los gobiernos ya que a través de esta actividad se provee de ingresos a la población económica más vulnerable mediante la generación de empleos. En el caso del estado de Campeche (a la cual pertenece la población objeto de estudio), se ocupó a 9,247 personas al mes de mayo de 2008 según la información emitida por el Instituto Nacional de Estadística, Geografía e Informática INEGI (2009) que aunque forman parte de la población económicamente activa, no cuentan con estudios suficientes para poder desempeñarse en otras actividades, lo que justifica la permanencia y crecimiento del sector para la estabilidad social de la entidad.

Objetivos de la Investigación

Todo líder de empresa familiar desea crear su empresa, verla crecer, desarrollarse en forma sostenida, permanecer en el mercado y, lo más importante, alcanzar su trascendencia generacional. El presente estudio pretende alcanzar los siguientes objetivos:

- a. Evaluar la percepción y nivel de conocimientos de los socios fundadores de las constructoras familiares de la ciudad de Campeche respecto a la administración estratégica.
- b. Determinar la posición financiera de las constructoras familiares de la ciudad de Campeche.
- c. Identificar cómo incide la administración estratégica en la posición financiera de las constructoras familiares de la ciudad de Campeche.

REVISION DE LITERATURA

En el presente estudio se analizó el concepto de administración estratégica y los elementos que influyen para su implementación o rechazo y la situación económica del sector construcción como parte de la problemática actual para que las constructoras familiares alcancen sus objetivos de largo plazo.

Importancia Del Sector Construcción En La Población De Estudio

Las empresas familiares están presentes en todas las actividades económicas como es el caso del sector construcción, que es de los más complejos y uno de los principales indicadores de la economía mexicana. Este sector aún cuando es un indicador de la economía nacional, no contribuye de manera sustancial al

PIB del país pues al cierre del ejercicio 2008 su aportación fue de 7.0%, menor comparado con la aportación de otros sectores como el manufacturero (18.6%), o el comercial (14.9%) que también integran la planta productiva. Sin embargo es uno de los mayores generadores de empleo directo en los estratos sociales más necesitados, ocupando al 8.1% de la población económicamente activa (PEA) al cierre de 2008 ubicándose por debajo del sector comercio que empleó al 19.7%, el manufacturero que contribuye con el 15.5% y el sector primario que ocupa al 13.6% según datos de la Encuesta Nacional de Ocupación y Empleo (ENOE) elaborada por el INEGI (2009).

Cabe destacar que la mayor parte de los recursos de este sector provienen de las partidas que el gobierno destina del presupuesto anual de egresos para obras de beneficio social; y ha destinado recursos para apoyar el desarrollo de este sector a través de los programas Cadenas Productivas y Financiamiento a Obra Pública vía NAFIN, o el programa Crediconstructor con la participación de la Secretaría de Economía, el Consejo Mexicano de Uniones de Crédito y el Centro para el Desarrollo de la Competitividad Empresarial, quienes diseñaron un plan piloto de crédito en cuenta corriente o avío para eventualidades de tesorería destinado a la pequeña y mediana empresa constructora. (Cámara Mexicana de la Industria de la Construcción, 2008).

La industria de la construcción ha experimentado cambios estructurales junto con la decisión del gobierno de firmar el Tratado de Libre Comercio con los Estados Unidos y Canadá, lo que impuso nuevos retos y oportunidades a las que se debería ir adecuando de una manera gradual pero constante, hasta llegar a niveles de competitividad internacionales. Las fortalezas del sector en términos de competitividad son su conocimiento del sector público y sus prácticas administrativas, experiencia en el mercado laboral, trato con sindicatos y sus relaciones con proveedores de materiales e insumos. Sus debilidades estructurales que sólo se resuelven a mediano y largo plazo son: Alto costo del financiamiento y sus restricciones, carga fiscal, tecnología obsoleta, falta de materiales estandarizados y a gran escala, lo que se refleja en los bajos niveles de productividad alcanzados por esta industria.

El gobierno federal actual, ha diseñado el Programa Nacional de Infraestructura 2007-2012 que establece los objetivos, estrategias, metas y acciones para aumentar la cobertura, calidad y competitividad de la infraestructura del país (Secretaría de la Presidencia de la República del Gobierno de México, 2007).

Se pretende una inversión estimada consolidada durante los 6 años de 2,532 mil millones de pesos con un promedio de 422 mil millones de pesos anualmente y considera los sectores de comunicaciones, transportes, agua y energía. Según el Plan Nacional de Infraestructura una de sus metas es que para el año 2030, México se ubique en el 20% de los países mejor evaluados de acuerdo con el índice de competitividad que elabora el Foro Económico Mundial.

En el caso del Estado de Campeche, el Plan Estatal de Desarrollo 2003-2009 representa los criterios técnicos y los propósitos institucionales del gobierno estatal y sostiene haber sido formulado con la participación de las instituciones públicas y de la sociedad civil. (Gobierno del Estado de Campeche, 2004) Acelerar, ir al paso o frenar son los retos a que se enfrenta la política económica y no existen recetas mágicas que permitan mantener el crecimiento de una economía sin que se tengan que aplicar ajustes a la misma, ya que el país no es un ente independiente e individual y la misma globalización y sus efectos internacionales lo afectan o benefician de manera simultánea como a todos los países (Parkin 2000). Se prevé que los próximos años sean austeros, se tiene un grave problema estructural de falta de fondos públicos (los ingresos tributarios del gobierno representan el 10% del PIB) sin que se vaticine la multicitada Reforma estructural y con deficiencias en el pago y gestión de impuestos y por supuesto de administración eficiente y honesta de los recursos. Sin embargo, se ha anunciado por parte del gobierno federal, que se impulsará la construcción de infraestructura mediante Proyectos de Prestación de Servicios, que es una modalidad donde el sector público asume el pago de cuotas y destina una renta del presupuesto en función del número de usuarios atendidos, lo que garantizaría a los inversionistas privados un flujo permanente de ingresos.

Administración Estratégica

La globalización exige actualmente a las empresas mantener altos estándares de calidad para alcanzar y sostener su ventaja competitiva, para ello una herramienta clave es la Administración Estratégica la cual se define como “El arte y la ciencia de formular, implantar y evaluar las decisiones a través de las funciones que permita a una empresa lograr sus objetivos” (Fred, 2003, p 5). La formulación de estrategias y su contenido también se ven afectadas por la interacción de la familia y el negocio y en ocasiones dejan de ser verdaderas soluciones para convertirse en simples cambios. El diseñar correctamente una estrategia es importante cuando se aproximan procesos como el de sucesión, nuevas divisiones empresariales, diversificaciones o bien su internacionalización. Dentro del mismo tópico de estrategias administrativas, Filbeck y Smith (1997) desarrollan un estudio evaluando la influencia de la personalidad de los miembros de una empresa familiar y qué tipo y cómo deben ser diseñadas las estrategias que eviten la aparición de conflictos por el enfrentamiento o choque de los diferentes caracteres de los miembros. En las conclusiones obtenidas, señala que una buena comunicación facilita la obtención de objetivos y que las diferencias de personalidad causan problemas o son agravados cuando no se comunica en forma eficaz las metas de la organización y de la familia como tal.

Cater y Schwab (2008), mediante un estudio de caso argumentan que el desarrollo e implementación de estrategias para las firmas familiares están influenciadas por ocho características propias a saber: fuertes lazos familiares, reemplazo de candidatos a ocupar la alta dirección, orientación interna, sistemas informales de administración, motivos altruistas, integración de administradores profesionales, consenso en la orientación y orientación de metas a largo plazo.

Concluyen mediante esta investigación empírica que los elementos antes citados conforman la ‘familiness’ de las firmas familiares y que estos elementos se hacen presentes en diferentes grados pero son decisivos en los cambios de la alta dirección y la forma en que se toman las decisiones a largo plazo o bien el diseño de estrategias para épocas de crisis y de recuperación. Planear para lograr la transición de una generación a otra es un proceso difícil y se considera el compromiso más importante en la administración de empresas familiares y éste se hará presente tarde o temprano por diferentes razones, su falta de previsión como es sabido puede llevar a la división familiar y como consecuencia a la desaparición de la organización; y es aquí donde se da la contribución del estilo de liderazgo al éxito de la familia y la empresa, como indica Sorenson (2000) mediante un estudio desarrollado con 59 empresas familiares pequeñas del estado de Texas, obteniendo resultados significativos respecto a la participación del líder en las costumbres familiares y los niveles de satisfacción de los miembros de la empresa, con sus personalidades tan distintas entre sí a saber: autocríticos, participativos, expertos, pero todos con el objetivo común de integrar armónicamente a la empresa y familia.

Pero no sólo la personalidad del líder influye en la vida diaria de las organizaciones, pues no es el único que legalmente tiene derecho a decidir, pues existen más socios que tienen aportaciones de capital en la empresa, que no trabajan en ella pero que tienen un derecho de voto que les permite decidir el futuro de la organización, tal como lo estudió Vilaseca (2002) basándose en la teoría de Agencia, examinó los elementos que influyen en el conflicto de intereses y objetivos entre los accionistas que no laboran en la empresa familiar y aquellos que conforman el equipo de alta dirección de la misma. Analizó los resultados obtenidos en encuestas aplicadas a 156 accionistas de 10 empresas españolas familiares, combinando información tanto cualitativa como cuantitativa y encontró que el grado de compromiso de la empresa familiar está negativamente correlacionado con el número de miembros de la familia que ocupan puestos directivos y que la relación que resalta de forma positiva es la que existe entre los socios no directivos con la empresa respecto al compromiso de elevar su nivel de crecimiento. Igualmente señala, como otros autores, que los resultados de los mecanismos y procesos implementados dependen de la atención que la empresa ponga en los tres subsistemas de la organización: propiedad, familia y empresa.

Tokarczyk, Hansen, Grenn y Down (2007). en su estudio desarrollado sobre la teoría del rol que desempeñan los lazos filiales o fraternos dentro de una empresa familiar señalan que este “recurso intangible” tiene una influencia determinante en las relaciones familiares, y la eficiencia operacional cuando la organización está orientada hacia el mercado ‘familiness’. Por su parte Forcadell, Montero, Ortiz y Sacristán (2001) definen la ‘familiness’ como el conjunto de recursos y capacidades específicos de la empresa familiar que en algún grado permiten la obtención y mantenimiento de sus ventajas competitivas. Ambos grupos de investigadores sostienen que este tipo de recursos permiten identificar con qué elementos cuenta la empresa familiar y a su vez desde la perspectiva del proceso, cómo se mejoran o destruyen los mismos con el paso del tiempo.

Por lo tanto, existe un cierto acuerdo en que los recursos más relevantes para obtener y mantener la ventaja competitiva son los intangibles y esto depende de un conjunto de orientaciones o enfoques como pueden ser: 1) enfoque basado en el conocimiento, 2) enfoque de los recursos, 3) orientación al mercado y 4) orientación al cliente. Las orientaciones antes descritas confluyen finalmente en una combinación de dos elementos que son: el conocimiento y la cultura, entendiéndose que esta última es el reflejo de la toma de decisiones y experiencias adquiridas en el devenir del tiempo y el cotidiano quehacer empresarial de la organización. En consecuencia, el conocimiento, recursos intangibles o ‘familiness’ es un factor decisivo en el proceso del diseño e implementación de la administración estratégica.

METODOLOGÍA

Este estudio es de tipo descriptivo porque se mide o recoge información sobre las variables que participan en el problema sujeto a estudio como nivel de conocimiento de la administración estratégica, y los indicadores para la determinación de la posición financiera; el diseño es no experimental transversal ya que se recolectaron datos en un solo momento en su contexto natural, mediante entrevistas a los socios fundadores. El método utilizado para la recolección de información cuantitativa y cualitativa es a través de trabajo de campo y la técnica empleada es la entrevista. (Hernández, Fernández y Baptista, 2006).

Sujetos en el Estudio: El estudio se desarrolló tomando como población las constructoras familiares de la ciudad de Campeche con especialidad en la construcción de vías terrestres. De las 40 constructoras familiares identificadas, aceptaron participar 31, sin embargo al administrar el instrumento se observó que dos de ellas no reunían uno de los dos requisitos mínimos para ser consideradas como empresas familiares a saber: la tenencia accionaria y la participación de por lo menos dos de los miembros de la familia en su administración y funcionamiento (Longenecker et al, 2001). Lo anterior delimitó el número de participantes a 29 firmas familiares lo que representa el 72.5% del universo inicial.

Instrumento: La información de tipo cualitativa y cuantitativa se obtuvo mediante la administración de una entrevista semi-estructurada a los 29 propietarios de las empresas familiares desarrollada por Brockhaus (2004), dividido en dos dimensiones: indicadores financieros (21 reactivos) y administración estratégica (15 reactivos). Antes de realizar la entrevista se desarrolló una prueba piloto con el fin de comprobar la correcta comprensión de las preguntas planteadas y evitar desvíos en los objetivos propuestos, así como adaptar a la población de estudio el instrumento antes citado, se administró el instrumento al 10% de la población inicialmente contemplada obteniéndose un alfa de Cronbach de .789 Posteriormente, al desarrollo de las entrevistas se estableció la confiabilidad al obtener un alfa de Cronbach de .775 parámetro que se considera aceptable (Hernández, Fernández y Baptista, 2006).

Procedimiento Para Análisis De Datos

La construcción de sentido a partir de los datos cualitativos se estructuró en categorías que reflejen una visión total de la situación, conocido como análisis taxonómico (Spradley, 1979, 1980 citado por Bonilla y Rodríguez, (1997) siguiendo esta pauta, se realizó un análisis de contenido general, consistente en

codificar los datos de los cuestionarios en categorías y subcategorías, definidas operacionalmente y calculando las frecuencias de los fenómenos involucrados en ellas (Goetz y Le Compte, 1988) empleando las frecuencias para preguntas dicotómicas o numéricas y para las variables de cadena la interpretación de acuerdo a cada uno de los elementos de cada categoría (Bonilla y Rodríguez, 1997).

Se procedió a realizar el análisis de contenido en las respuestas de las entrevista para identificar la frecuencia de ideas y las palabras clave que expresen lo mismo convirtiéndose entonces en “frases testimonio” (Savall, 2003).

RESULTADOS

Los resultados del cuestionario señalan que todos los entrevistados afirman estar involucrados al 100% en las empresas, desempeñándose como directores generales, y de acuerdo a la frecuencia de respuestas (25.8%), tener entre 5 y 10 años de experiencia en el sector antes de constituir la constructora; se detectó que la más antigua se constituyó en 1982 y la más reciente entre las que participaron el estudio se creó en el año 2004. Respecto a su estado civil, informaron estar casados, y sólo un propietario manifestó pertenecer al género femenino. El rango de edad del socio fundador, con la frecuencia más alta fue el establecido entre 47 y 55 años, con un porcentaje del 38.7%. El 90.3% de los propietarios tiene la licenciatura como el nivel más alto de estudios. Al analizar los indicadores financieros, se observó que la mayoría de los informantes reportan haber constituido entre 2 y 4 empresas lo que indica su experiencia empresarial. Igualmente informaron que las constructoras familiares sujeto de estudio tienen un promedio de volumen de obra que oscila entre 3 a 5 obras anuales según la mayor frecuencia reportada (58.6%)

Los ingresos que obtuvieron este tipo de constructoras en 2007 y 2008 mediante el concurso y adjudicación de obra se presentan en la tabla 1.

Tabla 1: Ingresos del año 2007 y 2008 (miles de pesos).

2007			2008		
Rango de ingreso	Frecuencia	%	Rango de ingreso	Frecuencia	%
\$1,405 a \$43,331	18	62.2	\$1,911 a \$83,734	19	65.6
\$43,332 a \$85,258	7	24.1	\$83,735 a \$165,558	7	24.1
\$85,259 a \$127,185	1	3.4	\$165,559 a \$247,382	0	0.0
\$127,186 a \$169,112	0	0.0	\$247,383 a \$329,206	1	3.4
\$169,113 a \$211,039	2	6.9	\$329,207 a \$411,030	0	0.0
\$211,040 a \$252,966	1	3.4	\$411,031 a \$492,853	2	6.9

Los ingresos generados por este sector sirven para cubrir sus costos de operación como materia prima, gastos indirectos y mano, siendo precisamente este último rubro donde la industria de la construcción contribuye a la economía del Estado y a la sociedad, al generar y mantener fuentes de empleo. Los empleos generados tanto de tipo eventual como permanente, se presentan por rangos en la tabla 2 para los años 2007 y 2008.

Tabla 2: Total de empleados años 2007 y 2008.

Rango de empleados	2007		2008	
	Frecuencia	%	Frecuencia	%
5 a 96	26	90.0	24	83.0
97 a 188	0	0.0	2	7.0
189 a 280	0	0.0	0	0.0
281 a 371	2	7.0	0	0.0
372 a 463	1	3.0	2	7.0
464 a 555	0	0.0	1	3.0

Como parte de los indicadores financieros se solicitó a las empresas información sobre el valor de sus activos totales al cierre del ejercicio 2008. Esta cifra incluye el activo circulante, la inversión en inmuebles, planta y equipo así como los activos diferidos de la firma familiar. Véase tabla 3.

Tabla 3: Valor del activo total año 2008 (miles de pesos).

Rango valor de activo total	Frecuencia	%
\$1,105 a \$25,562	10	34.6
\$25,563 a \$50,020	9	31.0
\$50,021 a \$74,478	7	24.2
\$74,479 a \$98,936	1	3.4
\$98,937 a \$123,394	1	3.4
\$123,395 a \$147,852	1	3.4

Igualmente se requirió a las organizaciones que proporcionaran el capital contable de la misma al cierre del ejercicio 2008, el cual comprende las aportaciones de capital social y reservas, así como el capital ganado y el capital contribuido (utilidades o pérdidas del ejercicio y acumuladas). Esta información se encuentra reflejada en la tabla 4.

Tabla 4: Valor del capital contable total año 2008 (miles de pesos).

Rango valor de capital contable	Frecuencia	%
\$552 a \$15,926	10	34.6
\$15,927 a \$31,301	9	31.0
\$31,302 a \$46,676	7	24.2
\$46,677 a \$62,050	1	3.4
\$62,051 a \$77,425	1	3.4
\$77,426 a \$92,800	1	3.4

El pasivo es el grupo del balance general, que refleja las obligaciones comerciales, contractuales y legales pendientes de pago a corto y a largo plazo de una entidad. De las empresas entrevistadas sólo cuatro informaron tener pasivos pagaderos en el largo plazo, tabla 5.

Tabla 5: Valor del pasivo total año 2008 (miles de pesos).

Rango valor de pasivo total	Frecuencia	%
\$61 a \$12,081	17	58.7
\$12,082 a \$24,101	6	20.7
\$24,102 a \$36,121	0	0
\$36,122 a \$48,142	3	10.3
\$48,143 a \$60,163	1	3.4
\$60,164 a \$72,184	2	6.9

Con la información proporcionada se aplicaron las razones financieras pertinentes que señala el apéndice C de la norma de información financiera A-3 (Instituto Mexicano de Contadores Públicos, 2009), a los datos de cada firma con la intención de determinar la posición financiera al cierre de 2008. Por la limitante de la información financiera proporcionada, sólo se evaluaron dos parámetros de solvencia en el área de apalancamiento, un parámetro de eficiencia operativa y uno de rentabilidad. La solvencia o estabilidad financiera, evalúa el exceso de activos sobre los pasivos y como consecuencia la suficiencia de capital contable de las entidades; sirve al usuario para examinar la estructura de capital contable de la entidad, en términos de la mezcla de recursos financieros y la habilidad de la entidad para satisfacer sus compromisos a largo plazo (IMCP, 2009). La solvencia mide los niveles de apalancamiento y de cobertura de deuda de las empresas y para el caso de las organizaciones estudiadas, se determinó que éstas tienen un grado de apalancamiento promedio de 104.30 %.

Respecto a la eficiencia operativa (que se refiere al grado de actividad con que la entidad mantiene niveles de operación adecuados), sólo se evaluó un parámetro de actividad operativa en el largo plazo de los dos disponibles según el apéndice C, de la norma de información financiera A-3 (IMCP, 2009); encontrándose que en promedio la inversión en activos totales contribuye a la generación de ingresos 1.6925 veces. Por último, en el rubro de rentabilidad, (que es la capacidad promedio de las empresas

estudiadas para generar utilidades o incremento en sus activos netos), sólo se evaluó un parámetro relativo al crecimiento en ventas del rubro de retorno sobre ingresos de un total de nueve fórmulas disponibles. El resultado obtenido del promedio de las empresas analizadas nos señala que tuvieron en el ejercicio 2008 un incremento en ventas del 81.58 %. A pesar de la limitación en indicadores, éstos se consideran positivos al cierre del ejercicio 2008 (salvo los niveles de apalancamiento), más aún si se considera que el pronóstico del PIB del sector construcción para el año 2009 sea de -4.9% según la gerencia de economía y financiamiento de la dirección técnica de la CMIC (2009).

El instrumento administrado igualmente comprende la dimensión de la administración estratégica la cual buscó identificar el conocimiento de los propietarios sobre la misma como herramienta de planeación, el grado de implementación y las estrategias que se tienen diseñadas y que se aplican actualmente en dichas organizaciones. Esta dimensión está determinada por los reactivos 22 a 36. Con el objetivo de tener una idea más clara de la percepción que tienen los propietarios de las empresas respecto a la administración estratégica como herramienta de planeación y el diseño de estrategias, se desarrolló un análisis cualitativo para evaluar dicha percepción y se asignó un puntaje para obtener finalmente un índice de percepción de la administración estratégica. De la sección de preguntas abiertas del instrumento se seleccionaron los comentarios más representativos de entre todas esas respuestas, considerándose como “frases testimonio”, como sugieren Besson y Haddadj (2002) para obtener un “índice de percepción de la administración estratégica” (IPAE). A mayor IPAE, significa que el propietario tiene un mejor conocimiento de la administración estratégica. Tabla 6

Tabla 6: Índice de Percepción de la Administración Estratégica.

CONCLUSIONES

Con los resultados obtenidos de acuerdo a las entrevistas, se pudieron identificar las principales características de la población de estudio respecto a la situación financiera de las empresas participantes y

la percepción del propietario respecto a la administración estratégica como elemento sustancial para planear el futuro de la organización. La primera pregunta de esta investigación cuestiona la percepción y nivel de conocimientos de los socios fundadores de las constructoras familiares de la ciudad de Campeche respecto a la administración estratégica determinándose que:

a.- Las organizaciones participantes, no reportan tener un plan de negocios escrito, o estar desarrollándolo actualmente, salvo una empresa que señala estar en dicho proceso, por lo que no cuentan con metas, objetivos y valores definidos, así como tampoco han diseñado su misión y visión, como parte de un proyecto de administración estratégica, lo que permite señalar que su planeación se circunscribe solo al corto plazo.

b.- No han elaborado algún estudio en lo particular que les permita un conocimiento real de sus debilidades y fortalezas, para aprovechar las oportunidades del sector construcción o evitar las amenazas de los competidores y del mercado en conjunto, como es el caso de la crisis financiera internacional que afecta a todas las actividades económicas.

c.- Los logros empresariales, se limitan a la permanencia en el sector, pero no manifiestan tener un plan metodológicamente desarrollado y por escrito, con estrategias para incrementar su presencia o penetrar nuevos mercados. Las constructoras que han incursionado en otros estados del país lo hicieron orilladas por falta de obra suficiente en el Estado y no porque sea un objetivo de su plan de crecimiento empresarial.

d.- Tienen un número reducido de estrategias para fomentar el crecimiento empresarial y financiar las actividades de la organización, careciendo de una metodología de investigación de mercados que les permitan evaluar los costos financieros de la fuente de financiamiento elegida para sus proyectos de inversión.

e.- Es notorio que al intentar determinar el vínculo o la relación (mediante el establecimiento de índices) que guardan la administración estratégica (IPAE) con la posición financiera se obtuvo una relación baja y sin fuerza, considerando que es el reflejo del escaso o nulo conocimiento que manifestaron los socios fundadores respecto a la administración estratégica como herramienta para planear el futuro de sus organizaciones, a la falta del diseño e implementación de más y mejores estrategias para fomentar y financiar el crecimiento empresarial, y no tener por lo menos bien identificadas más de una de sus fortalezas respecto a sus competidores y reflejar todo de manera formal en un documento, para intentar establecer una ventaja competitiva, acorde a su visión empresarial.

La segunda interrogante planteada, es relativa a la posición financiera de las constructoras familiares de la ciudad de Campeche concluyéndose que:

a.- En general, no fue posible determinar una posición financiera integral de las empresas participantes, aunque los resultados financieros obtenidos mediante la aplicación del método de razones, deja entrever que existe un crecimiento en el nivel general de ingresos, pero esto se debe a que las firmas más grandes han incursionado en otros mercados de la región sur del país, lo que señala que tienen la capacidad técnica para hacer frente a otros competidores y la necesidad de concursar en nuevas plazas ante la carencia de obras públicas suficientes para el sector.

b.- En términos numéricos las empresas se limitaron a proporcionar el valor total de los rubros solicitados de sus balances generales y estados de resultados, mostrándose reacios a proporcionar las cifras individuales que integran los grupos generales de cuentas como el activo circulante, inmuebles, planta, equipo, activo diferido o bien la integración de sus pasivos, por lo cual no es posible un análisis minucioso de la posición financiera de las mismas, pudiendo evaluarse parcialmente su solvencia, eficiencia operativa y su rentabilidad, sin que proporcionen elementos relativos a su grado de liquidez.

c.-La importancia de contar con esta información radica en que permitiría evaluar los resultados financieros de las empresas que si tuvieran implementada la administración estratégica o parte de ella; y poder comparar los logros económicos respecto a aquellas organizaciones que no cuentan con una herramienta de tipo estratégico y administrativo o bien servir de base para desarrollar comparaciones financieras futuras una vez que decidieran utilizar la administración estratégica como ventaja competitiva. Finalmente no fue posible determinar el grado de incidencia de la administración estratégica en la posición financiera de las empresas participantes ante el conocimiento y aplicación mínima de la herramienta como parte integrante de la planeación de largo plazo de estas organizaciones, por lo tanto es factible considerar que la posición que ocupan en el mercado es resultado de las cualidades administrativas y de liderazgo del socio fundador basada en empirismo y experiencias empresariales anteriores.

ARBITRAJE MERCANTIL EN EL CÓDIGO DE COMERCIO, RECURSO JURÍDICO DESAPROVECHADO POR LOS SUJETOS DEL DERECHO MERCANTIL EN CD. JUÁREZ, CHIH., MÉXICO

Elvira Mora Luján, Instituto Tecnológico de Ciudad Juárez, Chihuahua, México
Jorge Armando Cárdenas Morales, Instituto Tecnológico de Cd. Juárez, Chihuahua, México

RESUMEN

El Arbitraje mercantil, al que pueden someterse los contratantes en el contrato de compra-venta para dirimir controversias ofrece las ventajas jurídicas de: flexibilidad, (por ser menos contencioso), rapidez (ya que no requiere de una segunda instancia de apelación), confidencialidad del procedimiento, etc., es poco aprovechado por los Micro y Pequeños Empresarios en Cd. Juárez, Chih., México; no obstante estar establecido en el Código de Comercio, que rige las relaciones mercantiles, ya que cuando se les presentan situaciones por incumplimiento de obligaciones comerciales acuden a la aplicación de la normatividad tradicional de los juicios ejecutivos mercantiles, en donde tales juicios no reúnen las ventajas del arbitraje antes aludidas, situación que los deja en desventaja competitiva con los comerciantes de otros países y con los grandes empresarios que sí utilizan el arbitraje como medio alternativo de solución de conflictos. Sin embargo, dichos empresarios pueden dirimir sus conflictos ante las autoridades jurisdiccionales oficiales por medio del arbitraje establecido en el propio Código Mercantil y no lo hacen, desaprovechando las ventajas jurídicas del arbitraje ahí regulado, que los llevaría si lo hicieran a la aplicación de una justicia pronta y expedita, para que con seguridad jurídica y económica puedan ejercer el comercio.

PALABRAS CLAVES: Mediación, conciliación, arbitraje, justicia, expedita.

INTRODUCCIÓN

La globalización de los mercados en un fenómeno actual inevitable, de la que México forma parte, en los últimos años su participación en el comercio exterior se ha destacado ya que se ubica entre los países con mayor intercambio comercial del mundo y es uno de los más atractivos para recibir inversión. Los comerciantes mexicanos participan cada vez más en el comercio internacional, surgiendo de esa participación relaciones jurídicas con comerciantes de otros países, que dan lugar a la celebración de contratos que generan derechos y obligaciones entre ellos, y, al no cumplir con éstas, se suscitan diferencias, que pueden llegar a controversias que deberán ser solucionadas en primer lugar por las partes en conflicto, y, en segundo lugar, cuando las características del conflicto impiden un arreglo entre las éstas, se hace imprescindible la asistencia de un tercero el cual puede recomendar una solución o imponerla. La intervención de terceras personas ajenas al conflicto se realiza a través de los medios alternativos de solución de conflictos tales como la negociación, la mediación, la conciliación, el arbitraje y la transacción. El procedimiento de arbitraje es la alternativa de carácter internacional privado más utilizada en el comercio exterior, para lo cual existen organismos de carácter oficial y centros privados de arbitraje internacional ante los cuales se lleva a cabo dicho procedimiento a fin de resolver los conflictos comerciales que se les presentan a los sujetos que participan en el comercio exterior.

En Cd. Juárez, Chihuahua, México, existen Micro, Pequeños y Medianos Empresarios (MIPYMES) que se dedican al comercio exterior y por lo tanto, están sujetos a los riesgos que conllevan las relaciones comerciales, como lo es, el llegar al incumplimiento de las obligaciones contractuales, por lo que podrán

ventilar sus conflictos por medio del procedimiento de arbitraje ya sea nacional o internacional privado, según sea el caso, para exigir el cumplimiento de un derecho, o bien, para que sean forzados a cumplir con las obligaciones contraídas; situación que nos llevó a analizar las diversas alternativas públicas y privadas con las que pueden contar dichas empresas para que resuelvan sus conflictos de comercio exterior. En el presente trabajo se expone el análisis relativo al arbitraje comercial que en el derecho internacional privado es regulado por el Código de Comercio en México. El objetivo general de la investigación fue indagar entre los empresarios y las autoridades jurisdiccionales la existencia de tal desconocimiento y analizar el desaprovechamiento que tienen dichos empresarios del arbitraje como una alternativa viable, factible, económica y segura para resolver sus controversias nacionales e internacionales de carácter comercial.

REVISIÓN DE LITERATURA

En primer lugar es preciso citar el concepto de arbitraje establecido por la doctrina mexicana Pina, (1979) lo conceptúa como: Actividad jurisdiccional desarrollada por los árbitros para resolver el conflicto de intereses que les ha sido sometido por los interesados. Ahora bien, también se debe entender éste como un litigio pleito, contienda o juicio que es resuelto por una tercera persona ajena a los comerciantes llamada juez o árbitro, quien es el que dicta la sentencia o resolución en dicho pleito. Es pertinente citar, lo que al respecto señala Briseño, (1999) quien dice que es un proceso jurídico tramitado, desarrollado y resuelto por particulares. A su vez Abascal, (2001) señala que el litigio comercial es un medio de solución de controversias, producto de un acuerdo entre las partes por el que convienen que determinadas disputas se resolverán según determine un tribunal arbitral.

Con el análisis de tales conceptos podemos entender que si dos comerciantes no llegaron a un acuerdo en cuanto a sus diferencias por conducto de la negociación o la mediación o de la conciliación, entonces tendrán que acudir ante una autoridad ya sea oficial (gubernamental) llamado Juez a solicitar que se lleve a cabo el arbitraje y la designación de los árbitros; o bien, acudirán ante órganos no gubernamentales u oficiales – Centros de Arbitraje – para que sean éstos quienes designen a los árbitros para que resuelvan el pleito por medio de un procedimiento arbitral y dicten la resolución o laudo correspondiente. Igualmente, cabe destacar que el arbitraje comercial privado derivado de la voluntad de los particulares, también está regulado por el artículo 7º. De la Ley Modelo de la UNCITRAL, (Comisión de las Naciones Unidas para el Desarrollo del Derecho Mercantil Internacional conocida como CNUDMI), que establece: Las partes deciden someter al arbitraje todas las controversias o ciertas controversias que hayan surgido o puedan surgir entre ellas respecto de una determinada relación jurídica, contractual o no contractual. El acuerdo de arbitraje podrá adoptar la forma de una cláusula compromisoria incluida en un contrato o la forma de un acuerdo independiente.

Ahora bien, en materia de derecho internacional privado o derecho conflictual, se debe distinguir el arbitraje interno del internacional, esto será de acuerdo al tipo de litigio o pleito que se va a resolver, o a las normas que se van a aplicar, o al lugar donde se actúa. Si el arbitraje es entre comerciantes de una misma entidad federativa o estado se está frente al arbitraje interno o nacional, y si el arbitraje es entre comerciantes de diferentes países se está ante el arbitraje internacional, al respecto la normatividad mercantil de México, determina la internacionalidad del arbitraje de acuerdo a la sede del lugar del procedimiento donde se realiza el arbitraje, (si ésta se encuentra en el extranjero será arbitraje internacional, igualmente si los comerciantes tienen su establecimiento comercial en distintos países); o también según el lugar del cumplimiento de una parte sustancial de las obligaciones de la relación comercial; o bien, de acuerdo al lugar donde se encuentra el objeto del litigio. Así lo señala el artículo 1416, fracción III, del aludido Código de Comercio: Arbitraje internacional, aquel que las partes, al momento de celebración del acuerdo de arbitraje, tengan sus establecimientos en países diferentes comercial o el lugar con el cual el objeto del litigio tenga una relación más estrecha esté situado fuera del país en el que las partes tienen sus establecimientos. Para los efectos de esta fracción, si alguna de las

partes tiene más de un establecimiento, el establecimiento será el que guarde una relación más estrecha con el acuerdo de arbitraje; y si una parte no tiene ningún establecimiento, se tomará en cuenta su residencia habitual.

Es necesario señalar que los sujetos que participan en el comercio tanto nacional como internacional deben asentar en sus contratos mercantiles la cláusula arbitral o cláusula compromisoria que menciona la ley mercantil, en el artículo 1432: El Tribunal arbitral estará facultado para decidir sobre su propia competencia, incluso sobre las excepciones relativas a la existencia o validez del acuerdo de arbitraje. A ese efecto, la cláusula compromisoria que forma parte de un contrato se considerará como un acuerdo independiente de las demás estipulaciones del contrato. Ahora bien, la decisión de un tribunal arbitral declarando nulo un contrato no entrañará por ese sólo hecho la nulidad de la cláusula compromisoria.

Del estudio doctrinal que se realizó en la investigación y de la práctica jurídica, se encontró que el arbitraje se caracteriza por ser una institución jurídica, por lo que su aplicación y la facultad del árbitro emanan de la voluntad de las partes. El árbitro debe ser una tercera persona imparcial e independiente de éstas y ser especialista en la materia de la controversia; Además, el arbitraje puede pactarse mediante la inclusión en el contrato mercantil de una Cláusula Compromisoria como ya se indicó la que determina la celebración de un convenio arbitral independiente; por lo tanto, el procedimiento es flexible y es diseñado por las partes; por lo que el árbitro puede decidir la controversia conforme a derecho o por equidad y las partes están obligadas a acatar la resolución dictada por éste, o sea, el llamado laudo arbitral.

Asimismo, el arbitraje ofrece como ventajas que es más rápido, que los procedimientos jurisdiccionales tradicionales, ya que no existe recurso de apelación y se acotan las razones por las cuales se puede interponer amparo, evitando así el abuso del juicio de garantías. En cuanto a la confidencialidad en el arbitraje no existe la obligación de publicar el estado del procedimiento ni las decisiones que toman los árbitros, beneficiando con ello a las empresas, particularmente a aquéllas que cotizan en la bolsa. Además, se tiene la posibilidad de elegir a los especialistas en la materia del litigio para que resuelvan la controversia; también la participación de las partes en la constitución del tribunal arbitral favorece el cumplimiento voluntario de las resoluciones arbitrales. Los árbitros además, tienen contacto directo con el expediente y con las partes y así como la oportunidad de conocer mejor el caso. La normatividad del procedimiento arbitral impone la obligación a los árbitros de declarar su independencia de las partes y su imparcialidad frente a los puntos controvertidos, ello evita la corrupción y por ende reduce la duración y el costo del procedimiento, en cuanto a la ejecutabilidad del laudo, y, tanto en México como en el extranjero aseguran su ejecución y su cumplimiento.

La Constitución Política de los Estados Unidos Mexicanos al ordenar la creación previa de tribunales para impartir justicia, da legalidad a la tribunales de arbitraje comercial tanto nacional como internacional, por medio del Código de Comercio de México, en su artículo 1432, faculta la creación de los tribunales de arbitraje ante los juzgados de primera instancia federal y/o estatal para que ante ellos se presenten asuntos de arbitraje por medio de un procedimiento de arbitraje al que se someten previamente los comerciantes en conflicto; según lo acordado en la Cláusula Compromisoria del Contrato Comercial suscrito por ellos, pero dando absoluta independencia al tribunal arbitral. Los sujetos que participan en el comercio exterior por lo tanto, pueden acudir ante una autoridad jurisdiccional mexicana a resolver sus diferencias por medio del procedimiento de arbitraje ya sea ante un Juez de Primera Instancia de lo Civil -quien es una autoridad jurisdiccional estatal ante la que se tramita la materia mercantil, o bien, ante un Juez de Distrito -primera instancia federal- quien también puede dirimir la materia mercantil por ser de aplicación federal, y serán estas autoridades oficiales las que vigilen la legalidad del procedimiento de arbitraje.

A mayor abundamiento en cuanto a las ventajas del arbitraje establecido en la Ley, el propio Código de Comercio en su Libro Quinto. De los Juicios Mercantiles establece que: la ventilación del procedimiento arbitral ante las autoridades dependientes del Poder Judicial debe ser gratuito, es decir, el Juez que ante el cual se ventila no cobra honorarios ya que recibe sueldo como empleado público. Los Comerciantes que

acuden ante tales órganos oficiales no se les cobran cuotas administrativas, o sean, los honorarios del Juez o los gastos de carácter meramente administrativos del juzgado; únicamente tendrán que cubrir los honorarios de los árbitros seleccionados y autorizados por el juzgador. Erogaciones que pueden ser diferentes a los honorarios gastos y costas específicos del arbitraje ante los órganos de arbitraje de carácter privado ya sea nacionales o internacionales en donde son sumamente altos los gastos y costas del tribunal arbitral; los gastos de viaje y los realizados por los árbitros; además de los peritajes requeridos por el tribunal arbitral para aclarar alguna duda en el juicio arbitral, gastos de viaje de los testigos requeridos, siempre que sean aprobados por el tribunal arbitral; el costo de la representación y asistencia legal de la parte vencedora siempre y cuando se haya reclamado dicho costo durante el procedimiento arbitral, y otros gastos que se presentan durante éste. Mientras que el arbitraje tramitado ante los órganos jurisdiccionales oficiales el monto puede ser considerablemente menor y más razonable; al alcance de los Micro y Pequeños Empresarios que inician sus actividades en el comercio exterior.

METODOLOGÍA

De acuerdo con el objetivo del presente trabajo, se revisó la información secundaria existente sobre el problema en cuestión, por lo que se consultó la literatura de varios juristas especialistas en la materia, tesis, publicaciones y la normatividad de los Centros de Arbitraje. Además para la obtención de la información directa o de primera mano, se realizaron entrevistas y encuestas encaminadas a demostrar el desconocimiento por parte de las empresas sujetas a estudio de las oportunidades competitivas que les proporcionan los medios alternativos de solución de conflictos internacionales y en especial el arbitraje que se ventila ante los órganos jurisdiccionales de carácter público en México, así como la inexistencia de un centro privado de mediación y arbitraje, en el ámbito internacional para determinar la limitante para las MIPYMES de Cd. Juárez, para que puedan incursionar con seguridad jurídica y economía procesal, en los mercados internacionales.

Asimismo se entrevistaron autoridades correspondientes de los Poderes Judiciales Federal y Estatal, para determinar el desaprovechamiento que tiene del arbitraje que regula el Código de Comercio vigente en México por parte de esos empresarios, por lo que se obtuvo información directa al entrevistar a siete Jueces Civiles del Poder Judicial del Estado, en Cd. Juárez, Chihuahua, México quienes son Juzgadores de Primera Instancia (ante los cuales se ventilan los juicios mercantiles), así como tres Jueces de Distrito y un Secretario de Juzgado en la misma localidad, quienes dependen del Poder Judicial Federal.

Una vez procesada la información se presenta de una manera sencilla a través de gráficas, el desconocimiento por parte de las Empresas sujetas a este estudio de la existencia de los medios alternativos de solución de conflictos internacionales. En cuanto a la demostración causal de la hipótesis relacionada con los altos gastos y costas que les ocasionan los juicios mercantiles rebasa los límites de la presente investigación, por no estar a nuestro alcance debido a la naturaleza de la privacidad de tal información. Asimismo se indagó ante los diversos organismos empresariales y autoridades correspondientes de la localidad sobre la posible existencia de algún centro público o privado de orientación, y capacitación sobre la materia a estudio, o de algún organismo de carácter privado de conciliación y arbitraje, con resultados negativos; encontrándose que únicamente en los Juzgados Estatales y Federales dependientes de los Poderes Judiciales Estatal y Federal del gobierno es en donde se puede ventilar la conciliación y el arbitraje, (establecido por el Código de Comercio), ya que no existe en la localidad ningún órgano o institución de carácter privado para dirimir tales asuntos. Por lo tanto, si bien es cierto que solo existen los órganos de carácter público, para tales fines, también lo es que los empresarios y comerciantes de la localidad no acuden a dirimir sus controversias ante ellos por ese medio legal alternativo, sino que lo hacen por los medios legales tradicionales, quedando por ende la normatividad del la ley mercantil como letra muerta en dicho Código

RESULTADOS

Del análisis de la literatura revisada se determina que los medios alternativos de solución de conflictos comerciales son la mejor opción para obtener una justicia imparcial, pronta y expedita. Asimismo que el arbitraje es la figura jurídica que contempla dichas características para resolver una controversia presente o futura ya que es acordada previamente por las partes, porque su aplicación y la facultad del árbitro emanan de la voluntad de éstas, pues el árbitro es un tercero imparcial e independiente de ellas, además es especialista en la materia comercial de la controversia. Este medio alternativo puede pactarse mediante la inclusión de una “Cláusula Compromisoria” en un contrato, o mediante la celebración de un convenio arbitral independiente; por lo tanto el procedimiento es flexible al ser diseñado por las partes; el árbitro puede decidir conforme a derecho o por equidad y los sujetos en litigio están obligados a acatar el laudo arbitral. El procedimiento tiene menos formalidades que el sistema tradicional de justicia lo que lo hace menos contencioso. Es más rápido y expedito ya que no existe recurso de apelación y se acotan las razones por las cuales se puede interponer amparo, ello evita el abuso del juicio de garantías y acorta el procedimiento y por ende la justicia que por medio de este se imparte es imparcial pronta y expedita, tal como lo ordena la Constitución Política de los Estados Unidos Mexicanos.

El principio de confidencialidad se respeta plenamente en el arbitraje ya que no existe la obligación de publicar el estado del procedimiento ni las decisiones que toman los árbitros, lo que beneficia a las empresas. La especialización de los árbitros en la materia comercial es una ventaja sobre los sistemas tradicionales en el que no todas las autoridades y funcionarios de los Juzgados donde se ventilan los casos mercantiles son especialistas en la materia mercantil nacional e internacional. La participación de las partes en la constitución del tribunal arbitral favorece el cumplimiento voluntario de las resoluciones arbitrales. El árbitro tiene un contacto directo con el expediente y con las partes, tiene oportunidad de conocer mejor el caso. Existe independencia e imparcialidad de los árbitros porque la regulación del procedimiento arbitral impone la obligación a los árbitros de declarar su independencia con las partes y su imparcialidad frente a los puntos controvertidos, lo que evita la corrupción y por ende reduce la duración y el costo del procedimiento. La ejecutabilidad del laudo en México y en el extranjero está regulada por la legislación interna y por las convenciones que ese País ha ratificado, que aseguran la ejecución del laudo arbitral tanto en esa nación como en el extranjero, tal como lo aseveran los especialistas en la materia.

Del resultado de las entrevistas realizadas a los funcionarios judiciales se observa el desconocimiento y desaprovechamiento -por parte de los sujetos que participan en el ámbito de las relaciones mercantiles-, de la existencia de los medios alterativos aludidos, ya que dichas autoridades jurisdiccionales manifestaron que en los años que tienen laborando en la judicatura nunca se han presentado ante ellos comerciante o empresario alguno, a ventilar algún caso de arbitraje comercial nacional o internacional. Agregaron, que el arbitraje es una alternativa que tienen los comerciantes y cualquier persona que sin ser comerciante ejercite actos de comercio, para resolver por medio de éste sus conflictos comerciales -nacionales o internacionales- en lugar de un juicio tradicional jurisdiccional que les llevaría más tiempo. Asimismo afirmaron que desafortunadamente no se hace uso de esa alternativa, a pesar de que es de gran beneficio, no sólo para quien ejerce el comercio nacional e internacional, sino además para el Poder Judicial, ya que si los conflictos comerciales se resuelven por medio del arbitraje ayudaría en gran medida con el rezago de asuntos que se ventilan ante tales Juzgados.

En cuanto a el análisis de la información obtenida de las Empresas encuestadas, nos arroja como resultado el desconocimiento que tiene el 80% de los Micro, Pequeños y Medianos Empresarios consultados sobre la existencia de los medios alternativos de solución de conflictos que se les presentan o se les pueden presentar en sus relaciones comerciales internacionales, así como las ventajas que tales medios les proporcionarían si dirimen sus desacuerdos por medio de éstos. El 90% de dichos empresarios manifestó que cuando se les presenta algún problema jurídico lo dirimen por los medios judiciales tradicionales que duran bastante tiempo por lo que las pérdidas económicas que has sufrido por ello han sido altas,

independientemente de que si ganan o pierden el juicio, aunque hayan dirimido la controversia por la vía ejecutiva mercantil, que de acuerdo a la ley mercantil debe ser la vía más rápida. Tampoco existe organismo alguno en la localidad de carácter privado que sea centro de conciliación y arbitraje ante el cual puedan dichas empresas acudir cuando se les presenten diferencias o desacuerdos en sus relaciones comerciales para que los orienten o lleven a buscar solución por medio del arbitraje o cualesquier otro medio alternativo de solución de tales conflictos.

CONCLUSIONES

Una vez analizados los resultados de la presente investigación sobre la problemática del desconocimiento por parte de los Micro, Pequeños y Medianos Empresarios sujetos a este estudio, de la existencia de los medios alternativos de solución de conflictos comerciales nacionales e internacionales, y en especial el arbitraje establecido en el Código de Comercio, se puede concluir que se ha probado la hipótesis de la presente investigación ya que los Micro, Pequeños y Medianos empresarios encuestados en este trabajo - en un alto porcentaje- desconocen la existencia de dichos medios jurídicos de solución. Asimismo, tal situación, les ha ocasionado (en algunos casos analizados) inseguridad jurídica para seguir participando en sus relaciones comerciales, y además puede provocar que abandonen su participación en el comercio exterior, por las pérdidas económicas que tales conflictos les han producido, cuando los han ventilado por los medios tradicionales, lo que les impide ser competitivos internacionalmente.

Consideraciones que vienen a probar y a dar veracidad a la hipótesis de investigación en la que se asienta que: En Cd. Juárez, Chihuahua, México las MIPYMES que se dedican al comercio exterior, desaprovechan el arbitraje regulado por la ley mercantil mexicana. Encontrándose por ende dicha normatividad como letra muerta, es decir, sin aplicación para todos aquellos sujetos que participan en el comercio y que desconocen las ventajas que les puede proporcionar el arbitraje tanto nacional como internacional promovido ante los tribunales jurisdiccionales de carácter oficial y regulado por el Código de Comercio, medio alternativo de solución de conflictos que es ignorado por las empresas investigadas, así como por sus asesores jurídicos.

Por lo tanto, se recomienda a los organismos públicos y privados que por medio de sus dependencias conducentes se lleve a cabo la creación de centros de información jurídica necesarios para que las MIPYMES sean debidamente informadas y asesoradas sobre tales alternativas. Asimismo, es necesario que los litigantes o juristas se capaciten o especialicen en la materia para conducir a sus clientes a resolver las controversias comerciales ya sea nacionales o internacionales por los medios alternativos de solución como lo son: la negociación, la mediación, la conciliación y el arbitraje y no seguir ventilando los asuntos por las vías tradicionales ordinaria o la ejecutiva mercantil, según sea el caso y tomar la opción jurídica, del procedimiento de arbitraje establecido en el Código de Comercio, para que éste deje de ser letra muerta y sobre todo evitar que los comerciantes y empresarios tengan pérdidas económicas por lo gravoso y tardado de los juicios tradicionales que los lleva a abandonar su participación en los ámbitos del comercio internacional.

Lo anterior, sin demeritar las vías tradicionales ordinarias y ejecutiva mercantil, para los asuntos correspondientes en los que ha operado con éxito su ventilación por esos medios, pero del análisis de los casos concretos a este estudio se tomó en cuenta de las encuestas, que quienes han optado por estas vías han sufrido pérdidas económicas, y, sin contar aquí las manifestaciones de actos corrupción que adujeron, situación ésta última que no tomamos en cuenta al evaluar tal punto, ante la limitante de la falta de elementos legales de convicción para así afirmarlo.

Ahora bien, si bien es cierto que esta investigación se realizó para auxiliar a las Micro, Pequeñas Empresas que se dedican al comercio exterior, con el fin de ofrecerles las mejores opciones u alternativas para solucionar los conflictos que se les presentan en el ejercicio de esa actividad, también lo es que aplica para todos los sujetos que participan en el comercio nacional y las grandes empresas, para quienes también les será de gran beneficio las propuestas que surgen de este trabajo, en cuanto a la creación en la localidad de centros privados de mediación, conciliación y arbitraje, así como órganos públicos y

privados de orientación y capacitación en la materia. Por lo que al resolver tales carencias, los sujetos del derecho mercantil podrán incursionar con seguridad jurídica y economía procesal, en los mercados nacionales internacionales y por ende serán más competitivos frente a otras empresas nacionales e internacionales.

RESUMEN

En este trabajo se pone de manifiesto la importancia de la colaboración a través de los clusters, en uno de los sectores industriales de mayor importancia en España: el sector de “Fabricantes de Equipos y Componentes para la Automoción”. Esto es así debido a que el sector de Fabricación de Automóviles cada vez delega más funciones de I+D+i y de coordinación con proveedores a las empresas auxiliares de automoción. Sin embargo, el hecho de ser éste un sector compuesto mayoritariamente por PYMEs dificulta la óptima realización de las mismas en solitario, por lo que la pertenencia a organizaciones que reúnan en su seno a los agentes de la cadena de valor, competidores e instituciones resulta decisiva a la hora de mantenerse en el mercado. Para confirmar el planteamiento teórico establecido, se realiza un análisis cualitativo comparativo entre el Cluster de Automoción del País Vasco y el resto de las empresas del Sector. Por último, con el fin de aportar herramientas, que permitan mejorar la competitividad, en un futuro marcado por la globalización y la crisis analizamos el Cluster de Fabricantes de Equipos y Componentes para la Automoción del País Vasco.

PALABRAS CLAVE: colaboración, cluster, espacios regionales, competitividad

IMPROVING COMPETITIVENESS BY ENTERPRISE COLLABORATION IN AUTOMOTIVE COMPONENTS

ABSTRACT

This work focuses on the importance of cluster collaboration in one of the most important industrial sector in Spain: “Automotive Components”. The reason why it is so lies on the fact that General Automotive sector delegates more and more R+D+I functions and coordination to suppliers to the automotive components enterprises. However, being a sector mainly composed by SMEs makes those functions be difficult achieved an so, being a member of a cluster where servants of the value chain, competitors and institutions work together is vital to keep oneself on the market. To reinforce this theory, we have carried out a qualitative analysis comparing Automotive Components Cluster in the Basque Country to the rest of the sector enterprises. Finally, in order to provide tool, and to improve competitiveness in a future characterized by globalization and crisis, Automotive Components Cluster of the Basque Country are analyzed.

INTRODUCCIÓN

La pérdida de ventaja competitiva que, en un importante número de casos, culmina con el cierre de las organizaciones, exige un cambio en nuestro modelo de crecimiento. Este hecho se hace más patente a

tenor de la crisis actual que en la Unión Europea comenzó a despuntar a finales del 2007; en 2008 cobró cuerpo global; se agudizó de forma virulenta en el 2009; y en la que aún nos mantenemos sin atisbos de mejora e inmersos en informaciones, en ocasiones, contradictorias. Sus consecuencias son importantes tanto actividad como en el empleo del sector industrial, principalmente. Este marco requiere de nuevas formas de hacer, nuevas prácticas en gestión, nuevos sistemas de aprendizaje y del desaprendizaje de modelos utilizados hasta el momento, que permitan a las organizaciones seguir generando valor y conseguir crear, mantener e incluso potenciar las ventajas competitivas, apostando por una industria más competitiva y sostenible orientada a incluir, de forma activa, en su gestión lo que se consideran algunas de las claves determinantes de la competitividad (EUSKALIT, 2011):

- Potenciar la competitividad sobre la base de la innovación
- Dinámicas organizacionales que facilitan el desarrollo de las capacidades creativas y relacionales de sus miembros
- Creación de un proyecto compartido entre las personas de la organización
- Compartir y cooperar en un proyecto para desarrollar “redes competitivas” que permitan abordar proyectos más ambiciosos orientados al mercado.

El tejido empresarial e industrial de Europa, en general, y de los Espacios Regionales que lo componen, en particular, está mayoritariamente formado por PYMEs. Las entidades deben organizarse para que sistemáticamente vayan dejando lo establecido, acostumbrado, familiar, etc. porque el conocimiento cambia rápido (Drucker, 1993) y estos procesos resultan mucho más dificultosos en PYMEs al tener menos facilidad para obtener los recursos que posibiliten la innovación y mantenimiento de la ventaja competitiva y a que los costes marginales que supone esta actualización resultan, a medio plazo, superiores al valor añadido que generan. Resulta evidente la necesidad de instrumentalizar algún tipo de entorno facilitador de la innovación tanto tecnológica como en la gestión, dado que históricamente, la falta de tecnología ha sido el freno más importante a la conversión de ideas creativas en innovación (Morcillo & Alcahud, 2005); tarea en la que se han de involucrar los gobiernos, ya que si la innovación es uno de los más importantes factores de ventaja competitiva sostenible de las organizaciones, también de capital importancia para el desarrollo sostenible de cualquier nación/región (Porter, 1991).

Para que estos procesos se puedan llevar a cabo con esperanza de éxito habrá que incluir en los procesos de inversión en innovación de las organizaciones a las universidades y centros tecnológicos (Casas, 2001), apostando por herramientas que integren el modelo Triple Helix, tales como los clusters que han sido una de las fuentes principales de inspiración y expansión de lo que se ha venido en denominar el “desarrollo regional” en Europa (Lagendijk & Conrnford, 2000). Uno de los Espacios Regionales que ha seguido esta política de clusters es la Comunidad Autónoma Vasca (CAV) que en la década de los 90, y a partir de un estudio realizado por Michael Porter, que analizó tanto la situación real de la economía vasca como su potencial de competitividad en una economía de mercados, comenzó una política de promoción de clusters tanto sectoriales como interdisciplinares con notable éxito.

Estos clusters están dirigidos a aglutinar PYMEs del sector para facilitar el acceso a los factores clave de la ventaja competitiva. Para ello reúnen en su seno a los distintos agentes de la cadena de valor productiva del sector, así como a agentes de conocimiento necesarios para llevar a cabo una gestión conforme a las prácticas más exitosas y facilitar la transmisión y generación de nuevo conocimiento; todo ello sin olvidar la presencia de los organismos públicos que actúan de agentes receptores de las necesidades y emisores de políticas dirigidas a cubrirlas. Es en estos momentos de crisis donde se puede comprobar la verdadera eficacia de estos clusters, siendo nuestra hipótesis de trabajo:

Las empresas, de pequeño y mediano tamaño, pertenecientes a clusters diseñados siguiendo el modelo Triple-Helix se encuentran en mejor posición, frente a la crisis económica actual, que aquellas del mismo sector que actúan de forma individualiza.

Nos encontramos, por tanto ante un estudio de carácter cualitativo cuyo objetivo es confirmar que el mantenimiento y mejora de la ventaja competitiva de las PYMEs aumenta de manera significativa si pertenecen a un cluster u organización similar, que se base en el modelo Triple Helix. Para ello, hemos realizado un estudio de la evolución de los principales indicadores económicos de las empresas del sector de automoción, separando las pertenecientes al cluster de automoción de la CAV de las del resto del Estado. Para el mencionado análisis hemos utilizado la base de datos SABI que incluye la Base de Datos de Análisis de Balances del ejercicio 2010 (fuente: Bureau Vann Dyck Electronic Publishing). El estudio comienza con una parte destinada a la revisión de la literatura sobre modelos de colaboración y cooperación empresarial y políticas cluster; para continuar con una parte dedicada a la metodología utilizada que como ya se ha mencionado es de carácter cualitativo; a continuación pasamos a exponer los resultados del análisis cualitativo y comparativo realizado y finalizamos nuestro trabajo con las principales conclusiones alcanzadas. A continuación se detallan las referencias bibliográficas consultadas y empleadas así como la biografía de los autores de este trabajo.

Los Clusters Propulsores De Ventaja Competitiva

A partir de los años 90, un buen número de autores (Amin, 1998; Cooke *et al.*, 2000; Storper, 1998) comienzan a hablar de una nueva etapa para el desarrollo regional. De una estrategia de desarrollo dirigida hacia la movilización de los recursos locales haciendo uso de una interpretación más amplia de los procesos económicos, con una visión que sitúa las ventajas competitivas de las regiones en la construcción de redes de asociación. El objetivo final de estas estrategias de desarrollo es incrementar el potencial de conocimiento de toda la sociedad regional en su conjunto, incluidas sus instituciones (Morgan, 1997). Su propuesta trata de potenciar los activos intangibles y las ventajas relacionales de los espacios regionales y se basa en: “*construir redes de conocimiento, mecanismos de aprendizaje y capital social es un activo necesario y complementario a los factores económicos que tradicionalmente se pensaba que influían sobre el desarrollo económico*” (Morgan & Nauwelaers, 1999, pág. 226), siendo los clusters concebidos según la definición de Michael Porter y su equipo en la Harvard Business School un instrumento apropiado para esta labor. Los clusters así definidos son concentraciones geográficas de empresas interconectadas, suministradores especializados, proveedores de servicios, empresas de sectores afines e instituciones conexas (por ejemplo, universidades, institutos de normalización, asociaciones comerciales) que compiten pero también cooperan (Porter, 1999) y constituyen una potente herramienta para el desarrollo de políticas económicas a escala regional (Palacio, 2010).

Representan por un lado, una nueva forma de pensar sobre la economía y la organización del desarrollo económico en un determinado campo de actividad y, por otro lado, potencian (Aranguren, 2010) la creación de importantes interrelaciones entre empresas y sectores en cuanto a la tecnología, cualificaciones, información e innovación. Según varios informes oficiales (OECD, 1999; OECD, 2007; Orkesta, 2009), los clusters influyen principalmente sobre la competitividad de sus organizaciones socias, en particular, y del sector al que pertenecen, en general, en los siguientes tres aspectos:

1. Incrementan la productividad y la eficacia de las empresas o sectores que las integran a través de los siguientes factores: acceso a recursos materiales y humanos especializados; acceso a la información: facilita y abarata el fluir de información en el interior del cluster; acceso a las instituciones y bienes públicos. Constituye un acceso eficaz a inputs especializados, servicios, empleados, información e instituciones; marketing continuo y acciones que refuerzan la imagen; mejora de la función de compras; mejor coordinación de las actividades de los integrantes del cluster; facilita la coordinación y las transacciones entre empresas.

2. Incrementan su capacidad de innovar y, con ello, su capacidad de aumentar la productividad. El cluster ofrece una serie de ventajas a la hora de innovar, como pueden ser: mayor rapidez y capacidad de percepción de las necesidades de los clientes así como de las nuevas posibilidades en tecnología, producción y/o comercialización; acceso rápido a los recursos (materiales y humanos) necesarios para llevar a cabo la innovación o experimentación a un coste inferior (economías de escala y de aprendizaje); amplían la capacidad de percibir las oportunidades para la innovación; surgen más suministradores e instituciones que ayudan a la creación del conocimiento; potencia la experimentación dados los recursos locales disponibles.
3. Estimulan la creación de nuevas empresas y la comercialización, lo cual apoya la innovación y expande el cluster. Las causas más destacadas suelen ser las siguientes: mejor información sobre las oportunidades en el interior del cluster; se reduce el riesgo percibido de entrada: menores barreras de entrada, relaciones establecidas o presencia de otras empresas que ya tuvieron éxito; las oportunidades de nuevas empresas y nuevas líneas de negocios establecidos son más visibles; la comercialización de nuevos productos y el establecimiento de nuevas empresas es más fácil debido a las cualificaciones, suministradores y otros factores disponibles.

Por otro lado, la literatura sobre la cooperación (Palacio, 2010; Parra *et al*, 2008, pág. 88) coincide en afirmar que ésta permite a las empresas, especialmente a las pequeñas y medianas empresas, aumentar su capacidad para competir, puesto que, mediante una mayor cooperación, pueden superar las barreras que tienen en aspectos relevantes como la innovación y la internacionalización. Las regiones con un porcentaje mayor de empleo en las industrias que pertenecen a clusters fuertes son, generalmente, más prósperas (Aranguren, 2010, pág. 91). Si el empleo refleja actividades en muchas industrias que pertenecen a tales clusters, la prosperidad aumenta fuertemente.

La situación en los grupos de clusters vinculados a través de industrias comunes o en clusters que también están presentes en regiones vecinas, proporcionan beneficios adicionales. Aunque sea posible que muchos otros factores diferentes de los clusters puedan tener un impacto en la prosperidad, los datos obtenidos de estudios realizados por la OCDE y el Cluster Observatory de Europe Innova, proporcionan evidencias claras de que los clusters están significativamente relacionados con la prosperidad y que, por tanto, es necesario considerarlos como una parte central de la estrategia económica.

Teniendo en cuenta que el crecimiento y el éxito de una región pueden ser atribuidos a la formación incesante de multitud de entidades especializadas y diversas que se alimentan, apoyan e interactúan entre sí, es necesario fomentar las relaciones entre Gobierno-Academia- Empresa- Sociedad (Navarro, 2009). Para acceder al desarrollo económico de las sociedades basado principalmente hoy en día en la innovación, consideramos que es necesario fomentar las *Relaciones* entre estos cuatro actores. Sabel, (1989, págs. 30-31) por su parte destaca la importancia de las redes industriales y sociales, señalando “las ventajas de aprendizaje de los sistemas de red como organización industrial”. Estas redes, afirma, son cruciales no sólo para las pequeñas empresas, sino también para un número creciente de grandes empresas, que están imitando y aliándose con los distritos industriales. Existen más de 500 iniciativas o asociaciones cluster en el mundo y aunque en cada lugar las Asociaciones Clusters tienen su propia especificidad, en general, son instituciones para la colaboración formada por empresas, instituciones educativas y de investigación, agentes gubernamentales y otros agentes sociales que se crean con el objetivo de mejorar la competitividad de las actividades relacionadas en un determinado territorio.

EL SECTOR DE LA INDUSTRIA DE EQUIPOS Y COMPONENTES DE AUTOMOCIÓN EN EL ESPAÑA Y EN LA CAV

A la hora de plantearnos el estudio del sector, hemos tenido en cuenta dos factores: en primer lugar el alto grado de importancia del sector en el conjunto económico industrial de nuestro país y, en segundo lugar, un notable impacto negativo consecuencia de la crisis desde finales del 2008 y especialmente en el 2009, año hasta el que llega nuestro estudio. El motivo que nos mueve a escoger un sector que recoja estos factores es llegar a conocer las necesidades del sector y plantear nuevas formas de gestión más competitivas a las que una empresa pueda hacer frente a situaciones de crisis.

El sector de la industria de equipos y componentes de automoción está adquiriendo cada vez mayor importancia dentro del proceso productivo del automóvil. De hecho, en los últimos años está absorbiendo funciones cada vez más complejas como la I+D+i o la coordinación con otros proveedores (ICEX, 2011), debido a que los fabricantes de automóviles cada vez subcontratan y suministran más sistemas completos ya pre-montados; generando en la actualidad el 75% de puestos de trabajo directos del sector de la automoción. Estos hechos llevan al sector a contribuir en el PIB de España en un 5,5%; a generar el 8,7% del empleo sobre la población activa y a copar el 18,3% de las exportaciones nacionales de bienes y servicios (Instituto Nacional de Estadística – INE) Más concretamente y dado que incluir las empresas fabricantes de automóviles podría conducir a la aparición de desajustes, nos decantamos por estudiar los sectores de fabricantes de equipos y componentes, pues aunque recogen menos volumen de negocio (ver tabla 1), recogen el 90% de las empresas del sector de automoción y su volumen de ocupación también es significativamente superior al de los fabricantes.

Tabla 4: Indicadores del Sector de Automoción en España en 2009

	Fabricación de vehículos de motor CNAE2009-29.1	Fabricación de componentes CNAE2009-29.2 y 29.3
Nº de empresas (Unidades)	197	2.019
Volumen de Negocios (M. €)	30.428	15.555
Nº de ocupados (unidades)	63.039	82.606

Principales indicadores económicos del sector de la automoción en el España en el que se puede observar que la inclusión de los fabricantes en el estudio puede originar desajustes al ser un número pequeño de empresas con el doble de volumen de facturación que las auxiliares y con un número muy inferior de ocupados. Fuente: Elaboración propia a partir datos INE para 2009.

España cuenta con una importante industria de fabricante de equipos y componentes de automoción integrada por más de dos mil empresas que facturaron 15.555 millones de euros en 2009 y un empleo de 82.606 trabajadores, situándose en el tercer lugar del ranking de la industria europea de componentes. Si bien es cierto que estas cifras son bastante negativas si las comparamos con las de 2008, cuando la facturación fue de 20.819 millones de euros y el empleo de 96.775 trabajadores, se trata, en general, de empresas innovadoras, competitivas y flexibles, que exportan más del 53% (Secretaría General de Comercio Exterior del Ministerio de Industria, Turismo y Comercio) de su producción, lo que denota un elevado grado de internacionalización.

En el caso de la CAV su tejido industrial está formado mayoritariamente por PYMEs (ver tabla 2). Centrándonos en el sector de equipos y componentes de automoción más del 20% pertenecen al Cluster de Automoción (ACICAE) fundado en 1993, conformado básicamente por las PYMEs del sector (ver tabla 3). Este cluster es muy relevante en la CAV pues supone el 21,8% del total de las exportaciones vascas y el 3,9% de las mundiales (Aranguren *et al.*, 2011). Es un cluster muy dinámico pues su cuota de exportación tiene una clara tendencia creciente, el 64% de sus empresas cuentan con departamentos de I+D+i a los que se destina, de media, el 2,1% del total de facturación (ACICAE). Cabe destacar la creación del AIC-Automotive Intelligence Center en el año 2009 como único centro de generación de

valor para el cluster que se constituye como un centro en el que el conjunto del sector coopera en diversas áreas de mejora competitiva como conocimiento, formación, tecnología y desarrollo industrial.

Tabla 5: Distribución del tejido industrial en la CAV 2005-2009

Tamaño Empresa	2.005	%	2.006	%	2.007	%	2.008	%	2.009	%
Microempresas	51.744	82,07	52.444	81,85	52.652	81,63	51.667	81,91	50.699	82,34
Pequeña Empresa	9.396	14,90	9.672	15,09	9.815	15,22	9.425	14,94	8.981	14,59
Mediana Empresa	1.650	2,62	1.685	2,63	1.755	2,72	1.718	2,72	1.630	2,65
Gran Empresa	259	0,41	274	0,43	278	0,43	271	0,43	266	0,43
Total Empresas	63.049	100,00	64.075	100,00	64.500	100,00	63.081	100,00	61.576	100,00

El tamaño de las empresas se mantiene a lo largo del tiempo y que las empresas se encuadran en el apartado de PYMEs de forma abrumadoramente mayoritaria, siendo muy importante el porcentaje de las mismas que tienen menos de diez trabajadores y, en consecuencia, entran en la categoría de microempresas. Esto nos da idea de la importancia de impulsar clusters u otras redes de colaboración entre ellas para mantener y/o mejorar su ventaja competitiva. Fuente: Elaboración propia a partir de los anuarios del Ministerio de Empleo y Seguridad Social.

Tabla 6: Comparativa CAV-ACICAE año 2009 de empresas por tamaño en %

territorio histórico	c a v			a c i c a e		
	pequeña	mediana	grande	pequeña	mediana	grande
araba	15,82	16,86	13,79	16,67	15,22	0,00
bizkaia	33,04	33,14	30,27	57,14	50,00	70,00
gipuzkoa	51,14	50,00	55,94	26,19	34,78	30,00

En el Cluster de Automoción (ACICAE) el porcentaje de PYMEs es muy superior, salvo en el caso de Bizkaia, al del conjunto de estas empresas en la Comunidad Autónoma Vasca (CAV), por lo que parece evidente que ACICAE reúne, fundamentalmente, a PYMEs que son las entidades que más dificultad tienen para acceder a recursos de innovación, internacionalización y mejora de la ventaja competitiva. Fuente: Elaboración propia a partir de la base de datos SABI (fuente: Bureau Vann Dyck Electronic Publishing).

Entendemos que lo expuesto hasta ahora justifica debidamente la elección del sector de equipos y componentes de automoción en el España para el estudio y su comparación con un Espacio Regional con un cluster de automoción muy competitivo y dinámico como es ACICAE en la CAV.

METODOLOGÍA

En este estudio se utilizan dos universos: el primero está formado por el total empresas pertenecientes al sector de equipos y componentes de automoción de España; y el segundo comprende el total de empresas del sector de equipos y componentes de automoción que pertenecen a ACICAE. Todas las organizaciones, según su actividad, se incluyen en el Código Nacional de Actividades Económicas, que tiene carácter internacional. En nuestro caso, los datos son referidos CNAE-93 hasta 2007 y CNAE-09 para 2008 y 2009 (ver tabla 4).

Tabla 7: Correspondencias CNAE 93-09 para el sector de equipos y componentes de automoción

cnae-93 rev1 codigo	cnae-93 rev1 título	cnae-2009 codigo	cnae-2009 título
31611	Fabricación de aparatos y dispositivos eléctricos para motores de combustión interna	2931	Fabricación de equipos eléctricos y electrónicos para vehículos de motor
34200	Fabricación de carrocerías para vehículos de motor, de remolques y semirremolques	2920	Fabricación de carrocerías para vehículos de motor; Fabricación de remolques y semirremolques
34300	Fabricación de partes, piezas y accesorios no eléctricos para vehículos de motor y sus motores	2932	Fabricación de otros componentes, piezas y accesorios para vehículos de motor

En esta tabla se recogen los códigos nacionales de actividades económicas (CNAE) correspondientes a industrias del sector de equipos y componentes de automoción que conforman los universos que hemos procedido a estudiar. Hasta el ejercicio 2007 el CNAE se toma de la columna CNAE-93 Rev1 y para los ejercicios del 2008 en adelante se toma el CNAE de la columna CNAE-2009. Fuente: Elaboración propia a partir de datos del INE.

Fijados los universos, en una primera fase se ha determinado como índices económicos claves a estudiar en el periodo 2005-2009: tasa de empleo; cifra neta de negocios y volumen de exportaciones, dado que

son los que tienen un reflejo más inmediato y visible en el entorno socioeconómico. A continuación, para el examen de los índices económicos de referencias, se ha procedido a fijar las fuentes de extracción de los datos que pudieran resultar más fidedignas, obteniéndose como resultado: base de datos SABI para los datos de empleo y de cifra neta de negocios e ICEX para los datos referentes a las cifras de exportación.

RESULTADOS

Se ha llevado a cabo un análisis cualitativo de los cinco últimos años, ya que, además de ser el periodo medio de los estudios de datos históricos a largo plazo, también nos recoge información sobre el comportamiento de las empresas del sector en periodos de bonanza y en periodos de crisis económica. En consecuencia, tomando como base el ejercicio 2005, los resultados del análisis cualitativo realizado para cada uno de los índices seleccionados son los siguientes. El primer índice económico estudiado ha sido la tasa de empleo, dado que es el índice que más ha sufrido las consecuencias de la actual crisis económica. Los resultados de su análisis los vemos en la tabla 5.

Tabla 8: Evolución de la Tasa de Empleo para el sector y para ACICAE

Tasa de Empleo	2005		2006		2007		2008		2009	
	Total	%	Total	%	Total	%	Total	%	Total	%
CNAE 292 y 293 España	86.803,00	100,00%	85.806,00	98,85%	84.029,00	96,80%	96.775,00	111,49%	82.606,00	95,16%
CNAE 292 y 293 ACICAE	4.218,00	100,00%	4.125,00	97,80%	5.440,00	128,97%	5.678,00	134,61%	5.037,00	119,42%

Tomando como base el año 2005 para España la tendencia ha sido de pérdida paulatina, mientras que las empresas socias del sector en ACICAE mejoran a partir de 2007 la tasa de empleabilidad respecto a 2005. Fuente: Elaboración propia a partir de la base de datos SABI.

En cuanto al segundo índice económico estudiado, este ha sido la cifra neta de negocios, por ser la segunda en orden de incidencia de la crisis económica actual. Tratamos de averiguar si la evolución de las empresas pertenecientes al cluster es mejor que en el resto del Estado. En la tabla 6 aparecen los resultados del análisis realizado.

Tabla 9: Evolución Cifra Neta Negocios para el sector y para ACICAE en miles de euros

Cifra Neta de Negocios	2005		2006		2007		2008		2009	
	Total	%	Total	%	Total	%	Total	%	Total	%
CNAE 292 y 293 España	17.077,00	100,00%	17.792,00	104,19	18.894,00	110,64	20.819,00	121,91	15.555,00	91,09
CNAE 292 y 293 ACICAE	1.054,00	100,00%	1.017,00	96,49	1.160,00	110,06	1.030,00	97,22	1.158,00	109,87

El sector, a nivel estatal, presenta tendencia positiva hasta caer en 2009; este hecho se debe a las políticas de ayudas al sector del automóvil del Gobierno Español hasta 2008, inclusive. Por el contrario, la tendencia de los socios del sector en ACICAE presenta altibajos, manteniéndose cerca del año base y repuntando en 2009. Fuente: Elaboración propia a partir de la base de datos SABI.

El tercer y último índice económico objeto de estudio ha sido el volumen de exportaciones del sector. Este índice ha sido el último en sufrir los efectos de la crisis y se ha agravado desde el momento en que las economías de los países de la Unión Europea han comenzado a enfriarse, como puede apreciarse en los resultados que aparecen en la tabla 7.

Tabla 10: Evolución Volumen de Exportaciones para el sector y para ACICAE en miles de euros

Volumen de Exportaciones	2005		2006		2007		2008		2009	
	Total	%	Total	%	Total	%	Total	%	Total	%
CNAE 292 y 293 España	16.037,50	100,00%	16.281,53	101,52	16.101,05	100,40	14.834,88	92,50	11.453,48	71,42
CNAE 292 y 293 ACICAE	267,37	100,00%	297,63	111,31	319,99	119,68	321,02	120,06	323,25	120,90

La Cifra Neta de Negocios del sector en España presenta tendencia positiva hasta caer por debajo de la cifra de 2005 en 2008 momento en que las economías de la UE frenan su consumo. Por el contrario, la tendencia de los socios del sector en ACICAE es de clara mejora, ya que su evolución es positiva en todos los ejercicios objeto de estudio. Fuente elaboración propia a partir datos INE.

Como resumen, presentamos en las figuras siguientes los resultados para España y para los socios de ACICAE, en las que podemos apreciar la evolución de los índices estudiados.

Figura 1: Evolución índices económicos sector equipos y componentes automoción en España

Se puede apreciar la tendencia general a la baja, exceptuando el ejercicio 2008, donde las ayudas al sector del automóvil adquirieron su mayor volumen respecto a ejercicios anteriores. A pesar de todo el sector muestra estabilidad si tenemos en cuenta la situación general de la industria en España.

Figura 2: Evolución índices económicos sector equipos y componentes automoción en ACICAE

En el caso de ACICAE se comienza con una bajada en el empleo, producto del ajuste de plantillas a la nueva situación, para evolucionar de forma positiva el resto de los ejercicios, hasta el 2009 en que sufre una nueva caída. El resto de índices se mantienen estables en el tiempo sin apenas fluctuaciones y siempre con tendencia positiva.

A continuación presentamos las figuras comparativas España-socios del sector en ACICAE de los índices económicos, en peso relativo.

Figura 3: Comparativo tasa de empleo España-ACICAE en %

A pesar que en el 2005 los datos de empleo son similares para los colectivos estudiados, en el 2007 la tasa de empleo de ACICAE se despega de la de España ofreciendo resultados mucho mejores que se mantienen en el tiempo, a pesar de que en 2009, ambos colectivos sufren un empeoramiento del indicador

Figura 4: Comparativo volumen negocio y volumen de exportación España-ACICAE en %

La cifra neta de negocios de las empresas del sector pertenecientes a ACICAE, en valores relativos, se mantiene en todo momento por encima de las empresas de España. En lo que se refiere al volumen de exportación el España muestra mejores resultados, a partir de 2007, mientras que los socios de ACICAE ofrecen resultados estables en el tiempo

CONCLUSIONES

Del análisis de la revisión de la literatura concluimos que los clusters, por sí mismos, no suponen una fuente de ventaja competitiva; ésta se hace realidad cuando asumen el modelo de Triple Helix en el que se interrelacionan al mismo nivel Gobierno-Universidad-Empresas. La estrategia clave sobre la que tienen que trabajar es la cooperación, para lo que es fundamental crear relaciones de confianza entre los miembros del cluster. El comportamiento de los índices económicos estudiados: tasa de empleo, cifra neta de negocios y volumen de exportaciones, es en general mejor en las empresas socias del cluster ACICAE que en el resto de las empresas del sector tanto en cantidades absolutas como relativas, lo que nos lleva a concluir que, sobre todo en el caso de PYMEs, la pertenencia a clusters o redes de empresas que potencian la colaboración cliente-proveedor, la mejora de la formación, la profundización en la internacionalización y la mejora de la logística están mejor preparadas para hacer frente a las épocas de crisis, por lo que el impacto en las mismas es menor. Una política regional de clusters o redes de empresas organizadas bajo el modelo de Triple Helix se presenta como una buena herramienta para que las empresas, en general y las PYMEs, en particular mejoren su ventaja competitiva de forma sostenible y estén mejor preparadas para resistir periodos de crisis generales y/o sectoriales.

THE CASE METHOD IN MEXICANS PUBLICS UNIVERSITIES

Manuela Camacho Gómez, Universidad Juárez Autónoma de Tabasco
Cecilia García Muñoz Aparicio, Universidad Juárez Autónoma de Tabasco
María del Carmen Ancona Alcocer, Universidad Juárez Autónoma de Tabasco

ABSTRACT

Public universities in Mexico have been characterized by the lectures, however, these are committed to ensuring the use and design of competitive materials, where the case studies play a crucial role as the student is the protagonist. The partial results presented in this paper correspond to a focused research to meet the need of the case method in the Bachelor of Marketing of public and private universities of the State of Tabasco, Mexico. The study's main objective is to analyze the use, design and creation of a Bank Business Case for the Degree in Marketing from the Academic Division of Economics and Administrative Sciences (DACEA) of the Universidad Juárez Autónoma de Tabasco (UJAT). The research was performed under the qualitative method with case study approach through three techniques: a) Analysis Documentary b) Application of questionnaires c) Application of semi-structured interviews. The analysis was a qualitative with significant findings on the use of case studies in the Bachelor of Marketing 11 universities.

KEY WORDS: Case Method, Marketing, Universidad Juárez Autónoma de Tabasco.

EL MÉTODO DE CASOS EN UNIVERSIDADES PÚBLICAS MEXICANAS

RESUMEN

Las universidades públicas en México se han caracterizado por las clases magistrales, sin embargo, estas se encuentran comprometidas a velar por el uso y diseño de materiales didácticos competitivos, donde los casos juegan un papel crucial ya que el estudiante es el protagonista. Los resultados parciales que se presentan en esta ponencia, corresponden a una investigación que se enfocó a conocer la necesidad del método de casos en la Licenciatura en Mercadotecnia de las universidades públicas y privadas del Estado de Tabasco, México. El estudio tiene como objetivo principal analizar el uso, diseño y creación de un Banco de Casos Empresariales para la Licenciatura en Mercadotecnia de la División Académica de Ciencias Económico Administrativas (DACEA) de la Universidad Juárez Autónoma de Tabasco (UJAT). La investigación se realiza bajo el método cualitativo con enfoque de estudio de casos a través de tres técnicas: a) Análisis Documental b) Aplicación de cuestionarios y c) Aplicación de entrevistas semi-estructuradas. El análisis fue de corte cualitativo con hallazgos significativos sobre el uso de los casos prácticos en la Licenciatura en Mercadotecnia de 11 universidades.

PALABRAS CLAVE: Método de caso, Marketing, Universidad Juárez Autónoma de Tabasco

INTRODUCCIÓN

En México, el uso del método del caso es especialmente utilizado en Escuelas de Negocios que de continuo son organizaciones privadas. Por su parte las instituciones públicas inician este proceso, impulsado por sus propios profesores, muchos de ellos formados en universidades particulares o en el extranjero. A nivel organismo, la Asociación Nacional de Facultades y Escuelas de Contaduría y Administración (ANFECA) ha dado impulso al método de caso a través de foros y convocatorias anuales para la escritura de casos por parte de profesores de universidades públicas y privadas.

A nivel internacional, los organismos supranacionales consideran en sus políticas el aprendizaje significativo que contemple estrategias didácticas acordes a la practicidad, tal como es el método de caso, el cual es el más usado por diversas universidades y escuelas de negocios nacionales e internacionales. El método de casos es el modelo educativo utilizado por universidades prestigiadas como Harvard en los Estados Unidos, el INCAE Business School en Costa Rica y Nicaragua y en México por el Instituto Panamericano de Alta Dirección de Empresas (IPADE) y el Instituto Tecnológico de Estudios Superiores de México (ITESM). En este contexto, la Licenciatura en Mercadotecnia (LEM) es una carrera propicia para utilizar la técnica didáctica del caso, sin embargo, es necesario apoyar el diseño de materiales para coadyuvar a la cualificación de los profesores con un enfoque de aprendizaje significativo hacia los estudiantes, que al mismo tiempo garantice la calidad de la enseñanza (Camacho, 2012).

En Tabasco, México, se asumió que en las universidades que imparten la Licenciatura en Mercadotecnia (LEM), no se utiliza el método de casos y tampoco se dispone de casos propios que pudieran coadyuvar al desarrollo de habilidades directivas y gerenciales de los estudiantes de LEM. Estas premisas conducirían a diseñar materiales didácticos aplicables al método de casos, para sustentar el inicio de un acervo proveniente de investigaciones empresariales y con aplicabilidad contextual que apoyen el egreso de capital humano con competencias requeridas por los mercados de trabajo y por el propio ambiente global de los negocios (Camacho, 2012).

REVISIÓN LITERARIA

El Método Del Caso En La Enseñanza

En esta ponencia, se asume el método de caso bajo su enfoque de enseñanza o instrucción. Se le aborda como ente didáctico, componente clave del aprendizaje significativo. El caso usualmente describe una situación específica y real de una organización empresarial, institución o personas, en un contexto y en un periodo dado. En consecuencia, para que exista un estudio de caso se requiere de una historia empresarial que contar, con alguien que la describa y otro que la escriba. Una vez concluido el caso, la academia contará con un “simulador de negocios escrito”, el cual podrá ser seleccionado por algún profesor o facilitador para alcanzar objetivos didácticos en sus asignaturas, cursos o seminarios. Estos beneficios serán aprovechados por los estudiantes o ejecutivos formados bajo este método (Camacho, 2011).

El caso trata es una forma práctica y atractiva para acercarse a la realidad empresarial o institucional, es una herramienta didáctica valiosa para que el estudiante o participante, se familiarice y adquiera rigor intelectual y ético en la detección y planteamiento de problemas y soluciones. En este contexto, los alumnos asumen la situación de quienes tienen la responsabilidad de decidir, y proceden a realizar un análisis y diagnóstico del problema y elaboran o proponen un plan de acción. De esta manera, el método del caso contribuye a formar el juicio del ejecutivo en el proceso de toma de decisiones, a adquirir habilidades interfuncionales y desarrollar una visión integradora aplicada a la gestión en un ambiente complejo, que permite mejorar la capacidad y estilo de dirección así como la adquisición de la disciplina intelectual para formular problemas y alternativas de solución (ESE n/d).

El método del Caso, se le asume también como una forma de enseñanza en la que los estudiantes deben involucrarse para aprender, ya que la técnica desencadena un proceso de pensamiento, de análisis, de solución de problemas o inclusive de evaluación y juicio. Bajo este supuesto, se trata de una práctica en una situación “real”, el caso; esto crea las habilidades del pensamiento que serán necesarias cuando se encuentren en situaciones reales de toma de decisiones. Es decir, se trata de la descripción de una determinada situación en la vida real ó una situación que atraviesa una persona u organización en un momento dado de su historia (Ogliastri, 1999, NACRA, n/d), CIC n/d, Naumes, 2006).

El método de caso como sistema formal de aprendizaje fue propuesto por la Universidad de Harvard para la enseñanza del Derecho, y posteriormente fue llevado a otras disciplinas, aunque originalmente surgió en la enseñanza de la Medicina a través de las historias clínicas (Powell y García, 2006).

Aprender Con Casos

En las universidades públicas, la enseñanza está basada en las clases magistrales y en el dominio de conocimientos del profesor. La alternativa es el uso didáctico de casos como un proceso pedagógico activo en lugar del proceso pasivo que resulta de las explicaciones en clase, con esta técnica, los estudiantes aprenden a través del análisis y actividades que realizan, esto implica que aprender haciendo provee un mayor y duradero aprendizaje. El método es más eficaz en grupos poco numerosos (Naumes, 2006). Esto quiere decir que, enseñar con casos, implica la atención de condiciones mínimas y competencias del profesorado para su buen uso y utilidad. De acuerdo con Ainciburu (2004), una forma de validar la eficacia y los beneficios del uso de Estudios de Caso en la instrucción, es la evaluación de situaciones reales y aplicación de conceptos a partir de ejemplos prácticos; aprender a desarrollar conceptos nuevos y a aplicar aquellos ya establecidos a situaciones novedosas; asimilación de ideas y conceptos que utilizan los estudiantes, el trabajo en grupo que constituye una preparación eficaz en los aspectos humanos de la gestión. En consecuencia, las condiciones que debe cumplir un estudio de caso para ser pedagógicamente útil desde el punto de vista económico son autenticidad, situación concreta sacada de la realidad, urgencia, ser una situación problemática que provoca un diagnóstico o una decisión. Debe ser por tanto, una situación que puede proporcionar información y formación en un dominio del conocimiento o de la acción del tema que se aborda a través del caso (Ainciburu, 2004).

METODOLOGÍA

Objetivo De La Investigación

Analizar el uso, diseño y creación de un Banco de Casos Empresariales en la Licenciatura en Mercadotecnia de la División Académica de Ciencias Económico Administrativas de la Universidad Juárez Autónoma de Tabasco.

Justificación De La Investigación

Tomando en cuenta que UJAT contempla dentro de su Plan Estratégico de Desarrollo 2006-2016 la formación del estudiante de manera integral y armónica, con actitudes críticas y emprendedoras y énfasis en la competitividad y compromiso con la sociedad (UJAT, 2006), se consideró relevante el desarrollo de la investigación. Esta forma parte de los trabajos que realiza el Cuerpo Académico de Estudios Estratégicos para Negocios e Instituciones (CAEENI) a través de la línea de generación y aplicación del conocimiento (LGAC) Mercadotecnia y Finanzas para negocios e instituciones. Los resultados de la investigación con estudiantes, profesores y empresarios, conducirán a la elaboración de casos prácticos adaptados al entorno geográfico- cultural- empresarial del Estado de Tabasco, México y de la Región Sureste, permitirá que los profesores estén provistos de una herramienta didáctica que fomente el aprendizaje significativo a través del uso de un método actual y competitivo en la impartición de sus materias. En consecuencia, la creación de un Banco de Casos facilitará la disponibilidad de materiales didácticos que coadyuven a estar a la vanguardia de las escuelas de negocios en un contexto adaptado y propicio para el desarrollo de competencias de los egresados de LEM y de las carreras y posgrados de las ciencias económico administrativas, con miras a una inserción más competitiva en los mercados de trabajo.

Diseño De La Investigación: En esta investigación se utilizó el método cualitativo mediante el estudio de casos a través de tres técnicas a saber: a) Análisis Documental b) Aplicación de cuestionarios, c) Aplicación de entrevistas y d) Observación participante. El análisis documental se realizó en bases de

datos especializadas, mediante revisiones exhaustivas en publicaciones especializadas, portales de IES y organismos relacionados con la escritura, uso y publicación de casos prácticos, así como tesis con las que cuenta la División Académica.

Población: La población objetivo fueron Profesores y estudiantes del área de Mercadotecnia de la Licenciatura en Mercadotecnia, correspondientes a 11 universidades del Estado de Tabasco y empresarios de la localidad y de la región. En esta ponencia se reportan hallazgos de 6 universidades, en su fase estudiantil

Técnicas de investigación: Además de la revisión documental, se diseñaron cuestionarios diferentes para profesores y estudiantes, considerando la información clave que provendría de cada informante clave, para lo cual se contempló al menos 4 dimensiones, el uso del caso, el dominio de la técnica por parte del profesor de casos, materia en la que se utiliza y utilidad del caso para la formación de competencias directivas y gerenciales (Ver Anexo 1). También se realizó el diseño de la guía de entrevista para empresarios, la cual se encuentra en proceso.

Cálculo de la muestra: La determinación de la muestra de la población de estudiantes (Ver Tabla 1) a quienes se les aplicaron los cuestionarios se llevó a cabo mediante un muestreo aleatorio estratificado, considerando los siguientes parámetros:

$N=1612$ (Población)

$Z_{95\%} = 1.96$ (Intervalo de Confianza)

$p = 50\%$ (Proporción de individuos que poseen en la población la característica de estudio.

$q = 50\%$ (proporción de individuos que no poseen esa característica, es decir, es $(1-p)$)

$e = 5\%$ (error muestral deseable)

$$n = \frac{(1.96)^2(0.5)(0.5)(1612)}{(1612-1)(0.05)^2 + (0.5)(0.5)(1.96)^2} = \frac{1548.16}{4.9879} = 310.38$$

$$n = 310$$

$$\frac{n}{N} = \frac{310}{1612} = 0.1923$$

Tabla 1: Muestras de estudiantes por universidad

	Universidad		Muestra
1	UM	11*(0.1923)	= 2
2	UAG	92*(0.1923)	= 18
3	UNID	42*(0.1923)	= 8
4	UTM	24*(0.1923)	= 5
5	UD	34*(0.1923)	= 7
6	IEU	70*(0.1923)	= 13
7	UMMA	30*(0.1923)	= 6
8	US	12*(0.1923)	= 2
9	UJAT	970*(0.1923)	= 187
10	UVM	28*(0.1923)	= 5
11	UPCH	299*(0.1923)	= 57
	TOTAL		310

Tiempo De Aplicación De Los Cuestionarios

Los instrumentos aplicados a estudiantes se llevaron a cabo en un periodo aproximado de 3 meses en el periodo de julio - septiembre 2011.

Tabla 2: Dimensiones Cuestionario Estudiantes

Pregunta	Alternativas a elegir
1.- ¿Conoces el método de casos? (Casos prácticos).	Si () Pasa a la pregunta 3 No ()
2.- ¿Te gustaría utilizarlos?	Si () No ()
3.- ¿Dentro de las actividades didácticas en tus materias, tus profesores incluyen la resolución de casos prácticos?	Si () No ()
4.- ¿De qué fuente provienen los casos prácticos que has resultado?	1. Libros de texto 2. Revistas 3. Bases de datos con casos 4. Otros (especificar)
5.- Aproximadamente, ¿Cuántos casos prácticos has resuelto durante tu carrera?	1. De 1 a 3 2. De 4 a 6 3. Más de 7
6.- ¿En qué materias has tenido la oportunidad de resolver casos prácticos?	6a. Investigación de mercados 6b. Mercadotecnia agroindustrial 6c. Mercadotecnia estratégica 6d. Comportamiento del consumidor 6e. Mercadotecnia internacional 6f. Publicidad y promoción de ventas 6g. Mercadotecnia de servicios 6h. Mercadotecnia social 6i. Consultoría 6j. Otras (especificar)_____
7.- ¿En qué momento del semestre les aplican en clase la resolución de casos prácticos?	1. Al inicio del semestre 2. A la mitad del semestre 3. Al final del semestre 4. Constantemente
8.- Considero que mis profesores dominan la aplicación del método del caso en clases.	1. Totalmente de acuerdo 2. De acuerdo 3. Neutral 4. En desacuerdo 5. Totalmente en desacuerdo
9.- ¿Cuál es la característica más importante para resolver un caso práctico?	1. La información actual de la empresa se encuentre en un contexto de éxito o amenaza 2. Presentar una situación real de las áreas funcionales de la empresa 3. Apoyarse en preguntas de discusión que generen debate 4. El profesor de casos aplica bien el método
10.- La aplicación de casos prácticos me permite como estudiante el fortalecimiento o desarrollo de mis competencias directivas y gerenciales.	1. Definitivamente sí 2. Posiblemente sí 3. Indeciso 4. Probablemente no 5. Definitivamente no
11.- ¿Cuál es tu opinión acerca de los casos prácticos? (selecciona una opción).	1. Me enseñan a tomar decisiones 2. Aplico los conocimientos de la teoría 3. No son aplicables a mi carrera 4. Hacen dinámica la clase 5. Funcionan como autoevaluación 6. Se deben emplear con más frecuencia en clases 7. Me ayudan a trabajar en equipo 8. Otras:_____
12.- Considero que las materias en que podría tener mayor utilización el uso de casos prácticos son (enumere del 1 al 3, donde 1 es el más importante):	6a. Investigación de mercados 6b. Mercadotecnia agroindustrial 6c. Mercadotecnia estratégica 6d. Comportamiento del consumidor 6e. Mercadotecnia internacional 6f. Publicidad y promoción de ventas 6g. Mercadotecnia de servicios 6h. Mercadotecnia social 6i. Consultoría 6j. Otras (especificar)_____

Confiabilidad Del Instrumento

Se aplicaron 30 cuestionarios piloto a estudiantes de la Licenciatura en Relaciones Comerciales y Mercadotecnia de la UJAT, y posteriormente, se mejoró el cuestionario para poder aplicarse a los estudiantes de mercadotecnia de las 11 universidades seleccionadas para éste estudio. Con estos datos se utilizó el software SPSS versión 17 para determinar el Alpha de Cronbach para estimar la confiabilidad de los instrumentos a aplicar tanto a profesores como estudiantes, el resultado fue de .087, con lo cual se

estimó un nivel óptimo para dar paso a las mejoras respectivas y posteriormente aplicar los cuestionarios definitivos a estudiantes de 11 universidades, de las cuales se reportan seis en esta ponencia (Ver tabla 2).

Aplicación De Cuestionarios Definitivos A Estudiantes.

Para los grupos de estudiantes que se reportan, se aplicaron un total de 246 cuestionarios a los estudiantes de mercadotecnia de las universidades 1, 2, 3, 4, 5 y 6 (Ver Tabla 3).

Tabla 3: Cuestionarios aplicados a estudiantes de tres universidades

Universidad	No. De Cuestionarios aplicados
Universidad 1	37
Universidad 2	7
Universidad 3	187
Universidad 4	2
Universidad 5	5
Universidad 6	6
Universidad 7	2
Total	246

Procedimiento Para El Análisis De Datos

Una vez hecho el trabajo de campo, se procedió al análisis cualitativo con tablas de doble entrada, sobre la información obtenida en los 246 cuestionarios aplicados a estudiantes de 6 universidades que se reportan. Asimismo, en la etapa actual se revisan e interpretan los materiales que proporcionan las empresas participantes. De éstas se tienen contemplado la invitación a 25 de ellas que estén ubicadas en la localidad o en la región. De las empresas que proporcionen información sobre algún periodo de su empresa, se elegirán 10 cuyas situaciones sean apropiadas y suficientes para generar Estudios de Casos para la enseñanza. Con estos datos y la proveniente de profesores, se dará curso a la segunda parte del proyecto que consistirá en escribir los casos prácticos de las áreas de la carrera donde podría ser prioritario su uso. Para ello se identificarán primero las sub áreas de Mercadotecnia: Producto, Imagen Corporativa, Comunicaciones integradas, Publicidad, Promoción de Ventas, Distribución, Logística.

Después se determinarán las materias donde podrían aplicarse, se definirán los objetivos didácticos del caso y se determinará la situación a ser analizada así como la elaboración de las preguntas relacionadas con el caso, tanto las que serán utilizadas por el profesor como las que responderá el estudiante. Se describirán con detalle los procedimientos de manera ordenada, sistemática y coherente que se aplicarán para alcanzar los objetivos. Se informará cuál es el diseño del estudio, las técnicas, los procedimientos y análisis de datos que se utilizarán para alcanzar los objetivos propuestos.

RESULTADOS

Después de analizar los 246 cuestionarios aplicados a estudiantes de la Licenciatura en Mercadotecnia de las seis universidades de referencia, se encontró que las edades de los estudiantes entrevistados se ubican en el rango de los 19 a los 44 años. Se destacan las respuestas más significativas (Ver Tabla 4).

Tabla 4: Principales resultados obtenidos

Pregunta	UD	UJAT	UM	UMMA	US	UVM
1 ¿Conoces el método de casos?	Si 100%	Si 72%	Si 100%	67% No	Si 100%	60% No
2 ¿De qué fuente provienen los casos prácticos que has resuelto?	El 50% Libros de texto 50% de base de datos.	56% Libros de texto	Libros de texto 100%	67% Libros de texto	100% Libros de texto	67% Revistas 15% Mercadotecnia estratégica, 15% Mercadotecnia Internacional, 15% en Mercadotecnia agroindustrial
3 ¿En qué materias has tenido la oportunidad de resolver casos prácticos?	19% Investigación de mercados, 18% Consultoría, 9% Mercadotecnia estratégica	20% Investigación de mercados, 16% Comportamiento del consumidor, 12% Mercadotecnia Estratégica	33% Comportamiento del consumidor, 17% Mercadotecnia internacional, 17% Mercadotecnia Estratégica	30% Otras (no definieron cuáles), 20% Investigación de mercados, 20% Mercadotecnia Social.	19% Investigación de mercado, 18% Mercadotecnia de servicios, 18% Publicidad y promoción de ventas	
4 ¿En qué momento del semestre les aplican en clase la resolución de casos prácticos?	75% A mitad del semestre	A mitad del semestre 49.7%	El 50% A la mitad del semestre Constantemente.	50% A mitad del semestre	100% Al inicio de semestre	40% A mitad del semestre, 40% Al final del semestre
5 Considero que mis profesores dominan la aplicación del método del caso en clases	75% Si está totalmente de acuerdo	De acuerdo 45%	100% De acuerdo	50% Totalmente de acuerdo	50% Totalmente de acuerdo, 50% De acuerdo	40% Totalmente de acuerdo, 40% Neutral

CONCLUSIONES

En las universidades mexicanas, en lo que corresponde a la Licenciatura en Mercadotecnia impartida en IES del Estado de Tabasco, se pudo conocer el nivel de conocimiento, utilización y beneficios percibidos sobre el método de casos. El cual según las respuestas de los estudiantes, puede considerarse como un material didáctico apropiado para la profesión, así lo refieren los informantes de seis universidades, quienes destacan el conocimiento sobre el método, su uso, el dominio de la técnica por parte de sus profesores, la formación de competencias directivas y las materias en las que es más propicio su utilización, especialmente refieren investigación de mercados, publicidad y promoción de ventas, mercadotecnia internacional, mercadotecnia social y comportamiento del consumidor. En este sentido, los casos provenientes de investigaciones empresariales, constituirán una fuente de materiales didácticos para apoyar la formación del capital humano que posteriormente ingresará al mercado laboral.

LA COMUNICACIÓN Y EL GRADO DE SATISFACCIÓN EN LAS RELACIONES INTERPERSONALES DE LOS TRABAJADORES DE UNA PEQUEÑA EMPRESA DE LA INDUSTRIA METAL MECÁNICA

Ma. Guadalupe Día Díaz, Universidad Autónoma de Coahuila-México
Maricela Carolina Peña Cárdenas, Universidad Autónoma de Coahuila-México
Ana Karen González Martínez, Universidad Autónoma de Coahuila-México

RESUMEN

El presente trabajo de investigación se llevó a cabo con la finalidad de identificar si existe relación entre la variable comunicación con las de supervisión y compañeros de trabajo respecto a la satisfacción laboral de los trabajadores administrativos y operativos de una Pequeña Empresa de la industria metal-mecánica ubicada en Frontera, Coahuila. El estudio se realizó a un consenso de 35 trabajadores, aplicando un cuestionario estructurado, tipo escala de Likert, que consta de 40 reactivos correspondientes a 10 variables; para la fiabilidad del instrumento se utilizó la prueba Alfa de Cronbach, obteniéndose un coeficiente de consistencia interna de 0.89. Los resultados obtenidos son: que la variable comunicación no muestra una correlación significativa con las variables de supervisión y compañeros, sin embargo estas últimas sí se correlacionan significativamente.

PALABRAS CLAVE: Comunicación, satisfacción laboral, relaciones interpersonales

ABSTRACT

The paper has developed a study to identify the correlation between the variable communication with Monitoring and co-workers about job satisfaction of administrative workers and operating a small business in the metal working industry located in Frontera, Coahuila, México. The study was conducted as a consensus of 35 workers, using a structured questionnaire, Likert type scale, consisting of 40 reagents for 10 variables, the reliability of the test instrument was used Chronbach's alpha, yielding a coefficient of internal consistency 0.89. The results are that, the communication variable shows non significant correlation with the variables of supervision and co workers, but the latter does not correlate significantly.

KEYWORDS: communication, Job satisfaction, relationship.

INTRODUCCIÓN

En el presente, la contribución que generan las Pymes a nivel mundial, al crecimiento económico, a la competitividad, innovación y generación de empleos, en sus países de origen, ha creado un gran interés en su estudio tanto por instituciones privadas como educativas y de gobierno para crear propuestas, estrategias, políticas o programas, que permitan su crecimiento en el mercado y el éxito competitivo. No es la excepción el interés de estudiar el comportamiento de las personas en el contexto de las empresas, ya que su desempeño es fundamental para el logro de los objetivos y, por ello, ha aumentado la preocupación de los directivos por encontrar la manera de incrementar la satisfacción en las relaciones interpersonales de los trabajadores, es así que éste estudio tiene por objetivo identificar si existe relación entre la variable comunicación con las de supervisión y compañeros de trabajo respecto a la satisfacción laboral de los trabajadores de una pequeña empresa de la industria metal mecánica ubicada en Frontera, Coahuila denominada "Fabricaciones mecánicas Santoyo S.A.de C.V.". Dicha organización

fue fundada en el año de 1972, y a la fecha está conformada por 35 personas. A nivel gerencial existe un Director (fundador y dueño de la empresa), lo secunda su hijo que ocupa el puesto de subgerente, quien ingresó desde hace 26 años y en ese transcurso de tiempo ha sido preparado para la sucesión.

REVISIÓN LITERARIA

El mundo de los negocios, en los últimos años, se ha caracterizado por una serie de retos y cambios de diferente índole, se ha originado un creciente interés a nivel mundial por observar el comportamiento y desarrollo de las PyMes y por responder a interrogantes respecto a los factores que las dirigen a la supervivencia y al éxito competitivo, siendo el recurso humano foco de interés y preocupación de los directivos para encontrar la manera de aumentar su desempeño y satisfacción en el trabajo.

Peña et. al. (2011) cita a Chiang y Vega (2011) al hacer referencia de falta de una definición unánimemente aceptada sobre el concepto de *Satisfacción Laboral*, ya que el elemento humano es clave para obtener resultados positivos. Al respecto, Caballero (2002) cita a Weinert (1985) quien destaca “cómo, en el conjunto de las organizaciones, aspectos psicológicos tan importantes como las reacciones afectivas y cognitivas despiertan, en el seno de las mismas, niveles de satisfacción e insatisfacción”.

La satisfacción laboral, puede ser definida desde diferentes perspectivas, por lo que cada autor elabora una nueva definición según el desarrollo de su propia investigación. Existe una serie de definiciones de diferentes autores que hacen referencia a la satisfacción laboral como un estado emocional, sentimientos o respuestas afectivas, tal como se muestra en la tabla 1

Tabla 1: Definiciones de Satisfacción Laboral (Como estado emocional, sentimientos o respuestas afectivas)

Año	Autor	Definición
1969	Smith, Kendall & Hulin	Sentimientos o respuestas afectivas referidas, en este caso, a facetas específicas de la situación laboral.
1990	Mueller & McCloskey	Una orientación afectiva positiva hacia el empleo.
1993	Newstron & Davis	Un conjunto de sentimientos y emocionales favorables o desfavorables con las que los empleados ven su trabajo.

Fuente: Chiang, Martín & Núñez (2010)

Otros autores consideran que la satisfacción laboral, va mas allá de las emociones generadas en y por el trabajo, la definen como una actitud generalizada ante el trabajo, es decir... al ser considerada una actitud, supone una evaluación que alude simultáneamente al afecto, a la cognición y a las disposiciones conductuales, tal como lo considera Robbins (2004) quien define la satisfacción laboral como “*la actitud general del individuo hacia su trabajo*”. En el que las actitudes tienen 3 componentes: el afectivo (parte emocional o sentimental de la actitud), Cognitivo (Opinión o creencias de la actitud) y Conductual (Intención de comportarse de cierta manera hacia alguien o algo).

Una persona satisfecha con el trabajo, tiene actitudes positivas, mientras que aquella que se siente insatisfecha alberga actitudes negativas. Los problemas de motivación y de satisfacción laboral en las empresas, responde al hecho de que, por un lado, aunque la motivación como proceso interno sigue un patrón similar en las personas, las necesidades varían de individuo a individuo y marcan diferencias en las pautas de conducta; por el otro lado, no hay un solo factor determinante de la satisfacción laboral, al ser ésta multidimensional y presentar varias facetas. Unas de las teorías motivacionales que nos puede ayudar a interpretar como se produce la satisfacción laboral del personal de la Pequeña empresa objeto de estudio, es la teoría de Motivación e Higiene de Herzberg, propuesta en 1959. Dicha teoría se basa en dos factores: el de satisfacción o intrínseco y el de insatisfacción o extrínseco también llamado factor higiénico. El primer factor se refiere a las condiciones que tienen relación directa con el contenido del puesto de trabajo que producen un efecto de satisfacción y está integrado por las siguientes categorías: ascensos, el trabajo en sí mismo, el sentido del logro, posibilidades de crecimiento, responsabilidad y reconocimiento. El segundo factor mencionado (insatisfacción), se refiere a las condiciones que rodean al

individuo al realizar su trabajo y que pueden ser psicológicamente poco saludables para el trabajador, el cual está integrado por categorías tales como: condiciones de trabajo, administración y políticas de la empresa, relaciones interpersonales con los compañeros de trabajo, relaciones interpersonales con el supervisor o jefe inmediato, supervisión técnica, salarios y prestaciones, seguridad en el trabajo, status y vida personal. (Herzberg et al. 1987).

Por otro lado, alguna de las variables que Spector (1895) considera producen satisfacción laboral, son entre otras, la supervisión, compañeros de trabajo y comunicación. Mismas que a continuación analizaremos. Por su parte, Mosley et.al (2005) define la supervisión laboral como aquel proceso mediante el cual un individuo con conocimientos y experiencia superior, asume la responsabilidad de dirigir a otros, para obtener con ellos resultados que les son comunes y de interés; en el que la supervisión está relacionado con el liderazgo y es usado para influir en los empleados. Una de las tipologías más aceptadas a través de las últimas décadas en el enfoque de liderazgo y utilizadas por supervisores, es el *Transformacional y el transaccional*. Bass (1985) identifica la diferencia entre un estilo transaccional y uno transformacional, ya que radica en que es lo que los líderes y seguidores ofrecen unos a otros. Los líderes Transformacionales ofrecen una visión y se enfocan en necesidades internas de orden mayor, por ello inspira carisma, estimación intelectual sobre todo porque proporciona a sus seguidores atención personalizada para instruir y aconsejar individualmente a los miembros de su equipo.

En contraste con los líderes transaccionales se focalizan en el adecuado intercambio de recursos, en el que el punto clave es la relación de influencia mutua. Si bien los dos estilos tienen características distintivas, no representan los extremos, sino que son enfoques complementarios, por lo que se destila a la fecha, es la conjugación de los dos. El enfoque de la supervisión en nuestros tiempos es el desarrollo del trabajo en equipo, actitud de apoyo y soporte, cambios que aumenten la motivación, habilidades de escuchar a los demás, responsabilidad compartida, y comunicación más amplia horizontal y externa.

Alguno de los retos actuales que enfrentan los supervisores, son el tratar con una fuerza de trabajo más diversa, hacer frente a una tecnología creciente, a los cambios ocupacionales e industriales que les demanda el mercado, satisfacer los desafíos globales bajo un comportamiento ético y bajo el concepto de compañerismo laboral. Se entiende por compañero de trabajo al individuo(s) que forma(n) parte de una colectividad. Este se da en equipos de trabajo en una empresa o bien percibir a toda la organización como compañeros, esta depende del tamaño de la empresa. Pero para entender el desenvolvimiento de las personas en una sociedad, es necesario recurrir a la definición de comunicación; define Sígala (2003) que la comunicación es la trasmisión de señales, signos o pensamientos a través de un lenguaje o código conocido tanto por el transmisor como el receptor. Además hay estudiosos que identifican con claridad la comunicación empresarial. Cita Saló (2005) que la comunicación en la empresa, es un proceso dinámico e irreversible, intencional, complejo, mediante el cual intercambiamos e interpretamos mensajes significativos en un contexto determinado. Esta puede ser:

- Externa: Intercambio de información entre la empresa y su entorno. Como ejemplo esta la comunicación Institucional (mantiene e incrementa la imagen positiva frente a los consumidores, accionistas, proveedores), comercial (conocida como de Marketing y tiene como función principal elaborar y transmitir productos que ofrece la empresa. Gestiona la marca y productos) y financiera (proyecta una visión favorable en el ámbito financiero sobre las perspectivas y la situación general de la empresa en términos de rentabilidad financiera)
- Interna: Intercambio de información entre los miembros de la empresa. Ejemplo de ello la comunicación en el ámbito Social (se dirige a las personas que forman parte de la empresa. Existe un elemento imprescindible para la buena marcha y es que el personal se sienta implicado y comprometido con el proyecto de la misma)

La comunicación interna se puede dividir en función de su contenido en:

- Operacional: se engloban todos los mensajes relativos al trabajo.
- Motivacional: Mensajes que favorecen el sentido de pertenencia y buen clima de trabajo.

Por lo que se percibe, es la comunicación interna la que mayormente favorece para crear buenas relaciones laborales que produzcan beneficios de satisfacción laboral en el personal de la empresa.

METODOLOGÍA

El diseño metodológico corresponde a una investigación de campo, transversal, de tipo descriptivo y cuantitativa. La Muestra se determinó por consenso ya que incluye a las 35 personas, población total la empresa. La información se recolecto a través de un cuestionario en base al JSS, *Job Satisfaction Survey de Spector* (1985), el cual consta de 36 preguntas en 9 variables (4 reactivos de cada variable). Para esta investigación se consideró las variables de supervisión, compañeros de trabajo y comunicación. El instrumento es tipo escala de Likert, con 6 opciones de respuesta (1. Muy en desacuerdo, 2. Moderadamente en desacuerdo, 3. En desacuerdo, 4. De acuerdo, 5. Moderadamente de acuerdo y 6. Muy de acuerdo). Para determinar la confiabilidad del instrumento de medición se realizó un estudio piloto, cuyos resultados fueron sometidos a la prueba de Alfa de Cronbach utilizando el programa estadístico SPSS (versión 17.0), obteniéndose un coeficiente de consistencia interna de 0.89, el cual es considerado aceptable Una vez tabulados los datos, se les sometió a tratamiento estadístico, usando el programa SSPS (versión 17.0).

RESULTADOS Y CONCLUSIONES

Las Medias globales obtenidas de las tres Variables comprendidas en el presente estudio, se presentan en la Tabla siguiente.

Tabla 2: Medias globales y desviaciones estándar de las 3 variables.

Variables	Media	DS
Compañeros de trabajo	3.79	0.90
Comunicación	3.61	0.91
Supervisión	3.58	0.87

En esta tabla se muestra medias globales y desviaciones estándar de las variables Compañeros de trabajo, Comunicación y Supervisión.

Como se puede observar, la Media más alta corresponde a la variable *compañeros de trabajo*. Por lo que los trabajadores dan mayor importancia a las relaciones interpersonales entre sus compañeros de trabajo predominantemente, seguido de la comunicación, la cual se percibe de acuerdo a Saló (2005) que el personal sujeto de estudio percibe la comunicación empresarial interna, como aceptable.

Tabla 3: Coeficientes de Correlación de Pearson de las 3 variables

	Comunicación	Supervisión	Compañeros de T.
Comunicación			
Supervisión	.593**		
Compañeros de T.	.529**	.621**	

En esta tabla se muestra los Coeficientes de correlación de Pearson de las variables Compañeros de trabajo, Comunicación y Supervisión. * La correlación es significativa al nivel 0.05. ** La correlación es significativa al nivel 0.01.

Se observa en la tabla anterior, que la mayoría de los coeficientes muestran niveles de significancia de 0.01 y 0.05, pero el único con valor superior a 0.6 que es el límite a considerar para afirmar que si existe correlación es *Supervisión con Compañeros de trabajo* para producir buenas relaciones interpersonales que favorecen la satisfacción en el trabajo. La variable comunicación no muestra tan alta correlación con

supervisión y compañeros de trabajo. Se concluye que la teoría motivacional de Higiene de Herzberg, siendo los factores extrínsecos o higiénicos los que producen satisfacción laboral.

FIESTA, FOLKLORE Y TRADICIÓN PATRIMONIO DE AGUASCALIENTES

Araceli Gutiérrez Guzmán, Universidad Autónoma de Aguascalientes
Haydeé Aguilar Romero, Universidad Autónoma de Aguascalientes
José Gabriel de la Rosa Ponce, Universidad Autónoma de Aguascalientes
Juan Carlos Moreno Aguilera, Universidad Autónoma de Aguascalientes

RESUMEN

Aguascalientes es un estado que se ubica en la región centro-norte del país y cuenta con un clima muy agradable la mayor parte del año. Actualmente se tienen 327 atractivos en su inventario turístico, los cuales están presentes en todos los municipios que conforman al Estado de Aguascalientes. Claros ejemplos son sus barrios, templos, plazas, jardines, monumentos arquitectónicos, museos, plazas de toros, balnearios y eventos tradicionales como la Feria Nacional de San Marcos, una de las mejores y más antiguas muestras del folklore y la cultura de la región, con sus exposiciones artísticas, eventos culturales, bailes y peleas de gallos. El Festival de las Calaveras, surge con el objeto de rescatar y preservar nuestras tradiciones del culto a los muertos, así como para rendir homenaje a uno de los más grandes artistas plásticos de México, reconocido a nivel mundial, José Guadalupe Posadas. Aguascalientes, es una ciudad con Patrimonio Cultural, la caracterizan elementos en el ámbito cultural y social, como su Historia en la que se manifiesta rasgos de época pasada, y el Museo Nacional de la Muerte con acervo de casi 2 mil objetos relativos al tema -coleccionados a lo largo de medio siglo por el grabador Octavio Bajonero Gil.

INTRODUCCIÓN

México es un país con grandes riquezas y atractivos turísticos; siendo su patrimonio todos aquellos elementos con los que cuenta como su cultura que se manifiesta a través de sus fiestas y tradiciones, tal es el caso de las Fiestas populares en que se conjuntan tres conceptos: la fiesta, la ceremonia y el rito, pues la mayoría de estas, ha sido establecida por la Iglesia católica, por las autoridades, deseosas de celebrar un acontecimiento notable, las costumbres y el carácter anfitrión de las personas, etc. Aguascalientes, es sin duda una ciudad con Patrimonio Cultural, ya que cuenta con elementos que lo caracterizan en el ámbito cultural y social, como su Historia en la que se manifiesta rasgos de época pasada, así también se manifiesta el hombre contemporáneo con una finalidad establecida y dependen de la inventiva de éste, para manifestar y difundir la cultura o prestar algún servicio. Por lo anterior consideramos que el presente trabajo es una recopilación de la historia y cultura del Estado de Aguascalientes, que se manifiesta a través de las costumbres y tradiciones, que se mantienen vivas en la población.

REVISIÓN LITERARIA

Las ferias, manifestaciones religiosas, música, danza, artesanía y artes son tipos de atractivos turísticos que pertenecen a la categoría del folklore, según la clasificación, todavía vigente que la Secretaría de Turismo realizó en el año de 1979. Las ferias y eventos programados son “atractivos susceptibles de crearse y que pueden ubicarse en cualquier parte del país” (Torruco Marqués & Ramírez Blanco, 1991). El Patrimonio cultural está formado por los bienes y testimonios culturales que han seleccionado los grupos dominantes a lo largo de la historia. El concepto se construye a partir de lo que se reconoce como patrimonio cultural universal y lo que se distingue como patrimonio cultural propio, representativo de la nación. Ante foros internacionales, el gobierno mexicano definió en 1982 lo que considera patrimonio cultural: “las obras de sus artistas, arquitectos, músicos, escritores y sabios, así como las creaciones anónimas surgidas del alma popular y el conjunto de valores que dan sentido a la vida. Es decir, las obras

materiales y no materiales que expresan la creatividad de un pueblo: la lengua, los ritos, las creencias, los lugares y monumentos históricos, la literatura, las obras de arte, los archivos y bibliotecas (UNESCO, 1982:45). Es un hecho que la definición dista mucho de referirse exclusivamente a lo monumental, a lo artístico y a las joyas arquitectónicas que se han considerado únicas desde los puntos de vista de la historia y de la estética, sino que se ha ampliado, al contemplar las creaciones anónimas surgidas del alma popular; lo que abarca las tecnologías tradicionales, asentamientos y muchos factores más.

Visto así el patrimonio cultural arqueológico, histórico y artístico, que casi siempre se refiere a los testimonios de los grupos dominantes, a los productos de la alta cultura, como son los templos y palacios, centros ceremoniales y objetos pertenecientes a personas de la alta escala social, se ha abierto y actualmente absorbe objetos que se producen en el pueblo. En el siglo XIX apareció en Europa una corriente romántica que descubrió en las tradiciones populares... en la música, en el folklore, la literatura y el arte, la esencia del carácter nacional (Florescano, 1993:9). En México nació el deseo de crear una identidad propia, asentada en el pasado y en el reconocimiento de valores culturales propio de los grupos sociales del territorio nacional; esta idea se extendió entre los intelectuales, finiseculares, pero pronto chocó con las ideas etnocentristas de los grupos cultos de ese momento. A pesar de todo, se rompió con el monopolio cultural y se revaloró la conciencia histórica, lo que despertó al nacionalismo y resaltó identidades. Es un hecho reconocido que una de las grandes hazañas del Estado que surgió de la Revolución de 1910 fue haber creado una noción de identidad nacional y de patrimonio cultural aceptado por vastos sectores de la población. El movimiento revolucionario de 1910 reconoció un pasado prehispánico en las tradiciones de los grupos indígenas y de las masas de campesinos populares, que se identificaron como lo genuino del alma nacional.

Si todos los pueblos tienen cultura, si poseen o manejan un acervo de maneras de hacer y entender, su actuar se traduce en creación o apropiación de bienes materiales que se añaden a los ya existentes, o los sustituyen. Así se crea y se recrea el patrimonio cultural de cada pueblo, patrimonio integrado por los objetos que se mantienen vigentes, bien con el sentido y significados originales, o bien como parte de una memoria histórica (Bonfil, 1993:21). De esta manera el patrimonio cultural no se restringe a los rasgos materiales del pasado, sino que abarca hechos que corresponden a esferas diferentes de cultura, como son las costumbres, las formas de expresión simbólica y los comportamientos, entre otros. Las concepciones sobre el patrimonio cultural, así como las políticas dedicadas a su estudio conservación y difusión se relacionan según Enrique Florescano con cuatro elementos que son dinámicos y variables:

- a) En cada época, las sociedades rescatan el pasado de manera diferente, y seleccionan de ese pasado ciertos bienes y testimonios que en esa época se identifican con el concepto que se tiene del patrimonio cultural del presente con el pasado.
- b) La mayoría de las veces esta selección de bienes y manifestaciones culturales es realizada por las clases sociales dominantes, de acuerdo con sus intereses. En un Estado nacional, la formación de categoría de patrimonio cultural se define a partir de una oposición entre lo que se considera patrimonio cultural universal y lo que se reconoce como patrimonio cultural propio, característico de la nación.
- c) Como el patrimonio cultural es producto de un proceso histórico, dinámico, una categoría que se va conformando a partir de la conformación e interacción de las distintas clases sociales que constituyen un país, el uso que se hace del patrimonio cultural está determinado por las diferencias de clases que concurren al seno de la sociedad nacional.

Objetivo General

Conservar y preservar las costumbres y tradiciones mexicanas a través de la promoción turística al Estado tanto a nivel nacional como internacional.

Objetivos Especificos

- Incrementar el número de visitantes al Estado de Aguascalientes, promoviendo sus festividades que manifiestan la cultura de la ciudad, obteniendo así mayor beneficios económicos con la generación de empleos.
- Colaborar en el desarrollo del Estado mediante la difusión y promoción de las festividades que son apropiadas para el intercambio cultural de anfitriones y visitantes.

METODO DE INVESTIGACIÓN

El diseño de la investigación del presente trabajo fue de tipo documental, literaria, descriptiva y participativa, buscando especificar el cumplimiento de los objetivos y características del Patrimonio Cultural del Estado de Aguascalientes. Además de describir los elementos que identifican a la población. Además en el presente trabajo se llevó una recopilación de documentación de manera directa con las dependencias.

Fiestas Y Eventos Tradicionales En Aguascalientes.

La Feria Nacional de San Marcos, es el festejo popular más importante de México realizado en la ciudad de Aguascalientes en honor a San Marcos santo Patrono, durante la verbena abrileña, con una historia de más de 180 años de tradición. A partir de su instalación en el Parían en la segunda década del Siglo XIX, se fue enriqueciendo como oportunidad de intercambio tanto comercial como sociocultural, rasgos que la distinguen hasta la época actual. Actualmente conocida como la “Feria de Todos” y considerada una Feria de importancia nacional en nuestro País y de gran prestigio a nivel internacional. Integrada en los últimos años por diversos eventos artísticos, culturales, y sociales abiertos a todo público; exposiciones comerciales, ganaderas y de tecnología; además diversión nocturna como antros, casinos y restaurantes, entre otros se ha ido fortaleciendo para ofrecer tanto a residentes como a turistas, diversas semanas de escape de la vida rutinaria. Es una celebración que lleva desde la coronación a la Reina de la Feria hasta el serial taurino más importante de Latinoamérica donde se presentan las máximas figuras del toreo a nivel mundial. Campeonato Nacional Charro, tradición del deporte nacional mexicano. Peleas de Gallos, donde participan bandos de todo el país y donde se presentan los más reconocidos artistas del momento durante la variedad del palenque. Aguascalientes es un lugar formidable para realizar turismo religioso ya que cuenta con majestuosos monumentos, hermosos edificios e impresionantes templos que son estructuras arquitectónicas inigualables y de gran riqueza cultural.

La mayor fiesta está en torno a la Romería de Nuestra Señora de la Asunción, durante el mes de agosto de cada año la Catedral-Basílica, es escenario de las peregrinaciones que con motivo se llevan a cabo 3 semanas antes del día 15 de agosto y cuya celebración se viene realizando desde el año 1741 en el que el ilustrísimo Dr. Don Juan Gómez de Parada decreto la celebración de la fiesta de la Asunción, celebración que a partir del año 1936 se conjunta con el Quincenario. La Romería culmina con el desfile de carros alegóricos adornados con motivos frutales, verbenas y diversiones populares con innumerables comparsas representadas por bandas de guerra, danzantes-matlachines, bandas musicales, mariachis, estudiantinas, charros y sus escaramuzas, así como grupos religiosos juveniles que enmarcan el transcurso de vistosos y espectaculares carros alegóricos con temas bíblicos que relatan la vida de la Virgen.

Otra de las manifestaciones culturales para la población de Aguascalientes es sin duda el culto a los muertos una tradición que se ha convertido en uno de los atractivos turísticos culturales en el Estado, como lo es el Festival de las Calaveras, que surge con el objeto de rescatar y preservar nuestras tradiciones del culto a los muertos, así como para rendir homenaje a uno de los más grandes artistas plásticos de México, reconocido a nivel mundial, José Guadalupe Posadas.

Este ilustre grabador y dibujante nacido en Aguascalientes, hizo famosa a “La Catrina”, anfitriona del gran Festival de las Calaveras, un espectáculo lleno de color, folklore y tradición que se ha convertido en una tradición para la población, así como un elemento que ha incrementado considerablemente el número de turistas que visitan la ciudad de Aguascalientes. Celebración donde hay exposiciones de pintura, grabados y fotografías, variedad de eventos musicales, obras de teatro con representaciones de leyendas de la entidad, concursos, pabellones, gastronomía, cultura, presentaciones de grupo de danza, y corridas de toros. Durante el Festival se tienen exposiciones de altares de muertos que son acompañados por las jocosas calaveras literarias como “cuenta tu calavera”, así como caminatas nocturnas llevadas a cabo en el Cerro del Muerto, su desfile de Calaveras que recorre las calles del centro de la ciudad en el que pueden admirarse un sin número de alusiones a la muerte.

La Isla San Marcos es el Complejo ferial inaugurado en el 2006. Su extensión abarca 44 hectáreas desarrolladas en un ambiente ecológico dedicado cien por ciento a la familia. Este desarrollo al aire libre cuenta con un lago artificial con fuentes centrales, un zoológico con animales propios del centro y bajío de México, un reloj mecánico; el más grande de Latinoamérica con más de 27 metros de diámetro y por último la montaña rusa Tsunami; única en México con cuatro rizos. Dentro de la isla se encuentra también la Expovelaria, en donde se realiza la Exposición Ganadera, una de la más extensas y completas del mundo con muestras y subastas de ganado de todo tipo, incluyendo una muestra de palomas de exhibición, además de eventos musicales y artísticos. Siendo actualmente este complejo el recinto para la Feria Nacional de San Marcos y el Festival de las Calaveras

RESULTADOS

En este concepto de Patrimonio Cultural destacan los siguientes puntos:

- Es un fenómeno social que no se reduce a un hecho de orden individual;
- Es una abstracción que nos remite a la variedad de culturas históricas y tradicionales;
- Es un fenómeno social universal

CONCLUSION

La prioridad que se da a la protección y valoración del patrimonio cultural, es justificable ya que el patrimonio constituye el punto de partida de la actividad turística y es la base de identidad de las comunidades locales. Sin el patrimonio, las perspectivas de desarrollo de una población se verían limitadas. Tomando en cuenta el concepto de Mounir Bouchenaki, Subdirector general de Cultura de UNESCO, en el que afirmó en el Forum 2004 de Barcelona que: " El turismo ha de desarrollar un papel con el objetivo de dar a conocer el patrimonio cultural, creando circuitos turísticos que promuevan, no los sitios más conocidos, sino los menos conocidos para evitar que caigan en el olvido". Hemos considerado que hablar de las costumbres y tradiciones de la Ciudad de Aguascalientes es dar a conocer la identidad de la población en general, que es una ciudad pequeña en territorio pero grande en cultura.

Con la herencia cultural de los antiguos pueblos, se siente la necesidad de definir mejor el desarrollo humano y sobre todo, impulsar una estrategia voluntaria para que el turismo sea una herramienta sólida de desarrollo económico, social pero sobre todo cultural.

Por lo expuesto, consideramos este documento, como una interesante recopilación de la historia y cultura del Estado de Aguascalientes, con el manifiesto expreso de las ideas, costumbres, tradiciones, artesanías e historia propia, que hacen del sitio y sus espacios de exposición, un atractivo propicio de la apreciación cultural más crítica y de mayor goce, durante su solaz de interpretación de los pasajes registrados en acontecimientos de mayor influencia, para la sociedad aguascalidense y sus visitantes. La prioridad de protección y valoración del patrimonio cultural en el ámbito turístico, se justifica desde el punto de vista de que la cultura constituye el origen de la actividad turística y es base de identidad de las comunidades. Sin el patrimonio, las perspectivas de desarrollo de una población se verían limitadas.

RESUMEN

El alcance de este trabajo de investigación consiste en presentar el análisis de dos indicadores para medir eficiencia de PYMES agroindustriales. Los cuales son: i) la capacidad para generar empleo y ii) la capacidad para permanecer en el mercado. El primero de ellos, enfocado a medir el desempeño en la contratación de recursos humanos y la habilidad para retenerlos. El segundo de ellos comprende dos variables: 1) La penetración en el mercado y 2) La identificación de nuevos nichos de oportunidad. La aportación principal de esta investigación es construir un instrumento de medición de los factores que favorecen o que limitan la eficiencia de PYMES agroindustriales, particularmente de países en vías de desarrollo. Así mismo se abren alternativas de nuevas investigaciones en torno a la competitividad, eficiencia y productividad de estas empresas y sus perspectivas de ampliación de en otros contextos. La metodología empleada se basa en investigación documental, acudiendo a fuentes de información como informes, anuarios, artículos especializados y bases de datos estadísticos de proyectos existentes, así como en la aplicación de entrevistas a expertos para garantizar la validez y eficiencia del instrumento propuesto.

PALABRAS CLAVE: Agroindustria, eficiencia, desarrollo económico regional.

JOB CREATION AND RETENTION IN MARKET EFFICIENCY MEASURES AS AGROINDUSTRIALES SMEs

ABSTRACT

The scope of this research is to present the analysis of two indicators to measure efficiency of agribusiness SMEs. These are: i) the ability to generate employment and ii) the ability to stay on the market. The first, focused on measuring performance in the recruitment of human resources and the ability to retain them. The second one comprises two variables: 1) The market penetration and 2) The identification of new niches of opportunity. The main contribution of this research is to build an instrument for measuring the factors that favor or limit the efficiency of agribusiness SMEs, particularly in developing countries. It also opens new research options around competitiveness, efficiency and productivity of these companies and their prospects for expansion in other contexts. The methodology used is based on desk research, drawing on sources such as reports, yearbooks, specialized articles and statistical databases of existing projects and the application of expert interviews to ensure the validity and efficiency of the proposed instrument.

INTRODUCCIÓN

Uno de los principales retos que enfrentan los países en desarrollo es la baja productividad en diferentes ámbitos de su estructura. Entre las causas principales de este problema se encuentra el bajo nivel de eficiencia en el desempeño, en áreas cruciales, de los actores que de manera directa o indirecta intervienen en las actividades económicas. Particularmente, las empresas micro, pequeña y mediana (MIPYMES) presentan un “rezago competitivo” importante; en el caso de las PYMES agroindustriales, los riesgos inherentes al sector se han exacerbado en años recientes por efectos del cambio climático, por la deficiencia en las políticas agrarias y por el escaso financiamiento que hay para ellas; de acuerdo con cifras del Centro de Estudios en Finanzas Públicas, en el año 1994, se otorgaban 11,592 millones de pesos como financiamiento de la banca de desarrollo al sector agropecuario; al año 2008 sólo fue de 198 millones de pesos (Figuroa *et al.*, 2011). El producto interno bruto agropecuario en México (PIBA), comparado contra el PIB total, representó 9%, mientras que las exportaciones agroalimentarias representaron un 6%. En promedio, la productividad laboral agropecuaria tuvo un incremento de 4.4% entre 1993 y 2003, debido a la introducción de tecnología y la salida de mano de obra familiar no remunerada. Sin embargo, el déficit comercial en el sector aumentó debido a que se facilitaron las importaciones, desde Estados Unidos, de productos con precios subsidiados. El empleo se redujo en 22% y los salarios también disminuyeron 28% entre 1994 y 1997 (Larralde, 2011).

Una forma de combatir el rezago es identificar las causas específicas que lo provocan. Sustentado en algunos estudios señalan que la eficiencia es un elemento de la competitividad, porque fomenta un mejor desempeño de los agentes de la economía (Jiménez *et al.*, 2011; Cordero, 2006), el presente artículo muestra el diseño de un instrumento de recolección de datos que permita medir la eficiencia de pequeñas y medianas empresas (PYMES) agroindustriales a través de varios indicadores, entre ellos: i) la capacidad para generar empleo y ii) la capacidad para permanecer en el mercado. La relevancia que este instrumento tiene es que permitirá detectar causas de ineficiencia en la operación de un negocio y eventualmente, apoyar en el proceso de identificación de estrategias para mejorar la competitividad de las empresas.

REVISIÓN DE LITERATURA

Las causas que provocan los problemas mencionados se mezclan con una problemática que tiene que ver con decisiones de carácter “interno” en las empresas; dicha combinación genera entre otros resultados, un bajo valor agregado en los productos o servicios que producen. Por ello, es importante identificar las causas “internas”, que están al alcance de los empresarios, con la finalidad de mejorar su desempeño. El enfoque que esta investigación propone, es tomar algunos elementos que: i) distintos organismos nacionales y mundiales establecen como generadores de competitividad, tales como la Organización para la Cooperación y Desarrollo Económico (OCDE, 1992 citado por Gil 2006), el Instituto Mexicano de la Competitividad (IMCO, 2007), y el Foro Económico Mundial (en Villarreal, 2007); ii) así como los elementos de competitividad y eficiencia descritos por algunos autores (Mercado, 2005; Porter, 2009) y iii) por las recomendaciones de PYME-JICA para una buena gestión de las empresas (Secretaría de Economía, 2012) y aplicarlos a medir resultados en la gestión de las PYMES agroindustriales. Así mismo, dado que hay factores de ineficiencia detectados por diversos organismos en México, se parte de tales hallazgos para el diseño del instrumento de recolección de datos. Particularmente, lo que la Cámara Nacional de la Industria de la Transformación (CANACINTRA) ha detectado en materia de ineficiencia: i) “Deficiente infraestructura pública en comunicaciones, telecomunicaciones y energía, ii) Fuentes de financiamiento escasa para las micro, pequeña y mediana empresas (MIPYMES), iii) Recursos humanos sin capacitación efectiva, iv) Falta de vinculación de las empresas con instituciones de ciencia y tecnología” (Fondo Mexicano para la Educación y el Desarrollo, 2004).

Los factores enunciados por CANACINTRA, pueden ubicarse en algunos de los diferentes niveles de competitividad que Klauss ha definido (citado por Domínguez Ríos, 2002) como: **1) Nivel meta.**- Valores y principios de la sociedad que determinan el comportamiento de sus ciudadanos, en particular en el ambiente económico, **2) Nivel macro.**- Se definen las condiciones económicas necesarias para desarrollar la actividad productiva, **3) Nivel meso.**- Se resuelven los aspectos regionales y sectoriales, tales como el capital humano, la infraestructura, etc., **4) Nivel micro.**- Se toman las decisiones tradicionales de la empresa, tanto para producción como para la distribución.

METODOLOGÍA

Para los efectos de esta investigación, se consideraron elementos de competitividad de los niveles meso y micro: a) capital humano y b) decisiones relativas a distribución e identificación de nuevos mercados. La investigación está enfocada a medir los resultados que han tenido las empresas en los últimos cinco años. En el caso de este artículo, sólo se mostrará, como parte del cuestionario, el segmento relativo a *eficiencia*: medida a través de su capacidad para utilizar adecuadamente los recursos humanos a su alcance: desempeño en la contratación de recursos humanos y la habilidad para retenerlos; y de su capacidad de permanecer en el mercado: penetración de mercado, e identificación de nuevos mercados. Se diseñaron dos instrumentos de recolección de datos: Un guión de entrevista que servirá de base para aplicar entrevistas semi-estructuradas y un cuestionario con preguntas cerradas utilizando para las posibles respuestas una escala Likert de 5 niveles. Los instrumentos de recolección de datos se enfocaron a indagar aspectos cualitativos y cuantitativos de las empresas agroindustriales. En el siguiente apartado se muestran las dos categorías de eficiencia con sus variables e indicadores que se consideraron para el diseño de tales instrumentos, los cuales se tomaron de la literatura relativa a manuales de procedimientos para reclutamiento, selección, permanencia y promoción del personal, así como de la literatura relativa a estrategias de mercado.

RESULTADOS

Se integró el elemento *capacidad para generar empleo*, compuesto por: *eficiencia en la contratación de recursos humanos y habilidad para retenerlos* a través de las siguientes **variables**: Variable 1. Localización de la empresa; Variable 2. Proceso de reclutamiento y selección de personal; Variable 3. Permanencia y promoción del personal; Variable 4. Indicadores de eficiencia (auto-evaluación de los procesos de la empresa). De ellas, se derivan los siguientes **indicadores** (tanto en este caso como en el relativo a *capacidad para permanecer en el mercado*, el primer dígito de la numeración relaciona al indicador con el número de variable al que corresponde):

- 1.1. Ubicación de la empresa: cercanía de la empresa a instituciones educativas de nivel superior y medio superior; cercanía de la empresa a asociaciones empresariales, cámaras empresariales, etc.
- 2.1. Incorporación en la organización de una persona, área o departamento (incluso a nivel staff) encargados de identificar recursos humanos acordes a las necesidades de la empresa.
- 2.2. Incorporación de procedimientos para: reclutamiento, selección y contratación de personal.
- 3.1. Existencia de programas de: inducción y capacitación al personal de nuevo ingreso.
- 3.2. Existencia de programas de actualización y capacitación continua al personal.
- 3.3. Definición y difusión de los criterios de promoción y permanencia del personal.
- 3.4. Existencia de un programa integral de incentivos al personal.

- 3.5. Existencia y difusión de un reglamento interno de trabajo.
- 3.6. No existencia de personal con trabajo no remunerado
- 3.7. Existencia de una estrategia para conocer el nivel de sueldo para empleos similares a los de la empresa en la región.
- 3.8. Existencia de un programa de re-contratación de personal que previamente ha laborado en la empresa (en el caso de MIPYMES cuya que operan por temporada)
- 4.1. Existencia de un procedimiento para medir la eficiencia de los procesos de reclutamiento, permanencia y promoción del personal.
- 4.2. Existencia de un procedimiento para medir la rotación del personal.
- 4.3. Existencia de un procedimiento para medir la productividad del personal.
- 4.4. Pertenencia de la empresa a bolsas de trabajo locales y estatales.
- 4.5. Existencia de convenios de la empresa con instituciones educativas relativas a estadías, prácticas, servicio social, etc.

Así mismo el elemento *capacidad para permanecer en el mercado*, compuesto por *penetración en el mercado e identificación de nuevos nichos de oportunidad*, se integró por las **variables**: Variable 1. Conocimiento del mercado; Variable 2. Segmentación adecuada del mercado; Variable 3. Penetración de mercado; Variable 4. Identificación de nuevos mercados. Las cuales se integran por los siguientes **indicadores**:

- 1.1. Conocimiento de: clientes, proveedores y competencia; ventajas competitivas del producto o servicio ofertado; ventajas competitivas del producto o servicio ofertado por los competidores.
- 2.1. Identificación clara del mercado “apuntado” para el producto o servicio que oferta la empresa.
- 3.1. Diseño de una estrategia bien definida de colocación del producto en el mercado.
- 3.2. Campaña publicitaria acorde con: estrategia de colocación/mercado “apuntado”.
- 3.3. Diseño de un procedimiento para medir la penetración del producto en el mercado.
- 3.4. Existencia de procedimientos de monitoreo continuo de: las estrategias de penetración de mercado de los competidores; las nuevas necesidades del mercado.
- 4.1. Pertenencia de la empresa a cámaras, asociaciones, etc. de la misma industria.
- 4.2. Recepción en la empresa de boletines especializados, revistas, etc. publicados por la industria.
- 4.3. Asistencia a ferias, foros, exposiciones, etc. de carácter empresarial.
- 4.4. Conexión a internet y consulta de sitios relacionados con el sector y con otros sectores potencialmente atractivos.

4.5. Política de atención al cliente a través de sugerencias y comentarios del producto o servicio.

CONCLUSIONES

La estructura del cuestionario y de la guía de entrevista por variables e indicadores, facilita reconocer la eficiencia por áreas o actividades de la empresa. La medición de cada indicador a través de una escala, permite a su vez, identificar grados de eficiencia, evitando así probabilidades dicotómicas de respuesta. La incorporación de la entrevista, brinda la posibilidad de contar con elementos cualitativos adicionales a los que el cuestionario va a ofrecer. Ambos instrumentos de recolección de datos pueden aplicarse a empresas agroindustriales independientemente de su actividad particular. La experiencia previa en materia de consultoría a PYMES contribuyó en gran medida a la determinación de las variables y los indicadores.

INFLUENCIA DE LOS ATRIBUTOS DEL ENTORNO COMERCIAL EN LAS EMOCIONES, SATISFACCIÓN Y LEALTAD DEL CONSUMIDOR CHILENO

Cristóbal Fernández Robin, Universidad Técnica Federico Santa María.

Paulina Santander Astorga, Universidad Técnica Federico Santa María

Jorge Cea Valencia, Universidad Técnica Federico Santa María

RESUMEN

El objetivo central de esta investigación es demostrar como los diferentes elementos ambientales que componen los entornos comerciales influyen en las emociones, satisfacción y lealtad experimentadas por los consumidores chilenos. Ello además, bajo un estudio comparativo entre centros urbanos (comercio en calles céntricas de la ciudad) y centros comerciales (shoppings o malls). Para ello se realizó una fase exploratoria con una técnica cualitativa, consistente en Entrevistas en Profundidad a expertos, apoyada por una exhaustiva revisión bibliográfica. Posteriormente, se utilizaron modelos cuantitativos (Regresiones, Servqual) para el diseño y aplicación de un cuestionario el cual involucró a una muestra no probabilística de 600 consumidores de diferentes segmentos. Con ello, se obtienen resultados que explican las principales diferencias percibidas entre ambos entornos en función de las percepciones y experiencias de quienes frecuentan dichos entornos.

PALABRAS CLAVE: Emociones, satisfacción, lealtad, entornos comerciales, servqual, regresiones.

INFLUENCE OF THE ATTRIBUTES OF BUSINESS ENVIRONMENT IN EMOTIONS , CUSTOMER SATISFACTION AND LOYALTY OF CHILEAN CONSUMER

ABSTRACT

The main objective of this research is to demonstrate how the different environmental elements that compose commercial environment affect and influence emotions, satisfaction and loyalty experienced by consumers. The different environments considered in this research are urban centers (downtowns) and commerce centers (shopping or malls). On behalf of this research, a qualitative exploratory phase was developed, that consisted in an extensive Expert Interview supported by an exhaustive bibliographic review. Subsequently, quantitative methods (Regressions, Servqual) were used for the design and application of a survey, which was applied to a no probabilistic sample of 600 customers from different segments. Thus, results were obtained explaining the principal differences perceived between both commercial environments based on the perceptions and experiences of those who frequent these environments.

SIGNIFICACIONES, MOTIVACIONES Y COMPORTAMIENTOS DE COMPRA ASOCIADOS AL CONSUMIDOR DE LUJO EN CHILE

Cristóbal Fernández Robin, Universidad Técnica Federico Santa María
Jorge Cea Valencia, Universidad Técnica Federico Santa María
Paulina Santander Astorga, Universidad Técnica Federico Santa María
Víctor Cabrera Maturana, Universidad Técnica Federico Santa María

RESUMEN

Un estudio descriptivo sobre el consumo de lujo en Chile
La investigación realizada tiene como objetivo central conocer el mercado de productos y servicios de Lujo que hoy se desarrolla en Chile desde la perspectiva del propio consumidor. El estudio se centra principalmente en entender y describir las principales significaciones y motivaciones que tienen las personas pertenecientes al segmento ABC1 (nivel socioeconómico alto del país) orientado al consumo de productos clasificados por estándares internacionales como pertenecientes a la industria del lujo. La metodología de investigación consistió en una exhaustiva revisión bibliográfica, entrevista a expertos en el mercado nacional (2), entrevistas en profundidad a consumidores de diferentes rangos etéreos (3) para finalmente medir los hallazgos a través de la creación de un cuestionario aplicado a una muestra total de 596 personas, hombres y mujeres, laboralmente activas consumidoras de productos de lujo, entre 25 y 50 años de edad. Los resultados obtenidos apuntan a un mercado emergente con una industria poco informada respecto a las características de sus consumidores. Se entregan de este modo los principales lineamientos estratégicos para poder realizar mejoras apuntando a un crecimiento informado respecto a las demandas.

PALABRAS CLAVE: Lujo, consumidor, marketing.

MEANINGS, MOTIVATIONS, AND PURCHASING BEHAVIORS ASSOCIATED TO LUXURY CONSUMERS IN CHILE

A descriptive study on luxury consumption in Chile **SUMMARY**

The main purpose of this research is to gain understanding of the luxury products and services market in Chile from the point of view of the consumers themselves. This study is basically aimed to comprehend and describe the main meanings and motivations of individuals belonging to the ABC1 segment (upper classes of the country), focusing on the consumption of products considered as constituent parts of the luxury industry under international standards. The investigation methodology involved extensive bibliographic reviews, interviews to experts on the national market (2), and in-depth interviews to consumers from different age groups (3.) Finally, findings were measured through a questionnaire administered to a final sample of 596 people, males and females, all of them in the labor force, consumers of luxury products, and ages 25 to 50. The final results point to a burgeoning market, and to an industry that shows a low level of knowledge of the characteristics of its consumers. This way, we show the main strategic lines to follow in order to make improvements aiming to an informed development in relation to the demands.

PRINCIPALES AGENTES PROVEEDORES DE CONOCIMIENTO EN EL SECTOR HOTELERO

María Soledad Celemín Pedroche, Universidad Autónoma de Madrid

Luis Rubio Andrada, Universidad Autónoma de Madrid

José Miguel Rodríguez Antón, Universidad Autónoma de Madrid

María del Mar Alonso Almeida, Universidad Autónoma de Madrid

RESUMEN

Los sistemas organizativos pueden aprender de la propia organización y del entorno. En concreto, los establecimientos hoteleros, como organizaciones en permanente conexión con la información y el conocimiento, necesitan identificar a los agentes externos e internos generadores de conocimiento, para desarrollar un aprendizaje tanto interno como externo. El propósito de este estudio empírico es analizar de qué agentes internos y externos están captando información para aprender los establecimientos hoteleros de tres, cuatro y cinco estrellas de la Comunidad de Madrid. Según los resultados obtenidos se resalta la importancia de los clientes como el stakeholder del que se capta mayor información en los establecimientos hoteleros y, a nivel interno, se está valorando y apoyando el trabajo de los responsables de departamento, como recopiladores de la información que fluye en las organizaciones hoteleras y de la que se puede aprender.

ABSTRACT

Organizational systems can learn from the own organization and environment. Specifically, hotel establishments, as organizations with a permanent connection to information and knowledge, need identify to external and internal agents that create knowledge in order to develop internal and external learning. The purpose of this empirical study is to analyze the internal and external agents that are capturing information in order to learn in three, four and five star hotels in the Madrid Region. According to the results, it is highlighted that customer is the stakeholder from more information is captured in hotel establishments. Internally, department responsible work is being valued and supported because they are collectors of information that flows on hotel organizations and from which it is learned.

PALABRAS CLAVE: Stakeholders, agentes internos, conocimiento, aprendizaje organizacional

KEYWORDS: Stakeholders, internal agents, knowledge, organizational learning

INTRODUCCIÓN

Un proceso fundamental en las organizaciones es la captura de información, la cuál supone una herramienta clave para el desarrollo de cualquier tipo de organización (Buhalis, 1998; Celemín, 2011a). Autores como Drucker (1995) y Spender y Grant (1996) exaltan el conocimiento como fuente de ventaja competitiva y motivo de rentas superiores para los empresarios. Por lo tanto, los establecimientos hoteleros, como organizaciones conectadas continuamente con la información y el conocimiento y por la necesidad de buscar, observar y conocer cómo se está desarrollando el entorno, precisan aprovecharlo al máximo. Las empresas hoteleras no solamente aprenden de los stakeholders externos, sino también pueden aprender de los miembros que componen la organización (Martínez, 2002). El conocimiento que proviene de los empleados de una organización es un valor intangible que pertenece a la propia empresa y que ésta tiene que saber cómo emplearlo. Así, según Caddy, et al. (2001) las organizaciones tienen que ser conscientes de la importancia de controlar y utilizar sus recursos de conocimiento interno.

Esta investigación se va a centrar en la industria del turismo, en concreto, en el sector hotelero. Ello es debido a que esta industria está estrechamente vinculada con la información y el conocimiento, lo que da lugar a que los directivos de las organizaciones hoteleras necesiten controlar de quién proviene la información tanto interna como externa que entra en sus empresas.

REVISIÓN DE LA LITERATURA

Los sistemas organizativos pueden aprender de la propia organización y del entorno (Celemín, 2011a). Así, el conocimiento se puede adquirir a través del aprendizaje interno -de los empleados, de los grupos de empleados, de los departamentos, de los servicios centrales o de las divisiones- y, a través del entorno -de los socios, competidores, clientes, proveedores, gobiernos, oficinas centrales, mercados, inversores y otros- (Mintoff, 1983; Ordóñez de Pablo, 2002; Kumar et al., 2008).

La literatura relativa al aprendizaje organizacional precisa que las organizaciones tienen que conectarse con el entorno exterior (March, 1991) con el fin de buscar conocimiento fuera de los límites organizacionales (Garvin, 1993; Watkins y Marsick, 1996). Siguiendo con los agentes externos, hay que indicar como el valor del cliente ha sido objeto de estudio de gran interés para muchas de las investigaciones relacionadas con los establecimientos hoteleros (Oh, 1999; Ekinci et al., 2003; Kim y Oh, 2004), y es que los directivos de los hoteles necesitan conocer y entender las necesidades de sus clientes (Choi y Chu, 2001; Kahle, 2002). Desde el punto de vista de los directores, los hoteles deberían de invertir en la comprensión de los clientes y en las actividades de unión hacia éstos, lo que permitiría ofrecer servicios según las expectativas de los clientes (Nasution y Mavondo, 2008). La clave del éxito de las empresas está en la rápida identificación de las necesidades de los clientes y en la búsqueda de clientes potenciales con productos y servicios personalizados y actuales que satisfagan dichas necesidades (Buhalis y Law, 2008). A partir de este argumento se pretende analizar si Los clientes son los agentes externos más importantes para proporcionar información a los establecimientos hoteleros.

Los establecimientos hoteleros estudiados también adquieren información procedente de la propia organización. Los agentes internos están formados por individuos y grupos con distintos intereses, objetivos, lealtades y valores (Williams, 2001). Todas las compañías dependen de la información que fluye entre los individuos, grupos, departamentos y funciones (Gamble et al., 2000). Los individuos de una empresa adquieren o capturan conocimiento y pueden utilizar ese conocimiento en sus organizaciones si el entorno organizacional lo permite (Yang, 2004). En relación a los agentes internos, Cooper (2006) señala que los responsables de departamento son los que suelen proporcionar información interna de la organización, representando la mayor fuente de información interna de los establecimientos hoteleros. En este sentido, los empleados del *front office* y del *back office* tienen como jefes a los directivos intermedios, los cuales captan la información que éstos les proporcionan y, a la vez, también reciben la de los más altos directivos para comunicarla a los empleados. Por ello, al hilo de esta argumentación, en este estudio se pretende analizar si La mayor fuente de información interna de los hoteles procede de los responsables de departamento frente al resto de empleados del hotel.

METODOLOGÍA

La población a estudiar se encuentra integrada dentro del sector turismo, ya que se trata de una de las industrias en las que se da un gran flujo de información que se puede transformar en conocimiento (Poon, 1993; Celemín, 2011a). La elección del estudio de los hoteles de 3, 4 y 5 estrellas de la Comunidad de Madrid se debe a la importancia económica del sector turismo y, en concreto, del sector hotelero en la Comunidad de Madrid. La Comunidad de Madrid ha sido la comunidad autónoma con mayor grado de ocupación por plazas durante el mes de enero de 2012 -41%- (INE, 2012a). A ello hay que sumar datos como que en Diciembre del 2010 se generaron más de 15.020 puestos de trabajo en relación únicamente al sector hotelero, siendo el 80 por ciento de los alojamientos hoteleros de la Comunidad de Madrid de 3,

4 y 5 estrellas y constituyendo estas categorías de hoteles el 90 por ciento de las plazas hoteleras (INE, 2012b). El universo a estudiar está compuesto por un total de 370 establecimientos hoteleros de 3, 4 y 5 estrellas de la Comunidad de Madrid. Por lo tanto, el marco muestral del que se parte son esos 370 hoteles, de los cuales se obtuvieron respuesta de 147 hoteles, de los cuales 48 son de 3 estrellas, 84 de 4 estrellas y 15 de 5 estrellas, lo que representa un 39 por ciento del universo, siendo el error muestral del 6 por ciento a un nivel de confianza del 95 por ciento.

En este estudio se ha realizado una investigación por encuesta, con el objetivo de analizar de qué stakeholders y agentes internos se obtiene mayor información. Para reflejar la validez del instrumento de medida, el cuestionario, se llevó a cabo un panel de expertos compuesto por 4 académicos doctores en Organización de empresas y Economía Aplicada. Con este proceso, se pretendía que estos académicos, con su experiencia teórica y empírica en el objeto a estudiar, analizaran y evaluaran la lista completa de ítems que se había recopilado del estado del arte. Tras haber realizado la primera encuesta cotejada por los académicos que formaron el panel de expertos, se pasó a realizar un *pre-test* que fue llevado a cabo por 3 directivos del sector hotelero. En concreto, el cuestionario fue valorado y evaluado por 3 altos cargos directivos, cada uno perteneciente a un hotel de 3, 4 y 5 estrellas respectivamente de la Comunidad de Madrid. La fase de recogida de datos estuvo comprendida entre el 15 de Abril y el 1 de Agosto de 2010, la cuál estuvo dividida en 2 partes: La primera de ellas consistía en un seguimiento telefónico con la finalidad de contactar previamente vía teléfono con cada uno de los hoteles que constituían la población y en la segunda parte se mandó el cuestionario a una parte de la población -los hoteles que estaban situados fuera de la capital de Madrid- por correo ordinario y al resto de los hoteles que estaban situados en la capital se les entregó y paso a recoger el cuestionario personalmente.

RESULTADOS Y DISCURSIÓN

Tras el proceso de recogida de los datos y una vez realizado el correspondiente análisis estadístico, se han obtenido una serie de resultados. Para verificar las proposiciones realizadas, se han tenido en cuenta los principales estadísticos descriptivos, correlaciones entre las variables a analizar en el estudio y en los casos que se requería, un contraste de medias por pares mediante el procedimiento de la prueba t para muestras relacionadas. Los agentes externos analizados de los cuáles se puede captar información han sido los siguientes: Proveedores, clientes, competidores, accionistas, mercado, acreedores financieros, gobiernos, sindicatos, sociedad, grupos de presión o interés, confederaciones empresariales, centrales de reservas y otros interesados-. Según el análisis realizado, el nivel de captación de información es diferente según el agente externo del que proceda. Así, en la figura 1, en el cual aparecen reflejadas las medias de los 13 ítems que conforman los agentes externos, se puede observar que el mercado representa al agente externo del cual se capta más información (4.03) y los sindicatos del que menos (1.94).

Los clientes, que se han postulado en este estudio como el agente externo del que se capta mayor información por parte de los establecimientos hoteleros, representan al segundo *stakeholder* del que se obtiene mayor información (3.99). Además, la variable clientes tiene con la variable que ocupa la primera posición -mercado-, una significatividad asintótica bilateral de 0,568, la cual está por encima de 0.05, lo que llevaría a aceptar la hipótesis nula -igualdad de medias-, esto es, los encuestados no encuentran diferencias apreciables entre estas dos variables (ver tabla 1). A ello, hay que añadir como la correlación existente entre ambos ítems es de 0.290**, lo cual indica que ambas variables presentan una correlación significativa al 1 por ciento. Ante estos resultados, se puede determinar que los clientes son una parte fundamental del mercado y, por ello, tienen una posición muy valorada en los resultados, por lo tanto, se verifica que: Los clientes son los agentes externos más importantes para proporcionar información a los establecimientos hoteleros. En esta proposición se refleja cómo los establecimientos hoteleros analizados precisan conocer qué necesitan y quieren los clientes (Yang, 2004), ya que la clave del éxito está en la rápida identificación de sus preferencias (Buhalis y Law, 2008). Así, Nasution y Mavondo (2008) señalan

que los hoteles deberían de invertir en la comprensión de los clientes, lo que permitiría una alineación de la provisión de servicios con las expectativas de los clientes.

En relación al resto de agentes, tras el mercado y los clientes, se sitúan con una media por encima de 3: Las centrales de reservas (3.81), los competidores (3.26), las confederaciones empresariales (3.13), los proveedores (3.11) y la sociedad (3.01) -Ruhanen y Cooper (2004) destacan que la industria hotelera tiene que conocer y entender todos aquellos elementos del negocio, incluyendo cómo este debería de cambiar de acuerdo a los cambios de la sociedad-. Este tipo de agentes con una media superior a 3 representan los *stakeholders* más ligados con el mercado, aunque hay que señalar que aparte de estos agentes externos existen otros como son los accionistas (2.5), los acreedores financieros (2.33) y el gobierno (2.38), los cuáles han sido destacados por varios autores como Caddy et al. (2001); Williams (2001); Ordoñez de Pablo (2002) y Kumar et al. (2008). Estos agentes han sido tenidos en cuenta a la hora de tomar decisiones estratégicas, aunque en la presente investigación, han sido menos valorados que aquellos más directamente relacionados con el mercado.

Figura 1: Valoración de la cantidad de información captada de los agentes externos

Esta figura muestra las medias de cada uno de los agentes externos analizados en esta investigación, siendo el mercado los más valorados (4.03) y los sindicatos el que menos (1.94). Los clientes, que se han postulado en este estudio como el agente externo del que se capta mayor información en los establecimientos hoteleros analizados, representan al segundo stakeholder del que se obtiene mayor información (3.99).

Tabla 1: Prueba de muestras relacionadas entre clientes y mercados

Prueba de muestras relacionadas								
	Diferencias relacionadas					t	Gl	Sig (Bilateral)
	Media	Desv. Tip.	Error típ. de la media	95% Intervalo de confianza Superior	Inferior			
Clientes-Mercado	-0.048	1.013	0.084	-0.214	0.118	-0.572	145	0.568

Esta tabla muestra un contraste de diferencia de medias por pares entre las variables clientes y mercados. Si la significatividad bilateral es mayor que 0.05 no puede rechazarse la hipótesis nula (igualdad de medias), lo que supone que no hay diferencias apreciables en las medias de una y otra variable (Ello ocurre en este caso).

Los agentes internos estudiados en este estudio son los Empleados del front office, empleados del back office, responsables de departamento y alta dirección. En la figura 2 se observan las medias de cada uno de los componentes que constituyen los agentes internos en el estudio. Los miembros de la empresa de los

cuales se capta mayor información son los responsables de departamento (4.38) y de los que menos los empleados del back office (3.95). A ello habría que añadir las altas correlaciones existentes entre los responsables de departamento y el resto de variables: Los empleados del front office (0.582**); los empleados del back office (0.597**) y la alta dirección (0.537**). Ante estos resultados, se puede concluir que los responsables de departamento son los agentes internos de los que más información obtienen los establecimientos hoteleros analizados, ya que se sitúan en una posición intermedia entre los empleados -los cuales obtienen información de los clientes- y los directivos, que continuamente les están proporcionando información sobre el mercado y los resultados a los que se quiere llegar y los que realmente se están obteniendo. Todo ello, da lugar a que se verifique la segunda proposición:

La mayor fuente de información interna de los hoteles procede de los responsables de departamento frente al resto de empleados del hotel. En esta proposición se resalta cómo los responsables de departamento, al estar en una situación intermedia en la jerarquía de la organización, son los que recopilan una mayor información procedente tanto de los altos directivos como de los empleados, lo que apoya el aprendizaje a nivel organizacional. Así, Cooper (2006) indica que son los responsables de departamento los que representan a aquellos empleados que proporcionan más información distinguiendo aquellos responsables que facilitan conocimiento operacional y aquellos otros que sirven de vínculo de comunicación entre los agentes internos y externos. En relación al resto de agentes internos, en segunda posición se encuentran los empleados del *front office*, con una media bastante alta (4.25), ya que este tipo de trabajadores poseen una alta capacidad para ser fuente de conocimiento que procede del exterior, debido a que comparten conocimiento relacionado con el cliente, con el producto, resuelven problemas y negocian situaciones vía boca a oreja (Yang y Wan, 2004), aunque en este caso hay que resaltar como no hay un gran interés por parte de los empleados del *front office* por esforzarse en almacenar y retener conocimiento operativo, ya que existe una extremada movilidad de los empleados en este sector (Yang y Wan, 2004). Muy próximos a los empleados del *front office* están los directivos (4.24). Según Yang (2004), la alta dirección del personal necesita fomentar el aprendizaje organizacional consiguiendo que los empleados tengan una actitud de compartir conocimiento y aprender. Por último, se encuentran los empleados del *back office*, con una media alta, pero por debajo de 4 (3.95). Esta última posición indica que son los empleados de los que menos información se recopila en los establecimientos hoteleros analizados.

Figura 2: Valoración de la cantidad de información captada de los agentes internos

Esta figura muestra las media de cada uno de los agentes internos analizados en esta investigación, siendo los responsables de departamento los más valorados (4.38) y los empleados del back office el que menos (1.94).

CONCLUSIONES Y RECOMENDACIONES

En este trabajo, de carácter exploratorio, se resalta a la información como un elemento esencial para el aprendizaje de las organizaciones. Por ello, se trata de averiguar de qué agentes tanto internos como

externos se está captando mayor información en los establecimientos hoteleros. Para ello, se han planteado dos objetivos: Uno de ellos relacionado con la captación de información de los clientes considerándolos como un stakeholder vital para las organizaciones hoteleras y, por otro, se ha propuesto a los responsables de departamento como los agentes internos que captan mayor información por su posición intermedia en la estructura organizativa de la empresa.

Tras el estudio realizado, se ha verificado que realmente los clientes son los agentes más importantes para proporcionar información a los establecimientos hoteleros. El valor del cliente y la importancia de conocer sus preferencias y necesidades ya ha sido objeto de estudio en otras investigaciones (Kahle, 2002; Nasution y Mavondo, 2008), pero empíricamente no se había establecido en la literatura su importancia comparándolo con el resto de agentes externos que tienen influencia sobre las organizaciones. En los resultados estadísticos obtenidos en esta investigación, se ha comprobado que los clientes -como parte del mercado- han sido el agente más valorado por los encuestados. Ante estos resultados se puede concluir que los establecimientos hoteleros reconocen que los elementos que componen su mercado en relación a los agentes externos, son los agentes más importantes para captar información y aprender. Por eso, resulta vital conocer principalmente toda aquella información que proviene tanto de los clientes finales como de los canales de distribución. Igualmente, es necesario conocer que están haciendo los competidores.

Ante la gran captación de información procedente de este tipo de agentes externos, se recomienda a los establecimientos hoteleros que aprendan de ese nuevo conocimiento captado para generar mejores relaciones. En el segundo de los propósitos de este estudio, se ha propuesto que los responsables de departamentos son los agentes internos de los que se obtiene una mayor información, debido a que en la literatura se le ha dado más importancia al capital intelectual procedente de los empleados con una mayor responsabilidad que el proveniente de aquellos empleados del *front office*. Aunque hay que señalar que esta tendencia está cambiando, ya que gracias a este último tipo de empleados se pueden alcanzar ventajas competitivas sostenibles (Shaw y Williams, 2009), como lo muestra el hecho que pueden obtener información valiosa proveniente de los clientes a tener un contacto más directo con ellos.

Los resultados empíricos de este estudio indican que, efectivamente, los empleados con más responsabilidades en los departamentos son los más valorados para captar información por parte de los establecimientos hoteleros. Esto es debido principalmente debido a: (1) El hecho de valorar más su capital intelectual; (2) por ser agentes establecidos en una posición intermedia entre los directivos y los empleados del *front office*, posición que les permite recopilar una gran cantidad de información y (3) porque al tener un puesto con una mayor estabilidad que los empleados del *front office*, presentan una menor posibilidad de movilidad hacia otras empresas. Por lo tanto, en esta investigación se sugiere a los establecimientos hoteleros que se anime a los responsables de departamento a captar información procedente de todos los empleados de la empresa y a transmitirla verticalmente. En esta investigación no se aprecia indicios de la nueva línea académica de investigación que defiende que hay que intentar retener el conocimiento procedente de los trabajadores del *front office* o *front line* en el sector turismo "*knowledgeable tourism worker*", posiblemente porque este tipo de trabajadores presentan una alta movilidad en el trabajo, lo que dificulta que la información que captan la compartan con sus compañeros o superiores y, por lo tanto, no se quede en el hotel.

APLICACIÓN DEL MÉTODO DE DECISIÓN MULTICRITERIO UTASTAR PARA LA SELECCIÓN DE PORTAFOLIOS DE INVERSIÓN

Juan Carlos Vergara Schmalbach, Universidad de Cartagena

Tomás Fontalvo Herrera, Universidad de Cartagena

José Morelos Gómez, Universidad de Cartagena

RESUMEN

Los métodos multicriterios para el análisis de decisiones (MCDA) permiten coadyuvar en el proceso de elección de portafolios de inversión, a partir del análisis de unos criterios. Estos métodos han demostrado ser un tema de interés creciente en el mundo académico con ventajas demostradas en su aplicación en el área financiera. En este artículo se propone el análisis de un conjunto de 5 portafolios caracterizados con 6 criterios mediante la aplicación del método UTASTAR. Los resultados alcanzados conducen a un listado priorizado de los portafolios considerados (de mayor a menor importancia), que comparado con el análisis inicial realizado por un grupo de expertos en el tema, conducen finalmente a la validación del modelo de acuerdo a un coeficiente de correlación de Kendall superior a 0,8.

PALABRAS CLAVES: Método Multicriterio, Portafolio de Inversión, UTASTAR, Programación Lineal.

ABSTRACT

The methods for Multiple Criteria Decision Analysis (MCDA) can help in the process of choosing investment portfolios, based on an analysis of criteria. These methods have proven to be a topic of growing interest in the academic world with proven strengths in its application in finance. This article proposes an analysis of a set of 5 with 6 criteria portfolios characterized by applying the method UTASTAR. The results obtained lead to a prioritized list of portfolios (highest to lowest importance), confronted with the initial analysis conducted by a group of experts in the field, validating the model with a Kendall's correlation coefficient equal to 0.8.

KEY WORDS: Multicriteria Method, Investment Portfolio, UTASTAR, Linear Programming.

INTRODUCCIÓN

Tomar una decisión (DM) en el entorno empresarial suele ser una tarea compleja, donde se debe evaluar de forma rutinaria, diversos criterios y alternativas o proyectos. Esta razón conduce muchas veces a la utilización de métodos matemáticos, estadísticos y heurísticos, que conducen a un posible listado jerarquizado de aquellas alternativas que deberían ser prioridad en una futura decisión. Los métodos multicriterios para el análisis de decisiones (o MCDA, por sus siglas en inglés) han demostrado ser un tema de interés creciente en el mundo académico y empresarial (Ehrgott, Figueira, y Greco, 2010), donde su aplicación permite interrelacionar diversas variables en un modelo matemático o algoritmo, con el fin de encontrar aquella alternativa que fuese más conveniente. En la actualidad se pueden encontrar diversos métodos multicriterios con bases en la programación multiobjetivos, relaciones de sobreclasificación, los métodos ELECTRE y PROMETHEE, la valoración de funciones de utilidad y sistemas expertos

(modelos de regla de decisión) (Zopounidis y Doumpos, 2002a). El presente artículo propone la aplicación del método UTASTAR (en el área de la valoración de funciones de utilidad) en la evaluación de un conjunto de portafolios de inversión caracterizados por 6 criterios, disponibles para una empresa. El objetivo es definir cuál es el portafolio que presenta mayor utilidad marginal, equivalente a la elección más adecuada.

REVISIÓN DE LA LITERATURA

La necesidad de aplicar un método multicriterio se presenta cuando existe un problema que involucre la comparación, jerarquización y valoración de un conjunto de alternativas respecto a n criterios requeridos para tomar una decisión (Beuthe y Scannella, 2001). Estos métodos encuentran una estrecha relación con las finanzas, área cuyo eje central gira en decisiones de asignación eficiente del capital y el manejo correcto de los recursos escasos (Hallerbach y Spronk, 2002). En una revisión de la literatura se encuentran aplicaciones en el área financiera, que en términos generales, se concentran en la generación de riqueza, la gerencia financiera, las medidas de desempeño, la gestión de portafolios, la evaluación del stock, riesgo crediticio y el análisis de inversiones, entre otros aspectos (Zopounidis y Doumpos, 2002b). Toloie-eshlaghy y Homayonfa (2011) en una revisión de la literatura reciente, identificaron un total de 50 papers en este campo, publicados entre los años 1999 y 2009. Para Zopounidis y Doumpos (1999) existen 4 tipos de problemas de decisión aplicables a las finanzas:

- a. Selección de la alternativa más apropiada.
- b. Clasificar las alternativas en grupos homogéneos.
- c. Categorizar las alternativas en orden descendente de mejor a peor.
- d. Caracterizar las alternativas

En este sentido, el método UTA (incluyendo sus variantes) hace posible esta valoración (apuntando al problema b), transformando cada alternativa en una función de utilidad aditiva, evaluada mediante un ejercicio de programación lineal (Greco, Slowinski, Figueira, y Mousseau, 2010). La función que arroje mayor utilidad será ubicada en el primer puesto de importancia, seguida de aquellas que muestren un menor valor en orden jerárquico. En la revisión se encontraron pocas publicaciones respecto a la aplicación del método UTA - aseveración respaldada por la revisión de la literatura realizada por Xidonas, Mavrotas, Askounis y Psarras (2008) - y su derivación en el método UTASTAR para valorar portafolios de inversión, resaltando los trabajos de Zopounidis, Doumpos y Matsatsinis (1997), y Xidonas y Psarras (2009) cuyos objetivos se orientaron a la selección de la mejor alternativa que se adapte a las preferencias del inversor.

METODOLOGÍA

UTASTAR es un método multicriterio que emplea una técnica especial para evaluar un conjunto funciones de utilidad de valor marginal (u), dando como resultado un listado jerarquizado (según importancia) de alternativas (denotadas con la letra a), que finalmente coadyuvan a la toma de decisiones (DM) (Jacquet-lagr y Siskos, 2001). El método propuesto en éste artículo en una modificación del método original UTA (Utilidad Aditiva) creado por jacquet-Lagr y Siskos (1982), representado por un modelo de programación lineal, cuya función objetivo se traduce en minimizar el valor total de las desviaciones (o error simple denotado como $\sigma[a]$) inherentes a cada función de utilidad. El valor agregado del método UTASTAR radica en introducir un doble posible error (σ^+ y σ^-) en cada función de utilidad, convirtiendo en una razón para su aplicación y desarrollo del caso mencionado. El modelo general se muestra a continuación.

F. O.

$$\text{Min } Z = \sum_{k=1}^m [\sigma^+(a_k) + \sigma^-(a_k)]$$

s. a

$$\begin{aligned} \Delta(a_k, a_{k+1}) &\geq \delta \text{ si } a_k > a_{k+1} \\ \Delta(a_k, a_{k+1}) &= 0 \text{ si } a_k \sim a_{k+1} \\ u_i(g_i^{i+1}) - u_i(g_i^i) &\geq 0 \\ \sum_{i=1}^n u_i(g_i^*) &= 1 \\ u_i(g_{i^*}) &= 0, u_i(g_i^j) \geq 0, \sigma(a) \geq 0 \\ \forall j &= 1, 2, \dots, \alpha_i - 1, i = 1, 2, \dots, n, k = 1, 2, \dots, m \end{aligned} \quad (1)$$

Donde n es igual al número total de criterios o características de selección (i) considerados en la toma de decisión, α_i es el número de elementos empleados en la escala de valoración para cada criterio y m es el número total de alternativas. En la Tabla 1 se muestran los criterios de selección considerados para evaluar las alternativas de inversión, con sus respectivos valores estimados, denotados en el modelo con la letra g_i (donde i represente el número de la característica).

Tabla 1: Caracterización de los portafolios de inversión

Portafolios de Inversión	Característica y criterio					
	VPN (1)	TIR (2)	Periodo de Repago (3)	Alineación con el negocio (4)	Riesgo Técnico (5)	Complejidad (6)
Alternativa 1 (a_1)	\$ 1,350.00	25%	5	Bajo	Alto	Alto
Alternativa 2 (a_2)	\$ 2,210.00	24%	4	Medio	Medio	Medio
Alternativa 3 (a_3)	\$ 4,340.00	31%	2	Medio	Bajo	Bajo
Alternativa 4 (a_4)	\$ 3,100.00	24%	3	Alto	Medio	Alto
Alternativa 5 (a_5)	\$ 4,520.00	36%	3	Bajo	Alto	Alto

g_1 –**VPN**: Representa el Valor Presente Neto de la inversión en términos monetarios, resultado de comparar el valor presente de los ingresos y egresos (Meza, 2008).

g_2 –**TIR**: Es la Tasa Interna de Retorno de la Inversión que indica la proporción de retribución al capital invertido (Jiménez, Espinosa, y Fonseca, 2005).

g_3 – *Periodo de repago*: Equivale al tiempo necesario para recuperar la inversión.

g_4 – *Alineación con el negocio*: Valoración cualitativa de un grupo de experto en la alternativa de inversión sobre la integración y/o complementariedad con el negocio de la empresa.

g_5 – *Riesgo Técnico*: Valoración cualitativa del riesgo interno o propio de la alternativa de inversión (Vélez, 2003).

g_6 – *Complejidad*: Valoración cualitativa de la complejidad del portafolio de inversión.

RESULTADOS

Los resultados propuestos en el desarrollo del método UTASTAR sugieren que la alternativa 3 es la más conveniente, seguida de la alternativa 5 (ver Tabla 2).

Tabla 2: Solución final

Portafolios de Inversión	Utilidad global
Alternativa 3	0,6834
Alternativa 5	0,3667
Alternativa 2	0,3167
Alternativa 4	0,3167
Alternativa 1	0,3167

La evaluación realizada por la empresa en cooperación con un grupo de evaluadores expertos relacionaron las alternativas 3 y 5 como las más adecuadas para invertir, supuesto que se equipara con el ranking obtenido resultado de la aplicación del método UTASTAR (ver Tabla 3).

Tabla 3: Puesto del DM para las alternativas

Portafolios de Inversión	Puesto del DM dado por el grupo experto	Puesto según su utilidad global
Alternativa 3	1	1
Alternativa 5	2	2
Alternativa 2	3	3
Alternativa 4	4	3
Alternativa 1	5	3

El coeficiente de correlación de Kendall calculado es igual a 0,8367 demostrando una fuerte relación entre ambas puntuaciones (Abdi, 2007) y validando los resultados para la empresa.

5. DISCUSIÓN Y CONCLUSIONES

Como principal aporte, este artículo provee una descripción del método UTASTAR aplicado a la evaluación de portafolios de inversión, para apoyar en la elección de las alternativas más convenientes para una empresa. A pesar de que los métodos multicriterios son ampliamente conocidos y estudiados, demostrando su conveniencia y aporte en la toma de decisiones (Zopounidis y Doumpos, 2002), se encontraron muy pocos desarrollos en el área financiera relacionadas con el método UTASTAR (Xidonas, Mavrotas, y Psarras, 2009). En este sentido las posibilidades de aplicación son muy variadas, e incluso, se ha demostrado que este método puede complementar sistemas expertos y demás herramientas estadísticas utilizadas como apoyo en la toma de decisiones (C Zopounidis, Doumpos, y Matsatsinis, 1997). En cuanto a los resultados obtenidos en este artículo, se pudo lograr una jerarquización de alternativas consistentes a un ranking preliminar dispuesto por la empresa consultada, valoración que fue realizada por un grupo asesor experto en el área financiera. La viabilidad en la aplicación del método UTASTAR para la selección de portafolios de inversión está demostrada en este artículo, aseveración demostrada también por Xidonas y Psarras (2009). A todo esto se suma, la posibilidad de incluir escalas cualitativas que se utilizan directamente en el desarrollo del método, evitando su conversión a números (se pueden obtener valoraciones de criterios de forma cualitativa).

Un aspecto negativo a resaltar se relaciona con la complejidad creciente del modelo (posee múltiples etapas) a medida que se agregan nuevos criterios y alternativas. El orden inicial en que estén dispuestas las alternativas es otro punto débil a resaltar, debido a que afecta directamente los resultados arrojados por el método (se requiere de una valoración inicial) (Nikolaos F Matsatsinis, Lakiotaki, y Delias, 2007). Esta última anotación podría convertirse en un tema de estudio futuro, cuyo objetivo se enfocaría en evitar la variación en los resultados a partir de la ordenación inicial de las alternativas.

PERFIL SOCIO-DEMOGRÁFICO DE LA MUJER EN EL MUNICIPIO DE CHIHUAHUA.

Virginia Ibarvo Urista, ITCH
Gaspar Alonso Jiménez Rentería, ITCH
Claudia Alvarado Delgadillo, ITCH

RESUMEN

Este trabajo tiene por objeto conocer aquellas variables de orden cualitativo y cuantitativo que definen el perfil de la mujer en el municipio de Chihuahua, muy específicamente en las colonias que se encuentran ubicadas en la periferia de la ciudad, también se pretende conocer aquellas características que permitan identificar sus necesidades y oportunidades en mujeres mayores de 15 años. Para lo cual se llevaron a cabo 3 tipos diferentes de investigación; Cualitativa, Descriptiva y Trasversal. La primera consistió en efectuar sesiones de grupo y entrevistas a profundidad, la segunda mediante el análisis de los datos proporcionados por el Instituto Nacional de Geografía y Estadística (INEGI) y por último la tercera, la aplicación de distintos instrumentos que permitieran formar un perfil de la mujer en estudio. Obteniendo resultados en cuatro vertientes diferentes; Educación, Derechos Humanos, Emprendedurismo y Salud.

PALABRAS CLAVE: Mujeres, perfil, Chihuahua, demográficos.

CHIHUAHUA CITY WOMEN'S SOCIO-DEMOGRAPHIC PROFILE

ABSTRAC

This work aims to know the variables of a qualitative and quantitative kind, that define the women's profile in Chihuahua city, most specifically in the colonies that are located at the periphery of the city, also seeks to know those characteristics that enable identify needs and opportunities for women over 15 years. We are supported our study on 3 different types of research; Qualitative, Descriptive and Traversal. The first was to conduct focus groups and depth interviews, the second by analyzing data provided by the National Institute of Geography and Statistics (INEGI) and finally the third, the application of different instruments that allow building a profile of the women in the study. Getting results in four different aspects, Education, Human Rights, Entrepreneurship and Health, we are able to know their needs and goals.

KEYWORDS: Women, profile, Chihuahua, demographic

INTRODUCCIÓN

Cada vez es más inminente el definir las variables que atienden cualquier fenómeno social y humano, es necesario saber cuáles son las diferentes características que integran los eventos de interés, con el fin de conocer su comportamiento y las medidas que repercutieran en beneficio de dicho evento, máxime cuando se trata del desarrollo de una sociedad en la cual estamos inmersos. Aunque son numerosos los estudios transversales basados en muestras de mujeres, todavía son escasos los municipios que cuentan con una información actualizada y basada en una amplia heterogeneidad de escalas, este estudio tiene la

cualidad de haber utilizado desde datos socio demográficos obtenidos en el INEGI así como datos cualitativos a partir de sesiones de grupo y entrevistas a profundidad como también encuestas aplicadas a mujeres mayores de 15 años. La variedad de fuentes de información nos permite identificar más a profundidad las necesidades y condiciones de vida. La población objetivo de nuestro estudio son mujeres mayores de 15 años, habitantes de colonias de bajos recursos del municipio de Chihuahua entrevistada y encuestada durante los meses de Abril y Mayo del 2011. Planteamiento del problema Cuando se desconoce las causas de un fenómeno social y económico, es muy probable que no se encuentren las medidas necesarias para combatir o apoyar dicho fenómeno. El desconocimiento provoca errores, ineficacia e ineptitud en las soluciones. Por tal motivo es necesario conocer a fondo las causas que los originan y las consecuencias que ocasionan el evento. A continuación una muestra de las preguntas que se generan a partir de este desconocimiento:

¿Qué tanto sabe nuestra población objeto, acerca de los derechos humanos?

¿Qué tan graves son los problemas de salud en las mujeres chihuahuenses?, ¿Los servicios médicos son adecuados y suficientes? ¿Existe la información necesaria para prevenirlos?

¿Qué nivel de educación tienen las mujeres de las distintas colonias motivo de la investigación? ¿Qué ha motivado a estas mujeres a dejar de estudiar? ¿Cuáles son las causas por las que desearían seguir estudiando?

¿Por qué las muchas mujeres no emprenden un negocio? ¿Qué tanto conocimiento tienen acerca de los apoyos de gobierno? ¿Existen apoyos gubernamentales? ¿Por qué no se tiene acceso a dichos apoyos?

Objetivo de la Investigación

Se analizará información relativa al rol de la mujer en la sociedad y definir cuáles son los aspectos que mayormente preocupan al género femenino.

Antecedentes

Sensibilizar la situación de la mujer ha sido, desde mediados de los años 70's, una meta importante para muchas naciones y organizaciones en el mundo, que en esa década empezaron a publicar estadísticas específicas sobre las mujeres, sin lugar a duda, una de las principales organizaciones, es: la Organización de Naciones Unidas, que en 1991 publica su documento "Las mujeres del mundo 1970-1991", documento que se convierte en el antecedente obligado para la mayoría de estudios que se realizaron a partir de ese momento. En julio de 2010, la Asamblea General de las Naciones Unidas creó ONU Mujeres, la entidad de la ONU para la Igualdad de Género y el Empoderamiento de la mujer, inclusive la ONU ha publicado una guía para la generación de reportes en las naciones. El Fondo Económico Mundial, año con año, publica un Índice Global de Diferencia de Género, The Global Gender, (2010) en donde se examina la diferencia entre hombres y mujeres en cuatro categorías fundamentales: participación en la salud, oportunidad a nivel educacional, económica y la supervivencia y el empoderamiento político, con estos cuatro sub-índices y las 14 distintas variables que los componen, junto con las fuentes de datos utilizadas para cada uno de ellos el Fondo Económico Mundial, diseña las diferencia de género en el acceso a recursos y oportunidades en países individuales en lugar de los niveles reales de los recursos disponibles y las oportunidades en esos países. El índice Global de la diferencia de género es independiente de los niveles de desarrollo en cada uno de los países. En otras palabras, el índice se construye en base al rango de sus diferencias de género, no sobre el nivel de desarrollo de cada país. Por ejemplo, los países ricos tienen más educación y oportunidades de salud para todos los miembros de la sociedad y la medida de estos niveles es independiente de la diferencia que se encuentre entre los diferentes géneros. El índice Global de la diferencia de género, sin embargo, premia a los países que obtienen pequeñas diferencia en

el acceso a estos recursos, independientemente del nivel general de recursos. Así el índice castiga o premia a países en función del tamaño de la diferencia entre los diferentes indicadores.

Prácticamente todas las organizaciones internacionales tienen dentro de sus publicaciones múltiples estudios que se refieren a; las diferencias de género, al empoderamiento de la mujer en la economía, Cómo las normas sociales afectan la diferencia de género en nuestros países, así como, una diversidad de temas que dejan ver la importancia del estudio de género en nuestra sociedad. A nivel nacional el INEGI ha publicado números documentos acerca de cómo medir el desarrollo de la mujer en nuestra nación y cuáles son los datos duros más importantes en lo que a cuestiones de mujeres se refiere. También ha proporciona información estadística proveniente de la Encuesta Nacional sobre el trabajo, de los conteos y censos económicos y poblacionales, generando con esto reportes y publicaciones que nos permiten conocer el perfil sociodemográfico de la mujer en nuestro país.

Para contribuir al desarrollo de los congresos, el Instituto Nacional de Estadística y Geografía (INEGI) presenta la publicación “Las mujeres en Chihuahua”, contiene estadísticas sobre desigualdad de género y violencia contra las mujeres. Los indicadores sobre Chihuahua incluidos en la publicación, se comparan de manera sistemática con los correspondientes a nivel nacional. Si bien la mayor parte de los indicadores se refieren a la violencia hacia las mujeres chihuahuenses, también se presentan algunos referidos a su determinación socioeconómica. Un documento de similares características se elaboró para cada entidad federativa. Para mostrar la condición social de las mujeres en cada uno de los estados.

En esta publicación, se dedica el primer apartado a dar un perfil de la condición social de las mujeres en Chihuahua, en el que se describe la situación de desigualdad de género y violencia contra las mujeres, con base en los indicadores seleccionados; se presentan los indicadores estadísticos referidos a la violencia hacia las mujeres chihuahuenses y su caracterización socioeconómica: la estructura y composición de la población, las condiciones en cuanto a mortalidad y salud, nupcialidad y hogares, educación, participación en la actividad económica, en el ámbito social y en la toma de decisiones. Adicionalmente, se presentan indicadores sintéticos sobre la igualdad de género desde la perspectiva del Índice de Desarrollo Humano (IDH), el Índice de Desarrollo relativo al Género (IDG) y el Índice de Potenciación de Género. En México, como en todo el mundo, las mujeres son tratadas por el Estado y la sociedad en conjunto, de manera francamente desigual, sobre la base de una discriminación histórica. De acuerdo con el Informe de Desarrollo Humano, en ninguna entidad federativa del país se observa igualdad de trato y oportunidades entre hombres y mujeres. Existen otros trabajos a cargo del INDESOL en colaboración con el Programa de Apoyo a la Instancias de las Mujeres en la Entidades Federativas (PAIMEF), que elaboraron un Catálogo de Indicadores de Género (2010), para el Instituto Chihuahuense de la Mujer, en el cual se encuentran indicadores y datos estadísticos provenientes de registros, de encuestas, censos y demás, que proceden de muy diversas fuentes y no únicamente del Instituto.

MARCO TEÓRICO

La investigación sobre la mujer en la sociedad surge con mayor fuerza en la década de los 70, pero hoy en día se han generalizado más dichas investigaciones debido a la incorporación cada vez más creciente de la mujer en el ámbito laboral y el cambio de roles que desempeña la mujer hasta mediados de la década de los 50's. Se ha hablado mucho acerca de los estereotipos y como estos han ido evolucionando, se han definido nuevos estereotipos masculino y femenino Como lo define Suarez (2007) se entiende como estereotipo al conjunto de ideas que una sociedad obtiene a partir de las normas o patrones culturales previamente establecidos. La acción de estereotipar es fijar de manera permanente y de identificar lo estereotipado como el seguimiento de un modelo preestablecido, conocido y formalizado que se adapta de una manera fija. Los estereotipos sociales son generalizaciones sobre personas e instituciones que se derivan de su pertenencia en determinados grupos o categorías sociales. Pertenecen al imaginario colectivo y se nos presentan como la pura realidad objetiva e incuestionable ya que están vinculados a la estructura social y obviamente trascienden así a la sociedad.

El estereotipo de la mujer había sido buena, pasiva, obediente, servil, tierna, maternal, ama de casa, amable, comprensiva, discreta, delicada, dependiente y sin iniciativa, administradora de parte del dinero del hombre en el ámbito del hogar, temerosa, atractiva físicamente, siempre joven, y con apoyo incondicional para el hombre. También con la afectividad, dependencia y preocupación por los demás. Pero este estereotipo ha ido cambiando sustancialmente con el paso de los años y encontramos a una mujer independiente, con una capacidad de lucha y de empoderamiento más allá de lo que ella misma había sospechado poseer, encontramos en el inicio del siglo XXI una mujer con capacidad de superación que incursiona en los ámbitos político, económico, cultural, social y profesional, con menos posibilidades de ejercer los papeles protagonistas de su contraparte masculino, por las condiciones sociales que prevalecen, pero con mucha más fuerza y perseverancia.

Se presentan muchos estudios a partir de la “diferencia de género” en los que se hace hincapié en los conceptos que permiten definir a través de la sociología aquellas desigualdades que nos marcan como géneros diferentes. Primero se define el concepto de género a través de una comparativa del concepto de sexo, puesto que son confundidos de forma errónea con frecuencia. Se entiende como sexo, la condición biológica con la que se nace, es decir, nacemos hombre o mujer dependiendo de nuestra anatomía. Por el contrario, el género es un producto cultural, ya que se define por comportamientos atribuibles a hombres y mujeres que están socialmente contruidos y que carecen de una base biológica. Biológicamente una persona es macho o hembra, sin embargo, para describir el género, se utiliza el concepto de hombre o mujer. Carol Gilligan (2008) ha realizado un análisis de las diferencias de género a partir de las imágenes que los hombres y mujeres adultas tienen de sí mismos y de sus logros, la autora manifiesta que las mujeres se definen a sí mismas en término de relaciones personales y juzgan sus logros en referencia a su capacidad para cuidar a los otros. El tradicional rol que realiza la mujer es el de cuidadora y compañera. Pero dichas tareas son a menudo infravaloradas por los hombres, quienes consideran que su propio énfasis en el logro individual es la forma de conseguir el éxito.

Para poder estudiar la tipología de la mujer es necesario evaluarla sobre los diferentes indicadores que nos permitan conocer sus variables y parámetros, por lo que es necesario llevar una selección muy exhaustiva de que indicadores a utilizar para poder llegar a un conocimiento demográfico. Un indicador (del latín *indicare*) es un dato, señal, hecho o aviso que muestra un cambio respecto a algo que se está midiendo, que bien puede ser una condición, un fenómeno, una situación, un programa. En términos generales, los indicadores son percibidos como medidas verificables de cambio o resultado. “Los indicadores son poderosas herramientas en principio, permiten apreciar la situación actual. En segundo lugar, permiten cuantificar lo objetivos específicos. En tercer término, y quizás es lo más importante, se convierten en puntos guía que señalan el progreso hacia una meta establecida.” ONU (1999). Los indicadores pueden ser cuantitativos o cualitativos, dependiendo de su naturaleza, pero en cualquier caso, tienen el propósito de «clarificar y definir objetivos, establecer la dirección presente y futura respecto a metas y valores, evaluando programas específicos, demostrando progreso, midiendo los cambios y determinando el impacto de los programas.» ONU (1999). Según el INEGI, (2002) un indicador deben tener las siguientes características:

- 1.- Estar inscrito en un marco conceptual que le permita asociarse firmemente con los eventos al que el investigador pretende dar forma.
- 2.- Ser específicos. Deben mostrarse especificando la meta u objetivo a que se vinculan y/o a la política a la que se pretende dar seguimiento.
- 3.- Ser explícitos, que en su nombre se entienda si se trata de un valor absoluto o relativo, de una tasa, una razón, un índice, así como la población, producto, segmento, cobertura geográfica, etc.
- 4.- Estar disponibles para varios años, a fin de que se entiendan los progresos y movimientos del mismo a través del tiempo

- 5.- Ser comparable
- 6.- Deben ser relevantes y oportunos
- 7.- Ser claro, de fácil comprensión
- 8.- Debe poder levantarse y calcularse de la misma manera periódicamente
- 9.- Debe ser sensible al cambio, tanto para mejorar como para empeorar

Bajo los criterios más estrictos, no todos los datos, medidas o estadísticas pueden ser considerados como indicadores, reservándose este término únicamente a aquellas estadísticas que reflejan aspectos del desarrollo económico, social, humano, por ejemplo, y que cuentan con marcos legales, normativos y programáticos. Sin embargo, en diversos documentos de la ONU y de organismos internacionales se admite como un indicador a la expresión cuantitativa o, en su caso, cualitativo, correspondiente a un índice, medida, cociente o fórmula, que establece un parámetro del avance en el cumplimiento de los objetivos y metas, en donde frecuentemente el indicador se considera como «línea de base». Las organizaciones que estudian el desarrollo humano y su comportamiento, se han enfocado a obtener, de forma permanente, un grupo de indicadores comunes para la mayoría de los países que les permitan evaluar su situación demográfica, social, económica y del medio ambiente con respecto a determinados objetivos y metas de carácter internacional; asimismo, difunden diversos informes y reportes con sus evaluaciones y la evolución de los países y el mundo en su conjunto en diversos tópicos.

METODOLOGÍA

Se llevaron a cabo tres tipos de investigación con el fin de reunir el mayor número de datos con una heterogeneidad que permitiera conocer los distintos conceptos que conforman su perfil socio demográfico. Para esto se aplicaron distintos tipos de investigación, así como, diferentes herramientas.

Investigación Cualitativa: Para la investigación Cualitativa se llevaron a cabo 10 sesiones de grupo recopilando más de 12 horas de video de las cuales se editaron obteniendo aquellas opiniones que mejor reflejan el sentir de la mujer en nuestro medio. Además se realizaron entrevistas a profundidad con especialistas en el tema, tales como, trabajadoras sociales, psicólogos, funcionarios públicos y maestros.

Investigación Descriptiva: Se analizaron las 96 colonias que conformaba la mayor parte de las colonias de escasos recursos en el municipio de Chihuahua y se contabilizaron todos los AGEBS (Áreas geoestadísticas básicas) del 2010. Para cotejar con los datos obtenidos en el campo se analizaron 10 variables en 6 niveles diferentes como lo marca AMAI (Asociación Mexicana de Agencias de Investigación de Mercados y Opinión Pública, A.C.). Se utilizó el método de puntos propuesto por dicha asociación y se compararon a los obtenidos del Instituto Nacional de Geografía y Estadística (INEGI).

Investigación Descriptiva Transversal: Se aplicaron 2204 encuestas a una población de mujeres de 15 años o más, sumando un total de 96,912 en las colonias que conforman nuestro segmento de estudio. Se dividieron en 4 tipos de instrumentos que correspondieron a: Salud, Derechos Humanos, Educación y Emprendedurismo. Se llevó a cabo un análisis de frecuencia y se obtuvieron algunos datos muy significativos.

RESULTADOS

Perfil socio-demográfico.

Se analizar 28 Áreas Geo estadísticas Básicas (AGEBS) como muestra del total que conforman las 96 colonias de las colonias en condición de pobreza. Un AGEBS equivale aproximadamente a 20 cuadras o

manzanas de las diferentes colonias analizadas. A continuación las variables que se tomaron del Censo para equipararlas con las de AMAI.

Tecnología y entretenimiento: Número de televisiones a color, Computadora

Infraestructura práctica: Número de focos, Número de autos, Estufa,

Infraestructura sanitaria: Baños, Regadera

Infraestructura básica: Tipo de piso, Número de habitaciones

Capital humano: Educación del jefe de familia.

Tanto los datos del INEGI como los recabados en las encuestas nos dieron como resultado que en promedio las familias que habitan las colonias analizadas tienen la Clasificación D+.

Este segmento tiene cubierta la mínima infraestructura sanitaria de su hogar. Aspira en primer lugar a adquirir bienes y servicios que le hagan la vida más práctica y sencilla

Sus condiciones básicas de vivienda y salud son:

- Casas pequeñas con 3 o 4 habitaciones; un baño.
- Pisos en su mayor parte de cemento o cerámica
- La mitad son propias o la está pagando.
- Casi todos cuentan con baño y regadera, aunque solo dos terceras partes tiene lavabo o calentador de agua de gas, fregadero y lavadero.
- Dos terceras partes tiene un automóvil.
- Casi todos cuentan con refrigerador, estufa de gas y lavadora.
- Excepto licuadora y a veces microondas, muy pocos tienen otros electrodomésticos y ayudas para la cocina.
- Dos terceras partes tienen teléfono.
- Solo una escasa minoría cuentan con TV de paga y videojuegos
- En promedio el nivel de estudios que predomina es; secundaria o primaria incompleta.
- La mayor parte de su gasto lo invierten en alimentos, transporte y pago de servicios.
- Proporcionalmente gastan más en cereales y verduras.

Algunos datos obtenidos importantes son: aproximadamente el 25% de los hogares de las colonias analizadas cuentan con jefatura femenina, de 20.6 en conteo del 2005 a un 23.1% en el censo del 2010, en 5 años según datos estatales, podemos decir que las colonias analizadas tienen casi un 2% más de hogares con jefatura femenina. El 51% de la población de las mismas colonias son mujeres y de estas el 68% son mayores de 15 años. Que se tiene en promedio 8.3 años de escolaridad, y el tema de salud existe una cobertura del 83.6 % que cuenta con algún tipo de servicio médico únicamente el 16.4% no cuenta con este servicio. Otro dato interesante proporcionado por el INEGI (2004), a nivel estatal, es el Índice de Desarrollo relativo al Género (IDG) en el municipio de Chihuahua implica una merma en desarrollo humano que ha sido calculada en alrededor de 1.31% debida a la desigualdad entre hombres y mujeres. Estas cifras destacan que las mujeres en Chihuahua tienen un trato asimétrico que redundará en la

restricción de sus libertades y en el ejercicio de sus derechos. Aun cuando la tasa de alfabetización es similar en las mujeres (95.86%) y en los hombres (96.25%) y, la tasa de matriculación (de primaria a licenciatura) es ligeramente mayor en las mujeres (67.14%) que en los hombres (64.61%), la brecha más importante en uno de los componentes del índice se aprecia en la brecha de ingresos provenientes del trabajo: las mujeres ganan, en promedio, 6 352 dólares, mientras que los hombres 18 461 lo que significa que ellas ganan alrededor del 34.0% de lo que ganan los hombres. En conjunto, estos indicadores sintetizados en el Índice de Desarrollo relativo al Género (IDG) colocan a Chihuahua en el lugar número 8 en relación al conjunto de entidades del país, ligeramente arriba de Sonora y Campeche. En el ámbito político; En el estado de Chihuahua, así como en el municipio capital, los puestos senatoriales y diputados de distrito están divididos entre hombre y mujeres como sigue:

Tabla No.1: Composición política por sexo en el estado y ciudad de Chihuahua.

Distribución porcentual de regidores	Estado de Chihuahua		Municipio de Chihuahua	
	Mayoría Relativa	Representación proporcional	Mayoría Relativa	Representación proporción
	2010		2010	
Mujeres	30%	37.5%	54.21%	40.37%
Hombres	70%	62.5%	45.79%	59.63%

En comparación con otros estados de la república, se puede decir que Chihuahua es uno de los que posee mayor equidad de género en términos políticos. Una de las facetas más importantes y de mayor arraigo en las mujeres, son las tareas domésticas ya que se ubican dentro del papel femenino obligado y la mujer debe aceptar como natural e ineludible, lo que representa una doble carga en su vida, aparte del cuidado de los hijos y el marido. Después de la agotadora jornada en una fábrica (maquiladora) o bien en labores fuera de casa, deben continuar realizando las tareas hogareñas.

Este es una de las razones por las que muchas mujeres abandonan el trabajo, siempre tan necesario para el presupuesto familiar, especialmente en los actuales circunstancias económicas en las que se vive empobrecido por el alza constante del costo de vida. Al abandonar su puesto pierde todo los derechos adquiridos a través de su ingreso, al no reunir la cantidad de años suficientes para jubilarse o no contar con de la edad necesaria para iniciar el trámite de jubilación, la mujer de la tercera edad está sujeta a la manutención por parte de otros, como puede ser el cónyuge o bien los hijos.

Por otro lado, según datos del Instituto Nacional de Geografía y Estadística (INEGI) en 2008, manifiesta que, por cada 100 enlaces realizados en el país, hubo 14 divorcios; mientras que en el año 2000 la relación fue de 7.4 y en 1971 de 3.2. Lo que pone de relieve el problema tan grave de los hogares unipaternales en nuestro país, principalmente con jefatura femenina Para el año 2008, Chihuahua ocupaba un primer lugar en divorcios, (26.9 divorcios por cada 100 matrimonios), muy por encima del nivel nacional. Para poder conocer a fondo las distintas facetas de la mujer, se definieron cuatro ejes principales; Salud, Emprendedurismo, Derecho Humanos y Educación. En el área de Salud se pretende conocer cuáles son los servicios médicos más recurrentes en la población entrevistada, así como, las enfermedades que más aquejan a la mujer y el conocimiento que tiene acerca de las medidas mínimas de medicina preventiva que debe llevar a cabo. En el sector de emprendedurismo pretendemos saber en qué se ocupa la mujer, cuales son los campos laborales en los que se desarrolla, si tiene conocimiento de apoyos gubernamentales para su desarrollo empresarial y cuáles son sus limitantes. Con respecto al importante tema de los Derechos Humanos buscamos información acerca de la inequidad que se manifiesta por cuestiones de género, saber si ha sido objeto de discriminación y de qué tipo, así como conocer si ha padecido de violencia física en su persona. Y el no menos importante tema de la Educación, primero identificar en qué nivel de conocimiento se encuentra la mujer perteneciente a nuestra

población objeto, así como, las causas que la orillaron, si ese fuera el caso, a dejar de estudiar y si existe la pretensión de continuar con sus estudios, una aspecto que queremos corroborar es que tanto influye la educación de la madre en el desarrollo académico de los hijos. A continuación se da un pequeño resumen de lo obtenido tanto en las investigaciones, descriptivas, cualitativas y transversal.

Derechos Humanos

Algunas de las opiniones aportadas en las sesiones de grupo que se realizaron entre las personas tanto del sexo masculino como femenino, fueron las siguientes: Al hablar de Derechos Humanos, nuestros entrevistados coinciden que el 100% de las mujeres han sufrido discriminación de algún tipo, ya sea en el hogar paterno, como en el matrimonial, que la mayoría de las mujeres que están siendo agredidas de manera psicológica ni siquiera saben que están siendo violentadas, que las mujeres golpeadas no acuden a levantar una demanda porque tienen miedo a seguir siendo agredidas.

La mayoría de las mujeres no acuden a instituciones de apoyo porque saben que al volver a sus casas seguiría la agresión. Por otro lado comentó la Lic. Lara Armendáriz Carbajal, primera visitadora de la Comisión Estatal de Derechos Humanos que las mujeres únicamente han oído hablar de los Derechos de la Mujer, más sin embargo, son pocas las que realmente los conocen, ya que a las asociaciones e instituciones les hace falta mayor difusión. La opinión de la psicóloga Alejandra Vadillo Mecías, comentó. "La mujer va creciendo en su desarrollo profesional más sin embargo tiende aun a ser desvalorizadas por algunas ramas de la sociedad". El tema de Derechos Humanos, sin lugar a duda es sensible en su manejo, ya que la mayoría de mujeres, no lo consideran y sus respuestas aparecen sesgadas, pudimos identificar este fenómeno debido a distintas preguntas de filtro que se aplicaron. Se les pregunto, utilizando la técnica de tercera persona, si conocían a alguien que hubiera sufrido discriminación y el 43% contestaron que sí, pero cuando se preguntó qué tipo de discriminación habían sufrido sin tomar en cuenta la respuesta anterior, positiva o negativa a la pregunta anterior, el 100% selecciono algún tipo de discriminación. A la pregunta específica de ¿Quién es el culpable del incumplimiento de los Derechos humanos en la mujer. Prácticamente la mitad 48.9% contesto que cada mujer es responsable de permitir el abuso en su persona, en segundo término, el 30.3 5% mencionó que la sociedad y en tercer lugar el Gobierno. El 100% de la mujeres sabe que hay campañas, leyes e instituciones, dedicados a la protección de los Derechos Humanos, pero muy pocas pudieron mencionar alguna, institución, campaña, solo un porcentaje muy bajo menciona la Comisión Nacional de Derechos Humanos, sin poder dar su nombre exacto. El tipo de discriminación que más se mencionó fue la falta de igualdad y oportunidades en el ámbito laboral. Las mujeres cuyo estado civil es casada, fueron las que más mencionaron discriminación y falta de respeto a los Derecho Humanos de la Mujer, 16.44% mencionó violencia física.

También se comentó que sigue existiendo un problema grave de discriminación, que como país seguimos limitando oportunidades basándonos en la diferencia de género y en la conveniencia personal u organizacional, siguen sucediendo prácticas como negar el trabajo a una mujer embarazada, comentaron, la diferencia de salarios en igualdad de circunstancias entre un varón y una mujer, aunque sea penalizado por la ley, las mujeres no acuden a poner sus demandas. Hoy en día existen varias instituciones y asociaciones que velan y defienden los derechos de la mujer en todas partes del mundo. Lamentablemente a estas Instituciones no se les ha dado la difusión adecuada, ya que muchas mujeres no están informadas ni siquiera de su existencia. Estas Instituciones están luchando día con día para erradicar por completo la discriminación hacia la mujer, y aunque hacen un gran trabajo, y la discriminación a la mujer y la violencia han disminuido considerablemente, no es una tarea fácil para las asociaciones, ya que a pesar de la falta de difusión adecuada a las mismas, algunas mujeres no recurren a estas Instituciones por miedo a ser rechazadas o criticadas por la sociedad. En conclusión, podemos afirmar, que no se respetan sus derechos, ni se ejerce la justicia al momento de agredir o discriminar a una mujer y aunque Chihuahua es pionero en la aplicación de la Ley Estatal de Igualdad Entre Mujeres y Hombres, falta mucho por hacer en este tema.

Educación

En el pasado eran pocas las mujeres que estudiaban, sin embargo en los actualidad, las mujeres han ido avanzando más y se preparan cada vez más, para eso en las escuelas a nivel profesional ya se ve la equidad en las aulas entre hombres y mujeres lo que no sucedía anteriormente. Hoy en día se cuenta con un gran número de mujeres profesionistas en diferentes áreas. Inclusive la mujer está incursionando en áreas que se pensaba exclusivas para hombres. Aun así, existen algunos inequidades dentro del área de educación tales como: la falta de apoyo por parte del gobierno hacia las madres solteras que quieren seguir estudiando. Los datos obtenidos de las encuestas es que: las mujeres que tiene la instrucción básica son el 16%, un 39.5 % curso algún grado o terminó la educación secundaria, mientras que solo un 21% tiene algún estudio técnico. De las mujeres entrevistadas el 16% se encuentra actualmente estudiando, de ese 16% el 53% tiene entre 15 y 20 años de edad y el 29.6% tiene entre 21 y 26 años , esto quiere decir que todavía la mayor parte de estas mujeres que estudian, se encuentran en la casa materna, mientras que solo un 3.7% son mayores de 45 años. El 60% conoce la existencia de programas de apoyo gubernamentales para llevar a cabo estudios de nivel superior, pero solo el 11% del total ha disfrutado de algún tipo de beca o ayuda. Manifestando que no se conoce ninguna beca o apoyo para estudiar la educación secundaria o el nivel básico. El promedio de hijos en mujeres de estas colonias es de 2.3 y la mayoría en edad escolar, por lo que la madre tiene que dedicar parte de su tiempo a la realización de tareas escolares, solo un 7.8% mencionó que no lo hace, pero la mayoría dedica de 15 a 30 minutos.

El 8% de las mamás consideran que el lenguaje académico que utilizan sus hijos, no es comprensible para ellas, identificando matemáticas como la materia con más dificultad seguida por ciencias sociales. Y solamente al 14% no se les dificulta ninguna materia. El 24.8 % no recibe ningún apoyo para la educación de sus hijos, los esposos en un 48% son los que aportan alguna cantidad para la educación de los hijos. Un 73.67% consideran el desempeño de sus hijos dentro de la escuela va de Regular a Excelente, se cree que es una respuesta que tiene sesgo por lo que se considera un error de socialización dentro de la investigación (contestar lo socialmente aceptado) encontrando que no concuerda con nuestra hipótesis de que las mujeres con mayor preparación tienden a tener hijos con un mejor aprovechamiento en el aula. Si la gran mayoría de las mujeres tiene hasta secundaria, se pensó que tendrían hijos con un pobre aprovechamiento, esto deberá ser motivo de un estudio más exhaustivo de este punto en particular.

Del 21.63 % de las mujeres que tienen nivel medio o carrera técnica, podemos observar que el trabajo y la falta de dinero no permiten que estas mujeres encuestadas continuaran sus estudios. Manifestaron que les gustaría seguir estudiando pero no les es posible por falta de recursos y tiempo para realizarlos. Otra forma de discriminación en el núcleo familiar con respecto a la educación, se da al limitar las oportunidades de estudio a las mujer y favorecer la preparación en mayor grado a los hombres. Las madres comentaron, “que a pesar de que la madre tenga estudios o no, buscará los medios para que sus hijos puedan superarse y motivarse a aspirar la oportunidad, que tal vez ella no tuvo”. Algunos de los puntos en los que los participantes estuvieron de acuerdo, es que para todos es muy importante que la mujer se supere, y que complemente su preparación personal con una profesión, es parte del buen ejemplo que puede dar a su familia, los estudios de la madre, son la base para poder sacar adelante una familia, para mejorar el sustento que puede ser junto con el padre o en caso de ser madre soltera de manera individual. Sin embargo a pesar de coincidir en la necesidad de la superación y la ayuda económica que representa el hecho de que la madre se prepare o lleve a cabo labores fuera de casa, insistieron los participantes, en que es bueno que la mujer desarrolle dichas actividades, “siempre y cuando no desatienda a los hijos y al hogar”, se agregó: “que podría desencadenar en problemas más graves, de tipo social “. Por lo que concluimos que, para nuestro segmento de investigación, sigue siendo la figura materna la única y principalmente responsable de la educación, valores morales y comportamiento de los hijos. Se reconoció que en gran medida el futuro de la familia depende de la visión y actitud de la mujer, así como los

objetivos y metas de la misma para llevar a todos los miembros de su núcleo familiar, a enfrentar las distintas situaciones que presenta la vida. Lo que da una visión matriarcal de la organización del hogar.

Emprendedurismo

Las mujeres son más organizadas que los hombres debido a que sus padres les inculcan el orden más que al varón por el hecho de que en nuestra cultura la mujer es la que está en casa y el hombre es el que sale a trabajar. Con base en los resultados que arrojó la encuesta, el 62% de las mujeres toma la decisión en cuanto a la distribución del dinero en la casa, mientras que el 25% de los hogares la mujer es la que aporta la mayor parte de los ingresos, cabe destacar en cuanto a quien toma la decisión hubo una marcada diferencia entre las colonias con mayor antigüedad en donde aparece el hombre como el tomador de decisiones mientras que en las colonias nuevas la mujer es la que distribuye el gasto.

El 67.5% de las mujeres encuestadas trabajan, el 26.5% se auto emplea principalmente en área comercial, con edades entre 36 y 40 años, al 60% le gustaría emprender su propio negocio. Las actividades que más se mencionaron como atractivas, fueron: estética, una boutique, negocios de comidas y en menor proporción abarrotes o vender zapatos. ¿Por qué no ha podido iniciar un negocio? La causa más mencionada con un 65.6% por falta de dinero. El 92.2 % de las mujeres no tienen conocimiento alguno acerca de los programas de financiamiento gubernamentales. Por otra parte las entidades que proporcionan créditos, informaron que el 60% de las solicitudes provienen de mujeres emprendedoras. Las que no trabajan, un 19.6%, no lo hacen principalmente porque son solteras y estudian y el 32% las labores del hogar no les permite trabajar, o bien la falta de experiencia y el 29% mencionó que por la edad. Solo el 2% comentó que no hay vacantes.

Salud

En el ámbito de la Salud, según la Dra. Teresa María Uranga Urías, médico general del IMSS comentó, “La mayoría de los pacientes que se reciben diariamente en el IMSS son mujeres. Todos los días teníamos desde partos, complicaciones en el embarazo, síntomas de la menopausia, mujeres diabéticas, enfermedades más graves como la osteoporosis, el cáncer de mama, la infertilidad o ver morir a bebés en el parto, verdaderamente la mujer es el pilar de la familia y si esta se enferma, la familia se ve desorientada”. En este tema se puede agregar estadísticas proporcionadas de las enfermedades más comunes en la mujer, pero lo que realmente se pretende es ver que apreciación tiene la población, acerca de la salud de la mujer. El 95% de las mujeres cuenta con servicio médico, el 47% cuenta con Seguro social, el 27% por el esposo y el 29% por su trabajo.

El 84% califica de regular a excelente solo un 14% lo califica como malo o muy malo. Consideran que es un servicio barato o muy barato, que tiene las instalaciones básicas, sin embargo piensan que su puede mejorar el tiempo de espera de cita, la actitud del personal y la disponibilidad de medicamentos, como aspectos que requieren una solución inmediata. Están conscientes de que las enfermedades más comunes son: el cáncer de mama, la diabetes y el cáncer cervicouterino. Solo un 11% manifestó que tiene más de 5 años que no asiste al ginecólogo, lo que parece lógico dado que la mayoría de las encuestadas está en edad reproductiva, o bien contestaron de manera socialmente aceptada, porque al aplicar la pregunta filtro de que “medidas preventivas debían de tomar” no supieron la respuesta adecuada. Muchas de ellas comentaron, que no acuden a hacerse un Papanicolaou porque pierden hasta dos días de trabajo. Falta mucho por hacer en la salud de la mujer, aunque los programas de gobierno cubren casi el 100% de la población femenil, falta mucha difusión y prontitud en los servicios, muchos más médicos especialistas y una alimentación adecuada aquellas madres que están en estado de gravidez.

CONCLUSIONES

Se pudo observar durante la realización de las investigaciones: que existe poca preparación entre las mujeres de las colonias de bajos recursos, ya que las condiciones económicas únicamente alcanzan para lo más esencial, lo que obliga a muchas de ellas a trabajar, dejando el cuidado de los hijos a guarderías o bien a la abuela, cuando es posible. Otro dato interesante, es todas desean tener una empresa que les genere mayores ingresos, no por el aspecto de superación personal, esto casi no se contempla, son mayores sus necesidades primarias, además de que no hay suficiente conocimiento de programas de apoyo a la pequeña empresa y micro empresa, otro factor que reprime el emprendedurismo en la mujer, es el machismo, algunas opinaron que no pueden tener mayores ingresos que el hombre, por lo que se contentan con un trabajo pobremente remunerado, se pudo observar, que la discriminación sigue presente en nuestra sociedad sobre todo en el ámbito laboral, que falta difusión por parte del gobierno tanto en campañas de Derechos Humanos, para lograr que se defienda la causa de la igualdad en el ámbito laboral,

En cuestión de salud, están “conformes” con el servicio médico, pero cuando se le permite externar las quejas en contra del mismo sus opiniones parecen contradecirse, conocen también, de la existencia de medicina preventiva, pero no les llegan los programas a sus colonias, ir al médico representa perder uno o más días de salario. En suma, existe mucho trabajo que hacer para poder remediar las condiciones de vida de las mujeres de las colonias pobres, que es necesario que gobierno y sociedad pongan más empeño en la difusión de los programas y la capacitación de las mujeres de nuestro municipio. Hacer llegar más a fondo los apoyos para que continúen estudiando, para que establezcan su salón de belleza o su pequeña empresa, que los programas de salud sean inmediatos y no a tres o cuatro meses cuando “les toque” la cita con el ginecólogo. Son muchas las necesidades y los recursos son escasos, solo queda esperar que las autoridades los sepan distribuir con equidad y eficiencia.

TRABAJO A FUTURO

Faltaría hacer un comparativo entre los distintos municipios del Estado o del país, contra el municipio de Chihuahua, así como, determinar el Índice de Desarrollo de Género a nivel colonia y conocer el punto de vista del hombre con respecto a la mujer.

CALIDAD DE SERVICIO QUE PROPORCIONA LAS INSTITUCIONES DE EDUCACION SUPERIOR EN MÉXICO

Tomas Cervantes Collado, Universidad Autónoma de Baja California
Rosalinda Jiménez Hernández, Universidad Autónoma de Baja California

RESUMEN

La importancia que tiene hoy en día la educación a nivel superior es de gran relevancia ya que por medio de esta se busca tener una educación sustentable para los educandos, mas sin embargo si no se cuenta con servicios de calidad adecuados es un tanto difícil el poder lograr este objetivo. En este articulo se abordara la situación a la que se esta enfrentando las Instituciones de Educación Superior (IES) en México analizando la preocupación que existe por la calidad, eficiencia y productividad que se está generando al interior de dichas Instituciones. Tomando como referencia para esta investigación a la Universidad Autónoma de Baja California, Facultad de Ciencias Administrativas realizando un estudio observacional a los usuarios para conocer las circunstancias del servicio que está proporcionando dicha institución y hacer un comparativo con las demás IES de México y dar a conocer la situación actual.

PALABRAS CLAVES: Calidad, Servicio, Educación Sustentable, Educandos, Instituciones de Educación Superior (IES)

QUALITY OF SERVICE THAT PROVIDES THE HIGHER EDUCATION INSTITUTIONS IN MEXICO

Tomas Cervantes Collado, Universidad Autonoma de Baja California
Rosalinda Jiménez Hernández, Universidad Autónoma de Baja California

SUMMARY

The importance of today's higher level education is relevance since through this seeks to have a sustainable education for learners, but if you do not have adequate quality service is difficult to achieve this goal. In this article we address the situation that is facing the Higher Education Institutions (IES for its acronym in Spanish) in Mexico, analyzing the concern for quality, efficiency and productivity that is being generated within those institutions. With reference for this investigation to the "Universidad Autonoma de Baja California", "Facultad de Ciencias Administrativas" conducting an observational study for users to know the circumstances of the service that is providing the institution and make a comparison with other Institutions in Mexico and release the current situation.

JEL: I23

KEY WORDS: Quality, Service, Sustainable Education, Learners, Higher Education Institutions (IES for its acronym in Spanish)

INTRODUCCIÓN

La educación superior, en México, debe enfrentar retos particularmente difíciles: debe formar profesionales capaces no simplemente de adaptarse a los imprevisibles cambios de la sociedad y de las actividades técnicas, científicas y sociales, sino de generar y conducir dichos cambios; debe encontrar las formas de incidir de manera cada vez más decidida, permanente y eficaz en la sociedad en todos sus

ámbitos; también, y cada vez de manera más amplia, debe superar el economicismo educativo que reduce la educación a un insumo de la producción, y al ser humano a "recursos humanos" y rescatar el valor cultural de la educación. Estos son algunos de los aspectos en que se concreta el reto de mejorar la calidad de la educación superior. Un instrumento que cada vez con más insistencia se plantea como adecuado para estimular el mejoramiento de la calidad de la educación es aplicar indicadores que nos muestren realmente cual es la situación actual obteniendo como resultado líneas de acción para mejor dicho servicio.

En la presente investigación se aplicaron encuestas a los alumnos de la Universidad Autónoma de Baja California, Facultad de Ciencias Administrativas para obtener datos que pudieran ser de relevancia en la calidad educativa que se esta proporcionando.

REVISIÓN LITERARIA

El objetivo de la Gestión de la Calidad Total (GCT) (Crosby, 1979; Feigenbaum, 1983; Deming, 1989; Juran y Gryna, 1993; Ishikawa, 1994; Camisón, 1999a) en cualquier organización es satisfacer las necesidades del cliente, siendo la clave de su implantación la comprensión de las necesidades de esos clientes. La mayoría de las investigaciones llevadas a cabo en GCT se han orientado hacia las empresas industriales y las empresas de servicios comerciales en general. En lo referente al entorno universitario basándose en una experiencia práctica dicho entorno no es tan distinto al de los servicios comerciales.

Algunos autores como Bemowski (1991) ya reconocen explícitamente la obligación necesaria por parte de las instituciones académicas de aplicar un sistema de GCT como medio para sobrevivir en un futuro. De ahí que en la actualidad estén emergiendo una serie de estudios que intentan adaptar dichos conceptos de la GCT tradicional, a campos como el de la educación superior, sobre todo desde finales de la década de los ochenta (Sallis, 1993).

METODOLOGÍA

En la presente investigación se realizó una encuesta tomando como referencia a una población de estudiantes de 5,000 por medio de la siguiente fórmula se determinó la muestra para la aplicación de dicha encuesta con un grado de confianza de 99% y un nivel de error de 2% así determinando la siguiente muestra.

$$n = \frac{6^2 N p q}{e^2 (N-1) + 6^2 p q} \quad (1)$$

$$n = \frac{2.54^2 (5000)(.50)(.50)}{.02^2 (5000 - 1) + 2.54^2 (.50)(.50)} \quad (2)$$

$$n = \frac{6.4516 (5000)(.25)}{1.9996 + 1.6126} = \frac{8064.50}{3.6122} = 2,232.5729 \quad (3)$$

Se encuestó a 2,233 alumnos (mirar encuesta en la parte de anexos)

RESULTADOS

Aplicando la metodología antes mencionada se obtuvieron los siguientes resultados teniendo con un índice de respuesta más alto los siguientes cuestionamientos; Pregunta 1.- Estoy satisfecho con el sistema de enseñanza que llevan a cabo mis maestros, 5.- El horario del áreas académicas y administrativas asegura que se pueda acudir a él siempre que se necesita, 8.- Los laboratorios y préstamo de equipo ofrecen atención, equipo en condiciones óptimas y servicios de calidad, 9.- Cuando acudo a la biblioteca encuentro el material que necesito, 10.- Existen espacios para que yo como estudiante exprese mi opinión

sobre algunas deficiencias de las áreas académicas y administrativas. (Ver la parte de anexos para comprender el orden de las preguntas e interpretación de la Figura 1).

Estos cinco cuestionamientos tuvieron como respuesta casi nunca o nunca, a continuación se muestran las graficas de estos resultados globales.

Figura 1: Respuesta Global de los Cuestionamientos

Ver la parte de anexos para comprender el orden de las preguntas e interpretación de la Figura 1.

CONCLUSIONES

No se puede seguir brindando educación sin dejar de medir los resultados en la calidad de servicios que se ofrecen a los alumnos es por ello que es de suma importancia el aplicar estos indicadores que nos muestren estas áreas de oportunidad para poder brindar un buen servicio de calidad y poder cumplir con el objetivo principal que es proporcionar una educación sustentable para los educandos cuidado siempre las variables en la educación como los son fuerza de trabajo intelectual congruente con las tareas de gestión intelectual, tiempo invertido al aprendizaje (número de horas dedicados trabajo intelectual), información humanística, científica y tecnológica de la mejor calidad (insumo educativo), habilidades en la autogestión del conocimiento (educación sustentable), productos intelectuales generados (evidencia de aprendizaje) la alerta y el uso eficiente de la tecnología (habilidades y visión tecnológica), lenguaje profesional incorporado (variable principal de valuación de la calidad educativa), socialización tutor-alumno, valuación sistemática (Valoración de criterios de ocurrencia del aprendizaje).

Si realmente se cuidaran todos estos aspectos hoy en día la calidad de los servicios proporcionados en la educación superior estarían dentro de los estándares más altos a nivel mundial.

Haciendo un comparativo con las universidades de México a nivel nacional existen varios aspectos de relevancia a considerar como lo es el prestigio de las universidades que está estrechamente relacionado con tres ponderaciones: la selectividad de la admisión, la dimensión de la matrícula y la magnitud del cuerpo docente para cursos de postgrado así mismo en contraste con la mera reputación, la calidad académica o educativa percibida está muy vinculada con la selectividad en el pregrado y tiene poco que ver con el tamaño o el énfasis en los estudios de posgrado, una vez tomada en cuenta la selectividad.

El prestigio de las instituciones, en particular el que se relaciona con la selectividad, tiende a mantener una notable estabilidad durante periodos relativamente prolongados. Las razones de esa estabilidad se verán con más claridad cuando consideremos las dos siguientes perspectivas empleadas para estimar la calidad educativa. (Alexander W. Astin),

La ponderación de los recursos. Cuando los educadores tienen necesidad de efectuar evaluaciones operativas de la calidad académica, en general equiparan esa calidad a los recursos con que cuenta una institución educativa: profesores con gran capacitación y prestigio, abundancia de medios y estudiantes brillantes. (Asimismo, estos tres tipos de recursos tradicionalmente han proporcionado la base empírica más importante para acreditar la reputación institucional). La competencia profesional del cuerpo docente puede determinarse sobre la base del porcentaje de profesores que poseen un doctorado, mientras que su prestigio comúnmente se valora según las publicaciones que establece; en la reputación de que goza cada uno de ellos entre sus colegas de una determinada disciplina. Se aprecia la riqueza institucional de acuerdo con distintos criterios: las dotaciones, el gasto por estudiante, la planta física, los fondos para investigación, las existencias bibliotecarias, la remuneración de los docentes, la proporción estudiantes/profesor, etcétera. La calidad de los estudiantes se mide, por supuesto, según la selectividad, es decir, la capacidad académica media de los alumnos de primer año, determinada por los puntos obtenidos en las pruebas de admisión. La selectividad, por lo tanto, cumple una doble función en la evaluación de la calidad institucional: por una parte, puede ser considerada como un indicador del prestigio de la universidad y, por otra, como una medida de sus recursos. (Alexander W. Astin), El criterio de que las instituciones necesitan adoptar una perspectiva más orientada hacia los estudiantes en la planificación y la administración, implica algunos métodos de evaluación de la calidad que se apartan mucho de los enfoques tradicionales. Así, en el mareo de esta nueva perspectiva, una institución de educación superior de gran calidad es la que conoce lo que está pasando con sus estudiantes y proporciona a docentes y administradores oportunidades concretas de perfeccionar sus habilidades académicas en condiciones conminatorias mínimas. La institución de alta calidad tiene un sistema de evaluación y retroalimentación de información sobre la formación del estudiante que le permite practicar los ajustes apropiados en los programas o las políticas cuando se plantea la necesidad de cambios o mejoramiento. En otras palabras, la calidad se identifica no con el prestigio o las instalaciones físicas, sino más bien con un proceso permanente de autocrítica que hace hincapié en la contribución de la institución a la formación intelectual y personal de los estudiantes. (Alexander W. Astin), (Figura 2 parte de anexos)

ANEXOS

Universidad Autónoma de Baja California
Facultad de Ciencias Administrativas
Encuesta de Calidad

Instrucciones: Contesta la siguiente encuesta marcando con una X la respuesta que mejor consideres siendo lo más honesto posible.

Género: **M** **F**

Estoy satisfecho con el sistema de enseñanza que llevan a cabo mis maestros.

Siempre Casi siempre A veces Casi Nunca Nunca

El trato de maestros y administrativos con los alumnos es considerado y amable.

Siempre Casi siempre A veces Casi Nunca Nunca

Los maestros y administrativos se muestran dispuestos a ayudar a los alumnos.

Siempre Casi siempre A veces Casi Nunca Nunca

Los maestros y administrativos dan una imagen de honestidad y confianza.

Siempre Casi siempre A veces Casi Nunca Nunca

El horario de las Áreas académicas y administrativas asegura que se pueda acudir a él siempre que se necesita.

Siempre Casi siempre A veces Casi Nunca Nunca

Las Áreas académicas y administrativas informan de una manera clara y comprensible a los alumnos.

Siempre Casi siempre A veces Casi Nunca Nunca

Las Áreas académicas y administrativas dan respuesta rápida a las necesidades y problemas de los alumnos.

Siempre Casi siempre A veces Casi Nunca Nunca

Los laboratorios y préstamo de equipo ofrecen atención, equipo en condiciones óptimas y servicios de calidad.

Siempre Casi siempre A veces Casi Nunca Nunca

Cuando acudo a la biblioteca encuentro el material que necesito.

Siempre Casi siempre A veces Casi Nunca Nunca

Existen espacios para que yo como estudiante exprese mi opinión sobre algunas deficiencias de las áreas académicas y administrativas.

Siempre Casi siempre A veces Casi Nunca Nunca

En general estoy satisfecho con mi experiencia como estudiante de la Facultad de Ciencias Administrativas.

Siempre Casi siempre A veces Casi Nunca Nunca

REDES DE CONOCIMIENTO Y PROCESO DE CREACIÓN DE UNA MICROEMPRESA

Gerardo Vera Muñoz, Benemérita Universidad Autónoma de Puebla
Monserrat Vera Muñoz, Benemérita Universidad Autónoma de Puebla
Rafaela Martínez Méndez, Benemérita Universidad Autónoma de Puebla

RESUMEN

El objetivo del artículo consiste en indagar la importancia de las redes sociales en el proceso de creación de una microempresa de frutas deshidratadas en la ciudad de Puebla, México. De acuerdo a (Johannisson, 1998) la interacción del emprendedor con otros actores (familiares y amigos, otros empresarios, instituciones del entorno) constituye un aspecto crucial del proceso de creación de una empresa que debe ser particularmente estudiado. Se parte del supuesto que es a partir de estas redes como el emprendedor puede acceder a distintos tipos de recursos como: financiamiento, know how tecnológico, know how administrativo y know how empresarial, que de otra manera quedarían fuera de sus posibilidades. El enfoque teórico – conceptual de esta investigación incorpora diversos planteamientos derivados del marco analítico de las redes sociales en el que se piensa el emprendedurismo como un proceso enraizado en un contexto social, encauzado y facilitado o restringido e inhibido por la posición de las personas en el tejido social. A través de una estrategia metodológica basada en el estudio de casos se analizan los vínculos que el emprendedor va estableciendo con diferentes agentes clave, con la finalidad tener acceso al capital y a otros recursos que le permitan aprovechar las oportunidades percibidas.

PALABRAS CLAVE: emprendedurismo, redes sociales

INTRODUCCIÓN

El objetivo principal de este trabajo es analizar la importancia de las redes sociales en el proceso de creación de una empresa productora de fruta deshidratada. En la formación de cualquier empresa es común tomar en cuenta y analizar aspectos relacionados con el financiamiento, con la localización, con la comercialización, aspectos de tipo legal y desde luego la tecnología, pero muy pocas veces se toman en cuenta la importancia que en este proceso tienen aspectos como las redes sociales. Esto ha sido así, porque el enfoque tradicional sobre la investigación en emprendedurismo rechaza la naturaleza relacional del proceso. Por consiguiente, tratan a los emprendedores ya sea como tomadores de decisiones atomizados, operando como entidades autónomas, o como prisioneros de su ámbito cultural, predispuestos al emprendedurismo. La posición que se adopta en este trabajo, por el contrario, ve al emprendedurismo arraigado en un contexto social, encaminado y facilitado o restringido e inhibido por la posición de las personas en el tejido social. El trabajo se divide en cuatro secciones; en la primera de ellas se desarrolla el marco analítico de la investigación, el cual aborda el concepto de emprendedurismo, espíritu empresarial o actividad empresarial (en este trabajo se tomarán como sinónimos) desde la perspectiva de las redes sociales, así como la estrategia metodológica centrada en el estudio de caso. En la segunda, se describe el escenario de las empresas productoras de fruta deshidratada en México y particularmente en el estado de Puebla, enfatizando sus capacidades, así como las características del mercado en el cual participan. En la tercera sección se analizan las diferentes interacciones entre las emprendedoras (las dueñas) de la empresa productora de fruta deshidratada, y sus amigos, colegas, familiares e instituciones de educación superior (en adelante IES) a través de las cuales tuvieron acceso a diferentes recursos como información, experiencias y los conocimientos acerca de la tecnología, aspectos de gestión y de la actividad empresarial que eventualmente apoyaron a la consolidación del proyecto.

REVISIÓN LITERARIA

La Actividad Empresarial

En el escenario empresarial y particularmente en el ámbito de las instituciones de educación superior, de gobierno y no gubernamentales el concepto de actividad empresarial, espíritu empresarial o emprendedurismo en los años recientes ha sido objeto de una gran difusión y promoción. Instituciones como el Banco Interamericano de Desarrollo en el año 2004, publicó un trabajo coordinado por Kantis, donde recopilaba las experiencias sobre este tema en distintos países de América Latina, sur de Europa, este de Asia y América del Norte en un intento por aglutinar en este documento las mejores prácticas sobre el desarrollo emprendedor. El interés suscitado por este tema parece encontrar su referente inmediato en la necesidad de acelerar el proceso de creación de empresas que permita generar una demanda de empleos que el actual modelo económico no ha sido capaz de realizar, para una población que no obstante tener un nivel de educación mayor al que se tenía hace 20 o 30 años, no encuentra en el mercado de laboral un empleo congruente con este nivel de preparación y que a la vez le provea una remuneración que les permita aspirar a disfrutar de una calidad de vida cada vez mejor; esto último sobre todo resulta ser una prioridad para los países en desarrollo.

Los enfoques tradicionales de la investigación sobre la iniciativa empresarial olvidan la naturaleza relacional del proceso. Por consiguiente, tratan a los emprendedores ya sea como tomadores de decisiones atomizados, operando como entidades autónomas, o como prisioneros de su ámbito cultural, predispuestos a la actividad empresarial. El enfoque que se adopta en este trabajo, por el contrario, se enfoca en la actividad empresarial como arraigada en un contexto social, canalizada y facilitada o restringida e inhibida por la posición de las personas en el tejido social (Aldrich y Zimmer, 1985). Para realizar el análisis de la actividad empresarial desde la perspectiva de las redes sociales, es necesario tomar en cuenta la perspectiva demográfica, la cual plantea esencialmente que las ganancias netas de las empresas reflejan la operación de cuatro procesos evolutivos: variación, selección, retención y difusión, y la lucha por la existencia (Aldrich y Zimmer, op cit).

De acuerdo a esta perspectiva, la variación es entendida como cualquier tipo de cambio, intencional o no intencional, con el cual da inicio el proceso evolutivo. Algunos empresarios son impulsados por un solo propósito en su mente en su intento de adaptar sus planes a las exigencias ambientales. Otros empresarios tropiezan con oportunidades y recursos por casualidad, tal vez nunca intentaron crear una nueva empresa hasta que una coyuntura accidental de eventos se presenta. El proceso de creación organizacional depende únicamente de la aparición de variaciones y no del nivel de ambición, la previsión o la inteligencia que la gente aporta al proceso. La selección se refiere al proceso a través del cual se eligen aquellas variaciones en la formación de nuevas empresas, que han provocado más beneficios que otras en la adquisición de recursos en un ambiente competitivo. Los criterios de selección son fijados a través de la operación de las fuerzas del mercado, las presiones competitivas, la lógica de la estructura interna organizacional, y otras fuerzas generalmente más allá del control de los emprendedores individuales. En cuanto a la retención, es el proceso que permite a los empresarios y a sus empleados conservar las competencias de un grupo de organizaciones. Las variaciones conservadas son transmitidas, con más o menos variación, de las empresas sobrevivientes a aquellas quienes las siguen y de los viejos a los nuevos empleados, algunos de los cuales pueden salir para formar sus propios negocios. Los vínculos entre las empresas facilitan la difusión de las variaciones benéficas, mientras que las organizaciones aisladas contribuyen poco o nada a futuras generaciones. No todas las variaciones son difundidas a los nuevos empresarios (a causa de la hostilidad, resentimiento, errores, estupidez, poca voluntad para aprender, etcétera), introduciendo un gran elemento de incertidumbre en el proceso. Mientras que la lucha por la existencia se refiere a la competencia por los recursos y las oportunidades, alimentando la selección del proceso. Algunas oportunidades son tan diversas y los recursos tan abundantes que una elevada proporción de empresarios tiene éxito y la población de empresas crece rápidamente.

En industrias nuevas los pioneros tienen ventajas sustanciales y gozan de un rápido crecimiento. Sin embargo, cuando las industrias evolucionan, o los recursos llegan a ser más escasos, se presenta una mayor competencia incrementándose la tasa de mortalidad de las empresas, con muchas de ellas estancadas o en decadencia (Aldrich y Zimmer, op cit, p. 10). La perspectiva demográfica hace suposiciones mínimas acerca de las capacidades cognitivas de las personas como procesadores de información y hace prácticamente irrelevante cualquier especulación acerca de las personalidades empresariales. La gente llega a convertirse en emprendedor a través de la conjunción de los cuatro procesos delineados anteriormente, y la iniciativa empresarial toma significado solamente dentro del contexto de estos procesos. Los ambientes, como estructuras de oportunidad, son diversos, inciertos y percibidos imperfectamente, y es muy raro que un individuo en particular llegue a tener al mismo tiempo una visión exacta y sea consciente de ello. Las personas están limitadas por las fronteras de la racionalidad, padecen de información limitada o parcial y comunicación deficiente y están sujetos a procesos de influencia social y de reconstrucción de la realidad. Por lo tanto, una explicación completa de la iniciativa empresarial debe incluir el contexto social de la conducta, especialmente las relaciones sociales a través de las cuales la gente obtiene información, recursos y apoyo social (Ibídem p. 11).

Las Redes Sociales

Siguiendo a Aldrich y Zimmer (op cit), el punto de inicio para estudiar la actividad empresarial a través de las redes sociales es una relación o transacción entre dos personas. Las relaciones pueden analizarse a partir de: (1) el contenido de la comunicación, o la transferencia de información de una persona a otra; (2) el contenido del intercambio, o los bienes y servicios que dos personas pueden intercambiar; y (3) el contenido normativo, o las expectativas que las personas tienen una de otra como consecuencia de una característica especial o atributo. La fortaleza de los lazos depende del nivel, frecuencia y reciprocidad entre las personas, y varían de débiles a fuertes. Un interés central de los teóricos de las redes, ha sido encontrar la forma de asignar límites significativos para el ámbito de la unidad social objeto de la investigación. El concepto de conjunto – función, conjunto - acción y redes proporcionan algunas herramientas para establecer tales fronteras. El conjunto función consiste de todas aquellas personas con quienes una persona focal tiene relaciones directas. En el caso de los empresarios su conjunto función estaría determinado por sus relaciones con socios, proveedores, clientes, inversionistas, banqueros, acreedores, distribuidores, cámaras de comercio y miembros de la familia. Uno de los puntos más destacados por el concepto de conjunto - función tiene que ver con el conflicto producido por las diferentes expectativas de quienes forman parte del conjunto función del empresario. La sobrevivencia de la empresa dependerá de las estrategias que adopten los empresarios para resolver tales conflictos.

Un conjunto - acción es un grupo de personas quienes han formado una alianza temporal con un propósito limitado. En vez del análisis egocéntrico de los estudios del conjunto - función, la investigación del conjunto - acción examina el comportamiento útil de un agregado completo de personas. Los conjuntos - acción pueden tener su propia división interna del trabajo, normas de comportamiento con relación a otras personas, o principios definidos claramente para el reclutamiento de miembros nuevos. Un conjunto acción puede centrarse alrededor del comportamiento de un individuo como en los consorcios de firmas de alta tecnología conducidos por la empresa con el mayor poder de mercado. Una red es definida como la totalidad de todas las personas conectadas por un cierto tipo de relación y es construida hallando los vínculos entre todas las personas de una población bajo estudio, independientemente de cómo está organizada en conjuntos - función y en conjuntos - acción. Dado un sistema acotado, los investigadores identifican todos los vínculos entre la gente dentro de tal sistema. El análisis de redes asume que la red restringe o facilita la acción de la gente y los conjuntos acción y así es más que la suma de los vínculos individuales que la constituyen

Dimensiones críticas de las redes

De acuerdo a Aldrich y Zimmer (op cit), las tres dimensiones de las redes sociales útiles en el análisis social son: densidad, accesibilidad y centralidad. La densidad de un red se refiere a la extensión de los lazos entre las personas y es medida mediante la comparación del número total de lazos actuales con el número total de lazos potenciales si alguien en la red se conectara con alguien más. Las medidas más simples de la densidad únicamente consideran la presencia o ausencia de un lazo, pero medidas más sofisticadas toman en cuenta la fortaleza de los lazos. La accesibilidad se refiere a la presencia de una ruta entre dos personas sin importar la distancia. Las personas pueden clasificarse por el número de intermediarios que transitan antes de que una persona esté indirectamente relacionada con otra. La centralidad de una persona en una red está determinada por dos factores: (1) la distancia total de una persona focal hacia muchas otras, y (2) el número total de otras personas que pueden acceder a la persona focal. La mayor cantidad de personas que pueden ser alcanzadas y la distancia más corta de la distancia total a estas personas definen la mayor centralidad de la persona focal.

Sin dejar de reconocer la importancia de las tres dimensiones de las redes sociales: densidad, accesibilidad y centralidad, mencionadas por Aldrich y Zimmer, para el desarrollo del espíritu emprendedor, hay que agregar lo planteado por Granovetter sobre los vínculos fuertes y débiles. La propuesta afirma que nuestros conocidos casuales (lazos débiles) son menos propensos a estar socialmente involucrados entre si como lo están nuestros amigos más cercanos (lazos fuertes). De este modo, el conjunto de personas formado por cualquier individuo y sus conocidos casuales constituirá una red de baja densidad, mientras que un conjunto de personas que consiste del mismo individuo y sus amigos más cercanos será un tejido más denso. La importancia de esta diferencia radica en que el lazo débil entre el emprendedor potencial y su conocido casual es por lo tanto “no meramente un vínculo circunstancial trivial sino más bien un puente crucial entre dos tejidos muy densos de grupos de amigos cercanos”, que eventualmente pueden llegar a proporcionar información crucial. Mientras que los individuos con pocos lazos débiles estarán privados de información de lugares distantes del sistema social y estarán confinados a las noticias providenciales y a los puntos de vista de sus amigos más cercanos.

Además, hay que tener en cuenta lo mencionado por Lin (1982), quien sugiere, que en una estructura social jerárquica, una persona en una posición más cercana a la cima de la estructura tiene un mayor acceso y control de los recursos valiosos no solamente porque los recursos más valiosos estén intrínsecamente ligados a la posición, sino también a causa de la mayor accesibilidad de su posición a las posiciones de otros. Por consiguiente, no todos los lazos débiles son igualmente valiosos para la adquisición de recursos sociales, solamente aquellos cuyos contactos disfrutan de una posición social alta proporcionarán un mayor acceso a los recursos sociales.

El mercado de las frutas deshidratadas

No obstante que a nivel mundial el consumo per capita de frutas deshidratadas es bastante pequeño, en el corto y mediano plazo se prevé un incremento, como resultado de algunos cambios que se han observado en las preferencias del consumidor. Este supuesto, se fundamenta en algunas megatendencias referentes a la salud, conveniencia, sentidos y cambio de valores; que conllevan a una mayor preocupación por la calidad de vida, el medio ambiente y la sociedad. Las frutas deshidratadas se encuadran perfectamente en estas tendencias, ya que están consideradas como un producto saludable que aporta grandes cantidades de vitaminas y nutrientes que el cuerpo necesita con un porcentaje bajo en grasas. Además de que pueden consumirse en cualquier momento, pues no necesitan cocción, y la amplia gama de frutas deshidratadas especialmente las exóticas y/o tropicales permiten ajustarse a gustos muy variados. En términos generales se puede decir que existen dos segmentos de mercado para el sector de las frutas deshidratadas: El segmento menor, constituido por el consumidor final, que degusta las frutas deshidratadas, solas o combinadas como un snack saludable. El segmento más grande, compuesto por la industria del

procesamiento de alimentos, puesto que utilizan frutas deshidratadas como materia prima en la elaboración de cereales o en la pastelería. Asimismo, a nivel mundial los grandes mercados son la Unión Europea, especialmente para el mango y la papaya deshidratada; el de Estados Unidos, en particular para el mango deshidratado y Japón igualmente para el mango deshidratado (Aguilera, 1998).

Para México y particularmente en el caso de la ciudad de Puebla, puesto que la microempresa sujeto de estudio tiene este mercado local como objetivo, se realizó una encuesta que consistió en tomar una muestra aleatoria de 250 amas de casa, bajo el supuesto de que ellas son el medio para inculcar a sus hijos el consumo de este tipo de alimentos. Entre los resultados más significativos que se obtuvieron están los siguientes: Del total de 250 amas de casa entrevistadas, el 86% les dan fruta a sus hijos (sin importar si es fruta fresca o deshidratada).

Pregunta	¿Sus hijos consumen fruta?	
	Total	Porcentaje
Respuestas		
si	216	86.40%
no	34	13.60%

En lo que concierne al consumo, la mayor frecuencia encontrada fue de 4 y 5 veces por semana, en cada caso el porcentaje encontrado fue de 24.4% y 23.2%, respectivamente.

Pregunta	¿Cuántas veces a la semana consumen fruta?	
	Total	Porcentaje
Respuestas		
6	12	4.80%
7	24	9.60%
2	30	12.00%
3	31	12.40%
0	34	13.60%
5	58	23.20%
4	61	24.40%

Otra de las preguntas incluidas en la encuesta se refirió a si se consideraba la fruta deshidratada como una alternativa de alimentación saludable para sus hijos. La respuesta fue positiva en el 74.8% de los amas de casa encuestadas

Pregunta	¿Considera la fruta deshidratada como una alternativa de alimentación saludable?	
	Total	Porcentaje
Respuesta		
Sí	187	74.80%
No	63	25.20%

En cuanto a la pregunta sobre donde les gustaría comprar el producto, la mayoría, un 78%, respondió que en las tiendas minoristas

Pregunta	¿Dónde le gustaría comprar la fruta deshidratada?	
	Total	Porcentaje
Respuestas		
Tienda minorista	146	78.10%
Mercado	0	0.00%
Supermercado	41	21.90%
Centro comercial	0	0%
Anulados	63	25.20%

Otra pregunta que se consideró muy importante fue saber la cantidad preferida de fruta deshidratada y lo que estarían dispuestas a pagar por ella. Encontrándose que la presentación preferida fue la 100 a 150 grs. y lo más que pagarían \$10 por 100 grs.

Pregunta	¿De cuantos gramos le gustarían las presentaciones?	
Respuestas	Total	Porcentaje
50 - 100 gramos	1	0.40%
100 - 150 gramos	178	71.20%
Más de 150 gramos	8	3.20%
Nulo	63	25.20%

Finalmente se les preguntó a las amas de casa sobre qué tipo de fruta deshidratada prefieren, obteniéndose que las frutas preferidas son: piña, manzana y mango.

Pregunta	¿Qué fruta deshidratada es de su preferencia?	
Respuestas	Total	Porcentaje
Piña	66	26.40%
Manzana	57	22.80%
Mango	64	25.60%
Pera	0	0.00%
Nulo	63	25.20%

De acuerdo a los resultados presentados se puede decir que hay una demanda potencial para la fruta deshidratada en el mercado de la ciudad de Puebla, dado que se considera una alternativa alimenticia importante y se observa una alta frecuencia de consumo por semana. Asimismo, otros datos de mercado significativos son: que las amas de casa prefieren comprarla en las tiendas minoristas en presentaciones de 100 grs., estando dispuestas a pagar por esta presentación del producto una cantidad de \$10,00 y que sus frutas deshidratadas preferidas son la piña, la manzana y el mango.

Complementado el estudio de mercado se realizó un análisis de las principales marcas y centros de distribución que comercializan la fruta deshidratada en el mercado de la ciudad de Puebla, encontrándose que los competidores principales son: Balmoro, Chedraui, Xochucuaalli y frutohart, quienes comercializan el producto principalmente en centros comerciales, autoservicios y ferias naturistas, en presentaciones que fluctúan entre los 60 y 100 grs. con un precio promedio de aproximadamente \$20.00 por bolsa de la cantidad señalada, en sabores de mango, manzana y piña. Por lo tanto, en el aspecto de la competencia, se puede afirmar que no obstante que en el mercado de fruta deshidratada de la ciudad de Puebla existen 4 productores, uno de ellos de una cadena de supermercados, existe la posibilidad de competirles en cuanto a precio, calidad del producto y en los canales de comercialización.

METODOLOGÍA

El trabajo se desarrolló a través de una investigación principalmente cualitativa, bajo el método del estudio de casos. El diseño incluyó un estudio de campo, que se realizó a través de una guía de entrevista, llevando a cabo entrevistas a profundidad con dos de las integrantes (las directoras) del proyecto de empresa de frutas deshidratadas.

Asimismo, fue necesario complementar el trabajo de campo con una investigación cuantitativa, retomando algunos datos del estudio de mercado realizado por las integrantes del proyecto de la empresa analizada. La encuesta como ya fue señalado en párrafos anteriores, se aplicó a una muestra de 250 amas de casa de la ciudad de Puebla, bajo el supuesto de que ellas podrían ser un buen termómetro para estimar el gusto, la preferencia, la presentación y el precio sobre la fruta deshidratada.

RESULTADOS

Origen De La Idea

La idea de desarrollar este modelo surge como una inquietud de dos alumnas (hermanas, una de ellas ingeniera química y la otra ingeniera industrial) de la maestría de administración de la Facultad de Contaduría de la Benemérita Universidad Autónoma de Puebla. Al respecto comentan:

“Mucho tuvo que ver el hecho de que un amigo de una de nosotras estaba haciendo su tesis en el proceso de producción de frutas deshidratadas mediante el uso de energía solar, que es una energía limpia o también llamada energía verde, decidimos iniciar de igual modo este proyecto tomando en consideración el problema de obesidad que presenta en la actualidad nuestro país, enterándonos de éste a través de familiares y amigos que tienen hijos en edades preescolares y escolares de primaria que presentan esta problemática”.

Además, otro factor que influyó para que se aventuraran en este proyecto fue el énfasis de algunos de sus profesores de la maestría sobre la importancia del emprendedurismo. Así como la inquietud por probar la rentabilidad del proyecto y poder desarrollarlo en un mediano plazo.

La Socialización De Los Conocimientos

Como ya se señaló, los primeros conocimientos adquiridos fueron por parte de la tesis de un amigo, sobre todo en la parte técnica. En el aspecto financiero, su formación como maestras en administración les proporcionó las herramientas para estudiar la rentabilidad del proyecto. Por lo tanto, se puede decir que los primeros antecedentes del desarrollo del modelo de microempresa fueron en la escuela y por medio de amigos cercanos (el que les proporcionó la tecnología) y de conocidos casuales (aquellos profesores que les animaron para continuar con su proyecto de empresa). Con estos antecedentes y conocimientos adquiridos, es posible afirmar, que en un primer momento fue posible tener una idea sobre que tecnología utilizar y sobre la estructura organizativa de la empresa. Respecto a la estructura, está quedó definida de la siguiente manera: un encargado del área de producción y dos encargados y responsables del área administrativa que involucrarían las áreas de contabilidad, ventas y administración en general, esto independientemente del personal requerido para llevar a cabo las operaciones de producción y ventas.

Para definir el tipo de productos que se iban a producir y comercializar, primeramente, se llevó a cabo una encuesta vía internet con amigos, familiares y conocidos, es decir con algunas redes sociales, con el fin de sondear superficialmente el mercado, sin meterse en un estudio de mercado más definido. Este estudio de mercado se empleo más adelante, en el proceso del desarrollo del modelo. Con la información que se obtuvo, se decidió que los productos más pertinentes serían piña, manzana, pera y mango deshidratado. Otro factor que influyó en la definición de los productos, fue la visita que hizo una de las emprendedoras a la feria de emprendedores que se desarrolló a principios del año 2009 en la ciudad de Puebla, donde se presentaron dos de sus competidores directos, que se localizan en el estado y que son empresas que se encuentran en funcionamiento, una de ellas funciona desde el año 2000 y fue de la que se obtuvo mayor información. La asistencia a esta feria sirvió además, para reconocer la importancia que este tipo de actividades tiene para los empresarios, pues se trata de un escaparate donde tanto clientes potenciales, como competidores, instituciones de gobierno e instituciones de educación superior confluyen intercambiando experiencias y conocimientos, lo mismo sobre aspectos de mercado, que sobre tecnologías, fuentes de financiamiento o sobre pos cosecha.

Algo más que se puede calificar como esencial para el desarrollo del proyecto de empresa fue la experiencia adquirida en las empresas donde las dos estudiantes, ahora maestras en administración han prestados sus servicios. Al respecto una de las hermanas menciona:

“La intención de todo negocio es generar dinero, para ello, por nuestra experiencia en las empresas que hemos trabajado, todas ellas del giro automotriz, pero específicamente por las enseñanzas de nuestros jefes, hemos aprendido que no hay cosa más importante para generar buenas ventas que la calidad de los productos; sin ésta, hay reclamaciones e inconformidades con los clientes, muchas veces estos costos alcanzan un nivel muy alto lo que lleva a la empresa a sacrificar sus ganancias para solventar los costos por mala calidad”. “Sobre este aspecto de la calidad, un conocimiento que también ha sido útil es el que hemos adquirido en la universidad. En pláticas con nuestros maestros o en la impartición de su cátedra, hemos entendido y valorado la importancia de la calidad en la fabricación de nuestros productos, por ello este factor será tomado en cuenta de manera primordial en el desarrollo de nuestro modelo”.

En lo referente al mercado, lo que se propone en el modelo es introducir los productos en las tiendas minoristas o también llamadas “tienditas de la esquina” con la finalidad de hacer llegar a un mayor número de gente este tipo de productos a fin de que no parezca que son un lujo sino crear conciencia en el consumo de frutas, en particular las frutas deshidratadas. Esta decisión surgió a partir de algunos comentarios hechos con conocidos, colegas y amigos. En cuanto a la decisión de ubicar la empresa en la ciudad de Puebla, las hermanas comentan:

“Obedeció en primera instancia que somos oriundas de esta ciudad, y como razones adicionales es que sabemos que podemos ser ejemplo para otros emprendedores. Además, de que en nuestro estado son pocas las empresas que comercializan este tipo de productos, la mayoría se encuentran ubicadas en el Estado de México y las que se encuentran en el estado de Puebla solo distribuyen sus productos en tiendas naturistas limitando su alcance de mercado”.

En relación a los proveedores, no se tiene aun bien identificados a las personas que podrían venderles la fruta a un precio competitivo, de momento y de manera inicial se pretende abastecerse a través de la central de abasto que se encuentra ubicada en el extremo nororiente de la ciudad. Sobre este aspecto algo que vale la pena subrayar, es que no se han tenido las relaciones o los “contactos” que permitan tener un trato directo con los proveedores, sin intermediarios. Respecto a las fuentes de financiamiento, se planea iniciar con recursos propios además de analizar otras alternativas de financiamiento: bancarias y por medio de socios. En este sentido se comenta:

“Nuestros profesores de la maestría nos han informado sobre algunos lugares a donde podemos acudir para obtener dichos financiamientos a tasas preferenciales. Asimismo, algunos compañeros se han interesado para participar como accionistas en nuestro proyecto”.

Sobre el aspecto de tecnología una de las grandes ventajas de las hermanas emprendedoras, es su formación como ingenieras y haber estudiado la maestría en administración. Durante esta trayectoria académica, las relaciones establecidas con profesores y amigos, les ha permitido socializar y tener acceso a conocimientos sobre la deshidratación de las frutas a través de hornos de energía solar, así como a conocimientos sobre la actividad y el escenario empresarial. Por otra parte, sus experiencias en el trabajo, les ha permitido adquirir conocimientos en el área administrativa y en algunas otras como procesos de producción y calidad.

DISCUSIÓN

Tomando como referencia lo mencionado en los párrafos anteriores, queda claro la importancia que para el desarrollo de la actividad emprendedora tiene el tejido social en el que se encuentran inmersos los emprendedores. Que desde luego de ninguna son tomadores de decisiones atomizados ni mucho menos se observa una propensión a la actividad empresarial predeterminada. Y que en el caso de estas emprendedoras tal como lo señala la perspectiva demográfica, se puede suponer que la intención de formar una empresa fue por la presencia de una situación coyuntural (pues durante el periodo en el que estaban estudiando la maestría al menos alguna de ellas estuvo desempleada), por que de alguna manera tropezaron casualmente con algunos recursos (el amigo que les proporcionó la tecnología), por que tropezaron con ciertas oportunidades, como el nicho de mercado sobre la fruta deshidratada que identificaron en la ciudad de Puebla y cuya selección de tal alternativa estuvo fundamentada por las fuerzas del mercado, (pues si bien existía una ligera sospecha sobre el potencial de este producto, la decisión final se apoyó en un estudio de mercado), así como de otros factores que estuvieron fuera del control del par de emprendedoras (como que en ese “momento”, se hubiera “desatado una demanda por las frutas deshidratadas y el uso de energías limpias).

Respecto a las dimensiones de las redes sociales, se puede decir, que las emprendedoras están insertas en un red poco densa, pues básicamente el número de vínculos que se pueden observar es con amigos, maestros, jefes (de trabajos anteriores) y familiares. En el caso de la accesibilidad, se tiene que la comunicación con los agentes señalados es muy directa, sin ningún tipo de intermediario. Y en cuanto a la centralidad se puede afirmar que la centralidad de las dos emprendedoras es muy reducida, pues si bien es cierto que la distancia entre las emprendedoras y sus amigos, familiares y maestros es reducida, el número de personas que pueden acceder a ellas aun es muy limitado. Por otra parte, retomando a Granovetter, se observa la presencia de los vínculos fuertes y los vínculos débiles. Como ejemplo de los vínculos fuertes se puede señalar el parentesco de las dos emprendedoras (ambas son hermanas) y como ejemplo de los vínculos débiles sus maestros y jefes de trabajos anteriores. Sobre este aspecto destaca la importancia que representó para las emprendedoras esta relación, pues como bien se señala les proporcionó información crucial y les compartió puntos de vista diferentes y valiosos para la realización del proyecto.

Respecto a lo mencionado por Lin, sobre la importancia de la posición jerárquica, se puede decir, que esto aplica una vez más para sus profesores de la maestría y antiguos jefes, pues dentro de las estructuras de conocimiento, académicas o laborales es posible afirmar que por su posición tienen acceso a información privilegiada que compartieron con las emprendedoras. Asimismo, es pertinente agregar, que en el análisis realizado no se encontraron evidencias que pudieran dar cuenta de algunos aspectos mencionados en el marco de referencia, como los procesos evolutivos de retención y difusión y lucha por la sobrevivencia planteados por la perspectiva demográfica, ni tampoco fue posible, en cierta medida por la etapa de desarrollo en que se encuentra esta empresa realizar un análisis más puntual de las dimensiones de las redes sociales.

CONCLUSIONES

Una de las conclusiones a las que se puede llegar, es que el espíritu empresarial, desarrollo de la actividad empresarial o emprendedurismo, debe ser analizado tomando en cuenta el tejido social dentro del cual se encuentra inmerso el emprendedor. Que el desarrollo de la actividad empresarial requiere necesariamente de establecer vínculos con diversos agentes clave del proceso, posiblemente algunos de estos vínculos de manera obligatoria y otros de manera voluntaria pero ambos igualmente de importantes. Finalmente, es necesario agregar, la importancia de entender que el espíritu empresarial no es algo que tenga un carácter predeterminado, ni tampoco los emprendedores son decisores atomizados altamente efectivos, sino más bien el desarrollo de la actividad emprendedora debe ser entendido como un proceso en arraigado en el contexto social que facilita o restringe esta actividad dependiendo de la posición que el individuo ocupe en el tejido social.

DERECHO COMPARADO: OBLIGACION DE CONTRIBUIR Y PRINCIPIOS TRIBUTARIOS DE ECUADOR Y MEXICO

Jesús María Martín Terán Gastélum, Centro de Estudios Superiores del Estado de Sonora
José Manuel Osorio Atondo, Centro de Estudios Superiores del Estado de Sonora

RESUMEN

La República del Ecuador y Los Estados Unidos Mexicanos guardan similitudes políticas, económicas, sociales, culturales y jurídicas profundas, dado su antecedente histórico y contexto actual en el que se desarrollan. En tal sentido, el derecho comparado como instrumento eficaz para hacer parangones de normas, instituciones o decisiones jurisprudenciales concretas o de los ordenamientos jurídicos tomados en su conjunto, respecto de dos o más países, constituye una herramienta valiosa en la realización de un comparativo de tales Estados americanos en cuanto a la obligación tributaria de sus gobernados, la presencia y ubicación específica de tal deber en sus códigos políticos, las analogías, diferencias y alcances advertidos de su institución a rango constitucional, la definición doctrinal y apreciación particular tanto de los principios constitucionales tributarios como de los tributarios constitucionalizados que rigen en ese sector, determinando con base en tal análisis, el grado de evolución y avance jurídico alcanzado y avizorar eventuales adecuaciones en sus cartas fundamentales que fortalezcan la responsabilidad contributiva de los sujetos implicados en tal relación, la que indudablemente constituye el sustento y la base de todo Estado de Derecho.

PALABRAS CLAVE: Constitución, derecho comparado, obligación contributiva, principios constitucionales tributarios, principios tributarios constitucionalizados.

COMPARATIVE LAW: TAXES AND DUTIES AND TAXATION PRINCIPLES OF ECUADOR AND MEXICO

ABSTRACT

The Republic of Ecuador and The Mexican United States share striking similarities on politics, economics, society, culture and legal system due to their historical records and current context by which they develop. Comparative law serves as a valuable tool when comparing such American States when relating to taxation duties, the presence and specific location of such duties in their political codes, analogies, differences and achievements informed by the constitution, doctrinal resolutions and particular interpretation of the taxation principles that govern that sector. It is also an effective instrument when considering norm comparisons, institutional or concrete jurisprudential decisions or when referring to law regulations as a whole. Based on the current analysis, the degree of progress and legal advances constitute the foundations of every Rule of Law.

KEY WORDS: Constitution, comparative law, taxes and duties, constitutional taxation principles, constitutional principles of taxation

INTRODUCCIÓN

Sin duda los ejercicios de derecho comparado permiten obtener una perspectiva muy favorable respecto de las normas, instituciones o decisiones jurisprudenciales concretas o de los ordenamientos jurídicos tomados en su conjunto, entre dos o más países, lo que eventualmente posibilita establecer el grado de evolución, rezago o avance jurídico que se posee sobre el tema específico explorado en un determinado lugar, proponiendo así alternativas viables de adecuación de las instituciones legales en búsqueda de la plena coherencia, independencia, autonomía y eficacia del sistema normativo en consulta y el fortalecimiento del sistema jurídico en general. Por tal motivo en el presente trabajo se efectúa un análisis comparativo de las Constituciones Políticas del Ecuador y de México, especialmente por lo que concierne a la obligación contributiva a la que se sujeta a sus nacionales, estableciendo, en ambos casos, su ubicación precisa en el texto fundamental, la determinación realizada por el constituyente al instituir las, destacando en primer lugar las analogías y diferencias que tal estudio aporta.

Asimismo se establece la importancia que revisten en cualquier sistema jurídico, sobre todo en cuanto a interpretación doctrinal y judicial se refiere, los principios generales del Derecho, privilegiando el examen de éstos en referencia al ámbito tributario. Es así como se determina el significado y alcance de los principios constitucionales tributarios y de los principios tributarios constitucionalizados, enunciando, puntualmente, en los casos ecuatoriano y mexicano, los mismos y señalando las disposiciones normativas que los consagran. El resultado es un interesante comparativo que da la pauta para arribar a las conclusiones que se exponen, encaminadas las mismas a brindar un panorama claro que sobre el tema se presenta en ambos Estados de Derecho y que sin duda pueden ser referencia de futuras enmiendas, en aras de fortalecer al sistema tributario de las naciones implicadas.

El Derecho Comparado Y Su Utilidad

El derecho comparado es aquella parte de la ciencia jurídica ocupada del estudio de los sistemas legales de diversos países, analizándolos como modelo de respuesta a problemas jurídicos definidos en términos generales, es decir en abstracción del Estado concreto en que se plantean, aunque también se le utiliza para realizar un comparativo de normas u ordenamientos vigentes en distintas entidades o localidades dentro de una misma nación. Tiene como objeto hacer comparaciones de normas, instituciones o decisiones jurisprudenciales concretas o de los ordenamientos jurídicos tomados en su conjunto.

La doctrina lo define como “...la ciencia que trata de las semejanzas y diferencias entre los ordenamientos jurídicos de dos o más países” (Palomar de Miguel, 1981: 404).

García Maynez (2009: 177) sobre el tema, refiere que es una disciplina consistente en “*el estudio comparativo de instituciones o sistemas jurídicos de diversos lugares o épocas, con el fin de determinar las notas comunes y las diferencias que entre ellos existen, y derivar de tal examen conclusiones sobre la evolución de tales instituciones o sistemas y criterios para su perfeccionamiento y reforma*”.

La instancia judicial mexicana ha señalado al respecto que: “...el derecho comparado, cuya disciplina está considerada como fuente del derecho mexicano,...estudia a los diversos sistemas jurídicos existentes, a efecto de determinar las semejanzas y diferencias entre éstos y que, en su caso, permitiría una mayor comprensión del derecho nacional...” (IUS 2009: 199622).

La función del estudio comparativo es básica en el contexto jurídico actual, dado al aumento extraordinario de los intercambios económicos, personales y culturales entre las naciones, con el consiguiente incremento de las relaciones jurídicas a nivel transnacional.

Debe señalarse que como no es propiamente una rama del derecho, por ese motivo el derecho comparado puede aplicarse a cualquier área legal, realizando estudios específicos sobre temas particulares como la ecología, las comunicaciones vía satélite, la informática, etc. o generales como los valores en el campo

de los derechos humanos, tendencias judiciales, sociales, organizaciones políticas y económicas multinacionales, lo que eventualmente permite la elaboración de proyectos de reformas jurídicas. Su utilidad entonces es variada, tanto para la doctrina como para la jurisprudencia y el legislador.

Así la doctrina jurídica estudia con detenimiento casos de otros ordenamientos, para realizar su estudio y comentario del derecho positivo. La jurisprudencia por su parte en ocasiones acude al derecho comparado para interpretar las normas jurídicas; en este sentido se trata de aplicar una analogía amplia, a nivel internacional, para interpretar la ley interna. El legislador a su vez regularmente toma ideas y modelos del exterior o en el ámbito interno, para implantarlos en nuevas leyes que buscan solucionar problemas que se plantean localmente. En el ámbito del derecho tributario destaca la importancia de esta disciplina, pues a partir de la misma tanto la doctrina, como la jurisprudencia y el legislador se colocan en aptitud de desarrollar estudios comparativos de instituciones o sistemas jurídicos tributarios de diversos Estados nacionales, las tendencias de momento en el ámbito fiscal internacional, sus alcances y consecuencias, con el fin de establecer las semejanzas o las diferencias que entre ellos existen y su trascendencia en el orden social, derivando de tal análisis conclusiones sobre la eventual evolución o rezago de esas instituciones o sistemas en el ámbito interior, quedando en posición de definir criterios para su perfeccionamiento y adecuación. De ahí que este trabajo tenga por objetivo precisar analogías y discrepancias respecto de la obligación de contribuir y los principios tributarios que a nivel constitucional rigen en las Leyes Fundamentales del Ecuador y México, naciones con innegables semejanzas en el contexto cultural y jurídico, pero con concepciones diferentes de su realidad contributiva.

Identificación De La Obligación De Contribuir En Las Constituciones De Ecuador Y México

Según afirmación del jurista argentino Juan Bautista Alberti *“El Tesoro y el Gobierno son dos hechos que se suponen mutuamente. El país que no puede costear su Gobierno no puede existir como nación independiente, porque no es más el Gobierno que el ejercicio de su soberanía por sí misma”* (citado por Vallejo, 2009: 2).

Aseveración extrema sin duda, pero no menos realista en el contexto mundial donde invariablemente todos los gobiernos tienen necesidades fiscales que determinan su actuación, siendo el dinamismo económico el que provee la recaudación que las solventa. Aspecto además que no es ajeno a los contextos gubernamentales de las naciones ecuatoriana y mexicana. En esa tesitura, se procede a identificar en los textos constitucionales de ambos países, las normas específicas de donde deriva la obligación de contribuir, precisamente para el sostenimiento del gasto público y sus implicaciones. En la República del Ecuador, donde no puede soslayarse el hecho de que a lo largo de su historia independiente el constituyente ha contado con escaso reposo, ya que hasta la época actual ha promulgado un total de diecinueve leyes supremas, la obligación contributiva se identifica con claridad en el título II de los “Derechos”, capítulo noveno de las “Responsabilidades”, artículo 83 fracción 15 y en el título VI del “Régimen de Desarrollo”, capítulo cuarto de la “Soberanía Económica”, sección quinta del “Régimen Tributario”, artículos 300 y 301, de la reciente Constitución del Ecuador (CE) aprobada y vigente a partir del 2008, que disponen: “Art. 83.- Son deberes y responsabilidades de las ecuatorianas y los ecuatorianos, sin perjuicio de otros previstos en la Constitución y la ley:15. Cooperar con el Estado y la comunidad en la seguridad social, y pagar los tributos establecidos por la ley”.

“Art. 300.- El régimen tributario se regirá por los principios de generalidad, progresividad, eficiencia, simplicidad administrativa, irretroactividad, equidad, transparencia y suficiencia recaudatoria. Se propiciarán los impuestos directos y progresivos. La política tributaria promoverá la redistribución y estimulará el empleo, la producción de bienes y servicios, y conductas ecológicas, sociales y económicas responsables”. “Art. 301.- Sólo por iniciativa de la Función Ejecutiva y mediante ley sancionada por la Asamblea Nacional se podrá establecer, modificar, exonerar o extinguir impuestos. Sólo por acto normativo de órgano competente se podrán establecer, modificar, exonerar y extinguir tasas y contribuciones. Las tasas y contribuciones especiales se crearán y regularán de acuerdo con la ley”. Por lo

que hace a los Estados Unidos Mexicanos, por cierto con seis Constituciones después de independizarse, la obligación de contribuir se identifica en el título primero, capítulo segundo “De los Mexicanos”, artículo 31 fracción IV de la vigente Constitución (CM) promulgada en 1917, que dispone:

“Artículo 31. Son obligaciones de los mexicanos:IV.-Contribuir para los gastos públicos, así la Federación, como del Distrito Federal o del Estado y Municipio en que residan, de la manera proporcional y equitativa que dispongan las leyes”.

Analogías Y Diferencias En Cuanto A La Obligación Contributiva

Acorde a la definición precisada en los textos Constitucionales ecuatoriano y mexicano, se advierte una coincidencia en lo concerniente a la ubicación de la obligación o deber contributivo, dado que en ambos casos se le coloca en sus apartados de responsabilidades u obligaciones de los nacionales (artículos 83 fracción 15 de la CE y 31 fracción IV de la CM).

No obstante lo anterior, se distinguen asimismo aspectos que entrañan divergencias desde el punto de vista de la semántica y que precisan de mención, sobre todo por encontrarse elevadas a rango constitucional. En efecto, el artículo 83 de la CE inicia estableciendo: “*Son deberes y responsabilidades de las ecuatorianas y los ecuatorianos...*” determinando enseguida, en su fracción 15, “*...pagar los tributos establecidos por la ley*”.

Por su parte la CM en su dispositivo 31, en primer término indica: “*Son obligaciones de los mexicanos:*”, para más adelante precisar, en la fracción IV, “*Contribuir para los gastos públicos...*”. De esto se colige, primeramente, que mientras la CE refiere el “*deber y responsabilidad*” de sus nacionales de pagar tributos, la CM menciona ser “*obligación*” de los mexicanos el contribuir, lo cual determina diferencias, pues por “*deberes*”, término proveniente del verbo “*deber*”, según el Diccionario de la Lengua de la Real Academia Española (2001), se comprende “*el estar obligado a algo por la ley divina, natural o positiva; tener la obligación de corresponder a alguien en lo moral; cumplir obligaciones nacidas en respeto, gratitud y otros motivos.*”

“*Responsabilidad*” por su parte, alude al “*cargo u obligación moral que resulta para alguien del posible yerro en cosa o asunto determinado; la capacidad existente en todo sujeto activo de derecho para reconocer y aceptar las consecuencias de un hecho realizado libremente.*” El mismo diccionario define el término “*obligación*” como “*el vínculo que sujeta a hacer o abstenerse de hacer algo, establecido por precepto de la ley, por voluntario otorgamiento o por derivación recta de ciertos actos; correspondencia que alguien debe tener y manifestar al beneficio que ha recibido de otra persona.*”

De tales definiciones queda claro que mientras la CE otorga a la obligación contributiva una especie de valor, de acto moral e interno a cargo de los sujetos pasivos, la CM le da un significado diferente, al determinarla como conducta externa que prescinde de lo moral, de lo interno, compeliendo por autoridad a que se realice. Otra circunstancia a destacar y que sugiere disconformidad, la constituye el hecho de que la CE refiere el vocablo “*pagar*” tributos, en tanto la CM establece el término “*contribuir*”, de donde se infiere que para el primer ordenamiento constitucional, acorde al aludido diccionario de la Real Academia Española (2001), la obligación de contribuir la ubica en el contexto de “*dar o satisfacer lo que se debe, corresponder al beneficio*”; mientras que para la segunda Carta Suprema dicha obligación la supedita a “*dar o pagar la cuota que cabe por un impuesto o repartimiento, concurrir con otros al logro de un fin.*”

Palomar de Miguel (1981: 957 y 322) define “*pagar*” como “*dar uno a otro o satisfacer una deuda de dinero*”; y “*contribuir*” indica que es “*pagar o entregar cada uno la cuota que le corresponde por un impuesto.... y cuyo destino es cubrir gastos gubernamentales.*”

Es claro entonces que en este particular la CE se mantiene en una aparente postura (dado la real obligatoriedad de contribuir) de conceder a la obligación en análisis un carácter de prerrogativa o libertad para los ecuatorianos, ligado de alguna forma también al deber moral e interno, de satisfacer lo debido al Estado por las contraprestaciones recibidas de éste; en tanto que para la CM tiene un claro carácter imperativo, externo, de aportar por obligación lo necesario para la satisfacción del gasto público. Por otra parte, cabe y debe resaltarse que mientras la CM dispone como finalidad del acto contributivo los gastos públicos, la CE ubica en un objetivo más específico al pago de los tributos, pues atentos al contenido del segundo párrafo del mencionado artículo 300, *“La política tributaria promoverá la redistribución y estimulará el empleo, la producción de bienes y servicios, y conductas ecológicas, sociales y económicas responsables”*. Lógicamente el destino de las contribuciones o tributos al que aluden ambos ordenamientos supremos implica fines análogos, pero en el caso del país andino es notorio que resulta más explícito en cuanto a sus objetivos. Al respecto, el jurisperito Gabino Fraga (2003: 326 y 327) menciona que *“existe cierta dificultad para precisar en términos definidos lo que debe entenderse por gastos públicos, pues aunque ellos se encuentran señalados en el presupuesto de egresos, la formulación de éstos supone que previamente ha sido resuelto el problema. Creemos que por gastos públicos deben entenderse los que se destinan a la satisfacción atribuida al Estado de una necesidad colectiva, quedando por tanto excluidos de su comprensión los que se destinan a la satisfacción de una necesidad individual”*.

Consecuentemente se puede concluir que por “gasto público” debe entenderse toda erogación en dinero prevista en el presupuesto de egresos de la nación que incide sobre las finanzas del Estado y que este destina al cumplimiento de sus fines administrativos o económicos-sociales, es decir los llamados gastos corrientes equivalentes a las erogaciones efectuadas para cubrir el funcionamiento del aparato gubernamental en su conjunto (sueldos de funcionarios, rentas de oficinas, pago de servicios, mantenimiento de equipos, etc.), y los gastos realizados para cubrir las necesidades generales de la población. En cuanto a la CE, como oportunamente se indicó, el destino de los tributos pagados por sus administrados encuentra una más amplia aclaración, acorde al segundo párrafo del citado artículo 300, que delimita con precisión el alcance y fines de la política tributaria.

Aclaración que se ve robustecida a la luz de lo preceptuado por el artículo 6 del Código Tributario ecuatoriano, que establece: *“Los tributos además de ser medios para recaudar ingresos públicos, servirán como instrumento de política económica general, estimulando la inversión, la reinversión, el ahorro y su destino hacia los fines productivos y de desarrollo nacional, atenderán a las exigencias de estabilidad y progreso sociales y procurarán una mejor distribución de la renta nacional”*

Resulta interesante mencionar que la doctrina ecuatoriana sostiene que *“...el gasto público es una actividad erogatoria con el propósito de hacer efectivos los derechos e instituciones constitucionales, supuesto dentro del cual se deben analizar los aspectos económicos, sociológicos y administrativos.... erogar es una simple actividad registrable de carácter contable, en tanto que gastar es erogar algo y con algún sentido...”* (citado por Troya, 2009: 254 y 255). Se indica además que *“Ya no cabe afirmar únicamente que los tributos son ingresos que financian el gasto público, pues hoy en día cumplen un importante papel como instrumentos de política económica”* (Troya, 2009: 255).

En los términos apuntados, es nítido que el país sudamericano relaciona su sistema tributario con las condiciones sociales y económicas de su población y el papel del propio Estado frente a esas condiciones, procurando a través de su sistema recaudatorio objetivos precisos como el pleno empleo, desarrollo económico, estabilidad, eficiencia distributiva, equilibrio en la balanza de pagos, entre otros, destacándose en ello que prioriza y determina tales fines de una forma mucho más clara y específica que la CM y las leyes de naturaleza fiscal, pues como se apuntó en este caso se ha requerido de interpretación doctrinal y jurisprudencial para establecer sus reales alcances.

Por último, otro aspecto a destacar y que desde una óptica amplia no revista mayor trascendencia pero que es válido cuestionar, lo constituye el hecho de que mientras la CM refiere la obligación de contribuir a cargo de “los mexicanos”, la CE alude al género específico al determinar “son deberes y responsabilidades de las ecuatorianas y los ecuatorianos... pagar los tributos establecidos en la ley”, lo cual no deja de resultar innovador y de hecho atender a connotaciones de estricta índole política, de discurso, antes que a otros supuestos o reivindicaciones. Ello es así pues de acuerdo a las reglas gramaticales del español o castellano, idioma oficial por disposición constitucional en el Ecuador, el plural en masculino implica a ambos géneros y establecerlos por separado sólo es correcto cuando el femenino y el masculino son palabras diferentes, verbigracia damas y caballeros, hombres y mujeres, caso al que se ajusta la redacción del Código Político mexicano.

Los Principios Tributarios En Los Códigos Políticos De Ecuador Y México

Acorde con la doctrina y la legislación, los principios son aquellas pautas que establecen los lineamientos primordiales de un ordenamiento jurídico, que otorgan un sentido determinado al derecho positivo y puede afirmarse que constituyen su fuente de validez; por tal motivo todo aquél problema jurídico que no encuentre una respuesta satisfactoria en el derecho vigente y la jurisprudencia aplicable, puede hallar válida solución en los principios que modelen a cada ordenamiento jurídico concreto.

Sobre su utilidad, la doctrina señala que “en donde los principios desempeñan una labor fundamental es en el campo de la interpretación sistemática. Los principios dan consistencia y coherencia a todo el sistema jurídico, constituyen los puntos centrales de referencia para el sistema interno del derecho. La idea de coherencia y la idea del legislador racional son ideas regulativas de todo el entramado jurídico, y es ahí donde los principios ordenan, conforman y estructuran al sistema en su conjunto” (Cárdenas, 2007: 119). “Cuando se habla de principios constitucionales, en general, se trata de los límites materiales que establece la máxima ley de un sistema jurídico al resto de la normativa y de los valores que un grupo de individuos constituidos en la forma de Estado han decidido adoptar. Esta función dual que deben cumplir estos principios se concreta en el ámbito tributario al constitucionalizarse la materia financiera” (Figuerola, 1997: 108). En ese tenor, en materia tributaria podemos identificar dos clases de principios: *Los principios constitucionales tributarios y los principios tributarios constitucionalizados.*

Los primeros son aquellos de índole general que recoge la constitución y que resultan aplicables a todo el ordenamiento jurídico, incluido el ámbito tributario; en tanto que los segundos, son exclusivos del ámbito tributario, pero han sido incorporados en las cartas magnas a efecto de garantizar su observancia, respeto y aplicación en beneficio de los gobernados. Preciado lo anterior, enseguida se procede a mencionar los principios tributarios consignados en las Constituciones de Ecuador y México, iniciando con el país andino.

Ecuador

De la CE se desprenden una serie de principios tributarios, tanto constitucionales como constitucionalizados, encontrando en la primer categoría los de legalidad, universalidad o igualdad, equidad, transparencia, de sujeción o imperio de la ley, de limitación, de motivación, de responsabilidad, de seguridad jurídica y de impugnabilidad de los actos del poder. En cuanto a los segundos, es decir los principios tributarios constitucionalizados, los mismos se infieren con meridiana claridad de los artículos 83 fracción 15, 300 y 301, apreciándose los de legalidad, generalidad, progresividad, eficiencia, simplicidad administrativa, irretroactividad, equidad, transparencia, suficiencia recaudatoria y capacidad contributiva.

México

En el caso mexicano, de su Carta Fundamental se infiere igualmente la presencia de varios principios, tanto constitucionales aplicables al ámbito tributario, como tributarios constitucionalizados. De los primeros se puede atisbar los de legalidad, igualdad, seguridad jurídica, proporcionalidad, generalidad y razonabilidad. En cuanto a los segundos, saltan a la vista sin mayor asomo por derivarse del artículo 31 fracción IV, los de igualdad, capacidad contributiva, proporcionalidad, reserva de ley y destino del gasto público.

CONCLUSIONES

Del ejercicio comparativo efectuado en el presente estudio, es nítido que la Carta Magna ecuatoriana, es precisa y clara al determinar la obligación contributiva de sus nacionales y en tratándose de principios, tanto constitucionales tributarios como tributarios constitucionalizados, ha recogido en su texto las tendencias internacionales en la materia, pero muy especialmente son producto de la influencia que la actividad judicial, específicamente del Tribunal Constitucional, ha determinado a través su labor interpretativa, abonando en un progreso evidente. Este adelanto manifiesto es explicable también, en función de las numerosas constituciones con las que ha contado el Estado ecuatoriano a lo largo de su vida independiente, donde en una especie de dinámica de prueba y error, se han superado las diferentes problemáticas y deficiencias que representa la relación contributiva, procurándose progresivamente un alcance mayor y más sólido de sus principios, cuya destino y fin único no puede ser otro que el de blindar la obligación tributaria. Luego entonces es razón más que suficiente para entender y justificar la presencia de poco más de diez principios constitucionales tributarios y de otro número igual de tributarios constitucionalizados, en el Código Político del Ecuador, los cuales incluso y en éste último ámbito, de forma taxativa y sin margen a la confusión se precisan en sus numerales.

Ello es signo inequívoco del interés y cuidado que tuvo el Constituyente en el 2008, para determinar en las disposiciones de la Ley Fundamental, gama tan variada de principios, con el nítido objetivo de velar por los intereses esenciales de los gobernados en esa nación andina, frente a la actuación del poderío estatal. En este contexto es que a diferencia de lo que acontece en México, por lo que atañe a los principios tributarios constitucionalizados, en el país sudamericano se tuvo especial empeño de plasmar en el artículo 300 de su Ley Suprema los de legalidad, generalidad, progresividad, eficiencia, simplicidad administrativa, irretroactividad, equidad, transparencia, suficiencia recaudatoria y capacidad contributiva.

Caso distinto al mexicano, donde la Constitución Política de 1917 sólo atiende a determinar, en esta categoría, la mitad de principios que en el caso ecuatoriano, es decir los contenidos en el artículo 31 fracción IV de igualdad, capacidad contributiva, proporcionalidad, reserva de ley y destino del gasto público, advirtiéndose con meridiana claridad que sobre dicho particular ambos ordenamientos fundamentales sólo coinciden en asentar el principio de capacidad contributiva, más no en forma expresa sino implícita. Otro aspecto a rescatar lo constituye la circunstancia de que en la ley superior mexicana, se estipula como finalidad de los tributos “el gasto público”, concepto ambiguo que ha requerido en repetidas ocasiones de interpretación, tanto judicial como doctrinal, ya que sus alcances no son objeto de definición legal. No es el caso del Ecuador, donde el objetivo es con mucho más explícito al determinar el segundo párrafo del señalado artículo 300, que “la política tributaria promoverá la redistribución y estimulará el empleo, la producción de bienes y servicios, y conductas ecológicas, sociales y económicas responsables”, prescindiendo de las ambigüedades que caracterizan a su ordenamiento análogo mexicano. En las apuntadas condiciones, resulta notorio que actualmente el grado de evolución y avance que sobre el tema abordado presenta el Estado ecuatoriano en su Ley Suprema, evidencia una arquitectura legislativa más acabada al instituir la obligación contributiva y determinar los principios tributarios, hecho que bien puede ser motivo de análisis en el ámbito jurídico mexicano y constituir un área de oportunidad para enmendar la Carta Superior adecuándola al contexto internacional y al propio judicial y

doctrinal nacional, en aras de contar con bases fundamentales mucho más sólidas y de rango constitucional, que rijan en la relación tributaria y salvaguardar así con mayor amplitud los legítimos intereses de los sujetos inmersos en la misma.

EL EFECTO DE LOS IMPUESTOS SOBRE EL COSTO DE CAPITAL: ESTUDIO DE UN CASO EN COLOMBIA – ALMACENES ÉXITO S.A. PERIODO 2006 -2010

Maria Del Pilar Baez Roa, Universidad Pedagógica y Tecnológica de Colombia

RESUMEN

El sistema tributario colombiano es complejo ya que cuenta con una diversidad de tratamientos especiales. Dada esta diversidad y desde la perspectiva de la gestión financiera, algunas reformas pueden aportar al incremento de los flujos de caja de las empresas o a disminuir su costo de capital, mediante incentivos tributarios que incrementen su valor. Por lo que el presente trabajo pretende mediante un estudio de caso de la empresa Almacenes Éxito S.A. período 2006-2010, conocer el efecto que tienen los impuestos en el costo de capital. Para observar el efecto de los impuestos se tomó como marco conceptual las principales Propositiones de Modigliani y Miller. Encontrándose que el efecto de los impuestos corporativos en el costo de capital de Almacenes Éxito S.A. no genera una disminución en el período de estudio, pudiendo inferir que Almacenes Éxito S.A. no tiene un significativo beneficio tributario en el costo de capital obtenido de la financiación con deuda, por lo que el incentivo para Almacenes Éxito S.A. de buscar financiación con deuda son sus decisiones de inversión.

PALABRAS CLAVE: Costo de Capital, Impuestos Corporativos, beneficio tributario, deuda

THE EFFECT OF TAXES ON THE CAPITAL COST : A CASE STUDY IN COLOMBIA - ALMACENES ÉXITO S.A. PERIOD 2006 -2010

ABSTRACT

The tributary Colombian system is complex since it possesses a diversity of special treatments. Given this diversity and from the perspective of the financial management, some reforms can support to the increase of the cash flows of the companies or to diminishing its capital cost, by means of tributary incentives that increase its value. Due to it what the present work claims by means of a study of case the company Almacenes Exito S.A. period 2006-2010, to know the effect that the taxes have in the capital cost. To observe the effect of the taxes the principal Propositions of Modigliani and Miller were taken as a conceptual frame. As a result, it could evidence that the effect of the corporate taxes in the capital cost of Almacenes Exito S.A. does not generate a decrease in the period of study, being able to infer that Almacenes Exito S.A. does not have a significant tributary benefit in the cost of the capital obtained of the financing with debt, thus the incentive for Almacenes Exito S.A. of looking financial with debt are its decisions of investment.

RESUMEN

Las pequeñas empresas generalmente no cuentan con los recursos económicos para pagar una consultoría en logística. Esto implica que el manejo de sus procesos al interior de la organización se convierta en un problema para el empresario o en una oportunidad de mejoramiento. En este trabajo se presenta una metodología de apoyo para mejorar las operaciones logísticas de los pequeños negocios. El primer paso propuesto es realizar un diagnóstico a partir de una línea base conformada por indicadores de aprovisionamiento, almacenamiento, inventarios, transporte, distribución, servicio al cliente, logística inversa, responsabilidad social y costos logísticos. Adicionalmente se han diseñado herramientas para cada una de las áreas anteriormente mencionadas que permiten mejorar los problemas de logística interna de las empresas. Conforme a los resultados del diagnóstico la empresa debería decidir cuál de estas herramientas responden a sus necesidades para buscar un mejoramiento. Los primeros resultados de esta implementación se dan a conocer en este documento. Actualmente se está desarrollando la fase final de la metodología que corresponde a la elaboración de planes de mejoramiento logístico.

LOGISTICS MANAGEMENT METHODOLOGY FOR THE IMPROVEMENT OF SMALL BUSINESSES

ABSTRACT

Small businesses generally lack the financial resources to pay for a logistics consulting. This implies that management of processes within the organization to become a problem for the employer or an opportunity for improvement. This paper presents a methodology for support to improve logistics operations of small businesses. The first step proposed is to make a diagnosis from a baseline composed of indicators of procurement, warehousing, transportation, distribution, customer service, reverse logistics, social responsibility and logistics costs. Further tools are designed for each of the above areas that improve internal logistics problems of companies. According to the diagnostic results the company should decide which of these tools meet their needs to find an improvement. The first results of this implementation are disclosed herein. Is currently developing the final phase of the methodology that corresponds to the development of logistics improvement plans.

INTRODUCCIÓN

Las pequeñas empresas generalmente no cuentan con los recursos económicos para pagar una consultoría en logística. Esto implica que el manejo de sus procesos al interior de la organización se convierta en un

problema para el empresario o en una oportunidad de mejoramiento. En este trabajo se presenta una metodología de apoyo para mejorar las operaciones logísticas de los pequeños negocios.

El primer paso propuesto es revisar desde la literatura los indicadores que pueden ayudar a evaluar las deficiencias a nivel de logística en las empresas. Posteriormente se presenta un modelo de diagnóstico conformado por indicadores de aprovisionamiento, almacenamiento, inventarios, transporte, distribución, servicio al cliente, logística inversa, responsabilidad social y costos logísticos, que define una línea base en un momento del tiempo. Esta línea es medible y evaluable en otro segundo momento. Una vez se han detectado las debilidades en las áreas mencionadas, un grupo experto de consultores diseña un conjunto de herramientas, para mejorar los problemas de logística interna de las empresas. Conforme a los resultados del diagnóstico, la empresa decide cuál de estas herramientas responden a sus necesidades para buscar un mejoramiento. Los primeros resultados de esta implementación se dan a conocer en este documento. Actualmente se está desarrollando la fase final de implementación en otras empresas de la muestra seleccionada. Esta investigación tiene la siguiente organización. En la sección de revisión de la literatura se plantean los argumentos que sustentan la construcción de la línea base y las herramientas para el mejoramiento empresarial. Posteriormente se presenta la metodología utilizada, en donde se describe como se seleccionó la muestra, el procedimiento para la elaboración del diagnóstico y la selección de las herramientas. Después de lo anterior se presentan los resultados de la investigación. Finalmente, las conclusiones, limitaciones y futuras líneas de investigación.

REVISIÓN DE LITERATURA

En el mundo los profesionales de diferentes áreas se han interesado por diseñar metodologías que les permitan elevar su competitividad. En el tema del mejoramiento logístico se han estudiado y diseñado metodologías para la toma de decisiones en operaciones, compras, almacenamiento, transporte, servicio al cliente, infraestructura y comunicaciones. Para realizar un diagnóstico logístico es necesario tener en cuenta indicadores que permitan evaluar el desempeño en las áreas mencionadas.

En aprovisionamiento es importante medir pedidos efectivos, entregas a tiempo, desabastecimiento, medición del trade off y nivel de intermediación (Gómez, 1996; Del Rio, 2002; Heredia, 2007; Makridakis y Wheelwright, 1994; Montoya, 2002); en almacenamiento capacidad utilizada, costo por metro cuadrado, índice de rotación de mercancías, cantidad de mercancía averiada, cantidades óptimas de pedido, distribución del espacio (Muller, 2004; Ballou, 2004; Casanovas y Cuatrecasas, 2003; Sunil y Meindl, 2008; Soret, 2004; Presencia, 2004); en distribución incidencias de pedido, costos de transporte, seguridad en el transporte, rutas de distribución, ejercicios de inteligencia de transporte (Díaz, 1997; Bagchi, Bergougnoux, 2000; Blythe, 2007; Braun, 1987; Carvalho, 2007; Clifton, y Scuderi, 2007; Cohen, 2010; Der-Hong, Shin-Ting y Chandrasekar, 2004; Guisande y Subirada, 2001; Haluzová, 2008; Il-Gyo, Susan, y Chi-hyuck, 2007; Jiwattanakulpaisarn, Noland y Polak, 2008; Kamal, 2004; Kelly, 2006; Kumar, 2003; Lau, Choy, Tsui, y Choy, 2004; Montero, Codina, Barceló, y Barceló, 2001; Shawe, De Bie, y Cristianini, 2006; Sheng, Dianhai y Hongsheng, 2010; Stolzer, y Halford, 2007); en servicio al cliente entregas perfectas, indicador de quejas, devoluciones, revisión de órdenes de compra (Barabba y Zaltman, 1992; Albrecht y Zemke, 2000; Domínguez, 2006; Leppard y Molyneux, 2003; López, 2004; Lovelock, 2009; Newell, 2001; Serna, 1996; Serna, 1999; Lehmann, y Winer, 2007) y en costos logísticos todo lo relacionado con el costo pedir, manejar inventarios, empaque, embalaje, almacenamiento, costos financieros, stock averiado, entre otros (Mauleón, 2006). Para la elaboración de las herramientas también se consideraron recomendaciones sobre logística empresarial, manejo de la información y administración de operaciones (Ballou, 2004; Carranza, 2005; Christopher, 2000; Casanovas y Cuatrecasas, 2003; Chase, Jacobs, y Aquilano, 2009; Durán, 2001; Martin, 1999; Sunil y Meindl, 2008; Soret, 2004). El mejoramiento de la logística debe considerarse de manera integral en la cadena de valor. Fundamentalmente es necesario analizar los altos costos logísticos que enfrentan las empresas. Este

estudio permitiría identificar los costos logísticos de los empresarios y generar una política de mejoramiento, logrando un impacto a nivel científico, tecnológico, económico, ambiental y social.

METODOLOGÍA

En este estudio se utilizan dos muestras, la primera es una muestra de empresas a las cuales se les realizó el diagnóstico y seleccionaron herramientas de mejoramiento entre el año 2010 y 2011, la segunda, es una muestra de empresas a las cuales se realizó el mismo procedimiento entre el año 2011 y 2012. Estas empresas se encuentran en Colombia ubicadas en ocho ciudades del país (Ver tabla 1).

Tabla 1: Distribución de la muestra por ciudades y periodo. Elaboración propia.

CIUDAD	CALI	MEDELLIN	ORITO	CUCUTA	TIBÚ	B/BERMEJA	CARTAGENA	VILLAVICENCIO	NEIVA	YOPAL	TOTAL
NÚMERO DE EMPRESAS 2010-2011	12	7	11	8	7	15	8	6	10	0	84
NÚMERO DE EMPRESAS 2011-2012	0	0	0	10	0	10	10	10	10	6	56

Esta tabla presenta la distribución de las empresas seleccionadas para esta investigación, por periodo y ciudad de Colombia donde están ubicadas.

Una vez seleccionada la muestra se realizó un diagnóstico empresarial a cada una de las empresas. Este diagnóstico evaluó aspectos de aprovisionamiento, almacenamiento, inventario, transporte y distribución, servicio al cliente y costos logísticos. Los aspectos evaluados se muestran en la tabla 2.

Tabla 2: Aspectos evaluados en la línea base. Elaboración propia.

Aspectos Considerados Para Realizar El Diagnóstico	
Indicadores De Aprovisionamiento	Indicador De Servicio Al Cliente
1 Pedidos Efectivos	10 Entregas Perfectas
2 Entregas A Tiempo	11 Indicador De Quejas De Clientes
3 Desabastecimiento	12 Devoluciones
4 Nivel De Intermediación	13 Revisión De Ordenes De Compra
Indicadores De Almacenamiento	Indicadores De Inventario
5 Capacidad Utilizada	14 Índice De Rotación De Mercancías
6 Costo Por Metro Cuadrado	15 Índice De Mercancía Averjada
Indicadores De Transporte Y Distribución	Indicadores De Costos Logísticos
7 Incidencias De Pedido	16 Costos Logísticos Totales
8 Costo De Transporte	17 Ventas Perdidas
9 Seguridad Industrial En El Transporte	

Esta tabla muestra los 17 aspectos evaluados en cada una de las empresas al realizar el diagnóstico de la situación logística.

Este diagnóstico determina si la logística está incorporada como un tema clave en la organización, si existen indicadores y mecanismo de medición y análisis de la información que permitan la toma de decisiones y por ultimo si se ha desarrollado un enfoque para el desarrollo de la cadena de abastecimiento. Después de realizado el diagnóstico se realizó una capacitación de 120 horas los empresarios de la muestra seleccionada. En lo posible se sugirió que los asistentes fueran el gerente y el responsable de logística. Esta capacitación se inicio con una sensibilización al cambio en las organizaciones, la competitividad, el contexto global, fundamentos de logística y posteriormente se estudiaron cada una de las áreas consideradas en el diagnóstico.

A través de un focus group realizado con cinco expertos en logística se diseñaron 15 herramientas para el mejoramiento logístico (Ver tabla 3).

Tabla 3: Herramientas para el mejoramiento logístico. Elaboración propia.

HERRAMIENTAS DISEÑADAS PARA EL MEJORAMIENTO EMPRESARIAL		
MÓDULO	NOMBRE DE LA HERRAMIENTA	BREVE DESCRIPCIÓN
Aprovisionamiento	1. Trade off	El trade Off es una herramienta de trabajo que permite la visualización de los tiempos de aprovisionamiento y de las condiciones de trabajo con cada uno de los proveedores.
	2. Políticas de aprovisionamiento	Busca desarrollar en la empresa un perfil de políticas generales de abastecimiento que se identifique la filosofía empresarial.
	3. Evaluación de proveedores	Es una matriz que permite generar una evaluación para los proveedores, permitiendo determinar objetivamente su rendimiento.
Almacenamiento	4. Distribución en planta	Desarrolla la habilidad en el usuario de optimizar el área dedicada al almacenamiento de sus mercancías.
	5. Indicadores de inventario	Identifica puntos de gestión en el almacenamiento de mercancías mediante indicadores de sencillo entendimiento
	6. Planeación del inventario	Mediante la construcción de modelo óptimo identifica los ahorros en costos de la gestión del inventario
Distribución	7. Rutas optimas	Permite construir el ruteo de un vehículo dados unos puntos de entrega donde se puede economizar el mayor kilometraje posible.
	8. Matriz DRP	Permite la Planeación de los Recursos de Distribución (DRP). Se dirige principalmente a mejorar la gestión del inventario de producto final y al control del transporte de productos en la cadena de distribución.
	9. Exactitud en la entrega	Identifica los errores más comunes en la entrega de productos y retroalimenta al usuario para subsanarlos
	10. Costo de Vehículo	Identifica y controlar los costos asociados al uso de vehículos.
Costos	11. Estimación de costos logísticos	Permite estimar los costos logísticos de la compañía o puede estimarlos por proceso: Compras, almacenamiento, inventarios, demoras, distribución, transportes, servicio al cliente, gestión de desperdicios, transportes, entre otros. Puede asociarlos a un producto o servicio en particular o también a un proyecto de crecimiento de la empresa.
	12. Logística inversa	Diagnóstica y sugiere la construcción de actividades de mejoramiento en la logística inversa de la compañía.
Servicio al Cliente	13. Encuesta de autodiagnóstico para la gestión de clientes y de mercados	Examina la prioridad e importancia que les da la empresa a sus clientes y usuarios finales, y la efectividad de los sistemas utilizados para conocer, interpretar, determinar y satisfacer sus necesidades, antes durante y después de la entrega de sus productos y servicios.
	14. Encuesta de satisfacción	Examina la visión que los clientes tienen acerca del servicio al cliente prestado por la compañía.
	15. Política de servicio al cliente	Busca desarrollar en la empresa un perfil de políticas generales de servicio al cliente que se identifique la filosofía empresarial.

- Esta tabla muestra las catorce herramientas diseñadas por el grupo de expertos en logística para el mejoramiento empresarial.

La capacitación tuvo como objetivo que cada una de los asistentes por parte de las empresas se apropiara del conocimiento en logística y además seleccionara dos herramientas de las diseñadas para aplicarlas en su organización. Con base en los resultados obtenidos a partir de la primera muestra de empresas donde se realizó el diagnóstico, se evidenció el desconocimiento de los costos logísticos de la organización y la necesidad de su reducción, por lo cual se diseñó en el año 2011 una herramienta adicional que permite evaluar los costos logísticos de las empresas. En la tabla tres es la herramienta número 11. Finalmente, cuando el empresario conoce sus costos logísticos, el objetivo es llegar a su reducción. Para esto se propuso una estructura de Plan de Mejoramiento Logístico que incluye: problema, actividad, descripción de la actividad, meta, indicador, cronograma, fuente de financiación y resultado.

RESULTADOS

Aplicando la metodología descrita en la primera muestra de empresas se identificó a partir del diagnóstico que el puntaje promedio de las organizaciones analizadas es de 25,78%. El histograma muestra que la mayoría de las organizaciones tiene un puntaje entre 0% y 30%, lo cual permite inferir que son organizaciones que pueden mejorar la logística interna. Aunque tienen definidas algunas actividades relacionadas con la logística no han definido procesos sistemáticos o mecanismos de medición.

Figura 1: Histograma del diagnóstico logístico. Elaborado a partir del diagnóstico realizado.

Esta figura muestra el histograma de puntuación frente al diagnóstico empresarial realizado.

En la escala definida para el diagnóstico se considera que la madurez y el desarrollo de la gestión organizacional es “confiable” para calificaciones superiores al 40%, “en desarrollo” para calificaciones entre el 20,1% y el 40% y es “incipiente” para calificaciones del 20% o menos.

Figura 2: Perfil de la gestión logística en las organizaciones por ciudad. Elaborado a partir del diagnóstico realizado.

Esta figura permite evidenciar el desarrollo en el tema logístico en las diferentes ciudades de la muestra seleccionada.

A partir de los resultados se evidencia un desarrollo superior en los procesos de gestión de las organizaciones de Medellín y Cali, que son ciudades capitales de zonas industrializadas de Colombia. En estas ciudades se observan resultados del 60% en la madurez de la gestión logística de las empresas de Medellín y del orden del 40% en las empresas de Cali. Las empresas de la primera muestra seleccionaron las herramientas de trabajo, evaluaron sus costos logísticos a finales del año 2011 y estructuraron su plan de mejoramiento logístico para el 2012. Las empresas de la segunda muestra actualmente están en la fase de selección de herramientas y evaluación de sus costos logísticos. La selección de las herramientas evidencia que los intereses de los empresarios principalmente apuntan a tener una buena selección de proveedores, planear la distribución, administrar inventarios y brindar un buen servicio al cliente. El 97% de las empresas de la muestra número uno ya ha implementado la herramienta de costos logísticos. A partir de la evaluación de esta herramienta se detectó que los mayores problemas estaban en el control de inventarios, stock averiado, faltantes, existencias obsoletas y evaluación de proveedores. El estado de avance de esta investigación está en un 90%. Actualmente se está desarrollando la fase final de la metodología que corresponde a la elaboración de los planes de mejoramiento logístico para cada una de las empresas.

Tabla 4: Herramientas seleccionadas por los empresarios. Elaboración propia.

Herramienta Implementada	Número de empresas que la han utilizado	Porcentaje Utilización
Evaluación de proveedores	17	96%
Matriz DRP	12	98%
Autodiagnóstico servicio al cliente	11	100%
Planeación de inventario	11	93%
Costo de vehículo propio	8	98%
Indicadores de gestión de inventario	7	90%
Política de compras	7	99%
Trade off	7	94%
Distribución en planta	6	98%
Política de servicio al cliente	3	80%
Encuesta de satisfacción	2	100%
Total general	91	96%

Esta tabla muestra para cada herramienta el número de empresas donde fue implementada, así como el porcentaje de implementación en todas las empresas de la muestra número uno.

CONCLUSIONES

Las empresas localizadas en las ciudades de Cali y Medellín cuentan con el mejor manejo logístico de la muestra seleccionada. Por esta razón para el año 2012 no se incluyó muestra de estas dos ciudades. Las empresas apartadas de las zonas capitales como Tibú y Orito tienen menores niveles de gestión logística. En general pueden decirse que la logística para estas dos ciudades es incipiente y para Yopal, Villavicencio, Cúcuta, Cartagena y Neiva está en desarrollo. Lo que se encuentra es que la forma como se manejan los procesos de negocio en las empresas seleccionadas puede mejorarse. La herramienta esencial es la de costos logísticos, porque a partir de esta evaluación se pueden identificar debilidades y utilizar las otras herramientas para disminuir costos por áreas.

La conclusión que se deduce de los resultados obtenidos es que a partir de la identificación de los costos logísticos, se pueden identificar problemas a solucionar mediante un plan de mejoramiento logístico, donde las herramientas diseñadas pueden contribuir a la disminución de costos, mejoramiento de procesos y por tanto al aumento de la competitividad de las pequeñas empresas. Dentro de las limitaciones hay que resaltar, por una parte, que el construir la estructura de costos logísticos requiere asesoría por parte de personal conocedor de esta metodología. Futuras investigaciones podrán evaluar si es posible el diseño de un software de gestión logística integral. Esta metodología es replicable a cualquier empresa pequeña en cualquier sector económico ya que la muestra incluyó empresas pequeñas dedicadas a diferentes negocios.

EVALUACIÓN DE LA DENOMINACIÓN TURÍSTICA JOYAS DE VERACRUZ COMO APOYO A LA COMPETITIVIDAD MUNICIPAL

Julio Alonso Iglesias, Universidad Veracruzana

Leonel Lara Serna, Universidad Veracruzana

RESUMEN

De manera específica esta investigación, partiendo de una denominación de turismo del estado de Veracruz, conocida como “Joyas de Veracruz”, se realizó un diagnóstico de este programa y de los municipios que han recibido la denominación mencionada, para realizar un posterior análisis global del mismo y finalmente hacer una propuesta de mejoras para impulsar este programa de apoyo al turismo veracruzano.

EVALUATION OF DESIGNATION TOURISM JEWELS OF VERACRUZ IN SUPPORT OF THE COMPETITIVENESS COUNCIL

SUMMARY

Specifically this research, based on a designation of tourism in the state of Veracruz, known as the "Jewels of Veracruz", was made a diagnosis of this program and of the municipalities that have received the name in question, further analysis for overall it and finally make a proposal for improvements to promote this program to support tourism Veracruz.

INTRODUCCIÓN

El turismo cada día va creciendo su importancia en la toma decisiones económicas de varios países, y las secretarías y ministerios de cada país están dejando gradualmente de ser oficinas de segundo nivel para ser consideradas actualmente como uno de los principales puestos de los gabinetes de varios países al involucra aspectos como la economía, la salud, los medio de comunicación, de transporte y de seguridad nacional. Pero al mismo tiempo que va creciendo su importancia, de manera paralela en países como México, va creciendo el riesgo de aspectos negativos que inciden en problemas para su desarrollo y consecuentemente en los beneficios a la sociedad. Buscando mejorar la posición de México, se debe de fortalecer el programa de certificaciones de calidad, para efecto de alcanzar una competitividad real de los servicios que ofrecen las diversas poblaciones que componen el país, y en el que es fundamental la participación de todos los miembros de la sociedad Mexicana.

De manera específica esta investigación analizó lo anterior, partiendo de una denominación de turismo del estado de Veracruz, conocida como “Joyas de Veracruz”, en el cual se realizó un diagnóstico de este programa y de los municipios que han recibido la denominación mencionada, para realizar un posterior análisis global del mismo y finalmente hacer una propuesta de mejoras para impulsar este programa de apoyo al turismo veracruzano. Esta investigación forma parte de un programa de investigaciones encaminadas a conocer y fortalecer la actividad turística municipal en México y de manera particular en el Estado de Veracruz, y que estudia la situación actual el turismo municipal, sus tendencias, y desarrollo de productos turísticos y programas de desarrollo intermunicipal, así como capacitar a los mandos medios y altos, en la actividad turística y la gestión de organizaciones de administración y promoción del turismo municipal.

Desarrollo

La importancia de las certificaciones y denominaciones en el sector turístico, son cada día mayores, y cada vez más considerados por parte de los agentes económicos, políticos y sociales que intervienen en la dinámica del turismo. Los siguientes datos del Banco mundial y del banco de México, reflejan el grado de importancia de la actividad turística mexicana en el contexto internacional.

Según la Organización Mundial del Turismo (OMT, 1994), “el turismo comprende las actividades que realizan las personas durante sus viajes y estancias en lugares distintos a su entorno habitual, por un periodo de tiempo consecutivo inferior a un año, con fines de ocio, por negocios y otros”. En Noviembre del 2010 el Secretario de la Organización Mundial de Turismo (OMT), mencionó que México está recibiendo 22 millones de turistas anualmente. Así mismo el número de turistas que se transportó de Enero a septiembre de este año, creció 6.4% en comparación con el mismo periodo del año pasado, e incluso este aumento es superior a lo captado en el 2008 (datos mencionados por la secretaria de turismo, según el boletín 145 de prensa de la dependencia). El turismo es uno de los sectores económicos más importantes y dinámicos en el mundo actual, tanto por su nivel de inversión, participación en el empleo, aportación de divisas, como por la contribución al desarrollo regional. Aporta alrededor del 11% de la producción mundial y genera uno de cada once empleos. Se estima que en los próximos 20 años viajarán por el mundo 1.6 millones de turistas que dejarán una derrama económica de dos millones de millones de dólares. La importancia del turismo para la economía mexicana es indudable, sus beneficios no sólo se refleja en ser una industria que genera empleos y detonador del desarrollo regional, sino que además es factor de difusión de atractivos culturales y naturales.

México ofrece una extensa variedad de atractivos turísticos: la herencia de civilizaciones prehispánicas y el desarrollo de sitios arqueológicos como símbolos de identidad nacional, la incomparable belleza de sus playas, el encuentro de los vestigios de culturas milenarias conjugadas con grandes urbes, extensas áreas naturales con elementos históricos que lo hacen único en el mundo, así como una infraestructura turística de vanguardia internacional. Las cifras oficiales del Banco de México de lo que va del año en México en 2010, en su enfoque de turismo internacional, nos refleja el impacto en la economía nacional. La promoción turística juega un papel importante para mantener y consolidar a México como una potencia mundial, al generar una mayor demanda para los destinos y atractivos del país. México se ubicó en el lugar 10 en llegadas de turistas internacionales y en el lugar 20 en ingreso de divisas por turismo internacional. Se estima que el número de empleos directos generados por el sector sea de 2.1 millones de trabajadores, se estima que la participación sea del **5.5%**.

México ha sido desde hace mucho tiempo un país receptor de visitantes extranjeros. De hecho, es el octavo país del mundo en captación de turistas internacionales y el catorceavo en captación de divisas. Con estas cifras, el turismo supone más del 8% del PIB mexicano, genera más de 1,8 millones de empleos remunerados y es una de las actividades que más divisas genera en la economía mexicana. Este sector se ha convertido en uno de los impulsores del desarrollo económico y social del país.

A continuación se presentan dos cuadros correspondientes a las llegadas de turistas internacionales a México de acuerdo al SIOM contextualizado a manera de Ranking para evaluar el desempeño de los diferentes mercados emisores para México. El cuadro de la izquierda muestra el ranking de los países emisores al cierre de 2009, con su comparativo con 2008, mientras que el cuadro de la derecha muestra el ranking de lo que va del 2010, comparando con el mismo periodo de 2008 y 2009. La siguiente tabla nos presenta las fortalezas y debilidades que enfrenta el turismo veracruzano, y de manera específica, los municipios turísticos. Análisis de riesgos en imagen de México.

Imagen Turística De México.	Fortalezas	Debilidades
	Presencia de la imagen de México en algunos segmentos del mercado tradicionalmente sol y playa.	Imagen de la inseguridad y violaciones a Derechos Humanos. Contaminación y destrucción del medio ambiente. Falta de capacitación.
Oportunidades	Fortalezas Oportunidades	Debilidades Oportunidades
Los avances tecnológicos en las telecomunicaciones permiten un mayor acceso más amplio y directo para la promoción de valores turísticos en México,	Proyectar una imagen más completa y diversificada de los recursos turísticos de México a través de sistemas de telecomunicaciones y promover nuevos productos turísticos.	Riesgo de no aprovechar las tecnologías para distribuir mensajes confusos por falta de coordinación y prensa negativa.
Amenazas	Fortalezas Amenazas	Debilidades Amenazas
Existe el riesgo de que por medio de las nuevas tecnología de comunicación, se difunda información negativa sobre México, referente a la inseguridad, contaminación y destrucción del medio ambiente, así como las violaciones a Derechos Humanos.	Reforzamiento de imagen de inseguridad y pérdida de imagen en segmentos vulnerables a informaciones negativas, pérdida de oportunidades de abrir nuevos nichos de mercado y alcanzar nuevos mercados de turismo.	Pérdida de mercado. Pérdida de ingresos. Pérdida de empleos en el sector turismo.

Elaborada por los autores

A nivel estatal se presentan las variables que si bien inciden en sus fortalezas y debilidades de manera general, se van diferenciando cuando se agregan aspectos propios del estado, como extensión, población, recursos naturales, educación, legislación, Conciencia cívica, y educación ambiental. El turismo en Veracruz. Veracruz tiene de un 85 a 90 % de turismo nacional y el resto de turismo americano y Europeo, según datos de la Secretaría de turismo, y si bien cuenta con un potencial de turismo de cruceros, mientras no se desarrolle infraestructura ex profesa a esta actividad, difícilmente serán regulares los turistas que vengan por esta vía. Es el tercer estado con mayor biodiversidad. La situación presentada, nos permite visualizar que se debe emplear la creatividad para posicionar al estado de Veracruz, y no limitarse a ofrecer lo mismo con diferentes variantes de promoción, esto es paquetes que ofrecen el mismo producto turístico, y la falta de atractivos que justifiquen la permanencia del turista en los municipios veracruzanos. Como primer paso se debe hacer un estudio de diagnóstico a nivel municipal, para conocer de manera particular las fortalezas y debilidades de cada uno de ellos. También es fundamental la integración de los diferentes sectores económicos y de las diversas dependencias municipales y en su caso estatales, que confluyen finalmente es el ofrecimiento de servicios y facilidades a los turistas ya sean nacionales o extranjeros.

Limitaciones

A diferencia de otros destinos, en Veracruz los empleados de las industrias hotelera, gastronómica y de transporte no están suficientemente capacitados para atender a turistas internacionales, por lo que urge mejorar su desempeño, subrayó el presidente de la Canaco. “La capacitación empresarial tanto de empresarios como colaboradores es también muy importante, es fundamental. El servicio al cliente, la lengua extranjera, las habilidades gerenciales y empresariales son algunos de los temas obligados para que el personal de contacto deje en el turista la experiencia de un trato y servicio de excelencia y garantice que nos recomiende y que se repita su visita”. Mientras en Cancún, Los Cabos y Acapulco, los meseros, camareros, bell-boys, recepcionistas, taxistas e incluso agentes de Tránsito hablan inglés y algunos hasta francés, en Veracruz son monolingües, salvo contadas excepciones, lo cual es evidente en los cafés, bares, hoteles, puestos de artesanías y en las calles.

Descripción Del Programa Joyas De Veracruz.

Ante a negativa de ser denominados “Pueblos Mágicos”, varios municipios veracruzanos, En diciembre del 2008, la SECTURC emitió una convocatoria para que los municipios que pretendieran obtener a denominación “Joyas de Veracruz”, dicha convocatoria duraría tres meses, para posteriormente en el

segundo trimestre, la comisión calificadora, procediera a realizar las evaluaciones a las peticiones y determinar que municipios cumplieran los requisitos y posteriormente dar el paso a un periodo de 6 meses donde se iniciarían obras antes de que se concluyera el 2009, entre los requisitos estaban:

- No rebasar los 60,000 habitantes.
- Contar con bellezas naturales y de valor histórico.
- Monumentos esculturales
- Y servicios turísticos adecuados.

Entre los municipios que obtuvieron la denominación de “Joya de Veracruz” en el 2010 están:

Xico.

Naolinco.

Zozocolco.

La Antigua.

Misantla.

Durante el 2011 se suspendió el otorgamiento de nuevas denominaciones por encontrarse en reestructuración el programa.

METODOLOGÍA A DESARROLLAR

La metodología a desarrollar es de tipo mixto, y se realizarán encuestas, trabajo de exploración del espacio físico y revisión documental. Resultados previos. Se realizó un trabajo exploratorio de todas las potencialidades individuales de cada uno de los municipios galardonados, y adicionalmente de los que son candidatos, como punto de partida, y cotejándolo con el manual de procedimientos, a desarrollar por los que aspiran esta denominación y, por otra parte se está evaluando, el mismo manual para obtener una referencia en el sentido estricto de su cumplimiento y apoya el desarrollo de un municipio turístico.

DE ALTOS INVENTARIOS A JUSTO A TIEMPO SRV-SERVICIOS

Cielo Tatiana Lozano Arias, Corporación Calidad
Carlos Alberto González Camargo, Universidad Jorge Tadeo Lozano

RESUMEN

El siguiente es un estudio de caso de tipo cualitativo y cuantitativo que tiene como objetivo mostrar el mejoramiento de la empresa SRV-Servicios a partir de la implementación de herramientas que permiten obtener información clave para planificar la demanda. La unidad de análisis se limita a la empresa. Para la realización de este ejercicio se midió una línea base que consideró indicadores de aprovisionamiento, almacenamiento, inventarios, transporte, distribución, servicio al cliente y costos logísticos. Posteriormente se realizó un diagnóstico donde se evidenciaron falencias principalmente en el área de servicio al cliente, causadas por la falta de disponibilidad de producto. El método utilizado fue en principio la exploración y descripción de la forma como funcionaban los procesos de servicio al cliente en la empresa. Durante el desarrollo del estudio se implementaron herramientas de mejora para las áreas evaluadas en la línea base. Posteriormente se realizó el análisis de resultados, contrastando la información final con la medición inicial. Este estudio confirma la utilidad que tiene la implementación de las herramientas como Matriz DRP, Trade Off, Evaluación de Proveedores y Estudio del Entorno Macro y Micro para lograr el mejoramiento a nivel empresarial.

PALABRAS CLAVES: Logística, Justo a tiempo, Cadena de Suministro, Comercio Electrónico.

HIGH INVENTORIES AND JUST IN TIME SRV-SERVICES

ABSTRACT

The following is a case study of qualitative and quantitative aims to show the improvement of the SRV-services company from implementing tools that allow key information to plan demand. The unit of analysis is limited to the company. To perform this exercise was measured baseline indicators deemed procurement, warehousing, transportation, distribution, customer service and logistics costs. Later a diagnosis was made where weaknesses were evident mainly in the area of customer service, caused by lack of product availability. The method used was in principle the exploration and description of how processes worked customer service in the company. During the course of the study were implemented enhancement tools to the areas assessed at the baseline. Then performed the analysis of results, comparing the final information with the initial measurement. This study confirms the usefulness of implementing the PRA tools such as Matrix, Trade Off, Supplier Evaluation and Study of Macro and Micro Environment to achieve enterprise-wide improvement.

INTRODUCCIÓN

SRV-SERVICIOS está ubicada en la ciudad de Orito, departamento del Putumayo, al sur de Colombia. Esta empresa se dedica a comercializar productos del sector eléctrico, aire acondicionado, refrigeración, productos químicos, equipos de cómputo y es distribuidor de plásticos y de muebles. Cuando empezó la

actividad de la empresa se conocía con el nombre de REFRIELECTRICOS ORITO. Para ese entonces el fin era suplir la necesidad de productos especializados en refrigeración y electricidad. Después de un año, dedicados a estas dos líneas, se vio la necesidad de ampliar el portafolio con el fin de incrementar los ingresos y de esta forma mantenerse en el mercado.

Refrielectricos Orito en el 2007 tenían un área de 15m² y tres empleados. Su operación estaba conformada por tres eslabones de la Cadena de Suministro: Aprovechamiento, Almacenamiento e Inventarios y Servicio al cliente. Cuando algún cliente pedía volúmenes considerables de mercancías también se realizaban operaciones de distribución. Para el 2008 las ventas se incrementaron considerablemente, así que la empresa empezó a comprar grandes volúmenes de mercancía y tener altos inventarios para abastecer la demanda, sin embargo dos años después de estar funcionando y al observar la pérdida de productos y de dinero ya fuera por deterioro de la mercancía, obsolescencia del inventario o por pérdida del mismo, empezaron a entender lo que representaba tener altos inventarios. Es en este momento cuando la empresa decide empezar a agotar las existencias pero sin alterar el servicio al cliente ofrecido hasta el momento. La principal preocupación fue cómo no afectar el nivel de servicio. Para lograr lo anterior se apalancó en una página web para recibir sus pedidos y realizó alianzas estratégicas con competidores del mismo sector y empresas de distribución.

Esta investigación tiene la siguiente organización. En la sección de revisión de la literatura se plantean los argumentos que sustentan la utilización de las herramientas Matriz DRP, Trade Off, Evaluación de Proveedores, Estudio del Entorno Macro y Micro y el modelo de negocio electrónico. Posteriormente se presenta la metodología utilizada, en donde se describe el por qué se seleccionaron las herramientas y como se conformó la plataforma web. Después de lo anterior se presentan los resultados de la investigación. Finalmente las conclusiones, limitaciones y futuras recomendaciones de investigación.

REVISIÓN DE LITERATURA

Para lograr un desempeño logístico óptimo se pueden mejorar las estrategias de aprovisionamiento con la medición del Trade Off, que es la medición de los tiempos de entrega de aprovisionamiento y la Evaluación de los proveedores en términos de calidad, confiabilidad, precio, etc. (Gómez, 1996; Del Rio, 2002; Heredia, 2007; Makridakis y Wheelwright, 1994; Montoya, 2002); en almacenamiento se deberían calcular cantidades óptimas de pedido (Muller, 2004; Ballou, 2004; Casanovas y Cuatrecasas, 2003; Sunil y Meindl, 2008; Soret, 2004; Presencia, 2004). Dentro de los principales costos de almacenamiento se encuentran el manejo de inventarios, empaques, embalajes, costos financieros y stock averiado, entre otros (Mauleón, 2006). Algunos autores hacen énfasis en la importancia de disminuir inventarios, realizar clasificaciones según rotación de las mercancías y tratar de alcanzar el justo a tiempo, reduciendo las cantidades almacenadas de producto (Ballou, 2004; Carranza, 2005; Christopher, 2000; Casanovas y Cuatrecasas, 2003; Chase, Jacobs, y Aquilano, 2009; Durán, 2001; Martin, 1999; Sunil y Meindl, 2008; Soret, 2004). Otros autores sugieren el análisis de la distribución y análisis de entorno macro y micro para mejorar los negocios (Díaz, 1997; Newell, 2001; Serna, 1996; Serna, 1999). En la actualidad el comercio electrónico es una gran oportunidad de negocio en el contexto global (Abuhamdieh,

Kendall y Kendall, 2008; Carnaghan, Downer, Klassen, y Pittman, 2004; Chan, Al-Hawamdeh, 2002; Kolettis, 2001; Lo, 1999; Piturro, 1999; Weil, 2000; Willis, 2004. Algunos factores como la confiabilidad, la distribución, las distancias y la forma de pago afectan el crecimiento de los negocios electrónicos (Chen y McQueen, 2008; Sumanjeet, 2010; Duffy y Dale, 2002; Fryad Henari y Mahboob, 2008; Kabanda, y Brown, 2010; Subramani y Walden, 2001; Ratnasingam, 2005); los modelos electrónicos son accesibles a las pequeñas empresas (Lopez-Bassols y Vickery, 2001; Lopresti, 2007; MacGregor y Vrazalic, 2006; Plana, Cerpa y Bro, 2006).

METODOLOGÍA

El ejercicio realizado es un estudio de tipo descriptivo, correlacional y explicativo, que permite inferir juicios sobre el impacto de la implementación de las herramientas Evaluación de Proveedores, Análisis del Entorno Macro y Micro, Matriz DRP, Trade Off, en el mejoramiento del área de Aprovisionamiento y Servicio al Cliente. En cuanto al alcance, la investigación es de carácter mixto, en principio es cuantitativa por ser correlacional, ya que se midió una línea base de entrada y en un segundo momento una línea base de salida con indicadores asociados. También es de carácter cualitativo ya que se evidencian los problemas en la empresa por visita directa. La investigación es de tipo longitudinal porque los datos se recolectan en dos momentos en el tiempo. Finalmente todo el procedimiento termina en un tipo de investigación explicativa porque se comprobará la hipótesis de que a partir de la implementación de las herramientas logísticas seleccionadas combinadas con una plataforma de comercio electrónico es posible lograr el mejoramiento empresarial.

La hipótesis que se plantea es que el conocimiento de los costos logísticos de la organización permite la selección y la implementación de herramientas en diferentes áreas que impactan el nivel de servicio y por tanto en la rentabilidad de la organización. Para la medición de la línea base se realizó un diagnóstico de la empresa donde se identificaron debilidades por áreas. Posteriormente, en un segundo momento, se evaluaron los indicadores de cada uno de los componentes de la cadena de suministro y finalmente se identificaron los costos logísticos, para implementar un plan de mejoramiento.

Tabla 1: Aspectos evaluados en la empresa SRV en la línea base

Aspectos Considerados Para Realizar El Diagnóstico	
Indicadores De Aprovisionamiento	Indicador De Servicio Al Cliente
1 Pedidos Efectivos	10 Entregas Perfectas
2 Entregas A Tiempo	11 Indicador De Quejas De Clientes
3 Desabastecimiento	12 Devoluciones
4 Nivel De Intermediación	13 Revisión De Ordenes De Compra
Indicadores De Almacenamiento	Indicadores De Inventario
5 Capacidad Utilizada	14 Índice De Rotación De Mercancías
6 Costo Por Metro Cuadrado	15 Índice De Mercancía Averiada
Indicadores De Transporte Y Distribución	Indicadores De Costos Logísticos
7 Incidencias De Pedido	16 Costos Logísticos Totales
8 Costo De Transporte	17 Ventas Perdidas
9 Seguridad Industrial En El Transporte	

Esta tabla muestra los 17 aspectos evaluados en la empresa SRV-Servicios al realizar el diagnóstico de la situación logística.

Este diagnóstico determinó que los principales problemas de la empresa se encontraban en el almacenamiento y aprovisionamiento, lo cual estaba afectando el servicio al cliente. El primer paso fue reevaluar el mercado objetivo y el portafolio ofrecido hasta el momento con la herramienta “Análisis del Entorno Macro y Micro”, esto permitió saber cómo operaba la competencia y cómo se podía mejorar la empresa por medio de un ejercicio de benchmarking. En el año 20120 la empresa inicia el proceso de planeación y sincronización de los componentes de la Cadena de Suministro. En este proceso se observó el comportamiento histórico del consumo de los productos, esta labor se realizó utilizando la herramienta Matriz DRP, donde básicamente se podía tener un muestreo del comportamiento del consumo de los productos de manera diaria, semanal, mensual y anual, adicionalmente se reflejaba el comportamiento de la empresa al responder a la demanda en determinado momento, ya fuera por reacción desde los inventarios, planeación o por situaciones imprevistas. Cabe destacar que para este momento la empresa ya estaba caminando hacia la filosofía de no tener inventarios, pero para dar este gran paso, era necesario contar con datos claves en cada una de las áreas de la Cadena de Suministro. Por ejemplo, en

Aprovisionamiento o Compras era necesario tener un importante número de proveedores que pudieran suplir las necesidades de la empresa, las cuales se centraban principalmente en calidad, tiempo de respuesta en términos de tiempo y volúmenes de entrega, cumplimiento de documentación, precio y servicio posventa. Era ahí cuando se hacía indispensable evaluar la base de proveedores existente para seleccionar el mejor proveedor y realizar excelentes negociaciones. Aunque el área de Almacenamiento e Inventarios ya se encontraba en proceso de extinción era necesario recopilar los datos históricos del comportamiento del producto, considerando que la información más importante que se tenía que sustraer eran los indicadores de rotación del producto. Esto sería de mucha utilidad para la el pronóstico de la demanda que debería ser lo más aproximado posible. En el área de servicio al Cliente la información más importante era monitorear los nuevos comportamientos de compra que se estaban presentando por parte de los clientes. Por criterio experto se sugirió medir el Trade Off de los proveedores, diseñando un cuadro de tiempos de entrega para cinco regiones del país desde ocho centros de distribución. Esto permite el análisis de los tiempos de aprovisionamiento y las condiciones de entrega de cada proveedor. Posteriormente se evaluaron los proveedores y se llegó a la conclusión que algunos artículos se podían conseguir con mejores condiciones de compra como menor precio, mayor tiempo de garantía, menor tiempo de entrega, descuentos, mayor calidad, etc.

Se realizó también una matriz de Planeación de los Recursos de Distribución DRP para mejorar la gestión del inventario de producto final y el control del transporte de productos en la cadena de distribución. Con base en los resultados obtenidos se propuso llevar los inventarios a cero, por lo cual ya no se necesitaba un espacio de almacenamiento. En este momento el modelo de negocio cambió y fue necesario diseñar una estrategia de comercio electrónico, realizar alianzas estratégicas con proveedores y empresas transportadoras, definiendo como espacio de trabajo nueve regiones de Colombia.Finalmente, cuando SRV conoce sus costos logísticos, el objetivo es llegar a su reducción. Para esto se propuso una estructura de Plan de Mejoramiento Logístico que incluye: problema, actividad, descripción de la actividad, meta, indicador, cronograma, fuente de financiación y resultado.Para conocer la distribución de los costos logísticos de la organización se realizó el ejercicio de calcular los costos logísticos como se muestra en la figura 1.

Figura 1: Costos logísticos en la empresa SRV-Servicios

Esta figura muestra la distribución de los costos logísticos en la empresa SRV.

La promesa de servicio ofrecida por la empresa se mantiene al cambiar la estrategia de negocio de tener un almacén al implementar una estrategia de comercio electrónico. Al realizar la medición de salida se concluye que al haber implementado las herramientas de Evaluación de Inventarios, Trade Off, Matriz DRP, Análisis del Entorno Macro y Micro y Cálculo de Costos Logísticos, se obtuvo el resultado, de mantener la Política de Cero Inventarios, permitiendo mayor flujo de dinero para la empresa.

RESULTADOS

La empresa identificó donde estaban los Costos más altos de toda la operación. Fue así que para octubre SRV-Servicios, reconoció que los costos logísticos se centraban principalmente en Aprovisionamiento con un 64% y Servicio al cliente en un 36%. Aunque la empresa había realizado una exhaustiva selección de proveedores y una importan mejora en el área de atención al cliente, no estaba planificando su demanda de manera adecuada, razón por la cual no respondía de forma inmediata cuando el cliente solicitaba un producto. Esta respuesta inmediata implicaba costos más altos a los que comúnmente se manejaban por no tener inventarios. Sin embargo tenerlos no era la solución, pues ya se había avanzado bastante logrando la reducción de inventarios por parte de la empresa, así que el procedimiento consistió en empezar a realizar actividades que proporcionaran información para planificar mejor las compras con el fin de cumplir la promesa de servicio ofrecida, siguiendo con la metodología de cero inventarios.

Para este gran reto se le recomendó a la empresa implementar las herramientas Trade Off, y continuar con la implementación de la Matriz DRP, adicionalmente se le recomendó reevaluar el método de Calificación de proveedores. Posteriormente se examinaron los resultados obtenidos mediante la utilización de las herramientas. Por ejemplo, la herramienta Trade off le proporcionó a la empresa la información sobre el tiempo de respuesta efectivo para poder alinear la promesa de servicio ofrecida a los clientes, de acuerdo a la capacidad real tanto de la empresa como de sus proveedores. Por otro lado se retomó la información de los Indicadores de Inventarios y la información de la Matriz DRP para poder tener tendencias de comportamiento de la demanda. Esto permitió solicitar pedidos con anticipación de manera adecuada. La empresa implementó su negocio en una plataforma de comercio electrónico.

Esta implementación dio vuelco a la cadena de suministro utilizada a la fecha, teniendo como entrada la solicitud de los clientes mediante la tienda virtual, en la cual se tiene montados los catálogos online ofrecidos por la empresa con sus respectivas descripciones y la condiciones en las cuales será entregado el producto en esta operación. Se conformó la herramienta Trade off, hacia el cliente, donde además de incluir el tiempo que demora la empresa en tener el producto, el cliente tiene la posibilidad de saber según su ubicación en cuanto tiempo tendrá su producto y el costo final que pagara, después de que el cliente realiza clic en comprar, la empresa empieza a realizar contacto con el cliente recordándole las características del producto y la condiciones en las cuales serán entregado, esto se realiza con el fin de que siempre se tenga una entrega perfecta con las condiciones de lugar, tiempo, cantidades, precio, documentación, y especificaciones acordadas. Una vez se realiza la verificación, se establece comunicación con los proveedores seleccionados para que despachen el producto.

Cabe resaltar que algunos de los proveedores seleccionados realizan los despachos y en algunos se tienen alianzas con transportadores para que realicen el despacho de la misma, adicionalmente la empresa tiene ubicado a nivel nacional ocho centros de distribución que reciben el pedido según la ubicación del cliente. Los centros de distribución están ubicados en Barranquilla, Montería, Medellín, Bogotá, Cali, Pasto, Ipiales y Orito, esta ubicación estratégica y la forma de entrega sobre pedido se realiza con el fin de disminuir los costos de transportes y almacenamiento para poder competir ante las grandes plataformas de almacén que ofrecen los mismos productos. Estos centros de distribución en realidad son proveedores en cada ciudad. SRV-Servicios ofrece los mejores precios con la comodidad de entrega en la puerta de su casa o negocio, cumpliéndole al cliente final con la promesa de servicio vendida por la empresa, con la calidad solicitada, en el tiempo pactado, las cantidades solicitadas, con la documentación legal y el precio acordado. Hoy la empresa tiene ventas en todo el país, donde su mercado potencial no se encuentra en la zona donde está ubicada la empresa si no en la región del caribe al otro extremo de la ubicación de SRV-SERVICIOS. Como lo podemos observar en la Figura 2.

Figura 2: Regiones de negocio de la empresa SRV-Servicios en Colombia

Esta figura muestra como el mayor porcentaje de ventas de SRV está en la región Caribe, al norte del país, siendo que la empresa se encuentra ubicada en la Amazonia, al sur del país.

CONCLUSIONES

El caso estudiado, confirma la potencialidad del manejo adecuado y correcto de herramientas de optimización por áreas de la cadena de suministro para impactar el mejoramiento de la forma como se realizan los procesos en una organización. El análisis sirvió como apoyo a la toma de decisiones, en relación a las herramientas que pueden implementar organizaciones con características similares para mejorar su nivel de servicio logístico, mejorando su competitividad y por tanto su desempeño en el mercado. En todo caso, más allá del interés que pueda derivarse de los hallazgos de esta investigación, la misma debe interpretarse como una contribución al análisis de la logística. A partir de este ejercicio se puede mejorar y entender los impactos de la implementación de herramientas logísticas. Este estudio permite comprobar como el alcanzar el justo a tiempo es posible en pequeñas empresas y cómo el comercio electrónico sirve de plataforma en el caso de estudio para mejorar las condiciones de un negocio que contaba con altos costos de almacenamiento.

En este estudio se comprobó que el comercio electrónico es una buena plataforma para disminuir los inventarios y para trabajar con metodología sobre pedido. Esto requiere contar con información de calidad en la planeación de la demanda y teniendo aliados estratégicos durante la cadena de suministro. El comercio electrónico es una plataforma que logra que el reconocimiento de la empresa se realice de forma más rápida, como lo muestran los resultados de ventas al otro extremo del país donde está ubicada. La principal dificultad que se encontró fue pronosticar el comportamiento de la demanda para realizar pedidos de forma adecuada, anticipándose a lo solicitado por el cliente. En estudios futuros se recomienda a la empresa llevar un control del comportamiento del consumo de los productos ofrecidos y observar las tendencias de los mismos para poder abastecerse de manera racional.

OPORTUNIDADES DE EXPORTACION DE LA NUEZ PECANERA PRODUCIDA EN EL MUNICIPIO DE HERMOSILLO, SONORA, MEXICO

Beatriz Alejandra Hurtado Bringas, Centro de Estudios Superiores del Estado de Sonora

Rosalina Jaime Meuly, Centro de Estudios Superiores del Estado de Sonora

Natalia Guadalupe Romero Vivar, Centro de Estudios Superiores del Estado de Sonora

RESUMEN

El árbol pecan es el único nogal de origen americano cultivado en la parte norte de México, su fruta es conocida como nuez pecanera, se le conoce como la reina de las frutas secas, se distingue de otras nueces por tener excelentes cualidades de sabor, aroma agradable, buena apariencia, alto valor nutricional y por ser una fruta seca que ofrece beneficios a la salud; ésta es producida en estados de la zona norte del país y puede venderse al consumidor final ya sea descascarada o con cáscara, así como también al sector industrial a granel y descascarada. El estado de Sonora se coloca como el tercer productor de nuez a nivel nacional, después de Chihuahua y Coahuila. Los principales compradores de la nuez Mexicana son: Estados Unidos en primer lugar y China en segundo, siendo este último el principal destino de la producción sonoreense. Incrementar la superficie de siembra representa la oportunidad para el agricultor del Municipio de Hermosillo de obtener mayor cantidad de toneladas de cosecha, así como la diversificación de los destinos de exportación, y mejorar el precio pagado por tonelada exportada, así como también la reducción del riesgo que se presenta al exportar a un solo mercado.

PALABRAS CLAVE: Nuez, producción, exportación, mercados, destinos de exportación.

EXPORT OPPORTUNITIES FOR PECAN TREE PRODUCED IN THE COUNTY OF HERMOSILLO, SONORA, MEXICO

ABSTRACT

The pecan tree is the only walnut tree grown in the northern part of Mexico its fruit is known as the queen of dried fruits it is distinguished from other nuts because of its excellent qualities of taste, nice scent, good appearance, high nutritional value and for all these qualities this dried fruit offers health benefits. It is produced in the northern states of the country and can be sold to the final consumer either shelled or unshelled as well as to the industrial sector in bulk and unshelled. The state of Sonora stands as the third largest national producer after Chihuahua and Coahuila. The main buyers of Mexican walnut are in the first place the United States and in the second one China, this later country, is the principal destination for the production of the state of Sonora. Increasing the sowing area represents the opportunity for farmers in the county of Hermosillo to have a largest harvest and a diversification of export destinations and to improve the price for exported ton, as well as risk reduction that occurs when exporting to an only one market.

JEL: M11,L17, M21,M31

KEYWORDS: Pecans, market, commerce, business income.

INTRODUCCIÓN

El árbol pecan es el único nogal de origen americano, nativo del norte de México y sur de Estados Unidos, su conocida nuez pecanera es la semilla de su fruto, se encuentra dentro de una cáscara indehisciente o endocarpio leñoso, formada de dos lóbulos carnosos comestibles. Este cultivo se ha implementado en México desde los años cuarenta y cincuenta a la fecha, según datos oficiales de la organización de las Naciones Unidas para la Alimentación y la Agricultura (FAO), México ocupa el segundo lugar, después de Estados Unidos, como productor mundial de nuez pecanera, las principales variedades cultivadas son Western, Wichita y Criollas, cuyo periodo de cosecha transcurre entre los meses de octubre y diciembre.

De acuerdo a las estadísticas de la Secretaría de Agricultura, Ganadería, Desarrollo Rural y Pesca (SAGARPA), los productores sonorenses de nogal han concentrado sus exportaciones en el mercado chino, país al que lograron exportar alrededor del 80 % de su producción en la temporada 2009-2010; en este período el volumen de producción de nuez creció de siete mil 888 toneladas a 15 mil 782 toneladas; su valor de producción se disparó de 271.3 millones de pesos a 802.3 millones de pesos, como resultado de los buenos precios que alcanzó el fruto en el mercado internacional, y mejores rendimientos por hectárea.

Los principales estados productores de nuez en México son Chihuahua en primer lugar, Coahuila en segundo y Sonora en tercero, a través de los años estas entidades han ido incrementando su siembra aplicando tecnologías para el manejo de los recursos como el agua, la fertilización y el manejo de sanitario, esto contribuye a mantener estándares de calidad necesarios para ingresar a mercados internacionales.

Como se mencionó anteriormente el 80% de la producción sonorenses tiene como destino principal China, sin embargo es importante continuar con la siembra del nogal ya que según los datos del Sistema de Información Agropecuaria (SIAP), el rendimiento del municipio de Hermosillo es mayor al del principal productor a nivel nacional (Chihuahua), lo que representa una oportunidad de negocio para los agricultores del municipio de Hermosillo; y en consecuencia es importante la diversificación de los mercados de exportación de la nuez.

REVISIÓN DE LITERATURA

La producción comercial de nuez pecanera en México se inició a partir de 1946, desde entonces se han desarrollado sistemas de producción sustentables y competitivos. La industria nogalera en México comenzó con plantaciones que contaban con un gran número de variedades (más de 15) de las cuales, como es de esperarse, no todas tuvieron la adaptación adecuada, esto limitaba el potencial productivo de nuez durante los primeros 30 años, hasta que se definieron que las variedades Western Schley y Wichita, variedades con alrededor de 180 días de ciclo vegetativo (de brotación a cosecha) y con un potencial de rendimiento de 2000 kg/ha, requieren una lámina de riego de 1.4 m para la región del Desierto Chihuahuense, sin embargo, son susceptibles a la viviparidad de la nuez (nuez germinada), a pesar de ello, fueron las de mejor adaptación para todo el norte de México, motivo por el cual ocupan el 85% de las variedades de nogal pecanero actualmente cultivadas y se han implementado en las nogaleras nuevas .

El nogal es un cultivo que se caracteriza por tener una excelente adaptación a las condiciones climáticas del norte de México, comprendidas entre las 50 a 600 unidades frío y 3000 o más de unidades calor y baja humedad ambiental y de precipitación. El cultivo requiere la aplicación de riego en las huertas (1.40 m/año), implicando con ello la consiguiente tecnificación de los sistemas productivos con nuevos métodos de aplicación de agua y fertilizantes, con la utilización de los conceptos de fertirrigación, mínima labranza en el manejo de suelos y control integrado de plagas, con lo que se ha evolucionado al desarrollo de sistemas de producción de nuez poco contaminantes y muy competitivos .La generación de criterios de producción confiables en nuestro país se hace evidente sobre la producción de nuez mexicana, la cual alcanza los estándares de calidad más altos a nivel internacional; de tal forma que actualmente se exporta alrededor de 50% de la producción anual nacional, a los Estados Unidos de Norte América, por lo cual

debemos generar nuevas tecnologías confiables y de bajo riesgo que garanticen la competitividad productiva de la producción de nuez en México. (MJ Nuñez, GB Valdez, DG Martínez 2010). De acuerdo a la información proporcionada por SAGARPA, los productores sonorenses de nogal han encontrado un atractivo nicho de mercado en China, en la temporada 2009-2010; en este período el volumen de producción de nuez creció de siete mil 888 toneladas a 15 mil 782 toneladas; su valor de producción se disparó de 271.3 millones de pesos a 802.3 millones de pesos, como resultado de los buenos precios que alcanzó el fruto en el mercado internacional y mejores rendimientos por hectárea (\$40,000.00).

Sonora se coloca como el tercer productor de nuez a nivel nacional; sus productores buscan consolidar su crecimiento aplicando nuevas tecnologías para el manejo de agua, fertilización, poda y manejo sanitario que les permitan mantener la calidad necesaria para acceder a nuevos mercados. En 2010, el estado registró una superficie sembrada de ocho mil 603 hectáreas y una producción de 15 mil 782 toneladas de nuez, con un valor comercial de 802 millones 326 mil pesos, el 37.8% de la producción se utiliza en el mercado nacional, donde la mayoría de los productores venden el producto a granel, habiendo un intermediario el cual procesa la nuez en las presentaciones que requiera el consumidor final, el producto también es vendido al sector industrial encabezado por panaderías y la industria de la confitería, además de fábricas de helados y botanas quienes adquieren la nuez descascarada.

La nuez pecanera es conocida como “Reina de Las Frutas Secas”, se distingue de otras nueces por tener excelentes cualidades de sabor, aroma agradable, buena apariencia, alto valor nutricional y por ser una fruta seca que ofrece beneficios a la salud ya que es rica en ácidos grasos mono y poli insaturados como los Omega 3, benéficos para la salud humana, es fuente de proteína rica en arginina, de fitoesteroles y compuestos fotoquímicos que tienen el efecto modulador del colesterol sérico, de Vitamina E con efectos anti oxidantes; de Vitaminas del Complejo B, de Hierro fácilmente asimilable, y de fibra, así como también se destacan características insuperables como: ácidos grasos no saturados en mayor porcentaje que otras frutas secas comúnmente conocidas. Estos aceites son los que no ocasionan colesterol ni otros problemas circulatorios o cardíacos por lo que la nuez es un producto “Netamente Saludable”. Dentro de los aceites vegetales supera en calidad al de maíz y soja, siendo comparable al de oliva. Teniendo en cuenta que cada día se considera más importante la calidad de los alimentos para mejorar la “Calidad de Vida”, es de esperar que ocupe un lugar privilegiado dentro de las dietas a nivel mundial, principalmente en países desarrollados.

México concentra las exportaciones de nuez de nogal con cáscara a los Estados Unidos como principal destino, la cercanía geográfica permite a los productores que sea elegido este mercado como destino natural para su cosecha; sin embargo existen otros mercados que demandan el producto, como por ejemplo España, Italia y Alemania, en la siguiente tabla se muestran los principales importadores de nuez en el mundo.

Como se puede observar, el principal comprador a nivel mundial en el periodo 2009-2010, es Hong Kong, este comprador que adquiere el 17% del total de las ventas a nivel mundial, la tasa del impuesto de importación ad valorem es del 0% , lo que propicia que aumenten considerablemente las importaciones y su mercado tenga un crecimiento anual del 83%, en segundo lugar se encuentra Italia, con una participación en el mercado internacional del 16.3% y un crecimiento interno del 30% en las compras, otro comprador es Turquía, país que compra el 9.1% de las importaciones mundiales, con un crecimiento anual de las importaciones del 20%, sin embargo la tasa de importación de la nuez es del 43% ad valorem, factor que podría limitar las exportaciones mexicanas hacia ese mercado.

No se debe descartar a otros países compradores, como España, Alemania y Vietnam, quienes compraron el 8.3, 7.1 y 6.7% respectivamente, sin embargo el crecimiento de las importaciones para España y Alemania se ubican entre el 3 y el 5% mientras que Vietnam tuvo un crecimiento del 85%. De igual manera, es importante analizar la dinámica internacional del comercio de la nuez, ya que esta actividad

comercial tiene una actividad constante dentro las exportaciones que se generan en México, por ende es imprescindible identificar los principales competidores en la venta mundial de la nuez. Ver figura 1:

En la presente tabla se muestra los principales importadores de nuez de nogal; así como participación en las importaciones mundiales. Fuente: Cálculos del CCI basados en estadísticas de COMTRADE, Análisis e Investigación de Mercados, Centro de Comercio Internacional (ITC); Genova Suiza, Febrero del 2012.

Figura 1: Exportadores mundiales de nuez con cáscara.

En la presente figura se muestra los principales exportadores de nuez con cáscara a nivel mundial; así como la cantidad de las exportaciones y su precio. Fuente: Organización de las Naciones Unidas para la Alimentación y la Agricultura, (FAO) Febrero del 2012.

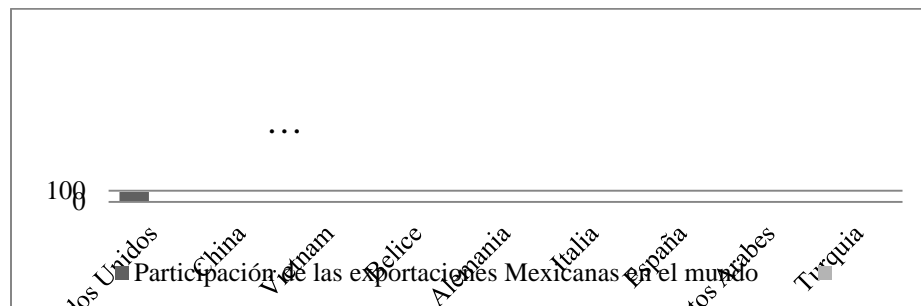

Como se puede observar en la Figura 2 Estados Unidos tiene el primer lugar de venta en el mundo, seguido por nuestro país, en tercer posición se encuentra Francia y después Chile, quedando China en 5to. lugar y Ucrania en 6to., la participación de estos países en el mercado internacional marca las tendencias de venta para aquellos productores que desean incursionar en el mercado mundial.

Según los datos generados por el Centro de Comercio Internacional, basados en estadísticas de COMTRADE, las exportaciones de nuez en México representa el 11.5% del total de las ventas de nuez en el mundo, con 18,547 toneladas y encontrándose en tercer lugar como productor y exportador mundial, la producción total es de aproximadamente de 79 millones de toneladas, de las cuales el principal destino es Estados Unidos siendo la calidad su principal pase de entrada al país anglosajón, con un 89.9 % de participación en las exportaciones del país, teniendo como beneficio el pago del 0% de arancel para la importación, esto permite que el producto sea más atractivo en precio para el comprador estadounidense. Estados Unidos también es uno de los principales países exportadores de nuez de nogal, sobre todo

tomando en cuenta que muchas de las importaciones que manejan son originarias de México.

Por su parte China desde hace más de tres años atrás ha ido demandando cada vez mayor cantidad nuez pecanera, México envía aproximadamente el 7% de su producción y al igual que en Estados Unidos no tiene impuesto de importación, ya que su tasa es del 0%, en el año 2010 se exportaron 1,391 toneladas de nuez con un valor de 5.542 millones de dólares, China comenzó a comprar nuez mexicana a partir del 2006.

Figura 2: Principales destinos de las exportaciones de nuez mexicana:

En la presente figura se muestra los principales importadores de nuez de nogal; así como participación en las importaciones mundiales. Fuente: Cálculos del CCI basados en estadísticas de COMTRADE, Análisis e Investigación de Mercados, Centro de Comercio Internacional (ITC); Genova Suiza, Febrero del 2012.

METODOLOGÍA

El diseño de la exploración partió de una investigación propiamente documental y descriptiva, se realizó una investigación de campo; es decir, se consultó a organismos oficiales y de gobierno para afianzar datos e información estadística sobre el tema investigado; así como también, sitios y/o bases de datos oficiales nacionales e internacionales, para el uso de la información estadística, de las exportaciones de nuez pecanera en los distintos mercados del mundo. Por lo anteriormente expuesto, el análisis de los aspectos para determinar las oportunidades comerciales de la nuez se dividió en dos grandes áreas: El mercado mundial y sus compradores y la producción en el mercado nacional y su destino. Para el estudio de la demanda de los mercados internacionales, se analizaron las tendencias en producción y el comercio en México y los países con altos índices de compra a nivel mundial. Para el análisis de los protocolos de negociación se eligieron aquellos países que más adquieren el producto a nivel mundial como posibles compradores de la nuez con cáscara; para analizar las tendencias de la comercialización de nuez, se tomó en cuenta el crecimiento del mercado, así como también, su participación en las importaciones mundiales (fuente: COMTRADE, Febrero del 2012). La Tabla 1, contiene los principales importadores mundiales de nuez pecanera.

RESULTADOS

El desarrollo de la actividad nogalera se ha enfocado y ha impactado primordialmente al sector primario, quedando pendiente el desarrollo de las actividades enfocadas a integrarse a cadenas productivas hortícolas, como son la transformación, empaque y la conservación del producto; esto trae como consecuencia el desarrollo de mercados alternativos que permitan la consolidación de la industria nogalera a través de la mejora de la infraestructura y organización integrada de los actores involucrados. Se debe considerar que aún existen retos difíciles por superar en la comercialización de nuez pecanera, estas amenazas deberán ser atendidas para lograr mejorar la productividad y desarrollar mercados nuevos y estables para la nuez pecanera de Hermosillo. Es importante considerar los países que actualmente se encuentran en los primeros lugares como compradores de nuez en el mundo, esto permitirá al productor

diversificar su actividad comercial e incrementar sus ganancias, permitiendo con esto impactar directamente en la economía del municipio de Hermosillo y la de la región. De acuerdo al estudio realizado los países compradores potenciales para la nuez son: Italia, España y Alemania.

CONCLUSIONES

La producción de nuez pecanera en México, ha sido altamente redituable para los productores, por su excelente calidad; esta característica la ubica como una de las mejores del mundo, esta situación es una oportunidad para el productor, ya que debe considerar para el incremento de la superficie de siembra, la buena adaptación del cultivo a los suelos y clima Hermosillense. La introducción e implementación de nuevas tecnologías, así como la incorporación de buenas prácticas agrícolas, sistemas de manejo integrado del cultivo, nuevos agroquímicos de acción específica y de baja contaminación, además de la búsqueda de nuevas variedades con ventajas competitivas sobre las actuales, permitirán alcanzar una mayor productividad, rentabilidad y competitividad al productor de la zona agrícola del municipio de Hermosillo.

El empresario debe contar con información económica del sector a nivel mundial con el fin de facilitar la percepción de la siembra y cosecha como un negocio rentable, además es importante fortalecer la organización entre los productores nogaleros para que incrementen las ventas a nivel nacional; con la integración de los agricultores pueden generar mayor sinergia e ingresar a mercados con mayores volúmenes de venta, logrando satisfacer la demanda de mercados alternativos grandes como Hong Kong, además de otros destinos alternativos como Vietnam y España.

De acuerdo al análisis de cada uno de los mercados elegidos como destinos alternos para la exportación de nuez pecanera Sonorense, los siguientes países son los que representan la oportunidad de negocio para los productores: Italia importó en el año 2010 un total de 26,571 toneladas de nuez pecanera con cáscara, con un valor de 3,397 dls. Con una paridad peso dólar: 12.50, que nos da como resultado: 42,462.5 pesos por tonelada, si el productor sonorense continúa vendiendo el producto en su fábrica y el comprador italiano se interesa por adquirirlo, con la venta se obtiene una ganancia de \$2,462.5 pesos, comparativamente hablando con el precio que se paga por la exportación a Estados Unidos (\$40,000) según el Sistema de Información Agropecuaria (SIAP). La tasa de crecimiento de las importaciones fue del 35%, según los datos de Trade map. Esto representa una oportunidad diferenciada en precio y destino la exportación de nuez.

Para el mercado Español, se encontró que la cantidad de toneladas importadas en el año 2010 fue de 15,242, se pagó un precio de \$37,987.5 pesos por unidad; este país tiene un crecimiento anual del 3%. Comparativamente en México en el 2010 se pagaron \$40,000 pesos por ton. Promedio, sin embargo el análisis estadístico del Sistema de Información Agropecuaria (SIAP) incluye los precios pagados en el año 2009 y 2008, en dichos años se pagó un promedio de \$35,000 pesos, si se toma en cuenta la variación del precio promedio, el pago por tonelada en España es redituable para el productor Mexicano. Alemania es otro de los destinos propuestos en la venta de la nuez con cáscara, este país compró un total de 12.795 tons. en el año 2010, pagando un promedio de \$38,650 pesos por unidad, este mercado tiene un crecimiento entre el año 2009 y 2010 del 5%, si se maneja un precio promedio de compra también podría considerarse como un mercado de destino de la exportación de la nuez.

Figura 3: Tasa de crecimiento 2009-2010 países compradores de Nuez

En la presente figura se muestra el crecimiento de los posibles compradores de nuez pecanera Sonorense Fuente: Cálculos del CCI basados en estadísticas de COMTRADE, Análisis e Investigación de Mercados, Centro de Comercio Internacional (ITC); Genova Suiza, Febrero del 2012

ANEXOS

Anexo 1: Una vez analizados los compradores de nuez en el mundo es importante para el productor que decide diversificar su actividad exportadora, conocer los puntos más importantes de los protocolos de negociación de sus posibles clientes. Para esta actividad se tomaron en cuenta los principales compradores de nuez en el mundo, con la finalidad de que el productor pueda preparar una negociación de compra venta de nuez en igualdad de condiciones con su contraparte.

Italia: Los aspectos de imagen y forma de acercamiento así como el respeto por los productos italianos son determinantes a la hora de cerrar un acuerdo con interlocutores italianos, las normas de protocolo son más laicas que en otros países, los italianos prefieren hacer negocios con quien ya conocen o con aquellas empresas que han sido introducidas a través de contactos.

En el caso de presentaciones y despedidas el saludo más habitual es el apretón de manos y en muchas ocasiones agarrar con la otra mano el antebrazo del interlocutor, el trato es formal y se presenta a las personas de mayor rango en primer lugar. En cuanto a los temas de conversación sienten cómodos en situaciones de excesiva formalidad. Las negociaciones pueden ser largas y cuanto más importante es el negocio, más tiempo de análisis se requiere y más tiempo se demora la decisión por esto las tácticas de presión para provocar una decisión positiva son interpretadas como signo de debilidad. Sus argumentaciones son muy expresivas con un extraordinario volumen de voz utilizando mucho el para lenguaje.

En ocasiones se reciben demandas desconcertantes por parte del interlocutor italiano para desestabilizar a la otra parte y no ceder ante estas peticiones puede percibirse como un fracaso de la negociación, pero todo lo contrario, la postura debe ser firme ya que es un indicio de que el acuerdo final está cerca. Las presentaciones de productos, servicios, proyectos, deben ser estéticamente perfectas pues la cultura italiana valora más la apariencia que el contenido.

Los productos italianos son muy valorados y es difícil cambiar los hábitos de compra con facilidad ya que las organizaciones empresariales mantienen una estructura horizontal también llamada cordata y cualquier decisión se toma de forma consensada por el equipo directivo, por ello es fundamental conocer la capacidad de decisión del interlocutor así como el nivel de influencia que ejerce sobre el equipo directivo y la organización Por último en ocasiones se entregan regalos solo a niveles directivos siendo muy valorados los libros de lujo con ilustraciones de alta calidad.

España: Para los españoles, el sentido del honor y el orgullo son los rasgos más típicos del carácter español; al momento de negociar hay que tener cuidado para no herir sensibilidades ya que una vez que los españoles han adoptado una posición es difícil que se vuelvan atrás, precisamente por una actitud orgullosa. Los horarios de los comercios suelen ser muy variables pero los más extendidos son de 10:00 a 13:30-14:00 hrs. y por la tarde de 16:00 ó 17:00 hasta las 20:00 ó 21:00 hrs. No obstante hay muchos comercios y establecimientos que empiezan a tener horarios continuos de la mañana a la noche. Ya sea por desconfianza o por un carácter reservado a los españoles no les gusta dar información sobre su empresa, el sector en que trabajan o los competidores. Es mejor no hacer preguntas directas sobre estos temas ya que aumentaría su recelo al momento de negociar. El ambiente de la negociación es formal, pero distendido. El español mantiene una actitud seria cuando se negocian los aspectos clave, pero se comporta de una manera muy cordial y alegre en el transcurso de la conversación. Es muy corriente utilizar el sentido del humor y contar chistes, incluso a personas que apenas se conoce.

La argumentación es una parte esencial del proceso negociador. Si bien, al principio, los españoles pueden adoptar una posición pasiva no es raro que se vayan motivando a lo largo de la conversación y terminen acaparando la palabra. Llegado este momento se les debe interrumpir ya que de lo contrario se reforzaría su posición; en España tiende a pensarse que el que más habla defiende mejor sus argumentos. En cuanto a las presentaciones bastará con usar el nombre propio y el primer apellido, pero en la correspondencia escrita y en los documentos legales deberán utilizarse los dos apellidos. Los españoles atienden puntualmente sus reuniones al igual que se hace en cualquier otro país europeo. Uno de los puntos que pueden diferenciarles de los europeos son los incumplimientos de algunos de los puntos pactados y de las formas de pago. El punto más débil es el de las formas de pago. Los plazos suelen ser muy largos y a la hora de pagar puede darse algún que otro problema.

Alemania: En las negociaciones alemanas el trato es formal se utilizan los apellidos y los títulos para dirigirse a las personas. A los alemanes no les gustan los negociadores que hablan sin plenos conocimientos, si no se sabe algo con certeza es mejor callarse. En las negociaciones los alemanes se caracterizan por el orden y seguir las reglas, incluso antes de realizar una reunión de negociación se debe confirmar previamente la cita y no deben ser canceladas, salvo por motivos de mucha importancia, por lo que la puntualidad es algo fundamental, por esta razón se debe ser muy puntual.

Si no se hace esto la persona representante puede ganarse una mala imagen y puede afectar la negociación. Los alemanes se fijan en productos que destacan en calidad o en servicio en vez de artículos que son de bajos precios. Una de las normas en las que confían completamente como un indicador de calidad es la norma DIN. En cuanto a los horarios comerciales empiezan muy temprano, desde las 8 de la mañana hasta las 8 de la tarde, de lunes a viernes. Los sábados el horario es de 8 de la mañana hasta las 4 de la tarde.

Alemania es un país de “Low Context”, esto quiere decir que los hombres de negocios alemanes suelen ser bastante francos, les gusta llegar directamente al punto, no dejar ideas vagas, y ser lo más conciso posible, valoran mucho el trabajo individual, le dan mucho valor al acuerdo o promesa verbal, ya que son personas de palabra. Las negociaciones para ellos son muy serias por lo que no suele ser bienvenido un chiste o un comentario inapropiado en la mayor parte de las ocasiones.

El comprador alemán es conservador no cambia fácilmente de proveedores y tampoco le interesan los negocios puntuales, sino las relaciones a medio plazo. Para entrar en el mercado hay que ofrecer algo adicional, ya sea un producto novedoso o una ventaja en precio. En las presentaciones se debe utilizar un lenguaje directo, claro y lógico, apoyado en argumentos, datos y gráficos que sigan una estructura predeterminada. Al alemán le importan más los hechos que la imagen o la historia de la empresa. A pesar de que es un país muy desarrollado, todavía existe un tipo de recelo hacia las mujeres que dirigen un equipo de trabajo o que toman decisiones importantes.

GERENCIA DEL CONOCIMIENTO COMO HERRAMIENTA PARA ALCANZAR LA COMPETITIVIDAD EMPRESARIAL

Yolanda Miquilena Coronel, Universidad Nacional Experimental Rafael María Baralt.
Milexis Carrasco García, Universidad Nacional Experimental Rafael María Baralt

RESUMEN

La nueva era de competencia global le plantea a la mayor parte de las organizaciones, instituciones y sectores de la sociedad, una transformación sustancial a fin de que puedan adaptarse a los cambios dinámicos del entorno. No obstante, la continua incapacidad para entregar calidad y valor se ha extendido a industrias que están perdiendo competitividad global en su participación en el mercado. Dentro de este contexto de cambio y globalización, muchas organizaciones aspiran contar con un personal mucho más creativo e innovador a fin de satisfacer las expectativas de sus clientes. Una forma de lograrlo es tomar en cuenta los conocimientos adquiridos por el personal para ser puesto en práctica; aprender a gerenciar el conocimiento que posee su capital intelectual. Es por ello, que el estudio se centró en determinar la asociación entre la gerencia del conocimiento y la competitividad empresarial. Se utilizó una investigación documental con un diseño de tipo bibliográfico con el propósito de proporcionar una interpretación de la investigadora y teórica de más reciente data que han planteado la necesidad de incorporar la gerencia del conocimiento como la nueva tendencia gerencial para alcanzar la competitividad. Estudios realizados por Saputelli (2003) presentan evidencias concretas de empresas que han logrado incrementar su creación de valor a través de una gerencia efectiva del conocimiento. Miquilena (2006) realizó un estudio donde concluye que las unidades analizadas se gerencia el conocimiento, confirmando así que la gerencia del conocimiento incide moderadamente en la competitividad empresarial de las empresas contratistas en estudio.

KNOWLEDGE MANAGEMENT AS A TOOL FOR ACHIEVING BUSINESS COMPETITIVENESS

ABSTRACT

The new era of global competition poses the need for substantial changes to most organizations, institutions and sectors of society in order to adapt to the dynamic changes of the environment. However, the continuous incapacity to deliver quality and value has been extended to industries that are losing global competitiveness in their market share. Within this context of change and globalization, many organizations aspire to have much more creative and innovative personnel so as to satisfy their client's expectations. One way of achieving this is taking into account the knowledge acquired by the personnel and that is put into practice; learning to manage the knowledge possessed by their intellectual capital. That is why this paper focused in determining the association between knowledge management and business competitiveness. A documental research with bibliographical design was used in order to provide the most current interpretation of research and theory proposing the need to incorporate knowledge management as a new business tendency to achieve competitiveness. Studies made by Saputelli (2003) present concrete evidences on businesses that have been able to increase their value creation through an effective managing of knowledge. Miquilena (2006) made a study were it is concluded that in

the analyzed units knowledge is managed, thus confirming that knowledge management affects business competitiveness both positively and moderately for the contractors enterprises studied.

INTRODUCCIÓN

Los avances en las tecnologías de información y producción están cambiando radicalmente los hábitos de los consumidores, los estilos de vida, las estrategias en los negocios y las fuentes de ventajas competitivas, surgen en consecuencia, nuevas e inesperadas formas de competencia en un mercado global cada vez mas impredecible e incierto. En este contexto, entre otras, la estrategia a seguir, debe sustentarse en el argumento de la creación y gerencia del conocimiento organizacional como elemento de apoyo a la competitividad, racionalidad económica y modernización, tratando así de hacer frente a las necesidades o cambios que este proceso ha puesto de manifiesto.

De forma tal que, en un ambiente de negocios abierto, con una orientación local e internacional, las estrategias y políticas deben incrementar la habilidad de las empresas para llegar a ser mas innovadoras, flexibles y competitivas, capaces de entrar en nuevos mercados, de desarrollar explotar nuevas ventajas tecnológicas y organizacionales, así como de reducir costos y riesgos. Por otro lado, en tanto la competitividad sea un elemento fundamental en el éxito de toda organización (Pelayo, 2001), los gerentes o líderes harán mas esfuerzos para alcanzar altos niveles de productividad y eficiencia; incluso podría decirse que en las organizaciones comprometidas con el éxito no solo están abiertas a un constante aprendizaje, sino que deseen enmarcarlo como su activo fundamental. Así, la creación de una inteligencia colectiva basada en el conocimiento, asegurara a las empresas de hoy la generación de ventajas competitivas difíciles de imitar por la competencia. Se hacen así de un valor adicional que les permitirá sobrevivir alcanzado los objetivos organizacionales: crecimiento y rentabilidad. En este contexto se enmarca el presente estudio cuyo propósito es determinar la asociación entre la gerencia del conocimiento y la competitividad empresarial.

Antecedentes

El arqueo bibliográfico realizado revela la existencia de trabajos cuya temática y conclusiones constituyen importantes aportes referenciales para su argumentación teórica de la presente investigación. Miquilena (2006), realizo un estudio cuyo propósito fue determinar el grado de asociación entre la gerencia del conocimiento y la competitividad empresarial, en las empresas contratistas afiliadas a la Asociación de Contratistas Petroleras y Afines de Venezuela (ACOPAV), ubicadas en el municipio Lagunillas del Estado Zulia, cuyos resultados arrojaron que en la mayoría de estas empresas se gerencia el conocimiento a través del cumplimiento en altos niveles de las actividades inherentes a la detección, generación, selección, adquisición, adaptación, divulgación y disponibilidad del mismo y un porcentaje considerable de ellas, resultaron ser competitivas confirmando así la asociación entre las variables objeto de estudio.

Sánchez (2003), en el trabajo de investigación titulado, Gerencia del conocimiento: Paradigma de gestión organizacional, luego de disertar sobre aspectos relativos a lo que se concibe por conocimiento y gerencia del conocimiento, centra su atención en la gerencia del conocimiento en Petróleos de Venezuela (PDVSA), evidenciando como en estas organizaciones estructuradas jerárquicamente, es importante manejar la gerencia del conocimiento como un proceso que definitivamente debe conllevar a una redefinición de las estructuras organizacionales, transitar de lo jerárquico a lo flexible, y de una toma de decisiones vertical a una mayor horizontalidad; partiendo siempre del principio de que todo proceso de gerencia del conocimiento, tiene por objetivo último la creación de valor, que debe sustentarse en la

estrategia medular de la organización.

También artículos publicados en Internet, demuestran que empresas a nivel nacional e internacional han utilizado la gerencia del conocimiento para crear ventaja competitiva. Así, Saputelli (2003), en su artículo “Gerenciar el conocimiento para crear ventaja competitiva”, presentó como objetivo mostrar el estado del arte de la gerencia del conocimiento, las lecciones aprendidas en los últimos años y los retos presentes para abordar la nueva tecnología. Por otro lado, señala algunas iniciativas novedosas de gerencia del conocimiento en empresas altamente competitivas, que promueven la filosofía de organizaciones que aprenden de su propia experticia y motivan el pensamiento altamente creativo; entre otras: Chevron, Texas Instruments, Skandia y Shell.

Gerenciar El Conocimiento.

En la actualidad, dentro del objeto de la administración, es de importancia capital los conocimientos que la empresa posee sobre sus procesos, productos, mercados, clientes, empleados, entre otros y sobre cómo continuar estos elementos para constituirse en una empresa competitiva. Entra a jugar un papel determinante para el futuro de la organización la denominada “gerencia del conocimiento”.

Zorrilla (1997) elabora bajo un enfoque heurístico la siguiente definición: Gerencia del Conocimiento es el proceso de administrar continuamente conocimiento de todo tipo para satisfacer necesidades presentes y futuras, para identificar y explotar recursos de conocimiento tanto existentes como adquiridos y para desarrollar nuevas oportunidades.

Coincidiendo con el mencionado autor, Macintosh (1997), define la Gerencia del Conocimiento como la identificación y análisis del conocimiento disponible y requerido, la planeación y control de acciones para desarrollar activos de conocimiento con el propósito de alcanzar objetivos organizacionales. Por su parte, Quintas, Lefere y Johns (1997) conciben “... la gerencia del conocimiento como un proceso que debe apoyar a la empresa en la búsqueda de una posición competitiva y nuevas oportunidades. Las definiciones expuestas anteriormente por los autores mencionados, además de reconocer que el conocimiento como recurso debe adquirirse, clasificarse, conservarse y explotarse para lograr los objetivos de la organización y hallar nuevas oportunidades; refieren la importancia de su presencia en todas las actividades cotidianas de la organización, por ser el proceso de administrar continuamente todo tipo de conocimiento existente o adquirido para cumplir los objetivos de la organización, descubrir y explotar nuevas oportunidades.

La gerencia del conocimiento es pues, un proceso, una cultura y una dinámica de la organización que alinea y mide el uso del conocimiento con los objetivos y metas de la misma, transformando la empresa en organizaciones que aprenden (Intesa, 2003). Luego, gerenciar el conocimiento es capturarlo, preservarlo y convertirlo en un activo impulsando al mismo tiempo el aprendizaje de la organización. Bajo las consideraciones realizadas, la valoración del conocimiento como uno de los activos más importantes que tienen las empresas para la creación de valor, sugiere en muchos casos, romper paradigmas del pasado, altamente arraigados a la forma de actuar de las empresas y de sus empleados. En tal sentido, la visión en el área de gerencia del conocimiento es la de lograr la incorporación continua de valor adicional al transformar el conocimiento implícito en conocimiento organizacional a través de la utilización óptima de las tecnologías de información.

Por lo demás, dentro del objeto de la administración y gerencia del conocimiento está lo que la empresa sabe sobre sus productos, procesos, mercados, clientes, empleados, entre otros, y sobre cómo combinar estos elementos para hacer una empresa competitiva. Precisamente, la gerencia del conocimiento busca mejorar el rendimiento de los individuos dentro de las organizaciones para mantener e incrementar el valor presente-futuro producto de las ventajas derivadas del conocimiento.

Para Viedma (1998, referenciado por Miquiliena, 2004), a juicio de la comunidad científica la gerencia eficaz del conocimiento es la fuente principal de ventajas competitivas sostenibles de las organizaciones.

Coincide y realza de este modo, la afirmación realizada por Laurence Prusak (Director de Knowledge Management en I.B.M.), para quien la fuente principal de ventajas competitivas de una empresa reside fundamentalmente en sus conocimientos, o más concretamente en lo que sabe, en cómo usa lo que sabe y en su capacidad de aprender cosas nuevas.

Entre las razones principales esgrimidas por Estados Unidos y Europa en 1999 para adoptar la gerencia del conocimiento en empresas, según la Internacional Data Corporation/Knowledge Management Magazine (2000) destacan: aumentar las ganancias, retener talentos, mejorar la satisfacción del cliente, aumentar la participación de mercado, mejorar la eficiencia y la rapidez, explotar nuevos segmentos de mercado, reducir costos y crear nuevos productos. Esta misma fuente revela como entre las dificultades presentes para aplicar técnicas de gerencia de conocimientos en estas empresas durante este año se encuentran: falta de comprensión del significado y beneficios, falta de tiempo de los empleados, carencia de habilidad en las técnicas, la cultura prevaleciente, no hay incentivos para compartir los conocimientos, insuficiencia de recursos económicos, ausencia de la tecnología necesaria y falta de compromiso de la alta gerencia.

REFLEXIONES FINALES

Dentro del nuevo contexto empresarial, sólo en la medida que los gerentes de cualquier organización, sin importar la naturaleza de la actividad realizada, actúen y promuevan una actitud gerencial acorde al entorno reinante y dirijan estratégicamente su empresa, con base en una gerencia adecuada del conocimiento; se estaría seguro de preparar a la organización para enfrentar un futuro incierto y turbulento, que puede determinar su éxito o fracaso. Así, los gerentes de cualquier empresa, deben precisar cuales son sus fortalezas y debilidades en relación a la gerencia del conocimiento como un activo intangible, volátil, difícil de concretar y retener y su relación y pertinencia con la generación y sostenimiento de ventajas competitivas para la organización. Podrán incluso, responder a las demandas del entorno asumiendo cursos de acción en su línea de producción al fabricarlos de manera segura, confiable y de alta calidad; en sus prácticas de mercadotecnia, en las actividades para la capacitación y educación de sus empleados, preparándolos para que desempeñen sus trabajos adecuadamente y entrenándolos para manejar la tecnología nueva en lugar de despedirlos, entre otras.

Además, será necesaria la instrumentación de intervenciones planificadas orientadas ya sea a minimizar la brecha existente o fortalecer, estimular, enriquecer y mantener en un grado de desarrollo adecuado tal relación. En especial, las empresas consultoras podrían programar eventos de formación empresarial dirigidos, a concienciar a los gerentes empíricos sobre las características del entorno futuro, y la necesidad de gerenciar el conocimiento como estrategia para permanecer y consolidarse en un mercado cada vez más incierto y competido. De igual forma, el desarrollo y gerencia efectiva de esos conocimientos, dotarán tanto a la gerencia como al personal en general, de las experiencias, actitudes, capacidades, habilidades, destrezas; otorgándoles la oportunidad de alcanzar el éxito tanto personal como organizacional, lo cual no es garantía de mantenerlo, no obstante la perfección y adquisición de nuevos conocimientos constituirán las bases para intentarlo. De manera tal que, las organizaciones en general, se favorecen al contar con individuos que estimulando la creación y gerenciando de forma adecuada el conocimiento disponible, planifiquen, organicen, dirijan y controlen un conjunto de actividades destinadas a alcanzar los propósitos organizacionales. Individuos capaces de reconocer sus necesidades y promover cambios importantes en un área funcional, o en la empresa como un todo.

Las empresas que adopten la gerencia del conocimiento como herramienta para alcanzar la competitividad, podrán iniciar el proceso de diversificación de su base económica y buscar otras alternativas adoptando medidas más creativas que permitan el desarrollo tecnológico, involucrando en esta tarea a los elementos motores del crecimiento del país: centros de investigación, sector empresarial,

gobierno y sociedad. Esto permitirá contar con el suficiente talento para el manejo óptimo de los limitados recursos de las organizaciones. Por tanto, es necesario reconocer la importancia de utilizar el proceso de poner el conocimiento (el acto de conocer y aprender, y el uso del conocimiento para añadir valor, crear y reforzar ventajas competitivas) como objetivo central de la estrategia de negocios; con el propósito de encontrar los activos de conocimiento requeridos, utilizarlos de la manera más efectiva y con una relación costo-beneficio apropiado, para competir.

RESUMEN

Este trabajo presenta una investigación de tipo descriptivo, transversal con diseño no experimental sobre el diagnóstico de la transparencia de las instituciones públicas de educación superior (IPES) del noroeste de México. El objetivo consiste en identificar, bajo el enfoque de la ley Federal de Transparencia y Acceso a la Información Pública Gubernamental (LFTAIPG), la existencia de diferencias significativas entre la transparencia de las IPES y el tipo de subsistema al cual pertenecen; para lograrlo se trabajó con una muestra de 21 universidades y tecnológicos. En la recolección de los datos se empleó una plantilla de 39 ítems cuya confiabilidad fue determinada a través del alfa de Cronbach, obteniendo un índice de 0.953. Los resultados obtenidos indican que el nivel de transparencia, en promedio, de las páginas Web de las IPES es muy bajo y que existen diferencias estadísticamente significativas en la transparencia de las páginas Web de las universidades y tecnológicos.

TRANSPARENCY OF THE MEXICAN PUBLIC ORGANIZATIONS OF HIGHER EDUCATION

ABSTRACT

This study is transversal-descriptive with nonexperimental research design to diagnose the transparency of public institutions of higher education (PIHE). The purpose of this research was to identify the level of transparency in PIHE and determinate if there are significant differences between transparency and type of subsystem to belong the public institutions of higher education. To make this happen a study was made on a sample of 21 institutions, in which the properties were evaluated on a scale of three variables. Tests of validity and internal consistency of the scale are satisfactory. The instrument was composed of 39 items which Cronbach's alpha was 0.953. The main results allow us to affirm that the institutions have a down level of transparency and transparency present significant differences with the subsystem to belong the public institutions of higher education

KEYWORDS: Transparency, Access to information, Public institutions of higher education

INTRODUCCIÓN

La transparencia y la rendición de cuentas de la actividad realizada por las entidades públicas y en especial por las de educación superior, es un tema nuevo en la agenda política de la mayoría de los países

(Martín, 2006). Sobre esta materia existen algunos estudios tanto a nivel internacional como nacional que se han avocado principalmente a la elaboración de índices que permitan determinar el grado de tra

nsparencia con que las instituciones públicas rinden cuentas sobre el manejo de los recursos que les son confiados por el Estado. En estos trabajos no se hace referencia al valor y oportunidad de la información presentada, en consecuencia, existe la necesidad de conocer si estas instituciones muestran información significativa que proporcione los elementos de juicio para la toma de decisiones de los usuarios y, sobre todo, que posibilite la medición de la calidad del servicio proporcionado. Con el objetivo de identificar, bajo el enfoque de la LFTAIPG, la existencia de diferencias significativas en la transparencia de las IPES atribuidas al tipo de subsistema, se ha seleccionado a universidades y tecnológicos del noroeste de México. Con ello se pretende, además, evaluar cómo se da la transparencia en sus portales de internet, Esta evaluación se delimita por tres variables (Facilidad de Acceso a la Información, Información referida a la Rendición de Cuentas y las Características de la Información), las cuales a su vez están subdivididas en once dimensiones; el estudio abarca los portales de transparencia de las páginas Web de las IPES del noroeste de la República Mexicana. La presente investigación temporalmente cubre el periodo 2009- 2010.

REVISIÓN LITERARIA

En la actualidad, el Sistema de Educación Superior (SES) en México se encuentra integrado al Sistema de Educación, el cual se conforma de los subsistemas de educación básica, educación media superior y educación superior (SEP, 2003). A su vez, el SES se conforma por varios subsistemas, entre los cuales se ubican el subsistema de universidades públicas y el de institutos tecnológicos. El primero se constituye por universidades federales y estatales es el más grande, pues tiene más alumnos y docentes que cualquier otro; se conforma por 50 instituciones (Cruz y Cruz, 2008); el segundo, está constituido por 249 instituciones (CENIDE) y atienden a una población escolar de 387,414 estudiantes en licenciatura y posgrado en todo el territorio nacional, incluido el Distrito Federal (DGEST, 2011).

Transparencia

Dentro del contexto gubernamental, transparencia es el término utilizado para describir el hecho de que la administración pública informe a los ciudadanos qué está haciendo con los recursos que le son confiados, cómo lo está haciendo, y por qué lo está haciendo. La transparencia, como derecho a conocer el qué, el cómo y el por qué de las acciones del Estado, forma parte del derecho a la información, el cual está considerado como una garantía individual, complementaria a la libertad de expresión (Carrillo, 2006).

En México, el estudio de la transparencia y rendición de cuentas es muy reciente. Sin embargo, históricamente, la necesidad de acotar y supervisar el poder ha sido un problema planteado por cerca de doscientos años en el Congreso constituyente, pero no fue sino hasta 1977 cuando el derecho a la información se incorporó en la Constitución Política de los Estados Unidos Mexicanos al reformarse diversas disposiciones, consagrándose como principio constitucional en el artículo 6º, en donde se propone que el Estado deberá garantizar el Derecho a la Información; ahí se establece la obligación que tiene el Estado de informar de los asuntos públicos (Carrillo, 2006).

Ya incorporado el derecho a la información en la Constitución, transcurrieron casi tres décadas hasta que se elaboró la Ley reglamentaria correspondiente: la Ley Federal de Transparencia y Acceso a la Información Pública Gubernamental (LFTAIPG) fue publicada en el Diario Oficial de la Federación (DOF) en junio del 2002, su finalidad consiste en proveer lo necesario para garantizar el acceso de toda persona a la información en posesión de entidad federal. (LFTAIPG, art. 1). Esta Ley establece los mecanismos de acceso a la información a través de las unidades de enlace y los comités de información. De acuerdo con la LFTAIPG, las Instituciones Públicas de Educación Superior (universidades y tecnológicos), de carácter federal, al ser financiadas con recursos provenientes del erario son

sujetos obligados a la transparencia y rendición de cuentas, también las IPES de carácter estatal cuyas entidades federativas ya emitieron una Ley Estatal semejante, tienen la obligatoriedad de cumplirla (Alcántar y Guillén, 2006). Las obligaciones de transparencia contenidas en el Artículo 7° de la LFTAIPG indican que los sujetos obligados deben poner a disposición del público la siguiente información: estructura orgánica, directorio de servidores públicos, sistema de remuneraciones, domicilio de la unidad de enlace, servicios que se ofrecen, tramites, requisitos y formatos, información sobre el presupuesto asignado, resultado de las auditorias al ejercicio presupuestal, concesiones, permisos o autorizaciones otorgadas, contrataciones celebradas, marco normativo, informes que generen, entre otras cosas. Esta información deberá estar a disposición del público a través de medios remotos o locales de comunicación electrónica (Artículo 9° de la LFTAIPG). Además, a efecto de recabar y difundir la información a que se refiere dicho artículo, la propia legislación establece en el artículo 28° el funcionamiento de un organismo encargado de esta actividad al cual se le ha denominado Unidad de Enlace (UdE). Para los fines de esta investigación, por transparencia se entenderá el hecho de que la información esté disponible sin trabas o requisitos, que sea comprensiva al incluir todos los elementos relevantes, y que sea confiable y de calidad.

METODOLOGÍA

Con la finalidad de alcanzar el objetivo propuesto se realizó un estudio transversal con diseño no experimental, identificado como descriptivo porque pretende describir la pertinencia de la información (agenda estadística y rendición de cuentas) del portal de transparencia de las IPES (Hernández et al., 2006). La población objeto de estudio se ha acotado a las IPES reportadas en dos directorios; el directorio de la Dirección General de Educación Superior Tecnológica que sirvió como guía para elegir a los tecnológicos ubicados en la región noroeste y el directorio nacional de Instituciones de Educación Superior de la ANUIES. Como resultado del análisis de ambos directorios, la población quedó integrada por 45 universidades y tecnológicos de tipo público afiliadas a la región noroeste. Una vez delimitada la población, se determinó el tamaño de la muestra aplicando la fórmula para población finita con un nivel de confianza del 90% y un margen de error del 5% resultando 21 instituciones.

La ayuda metodológica para la consecución del objetivo se basa en el análisis de contenido; para llevar a cabo el análisis se construyó una plantilla que utiliza como soporte y fundamento las obligaciones de transparencia estipuladas en la LFTAIPG, ésta se integra por 39 reactivos; veintiséis de ellos se midieron con la escala de Likert en dos modalidades; la primera: no acceso, más de 5 click, 4 click, 3-2 click, 1 click; y la segunda: no se describe, más de 12 meses atrás, de 7 a 11 meses, de 2 a 6 meses, y del mes en curso. En esta investigación, la fiabilidad del instrumento se calculó a través del alfa de Cronbach para los 26 ítems resultando 0.953. Para el tratamiento estadístico de la información se utilizó el paquete *Statistical Package for the Social Sciences* (SPSS) ®. Para determinar el nivel de transparencia de las páginas Web de las IPES se empleó el baremo de intensidad (Barraza, 2008) mostrado en la Tabla No. 1

Tabla 1: Baremo de Intensidad para la determinación del Nivel de Transparencia de las páginas Web de las IPES

Rango			Nivel
0	→	26	Muy bajo
27	→	52	Bajo
53	→	78	Alto
79	→	104	Muy alto

La plantilla se integró por 26 ítems, en donde cada ítem tiene 5 alternativas (0 al 4) de respuesta (Likert), cada respondiente debe seleccionar sólo una respuesta para cada ítem, por tanto el valor máximo por cuestionario es 104, con base en esto, se establecieron los intervalos de puntuaciones indicados en este baremo, haciendo una partición equitativa de dicho rango. Fuente: Elaboración propia

RESULTADOS

El nivel de transparencia se determinó comparando el puntaje obtenido por las IPES contra el baremo de intensidad (Tabla 1) construido para tal fin. El análisis reveló que el promedio de puntaje en esta evaluación fue de 19.42 un nivel muy bajo; únicamente el 38% de las IPES se encuentra arriba de esta media. Respecto al subsistema universidades, la página Web mejor evaluada fue la del Instituto Tecnológico de Sonora con 68.0 puntos y la que obtuvo la evaluación más baja fue la Universidad de Baja California Sur con 15.0 puntos. Del subsistema tecnológicos, el mejor evaluado fue el Instituto Tecnológico de Cajeme con 31.0 puntos y quien obtuvo la evaluación más baja fue el Instituto Tecnológico de Tijuana con solo 4.0 puntos. Los indicadores estadísticos para cada subsistema se muestran en la Tabla 2. Ahí puede apreciarse que la mediana más alta (32.0) le corresponde al grupo de las universidades, mientras que, la más baja (7.0) al grupo de los tecnológicos.

Tabla 2: Estadísticos Descriptivos de la Transparencia por Subsistema

Subsistema	N	Media (μ)	Mediana (Md)	Rango Medio	95% Intervalo De Confianza De La Media		Mín.	Máx.
					Limite Inferior	Limite Superior		
Universidad	8	35.0	32.0	19.5	20.5	49.4	15	71
Tecnológico	13	10.0	7.0	4.5	5.6	14.31	4	31

Fuente: Elaboración Propia, A Partir De Trabajo De Campo Con Apoyo Del Spss

A fin de verificar si esas diferencias son estadísticamente significativas, se aplicó una prueba de Kruskal-Wallis para muestras independientes cuyos resultados se ilustran en la Tabla 3; ahí se muestra que la Chi-cuadrada ($\chi^2=11.871$) tiene un valor p asociado de 0.001 la cual es menor que el umbral de significancia establecido (0.05), por tanto, se comprueba la existencia de diferencias significativas en la transparencia de las páginas Web entre universidades y tecnológicos.

Tabla 3: Prueba de Kruskal-Wallis^a/Transparencia por subsistema

TRANSPARENCIA	
Chi-cuadrada (χ^2)	11.871
Grados de libertad	1
Significancia	.001

Variable de grupo: Subsistema al cual pertenecen las IPES Fuente: Elaboración propia, a partir de datos de campo con apoyo del SPSS

CONCLUSIONES

El propósito de este estudio consistió en describir, bajo el enfoque de la ley Federal de Transparencia y Acceso a la Información Pública Gubernamental (LFTAIPG), si el subsistema de las IPES tiene algún

impacto en la información publicada en el portal de transparencia de las páginas Web de estas instituciones. Con base en los resultados obtenidos, se concluye que existen diferencias estadísticamente significativas en la transparencia de las páginas Web de las universidades y tecnológicos, es decir, aún cuando las universidades y tecnológicos pertenecen al sistema nacional de educación superior y ambas son instituciones públicas; la transparencia de sus páginas Web es diferente.

Otra conclusión que emana de los hallazgo es que, a pesar de que ambas IPES están expuestas a cumplir con las obligaciones en materia de transparencia y rendición de cuentas, su cumplimiento es incipiente y por tanto, a un nivel muy bajo; sobre este punto, las universidades presentan un mejor nivel de transparencia en sus páginas Web con respecto a los institutos tecnológicos. Los resultados de la investigación permite concluir que el grado de transparencia de estas instituciones, mostrado en sus páginas Web, es incipiente; por lo cual es recomendable que la autoridad correspondiente de cada IPES gestionen los cambios necesarios en sus páginas web, para hacer fácil y expedito el acceso a la información y en consecuencia éstas se convertirán en un medio para informar a su comunidad y sociedad en general, sobre las actividades que se desarrollan dentro de sus claustros así como los proyectos de crecimiento y otra información que se considere pertinente. Debe tenerse en cuenta que los resultados de este trabajo corresponden específicamente a instituciones públicas de un sector muy particular, la educación superior en México; por tanto, cualquier generalización deberá realizarse en este ámbito pero no al resto de las instituciones puesto que el diseño de la investigación fue precisamente para ese sector.

EVALUACIÓN DE LA PRODUCTIVIDAD EN LAS EMPRESAS CERTIFICADAS EN ISO: 9001 EN ZONA INDUSTRIAL MAMONAL DE CARTAGENA Y SU INCIDENCIA EN LA UTILIDAD FINANCIERA, MEDIANTE ANÁLISIS DISCRIMINANTE

José Morelos Gómez, Universidad de Cartagena
Juan Carlos Vergara Schmalbach, Universidad de Cartagena
Tomas José Fontalvo Herrera, Universidad de Cartagena

RESUMEN

Dada la importancia que reviste el mejoramiento continuo de los procesos de calidad y el incremento en la eficiencia y eficacia de los resultados organizacionales, se presenta en éste artículo de investigación, los resultados obtenidos en el desarrollo del proyecto de evaluación de indicadores de productividad de las empresas certificadas en ISO: 9001 y su incidencia, en la utilidad financiera de las empresas de la Zona Industrial de Mamonal en Cartagena-Colombia. En la metodología utilizada se realizó una descripción detallada de los sistemas de gestión de calidad, indicadores de productividad y financieros al grupo de 25 empresas certificadas en calidad del sector Industrial. Seguidamente, se utilizó la técnica de análisis multivariante de datos, aplicando el método de clasificación y segmentación a través de análisis discriminante, que permitió explicar la pertenencia y discriminación de cada grupo de indicadores de productividad y financieros, que mejor discriminan en la función objetivo, obteniendo como resultado la correlación existente entre las empresas certificadas en calidad y el incremento en los índices productividad de los años 2006 al 2010, y la incidencia de éstos, en la utilidad financiera margen bruto (MB) y Margen operacional (MO), en las empresas del sector objeto de estudio.

PALABRAS CLAVE: Productividad, Utilidad Financiera, Certificación, Análisis Discriminante,

ABSTRACT

Given the importance of the continuous improvement of the quality processes and the increase in the efficiency and effectiveness of the organizational outcomes, is presented in this article on research, the results obtained in the development of the draft assessment of indicators of productivity of the companies certified in ISO: 9001 and its incidence in the utility of financial companies in the Industrial Area of Mamonal in Cartagena-Colombia. In the methodology used was a detailed description of the quality management systems, indicators of productivity and financial to the group of 25 companies certified in quality of the industrial sector. Next, we used the technique of multivariate data using the method of classification and segmentation through discriminant analysis, which allowed to explain the membership of each group and discrimination of productivity and financial indicators that best discriminate the objective function, which resulted in the correlation between certified companies in quality and increased productivity indexes for the years 2006 to 2010, and the impact thereof on the financial income gross margin (MB) and operating margin (OM) in the companies under study.

KEY WORDS: Productivity, Utility Financier, Certification, Discriminant Analysis.

INTRODUCCIÓN

Dada la importancia de la productividad para el incremento de la eficiencia y eficacia en las empresas, en el presente artículo de investigación se evalúan los indicadores de productividad de las empresas certificadas en ISO: 9001, del sector Industrial de Momonal en Cartagena-Colombia, y la incidencia de estos índices en la utilidad financiera. Así mismo, se presentan la definición y conceptualización de los sistemas de gestión de calidad, las razones financieras y de productividad, los criterios para evaluar el impacto de los sistemas de gestión de calidad, y la incidencia de éstos, en la productividad y el rendimiento financiero de las empresas de sector Industrial. Para evaluar el impacto de la certificación en calidad en los indicadores de productividad y la utilidad financiera, se desarrolló una metodología para el análisis de los datos, tomando para éste estudio aquellas empresas certificadas que presentaron sus estados financieros en la Superintendencia de Sociedades de año 2010. Para la evaluación de los índices de productividad y financieros de las empresas del sector Industrial, se utilizó la técnica Multivariada del Análisis Discriminante (MDA). Finalmente, se presentan los resultados de la evaluación del impacto de la certificación en calidad y su incidencia en la productividad y utilidad financiera, y la verificación de supuestos a partir de las pruebas Saphiro & wilk y de Box, para la comprobación de normalidad e igualdad de matrices varianza-covarianza respectivamente, de las variables objeto de estudio.

REVISION LITERARIA

Una de las principales actividades económicas de Cartagena es la industria, la cual aporta aproximadamente 38% de la producción total de la ciudad y genera un 10% del total de puestos de trabajo (Arenas, 2009). La Encuesta Anual Manufacturera 2009 realizada por el DANE (2011), muestra que la ciudad generó 46.07% de la producción industrial, 40.54% del valor agregado y 23.35% del empleo que generó el sector industrial del Caribe colombiano, cifras que reflejan la relevancia de este sector a nivel regional. A nivel nacional, Cartagena es la cuarta ciudad de mayor producción industrial de Colombia, aportando el 6.7% de lo producido por la industria del país, en 2010 (Departamento Administrativo Nacional de Estadísticas, 2011). Su industria se caracteriza por ser altamente exportadora, especializada en los sectores petroquímico, químico y plástico; situación que ha llevado a que grandes multinacionales tengan su centro de producción y distribución en la ciudad, convirtiéndola en el principal fabricante de sustancias químicas del país, además de ser sede de la segunda refinería de petróleo más importante de Colombia después del Complejo Petrolero de Barrancabermeja (Arenas, 2009).

Gran parte de la producción industrial de Cartagena se concentra en el complejo industrial de Mamonal, reconocida como la zona de desarrollo industrial y manufacturero más importante del Caribe colombiano (Pérez, 2005). Sin embargo, Cartagena no escapó de los efectos de la crisis económica global, a raíz de la cual el sector industrial experimentó una contracción en su producción valorada hacia el año 2009, en 6,6% con relación al 2008 (DANE, 2011); por otro lado, un estudio llevado a cabo por el Observatorio del Caribe Colombiano en colaboración con la Cámara de Comercio de Cartagena (2005), titulado “Diagnóstico de la Competitividad de Cartagena: la situación de la ciudad a principios del siglo XX”, determinó que está lejos de ser considerada una ciudad competitiva, debido a su insuficiencia en aspectos relacionados con lo económico, recurso humano, infraestructura, el desarrollo de ciencias y tecnología, entre otros factores evaluados.

Certificación ISO 9000, La Productividad Y El Desempeño Financiero En La Empresa

Evidencia empírica sugiere que las empresas pueden obtener beneficios internos como mejoramientos en la calidad y en la productividad de sus procesos, además de lograr un mejor desempeño financiero, mantener o ampliar su sector de mercado y en general incrementar su valor, gracias a la implementación de iniciativas de gestión de calidad como Total Quality Management (TQM), el Just-in-time Systems (JIT)

o las normas de la serie ISO 9000 de sistemas de gestión de calidad (Corbett, Kirsch, & Montes-Sancho, 2005; Casadesús, Giménez, & Heras, 2001; Naveh & Marcus, 2004). Así mismo, Elmuti and Kathawala (1997) refiriéndose específicamente a la consecución de la certificación en ISO 9001 "Sistemas de la calidad. Un modelo de garantía de calidad para el diseño, el desarrollo, la producción, la instalación y los servicios"; que junto con la ISO 9002 son las únicas que prevén certificación del conjunto de normas de la serie ISO 9000 (Van Den Berghe, 1998); afirman que la aplicación de esta incrementa la productividad gracias al mejoramiento de la moral de los empleados.

METODOLOGÍA

Este artículo de investigación se enmarca dentro del tipo de investigación descriptivo y cuantitativo, basada en un análisis Discriminante Multivariado (DMA). para contrastar si en dos periodos distintos años 2006 y 2010, se puede verificar el mejoramiento de los indicadores de productividad y su incidencia en la utilidad financiera, como resultado de la evaluación del impacto de la certificación en calidad de las empresas en el Zona Industrial de Mamonal en Cartagena-Colombia. La población de esta investigación la integraron 25 empresas de la Zona Industrial de Mamonal, certificadas en ISO: 9001, que reportaron sus estados financieros en la Superintendencia de Sociedades y Cámara de Comercio de Cartagena, comprendidos entre el primer periodo de 2006 y el segundo periodo de 2010.

RESULTADOS

Análisis De La Evaluación Del Impacto De La Certificación En Calidad, Y Su Incidencia, En La Productividad Y Utilidad Financiera De Las Empresas Industriales De Mamonal.

Para la realización de este estudio se utilizaron los indicadores de productividad y utilidad financiera seleccionados que mejor discriminan con relación al modelo, para evaluar el impacto de la certificación en calidad y la incidencia de éstos en la productividad y utilidad financiera de las empresas del sector de Mamonal.

Verificación De Los Supuestos.

Distribución Normal Multivariante: La normalidad univariante contribuye, aunque no es condición suficiente de la normalidad multivariante. Los datos muestran una comprobación de la normalidad por separado de cada una de las variables, con el fin de encontrar evidencias que apoyen la posibilidad de la multinormalidad de las poblaciones del presente estudio. Para comprobar el supuesto de normalidad se pueden realizar diferentes pruebas, dentro de las cuales podemos destacar: Shapiro & Wilk, Anderson-Darling, Darling-Pearson, Kolmogorov-Smirnov y X^2 de bondad de ajuste. Hemos decidido utilizar la prueba de Shapiro & Wilk, que se recomienda cuando el número de observaciones es inferior a 30.

Las pruebas de normalidad para las variables por separado muestran como resultado que algunas no se comportan como variables normales (valor de aceptación de los estadísticos > 0.8), por lo que viola el supuesto de multinormalidad, como se observa en las tablas 1 y 2.

CONCLUSIONES

Evaluar los indicadores de productividad y utilidad financiera en las empresas certificadas del sector industrial de Mamonal, permite identificación de las variables que mayor incidencia tienen en la eficiencia de operativa y financiera de las organizaciones de la Zona de Analisis. En este artículo, se elaboró un modelo para la evaluación de los indicadores financieros utilizando el Análisis Discriminante para las empresas de la zona de Mamonal. De la función discriminante obtenida y de los estadísticos analizados. Se observó una buena predicción del modelo; como resultado del análisis de la función discriminante y los estadísticos utilizados, se puede concluir que la certificación en calidad de las

empresas del sector de Mamonal, incide positivamente en los índices de productividad, razón utilidad bruta/valor agregado (IP1), razón utilidad operacional/valor agregado (IP2) y estos últimos, a su vez, también inciden positivamente en las utilidades financieras margen bruto (MB) y margen operacional (MO).

RESUMEN

Cada vez los mercados están más fragmentados y la segmentación de mercados tiene un rol clave en las estrategias de mercadotecnia, es una herramienta que agrupa tanto a personas como organizaciones; ayuda a definir con mayor precisión las necesidades y los deseos de los clientes; a tomar decisiones; a definir con más exactitud los objetivos del marketing y asignar mejor los recursos. Esta investigación tiene el objetivo de identificar cuáles son las variables de segmentación más utilizadas por los pequeños empresarios y si son planificadas y ejecutadas como herramienta de precisión para conocer a su cliente y realmente fomenten estrategias de mercadotecnia que generen ventajas competitivas, además de analizar la parte teórica de segmentación con respecto a los modelos de negocios. El estudio tendrá un corte cualitativo mediante un grupo focal a empresarios de empresas de consumo, la guía de tópicos será diseñada por una selección de expertos utilizando la metodología propuesta por el Comité Estatal para la Ciencia y Técnica de la antigua URSS.

PALABRAS CLAVE: segmentación, mercados, pequeñas empresas

CASE STUDY: ANALYSIS OF IMPLEMENTATION OF MARKET SEGMENTATION AS A STRATEGY FOR SMALL BUSINESS

ABSTRACT

Every time the markets are more fragmented and market segmentation plays a key role in marketing strategies, is a tool that brings together both individuals and organizations, help to define more precisely the needs and desires of customers, to take decisions, to define more precisely the objectives of marketing and better allocate resources. This research aims to identify which segmentation variables used by small businesses and if they are planned and executed as a precision tool to know your customer and really promote marketing strategies that create competitive advantages, in addition to analyzing the theoretical segmentation with respect to business models. The study will have a qualitative focus group with employers from various sectors, the topics will be designed by a team of experts using the methodology proposed by the State Committee for Science and Technology of the former USSR.

KEYWORDS: segmentation, markets, small businesses

INTRODUCCIÓN

Cuando se habla del mercado en términos mercadológicos, se refiere al conjunto de compradores reales y potenciales de un producto o un servicio (Kotler y Armstrong, 2001) del cual se debe conocer sus necesidades, deseos y demandas; ¿Y como se hace? Dividiendo los mercados en grupos significativos de clientes; es decir segmentando el mercado que significa dividir un mercado en grupos más pequeños a los distintos compradores con base en sus necesidades, características o comportamientos, y que podrían requerir productos o mezclas de marketing distintos. Compañías exitosas como Protect and Gamble y

Kellogg's hacen lo imposible por conocer y entender las necesidades, deseos y demandas de sus clientes, realizan investigaciones acerca de que les gusta y les disgusta a los consumidores a fin de que puedan brindarles un producto que satisfaga sus necesidades, esto no necesariamente tendría que ser realizado por grandes compañías, las pequeñas empresas también lo requieren para poder satisfacer mejor a sus cliente, no obstante debido a que es un tema complejo y de elaboración, ven este proceso como una tarea que escapa de sus capacidades y posibilidades (Fernández y Aqueveque, 2001).

Sin embargo cuando se estudian modelos que están creados para desarrollar las capacidades y ventajas competitivas, no se hace una reflexión profunda de la segmentación. Los Modelos estudiados en esta investigación son el Modelo Nacional para PYMES Competitivas, el Modelo Nacional para Micro y Pequeñas Empresas Competitivas (2010), el Modelo de Negocios Canvas (Osterwalder, 2004) y el Cuadro de Mando Integral (Kaplan y Norton, 2002). El objetivo de esta investigación es identificar cuáles son las variables de segmentación más utilizadas por los pequeños empresarios y si son planificadas y ejecutadas como herramientas de precisión para conocer a su cliente y fomenten estrategias de mercadotecnia que generen ventajas competitivas. Además de analizar la parte teórica de segmentación con respecto a los modelos de negocios

REVISIÓN LITERARIA

La segmentación se puede definir según Czinkota y Kotabe (2001), como el proceso de dividir el mercado en grupos de clientes con diferentes necesidades y preferencias, para ellos la segmentación es una estrategia que emplean las empresas para concentrar y optimizar sus recursos dentro de un mercado general. Stanton, Etzel y Walker (2007), es la división del mercado total de un bien o servicio en varios grupos menores homogéneos, es decir los miembros de cada grupo son semejantes respecto de los factores que influyen en la demanda. La importancia de la segmentación radica en que teniendo el conocimiento del mercado se puede crear una mezcla de marketing correcta para satisfacer sus deseos aprovechando mejor sus recursos. La segmentación es importante tanto para empresas grandes como empresas pequeñas, debido a que cada vez se está abandonando el marketing masivo, que es la producción en masa, distribución en masa y promoción en masa del mismo producto y de la misma manera a todos los consumidores (Kotler, y Armstrong, 2007), y están identificando segmentos de mercado (Marketing de segmento) en donde se crean productos a la medida de cada grupo de consumidores. La segmentación de mercados se da cuando se divide al mercado en una o más variables, entre más variables se tengan más conocimiento del consumidor se tendrá, ya que la diferencia podría radicar en sus deseos, recursos, ubicación, actitudes de compra ó practicas de compra (Kotler, y Armstrong, 2001). Se pueden segmentar mercados de consumo, mercados industriales y de negocios. Para esta investigación únicamente se estudiara la segmentación de mercados de consumo, cuyas variables se muestran en la tabla 1.

Tabla 1: Segmentación de Mercados de Consumo

Segmentación de mercado de consumo	
Variable de segmentación Geográfica	Definición Dividir un mercado en diferentes unidades geográficas como naciones, regiones, estados, municipios, ciudades o vecindarios.
Demográfica	Dividir al mercado en grupos, con base en variables demográficas como edad, sexo, tamaño de familia, ingresos, ocupación, educación, religión, raza y nacionalidad.
Psicográfica	Dividir un mercado en diferentes grupos con base en la clase social, estilo de vida, o características de la personalidad
Conductual o comportamiento	Dividir un mercado en grupos con base en el conocimiento, actitudes, uso o respuesta de los consumidores a un producto. Aquí se incluye todo lo referido al empleo y consumo de toda la gama que se relaciona con productos y servicios "Eco".

Definición de las variables de segmentación para mercados de consumo es decir que las empresas les vendan a los consumidores finales. Fuente: Elaboración propia adaptada de Kotler y Armstrong, 2001; Kotler, 2001; Stanton, Etzel y Walker, 2007; Czinkota y Kotabe, 2001.

METODOLOGÍA

Para darle mayor rigurosidad al trabajo científico, en la selección de los expertos para la elaboración de los temas a utilizar en el grupo focal se utilizó la metodología propuesta por el Comité Estatal para la Ciencia y la Técnica de la Antigua URSS, es un proceso que busca alcanzar niveles de calidad, con un producto cuyo resultado científico garantice la solución del problema, su efectividad esta en relación con el desarrollo del proceso, con el rigor científico del trabajo investigativo, con la planificación del mismo y con la idoneidad metodológica e instrumental utilizada para desarrollarlo.

Después de seleccionado el grupo de expertos, se determina aplicar el método Delphi y se inicia esta etapa con entrevistas cerradas con el fin de buscar consenso acerca del contenido que debería de abarcar el trabajo del grupo, participan sólo los expertos que obtuvieron un grado alto y se logra el procesamiento de los temas que se preguntarán en el grupo focal, las preguntas están basadas en los Modelo Nacional para Micro y Pequeñas, Modelo Nacional para Pymes Competitivas y Modelo CANVAS; tras tres rondas de Delphi se logró llegar a un consenso entre los expertos formando la guía de tópicos del grupo focal que se muestra en la tabla 10. Se realizó un estudio exploratorio de tipo cualitativo a través de un grupo focal que es la recreación de la realidad en un laboratorio, esta técnica se puede observar en tiempo real, aprendiendo sobre un tema de manera inmediata. Su mayor ventaja es la profundidad de la información que se obtiene, derivada de la interacción del grupo (Kitelab, 2009), y consiste en reunir a un grupo entre 6 y 12 que cumplan con los requisitos necesarios para participar en la discusión de manera espontánea de un tema, guiados por un moderador con una duración entre 90 minutos y dos horas (Hair, Bush y Ortinau, 2004). La discusión se origina mediante preguntas no estructuradas que no suelen seguir un orden estricto (Kitelab, 2009). El grupo focal estuvo conformado por siete empresarios de pequeñas empresas en los siguientes giros: Empresa de venta al detalle de artículos de plásticos, Escuela deportiva de alto rendimiento de tenis, Empresa de análisis clínicos, Taller de automotriz y de motocicletas, Distribuidora de agua potable, Clínica veterinaria y Restaurante de comida mexicana.

RESULTADOS

- Los empresarios no seleccionan a sus clientes, ellos atienden a todas las personas que entran a sus negocios.
- Ningún empresario cuenta con algún registro de quienes son sus clientes y ninguno identifica quienes les dejan mayor utilidad.
- La necesidad que ellos satisfacen es una necesidad básica por la cual fue creado su negocio.
- Sus clientes regresan porque ya conocen su trabajo y gozan ya de una reputación y la gente los recomienda.
- La única segmentación que hacen es geográfica ya que a todos sus clientes que les venden su producto o servicio son de Cancún.
- Sólo la empresa de análisis clínicos saben la edad y el sexo de sus clientes debido a que son requisitos que se le piden al cliente todos los demás empresarios no lo saben; El taller automotriz y de motocicletas en su mayoría son hombres los que van a ese negocio.
- Ninguno sabe la ocupación y si tiene familia.

- No identifican ninguna variable psicográfica de sus clientes.
- Los clientes que compran en su negocio es porque tienen una necesidad.
- Tienen tanto clientes ocasionales como frecuentes, pero no dan ninguna distinción.
- El beneficio que ofrecen es que los clientes saben que realizan bien su trabajo.
- Acuden a su empresa cuando requieren el servicio.
- Sólo la empresa de Análisis Clínicos hacen promociones y son específicamente paquetes.
- El precio lo establecen basados en costos y en la competencia
- Su punto de venta (ubicación de lugar de trabajo) esta debido a que ellos vieron que sus clientes estaban ahí, o porque la renta es barata.
- Los productos o servicios que ofrecen son de calidad y a un buen precio.

Lo que esta investigación muestra es un desconocimiento total de lo que es segmentar su mercado, las empresas pequeñas todavía favorecen el concepto de mercados masivo, sin embargo no ven la utilidad de segmentar, lo único que a ellos les interesa es el concepto de ventas, por lo que no tienen la visión de establecer estrategias competitivas que puedan hacer crecer a su negocio.

CONCLUSIONES

La definición de la segmentación indica un análisis profundo del mercado dividiéndolo para identificar de manera más rápida y precisa los gustos y preferencias, así como demás variables que sean importantes rescatar para las empresas sobre sus consumidores. La segmentación es una herramienta que puede ayudar a los empresarios a crear productos o servicios diferenciados y poder contar con ventajas competitivas, solo si se conoce perfectamente quién es su cliente; El segmentar el mercado, además de conocer al cliente, puede ayudar a saber cómo tratarlo para que a corto plazo pueda adquirirlo, a mediano plazo retenerlo y buscar su fidelización y finalmente a mediano y largo plazo crecer continuamente en la cartera de clientes. El estudio de los modelos que se analizaron requieren de un conocimiento más profundo sobre el tema, ya que lo que se persigue es que el conocimiento del mercado proporcione el contexto en el que la empresa operará y permitirá entender los retos a los que se enfrentará para responder a ellos de la mejor forma. El desconocimiento de estrategias mercadológicas y de su aplicación es solo una de las múltiples carencias que enfrentan los microempresarios, a ellas hay que sumarles las debilidades financieras, administrativas, de recursos humanos, etc. Sabemos de su aporte a la economía, pero existe un hoyo negro en el conocimiento de las microempresas dirigidas por hombres orquesta.

Al desconocer su ventaja competitiva y los gustos y preferencias de los consumidores conceden ventaja a la competencia. Es la economía de mercado la que explica el fenómeno, pero los micro y pequeños empresarios están muy ocupados en el día a día. Se puede inferir que hay un desconocimiento total de cómo segmentar, por lo que esta investigación es el parte aguas de hacer una herramienta la cual enseñe paso a paso a los micro y pequeños empresarios a segmentar su manera de manera sencilla y fácil, la cual proporcione información para poder desarrollar la mezcla de mercadotecnia de una manera más eficaz y al mismo tiempo que se genere mayores estrategias buscando generar ventajas competitivas que les permitan estar más tiempo en el mercado, generando una propuesta de valor diferenciadora.

COMPETENCIAS GERENCIALES EN ORGANIZACIONES EMPRESARIALES Y EN ORGANIZACIONES EMERGENTES

Milexis Lisbeth Carrasco García, Universidad Nacional Experimental Rafael María Baralt
Yolanda Miquilena Coronel, Universidad Nacional Experimental Rafael María Baralt
María E. Di Fiore Subero, Universidad Nacional Experimental Rafael María Baralt

RESUMEN

En un mercado global tan competitivo y cambiante, las empresas son cada vez más exigentes para ofertar sus vacantes y han establecido perfiles para ocupar cargos dentro de las mismas. En tal sentido el contexto empresarial de cualquier país está obligado a hacer un seguimiento en cuanto a las competencias gerenciales que deben poseer quienes tengan bajo su responsabilidad la dirección de una empresa y aquellos que forman parte de la misma. Es por esto que el presente estudio tiene como finalidad hacer una comparación teórica entre las competencias gerenciales en organizaciones empresariales y las requeridas en las nuevas empresas emergentes. Para ello se realizó una revisión de tipo documental de diferentes autores especialistas en el área de competencias gerenciales, tales como Chiavenato y Burgazzi. Por otra parte se encuentran los planteamientos de McClelland, Robbins, Caballero y Fresco, para identificar cuales son las que están presentes en cada una de las organizaciones arriba mencionadas. Luego de una revisión exhaustiva acerca de las competencias gerenciales y las necesarias en las organizaciones emergentes, se concluye que las competencias presentes en las organizaciones poseen semejanzas y diferencias con las competencias gerenciales y las competencias requeridas en las empresas emergentes.

PALABRAS CLAVE: Competencias Gerenciales, Competencias por Funciones Gerenciales, Organizaciones Emergentes.

MANAGERIAL COMPETENCES IN BUSINESS ORGANIZATIONS AND EMERGING ORGANIZATIONS

ABSTRACT

In a global market that is so competitive and changing, businesses are increasingly demanding when offering their vacancies and have set profiles to occupy job positions within themselves. In this regard, the business context of any country is forced to monitor the managerial competences that must be possessed by those who have under their responsibility the direction of an enterprise as well as those who are part of it. That is why the present paper has the purpose of making a theoretical comparison between the managerial competences in business organizations and those required by the new emerging enterprises. In order to achieve that, a documental revision was made of different authors who specialize in the area of managerial competences, such as Chiavenato and Burgazzi. On the other hand, there are the approaches of McClelland, Robbins, Caballero and Fresco on identifying which of these competences are present in each of said organizations. After an exhaustive revision on managerial competences and those necessary in emerging organizations, it is concluded that the competences present in organizations have similarities and differences with the managerial competences and the competences required in emerging enterprises.

KEYWORDS: Managerial Competences, Competences for Managerial Functions, Emerging Organizations.

INTRODUCCIÓN

El siglo XXI se inicia con fenómenos que comenzaron a aparecer a finales del siglo XX: la globalización, la apertura económica, la competitividad son fenómenos nuevos a los que tienen que enfrentarse a las organizaciones, por lo que los gerentes se ven en la urgente necesidad de orientarse hacia nuevos rumbos. Los países, pero sobre todo las empresas colapsan cuando los esquemas de referencias se tornan obsoletos y pierden validez ante la nueva realidad empresarial. La incertidumbre, en algunos casos, crónica y progresiva, acerca de la evolución de las funciones gerenciales y su contenido futuro, genera una creciente ansiedad por parte de los ejecutivos de empresa, que es posible satisfacer mediante la identificación y desarrollo de algunas competencias que definen el perfil del gerente del nuevo siglo. En efecto las competencias concebidas como los conocimientos, capacidades, habilidades, destrezas, actitudes y aptitudes, significan la diferencia entre el desempeño excelente del promedio en un trabajo dado, rol, organización o cultura (Roverdeja, 2002); de modo que los gerentes responsables de dirigir las empresas deben poseer estas características que les permitan el logro de un desempeño superior en la realización de sus cargos gerenciales. En este contexto se enmarca el presente documento cuyo propósito es el de comparar las competencias gerenciales empresariales y las requeridas en las organizaciones emergentes, a través de una revisión de tipo documental tomando en cuenta los siguientes autores Sabino (2000); Vega (2000), Carrasco (2003). Caballero (2009), Fresco (2009).

Competencias Gerenciales En Organizaciones Empresariales

Las competencias gerenciales por funciones básicas de la administración planteadas por Sabino (2000), asocia las competencias requeridas por los directivos de las empresas en estudio con las necesidades de desarrollo previamente jerarquizadas, considerando la relación entre estas. Los resultados arrojados fueron: El ámbito de las competencias pueden ser considerado desde tres enfoques: el primero hace referencia a los conocimientos, características personales, cualidades, capacidades, habilidades y destrezas requeridas para tener un desempeño superior, que se pueda medir mediante estándares y que sirven para predecir el desempeño futuro. En el segundo enfoque, se concibe las tareas y actividades requeridas bien para prestar un servicio o producir un producto (Fernández, 2002); el éxito del desempeño depende de la experiencia del individuo, área o negocio al que pertenezca y la tercera afirmación indica que independientemente del tamaño y naturaleza de una organización el desarrollo de competencias es un elemento fundamental si se desea ejecutar las tareas inherentes a las funciones, cargos o actividades con eficiencia, eficacia y efectividad, mostrando siempre un desempeño superior. Sin embargo Vega (2000) hace su definición sobre las competencias gerenciales considerando cuáles son los requisitos que debe cumplir el gerente del siglo XXI en base a las funciones básicas que realiza, a fin de lograr un desempeño superior dentro del nuevo contexto empresarial.

En este sentido la nueva realidad empresarial requiere de un personal gerencial capaz de aplicar las funciones básicas de una manera mas agresiva para la toma de decisiones, debe ser autónomo, flexible, capaz de ver oportunidades donde otros ven problemas, evaluar alternativas, asumir riesgos, estar orientado a metas concretas con vocación de persistir en estas; de ser un individuo hábil para desarrollar equipos de trabajo, identificar tareas y objetivos motivantes, aprovechando sus fortalezas y compensando sus debilidades. Por otra parte, Carrasco (2003), establece una síntesis de correspondencia de competencias gerenciales por función gerencial producto de la revisión efectuada por autores como Chiavenatto, Koontz, Stoner. Tabla. 1.

Tabla 1: Competencias por Función Gerencial

FUNCION GERENCIAL	COMPETENCIAS
<p>PLANIFICACION. Actividades: Fijar objetivos, definir metas, establecer programas, determinar la estrategia general del negocio y desarrollar planes para coordinar las actividades, tanto a corto como a largo plazo.</p> <p>ORGANIZACIÓN. Actividades: Diseño y estructuración de la organización: identificación de tareas; clasificación y agrupación de labores; distribución y asignación del trabajo, la autoridad y los recursos entre los miembros de la organización, con miras al cumplimiento de los objetivos de la organización</p> <p>DIRECCIÓN. Capacidad para analizar la situación actual. Pensamiento estratégico e innovador Adaptabilidad al cambio. Cualidad innovadora. Administración del tiempo. Visión holística Habilidad para la toma rápida de decisiones. Manejo de la tecnología. Anticiparse a las necesidades del cliente. Capacidad para identificar tareas y coordinar recursos. Destreza en el manejo del tiempo. Conocimientos para seleccionar las técnicas y modelos gerenciales. Rápida adaptación ante los cambios. Designación de roles y autoridad. Trabajo en equipo. Eficacia y eficiencia. Conocer las actividades para asignar recursos. Aptitud para diseñar la estructura. Habilidad para adaptar la estructura a los cambios. Cualidad de líder para inculcar y mantener la filosofía de la empresa. Habilidad de Estratega Habilidad negociadora que facilite la resolución de conflictos. Capacidad para trabajar en equipo. Conocimiento y capacidad para la toma de decisiones acertadas. Capacidad y habilidad para motivar. Comunicación constante. Espíritu competitivo. Visión Holista de la organización. Habilidad para el manejo racional de los recursos disponibles. Establecimiento de estándares de calidad. Evaluar las operaciones planificadas. Habilidad para detectar desviaciones. Capacidad de evaluación el desempeño del recurso humano. Habilidad para establecer los correctivos pertinentes. Revisión de los procesos. Capacidad para la toma rápida de decisiones. Dar y recibir retroalimentación. Conocimientos del área financiera y contable. Tomar decisiones por consenso.</p>

Correspondencia de Competencias Gerenciales por Funciones Gerenciales.

Competencias Requeridas En Organizaciones Emergentes

Las organizaciones emergentes, son aquellas que propician espacios de diálogo: de consenso y diseño en ambientes virtuales, gracias a los flujos de información y conocimiento que circulan por las redes de comunicación e información, que dan cabida al intercambio de conocimientos, a la interacción para el aprendizaje, a la distribución de la inteligencia y a la integración de los procesos humanos con los artificiales; de allí que surja nuevas formas de organizar el trabajo, nuevas prácticas gerenciales y los sistemas de control de mando integral. (Caballero, 2009)

Es por esta razón que las competencias que deben poseer quienes se desenvuelven en este tipo de organizaciones son:

- Manejo y uso de documentos compartidos
- Destrezas informacionales que permiten niveles de programación básicos
- Capacidad de síntesis, investigación e integración de discursos hipermedias (sonido, texto, video)
- Destrezas en el diálogo con agentes virtuales; uso de avatares integrados al diálogo.

- Capacidad para trabajo transcultural y deslocalizado, orientado al resultado.
- Compromiso con la actividad que está desarrollando
- Gerencia a sí mismo su trabajo; debe ejercer la planificación, dirección, organización y control.

REFLEXIONES FINALES

En las organizaciones empresariales las competencias gerenciales tienen que poseer una alta capacidad de respuesta ante los cambios, solución de problemas e innovación para así adaptarse al mercado; debe existir una visión holística de la organización. En las organizaciones emergentes la ventaja competitiva está presente en la flexibilidad. Las empresas emergentes deben poseer capacidad de análisis, síntesis y juicio. En las organizaciones empresariales se debe poseer conocimiento, comprensión y aplicación.

El personal de una organización emergente no tiene horario, lo que indica que quien se dedique a laborar en el mundo de las empresas virtuales debe poseer disciplina y compromiso, además del conocimiento, debido, a que es el mismo e-worker quien se supervisa.

INFLUENCIA DE LA CONCENTRACIÓN DE PROPIEDAD Y EL CONTROL FAMILIAR EN EL NIVEL Y TIPO DE DIVERSIFICACIÓN DE LAS EMPRESAS COTIZADAS ESPAÑOLAS

Alejandro Hernández Trasobares, Universidad de Zaragoza
Carmen Galve Górriz, Universidad de Zaragoza

RESUMEN

En el proceso de crecimiento y expansión de las empresas la diversificación se constituye como una decisión estratégica fundamental, estando influida por la estructura de propiedad. El presente trabajo analiza el efecto de la concentración de propiedad y el carácter familiar de la empresa en la decisión diversificar, analizando tanto el nivel como el tipo de diversificación. Dada de una muestra de noventa y nueve empresas españolas cotizadas durante los años 2000-2005, y considerando sus empresas dependientes, se comprueba como una mayor concentración de la propiedad origina un menor grado de diversificación total y de diversificación no relacionada (actividades no relacionadas con la actividad principal de la empresa cotizada). Por otro lado, cuando la organización está controlada por un grupo familiar, dichas empresas presentan un mayor grado de diversificación que las compañías no familiares debido al mayor grado de diversificación relacionada (realización de actividades en negocios relacionados con la actividad principal de la empresa cotizada). Finalmente señalar que las empresas familiares presentan niveles de diversificación no relacionada similares a los de las empresas no familiares.

OWNERSHIP CONCENTRATION AND FAMILY CONTROL INFLUENCE IN LEVEL AND TYPE OF DIVERSIFICATION IN SPANISH LISTED COMPANIES

ABSTRACT

In growth and expansion of business process, diversification is established as a fundamental strategic decision, being influenced by ownership structure. This paper analyzes the effect of ownership concentration and family nature of the company's decision to diversify, analyzing both level and type of diversification. Given a sample of ninety-nine Spanish companies listed during 2000-2005, and considering its subsidiaries, we found as a greater ownership concentration is associated with lower degree of diversification and unrelated diversification (activities not related to the main activity of the listed company). On the other hand, when firm is controlled by a family group, these companies have a higher degree of diversification than nonfamily firms due to greater diversification related (business activities related to the core business of the listed company). Finally note that family businesses present unrelated diversification levels similar to those of non-family firms.

RESUMEN

En el presente boceto, se presenta un análisis jurídico tributario en concordancia al Impuesto Sobre Depósitos en Efectivo en México, su objeto en la economía del país, sus elementos esenciales del tributo así como la incidencia en la economía a fin de poder establecer si el mismo, desde su implementación hasta la época actual, puede considerarse apegado al marco legal aplicable y sobre todo si resulta constitucional.

PALABRAS CLAVE: depósitos en efectivo, informalidad, garantía de audiencia, fin extrafiscal, constitucionalidad.

TAXATION ANALYSIS ON CASH DEPOSITS IN MÉXICO

ABSTRACT

The following outline introduces a juridical tributary analysis related to tax on cash deposits in México, its aim for the country's economy, its tax main components as well as its impact in the economy in order to establish if it can be attached to the applicable legal framework and especially if it turns out to be constitutional; from its implementation up to present.

KEY WORDS: cash deposits, informality, audience guarantee, non-fiscal aim, constitutionality.

INTRODUCCIÓN

En los últimos 10 años el Sistema Tributario Mexicano ha sufrido varias modificaciones, al incluirse nuevas leyes fiscales que han sido muy criticadas por los sectores económicos, toda vez que se han detectado inconstitucionalidades en las mismas al violentarse ciertos principios. A mediados del año 2007, el gobierno federal en la iniciativa del Presidente de la República emitió un proyecto de reforma fiscal para el ejercicio fiscal 2008, en la cual estaba incluido un nuevo impuesto, que en su momento fue llamado Impuesto contra la informalidad, mismo según el ejecutivo federal, nace como consecuencia de la gran evasión fiscal que existe en México, casos específicos la economía informal, la prestación de servicios y la venta de bienes sin expedición de facturas, así como la creación de esquemas sofisticados para evadir el pago de contribuciones, entre otros. Por ello, el Presidente de la República propuso a la soberanía del legislativo la creación de este impuesto cuyo objeto fue incorporar una nueva contribución federal, complementaria del impuesto sobre la renta y auxiliar en el control de la evasión fiscal. En el presente trabajo se presenta un análisis jurídico tributario en relación al Impuesto Sobre Depósitos en Efectivo, sus inicios, su objetivo en la reforma fiscal y su impacto en la economía empresarial actual. Además y como complemento de la investigación, se busca dar respuesta a la siguiente pregunta: ¿Es constitucional el Impuesto Sobre Depósitos en Efectivo y ha alcanzado los objetivos para los que fue creado?

Estrada En Vigor De La Ley Del Ide Y Reforma

La ley y el impuesto correspondiente, fueron publicados en el Diario Oficial de la Federación del primero de octubre de 2007, entrando en vigor, por disposición de su artículo primero transitorio, el primero de Julio del año 2008, siendo sujetos del mismo tanto las personas físicas como las personas morales por los depósitos en efectivo que reciban en las cuentas que tengan abiertas en el sistema financiero. Sin embargo, para el ejercicio fiscal 2010, acorde a enmienda publicada en el Diario Oficial de la Federación (2011) del 7 de diciembre de 2009, se reformaron los artículos 2, fracciones III, primer párrafo y VI; 3, primer párrafo; 4, fracción I, tercer y cuarto párrafos; 5; 12, fracción I, y 13, y además se adicionó el artículo 12, con una fracción V de la Ley del Impuesto a los Depósitos en Efectivo, destacando dos aspectos importantes en la Ley; específicamente su parte exenta sufre una reducción de 25,000.00 a 15,000.00 pesos mensuales y la tasa impositiva se incrementa del 2 al 3%, lo cual indudablemente impactó en las retenciones realizadas por las Instituciones de Crédito por tal contribución. Tal reforma entró en vigor a partir del día primero de Enero del 2010. Como justificación para realizar la reforma precisada con anterioridad, que ciertamente ha sido la única que a la fecha ha experimentado la Ley de referencia, se insistió en los aspectos que se estimaron torales para su entrada en vigor durante el 2008:

“1. El comportamiento de la recaudación, al ser comparado con países con desarrollo similar al nuestro, el porcentaje es inferior al de aquéllos, considerando que la evasión fiscal se ha incrementado en un nivel superior al 15%.

2. La evasión fiscal se realiza en diversas formas, entre ellas la de un amplio mercado informal, la prestación de servicios y la venta de bienes sin expedición de facturas, así como la creación de esquemas sofisticados para evadir el pago de contribuciones, entre otros.

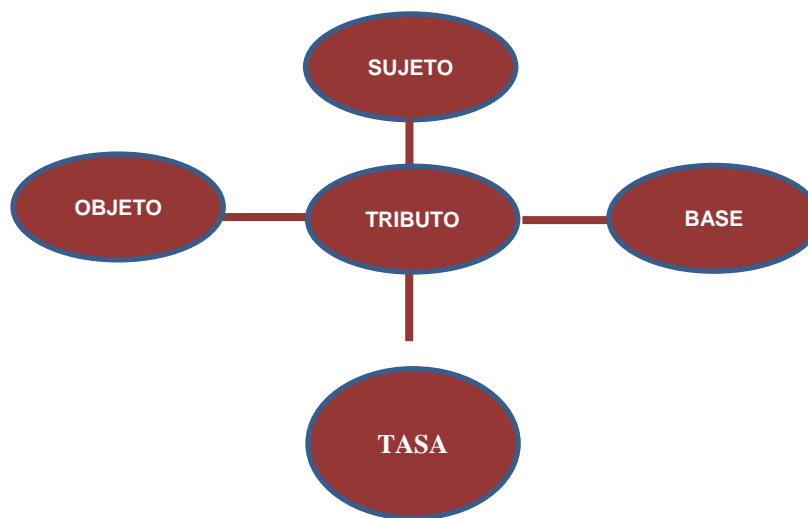

3. Es necesario proveer a la autoridad fiscal de herramientas adecuadas que le permitan concientizar a los contribuyentes de la importancia de cumplir adecuada y oportunamente con sus obligaciones fiscales y facilitar el cumplimiento de éstas, a efecto de propiciar una recaudación eficiente, que proporcione los ingresos necesarios para sufragar el gasto público. Y,

4. Algunas personas, tanto físicas como morales, inscritas o no ante el Registro Federal de Contribuyentes, obtienen ingresos que no declaran al fisco y por los que deberían pagar impuestos, o bien, se encuentran registradas pero declaran encontrarse en suspensión de actividades, no obstante que las continúan realizando sin pagar impuestos”.

Sin embargo y como justificación de la enmienda comentada se precisó que los objetivos planteados por el gobierno federal no se habían alcanzado cabalmente, además que castigar la informalidad se había convertido en promoverla, por lo cual se procedió a proponer y aprobar la indicada reforma.

Sujeto, Objeto, Base Y Tasa

Atendiendo al artículo 5º del Código Fiscal de la Federación, que a la letra señala: “Las disposiciones fiscales que establezcan cargas a los particulares y que señalan excepciones a las mismas, así como las que fijan las infracciones y sanciones, son de aplicación estricta. Se considera que establecen cargas a los particulares las normas que se refieren al sujeto, objeto, base, tasa o tarifa” Por lo tanto, indudablemente en todo ordenamiento jurídico tributario se deben contemplar los elementos esenciales del tributo, mismos que se encuentran protegidos por el principio de reserva material de ley, tal como se muestra en el siguiente esquema.

Es decir, toda ley tributaria que establezca un impuesto, contribución de mejoras, derechos o aportaciones de seguridad social, debe señalar cuáles son sus elementos para su determinación.

Objeto: Rodríguez Lobato, Raúl (1986:3), define al objeto del tributo como la realidad económica sujeta a imposición, como por ejemplo la renta obtenida, la circulación la riqueza, el consumo de los bienes o servicios, etc. El objeto del tributo quedará precisado a través del hecho imponible. Para efectos de la Ley del IDE, en su artículo 1º, establece que el objeto de dicha contribución serán todos los depósitos en efectivo efectuados, en moneda nacional o extranjera, que se realice en cualquier tipo de cuenta que tengan las personas físicas y morales en las instituciones del sistema financiero. Cabe mencionar que en el mismo ordenamiento se detalla que las transferencias electrónicas, traspaso de cuenta, títulos de crédito o cualquier otro documento o sistema pactado con instituciones del sistema financiero en términos de las leyes aplicables, aun cuando sean a cargo de la misma institución que los reciba, dichas operaciones no se considerarán depósitos en efectivo. Por lo tanto, queda claro que única y exclusivamente como el nombre del impuesto lo indica, el objeto de dicha contribución son los depósitos en efectivo.

Sujeto: El sujeto es de dos clases, pues en toda relación fiscal encontramos por un lado el sujeto activo y por otro el sujeto pasivo. Sujeto activo, desde el fundamento constitucional de la obligación de pagar contribuciones establecida en el Artículo 31 fracción IV, se precisa que dicha obligación de contribuir para los gastos públicos, será en favor de la Federación, del Distrito Federal o del Estado y Municipio en que residan. Para Flores Zavala, Ernesto (1995:12), el “sujeto pasivo, es la persona que legalmente tiene la obligación de pagar el impuesto. Una persona está obligada al pago de una prestación al fisco federal cuando el fisco está en la posibilidad legal de exigirle el pago de la prestación debida. De acuerdo con esta definición es sujeto pasivo del impuesto el individuo cuya situación coincide con la que la ley señala como hecho generador del crédito fiscal, es decir, el individuo que realiza el acto o produce o es dueño del objeto que la ley toma en consideración al establecer el gravamen, etc., pero también el individuo a quien la ley le impone la obligación de pago en sustitución o conjuntamente con aquél”. Retomando el artículo 1º de la Ley del IDE, instituye que las personas físicas y morales están obligadas al pago del impuesto establecido en la ley.

Base: Podría mencionar que la base es la cuantificación del hecho generador, por su parte, Flores Zavala, Ernesto (1995), define a la base como la cuantía sobre la que se determina el impuesto a cargo de un sujeto, por ejemplo: el monto de la renta percibida, valor de la porción hereditaria, número de litros producidos, etc. En la Ley del IDE actual, encontramos que en su numeral 2 fracción III, establece que las

personas físicas y morales, no pagarán por los depósitos en efectivo realizados en sus cuentas bancarias, hasta por un monto acumulado de \$15,000.00 pesos en cada mes del ejercicio fiscal. Por el excedente de dicha cantidad se pagará el Impuesto a los Depósitos en Efectivo en los términos de la indicada Ley.

Tasa o Tarifa.

Según Rodríguez Lobato Raúl (1986), existen diversos tipos de tarifas las más usadas son: De derrama, fija, proporcional y progresiva. La tarifa de derrama, es cuando la cantidad que se quiere obtener como rendimiento del tributo se distribuye entre los sujetos afectados al mismo, en México es común encontrar esta tarifa en las contribuciones de mejoras. La tarifa fija es cuando se señala en la ley la cantidad exacta que debe pagarse por unidad de medida, es el caso de los derechos. La tarifa proporcional es cuando se señala un tanto por ciento fijo, cualquiera que sea el valor de la base, por ejemplo el impuesto al valor agregado tiene tarifas de 15 %, 10 % y 0 %. La tarifa progresiva es aquella que aumenta al aumentar la base, es el caso del impuesto sobre la renta, en lo relativo de personas físicas que se encuentren en el régimen de salarios y el régimen por honorarios.

Para efectos de la Ley del IDE, en su artículo 3º, instaura que el impuesto a los depósitos en efectivo se calculará aplicando la tasa del 3% al importe de los depósitos gravados por esta ley, es decir, sobre el excedente de \$15,000.00 pesos en el mes se aplicará dicho porcentaje y el resultado será el impuesto.

Participación De Las Instituciones De Crédito

Indudablemente, las Instituciones de Crédito se convierten en un intermediario recaudador entre el Estado y los contribuyentes con el Impuesto a los Depósitos en Efectivo. Atendiendo al artículo 4º de dicho ordenamiento jurídico, podemos encontrar que las principales obligaciones de las Instituciones de Crédito son:

- ✓ Recaudar el impuesto el último día del mes de que se trate, de cualquiera de las cuentas que tenga abiertas el contribuyente.
- ✓ Enterar el impuesto en el plazo y en los términos que mediante reglas establezca la SHCP, el cual no debe exceder de tres días hábiles a aquel en el que se haya recaudado.
- ✓ Informar mensualmente al SAT el importe del impuesto recaudado y el pendiente de recaudar por falta de fondos en las cuentas de los contribuyentes o por omisión de la institución de que se trate.
- ✓ Recaudar el impuesto que no hubiera sido recaudado en el último día del mes de que se trate por falta de fondos, en el momento en el que se haga algún depósito durante el ejercicio fiscal en cualquiera de las cuentas que tenga el contribuyente en la institución financiera.
- ✓ Entregar al contribuyente de forma mensual y anual las constancias que acrediten el entero del impuesto a los depósitos en efectivo.
- ✓ Llevar un registro de los depósitos en efectivo que reciban.
- ✓ Proporcionar anualmente, a más tardar el 15 de febrero, la información del impuesto recaudado y del pendiente por recaudar.

- ✓ Informar a los titulares de las cuentas concentradoras, sobre los depósitos en efectivo realizados en ellas.

Casos Prácticos

Retomando la norma jurídica impositiva del IDE, establece su base, su parte exenta y su tasa correspondiente. Para mayor entendimiento supongamos que una persona física realizó en dos de sus cuentas bancarias de una misma institución de crédito un total de \$26,000.00 pesos en efectivo. Por lo tanto su determinación de IDE quedaría como se muestra en el ejemplo 1. De igual forma, supóngase que la misma persona realizó depósitos en efectivo en una cuenta de otra Institución de Crédito por un monto de \$12,720.00 pesos, lo cual no resulta impuesto a cargo debido a que no sobrepaso el límite de la parte exenta tal y como se muestra en el ejemplo 2.

Ejemplo 1

Depósitos en efectivo		\$ 26,000.00
(-) Exención		\$ 15,000.00
(=) Excedente		\$11,000.00
(x) Tasa		3%
(=) IDE que cobra el banco (que debe recaudar y enterar)		\$330.00

Ejemplo 2

Depósitos en efectivo		\$ 12,720.00
(-) Exención		\$ 15,000.00
(=) Excedente		0.00
(x) Tasa		3%
(=) IDE que cobra el banco (que debe recaudar y enterar)		0.00

Estrategias de Planeación Fiscal

Dentro de nuestra economía nacional, un gran porcentaje de empresas formalmente registradas, realizan operaciones con el público en general mediante la venta de productos o prestación de servicios. Dichas operaciones se efectúan principalmente en efectivo, lo cual obligadamente tienen que depositar los recursos monetarios recibidos en sus cuentas bancarias impactando con ello en el Impuesto Sobre Depósitos en Efectivo. La ley del IDE establece que dicho impuesto podrá ser acreditado directamente del Impuesto Sobre la Renta o bien compensado con otras contribuciones; sin embargo, a las empresas que no les resulta ISR en sus pagos provisionales, el IDE que se convierte en un impuesto a favor afectando al flujo de efectivo de la entidad económica, por lo que optaron inicialmente y como estrategia válida, en realizar sus depósitos mediante giros telegráficos, toda vez que Telecomunicaciones de México (TELECOM) al recibir el efectivo, efectuaba la transferencia electrónica a la cuenta de la persona que solicitaba sus servicios, evitando con ello que la Institución de Crédito que recibía la transferencia electrónica ya no lo contemplaba como depósito en efectivo y por lo tanto no se retenía impuesto alguno.

Sin embargo, actualmente ya se encuentran contemplados los giros telegráficos como depósitos en efectivo debido a que la autoridad detectó que muchas empresas lo estuvieron realizando.

De igual forma, otra de las estrategias para evitar afectar el flujo de efectivo, los empresarios optaron por solicitar créditos revolventes en la institución de crédito donde tenían sus cuentas bancarias. Recordemos que de acuerdo a la Ley del IDE en su artículo 1º segundo párrafo, menciona que aún cuando los depósitos sean a cargo de la Institución que los reciba, es decir, el pago de deudas con el Banco en efectivo no será sujeto de IDE. Lo que hacen los empresarios es pagarle al crédito revolvente al día siguiente de haber usado la tarjeta bancaria y mediante transferencia electrónica vía servicio por internet traspasa recursos de la tarjeta a la cuenta del negocio, evitándose con ello la retención del impuesto. Esta estrategia aún permanece en la práctica.

Estadísticas De La Recaudación Del Ide De acuerdo a las cifras de la Ley de Ingresos de la Federación, para los ejercicios fiscales 2008, 2009, 2010 y 2011, el presupuesto de recaudación del IDE fue en incremento como se muestra en las figuras 1, 2, 3 y 4

Acciones Del Servicio De Administración Tributaria

El 11 de octubre del 2011, el Servicio de Administración Tributaria lanza un programa para combatir la informalidad con el objeto de regularizar el Impuesto Sobre la Renta mediante la detección de las personas físicas y morales que hayan efectuado depósitos en efectivo durante el ejercicio fiscal 2009 y que no presentaron su declaración anual del mismo ejercicio. Dicho programa establece:

“El Servicio de Administración Tributaria (SAT) informa que como parte de la estrategia para combatir la informalidad, está llevando a cabo acciones de regularización del impuesto sobre la renta (ISR). Derivado de la información que se obtiene de las declaraciones del impuesto a los depósitos en efectivo (IDE) se ha identificado a alrededor de 600 mil contribuyentes que recibieron depósitos y evadieron el pago del ISR.

De estos contribuyentes identificados:

- ✓ Más de 60 mil recibieron depósitos por montos superiores al régimen en el que están registrados.
- ✓ Alrededor de 180 mil recibieron depósitos sin estar inscritos en el RFC.
- ✓ Casi 300 mil recibieron depósitos que debieron declarar y no lo hicieron

A estos contribuyentes se les está enviando una carta mediante la cual se les invita a regularizar su situación fiscal y un formulario para el pago del impuesto correspondiente.

Además, a quienes no están en el Registro Federal de Contribuyentes se les inscribirá automáticamente. Además del envío de cartas, se iniciarán alrededor de 71 mil acciones de control a contribuyentes que presentan en sus cuentas bancarias depósitos en efectivo con montos significativos. Con estas acciones, se proyecta recaudar alrededor de 5,000 millones de pesos.

Para aclarar cualquier situación específica, en el portal de internet se ha publicado un apartado con información especializada para los contribuyentes que han recibido la carta y para los que, aún sin haberla recibido, saben que deben regularizarse.

Se exhorta a quienes reciban la carta a no dejarse engañar por personas que pretendan resolver su situación fiscal y a consultar la veracidad de la carta en Internet. Se puede obtener mayor información sobre estas acciones en el portal del SAT www.sat.gob.mx o acudiendo a cualquier oficina de servicios al contribuyente.”

Es preciso mencionar, que en las cartas de invitación emitidas por la autoridad se manifiestan los supuestos depósitos en efectivo realizados por la persona física o moral, identificado la institución de crédito y los períodos en los cuales se llevaron a cabo. En la misma, la autoridad detalla el Impuesto Sobre la Renta que se debe de pagar por dichos depósitos aplicando lo establecido en el artículo 107 de la ley mencionada, otorgándole al contribuyente la oportunidad de realizar el pago en 6 mensualidades. Sobre tal programa la Procuraduría de la Defensa del Contribuyente (PRODECON), se pronunció entre otros puntos de controversia, que con este tipo de programas se violentan los derechos de personas que no son sujetas al pago del Impuesto Sobre la Renta, además de que se violenta el artículo 14 de la Constitución Política de los Estados Unidos Mexicanos en relación a la garantía de audiencia.

CONCLUSIONES

En términos de lo analizado en esta investigación, encontramos que desde su promulgación, la Ley del Impuesto Sobre Depósitos en Efectivo es cuestionable, ya que su finalidad no es aportar recursos al gasto público, dado que tiene fines extra fiscales y de control. El Impuesto a los Depósitos en Efectivo violenta

la garantía de audiencia, en el momento en que se realiza la retención deja al contribuyente en un estado de indefensión, toda vez que no se puede argumentar alegato alguno, ya que quien determina y realiza la misma, no es propiamente una autoridad. Violaciones al derecho de la privacidad, en el momento en que la institución bancaria, ofrece toda la información de un contribuyente a la autoridad fiscal, consagrada en el artículo 16 de la constitución, ya que no se tiene una orden para poder conocer y disponer de dicha información. Una violación además al secreto bancario, en la cual la institución financiera, se obliga y compromete a actuar de buena fe y salvaguardar dicha información, la cual sólo será utilizada de la mejor manera. Sin embargo encontramos un punto importante, que solo se realiza a los depósitos en efectivo y no a las transferencias electrónicas.

Para concluir se violentan la garantías de audiencia, la privacidad, el secreto bancario, y se otorgan facultades a las instituciones financieras, mismas que son propias de la autoridad fiscal lo cual es violatorio de nuestro marco jurídico, y por ultimo consideramos que dichas violaciones de seguirse dando, sólo desgastarán la economía de los contribuyentes, generarán pérdidas cuantiosas al erario público, lo cual ocasiona un desgaste mayor del Estado. En consecuencia y buscando dar una respuesta apropiada a nuestra pregunta de investigación, específicamente ¿Es constitucional el Impuesto Sobre Depósitos en Efectivo y ha alcanzado los objetivos para los que fue creado?; al respecto debemos concluir que ante las consideraciones presentadas a guisa de conclusión con antelación y asimismo acorde a los datos que la propia autoridad recaudadora proporciona y reflejados en este estudio, ni resulta constitucional y tampoco puede afirmarse y menos sostenerse que haya alcanzado a cabalidad sus objetivos para los que fue creado, antes por el contrario ha sido motivo de afectación y una carga adicional para los contribuyentes cautivos.

GESTIÓN DEL CONOCIMIENTO E INNOVACIÓN EN EMPRESAS DEL SECTOR SERVICIOS EN YUCATÁN, MÉXICO

Ruth Noemí Ojeda López, Universidad Autónoma de Yucatán

Jennifer Mul Encalada, Universidad Autónoma de Yucatán

Olivia Jiménez Diez, Universidad Autónoma de Yucatán

RESUMEN

El objetivo del presente estudio es analizar las actividades de gestión del conocimiento e innovación realizadas por las empresas del sector servicios en Yucatán y el impacto que han tenido en sus resultados (financieros y no financieros). Para ello, se realizó un estudio cuantitativo y descriptivo en el que participaron 37 empresas de servicios. Respecto de las actividades de gestión del conocimiento se pudo concluir que las empresas de este giro le otorgan mayor importancia a los programas de capacitación que les permiten a sus empleados adquirir destrezas y desarrollar habilidades. También se nota una preocupación por el registro y disponibilidad de la información, sin embargo, se requiere potenciar las actividades como la de identificar y compartir conocimientos. Respecto de las actividades de innovación, las empresas se han preocupado por realizar cambios en formas de organización, introducción de nuevos métodos y procedimientos, así como introducción de nuevos servicios y cambios en la forma de comunicarlos al cliente. Sin embargo, los indicadores respecto de la transferencia de tecnología y consultoría y obtención de patentes muestran una falta de atención.

PALABRAS CLAVE: gestión del conocimiento, innovación, destrezas y habilidades.

KNOWLEDGE MANAGEMENT AND INNOVATION IN COMPANIES OF THE SERVICE SECTOR IN YUCATÁN, MÉXICO

ABSTRACT

The objective of this paper is to analyse the activities on knowledge management and innovation done by the companies in the service sector in Yucatán, and the impact than activities had had in their results (financials and non financials). To accomplish this, we have done a quantitative and descriptive research, in which 37 companies of the service sector participated. According to the activities on knowledge management, it can be concluded that the companies of this sector give much more importance to the training programs that allow their employees to acquire skills and develop expertise. It is also shown concern about the information recording and disponibility; on the other hand, it is necessary to develop activities such as knowledge identification and sharing. With respect to innovation, the companies have done changes in their organization introducing new methods and procedures, they have also introduce new services and have changed their form of communication with their clients. On the other hand, the transfer of technology, consulting services and the patent and licence obtention show a lack of attention.

KEY WORDS: knowledge management, innovation, skills and expertise.

INTRODUCCIÓN

El término gestión del conocimiento (GC) es un concepto que cada vez está cobrando mayor importancia en el ámbito académico y empresarial y toma mayor fuerza a partir de la década de los noventa. Autores como Polany (1962), Drucker (1989), Senge (1998), Nonaka y Takeuchi (1999), Davenport y Prusak (2000), han tratado de explicar la contribución del conocimiento en el desarrollo de distintos fenómenos organizacionales como el aprendizaje, la cooperación entre empresas, la innovación, entre otros. Investigaciones realizadas, en su mayoría han concluido que una adecuada gestión del conocimiento es portadora de grandes resultados. Este trabajo está organizado de la siguiente manera. En primer lugar se presenta la revisión de la literatura donde se plantean conceptos como conocimiento, gestión del conocimiento e innovación. Posteriormente se presenta la metodología, donde se describe el método y las técnicas utilizadas, para luego realizar el análisis de resultados y concluir de acuerdo con el objetivo planteado.

REVISIÓN DE LITERATURA

La gestión del conocimiento en las organizaciones

Para comprender mejor la gestión del conocimiento es indispensable diferenciar entre dato, información y conocimiento. Para Davenport y Prusak (2000) los datos están localizados en el mundo y el conocimiento está localizado en agentes de cualquier tipo (ser humano u organización), mientras que la información adopta un papel mediador entre ambos. El dato es un hecho objetivo sobre algún acontecimiento, al que describe, aunque no dice nada sobre él, por sí mismo tienen poca o ninguna importancia. Destacan que el receptor, y no el emisor, es quien decide si el mensaje que recibe es verdaderamente información, es decir, le añade significado. El conocimiento es una mezcla fluida de experiencias estructuradas, valores, información contextual e internalización experta que proporciona un marco para la evaluación e incorporación de nuevas experiencias e información y se origina y aplica en la mente de los conocedores. En las organizaciones, el conocimiento comienza a incorporarse frecuentemente no sólo en los documentos y registros, sino en las rutinas organizacionales, procesos, prácticas y normas institucionales. Autores como Polany (1962) y Nonaka (1994) distinguen entre conocimiento focal (explícito) y tácito. El primero se refiere al conocimiento sobre el objeto o fenómeno que observamos y el tácito es el que se utiliza como instrumento o herramienta para manejar o mejorar la interpretación de lo observado, funciona como marco o trasfondo que permite efectuar las operaciones de observación de lo que está en el foco de atención. Estas dimensiones, se complementan.

En tanto, Spender (1996) distingue entre conocimiento individual y colectivo. En el conocimiento individual, las personas utilizan capacidades básicas (por ejemplo, la capacidad de resolver problemas aplicando un plan de acción determinado), modelos mentales, escalas de valores o esquemas de evaluación, reglas de invocación de estas escalas de valores dependiendo del contexto en que se mueven, y planes de acción para afrontar determinadas situaciones. Si se aplica la definición anterior al concepto de "conocimiento colectivo", el resultado es la capacidad de un grupo de individuos para resolver problemas con un grado de efectividad determinado, lo que también se conoce como conocimiento organizativo. De esta forma, Montoro (2009) define la gestión del conocimiento como la utilización óptima de las capacidades de un individuo o un grupo de ellos para la obtención de algún beneficio propio o para sus stakeholders. La gestión del conocimiento, en términos generales, lo que persigue es diseñar estrategias para la creación y el aprovechamiento exhaustivo del conocimiento en los contextos organizacionales. Para Donate y Guadamillas (2010, p. 33) "la Estrategia de Gestión del conocimiento (EGC) de una empresa se basa en el diseño estratégico de los procesos de creación, archivo, transferencia y aplicación del conocimiento de la organización para el logro de los objetivos competitivos". Estos autores señalan como dimensiones y variables de la estrategia de GC las siguientes:

Concepción de la EGC. Se refiere a la visión que los directivos tienen de la Gestión del Conocimiento y en cómo perciben su contribución potencial a la actividad de la empresa. De esta forma, habrá directivos que entiendan que la GC está únicamente relacionada con la gestión organizativa de tecnologías basadas en la información y las comunicaciones (TIC), mientras que otros podrían concebirla como un concepto más amplio que incluiría aspectos tanto de tipo humano como tecnológico.

Objetivos de la EGC. La importancia de estas metas y la urgencia para su cumplimiento condicionará la forma en que las herramientas de GC van a ser diseñadas y utilizadas.

Mecanismos y prácticas de GC. Son las iniciativas específicas que la organización utiliza para la creación (adquisición de conocimiento externo, aproximación a nuevos conocimientos a partir de proyectos, simulación de escenarios, entre otros); distribución (proyectos con equipos interdisciplinarios, comunidades de prácticas, grupos de aprendizaje, publicaciones, etc.); almacenamiento (bases de datos de información, manuales, reglamentos, informes, estudios de casos, entre otros); aplicación (equipos interdisciplinarios con autonomía, métodos de control, expertos que actúan como asesores, etc.); y protección (patentes, marcas, publicidad, entre otros) de conocimiento. Estas iniciativas buscan la creación de depósitos de conocimiento, mejorar su acceso y su transferencia o bien gestionarlo como si se tratara de un activo estratégico.

Sistemas de apoyo y extensión de la GC. Son los aspectos organizativos que facilitan el desarrollo de los procesos de GC, como la cultura, el liderazgo o las prácticas de recursos humanos. El liderazgo puede contribuir al desarrollo de un contexto adecuado para que los procesos de aprendizaje puedan ser llevados a cabo con éxito. Por otra parte, se necesitan una serie de cambios en las prácticas de recursos humanos para hacer posible la implantación de la estrategia (el desarrollo de equipos y comunidades de práctica, incentivos y métodos de supervisión y control de procesos).

En 2004, estos autores llevaron a cabo una investigación empírica desde un Enfoque basado en el Conocimiento a partir de una muestra de empresas industriales españolas, donde estudiaron el efecto en el resultado de negocio derivado de la relación entre la estrategia de innovación tecnológica de la empresa y su estrategia de conocimiento. Pudieron identificar cuatro tipos de estrategias de diferentes características: proactiva, moderada, pasiva e inconsistente. Además, encontraron un efecto positivo y significativo de la estrategia de conocimiento en el resultado de la empresa. Concluyeron que la estrategia de conocimiento modera la relación entre la postura tecnológica y el resultado de la empresa, específicamente identificaron que dicho efecto se produce cuando determinados tipos de estrategias de conocimiento (proactiva, pasiva) interactúan con ciertos tipos de posturas tecnológicas (liderazgo tecnológico, seguidor o último entrante) y generan resultados positivos en la rentabilidad, crecimiento en cifras de ventas y grado de cumplimiento de sus objetivos. Por lo anterior, establecieron que existe un efecto positivo y significativo en las prácticas de exploración del conocimiento en la obtención de nuevas tecnologías de producto y proceso. En este sentido, los directivos deberían plantear formas coherentes de gestionar el conocimiento de sus empresas con el fin lograr cubrir objetivos tales como una mayor eficiencia, la mejora de la calidad, o su capacidad para innovar con éxito. Autores como Alavi y Leidner (1999) también señalan la importancia para las organizaciones de la existencia de sistemas de medición de la gestión del conocimiento y consideran una serie de ventajas que emanan de la existencia de estos sistemas, como se puede apreciar en la figura 1.

Figura 1: Ventajas Originadas por la Existencia de Sistemas de Gestión del Conocimiento.

En esta figura se pueden apreciar las ventajas que los sistemas de gestión del conocimiento ofrecen a las organizaciones en sus diferentes áreas, así como durante el proceso mismo de sistematización. Fuente: Alavi y Leidner (1999).

Según Guadamillas (2006), en conjunto, la gestión del conocimiento contribuye al crecimiento de la organización debido a los factores siguientes: 1) La empresa es capaz de desarrollarse internamente a partir de conocimiento autogenerado, 2) La empresa adquiere externamente conocimientos que integran su base actual, y 3) La empresa adquiere o bien genera conocimientos a través de acuerdos de cooperación o de proyectos de colaboración con otras empresas o instituciones. Es evidente que la gestión del conocimiento bien aplicada proporciona un alto nivel de diferenciación y una alta capacidad competitiva por lo que es importante considerar algunos de los factores clave de éxito de la gestión del conocimiento.

La Innovación

El Manual de Oslo (2006) establece cuatro tipos de innovación en las organizaciones:

Innovación de producto. Es la introducción de un bien o servicio nuevo, o significativamente mejorado, en cuanto a sus características o en cuanto al uso que se le destina. Este tipo de innovación puede utilizar nuevos conocimientos o tecnologías, basarse en nuevas utilidades o combinaciones de conocimientos o tecnologías ya existentes.

Innovación de proceso. Consiste en la introducción de un nuevo o significativamente mejorado, proceso de producción o de distribución. Ello implica cambios significativos en las técnicas, materiales y/o programas informáticos. Las innovaciones de proceso pueden tener por objeto disminuir los costos unitarios de producción o distribución, mejorando la calidad, producir o distribuir nuevos productos o sensiblemente mejorados.

Innovación de mercadotecnia. Aplicación de un nuevo método de comercialización que implica cambios significativos en el diseño o el envasado del producto, posicionamiento, promoción o tarificación. Las innovaciones de mercadotecnia tratan de satisfacer mejor las necesidades de los consumidores, de abrir nuevos mercados o de posicionar en el mercado de una nueva manera un producto de la empresa con el fin de aumentar las ventas.

Innovación de organización. Introducción de un nuevo método organizativo en las prácticas, la organización del lugar de trabajo o las relaciones exteriores de la empresa. Pueden tener por objeto mejorar los resultados de una empresa reduciendo los costos administrativos de transacción, mejorando el nivel de satisfacción en el trabajo; y por consiguiente aumentar la productividad, facilitando el acceso a bienes no comercializados o reduciendo los costos de los suministros. Lo que distingue a la innovación de organización de otros cambios organizativos es la introducción de un método organizativo que no haya sido utilizado antes por la empresa y que resulte de decisiones estratégicas tomadas por la dirección.

Para Castillo (2000), la organización innovadora es aquella que introduce nuevas tecnologías destinadas a mejorar los productos y, procesos, asume riesgos derivados de la toma de decisiones, promueve cambios que le proporcionen ventajas competitivas, tiene un compromiso continuo con lo novedoso y está obligado a ver más allá del presente y convierte la visión en realidad. El primer impacto organizacional de la innovación se puede ubicar en el proceso de Investigación y Desarrollo (I+D) para la generación y el lanzamiento de nuevos productos. El desarrollo de nuevos productos requiere de una cultura particular generada en torno a los procesos de investigación (Hall, 1990). Jaramillo, Lugones y Salazar (2001) establecen que para valorar y medir el impacto de la innovación en el desempeño de la organización se pueden utilizar los indicadores siguientes:

Proporción de ventas y exportaciones por tecnologías de nuevos productos introducidos en el mercado en los últimos años: se incluyen productos comercializados que son tecnológicamente nuevos; productos comercializados tecnológicamente mejorados y productos que tecnológicamente no han cambiado, y que han sido elaborados con métodos recientes de producción renovados.

Resultados del esfuerzo innovador: las organizaciones tienen que evaluar el éxito del esfuerzo tecnológico con respecto a su desempeño en las ventas, ganancias, acceso a nuevos mercados, participación en los mercados tradicionales.

Uso de factores productivos: se refiere a la forma en la que la innovación tecnológica en productos y procesos ha llevado a cambios en la función de producción a través del uso de los factores (mano de obra, consumo de materias primas, materiales y energía).

También enlistan como principales factores que afectan la innovación, los siguientes:

De tipo económico: altos riesgos y costos, períodos muy largos para la recuperación de la inversión y carencia de fuentes apropiadas de financiación.

De tipo empresarial: tales como la carencia de potencial innovador, falta de información sobre tecnologías y mercados, escasez de personal calificado, difícil control de los costos de la innovación, resistencia al cambio, deficiencias en la consecución de servicios externos y falta de oportunidades para la cooperación.

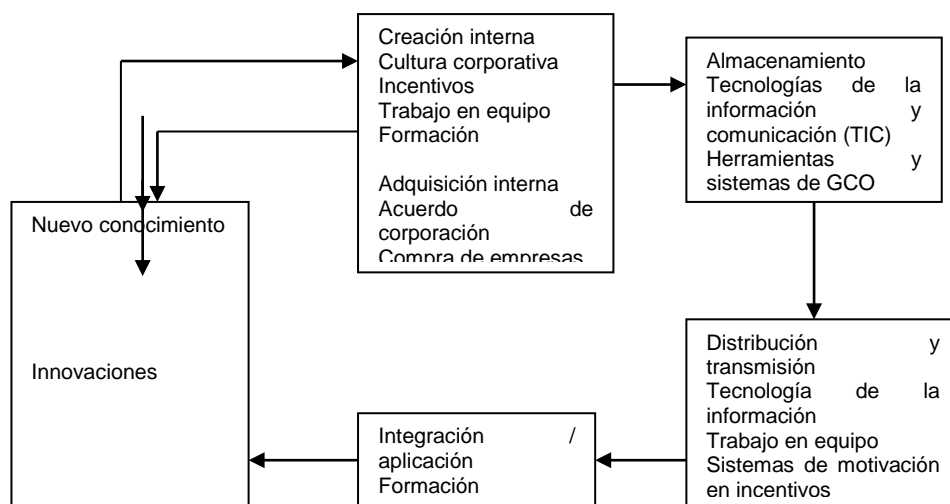

Otros factores que afectan a la innovación: la carencia de oportunidad tecnológica y de infraestructura, debilidad de los derechos de propiedad, la legislación y las normas mismas, la tributación, la poca o nula necesidad de innovar y la escasa respuesta de los clientes a los nuevos procesos y productos.

Relación entre la gestión del conocimiento e innovación

Los procesos de innovación colectiva se basan en intercambios conscientes e inconscientes del conocimiento. Regularmente las innovaciones se generan sobre un conocimiento existente previamente y

después construidas a través de la combinación o recombinación de diferentes conocimientos y componentes del Know How (Graft, 2006). En la figura 2 se muestran los factores implicados en la estrategia de gestión del conocimiento y su relación con la innovación. El planteamiento de la gestión del conocimiento es fundamental como estrategia global, orientada a toda la organización y a fomentar la participación de todos los empleados. En este sentido, es destacable la importancia de las prácticas de aplicación y transferencia de conocimiento entre los integrantes de los equipos de trabajo y con otros agentes externos, lo cual es un aspecto esencial para el éxito de la innovación. Otro de los factores a considerar es la habilidad de la empresa para obtener mediante compras y acuerdos de cooperación conocimientos externos complementarios a los que posee y sumarlos a los ya codificados para generar el desarrollo de innovaciones (Guadamillas, 2006).

Figura 2: Factores Implicados en la Estrategia de Gestión del Conocimiento

En esta figura se puede observar que la creación y adquisición interna, almacenamiento, distribución, transmisión y aplicación de conocimiento son factores que se relacionan con la generación de nuevos conocimientos y con la innovación. Fuente: Guadamillas (2006).

Por su parte, Hernández y Díaz (2007) también consideran que una condición indispensable para la producción de innovaciones en cualquier campo del conocimiento científico y tecnológico es la transmisión del conocimiento, y éste no se puede transferir ya sea intra o inter generacionalmente sin la disponibilidad del acervo de conocimiento acumulado para el mayor número de usuarios potenciales. Dicho acervo se encuentra disponible en la forma de libros, publicaciones técnicas, materiales escritos, tesis de grado, artículos científicos y el lugar donde todos estos materiales se concentran, que son las bibliotecas. Por tanto, el papel del conocimiento, la importancia de las personas, su papel creador e innovador, la necesidad de organizar su desarrollo para hacer más efectiva la gestión empresarial constituyen la fuerza motriz de las organizaciones de cara al siglo XXI. Es un reto para el diseño de la estrategia de innovación no dejar de la mano lo que en esencia puede representar el binomio conocimiento e innovación, cuyo soporte tiene que ser el sistema de información, en especial aquellos servicios de vigilancia, inteligencia prospectiva tecnológica, que le permitan a la organización enfilarse al éxito en el futuro. Para efectos de este trabajo de investigación se consideró como gestión del conocimiento la definición de Montoro (2009) y como innovación el concepto del Manual de Oslo.

METODOLOGÍA

Se trata de un estudio cuantitativo y descriptivo que tiene como objetivo analizar las actividades de gestión del conocimiento e innovación realizadas por las empresas del sector servicios en Mérida, Yucatán y el impacto que han tenido en sus resultados. El diseño de la investigación es no experimental y transversal ya que se carece del control de las variables y se realizó un corte en el tiempo para la obtención de los datos. La población estuvo constituida por 107 empresas de diferentes sectores económicos que realizan actividades relacionadas con innovación y que en 2011 aparecían como afiliadas al Registro Nacional de Instituciones y Empresas Científicas y Tecnológicas (Reniecyt). Este registro es un instrumento de apoyo a la investigación científica, el desarrollo tecnológico y la innovación de México a cargo del Consejo Nacional de Ciencia y Tecnología y a través del cual identifica a las instituciones, centros, organismos y personas físicas o morales de los sectores público, social y privado que llevan a cabo actividades relacionadas con la investigación y el desarrollo de la ciencia y la tecnología en México.

La muestra para este estudio la constituyeron aquellas que teniendo más de cinco años de operación estuvieron dispuestas a participar del mismo una vez que conocieron los objetivos. En este trabajo se presentan únicamente los resultados del sector servicios. La técnica para la obtención de la información fue la aplicación de una encuesta dirigida a directivos de las empresas participantes, donde se recabó información sobre las siguientes variables: Actividades relacionadas con gestión del conocimiento: identificación, registro, compartición, creación y uso de conocimiento relevante por parte de las organizaciones. Actividades relacionadas con innovación: desarrollo o mejora de productos, procesos, cambios organizacionales y/o comerciales; adquisición de tecnología, I & D interno, etc. Impacto en los resultados organizacionales: financieros: incremento en ventas anuales, incremento en la rentabilidad sobre los activos, etc.; no financieros: incursión en nuevos mercados, mejora de las relaciones con los clientes, mejora del ambiente laboral, imagen corporativa, etc.

El instrumento se construyó específicamente para este estudio y se conformó originalmente por 53 reactivos, como resultado de un proceso estadístico de validación y refinamiento el instrumento concluyó con 46 reactivos en sentido afirmativo. Se utilizó una escala de tipo Likert donde 1 equivale a totalmente en desacuerdo y 5 totalmente de acuerdo. Se calculó el α de Cronbach para los 46 reactivos obteniéndose un valor de confiabilidad de .857. Para cada apartado se obtuvo lo siguiente: .758 para las actividades relacionadas con el conocimiento; .779 para las actividades relacionadas con la innovación; .805 para los resultados obtenidos por actividades de gestión del conocimiento y .789 para los obtenidos por actividades de innovación. El instrumento se aplicó de manera autoadministrada a las empresas de diferentes sectores que aceptaron participar en el estudio. Se entregó la encuesta en el domicilio de las mismas y se recogieron en las fechas que se acordaron con ellas. El análisis de la información se llevó a cabo utilizando el paquete estadístico SPSS. En este trabajo se presentan únicamente los resultados del sector servicios.

RESULTADOS

De acuerdo con el Sistema de Información Empresarial Mexicano (SIEM), durante el año 2008 al 2010 en México se ha incrementado en un 12% el número de empresas, mientras que en el mismo período en Yucatán se incrementó en 38%. De las 33,789 empresas localizadas en Yucatán en 2010, 897 pertenecen al sector industria, 27,164 al sector comercio y 187,719 al sector servicios. Del total de empresas de servicios en Yucatán 5,262 son micro, 355 pequeñas, 58 medianas y 53 grandes. Los resultados obtenidos de la aplicación del instrumento se encuentran en la tabla 1.

Tabla 1: Número de Empresas por Sector

Sector	Número de empresas	Porcentaje
Comercio	11	14.67%
Servicios	37	49.33%
Industria	27	36.00%
Total	75	100.00%

En esta tabla se presenta el número de empresas por sector que participaron en el estudio. En el caso del sector servicios representó 49.33% del total de empresas encuestadas. Fuente: Elaboración propia.

Como puede notarse, las del sector servicios representan 49.33% del total de las encuestadas. De estas empresas, el 81% resultaron sociedades anónimas, y tienen un promedio de 10.95 años de antigüedad y 23 empleados. A continuación se presentan los promedios obtenidos para cada apartado del instrumento (ver tabla 2).

Tabla 2: Promedios Obtenidos para el Total de Empresas y el Sector Servicios.

Apartados	Total de empresas	Empresas del sector servicios
Actividades de gestión del conocimiento	4.08	4.12
Actividades de innovación	4.04	3.98
Impacto de actividades de conocimiento	3.95	4.00
Impacto de actividades de innovación	4.03	3.94

En esta tabla se muestran los promedios obtenidos por cada variable. Dichas cantidades representan el promedio de los reactivos correspondientes a cada una de ellas. Los resultados se presentan para el total de empresas y para las del sector servicios con la intención de poder compararlas. Fuente: Elaboración propia.

Como puede observarse, para el total de empresas encuestadas el promedio que resultó mayor fue el de actividades de conocimiento (4.08), sin embargo el promedio de impacto de dichas actividades fue de 3.95. En las empresas del sector servicios se nota un promedio de actividades de conocimiento ligeramente mayor (4.12) en comparación con el de todas las empresas y el de impacto tiene el mismo comportamiento. Respecto de las actividades de innovación y de impacto de dichas actividades ambos promedios son menores en comparación con el obtenido por el total de empresas. Actividades de conocimiento. Respecto de estas actividades, se encontró que gran parte de las empresas participantes se preocupa por realizar programas formales de capacitación para todo el personal tendientes a mejorar la destreza de los trabajadores, el 48% manifestó estar totalmente de acuerdo con ello. Dicha actividad fue la que obtuvo el mayor promedio dentro de las de conocimiento (4.41).

Así mismo, resultó que 54.1% están totalmente de acuerdo con la afirmación de realizar el registro y mantener disponible en el lugar y momento oportuno la información considerada relevante para el logro de los objetivos organizacionales, el promedio de dicha actividad fue 4.24. En cuanto a la realización de un proceso sistemático para identificar con qué conocimiento cuenta y/o necesita para la definición y desarrollo del negocio, un 37.8% estuvo totalmente de acuerdo. Gran parte de los directivos (45.9%) manifestó que los trabajadores comparten con sus compañeros sus experiencias y sus conocimientos relacionados con el trabajo. Un porcentaje muy bajo señaló estar totalmente de acuerdo ante la afirmación de contar con indicadores que permitan medir los cambios y mejoras. Esta actividad obtuvo el promedio más bajo (3.82). Actividades de innovación. Se observó que de las actividades de innovación, la introducción de cambios en la forma de organización y gestión de la compañía (proceso productivo, incorporación de nuevas estructuras organizativas, nuevas formas de desarrollar el potencial humano de la

compañía), fue la que obtuvo mejor evaluación, el 59.5% de las empresas participantes estuvieron totalmente de acuerdo, siendo esta actividad la mejor calificada con un promedio de 4.41.

La siguiente actividad mejor evaluada es la introducción al mercado de nuevos productos, obteniendo un promedio de 4.32. El 56.8% de los directivos encuestados manifestaron estar totalmente de acuerdo con dicha actividad. Las actividades de introducción de nuevos métodos o procedimientos y cambios en la forma de comunicar servicios al cliente también resultaron con buenas puntuaciones, obteniéndose un promedio de 4.19 y 4.08 respectivamente. Así mismo, se observó que de las actividades que resultaron con bajas puntuaciones se encuentran la adquisición de nuevas tecnologías de información y comunicación, y transferencias de tecnología y consultoría (derechos de uso, patentes, licencias, marcas, diseños, etc.), con promedios de 3.76 y 3.70, respectivamente. La actividad con la más baja puntuación resultó ser una de las más importantes, la obtención de patentes, registros de propiedad industrial ya que se obtuvo una media de 3.22. Se encontró que sólo el 29.7% de las empresas respondieron estar totalmente de acuerdo con realizar dicha actividad.

Resultados obtenidos por actividades relacionadas con el conocimiento. Del conjunto de preguntas relacionadas con la gestión del conocimiento tenemos que han servido principalmente para mejorar los procesos de la empresa, mejorar los productos y servicios ofrecidos y poder acceder a nuevos mercados. También ha permitido mejorar la rentabilidad de la empresa, incrementar las ventas y mejorar su posicionamiento en el mercado. Las actividades en donde menos han servido han sido para mejorar el impacto en el medio ambiente y reducir el consumo de materias primas. Resultados obtenidos por actividades relacionadas con innovación. Del conjunto de preguntas relacionadas con la gestión de la innovación tenemos que han servido principalmente para incrementar las ventas, mejorar las relaciones con los clientes así como su posicionamiento y acceder a nuevos mercados. Les ha permitido mejorar el clima organizacional y la rentabilidad de la compañía. También se encontró una baja puntuación con respecto al impacto positivo de la innovación en el medio ambiente.

CONCLUSIONES

Las empresas de servicios encuestadas tienen en promedio 10.95 años de antigüedad y 23 empleados. En su mayoría se trata de sociedades anónimas. Respecto a las actividades de GC se puede concluir que las empresas de este giro le otorgan mayor importancia a los programas de capacitación que les permiten a sus empleados adquirir destrezas y desarrollar habilidades. También se nota una preocupación por el registro y disponibilidad de la información, sin embargo se requiere potenciar las actividades como la de identificar y compartir conocimientos, pues aunque no resultaron mal evaluadas tampoco resultaron prioritarias para los directivos, siendo dichas actividades de suma importancia para el flujo del conocimiento dentro de la organización. Respecto de las actividades de innovación, las empresas se han preocupado más por realizar cambios en formas de organización, introducción de nuevos métodos y procedimientos, así como introducción de nuevos servicios y cambios en la forma de comunicarlos al cliente. Sin embargo, los indicadores respecto de la transferencia de tecnología y consultoría y obtención de patentes muestran una falta de atención. Lo anterior son factores de riesgo, pues en el caso de la transferencia de tecnología, la falta de información sobre las mismas y los mercados afecta negativamente a la innovación (Jaramillo, Lugones y Salazar, 2001). En el caso de las patentes, la falta de atención en su obtención puede ocasionar que los competidores copien sus innovaciones. Aunque autores como Hernández y Díaz (2007) señalan que entre los beneficios no financieros para la organización está la obtención de patentes, en el sector investigado esto no ocurre.

Se puede apreciar cómo la gestión de conocimiento y la innovación les permite a las empresas lograr mayor rentabilidad gracias a la mejora en productos y servicios, entrada a nuevos mercados, lo cual le permite reforzar su posicionamiento de mercado y con ello mejorar las relaciones con sus clientes, incrementar las ventas y mejorar el clima organizacional. Lo anterior se ve con mucha más claridad por el

tipo de empresas, ya que el sector se caracteriza por requerir de manera constante productos y servicios innovadores y una fuerte participación del capital humano. Tal como señala Donate y Guadamillas (2007) existe un efecto muy conveniente y relevante en las prácticas de gestión del conocimiento e innovación y de igual manera consideran primordial que el directivo de la organización esté convencido de que una buena GC se traducirá tarde o temprano en productos innovadores que garantizarán la supervivencia de la organización durante muchos años. Resulta interesante encontrar que dentro de los beneficios obtenidos por actividades de GC se consideró la mejora en los procesos de la empresa, sin embargo, la determinación de indicadores para medir dichas mejoras fue la peor evaluada de las actividades de GC. Lo anterior dificulta el análisis y medición del beneficio que se está obteniendo, de hecho Alavi y Leidner (1999) resaltan la importancia de la existencia de sistemas de medición en la GC.

Es importante notar que las actividades de gestión del conocimiento y de innovación han tenido muy poco impacto en mejorar el medio ambiente y reducir el consumo de materias primas, sin embargo cabe recordar que estos resultados son del sector servicios, el cual se distingue por no tener procesos de transformación como tal y por ende su grado de contaminación generalmente se asume como menor es menor. Finalmente se puede concluir que las organizaciones del sector servicios del estado de Yucatán obtienen resultados financieros y no financieros positivos por la implementación de los procesos relacionados la GC y la innovación. Como recomendación, las empresas deben fomentar la motivación de sus integrantes para que puedan compartir con sus compañeros de trabajo sus experiencias y conocimientos. También se propone estimular de forma sistemática en todas las divisiones de la organización la generación de nuevas ideas y conocimientos para mejorar el desempeño laboral, sin dejar a un lado la responsabilidad social de la empresa de cuidar el medio ambiente implementando procedimientos que ayuden a conservarlo. Del mismo modo, se debe motivar la obtención de patentes o registros de propiedad industrial, así como dar la importancia debida al establecimiento de cláusulas de confidencialidad con los trabajadores, sin dejar a un lado la realización de transferencias de tecnologías y consultorías con terceros.

BIOGRAFÍA

Ruth Noemí Ojeda López obtuvo el grado de Doctora en Ciencias de la Administración por la Universidad Nacional Autónoma de México. Ha publicado libros, capítulos de libro y artículos en revistas especializadas. Es miembro del SNI, profesor con perfil Promep y académico certificado por la ANFECA. Es profesora de la Facultad de Contaduría y Administración de la UADY, carretera antigua a Chuburná por 31 y 35-A S/N en Mérida, Yucatán. Correo electrónico: ruth.ojeda@uady.mx

Jennifer Mul Encalada obtuvo el grado de Maestra en Administración en la Universidad Autónoma de Yucatán y actualmente estudia el Doctorado en Ciencias de la Administración en la Universidad Nacional Autónoma de México. Ha publicado artículos sobre el área contable y administrativa en revistas especializadas. Es profesora de la Facultad de Contaduría y Administración de la UADY. Correo electrónico: jeni.mul@uady.mx.

Olivia Jiménez Diez obtuvo el grado de Doctora en Administración por la Universidad Del Sur. Su interés en la investigación incluye temas de comportamiento del consumidor y responsabilidad social empresarial, de los cuales ha publicado capítulos de libro y artículos en revistas especializadas. Es profesor con perfil Promep y académico certificado por la ANFECA. Es profesora de la Facultad de Contaduría y Administración de la UADY. Correo electrónico: jdiez@uady.mx

U-LEARNING: UNA ALTERNATIVA PARA FOMENTAR CULTURA FINANCIERA

María Elizabeth Teixeira, Universidad Nacional Experimental de las Fuerzas Armadas
Samuel Valencia, Pepsico Alimentos Venezuela

RESUMEN

En la actualidad asistimos a una serie de transformaciones sociales, buena parte de las cuales están siendo propiciadas por el desarrollo de diferentes tecnologías y la incorporación de éstas a la sociedad, por ello las instituciones de educación universitaria deben flexibilizarse y desarrollar vías de integración de las tecnologías de la información y la comunicación en los procesos de formación. U-Learning engloba nuevas actividades formativas apoyadas en las nuevas tecnologías como: m-Learning, c-Learning, e-Training, televisión interactiva, Web 2.0. Bajo este término (u-Learning) se agrupa la presencia de la tecnología en todos los momentos y en todas las situaciones en los que una persona puede agregar un nuevo conocimiento a su saber personal. La economía global demanda de todos incorporar a nuestra cultura general competencias en términos económicos y financieros que nos brinden seguridad y estabilidad. Para entender estos procesos de cambio y sus efectos, así como las posibilidades que para los sistemas de enseñanza-aprendizaje conllevan los cambios y avances tecnológicos, conviene situarnos en el marco de los procesos de innovación. ¿Es el u-learning una alternativa para fomentar cultura financiera?

PALABRAS CLAVES: u-learning, innovación educativa, cultura financiera.

U-LEARNING: AN ALTERNATIVE TO PROMOTE FINANCIAL CULTURE

ABSTRACT

Today we witness a series of social changes, many of which are being promoted by the development of different technologies and incorporating them into society, so higher education institutions must be flexible and develop ways of integrating information technology and communication in the training process. U-Learning training includes new activities based on new technologies such as m-Learning, C-Learning, e-Training, interactive TV, Web 2.0. This term (u-Learning) groups the presence of technology in all times and in all situations where a person can add new knowledge to your staff know. The global economy demands all add to our general knowledge skills in economic and financial terms that give us security and stability. To understand these processes of change and its effects and the possibilities for teaching and learning systems involve changes and technological advances should place ourselves in the context of innovation processes. Is the u-learning an alternative to promote financial literacy?

KEYWORDS: u-learning, educational innovation, financial literacy.

INTRODUCCIÓN

La integración progresiva de las herramientas tecnológicas en la enseñanza ha traído importantes consecuencias sobre la manera de aprender y adquirir el conocimiento, al tiempo que cuestiona las formas de organización de las instituciones y crea una nueva cultura centrada en el acceso y manipulación de la información en los entornos virtuales de aprendizaje en red. La cada vez más importante presencia del denominado u-learning en nuestra sociedad hace necesario plantearse desde una perspectiva compleja el

estudio de las transformaciones y los cambios necesarios en las instituciones de enseñanza, en el profesor y también en el discente. Considerando que las universidades están sumergidas en un contexto social, político, económico y cultural caracterizado por constantes cambios y surgimiento de nuevos modelos de producción basados en el conocimiento y sus aplicaciones, como es la educación virtual, están en la búsqueda de reforzar y reconocer los vínculos entre la enseñanza de educación universitaria, el mundo laboral y la sociedad. Todo ello exige a las instituciones de educación universitaria una flexibilización de sus procedimientos y de su estructura administrativa, para adaptarse a modalidades de formación alternativas más acordes con las necesidades que esta nueva sociedad presenta. La existencia de cursos en línea o proyectos experimentales de algunos profesores y/o departamentos, no presuponen una universidad flexible. Para que las instituciones existentes como las que están por surgir, puedan responder verdaderamente a este desafío, deban revisar sus referentes actuales y promover experiencias innovadoras en los procesos de enseñanza-aprendizaje, apoyándose en las TIC y haciendo especial énfasis en la docencia y en los cambios de estrategias didácticas de los profesores. En resumen, las instituciones de educación universitaria necesitan implicarse en mejora de la calidad y esto, en nuestro contexto, se traduce en procesos de innovación docente apoyada en las TIC.

REVISIÓN LITERARIA

Innovación Educativa

Según Carlota Pérez existen dos clasificaciones de innovación: incrementales y radicales. Las innovaciones incrementales son las mejoras sucesivas a los productos y procesos existentes. Desde un punto de vista económico, este tipo de cambio es el que origina el aumento general de productividad, observable en las estadísticas. Por contraste, una innovación radical, es la introducción de un producto o proceso realmente nuevo, es prácticamente imposible que una innovación radical resulte de los esfuerzos por mejorar una tecnología existente. Partiendo de la definición de innovación desarrollada por Morin y Serurat (1998), en la cual establecen innovación como "el arte de aplicar, en condiciones nuevas, en un contexto concreto y con un objetivo preciso, las ciencias, las técnicas, etc.", se considera que la innovación no es solamente el fruto de una investigación, sino también de la asimilación por parte de la organización de una tecnología desarrollada, dominada y aplicada eventualmente en otros campos de actividad, pero cuya puesta en práctica en su contexto organizativo, cultural, técnico o comercial constituye una novedad. De esta manera cualquier proyecto que implique el uso de las TIC, cambios metodológicos, formación de los profesores universitarios, entre otros, constituye una innovación.

Las instituciones de educación universitaria deben revisar sus referentes actuales y promover experiencias innovadoras en procesos de enseñanza-aprendizaje apoyados en las TIC. En este terreno las universidades convencionales se enfrentan a dificultades asociadas a la capacidad de flexibilización de sus estructuras (Salinas, 2002). De este planteamiento se desprende que las palabras claves para los cambios futuros que establecen vinculaciones entre las tecnologías de la información y comunicación y las nuevas modalidades de aprendizaje son: significado, coherencia, conectividad, sinergia, alineamiento y capacidad para la mejora continua.

De La Formación A Distancia Al U-Learning

La evolución de la enseñanza a distancia continúa cuando, a finales de los años 80 y comienzo de los 90, es cada vez más habitual que la gente comience a disponer de computadoras en sus domicilios. De esta manera, muchas editoriales vieron un auténtico filón en la distribución de cursos en formato CD, con apoyo de tutores vía telefónica, y estos cursos, a los que se denominaron de Enseñanza asistida por computadoras fueron responsables, sin duda alguna, de una gran parte de la alfabetización digital de aquellos que en esos años comenzaron a emplear el ordenador de manera más o menos habitual. Posteriormente, y con el auge de Internet, comenzaron a surgir lo que se conoce como formación e-learning, el término "e-learning" es la simplificación de Electronic Learning. El mismo reúne a las

diferentes tecnologías, y a los aspectos pedagógicos de la enseñanza y el aprendizaje. El e-learning consiste en la educación y capacitación a través de Internet. Es en este momento cuando la propuesta del e-learning se desplaza hacia una propuesta más abierta y que se basa precisamente en la interacción tutor-alumno, siendo esta interacción en su mayor parte a distancia mediante las herramientas de comunicación que aparecen integradas en los LMS, pero que obliga al alumno a seguir manteniendo un contacto real con dichos tutores. A este tipo de formación se le llama B-learning (Blended-learning) y su propuesta se basa en que, al ser del tipo semi-presencial, obliga al alumno a seguir los contenidos del curso y al tutor a ser constante en el seguimiento del aprendizaje de sus alumnos para que, llegado el momento de tener la tutoría presencial, ambos se encuentren en el mismo momento del proceso educativo.

En la actualidad, gracias a la utilización de los smartphone y a la cada vez más potente tecnología de que disponen los dispositivos móviles, se está generando una nueva corriente que tiene una fuerza enorme, sobre todo en la enseñanza de niveles superiores, que es el M-Learning (Mobile Learning). Se denomina aprendizaje electrónico móvil, en inglés, m-learning, a una metodología de enseñanza y aprendizaje valiéndose del uso de pequeños y maniobrables dispositivos móviles, tales como teléfonos inteligentes, agendas electrónicas, tablets PC, i-pods y todo dispositivo de mano que tenga alguna forma de conectividad inalámbrica. Por último, se está comenzando a hablar de un nuevo tipo de formación, el U-Learning (Ubiquitous learning). Tal como lo manifiesta en sus artículos Juan Domingo Farno, este tipo de formación es realmente interesante, y a nivel general es el que más expectativas tiene de causar un impacto muy positivo en la población en general, puesto que se basa en la idea de que, si nuestra manera de aprender no se basa en la formación puramente académica, y en cierta manera nunca dejamos de aprender independientemente de dónde nos encontremos, entonces es posible generar expectativas de formación basadas en formatos tecnológicos que son fácilmente adquiribles y accesibles por la inmensa mayoría de la población. Así, tiene mucho que decir los nuevos formatos de televisión digital, la TDT, u otros nuevos dispositivos que sin duda aparecerán y que tendrán una conectividad total, es decir, conectividad a Internet en cualquier parte y a cualquier hora, y que permitirán crear contenidos educativos que se basarán en diferentes tecnologías, siendo las audiovisuales sin duda alguna las que más expectativas de crecimiento tienen.

Cultura Financiera

Las decisiones económicas tomadas sin los conocimientos suficientes pueden derivar en graves errores. Por el contrario, tomar decisiones basadas en conocimientos financieros ofrece una mejor alternativa de vida económica. Comprender el campo de las finanzas es una tarea que se debe comenzar desde jóvenes. Aprender a conocer y entender el lenguaje de las finanzas desde temprana edad incrementará la habilidad para administrar el capital en base a estrategias financieras adecuadas. Asimismo, los jóvenes podrán iniciar una vida económica saludable desde temprana edad, lo que es importante cuando la base del desarrollo económico de cualquier individuo se basa en las finanzas.

En ocasiones se le da poca importancia a la cultura financiera o económica, pero es incuestionable la importancia que tiene el dinero en nuestras vidas. Es necesario darle su justa dimensión y considerarlo como pieza clave en el desarrollo del ser humano. Por ésta razón debemos considerar la educación financiera como parte fundamental de los conocimientos que debemos inculcar en los jóvenes y en cualquier persona que desee mejorar su situación financiera. Incluso se ha acuñado un término, economía del conocimiento, como síntesis de las características que desarrolla la nueva sociedad de la información y el concepto de creación de valor, mucho más amplio que el tradicional de beneficio que se utiliza para medir el rendimiento de las empresas. Dicho término engloba a todas las actividades de la empresa y pone especial énfasis en los intangibles o activos inmateriales basados en la capacidad de generar innovación, desarrollar investigación, mejorar el desarrollo y aportar soluciones a los problemas que se plantean en las organizaciones, en todas sus áreas de actividad, financiera, comercial, logística, marketing, etc.

Esta nueva sociedad, también soporta riesgos y costos. La revolución digital supone una nueva cultura, un proceso de adaptación, de las instituciones y de los individuos, y un cambio en el modelo de gestión y de educación. Se produce una transición de una economía industrial a otra fundamentada en la elaboración y sustitución de la información y el conocimiento. Es necesario dar la importancia que representa la cultura financiera en nuestra forma económica y social en que nos desenvolvemos. Existen muchas estrategias para desarrollarnos en éste tema de manera personal, familiar y en comunidad. Lo fundamental es que iniciemos las acciones que nos lleven a mejorar el nivel de vida de nuestra familia y sociedad.

METODOLOGÍA

Desde una perspectiva epistemológica, la sociedad como objeto de estudio de las ciencias sociales, es una realidad que en sus manifestaciones materiales es muy diversa y compleja, sujeta a constante cambio y evolución de la cual, además, forman parte importantes y numerosos elementos inmateriales, tales como principios, creencias, reglas morales, normas jurídicas, entre otros, pertenecientes al mundo de los valores, las ideas y el deber ser. En ciencias sociales se aceptan varios enfoques que sustentan los procesos de investigación, para esta investigación se planteo utilizar el enfoque transcomplejo, debido a que es un nuevo modo de producción de conocimientos, que apuesta más a la integración que a la disciplina particular. La corriente filosófica que sustenta la investigación es el Pensamiento Complejo y la Transdisciplina planteada por el Dr. Edgar Morin. Tal como lo expresa el Dr. Morin en su texto Los siete saberes necesarios para la educación del futuro: “La sociedad comporta dimensiones, históricas, económicas, sociológicas, religiosas... El conocimiento pertinente debe reconocer esta multidimensionalidad e insertar allí sus informaciones: se podría no solamente aislar una parte del todo sino las partes unas de otras; la dimensión económica, por ejemplo, está en inter-retroacciones permanentes con todas las otras dimensiones humanas; es más, la economía conlleva en sí de manera holográfica: necesidades, deseos, pasiones humanas, que sobrepasan los meros intereses económicos”. De lo antes expuesto se desprende que el área económico-financiera está presente en todas las actividades del ser humano de allí se desprende la importancia de la inserción en la formación universitaria de conocimientos financieros.

RESULTADOS

En las primeras experiencias de aplicación de las TIC en la formación, los proyectos se han centrado en la innovación técnica para crear entornos virtuales de aprendizaje basados en la tecnología más avanzada. A partir de ahora el centro de atención es el participante y las metodologías a utilizar, la nueva estrategia debe estar direccionada en una sólida fundamentación metodológica, al mismo tiempo que un enfoque centrado en el discente. Considerando todos los aspectos mencionados se puede construir una alternativa más cercana que la educación a distancia y diferente de la enseñanza presencial, la educación virtual.

El u-Learning reducirá la brecha digital, a través de una amplia oferta con fácil acceso para la formación integrada y de calidad, minimizando las desigualdades y fomentando la inclusión permitiendo aspirar a una sociedad más integrada y más justa, con sólidos conocimientos financieros que permitan el desarrollo sostenible de la nación. El éxito de estos proyectos de aplicación de la modalidad ubicua en la educación universitaria dependerá del prestigio y la capacidad de innovación de las instituciones, la flexibilidad de su profesorado, la calidad del contenido, el entorno de comunicación o la reconstrucción de los ambientes de comunicación personal. Adicionalmente es de suma importancia la correcta planificación de los aspectos tangibles como lo son: la plataforma, la comunicación, los materiales, el funcionamiento de la red, entre otros; y los aspectos intangibles compuestos por: el rol del profesor, la comunicación pedagógica, la interacción, el diseño de actividades, el proceso de evaluación y el grado de satisfacción de los profesores, discentes y gestores. La educación a través de la red vence las fronteras de las instituciones tradicionales ofreciendo nuevas posibilidades de aprendizaje abierto y flexible. La flexibilidad debe ser una opción compatible con la rutina docente, ofreciendo seguridad de conexión y

entrada al campus virtual en cualquier momento; de igual manera estar en capacidad de monitorear los otros dispositivos de comunicación como el Smartphone o las tablets para dar respuestas oportunas a través de las redes sociales incorporadas en estos dispositivos, de esta manera se puede asegurar la calidad que proporcione eficacia y satisfacción a los discentes y profesores.

CONCLUSIONES

Los resultados de aplicación tienen alcance en diferentes niveles, en el nivel financiero debido que la formación en este ámbito no solo favorecerá las finanzas personales de cada ciudadano sino que repercutirá en la sociedad permitiendo el desarrollo sostenible de la nación con personas con formación financiera sólida. En el aspecto social permite que los ciudadanos con preparación académica en otras áreas del saber diferentes a las finanzas adquieran los conocimientos necesarios para administrar sus recursos financieros y servir de agentes multiplicadores de la información en su entorno familiar, laboral y comunitario. Finalmente en el aspecto ecológico porque al ser consciente de los costos e implicaciones del consumo desmedido y desproporcional de productos y servicios genera una reflexión en los ciudadanos desde la perspectiva financiera que repercute en el medio ambiente.

POSGRADOS DE CALIDAD Y LAS COMPETENCIAS DE LOS COORDINADORES DE POSGRADOS

Abraham Vásquez Cruz, Universidad Veracruzana

Teresa García López, Universidad Veracruzana

Milagros Cano Flores, Universidad Veracruzana

RESUMEN

En México, la calidad de los programas de posgrado se reconoce cuando forman parte del Programa Nacional de Posgrados de Calidad (PNPC), del Consejo Nacional de Ciencia y Tecnología (CONACYT). En este documento, se presentan los resultados de un estudio generado por la inquietud de identificar si las competencias de los Coordinadores de los Programas de Posgrado se encuentran asociadas con la certificación de la calidad del programa de posgrado que coordinan. El ámbito de estudio fue la Universidad Veracruzana, institución educativa que impulsa la evaluación y acreditación de los programas educativos, como estrategia para asegurar y mejorar la calidad de las funciones de docencia, investigación, difusión cultural, vinculación y extensión universitaria. Así mismo, se consideraron como competencias a evaluar, algunas de las señaladas en el Modelo de Martha Alicia Alles (2008-2) y las que señalan los documentos oficiales de dicha universidad. Se diseñó y aplicó un instrumento a estudiantes, docentes, personal administrativo y directores de entidad de adscripción del programa de posgrado, mismo que permitió identificar las competencias de los Coordinadores de Posgrados pertenecientes al PNPC y de los que aún no ingresan a dicho programa. El análisis de la información se realizó mediante figuras, tablas cruzadas y χ^2 .

PALABRAS CLAVE: Capital humano, Educación, Competencias

GRADUATE QUALITY AND COMPETENCES OF GRADUATE COORDINATORS

ABSTRACT

In Mexico, the quality of graduate programs is well praised when they join up the Programa Nacional de Posgrados de Calidad (PNPC), from the Consejo Nacional de Ciencia y Tecnología (CONACYT). This paper presents the results of a study generated to identify if Graduate Program Coordinators competences meet the requirements related to certification of the graduate quality program that they coordinate. The field of study involves the Universidad Veracruzana, which is an educational institution that promotes the evaluation and accreditation of educational programs as a strategy to ensure and improve the quality of the functions of teaching, researching, cultural disseminating, bonding and university broadening. Therefore, some of the competences included in Martha Alicia Alles' model (2008-2) as well as in the official documents of the university were considered as competences to evaluate. A survey was designed and applied to students, scholars, administrative personnel and directors of the entity of assigning graduate programs, which allowed identifying the competences of Graduate Program Coordinators belonging to PNPC and those who have not entered the program yet. The data analysis was performed using figures, crosstabs and Chi squared test.

KEYWORDS: Human capital, Education, Competences

INTRODUCCIÓN

En este documento, se presentan los resultados obtenidos de la búsqueda de respuesta a la creencia de que las competencias que poseen los Coordinadores de Programas de Posgrado, están asociadas con el ingreso al Programa Nacional de Posgrados de Calidad (PNPC), del Consejo Nacional de Ciencia y Tecnología (CONACYT) de México y por el interés de que a través de la identificación de las mismas, pueda seleccionarse el capital humano que permita asegurar el ingreso al PNPC de los programas de posgrado de la Universidad Veracruzana (UV).

REVISIÓN LITERARIA

El trabajo de investigación se fundamenta en la metodología y conceptos de Martha Alicia Alles (2008-2), particularmente respecto a que el término competencia hace referencia a las características de personalidad, manifestadas a través de comportamientos, que generan un desempeño exitoso en un puesto de trabajo.

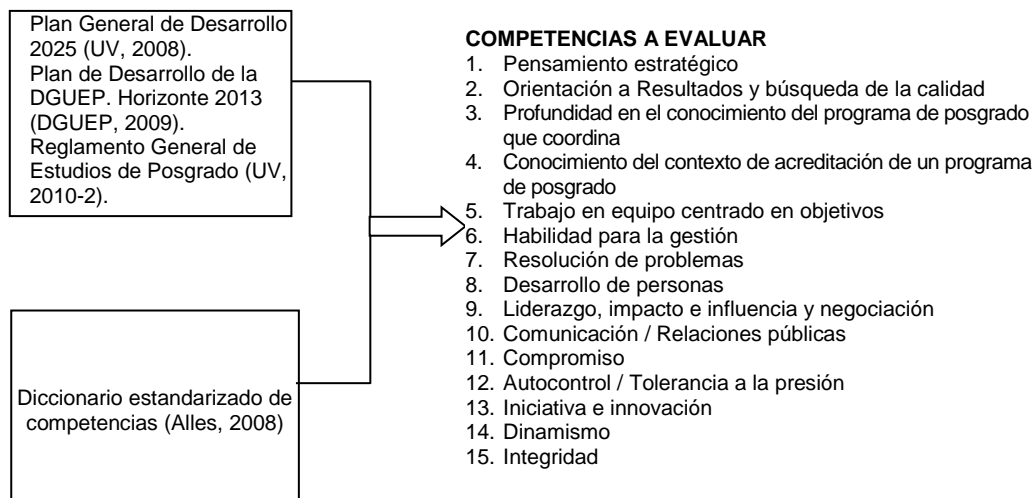

METODOLOGÍA

La hipótesis se estableció como: el ingreso de los programas de posgrado de la Universidad Veracruzana al Programa nacional de Posgrados de Calidad está asociado con las competencias de los Coordinadores de dichos programas. INGRESO DE PROGRAMAS AL PNPC. Reconocimiento otorgado por parte del Consejo Nacional de Ciencia y Tecnología (CONACYT) a la excelencia, calidad y pertinencia de los programas de estudio de posgrado. COMPETENCIAS DE LOS COORDINADORES DE LOS PROGRAMAS DE POSGRADO DE LA UNIVERSIDAD VERACRUZANA. Conjunto de capacidades, habilidades, destrezas, aptitudes y actitudes necesarias para desarrollar de manera eficaz los roles y actividades propias de los coordinadores o personas encargadas de la dirección y administración de los programas de posgrado de la UV. El trabajo se desarrolló a través de las fases: 1) *Revisión de la literatura*. Búsqueda y revisión exhaustiva de la literatura relacionada con las temáticas centrales de este trabajo: La gestión por competencias y los sistemas de acreditación de calidad de los programas de posgrado en México. 2) *Determinación de las competencias a evaluar*. Con fundamento en la teoría del Modelo de Alles, en la Figura 1, se muestra un esquema del proceso de selección. 3) *Diseño de un instrumento para medir las competencias seleccionadas*. Se construyó un instrumento con 31 comportamientos que evalúan 16 competencias. Los comportamientos fueron evaluados por medio de una escala tipo *Likert*, estructurada de acuerdo a las siguientes cuatro categorías ordinales: *No sé, Nunca, Rara vez, Casi siempre y Siempre*. El instrumento mostró que para 31 ítems, considerando a los 109 individuos evatuadores, se obtuvo un coeficiente de confiabilidad *Alpha de Cronbach* de 0.95475, lo que puede interpretarse como un instrumento de alta confiabilidad. 4) *Determinación de la población y la muestra*.

La población objeto de estudio fueron los Coordinadores de Programa de Posgrado de la Universidad Veracruzana, de aquellos posgrados aprobados, vigentes y con al menos un periodo escolar en funciones al 31 de diciembre de 2010. Se eligieron a Coordinadores de programas Consolidados en el PNPC y de programas no considerados en dicho programa, ubicados en el área de los Institutos de Investigación de la Universidad Veracruzana campus Xalapa, Veracruz, México. Adicionalmente, se consideraron los siguientes criterios de inclusión para la selección de la muestra: a) Posgrados cuyo Coordinador tuviera al menos un periodo escolar en funciones a la fecha de aplicación del instrumento; b) Posgrados que contaran con alumnos inscritos y con al menos un periodo escolar cursado a la fecha de aplicación del instrumento; c) Personal académico que tuviera al menos un periodo escolar laborando en la entidad académica donde se imparte el programa de posgrado, y que hubieran impartido al menos una asignatura de dicho programa a la fecha de aplicación del instrumento; d) Personal administrativo y de apoyo con al menos un periodo escolar laborado a la fecha de aplicación del instrumento y; e) Director del instituto o

entidad de adscripción del programa de posgrado evaluado con al menos un período escolar laborado en ese cargo a la fecha de aplicación del instrumento.

Figura 1: Determinación de competencias a evaluar

Fuente: Elaboración propia. La figura muestra el fundamento para la elección de las competencias a evaluar.

5) *Recopilación de información*: El instrumento se distribuyó físicamente y de forma electrónica a: estudiantes, académicos, personal administrativo y directores de la dependencia de adscripción del Coordinador del Programa de posgrado seleccionado en la muestra. La aplicación se realizó durante los meses de junio, julio y agosto del año 2011. Se aplicaron un total de 109 instrumentos. No se obtuvo el 100% de participación debido principalmente a la falta de tiempo y negativa de los evaluadores a contestar el instrumento. 6) *Procesamiento y análisis de la información*. Se utilizó el Software Estadístico SPSS versión 18 y el software de hoja de cálculo Microsoft Office Excel 2007.

RESULTADOS

Características De Los Programas De Posgrado De Los Evaluadores Que Integraron La Muestra.

El 43% de los evaluadores de muestra, pertenecían a programas de posgrado reconocidos por el PNPC y el 57% a los que no han sido reconocidos en dicho programa. El 89% de los integrantes de la muestra fueron evaluadores de programas educativos que ofrecen el nivel de Maestría y el 11% el de Doctorado. El 75% de los posgrados en el PNPC están orientados a la investigación, mientras que el 100% de los programas que no cuentan con el reconocimiento, son de carácter profesionalizante. La distribución del rol de los evaluadores de la muestra fue: 50% estudiantes; 39% académicos; 7% personal administrativo y 4% Directores.

Tabla 11: Resumen de aspectos específicos del Coordinador del Programa

	Grado académico		Pertenece al Sistema Nacional de Investigadores (SNI)		Tiene perfil PROMEP		Experiencia en el puesto Promedio de años
	Doctorado	Maestría	Sí	No	Sí	No	
En PNPC	100%		75%	25%	100%		1.88
No PNPC	33%	66%		100%	66%	34%	3.67

Fuente: Elaboración propia. La tabla muestra la distribución proporcional obtenida para las variables de control relacionadas con aspectos específicos del Coordinador de acuerdo con el reconocimiento o no en el PNPC. El reconocimiento del perfil del Programa de Mejoramiento del Posgrado (PROMEP), es otorgado por méritos académicos.

Evaluación De Competencias De Los Coordinadores De Programa De Posgrado Integrantes De La Muestra.

Fuente: Elaboración propia. La tabla muestra la distribución proporcional obtenida para cada competencia evaluada.

Prueba De Independencia

El análisis inferencial bivariado se realizó mediante tablas de contingencia, para lo que se aplicaron pruebas de independencia para cada una de las competencias evaluadas con relación a si el programa que coordinan se encuentra o no en el PNPC, por medio de una prueba Chi cuadrada (χ^2).

Tabla 13: Resumen de valores obtenidos de la prueba de Chi Cuadrada

Competencia	Valor de Chi Cuadrada	Grados de libertad	Nivel de significancia observado (valor P)	H ₀
Desarrollo de personas	19.513	1	0	Se rechaza
Resolución de problemas	10.385	1	0.001	Se rechaza
Orientación a resultados y búsqueda de la calidad	8.984	1	0.003	Se rechaza
Dinamismo	7.753	1	0.005	Se rechaza
Pensamiento estratégico	6.179	1	0.013	Se rechaza

Liderazgo, impacto e influencia y negociación	0.526	1	0.468	No se rechaza
Compromiso	0.213	1	0.644	No se rechaza
Confianza en sí mismo	0.181	1	0.67	No se rechaza
Autocontrol / Tolerancia a la presión	0.034	1	0.854	No se rechaza
Profundidad en el conocimiento del programa que coordina	0.002	1	0.962	No se rechaza

Fuente: Resumen de valores obtenidos de χ^2 por competencia evaluada.

CONCLUSIONES

En este trabajo de investigación, se destaca la importancia de las competencias del Coordinador de Programas de Posgrado, identificando aquellas cuya presencia, pueden ofrecer una mayor oportunidad para el ingreso al PNPC del programa que coordinan. De acuerdo con los resultados, se recomienda establecer un sistema de evaluación de competencias para los candidatos a ocupar el puesto de Coordinador de Programa de Posgrado a nivel institucional, ya que se tiene evidencia de que algunas de las competencias evaluadas en los coordinadores de posgrado, tienen mayor asociación con el ingreso del programa de posgrado al PNPC. Las competencias más significativas fueron: *Pensamiento estratégico; Orientación a resultados y búsqueda de la calidad; Trabajo en equipo centrado en objetivos; Habilidad para la gestión; Resolución de problemas; Desarrollo de personas y Dinamismo*. Este trabajo tiene como aporte la adaptación de la metodología para implementar la gestión por competencias en los puestos de la UV y el impacto que los resultados pueden tener en el mejoramiento de la calidad de los programas de posgrado de la misma. Los resultados solamente son ciertos para la muestra seleccionada, por lo que es recomendable ampliarla así como replicar el estudio.

LAS OPORTUNIDADES DE MEJORA EN LA CADENA DE SUMINISTROS PARA NEGOCIOS EN PAISES DE AMERICA LATINA (AL)

María Elena Delgado Ontiveros, Instituto Tecnológico de Chihuahua

Mirna Portillo Prieto, Instituto Tecnológico de Chihuahua

Alfredo Burciaga Garcia, Instituto Tecnológico de Chihuahua

RESUMEN

La cadena de suministros en los negocios actuales tiene posibilidades de experimentar cambios constantes. Es un campo de estudio con grandes perspectivas, ya que la globalización ofrece nuevas oportunidades de localización de negocios y expansión de mercados. Los nuevos esquemas de suministro dan paso a plantear nuevas formas de trabajo en donde se requiere infraestructuras y tecnologías diferentes. Para la industria de los países latinoamericanos ha sido difícil renovar sus espacios productivos y tomar ventaja de las oportunidades que brinda la globalización en las cadenas productivas. Este reporte se basa en un trabajo práctico donde se observaron empresas medianas en Chihuahua. Durante la observación de campo se detectaron tres problemas importantes que se derivan de la expansión de mercados al gestionar las nuevas tendencias en cadena de suministros: 1) Aumento del volumen de producción, 2) Flexibilidad, 3) Gestión de Calidad. El objetivo es definir las dificultades que sufren las empresas mexicanas en la gestión de la cadena de suministros, hacer una comparación con empresas de AL y detectar áreas de oportunidad en las cuales pueden aumentar su competitividad.

PALABRAS CLAVE: Cadena de Suministros, Tecnologías, Competitividad, Industria

OPPORTUNITIES TO IMPROVE THE SUPPLY CHAIN FOR INDUSTRIES IN LATIN AMERICA

ABSTRACT

The Supply Chain Management (SCM) has many possibilities of change. The study of SCM is a big field because globalization opens opportunities of business localization in many places of the world. The new style of supply materials is changing the ways of work in industries. Now businesses need new technologies and better infrastructures. For small industries in Latin America has been difficult to change and improve technologies and take advance of new markets and opportunities of globalization. This paper is based on a practice job in Mexican industries located in Chihuahua State. It was founded three main problems when companies try to change for a new SCM: 1) The production increment, 2) Flexibility, 3) Quality Management. The objective of this report is to define difficulties on small industries when they intent to work on a new SCM, and compare Mexican problems with others in Latin America.

KEY WORDS: Supply Chain, Technologies, Competitive, Industry

INTRODUCCION

El estudio acerca de la cadena de suministros ha ido en aumento, ya que la oportunidades que ofrece el mundo globalizado da lugar a nuevas formas de trabajo y entendimiento entre cliente-proveedor. El enfoque norteamericano se centra en la administración de la cadena, (Chain Supply Management, CSM), sin embargo la efectiva operación de una cadena de suministros requiere tanto de habilidades administrativas como técnicas, donde intervienen las más avanzadas tecnologías.

La administración efectiva de la cadena de suministros es cada vez más compleja, al tener que operar en espacios más globalizados, por lo cual se requiere de especialistas en diferentes áreas de conocimiento. La complejidad de las operaciones abre al mismo tiempo nuevas oportunidades, tanto de negocios como en el desarrollo de nuevas tecnologías, entre ellas las Tecnologías de Información y Comunicación (TIC's), automatización e informática industrial.

Gran parte de la gestión moderna ya no se hace manualmente, sino a través de sistemas automáticos e informáticos. Durante el trabajo de campo, se encontró que realmente pocas empresas mexicanas han hecho conciencia de este fenómeno tecnológico, y han incorporado de forma incipiente algunas tecnologías que automatizan una parte mínima de sus procesos, lo cual deriva en un control parcial poco eficiente.

En las empresas mexicanas, sobre todo las Pyme, el conocimiento e incorporación de nuevas tecnologías para operar una cadena de suministros efectiva ha llevado un paso lento. El desarrollo e implementación de tecnologías en los países latinoamericanos debe acelerar su paso para sostener su competitividad frente a economías que ofrecen grandes ahorros como lo es China en la mano de obra y la India en los sectores de software y electrónicos.

La gestión adecuada de la cadena de suministros es también una oportunidad para elevar las economías de los países, ya que brinda la oportunidad de mejorar el empleo y de abrir mejores inversiones. El equipamiento de los espacios es fundamental, así como el desarrollo de procedimientos y reglamentaciones flexibles para la importación y exportación de mercancías. Por ese motivo debe considerarse un tema importante también para las administraciones gubernamentales. Es así que el estudio acerca de la cadena de suministros debe llevar al menos tres enfoques: Enfoque administrativo, técnico y gubernamental.

REVISION LITERARIA

El concepto de la administración de la cadena de suministros (CSM) se deriva de introducir en los Estados Unidos el Justo a Tiempo (JIT por sus siglas en inglés Just in Time).

Es un término que adoptó la industria norteamericana de forma paralela al concepto de manufactura esbelta y de esa manera adaptar el JIT a un estilo americanizado. Las dimensiones de la Unión Americana son diferentes a las de Japón, por tanto en un principio el JIT parecía un sistema rígido. En Norteamérica llevó tiempo ajustar las infraestructuras para implementar el JIT.

En el ambiente industrial la cadena de suministros siempre ha existido y puede llevarse a cabo de manera horizontal o vertical. En tiempos recientes el estudio de la logística de suministros, ha tomado auge debido a que el JIT trajo nuevas formas de entendimiento entre cliente – proveedor, esto sumado a la globalización de mercados y a la disponibilidad de nuevas tecnologías informáticas, el enfoque de la administración de suministros ha cambiado radicalmente.

Tradicionalmente el estudio de la industria se ha centrado más en los procesos internos de fabricación, el enfoque del JIT estableció el concepto global de suministros y enlaza los procesos de la fábrica con el exterior, con proveedores y clientes.

La introducción del JIT en México se realizó en la década de los ochenta con la llegada de grandes firmas japonesas como Sony, Sumitomo y la armadora de autos Nissan entre otras. Estas empresas trajeron consigo algunos proveedores y establecieron un modelo de trabajo que los ingenieros mexicanos han ido asimilando. Así es como inició la cultura de administración de la cadena de suministros en México. Al

mismo tiempo la apertura comercial que tuvo México en esa década, ayudó a mejorar las infraestructuras comerciales que existían en ese momento.

Actualmente la administración de la cadena de suministros en las Pyme no ha llegado a ser eficiente, aun cuando han pasado tres décadas de aprendizaje. En conjunto la industria muestra una deficiencia, lo cual resta competitividad frente a los países de economías emergentes como los BRIC's.

Conceptos

Una cadena de suministros está integrada por todas aquellas actividades involucradas de manera directa o indirecta en la satisfacción del cliente al recibir un bien o servicio. (Ballou, 2004)

La cadena de suministros incluye no solo al fabricante y al proveedor, sino también al transportista, almacenista, vendedores de detalle, o menudeo, incluso a los mismos clientes, como se observa en la figura 1.

Administrar una cadena de suministros implica la integración de actividades en la compra de materiales y servicios para transformarlos en bienes intermedios, y productos terminados y entregarlos al cliente.

Una cadena de suministros debe ser lo suficientemente flexible para reaccionar ante imprevistos.

El objetivo de una cadena de suministro es maximizar el valor del producto generado y entregado al cliente. El valor que genera una cadena de suministro es la diferencia entre lo que vale el producto final para el cliente y los costos en que la cadena incurre para cumplir con la petición de este.

Figura 1. Etapas de la cadena de suministro

METODOLOGÍA

Este documento se deriva de una serie de observaciones directas a empresas con las que se ha trabajado para llevar a cabo mejoras en los procesos productivos. Las empresas objeto de este estudio, han establecido convenios de colaboración con el Instituto Tecnológico de Chihuahua.

En los trabajos realizados se han llevado a cabo reuniones y entrevistas con personal de las empresas, recorridos en el piso de producción, toma de datos, análisis e interpretación de resultados. En esos trabajos se han establecido mejoras en los procesos productivos de esas empresas y es así como la observación directa ha enriquecido la comprensión de la problemática que viven las empresas mexicanas al gestionar sus cadenas productivas.

Otra fuente de información importante ha sido la experiencia en tesis dirigidas por los profesores que publican el presente informe. En ellas los alumnos de maestría exponen problemáticas de las industrias donde llevan a cabo su trabajo de investigación. Durante la observación se detectaron tres problemas importantes que se derivan de la expansión de mercados al gestionar las nuevas tendencias en cadena de suministros: 1) Aumento del volumen de producción. 2) Flexibilidad, 3) Gestión de Calidad.

Una vez que se han encontrado las características principales de los problemas en gestión de suministros en las empresas mexicanas, se pasó a reconocer y comparar la problemática de empresas en América

Latina a través de información bibliográfica e internet. Un instrumento de análisis es el esquema de la cadena de valor de Porter donde se detectan las áreas de oportunidad representadas de forma discreta.

RESULTADOS

En los recorridos por el piso de producción de las empresas, se encuentra que faltan herramientas elementales para implementarse en los procesos productivos, de ahí se derivan la falta de control para gestionar adecuadamente el aumento del volumen de producción, la flexibilidad, y la calidad.

Esquema de análisis

Sobre el esquema de la Cadena de Valor de Porter se ha realizado el análisis de la problemática de las empresas. En ese esquema resaltan las habilidades que han quedado rezagadas en las empresas observadas.

Cadena de Valor de Porter

De acuerdo a Delgado M.E. (2009), Porter (2002), todas las empresas realizan actividades discretas que agregan valor al producto, desde su diseño, pasando por la fabricación, hasta la entrega final y el uso efectivo del producto elaborado. Lo importante en la cadena es identificar las actividades clave que realmente le agreguen valor al producto. Por ejemplo la distribución y entrega al cliente es una actividad importante que agrega valor porque es la forma en que el cliente obtiene el producto. Hay empresas muy competitivas en distribución de productos, otras muy buenas en el diseño, otras más en la mercadotecnia. Al hacer el análisis de la cadena de valor, el fabricante podrá encontrar cual es su ventaja competitiva en relación a los demás. También podrá detectar las actividades débiles en su cadena y podrá reforzarlas con un plan especial.

En la Figura 2 se muestra un modelo genérico de la Cadena de Valor. En el esquema se muestra en la parte superior a las actividades continuas, las cuales dan soporte a las actividades discretas. En el análisis de la cadena de valor de una empresa se deben analizar los dos tipos de actividades para encontrar mejoras en cada una de ellas.

Capacidad de gestión de empresas pequeñas en México.

Una gran parte de los problemas que enfrentan las empresas de menor tamaño en México se relacionan con sus capacidades para gestionar, organizar y administrar eficientemente sus recursos internos, así como su capacidad para relacionarse con el exterior, con clientes, proveedores, instancias de gobierno, etc.

El insertarse efectivamente en la cadena productiva representa gestionar efectivamente sus actividades internas y externas. Las capacidades de las empresas deben empezar desde adentro hacia afuera, desde el corazón de la empresa que es el piso de fabricación. (Delgado, M.E. 2009).

Capacidad de gestión del diseño del producto.

En tiempos actuales un buen diseño de producto ahorra bastantes costos y por lo tanto las utilidades pueden ser mayores. Un producto diseñado con partes y componentes difíciles de conseguir o fabricar, encarece el costo del producto final. La revisión del diseño del producto permitirá hacer conjuntamente una revisión del diseño del proceso y detectar si puede mejorarse con el fin de ahorrar costos, tiempos en la fabricación, encontrar nuevos materiales, hacer el ensamble del producto más fácil, disminuir números de parte, etc.

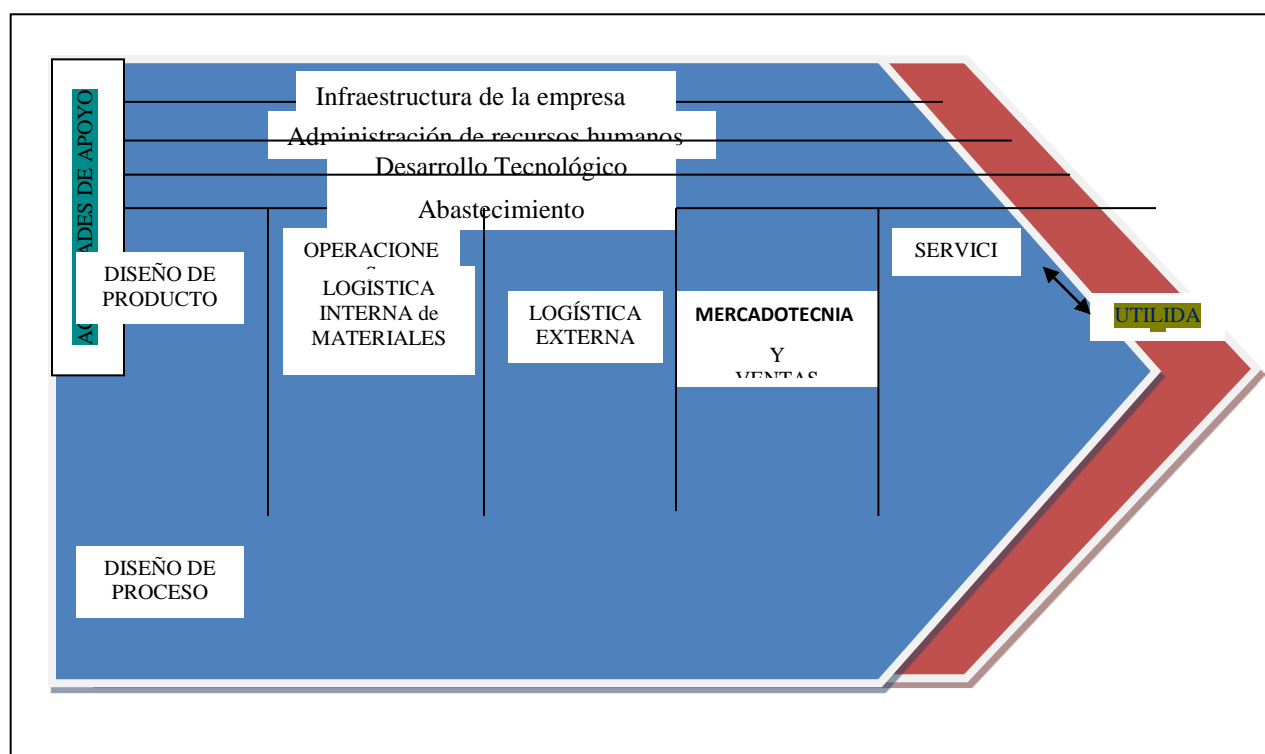

Durante la revisión del diseño del producto se podrá detectar si la empresa cuenta con las herramientas de producción adecuadas además de la disponibilidad de los materiales en cantidad y calidad.

En esta etapa se verifican algunos puntos críticos para el cliente y para el proceso de producción, que pueden ser medidas, tolerancias, evitar mezcla de materiales similares, entre otros detalles.

En los casos observados se encuentra que las fábricas cuentan con grandes habilidades para fabricar las piezas, pero no siguen un análisis sobre el diseño del producto, lo cual origina problemas al fabricar altos volúmenes como son la mezcla de material. La falta de herramientas informáticas complica la gestión de inventarios y el control de la calidad.

En dos plantas se hizo la propuesta y el diseño de un sistema de rastreo de material para poder trabajar con diferentes productos en una sola línea, es decir hacer flexible la producción.

Figura 2. Cadena de Valor de Porter. Modelo genérico.

Fuente: Delgado M.E. et al. 2009, CIPITECH 2009

En el análisis de las actividades discretas, se resalta que en una industria no solamente es importante el proceso de fabricación sino una serie de actividades que inician desde el diseño del producto y del proceso.

En el desglose de las actividades discretas se encuentran una serie de herramientas útiles para hacer efectivo el trabajo en cada una de las etapas.

Capacidad de gestión del diseño del proceso.

El proceso puede incorporar nuevas tecnologías que a veces no están al alcance de las empresas pequeñas. Es recomendable iniciar un diseño de proceso con la elaboración de un diagrama de flujo. En este diagrama se describen paso por paso las operaciones que serán necesarias para completar todo el producto final. (Niebel, 2004, Delgado M.E., 2009).

Una gran parte de los problemas de suministro pueden detectarse en la elaboración del diagrama de flujo. En las plantas observadas se encontró que no hacen un análisis del diagrama de flujo y por tanto cuando automatizan los procesos, lo hacen incorrectamente y aumentan sus desperdicios. Las plantas no cuentan con un sistema informatizado en el proceso, por lo tanto no tienen un control suficiente sobre costos, tiempos de entrega, materiales en existencia, herramientas disponibles, etc. Eso dificulta la producción de altos volúmenes.

Capacidad de operaciones.

Las empresas en las nuevas competencias deben ser capaces de poder aumentar su volumen de producción con costos bajos y en un tiempo cada vez más corto. (Delgado M.E., 2009, Bañegil, 2001). Las operaciones en la gestión total del proceso cuentan con herramientas poco informatizadas. Eso dificulta las funciones de compras, control de inventarios, y control de costos. La falta de capacidad en las operaciones resta competitividad a la empresa. La falta de congruencia entre equipos y procedimientos hace a las operaciones y la producción poco eficientes.

Estos problemas no solamente provocan que las empresas sean incapaces de aprovechar las nuevas oportunidades de mercado, sino que pierden a sus clientes actuales al no contar con planes y programas de producción o no son los adecuados.

Logística interna de materiales.

El diseño de una logística bien estructurada con una distribución y seguimiento pertinente para el uso y control de los materiales es lo que garantiza que el costo del producto se mantenga competitivo. El control de los inventarios es uno de los aspectos más difíciles dentro de las fábricas, en esta materia se pueden ampliar bastante las herramientas.

Es recomendable el uso de un software para llevar un control de los materiales y su logística. La mayoría de las empresas que fueron observadas, no cuentan con herramientas suficientes para hacer un control efectivo. Los problemas que enfrentan, son desperdicio y mezcla de material, lo que origina la elevación del costo del producto y resulta difícil mantener estable los parámetros de calidad.

Logística externa

Las empresas deben ir más allá de sus fronteras. La logística externa consiste en saber cómo se desplazarán los productos terminados hacia un mercado. Implica conocer los costos de distribución, almacenamiento, outsourcing, etc. Debe también tomarse en cuenta los servicios de aduana, tipo de transporte, (terrestre, marítimo, aéreo), el tipo de contenedores que transportarán el producto, imprevistos en el trayecto, entre otros aspectos.

Las empresas observadas han mantenido un mercado domestico bastante bueno, encuentran dificultades a la hora de exportar. La industria mueblera ha encontrado competidores muy agresivos en el extranjero y ha sido difícil desplazar los productos de este sector en otros países.

Mercadotecnia y Ventas

Para Philip Kotler (2006), la mercadotecnia es la función de la empresa que se encarga de definir los clientes meta y la mejor manera de satisfacer sus necesidades y deseos de manera competitiva y rentable. Es por eso que en la actualidad esta función es fundamental por la necesidad de conocer a sus clientes actuales y potenciales y de satisfacerlos con ofertas competitivas superiores a cambio de una utilidad o beneficio.

Dentro de la cadena de suministros es una función relevante para tener en cuenta los productos que realmente llenarán las necesidades del cliente.

Algunas empresas observadas fabrican productos intermedios, sus clientes son a su vez otras fábricas. Este tipo de empresas ha logrado posicionarse conservando a sus clientes y ampliando sus mercados. En el caso de la industria mueblera, que fabrica productos finales, algunos conceptos de diseño han quedado rezagados, situación que les ha restado competitividad frente a nuevos competidores extranjeros.

Servicio

El proceso de fabricación no concluye con la venta final del producto. Actualmente la mayoría de los clientes son exigentes y una forma de mantener un buen trato con ellos es con el servicio pos venta. Es preciso conocer qué tipo de servicio será necesario proporcionar al cliente. Sobre todo en la apertura de nuevos mercados y en las oportunidades para elaborar nuevos productos, las empresas deberán tomar en cuenta que tipo de servicio pos venta deberán proporcionar para así poder calcular un costo justo en el producto.

Algunas empresas observadas que han logrado introducir sus productos en mercados de clientes extranjeros, han encontrado que el servicio pos venta es muy caro y que el costo original del producto ha resultado demasiado bajo. En algunas ocasiones el servicio pos venta puede llegar a ser más caro que la misma fabricación del producto.

COMPARATIVA

Con respecto a la capacidad de gestión del diseño de productos y procesos, no existen en México datos precisos que permitan realizar una evaluación de esta parte de la cadena de suministro, sin embargo existe información aislada y enfocada al área de I+D, la cual establece que para el año 2004, el giro dominante estaba en el sector automotriz. El sector electrónico representaba el valor más bajo en I+D.

Así mismo Calderón Madrid (2009), establece que en México existe un estancamiento de la productividad derivado de la falta de innovación en productos y servicios, lo cual no les permite mantener y ampliar sus mercados, tal aseveración resulta de la evaluación de la efectividad de un programa de estímulos al gasto en I+D de las empresas, la cual refiere el bajo incremento de empresas y proyectos en estos programas de estímulos de 2001 a 2008 en México. Ver tabla 1.

En lo referente a la capacidad de las operaciones, la logística interna de materiales y la logística externa, las empresas mexicanas presentan un avance sustancial lo que las ha llevado a mejorar sus niveles de competitividad internacional de acuerdo al modelo de competitividad PYMEs 2011 de la Secretaría de Economía.

Mercadotecnia, ventas y servicio al cliente.

En base al diagnóstico del desempeño logístico en la industria mexicana realizado por académicos del Instituto Tecnológico de Estudios Superiores de Monterrey, donde se evaluaron cinco atributos básicos de la cadena de suministros: Confiabilidad en las entregas, Capacidad de respuesta, Flexibilidad, Costos, Eficiencia en la administración de los recursos. Se encontró que dado que la mayoría de las empresas tienen altos puntajes para la calidad de su servicio, en la distribución, esto indica que una buena distribución es un atributo que no representa una diferenciación o ventaja para una empresa, sino más bien un requisito mínimo que deben tener para seguir en operaciones. De acuerdo a los resultados, las empresas mexicanas dan un buen servicio a sus clientes, pero no están generando eficiencias internas asociadas a menores costos en las operaciones logísticas, mayor rentabilidad y aumento en la productividad.

Tabla 1. Estímulo Fiscal (Artículo 219 de la Ley del ISR)

AÑO	Monto máximo (millones de pesos)	Empresas	Proyectos	Monto Asignado (millones de pesos)
2001	500	149	547	415
2002	500	205	824	496
2003	500	236	873	500
2004	1000	357	1308	1000
2005	3000	608	2083	3000
2006	4000	483	1617	4000
2007	4500	622	1918	4500
2008	4500	526	1502	4500
TOTAL	18500		10672	18411

Fuente: Ley de ingresos de la Federación de 2001 a 2008 y resultados publicados en el Diario Oficial de la Federación.

CONCLUSIONES

La atención acerca de la cadena de suministros no puede centrarse únicamente en la administración sino también en el equipamiento y en desarrollo e incorporación de tecnologías para responder de forma rápida y efectiva a las demandas de los nuevos mercados.

Los procesos de aprendizaje de gestión de operaciones incluyendo la SCM en las PYMES deben acelerarse y tener más apoyo de instancias externas para lograr mayor competitividad.

El aprovechar las oportunidades de globalización requiere también un replanteamiento de los procesos internos de las empresas y adoptar nuevos pensamientos y formas de trabajar.

La falta de equipamiento y planeación ha limitado la gestión adecuada en gran parte de las empresas. El aumento del volumen de producción cuando las empresas abarcan mayores mercados origina problemas en el control de inventarios y en niveles de calidad, por tal motivo es recomendable aplicar mayores herramientas informáticas para el control de las operaciones dentro de la empresa, tales como: control de producción, control de materiales, control de calidad, costos, mano de obra, etc.

La falta de herramientas, origina que los problemas de los procesos productivos se reproduzcan a gran escala cuando los volúmenes de producción aumentan. La incongruencia entre procedimientos y equipos resta competitividad a los procesos. América Latina tiene grandes oportunidades de crecer reforzando las capacidades de sus empresas y haciendo más flexible sus sistemas de producción.

Oscar Plascencia Avila, Universidad Autonoma De Coahuila

RESUMEN

La pequeña y mediana empresa (PYME) ha sido en los últimos años el centro de atención de numerosos trabajos, no obstante, aún siguen necesitadas de fundamentos estratégicos, operativos y de alianzas que, de forma continua, le brinden oportunidades para mejorar su competitividad. Este Laboratorio Empresarial (LE) realizará estudios regionales dentro del Estado para crear una base de datos e información del entorno y de las PYME; facilitará el diagnóstico estratégico del modelo de negocio y la definición de estrategias de cambio, diseñará estrategias cooperativas de innovación bajo un sistema de Triple Hélice y mantendrá a través de un sitio una comunicación permanente con los empresarios que nos visiten. Al igual que el Modelo Nacional para MiPyMES Competitivas y los Modelos de Calidad, el Modelo que se ha estructurado tiene como premisas que la clave del éxito de la estrategia se encuentra al interior de la organización, en el manejo de sus recursos, ya sean humanos, materiales, financieros o de conocimiento; y la generación de ventajas competitivas se sustenta en el desarrollo y fortalecimiento de los recursos y actividades clave. Se presentan los primeros resultados alcanzados en el diseño, validación y conformación del sistema de trabajo del Laboratorio Empresarial.

Palabras clave: PYME, Laboratorio, estrategias cooperativas de innovación

BUSINESS LABORATORY OF THE SMES OF THE COMARCA LAGUNERA

ABSTRACT

In the last several years Small and Medium Sized Enterprises (SMEs) have been the center of attention on several papers and works, however, they are still in need of strategic and operational principles, in addition to alliances to get them continuous opportunities to improve their competitiveness. This Business Laboratory will conduct regional studies within the State to create a database and an information system from the environment and SMEs, which will serve to - among other advantages - get sustenance to both business and public policy; facilitate the strategic diagnosis of the business model and the definition of strategies for change; design cooperative strategies of innovation under a system of Triple Helix and maintain through this site a permanent communication with the entrepreneurs that visit us. As the National Model for Competitive SMEs and the Quality Model, our model has been structured having as a key premise, that strategic success is within the organization in managing their resources, whether human, material, financial or knowledge; also the generation of competitive advantages is based on the development and strengthening of key resources and activities. We present the first results achieved in the design, validation and production of the work system Business Laboratory.

JEL: M15

INTRODUCCION

Los últimos trabajos investigativos en este tema han permitido lograr un mayor conocimiento de las características y de sus relaciones de las PYME con el entorno económico. No obstante, las PYME siguen necesitadas de fundamentos y acciones estratégicas y operativas que, de forma continua, pongan de manifiesto sus oportunidades y las posibles estrategias al objeto de facilitar la toma de decisiones, tanto desde un punto de vista de política interna de la empresa para su gestión, como de política local o estatal, para determinar y fijar programas de actuación acertados y con suficiente tiempo de anticipación. Las bases de datos construidos brindarán información a las instituciones empresariales, de gobierno y financieras para la definición de políticas y la toma de decisiones.

El trabajo directo con las PYME permitirá identificar y medir indicadores de competitividad; fortalezas, debilidades, oportunidades y amenazas, así como oportunidades para innovar sus modelos de negocios y la planeación estratégica de las mismas. Con su implementación se contribuirá a una mejor formación de sus directivos y generar acciones colaborativas entre universidad – empresa, que permitirá la ampliación de conocimientos de todos los que participan directa e indirectamente, a través de la capacitación de los involucrados y de los resultados a que se arriben. Se elevarán los niveles académicos y profesionales de los profesores de planta de nuestra Facultad que imparten competencias relacionadas con estos temas.

Esta investigación se relaciona con la generación de Modelos de Negocios Innovadores para mejorar la competitividad de la PYME dentro de un entorno de gestión de la calidad y de cooperación y/o interacción en el sistema de innovación. La revisión bibliográfica se concentra principalmente en los Modelos de Negocios y los de Calidad.

REVISION LITERARIA

Existen muchas definiciones de modelo de negocio. Algunas van en la línea de “una narración de cómo funciona la empresa”, otras hablan de actividades y cadena de valor, las más recientes se centran en elecciones o respuestas a preguntas claves, según (Matarranz, 2011) y continua planteando que *habitualmente el trabajo sobre modelos de negocio se basa en conceptualizaciones estáticas de sus elementos y de las interrelaciones entre estos y con el exterior: “no se pueden olvidar aspectos dinámicos que resultan decisivos para el desarrollo y el éxito final de nuevos modelos”* Para (Eisenmann, 2011), un modelo de negocio es un conjunto integrado de elecciones características que especifican la propuesta única de valor para el cliente de una empresa y cómo configura sus actividades -y las de sus alianzas- para entregar ese valor y obtener unos beneficios sostenibles.

Para (Osterwalder & Pigneur, 2010) un modelo de negocio describe el fundamento lógico de cómo una organización crea, entrega y captura valor. Su enfoque ha popularizado una representación de los modelos de negocio el Modelo de Negocio de Canvas: Segmentos de Clientes, Propuesta de Valor, Canales, Relaciones con Clientes, Corrientes de Ingresos, Recursos Clave, Estructura de Costes, Actividades Clave, Alianzas Clave. Son múltiples las fuentes en donde encontrar referencias a los diferentes Modelo de Negocio y Modelos de Calidad que existen en el mundo empresarial: Modelo Mexicano para la Competitividad, Modelo Mexicano de Calidad, Modelo Iberoamericano de Calidad, Modelo Europeo de Excelencia Empresarial, Modelo Canvas, Modelo de Negocio de Walmart, Modelo de Negocio de Compac...etc. y en México, el Modelo Nacional para MiPyMEs Competitivas: “Un enfoque al diseño de un modelo de negocios innovador”, una herramienta directiva que tiene por objeto provocar una reflexión estratégica que incida en el desarrollo de capacidades y ventajas competitivas difíciles de imitar para mejorar aprovechar y responder eficientemente a las oportunidades del entorno en el que operan los negocios. Este es una adaptación del Modelo Nacional para la Competitividad para resolver y atender las problemáticas y los retos que enfrentan las organizaciones micro, pequeñas y medianas, mediante la generación de valor y aseguramiento de su sustentabilidad y crecimiento con base en el diseño de un modelo de negocios innovador (Instituto para el Fomento a la Calidad Total, 2010).

METODOLOGIA

Desde el punto de vista metodológico en esta investigación el primer paso se relaciona con el diseño del Modelo Teórico de Negocio Dinámico (MND) para la PYME de nuestra región. Tiene una mayor inclinación para PYME de manufactura y servicios y propone Estrategias Cooperativa de Innovación en un marco de alianzas Universidad – Empresa – Gobierno en un modelo general con enfoque de Triple Hélice. El segundo paso diseña los componentes y elementos que caracterizan a identifican el MND; denominamos componentes a los temas o “core competence” del modelo de negocio y elementos a las preguntas, indicadores o aspectos que permiten identificar o evaluar un componente.

El tercer paso se relaciona con Análisis de la Confiabilidad y Viabilidad del Modelo diseñado el mediante la prueba “cero” de un diagnóstico. El cuarto y quinto pasos se relacionan con la medición, se compara nuestro modelo teórico con la percepción que tiene el empresario acerca del manejo de su PYME se evalúa lo que realmente hace y se definen las brechas entre lo que piensa que hace, lo que realmente hace y lo que debiera hacer. El sexto paso alcanza la fase de mejora y es donde se le dan al empresario las estrategias innovadoras pero –como ya se señaló- no se tratará en este artículo; se aplican Métodos Expertos, correlaciones de Kendall, estadísticos de Fisher y Spearman para poder determinar los componentes principales y sus elementos.

RESULTADOS

Primer Resultado: Un Modelo de Negocio Dinámico (MND) propio, adecuado según la característica de las PYME de nuestra región y con una vocación de Modelo de Triple Hélice en el cual se refuerza el accionar de las Alianzas y que toma como fundamentos también los Modelos de Calidad. Este primer resultado llega hasta el diseño de los componentes principales. Los cinco primeros componentes tratados a nivel de la Concordancia de Kendall son: Propuesta de Valor (1,4); Alianzas (1,7); Resultados (3,0); Ejecución de la Propuesta de Valor (4,20) y Clientes (4,70). Segundo Resultado: A partir de los componentes principales se diseñan los elementos que caracterizan a identifican el MND.

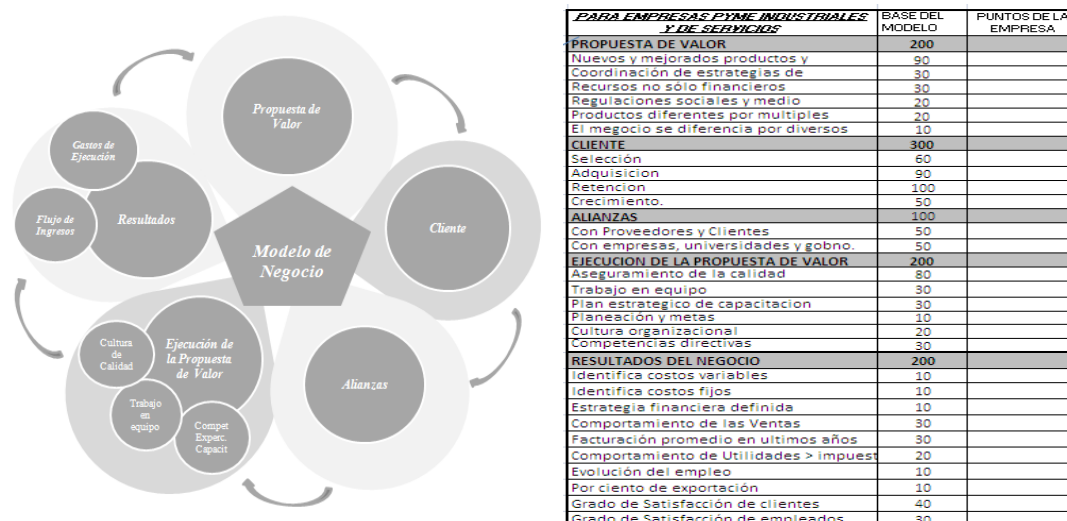

Conceptualizamos el término elementos como las preguntas, indicadores o aspectos que permiten identificar o evaluar un componente. En esta investigación existe una Variable de Trabajo que es el MND, así como elementos o variables independientes (VI) que se usan para explicar los cinco componentes o variables dependientes (VD) Se les solicitó a los participantes (expertos y empresarios) un listado de los elementos (o preguntas) que debía contener el Modelo para agruparlos dentro de los componentes principales. El primer listado arrojó una lista de 50 elementos que tras varias rondas Delphi quedaron reducidos a 34 Para establecer la correlación entre las treinta y cuatro variables independientes (VI) se pueden emplear varios métodos estadísticos, se selecciona el test exacto de Fisher que permite analizar si dos variables dicotómicas están asociadas cuando la muestra a estudiar es demasiado pequeña y no se cumplen las condiciones necesarias para que la aplicación del test X² sea adecuada

Al aplicarlo se está en posibilidad de no rechazar la Ho lo que significa que podemos aceptar como válidas las 28 (VI) y las 5 (VD). Al aceptar los resultados anteriores estamos en posibilidad de asignar a cada Componente o VD sus correspondientes Elementos o VI de tal manera que podemos presentar el Modelo de Negocio en la Figura 1 (izq) y su correspondiente Matriz de Calidad en la parte derecha

Tercer Resultado: Diagnóstico para conocer el grado de Adherencia que tiene la PYME encuestada con el Modelo Teórico. Se relaciona con la manera en que se debe implantar el MND mediante un diagnóstico. Ya en este tercer paso incursionamos en lo que es la fase de Análisis de la Confiabilidad y Viabilidad del Modelo diseñado (Ver Figura 1). El objetivo es lograr establecer ¿Cómo está la empresa en relación a los parámetros que parecen ser comunes en las organizaciones? representado en nuestro caso

por nuestro Modelo Teórico. O dicho en otras palabras, como señala (Braidot, 2010), ¿Qué grado de adherencia existe con el Modelo Teórico? (GAMT). Este es un momento clave dado que el empresario se enfrenta a una serie de preguntas a través de las cuales se revela lo que él pretende. Es un procedimiento tomado de los Modelos de Calidad en los cuales el evaluado explica cómo él hace, o pretende, o entiende que hace su labor. Resultado final, Sistema de Información (SI) del Laboratorio Empresarial

Figura 1: Ampliación del Modelo de Negocios Dinámico (MND) y Matriz del Modelo Teórico del Laboratorio Empresarial.

La imagen del MND ha sido modificada a partir de la mostrada en el Modelo Mexicano para las MiPyMES Competitivas del año 2011. Se han añadido cinco elementos a los dos componentes externos que identifican la Ejecución y los Resultados. La Matriz del Modelo Teórico (tabla a la derecha) en un ambiente de Modelo de Calidad, contiene los 5 componentes y los 28 elementos con puntuaciones que facilitan el diagnóstico de la situación de la PYME. Elaboración Propia

Ante la situación de la no existencia de una solución para este proyecto, se decidió generar toda la plataforma que soportará la operación del mismo, desde la parte de interface de presentación, interface con el usuario, administración y manejo de la base de datos de conocimiento, presentación y salida de información, así como varios módulos adicionales que se irán incorporando de acuerdo a las necesidades futuras. Hasta el momento se tiene diseñado el 50% de este SI por medio de un portal de Internet con aplicación web APP el cual está alojado u hospedado en el portal de nuestra Facultad de Contaduría y Administración, Unidad Torreón

CONCLUSIONES

El trabajo se caracteriza por una solución innovadora al combinar los principios de los Modelos de Calidad con los Modelos de Negocio auxiliados por un SI creando un procedimiento original que permite no sólo diagnosticar la situación de la PYME sino que se le brindan alternativas estratégicas y se le ofrece al apoyo mediante “coaching” por parte de alumnos y profesores de nuestra Facultad. Las variables externas comprenden la evolución del negocio, su demanda, satisfacción de los clientes, actuación de la competencia, la calidad, políticas económicas y sociales, competencias, empleo y capacitación. Las variables de tipo interno se refieren a la situación de la empresa en cuanto a la utilización de recursos materiales, humanos y financieros, grado de conocimientos técnicos, organización, selección, adquisición, retención y crecimiento de clientes, así como las alianzas y cluster.

La importancia de las Alianzas, tal como se explica en el (Modelo EFQM, 2009), radica que en el mundo de hoy, cada vez más exigente y en cambio continuo, el éxito puede depender de las alianzas. Estas pueden establecerse con clientes, sociedad, proveedores e incluso competidores, y se basan en un

beneficio mutuo claramente identificado. En nuestro caso apostamos por alianzas dentro del modelo de Triple Hélice que establece a la universidad como centro, con actividades de investigación y desarrollo basadas en principios académicos, a la industria como proveedora de demanda de los clientes sobre la base de sus actividades comerciales, así como la investigación y desarrollo para generar nuevas oportunidades de negocio, y al gobierno como gestor de condiciones políticas y marco regulador apropiado para generar entornos de crecimiento.

Se cumple el objetivo de este artículo que es comprobar la factibilidad de evaluar y calificar el comportamiento de una empresa PYME desde la óptica de su Ejecutivo al comparar lo que él piensa que hace con el modelo teórico que diseñamos. Este importante resultado validado y comprobado nos abre las puertas y facilita el camino para posteriores análisis que posibilitarían darle al empresario algunas alternativas estratégicas para resolver las brechas o insuficiencias que presenta en su accionar.

PROGRAMAS EDUCATIVOS ESTRATÉGICOS DEL ÁREA ECONÓMICO ADMINISTRATIVO PARA SU APERTURA EN INSTITUCIONES DE EDUCACIÓN SUPERIOR

Ma. Teresa González Barajas, CESUES
José César Kaplan Navarro, CESUES
María Consuelo Cruz Mendívil, CESUES

RESUMEN

El presente trabajo provee información suficiente y relevante a los líderes de la educación superior interesados en tomar decisiones acertadas, en cuanto a pertinencia de programas educativos a ofertar, para que den éstos respuesta a la emergencia de necesidades económicas, políticas y sociales vigentes y cumplan con el compromiso fundamental de la educación: transformar la realidad actual contribuyendo al progreso de la región y del país, preservando su relación con el mundo. Por tanto, después de haber realizado una investigación de tipo no experimental bajo dos enfoques: documental y de campo, se presentan los principales resultados que identifican la percepción de los requerimientos laborales del sector productivo de la región sur del estado de Sonora; así como la percepción de estudiantes de las Instituciones de Educación Media Superior (IEMS), respecto a la aceptación de un programa educativo con perfil económico administrativo.

PALABRAS CLAVE: pertinencia, perfil económico administrativo, requerimientos laborales

ABSTRACT

The present paper provides sufficient information relevant to higher education leaders interested in making good decisions in terms of relevance of educational programs to offer, to give them an emergency response to the economic, political and social force and meet fundamental commitment to education: transforming the current situation contributing to the progress of the region and country, preserving its relationship with the world. Therefore, after making a non-experimental research, under two approaches: documentary and field research. The results present the perception of the labor requirements in the production sector of the southern region of the state of Sonora, and the perception of senior high school students, regarding the acceptance of an educational program with administrative economic profile.

KEYWORDS: appropriateness, administrative economic profile, labor requirements.

INTRODUCCIÓN

Desde su concepción y nacimiento, es compromiso de la educación superior dar respuesta pertinente a la sociedad, bajo una perspectiva de calidad ante referentes nacionales e internacionales y atendiendo a los constantes cambios y nuevos descubrimientos en cuanto a integración de bloques económicos, velocidad en la comunicación y la tecnología, necesidad de constructos de conocimientos contemporáneos, disponibilidad de información, entre otros, que exige a las instituciones de Educación Superior (IES) profundos, reflexivos y estructurados cambios en su quehacer académico. (Corzo y Marcano, 2009). En tal sentido, las Instituciones de Educación Superior (IES), son reconocidas como productoras y difusoras de conocimiento para el desarrollo, al atender los requerimientos de la situación económico-social, con el propósito de lograr crecimiento y desarrollo (UNESCO, 2004). Así mismo, la política nacional en materia de educación superior, está encaminada a la actualización de programas de estudios,

sus contenidos, materiales y métodos para elevar su pertinencia y relevancia en el desarrollo integral de los estudiantes. Es entonces, inalienable el compromiso de las instituciones de educación superior (IES) de contribuir al progreso de la región y del país a través de la oferta de programas educativos pertinentes tanto a las necesidades del sector productivo como a la demanda de los egresados del nivel medio superior. México requiere que todos los jóvenes que así lo deseen puedan tener acceso a educación superior de calidad, y también que los contenidos y métodos educativos respondan a las características que demanda el mercado laboral (Presidencia de la república México, 2007).

Para el caso de Sonora, México, el Plan Estatal de Desarrollo 2010-2015 del Gobierno del Estado (2009) plantea la necesidad de promover la pertinencia de los planes de estudio de las instituciones de educación superior, a los requerimientos de las principales actividades productivas y a las oportunidades que ofrece el desarrollo tecnológico de la entidad. Sin embargo, el hecho de alcanzar los niveles de escolaridad más altos no garantiza que los estudiantes se incorporen, una vez graduados, al mundo del trabajo. Ello habla de manera elocuente del problema de la falta de vinculación entre la educación superior y el mercado laboral. A nivel nacional, el 50% de los estudiantes se inscribe en áreas de ciencias sociales y administrativas, en contraposición con las ciencias agropecuarias, naturales y exactas, en las que se observa una disminución en la matrícula, por lo que se infiere que los programas educativos con perfil económico administrativo tienen una demanda significativa, sin embargo es importante analizar qué programas son más estratégicos para su apertura, atendiendo la pertinencia del programa, para que los estudiantes respondan a las características que demanda el mercado de trabajo.

Por lo anterior, se deben alinear las necesidades educativas con los requerimientos del sector empresarial, mediante la vinculación del perfil de los programas educativos con las competencias profesionales requeridas por el sector productivo, a efecto de contribuir en la competitividad para el desarrollo, por lo tanto, se propone el presente proyecto de investigación enfocado en identificar la pertinencia de programas educativos con perfil económico administrativo y factible para su oferta en las IES. La realización de la presente investigación permitirá contar con información suficiente y relevante que permita a los directivos tomar decisiones acertadas en cuanto a la oferta de programas educativos con perfil económico administrativo, con lo que se estarán optimizando los recursos y como resultado de cursar un PE pertinente con el sector productivo, el egresado estará en mejores condiciones para la inserción laboral en un periodo de tiempo menor. Por otro lado, el sector productivo también se estará beneficiando al atender las necesidades del mercado laboral y las características que los nuevos profesionistas deben cumplir. En este contexto, las IES estarán ofreciendo opciones de formación profesional requeridas por la emergencia de necesidades económicas y sociales de las localidades en donde se establecen sus unidades académicas y con ello contribuyendo al progreso de la región y del país (ANUIES, 2000).

REVISION LITERARIA

Lepe Aguayo y Cols (1998), comentan que para estudiar la pertinencia de un programa educativo es necesario un estudio de las principales actividades económicas de la región para enfocarse a ésta y ofrecer carreras acordes a lo que los sectores productivos están solicitando. También, se deberá valorar los efectos que producirá la respuesta de la sociedad ante la oferta de esos programas educativos que solicitan los sectores productivos. La UNESCO (1998) en la conferencia mundial sobre la educación superior, señala “la pertinencia de los planes de estudios, las posibilidades de empleo de los diplomados, el establecimiento de acuerdos de cooperación eficaces y la igualdad de acceso a los beneficios que reporta la cooperación internacional...” aseverando que la educación superior debe hacer frente a la vez a los retos que suponen las nuevas oportunidades que abren las tecnologías, que mejoran la manera de producir, organizar, difundir y controlar el saber y de acceder al mismo. A medida que avanza el crecimiento y desarrollo de una región, el sentido de pertinencia de un programa educativo cobra relevancia, no sólo porque el profesional egresado encuentra trabajo, sino por la capacidad para crearlo en

este mundo de incesantes cambios. En este sentido, la pertinencia tiene que ver con el mercado laboral al que se insertarán los egresados de un programa educativo, por lo que son factores críticos de éxito, el tiempo y las condiciones de la comunidad a la que van dirigidos los nuevos profesionistas (Braslavsky, 1999). Para Tünnermann (2002), la pertinencia debe analizarse desde una perspectiva más amplia, que tenga en cuenta los desafíos, los retos y las demandas que impone la sociedad al sistema de ES y a cada una de las IES que lo integran., entendiendo a la pertinencia como la adecuación entre lo que la sociedad requiere de las instituciones y lo que éstas generan como respuesta eficiente y de calidad.

Por otro lado las ANUIES (2011), refiere que uno de los criterios para el diseño de políticas educativas a nivel superior es la pertinencia social, es decir que debe haber coherencia entre los objetivos y perfiles de egreso con las necesidades actuales de la institución educativa y con el mercado de trabajo. La palabra factibilidad, se deriva del vocablo factible (hacedero, realizable). En educación se refiere a la consistencia interna entre lo diseñado en el plan curricular y su relación con los distintos componentes educativos: programas de enseñanza, estuantes, adelantos en el campo disciplinario, profesores, administradores, recursos materiales, técnicos, económicos (Lepe aguayo y cols, 1998).

La factibilidad es un criterio que se enfoca hacia aquello que se puede realizar, ponerse en práctica, lo hacedero, lo posible en una realidad concreta. Es importante considerar la posibilidad de aplicar los nuevos esquemas al sistema escolar de que se trate, ya que, lo deseable debe ser también aplicable, formular preguntas, destacar situaciones, es una forma de establecer la factibilidad, es requisito primordial para la adopción de cualquier innovación. Para determinar la factibilidad de acuerdo a lo citado, es importante conocer el sistema educativo al que pertenece la institución que desea ofrecer el plan, además tener en consideración los recursos con lo que se cuenta (humanos y materiales, principalmente) para discriminar si el proyecto a emprender es aplicable o no.

OBJETIVO

Determinar qué programas educativos del área económico administrativo son estratégicos, para su apertura en instituciones de educación superior.

METODOLOGÍA

El diseño de la presente investigación es del tipo descriptivo cualitativo (Hernández, 2006) que aplica los métodos de la investigación social y sus instrumentos (cuestionarios y entrevistas), con el propósito de detectar la demanda de PE con perfil económico administrativo y la oferta laboral del sector productivo en la región sur del Estado de Sonora.

Muestra

El cálculo para el tamaño de la muestra se determinó utilizando la siguiente fórmula:

$$n = (Z^2 pqN) / (Ne^2 + Z^2 pq)$$

Donde:

n = Tamaño de la muestra

p = probabilidad de que ocurra el evento

q = probabilidad de que no ocurra el evento

e = Error

Z = Nivel de confianza (para 95% es 1.96)

N = Tamaño de la población

Utilizando como marco de muestreo el listado de los alumnos inscritos en las Instituciones de Educación Media Superior (IEMS) de la zona de influencia se tomarán de manera sistemática y aleatoria con probabilidad proporcional a su tamaño de la zona de influencia de la ciudad de Navojoa, Huatabampo, Alamos y Etchojoa. En el caso del sector productivo, se hará un catálogo único con las empresas registradas en el Sistema de Información Empresarial Mexicano (SIEM), Cámara Nacional de Comercio (CANACO), Cámara Mexicana de la Industria de la Construcción (CMIC) y Cámara Nacional de la Industria de la Transformación (CANACINTRA) de la zona de influencia referida en el párrafo anterior. Los cuestionarios (ver apartado de anexos) una vez contestados se codificaron y se capturaron en hoja de cálculo Excel 2007, con el cual se aplicó estadística básica descriptiva, que permitió hacer un análisis cualitativo (Weber, 1990).

Participantes

Se consideraron dos unidades de análisis:

1. *Estudiantes del sexto semestre* próximos a egresar de nivel medio superior en la región sur de Sonora. (Comprende los municipios de Álamos, Etchojoa, Huatabampo y Navojoa). Actualmente en dicha región, suman 34 preparatorias con un total de 4,169 alumnos (IEEES, 2010).

Para la segunda unidad de análisis, se considerará el padrón de comerciantes registrados en la Cámara Nacional de Comercio de los municipios anotados en el punto anterior, con un total de 309.

Instrumento Para La Obtención De Datos:

Se diseñaron dos cuestionarios (ver anexos):

1. Dirigido a estudiantes: Consta de **6** reactivos que incluye variables generales del estudiante, planes al terminar el bachillerato, las razones para ingresar a una Universidad y sus expectativas académicas.
2. Dirigido a directivos de Empresas: Conformado por **7** reactivos que incluye datos generales de la empresa, puestos, número de trabajadores, nivel promedio de estudios y principales actividades que se desempeñan a diversos niveles en el área económica – administrativa y participación académica.

Procedimiento

Para el desarrollo de esta investigación, se llevó a cabo el procedimiento que se describe:

1. Determinación de la población.
2. Determinación de la muestra.
3. Prorrato de la muestra tomando en consideración el número de sujetos inscritos en cada preparatoria. (y número de sujetos en cada comunidad en el caso del sector productivo).
4. Aplicación de los cuestionarios en un primer tiempo.
5. Captura de datos en base de datos.

6. Elaboración de las gráficas de los datos en hoja de cálculo de Excel.
7. Preguntas de discusión.
8. Análisis.
9. Presentación de resultados.

RESULTADOS

Conforme a los datos arrojados por el instrumento de recolección de datos, que se aplicó a estudiantes del sexto semestre de educación media superior se encontró que el 84% de los estudiantes encuestados si tiene pensado estudiar una licenciatura. Lo anterior significa que al tener una población de 4,000 estudiantes, en el próximo ciclo escolar estarán demandando más de 3,300 espacios en las universidades.

Además, se encontró que hay un 29% que le gustaría estudiar una opción distinta de las que se presentan de manera explícita en la siguiente figura. No obstante que en la pregunta se presentan opciones de programas educativos nuevos y actuales, prevalece la preferencia por los programas educativos tradicionales como el de Licenciado en Derecho con una preferencia del 16%, Licenciado en comercio internacional y Licenciado en administración de empresas con un 9% y Contador público con un 7%. En menor grado se encuentran las preferencias por los programas de Licenciado en sistemas computacionales administrativos, licenciado en agronegocios internacionales y licenciado en administración de empresas turísticas con un 6%. Y con apenas el uno por ciento de las preferencias, se encuentran los programas de Licenciado en sistemas de información administrativa, Licenciado en gestión de sistemas de negocios, Licenciado en economía, Licenciado en desarrollo empresarial y de negocios, Licenciado en desarrollo y economías regionales y Licenciado en administración pública.

El 55% de los jóvenes toman en cuenta las oportunidades de trabajo para la selección de su carrera, el 39% selecciona su carrera por vocación y el 6% por otros motivos. Del 17% de estudiantes que respondieron que no les gustaría recibir información, ya que no les interesa estudiar ninguno de los programas educativos enlistados en la pregunta anterior, el 73% opina que “no es la carrera que quieren estudiar”, el 21% “no tiene información” y el resto por “Otros” motivos.

Ante la pregunta directa a los estudiantes de preparatoria, de que si les gustaría recibir información de otros programas educativos con perfil económico administrativo, un 19% respondió que le gustaría recibir información del programa educativo de licenciado en desarrollo empresarial y de negocios, el 12% de licenciado en administración financiera, el 5% le gustaría recibir información sobre licenciado en economía, otro 5% de licenciado en administración del capital humano y del conocimiento, el 4% sobre licenciados en desarrollo de economías regionales, al 26% no le gustaría recibir información y el resto (17%), no contestó. Por otro lado, en el sector productivo se encontró que el 97% de las empresas requieren al menos de un profesional con perfil en las áreas económicas administrativas. Específicamente los empresarios prefieren a un contador público y/o a un licenciado en administración de empresas, ya que estas dos carreras tienen una preferencia del 70% y 64% en el sector productivo. (Ver tabla 1).

Tabla 1: Preferencias de licenciaturas por parte del sector empresarial

Programa Educativo	Preferencia %
Contador público	70
Administración de empresas	64
Economía y finanzas	30
Sistemas computacionales y administrativos	27
Mercadotecnia	18
Comercio internacional	18
Turismo	15
Otros	03
Fuente: Elaboración propia.	

En relación al número de puestos que las empresas tienen y están ocupados por profesionistas del área económico administrativo, el 33% mencionó que tienen en promedio 4 puestos, otro 33% dispone de 3 puestos, un 15% tiene 2 puestos, en el mismo nivel del 15% hay empresas que sólo tienen disponible 1 puesto y el 4% mencionó que no tiene ningún puesto con estas características. Considerando como valores de referencia donde 1 es más importante y 7 menos importante; se encontró que las áreas más importantes para los empresarios son en primer lugar las Ventas con un grado de importancia promedio de 2.1, seguido de Organización con 2.7 y Contabilidad con 3.5, luego Finanzas y Recursos humanos con 3.6, quedando rezagadas las áreas de Tecnología y procesos con 4.5 y el resto de las áreas con 6.6. (Ver tabla 2).

Tabla 2: Áreas más importantes para los empresarios

Área	Grado de importancia
Ventas	2.1
Organización	2.7
Contabilidad	3.5
Finanzas	3.6
Recursos humanos	3.6
Tecnología y procesos	4.5
Otros	6.6
Fuente: Elaboración propia.	

Por otro lado, considerando como valores de referencia donde 1 es más importante y 6 es menos importante, los beneficios que esperan obtener los empresarios en orden prioritario son los que se muestran en la Tabla 3, resultando los más importantes: Ventas, organización y control administrativo con valores de 2.1, 2.4 y 2.7 respectivamente.

Tabla 3: Beneficios que espera obtener el empresario

Área	Grado de importancia
Mejor nivel de ventas	2.1
Mejor Organización	2.4
Mejor control administrativo	2.7
Reducción de costos	3.1
Emprendimiento e innovación	3.5
Mejor control de recursos humanos	3.8.
Fuente: Elaboración propia.	

CONCLUSIONES

En atención a los resultados obtenidos, sin duda los programas educativos estratégicos con perfil económico administrativo en el sur del estado de Sonora, son el de Contador público y Licenciado en administración de empresas, considerando que estos dos son los de mayor requerimiento por parte del mercado laboral. Además tienen un grado de preferencia aceptable por parte de los estudiantes próximos a ingresar a la universidad. En segundo lugar se identificó el programa de licenciado en comercio internacional quien presentó una preferencia por parte del sector productivo del 18%, y una preferencia del 9% por parte de los estudiantes de educación media superior.

Otro hallazgo importante es que los estudiantes de educación media superior tienen disposición por recibir información de otros programas educativos que no son tradicionales, lo cual sugiere que hay apertura por conocer otras carreras. En este sentido será importante tomar en cuenta el perfil económico de la región y la tendencia que presentan los sectores de desarrollo y lo que el sector productivo espera al contratar a un profesional del área económico administrativa que como ya se vio en los resultados las áreas más importantes para los empresarios son ventas, organización y contabilidad

Por otro lado, el programa de licenciado en derecho es el que más preferencia tiene por parte de los estudiantes de educación media superior con un 16%, sin embargo no fue mencionado como preferente por parte del sector productivo. Finalmente, se debe reconocer el dinamismo que pueden presentar las preferencias de los estudiantes y del mercado laboral, además de las condiciones de los factores económicos de la región, por lo que es recomendable realizar un estudio antes de la apertura un programa educativo.

PERCEPCIÓN DE LA CALIDAD DEL SERVICIO EDUCATIVO UNIVERSITARIO. UN ENFOQUE CUALITATIVO

Oscar Reyes Sánchez, UABC.

Marcela Reyes Pazos, UABC

RESUMEN

El propósito de esta investigación es analizar las dimensiones la percepción de alumnos y profesores de la calidad del servicio educativo en la Universidad desde la perspectiva cualitativa. Del estudio de las diferentes dimensiones de la calidad del servicio, de la evidencia empírica obtenida complementen los instrumento cuantitativo servqual y obtener conclusiones relevantes que contribuyan a diseñar e implementar líneas de mejora en las actuales estrategias de calidad en el nivel de educación universitaria. Se utilizaron los marcos de interpretación del interaccionismo simbólico, la etnometdología y la fenomenología de Schutz. se utilizaron las técnicas de grupo focal, entrevista a profundidad y se apoyó en el software ATLAS.TI, con el fin de categorizar y describir las relaciones conceptuales desde la perspectiva cualitativa. Una de las aportaciones más importantes de esta investigación es complementar al instrumento cuantitativo con los métodos y técnicas cualitativas y apoyar a la planeación estratégica institucional y la mejora continua del servicio educativo.

PALABRAS CLAVE: Servqual, investigación cualitativa, satisfacción del cliente.

JEL:I23

ABSTRAT

The purpose of this research is to analyze the dimensions of the perception of students and teachers of the quality of education at the University from the qualitative perspective. The study of the different dimensions of service quality, the empirical evidence servqual complement quantitative tool and draw conclusions relevant to contribute to design and implement areas for improvement in current quality strategies at the level of education. We used the frameworks of interpretation of symbolic interactionism, etnometdology and Schutz phenomenology . Techniques were used in focus groups, depth interviews and leaned ATLAS.TI software in order to categorize and describe the conceptual relationships from the qualitative perspective. One of the most important contributions of this research is to complement the instrument with the quantitative and qualitative methods and techniques to support corporate strategic planning and continuous improvement of educational services.

Keywords: Quality of service, higher education, servqual.

INTRODUCCIÓN

Las características políticas, económicas y sociales actuales demandan mayores exigencias de aquellos especialistas que diseñan y planifican las actividades de formación educativa. Se requiere entonces, de universidades que presten servicios de formación de acuerdo a las demandas del mercado laboral de la región, del país y del mercado de trabajo globalizado. Para mejorar la calidad en las instituciones de educación superior, enfocadas como empresas de servicios, es necesario cumplir con las peticiones de la sociedad, por que ella es la que decide ingresar a la mejor escuela para recibir una educación de calidad, entonces es un desafío para las universidades públicas poder competir en este nivel, con una visión más

empresarial, donde cumplan con las peticiones de los clientes, compitiendo en cuestión de calidad del servicio. Pero necesita estar en una institución superior de calidad donde se sienta placentero, y satisfecho con los servicios que le proporcionan, donde cumplan con sus demandas e inquietudes como cliente.

Sin embargo estos rankings no muestran la percepción de calidad por el servicio recibido que tiene los estudiantes de la universidad, durante el periodo escolar, y si ellos están de acuerdo con el servicio que están recibiendo. Los estudiantes, tendrán una percepción positiva del servicio, si la institución educativa satisface todas las necesidades del alumno, cubriendo sus exigencias antes, durante y después del servicio.

La percepción de la calidad del servicio por parte del estudiante es de gran interés para las instituciones de educación superior, porque en la actualidad existen más universidades tanto públicas como privadas que compiten por estar certificadas con las normas ISO9000, y ofrecer el mejor servicio de educación pero no saben que es lo que piensan los usuarios al respecto. Para la universidad, la opinión y percepción del estudiante acerca del servicio que esta recibiendo es sumamente importante, porque él es el cliente quien juzga el servicio. La evaluación de la calidad del servicio en las universidades, es fundamental, para ejercer un control en los procedimientos que se llevan a cabo, y se puedan mejorar o perfeccionar funciones que se realizan mal, debe ser constante, llevar un seguimiento y ser automática. Entendida de este modo, la calidad requiere un juicio valorativo que viene dado por la evaluación. De esta manera, la palabra calidad adquiere un sentido descriptivo. Por lo tanto, es importante hacer la distinción entre calidad y evaluación, pues mientras la calidad de la educación implica un proceso de mejora continuo sobre sus elementos, también requiere necesariamente de la evaluación.

En la escuela, la evaluación de la calidad del servicio se realiza de distintas maneras, como puede ser por medio de encuestas de satisfacción de estudiantes, evaluación de los docentes, número de usuarios atendidos por día, encuesta de percepción de la calidad del servicio, buzón de sugerencias, acreditación de los programas de licenciatura, documentación, número de egresados, etc. Ello se deriva de las acciones que las universidades están realizando para establecer un sistema de evaluación de la calidad del servicio que ofrecen. Una estrategia para incrementar la calidad en estas instituciones es satisfacer la demanda de servicio de los alumnos, con el fin de cumplir con esa parte donde la empresa tiene que satisfacer a su cliente, y haciendo hincapié al mundo cambiante que se vive en la actualidad con la globalización, para que el día de mañana la universidad pública sea reconocida como una institución de buena calidad recomendada por los estudiantes, como clientes satisfechos.

Con esta investigación se pretende hacer un aporte en lo teórico al adaptar la escala servqual y servqualing a la medición de la percepción de la calidad del servicio educativo universitario desde la perspectiva docente, y en particular la creación de conceptos (obtención de dimensiones latentes, subyacentes o empíricas) en el área de la Administración de los Servicios ad-hoc al contexto del servicio educativo prestado en la FCH de la UABC. Se ha realizado la medición de la percepción de la calidad desde la perspectiva de los alumnos y PTC, pero resulta interesante analizar la percepción que tienen los PTC y contrastar con los resultados de los estudiantes para observar convergencias y divergencias.

Es un apoyo para la toma de decisiones y la planeación estratégica del desarrollo institucional de la FCH-UABC.

Formulación Del Problema

¿Qué relación existe entre la percepción de la calidad del servicio educativo y la importancia atribuida a las dimensiones que integran la calidad del mismo, de los Alumnos y Profesores de Tiempo Completo (PTC) de Licenciatura en la Facultad de Ciencias Humanas (FCH), campus Mexicali, de la Universidad Autónoma de Baja California (UABC) durante el periodo escolar 2010-1?

Objetivo general de investigación

Analizar la relación que existe entre la percepción de la calidad del servicio educativo y la importancia atribuida a las dimensiones que integran la calidad del mismo, de los alumnos y PTC de licenciatura en la Facultad de Ciencias Humanas (FCH), campus Mexicali, de la Universidad Autónoma de Baja California (UABC) durante el periodo escolar 2010-1. Complementar los resultados cuantitativos de calidad del servicio educativo universitario.

Alcances y limitaciones

La presente investigación se delimita al estudio de caso del universo de la FCH de la UABC utilizando muestras típicas de carácter cualitativo para grupos focales y entrevistas a profundidad.

REVISIÓN LITERARIA

El Interaccionismo Simbólico, estudia los significados dentro del lenguaje escrito y hablado y en el comportamiento en la interacción social, se analiza la acción humana abordándola como una ciencia interpretativa en busca de su significado y no como una ciencia natural, la cual busca leyes. El IS se práctica a través del “estudio de casos”, apoyado en la observación participante dentro del contexto bajo estudio. En el interaccionismo interpretativo se utiliza el concepto de “*triangulación múltiple*”, es decir, la combinación de múltiples *métodos*, múltiples tipos de *datos* (de diferentes muestras), múltiples *observadores* (más de un punto de vista) y múltiples *teorías* (para analizar la información), todo en el desarrollo y estudio de una misma investigación.

En esta investigación se contrastan los resultados cuantitativos y cualitativos con un enfoque complementario que permita un conocimiento más completo del objeto de estudio. La fenomenología tiene como sustento cuatro conceptos: la temporalidad, se refiere al tiempo vivido, la espacialidad, el espacio vivido, la corporalidad, el cuerpo vivido y la relacionalidad o la comunidad que se refiere a la relación humana (Álvarez-Gayou Jurgenson, 2003). Para la fenomenología es de vital importancia darle énfasis a la experiencia vivida de los seres humanos, en ella se vinculan los sujetos con su mundo al interactuar en un contexto rico en relaciones con objetos, personas, sucesos y situaciones. Dentro de la fenomenología existen dos premisas, la premisa expresada por Morse, hace mención de las percepciones de las personas, éstas, evidencian la existencia de su mundo, no como lo piensan sino como lo viven. La premisa formulada por Richard menciona que la existencia del hombre es crucial y significativa, pues, siempre estamos conscientes de algo, por lo cual la existencia implica que las personas están en su mundo y solo pueden ser comprendidas dentro de este contexto (Álvarez-Gayou Jurgenson, 2006).

El término fenomenológico está basado principalmente en relación con la presentación de Husserl y la explicación de una ontología por esencias. Esta rama de la filosofía se diferencia de otras al ser más descriptiva que explicativa (Álvarez-Gayou Jurgenson, 2006). A partir de la teoría de Alfred Schutz, se interpretó la experiencia de los sujetos participantes en el P E-A, la acción social es descrita por los sujetos actores basándose en las distintas tipificaciones que le son proveídas por su situación biográfica, su acervo de conocimientos a mano y la intersubjetividad (Schutz, 1993 y 1995). El mundo del sentido común está determinado por la situación biográfica del individuo, todos comparten una realidad, un espacio, pero las experiencias individuales definen al individuo de una forma distinta a sus semejantes. El acervo de conocimiento a mano, es todo el saber almacenado por las personas en el interior, en la memoria y hace uso de él, cuando se tiene una experiencia nueva.

La realidad fenomenológica se concibe como un mundo donde los fenómenos están dados, sin importar si éstos son reales o imaginarios. La realidad cotidiana es aprehendida por los sujetos de manera natural, por el denominado sentido común, mismo que es compartido por la colectividad.

El ser humano comprende su realidad y la de los otros como experiencias reales y significativas. Los individuos son capaces de ponerse en el lugar de otro. Este sentido común es también el lugar de las acciones del individuo; actúa en él, incluso, antes de comprenderlo. Pero ese conocimiento de los individuos está determinado por su biografía particular. Cada persona tiene experiencias propias que dependen de diversos factores como el lugar en donde habitan, su lugar de origen, la educación familiar, su educación formal, en fin, todos aquellos elementos que de alguna u otra manera configuran su vida concreta. De eso depende la perspectiva del mundo vivida por el sujeto y a través de ella comprende toda su existencia. Este proceso es posible al “acervo de conocimientos a mano”, también llamado “repositorio de conocimiento disponible”, así denominado por la fenomenología de Alfred Schutz, este es un almacén pasivo de experiencias personales y pueden ser traídas al aquí y ahora para constituir una nueva experiencia personal inmediata la cual será archivada y será considerada por el sujeto como una experiencia anterior y así sucesivamente. Este repositorio ayuda a estructurar las nuevas vivencias y hace posible la reflexión de los individuos en torno a sus experiencias.

El alumno comprende su realidad escolar y la de los otros compañeros como experiencias reales y significativas. Los estudiantes son capaces de ponerse en el lugar de otro. Este sentido común es también el lugar de sus acciones; actúan en él, incluso, antes de comprenderlo. Perciben la calidad del servicio educativo recibido en torno a las necesidades de su rol estudiantil y a la interacción con su entorno académico. Pero ese conocimiento de los estudiantes está determinado por su biografía particular. Cada alumno tiene experiencias propias que dependen de diversos factores como el lugar en donde estudian, donde habitan, su lugar de origen, la educación familiar, su educación formal, en fin, todos aquellos elementos que de alguna u otra manera configuran su vida concreta. De eso depende la perspectiva del mundo vivido y a través de ella es comprendida toda su existencia.

La realidad cotidiana de la calidad del servicio educativo universitario que se oferta en la FCH UABC la percibieron los sujetos del proceso educativo auxiliados en principio, mediante las categorías teóricas proporcionadas por el investigador y el acervo de conocimientos personales utilizados dentro de este marco de interpretación tanto de los alumnos como de los docentes a partir de aquí, se elaboraron las descripciones de lo percibido, de las vivencias del día a día en el proceso de enseñanza- aprendizaje (P E- A) desarrollado en la unidad académica bajo estudio, con las fortalezas y debilidades que caracterizan al servicio educativo y con el deseo de lograr una mejor educación, dentro del rol que cada uno de los sujetos juega y la posibilidad de influir en el proceso educativo institucional, según lo relatan los sujetos investigados mediante técnicas cualitativas de grupos focales y entrevistas a profundidad realizadas en la FCH UABC, se obtuvieron los resultados cualitativos siguientes.

Según Mejías (2005) y Mejías, Reyes y Maneiro (2006). Las dimensiones de la calidad del servicio se dividen en: Elementos Tangibles, Confiabilidad, Capacidad de Respuesta, Seguridad y Empatía y presentan 22 indicadores básicos traducidos y adaptados a la educación superior. Definición según Parasuraman, Zeithaml y Berry (1985, 1988 y 1998): Las percepciones de calidad de los clientes están influenciadas por una serie de diversas diferencias que ocurren en el lado de quien ofrece el servicio, y proponen la necesidad de examinar la naturaleza de la asociación entre la calidad del servicio percibida por el cliente y sus determinantes. En la presente investigación se abordan las percepciones que tienen los alumnos y los PTC como agentes participantes directos del servicio educativo universitario y tener una percepción multinivel de la calidad del servicio universitario.

Hoy en día el trabajo del administrador en las organizaciones se ve envuelto en conceptos de calidad. El enfoque de Parasuraman, Zeithaml y Berry (1988), mide la calidad del servicio, con el instrumento Servqual, y la propuesta de Mejías(2006) adapta este instrumento al sector educativo, denominado Servqualing. El servqual de Parasuraman ha sido aplicado en empresas internacionales y nacionales, y el servqualing de Mejías, implementado en instituciones latinoamericanas de educación superior, mostrando

bastante aceptabilidad en su utilización en la medición de la calidad del servicio educativo en Latinoamérica. Citas. Según Deming (1993 citado en Evans y Lindsay, 2000) la calidad debe dirigirse a las necesidades del consumidor, tanto presentes como futuras, y se determina por las interrelaciones entre los factores como el producto, usuario, y servicio. En el proceso administrativo de la empresa, en la etapa de control, se compara lo real con lo planeado. El control de calidad total tiene como propósito el cumplimiento de los requisitos propuestos por el consumidor, la prevención de la comisión de errores que reduzcan la calidad del producto, la intención de fabricar productos sin defectos y, reducir al mínimo el costo del incumplimiento relacionado con la calidad. Las empresas extranjeras y nacionales han alcanzado avances trascendentales en su ejercicio después de haber implantado un sistema de gestión de calidad total, ofreciendo productos y servicios de mejor calidad.

En México, la calidad se ha difundido muy rápido de manera efectiva, al principio en la industria, y después en los sectores educativos, servicios y gobierno. Esta investigación es importante en la actualidad por que toca el concepto de la calidad del servicio percibido por el cliente como una de las estrategias que utiliza actualmente la administración para mejorar la producción de servicios en las empresas gubernamentales, privadas, sin fin o con fin de lucro, con ello mantenerse y en lo posible liderar el mercado de servicios. Otro aspecto importante que se destaca en este estudio es el estudiar la percepción de la calidad del servicio, al ser un elemento más complicado para su medición que la calidad del producto, es doblemente abstracto, por un lado el servicio como tal es etéreo se produce sólo en el momento en que existe la interacción cliente – proveedor, y por otro se trabaja con las percepciones que entran en el terreno de la subjetividad del cliente, pero ha sido demostrado el hecho de ser confiable medir las percepciones con instrumentos como la escala de actitudes hacia el servicio llamada escala Likert o la escala de Diferencial Semántico. Se destaca un aspecto más, en el terreno de la Administración Educativa y en particular la educación universitaria pública el tema resulta relevante y novedoso en los últimos años, como se expone en la revisión de la literatura, no es un acción cotidiana medir la percepción de la calidad del servicio educativo de sus clientes (estudiantes) y menos aún la de los PTC.

METODOLOGÍA

La presente investigación en el enfoque cuantitativo se delimito al estudio de caso del universo de la FCH de la UABC y se utilizaron muestras a conveniencia del investigador (Reyes, O. y Reyes, M., 2012) **Universo.** La población total de alumnos de la Facultad de Ciencias humanas, de la UABC, campus Mexicali, es de 2258 estudiantes de las distintas carreras como son Ciencias de la Comunicación, Psicología, Sociología, y Ciencias de la Educación. Cuenta con una Planta Docente de Profesores de Tiempo Completo (PTC) de 49 quienes tienen labores académicas y administrativo-académicas, además de 98 maestros por asignaturas.

Muestra cualitativa. Entrevista a profundidad: se entrevistaron a seis estudiantes y a tres profesores. Grupo Focal: dos grupos de seis estudiantes y uno de cinco Profesores de Tiempo Completo (PTC). Se utilizó un instrumento guía de preguntas abiertas, se emplearon las categorías teóricas de calidad de servicio educativo universitario, se realizó un análisis de contenido en la construcción de conceptos con apoyo del Software Atlas.ti, utilizado en la investigación cualitativa.

RESULTADOS

Integración De Resultados Cuantitativos Y Cualitativos

1.- El propósito de esta investigación fue analizar la relación que existe entre la percepción de la calidad del servicio educativo y la importancia de la asociación de cada una de las dimensiones que integran la calidad del mismo: Se partió de las dimensiones teóricas (a priori) de Parasuraman y Mejías (Elementos tangibles, Confiabilidad, Capacidad de Respuesta, Seguridad y Empatía), se obtuvieron en los alumnos, a

través de el análisis de factores, las dimensiones empíricas (a posteriori) de: Servicio eficaz, compromiso con la eficiencia, empatía y elementos tangibles, de los estudiantes de licenciatura y en los docentes: atención empática, respuesta segura, satisfacción eficaz, comunicación eficaz y confianza, en la Facultad de Ciencias Humanas (FCH), de la Universidad Autónoma de Baja California (UABC) campus Mexicali, durante el periodo escolar 2010-1.

2.- En los alumnos se analizó la correlación de cada una de las dimensiones con la media general de la calidad del servicio, obteniéndose los siguientes coeficientes de correlación de Pearson y su significancia. Servicio Eficaz, $r=0.894$, $p=0.000$; compromiso con la eficiencia $r=0.865$, $p=0.000$, empatía $r=0.860$, $p=0.000$, y elementos tangibles $r=0.697$, $p=0.000$.

3. En los docentes se analizó la correlación de cada una de las dimensiones con la media general de la calidad del servicio, obteniéndose los siguientes coeficientes de correlación de Pearson y su significancia. Atención empática $r=0.746$, respuesta segura $r=0.847$, $r=$ servicio eficaz 0.877 , comunicación eficaz $r=0.826$ y confianza $r=0.750$, $p=0.000$.

4.- Para ello se aplicó el instrumento SERVQUALING del cual se obtuvo una confiabilidad alpha de Cronbach de 0.935. Con los datos obtenidos se realizó un análisis factorial, rotación de factores VARIMAX con el fin de obtener las dimensiones subyacentes, empíricas, de la percepción de la calidad del servicio educativo de los estudiantes, confirmándose 2 dimensiones teóricas: Elementos tangibles, y Empatía, propuestas por Parasuraman y Mejías, obteniéndose 2 dimensiones subyacentes: Servicio Eficaz, y compromiso con la eficiencia.

5.- Se establece la afirmación en este estudio que existe una correlación de la media general en la Percepción de la Calidad del Servicio Educativo, con las dimensiones empíricas que son: Servicio eficaz, compromiso con la eficiencia, empatía y elementos tangibles.

6. Se establece la afirmación en este estudio que existe una correlación de la media general en la Percepción de la Calidad del Servicio Educativo, con las dimensiones empíricas: Atención empática, respuesta segura, satisfacción eficaz y confianza.

7.- La percepción de la calidad del servicio educativo de los estudiantes, obtuvo una media de 3.13 la cual significa que el estudiante no esta ni de acuerdo ni en desacuerdo con la percepción general de la calidad de dicho servicio.

8. La percepción de la calidad del servicio educativo de los docentes, obtuvo una media de 3.06 la cual significa que no esta ni de acuerdo ni en desacuerdo con la percepción general de la calidad de dicho servicio.

9.- La misma interpretación se da a la medición de cada una de sus dimensiones empíricas, tanto en alumnos como en docentes.

10. En los instrumentos cuantitativos propuestos por Parasuraman y Mejías, hacen énfasis en la apariencia, en cambio en los datos cualitativos recogidos en los grupos focales y entrevistas a profundidad, hacen más referencia a la cantidad y calidad de los elementos tangibles, el principal problema señalado por los alumnos es el de los salones de clase con más alumnos de su capacidad, otro es el equipo de apoyo para el proceso de enseñanza-aprendizaje (P E-A) con relación al número de alumnos o usuarios del mismo. El alumno destaca lo más importante en su vida cotidiana escolar. El alumno se siente solo y sin respuesta adecuada a sus necesidades e intereses, se sienten desorientados en los procedimientos y trámites escolares. Se manifiesta la falta de la función adjetiva de apoyo administrativo, esto se refleja en los indicadores de los instrumentos cuantitativos NAND con el personal,

de sentir interés en solucionar los problemas de trámites administrativos a los estudiantes, en cumplir sus promesas de servicio, en realizar el servicio bien desde la primera vez y mantener los expedientes sin errores.

11. La ventaja del enfoque epistemológico transparadigmático propuesto aquí en esta investigación aborda al objeto de estudio con la fortaleza de cada paradigma epistemológico. El paradigma de las ciencias naturales con su método general de las ciencias busca las regularidades de los fenómenos para generalizar el conocimiento obtenido y sus técnicas están relacionadas con la posibilidad de medir de la manera más precisa a los fenómenos, tanto los eventos de la naturaleza como los sociales o de las ciencias humanas son de carácter estocástico, es la razón de emplear la teoría de la probabilidad sobre todo para evitar el error 1 y 2 en la confirmación de las hipótesis estadísticas de carácter científico.

En el caso de la medición de la percepción de la calidad del servicio universitario se utilizan técnicas estadísticas, escalas cuantitativas, para medir percepciones que tienen el carácter de subjetivas de las cuales se llega a hablar de objetividad cuando se consensan los resultados. Al utilizar escalas de medición de actitudes o escalas de diferencial semántico es posible aplicar técnicas estadísticas en un grupo o una población definida y esos resultados particulares referidos a una población o grupo singular, se pueden predecir o pronosticar formas de pensar, creencias y conductas en un momento determinado, de ese caso estudiado, siempre y cuando no haya transcurrido demasiado tiempo por que la realidad natural, social y humana está en constante flujo, por lo tanto, las mediciones son para una dimensión espacial y temporal determinada. Por otro lado el estudio de la subjetividad de las percepciones de los sujetos pertenecientes a grupos con una cultura particular, resulta muy útil emplear los paradigmas epistemológicos cualitativos,

posestructuralistas o o posmodernistas como es el caso de esta investigación doctoral la cual emplea los principios del Interaccionismo simbólico, la etnometodología y la fenomenología social de Schutz para comprender y entender la construcción de los significados y la intersubjetividad de los sujetos del proceso de E-A. La complementariedad de los paradigmas epistemológicos en lugar de caer en un enfoque espúreo, como algunos investigadores ortodoxos lo refieren, resulta un enfoque científico muy rico en conocimientos y por el contrario, permite confirmar los resultados, ampliarlos sinérgicamente contribuyendo a la validez y confiabilidad de los resultados de la investigación, nueva postura epistemológica en el siglo XXI. En la fase cualitativa de la investigación complementa los datos cuantitativos con aspectos muy importantes de la calidad del servicio educativo como es la dimensión de empatía, donde la percepción del alumno es que se siente solo y sin respuesta adecuada a sus necesidades e intereses, se sienten desorientados en los procedimientos y trámites escolares, se manifiesta la falta de la función adjetiva de apoyo administrativo en la administración educativa. En la dimensión de confiabilidad, hacen referencia de manera específica al servicio secretarial del área de la dirección, acerca de su trato desconsiderado y descortés con los alumnos, esto se refleja en los indicadores de los instrumentos cuantitativos Ni de acuerdo ni en desacuerdo (NAND) con el personal, de sentir interés en solucionar los problemas de trámites administrativos a los estudiantes, en cumplir sus promesas de servicio, en realizar el servicio bien desde la primera vez y mantener los expedientes sin errores.

En la dimensión de capacidad de respuesta, los alumnos están NAND con la puntualidad y disponibilidad, sobre todo en el área de apoyo administrativo. En particular el personal del servicio social ofrece un trato rígido y desconsiderado al estudiante; en el área de informática el trato al alumno es con falta de consideración y el trato por parte de las secretarías del área de la dirección no es adecuado para el estudiante. En la dimensión de elementos tangibles, al docente le llama la atención la paradoja de “edificios nuevos, equipos nuevos con zonas de jardín secas o marchitas, mascotas de mal aspecto en los patios, grafiti en los baños o en los mesa-bancos. Perciben falta de mantenimiento adecuado a los edificios; la caída frecuente del servicio de internet y la falta de este servicio inalámbrico en algunos salones, adicionalmente señalan la necesidad de mejorar los medios de difusión de la información de la Facultad. Tanto la dimensión teórica como empírica coinciden, la primera enfatiza en la apariencia

atractiva de la infraestructura física y equipo; la dimensión empírica de Atención Empática, vincula la atracción visual a la atención y ayuda individual brindada al estudiante, los docentes están NAND en ambas dimensiones y se relaciona con las respuestas cualitativas en la insatisfacción de tener edificios nuevos pero con mantenimiento inadecuado, perciben conductas estudiantiles irresponsables como el grafiti en baños y mesa-bancos, el servicio de internet irregular e insuficiente.

Se pone de manifiesto el rol laboral y formal del docente, percibe más fácilmente las insuficiencias de su centro de trabajo; por un lado el insuficiente mantenimiento del personal de jardinería y de intendencia, por otro, algunas conductas consideradas por ellos como irresponsables de los estudiantes, el grafiti en baños y pupitres. El servicio de internet inalámbrico lo destaca el docente por ser una herramienta importante en el proceso de enseñanza-aprendizaje (P E-A), en un modelo pedagógico apoyado por las Tecnologías de la Información y la Comunicación (TIC).El docente enfatiza en los recursos y en el ambiente requerido para el aprendizaje, como parte de su entorno laboral y asociado también al logro de sus objetivos de E-A, el alumno en cambio enfatiza en cantidad y calidad suficiente de salones y equipo utilizados en el P E-A, pero ambas se complementan en la percepción y se traduce en la oportunidad de destacar los aspectos de mejora del servicio educativo.El docente percibe una insatisfacción de los estudiantes en la atención recibida en sus trámites administrativos. Considera como motivo el desborde emocional en las relaciones humanas entre secretarias y alumnos.

El estudio de la subjetividad de las percepciones de los sujetos pertenecientes a grupos con una cultura particular, es muy útil emplear los paradigmas epistemológicos cualitativos, posestructuralistas o posmodernistas como es el caso de esta investigación doctoral la cual emplea los principios del Interaccionismo simbólico, la etnometodología y la fenomenología social de Schutz para comprender y entender la construcción de los significados y la intersubjetividad de los sujetos del proceso de E-A. La complementariedad de los paradigmas epistemológicos en lugar de caer en un enfoque espúreo, como algunos investigadores ortodoxos lo refieren, resulta un enfoque científico muy rico en conocimientos y por el contrario, permite confirmar los resultados, ampliarlos sinérgicamente contribuyendo a la validez y confiabilidad de los resultados de la investigación, nueva postura epistemológica en el siglo XXI.

En el caso concreto del estudio de la percepción de la calidad del servicio de la educación universitaria en la FCH UABC se observó en los instrumentos cuantitativos propuestos por Parasuraman y Mejías, hacen énfasis en la apariencia, en cambio en los datos cualitativos recogidos en los grupos focales y entrevistas a profundidad, hacen más referencia a la cantidad y calidad de los elementos tangibles, el principal problema señalado por los alumnos es el de los salones de clase con más alumnos de su capacidad, otro es el equipo de apoyo para el proceso de enseñanza-aprendizaje (P E-A) con relación al número de alumnos o usuarios del mismo. El alumno destaca lo más importante en su vida cotidiana escolar.

CONCLUSIONES

- 1.- Se confirma la relación que existe entre la percepción general de la calidad del servicio y sus dimensiones teóricas.
- 2.-Se complementaron los resultados cuantitativos ampliando con explicaciones descriptivas cada una de las evaluaciones cuantitativas.
- 3.-En la dimensión confiabilidad el alumno se siente solo y sin respuesta adecuada a sus necesidades e intereses, se siente desorientado en los procedimientos y trámites escolares.
- 4.-En la dimensión de empatía, donde la percepción del alumno es que se siente solo y sin respuesta adecuada a sus necesidades e intereses, se sienten desorientados en los procedimientos y trámites

escolares, se manifiesta la falta de la función adjetiva de apoyo administrativo en la administración educativa.

5.- En la dimensión de confiabilidad, hacen referencia de manera específica al servicio secretarial del área de la dirección, acerca de su trato desconsiderado y descortés con los alumnos, esto se refleja en los indicadores de los instrumentos cuantitativos Ni de acuerdo ni en desacuerdo (NAND) con el personal, de sentir interés en solucionar los problemas de trámites administrativos a los estudiantes, en cumplir sus promesas de servicio, en realizar el servicio bien desde la primera vez y mantener los expedientes sin errores.

6.-En la dimensión de capacidad de respuesta, los alumnos están NAND con la puntualidad y disponibilidad, sobre todo en el área de apoyo administrativo. En particular el personal del servicio social ofrece un trato rígido y desconsiderado al estudiante; en el área de informática el trato al alumno es con falta de consideración y el trato por parte de las secretarías del área de la dirección no es adecuado para el estudiante.

7.-En la dimensión de elementos tangibles, al docente le llama la atención la paradoja de “edificios nuevos, equipos nuevos con zonas de jardín secas o marchitas, mascotas de mal aspecto en los patios, grafiti en los baños o en los mesa-bancos. Perciben falta de mantenimiento adecuado a los edificios; la caída frecuente del servicio de internet y la falta de este servicio inalámbrico en algunos salones, adicionalmente señalan la necesidad de mejorar los medios de difusión de la información de la Facultad.

Tanto la dimensión teórica como empírica coinciden, la primera enfatiza en la apariencia atractiva de la infraestructura física y equipo; la dimensión empírica de Atención Empática, vincula la atracción visual a la atención y ayuda individual brindada al estudiante, los docentes están NAND en ambas dimensiones y se relaciona con las respuestas cualitativas en la insatisfacción de tener edificios nuevos pero con mantenimiento inadecuado, perciben conductas estudiantiles irresponsables como el grafiti en baños y mesa-bancos, el servicio de internet irregular e insuficiente. Se pone de manifiesto el rol laboral y formal del docente, percibe más fácilmente las insuficiencias de su centro de trabajo; por un lado el insuficiente mantenimiento del personal de jardinería y de intendencia, por otro, algunas conductas consideradas por ellos como irresponsables de los estudiantes, el grafiti en baños y pupitres. El servicio de internet inalámbrico lo destaca el docente por ser una herramienta importante en el proceso de enseñanza-aprendizaje (P E-A), en un modelo pedagógico apoyado por las Tecnologías de la Información y la Comunicación (TIC). El docente enfatiza en los recursos y en el ambiente requerido para el aprendizaje, como parte de su entorno laboral y asociado también al logro de sus objetivos de E-A, el alumno en cambio enfatiza en cantidad y calidad suficiente de salones y equipo utilizados en el P E-A, pero ambas se complementan en la percepción y se traduce en la oportunidad de destacar los aspectos de mejora del servicio educativo. El docente percibe una insatisfacción de los estudiantes en la atención recibida en sus trámites administrativos. Considera como motivo el desborde emocional en las relaciones humanas entre secretarías y alumnos.

RECOMENDACIONES

Se recomienda que las próximas investigaciones se realicen en instituciones de educación superior, de áreas diferentes a las ciencias humanas, con la finalidad de reiterar la utilidad del instrumento SERVQUALING y la complementariedad de las técnicas cualitativas en la investigación de la percepción de la calidad del servicio por parte del estudiante y el docente, desde una perspectiva multinivel, así como en otros contextos geográficos y culturales y con un enfoque transparadigmático como el utilizado en esta investigación..

PLANEACIÓN ESTRATÉGICA PARA ORGANIZACIONES SOCIALES EN COLOMBIA

Iris María Vélez Osorio, Universidad Icesi

RESUMEN

Las capacidades económicas de organizaciones sociales son limitadas, dadas las condiciones de donaciones y caridad a las que se ven sometidas, éste círculo de dependencia ha generado que la estructura de éste tipo de organizaciones corresponda a organizaciones que no cuentan con la capacidad de auto sostenerse, si bien son especialistas en el desarrollo de ayudas para los menos favorecidos, su escasez de recursos económicos no permite un mejor desarrollo de sus capacidades, es por esto que el análisis de las organizaciones sociales como unidades promotoras de cambio y desarrollo local deben ser estudiadas. Ésta problemática crece especialmente cuando de planeación estratégica se trata, a partir del análisis de distintos estudio de caso se propone en la presente investigación un procedimiento para la elaboración de planeación estratégica especial para organizaciones sociales, así como algunas recomendaciones sobre la gestión de éstas organizaciones que les permitan atender a comunidades generar impacto y modificar elementos vitales de sus procesos de producción, entrega de bienes y prestación de servicios.

PALABRAS CLAVE: Organizaciones sociales, planeación estratégica, desarrollo social, gestión.

STRATEGIC PLANNING FOR SOCIAL ORGANIZATIONAL EN COLOMBIA

ABSTRACT

The economical capacities of non-profit organizations are limited, giving the conditions of charity and donations through they survive as organizations, this circle of dependence had provoke that their structure correspond to organizations do not count with the capacity of self sustainability, in despite of they are specialists in developing helps for the vulnerable population, their escasez of economical resources do not allow a better development of their capacities, in consequence this analysis of non-profit organizations as units which promote change and local development should be study. This problematic grows specially when the priority is strategic planning, since the analysis of different study cases is proposed in this research a procedure for the strategic planning of this kind of organizations which allows to continue helping vulnerable communities, make an impact and modify principal process for improve their performance.

KEYWORDS: Non-profit organizations, strategic planning, social development, management.

INTRODUCCIÓN

Las capacidades económicas de organizaciones sociales son limitadas, dadas las condiciones de donaciones y caridad a las que se ven sometidas, éste círculo de dependencia ha generado que la estructura de éste tipo de organizaciones corresponda a organizaciones que no cuentan con la especialidad de auto sostenerse, si bien son especialistas en el desarrollo de ayudas para los menos favorecidos, su escasez de recursos económicos no permite un mejor desarrollo de sus capacidades, es por esto que el análisis de las organizaciones sociales como unidades promotoras de cambio y desarrollo local deben ser estudiadas. Sin embargo, éstas organizaciones también han sido manipuladas para el desarrollo de actividades que no corresponden a al de ayuda sino mas bien un maquillaje del quehacer empresarial,

donde se muestran el incremento de donaciones a fundaciones y por otro lado la gestión ineficaz y hasta irresponsable de las organizaciones que en su búsqueda de maximización de ganancias ofrecen ayuda a algunas organizaciones sociales pero no cambian radicalmente su gestión organizacional, sin embargo, y como todo no se puede generalizar muchas organizaciones han hecho tremendos esfuerzos por convertir a organizaciones sociales en maestros para aprender a trabajar por las comunidades o para modificar elementos vitales de sus procesos de producción, entrega de bienes, y prestación de servicios.

REVISIÓN TEÓRICA

La iniciativa económica no es exclusiva de la empresa privada ni monopolio del Estado, por lo que el sector solidario ha surgido como una alternativa posible frente a las iniciativas predominantes públicas y privadas; de éste modo muchas personas se unen para cruzar el interés económico con un fin altruista, social. El problema de ésta nueva alternativa aparece cuando se tiene por un lado la teoría que la soporta, la normatividad que la legaliza y la realidad empírica que se desarticula con todo aquello que aparece en el papel, la diferencia aparece porque la economía solidaria no corresponde ni con la lógica del mercado ni con la lógica del Estado pero debe enfrentarse a ambas; por tanto, la economía solidaria es un modo distinto de hacer economía apareciendo tres fines desde su construcción teórica inicial: primero, busca satisfacer las necesidades de los consumidores, segundo, tiene un proyecto social que cumplir y por último, busca construir una sociedad más equitativa y democrática, éstos elementos económicos, sociales y políticos componen el trabajo de las organizaciones de economía solidaria.

Cuando se hace referencia a la economía solidaria se reconoce una tipología de organizaciones; de acuerdo a la Ley 454 de 1998 son organizaciones solidarias entre otras: cooperativas, los organismos de segundo y tercer grado que agrupan cooperativas u otras formas asociativas y solidarias de propiedad, las instituciones auxiliares de la Economía solidaria, las empresas comunitarias, las empresas solidarias de salud, las precooperativas, los fondos de empleados, las asociaciones mutualistas, las empresas de servicios en las formas de administraciones públicas cooperativas, las empresas asociativas de trabajo y todas aquellas formas asociativas solidarias que cumplan con las características de organizaciones solidarias; hasta el momento no se ha elaborado y desarrollado un modelo de gestión que responda a éste tipo de organizaciones tan diversas pero todas bajo claras especificaciones por parte de las instituciones que las regulan.

La economía solidaria obliga a mirar a las organizaciones de una nueva forma y se convierte en una alternativa económica que produce empleo, ocupaciones productivas, propone preocuparse y actuar en relación a los diferentes problemas sociales, tales como: la pobreza, la exclusión, la desigualdad social consecuencia del sistema económico que a su vez causa desintegración social, conflictos ciudadanos, delincuencia, pandillas, violencia, entre otros, como factores que afectan a millones de personas en el mundo. Por tanto, las tradicionales formas organizativas hoy aparecen como insuficientes para atender las necesidades sociales en términos de calidad de vida, desarrollo sostenible y mejoramiento del ecosistema de éste modo desde la economía solidaria se busca atender éstos elementos proporcionando unos criterios eficientes de economía tanto en procesos decisionales como de gestión, generar una identidad consistente con el perfil solidario.

METODOLOGÍA

La presente investigación fue realizada a partir del análisis de estudios de caso en organizaciones sin ánimo de lucro, los estudios de caso se realizaron a partir de observación no participante, entrevistas no estructuradas, documentación de las organizaciones.

Se realizó además búsqueda documental en fuentes secundarias para conocer cuáles habían sido investigaciones recientes en el tema y las tendencias en planeación estratégica en organizaciones sin ánimo de lucro.

El objetivo corresponde a: encontrar un procedimiento para la elaboración de planeación estratégica especial para organizaciones sociales

RESULTADOS PRELIMINARES

La obra de Henri Fayol (1841 – 1925) constituye una aproximación a la división del trabajo por una parte vertical, en niveles de autoridad, y horizontal por departamentalización 1916, 1930. Considera entonces la existencia de unos principios básicos y generales de la administración: División del trabajo, autoridad y responsabilidad, disciplina, unidad de mando, unidad de dirección, subordinación de los intereses individuales a los intereses generales, remuneración del personal, centralización, jerarquía o cadena escalar, orden, equidad, estabilidad del personal, iniciativa, espíritu de equipo; en éste punto encontramos una diferencia clara entre administración y organización aunque se sigue viendo como una ciencia, la organización alude a dos significados por una parte a entidad social y por otro a la función administrativa y a los componentes de administración. Además, es necesario reconocer que Fayol intentó simplificar el trabajo del dirigente, no de los obreros, gracias a su visión de la organización como un todo aportó a la administración la función administrativa considerar el prever, organizar, dirigir, coordinar y controlar famoso PODC; en consecuencia, Fayol no está de acuerdo con ejercer control rígido sobre el trabajo y el trabajador, él considera que la libertad en el trabajo es un buen método para estimular al obrero a escoger su forma de trabajo.

Los planteamientos de Fayol hacen parte del enfoque clásico de la administración, prestó especial atención a la estructura, siempre consideró que una visión científica y métodos adecuados de gerencia ofrecerían un éxito de la administración; planteó seis funciones básicas de la empresa y las funciones principales del administrador.

Fayol (Administración Industrial y General, 1950) presenta 6 grupos de funciones en la que toda empresa puede ser dividida:

Funciones técnicas, relacionadas con la producción de bienes o servicios de la empresa

Funciones comerciales, relacionadas con la compra, la venta o el intercambio

Funciones financieras, relacionadas con la búsqueda y gerencia de capitales

Funciones de seguridad, relacionadas con la protección y preservación de los bienes y las personas

Funciones contables, relacionadas con los inventarios, los registros, los balances, los costos y las estadísticas

Funciones administrativas, relacionadas con la integración de las otras cinco funciones por parte de la dirección. Las funciones administrativas coordinan y sincronizan las demás funciones de la empresa, y están siempre por encima de ellas

Estas seis funciones según Fayol son las que componen lo que se conoce como administración, hoy en día sin embargo, muchos de los nombres han cambiado y se les llama áreas o departamentos, además se han anexado otras como recursos humanos e investigación y tecnología.

Por otra parte, existe una definición del acto de administrar distinto a la administración que Fayol plantea como el ciclo de 5 pasos, los cuales representan las funciones del administrador: Planear, Organizar, Dirigir, Coordinar y Controlar; todos componen al mismo tiempo el proceso administrativo que son específicas de la última función que se observa en el listado anterior así las funciones administrativas quedan argumentadas con éste proceso apareciendo casi como exclusividad de la dirección y delegadas en los distintos niveles jerárquicos, en detalle:

Planeación: implica evaluar el futuro y tomar previsiones en función de él. Unidad, continuidad, flexibilidad y valoración son los aspectos principales de un buen plan de acción.

Organización: proporciona todos los elementos necesarios para el funcionamiento de la empresa; puede dividirse en material y social.

Dirección: pone en marcha la organización. Su objetivo es alcanzar el máximo rendimiento de los empleados, de acuerdo con los aspectos generales.

Coordinación: armoniza todas las actividades de una empresa para facilitar el trabajo y los resultados. Sincroniza recursos y actividades en proporciones adecuadas y ajusta los medios a los fines.

Control: verifica si todas las etapas marchan de conformidad con el plan trazado, las instrucciones dadas y los principios establecidos. Su objetivo es identificar las debilidades y los errores para rectificarlos y evitar que se repitan.

La importancia de éste proceso es que sigue vigente; sin embargo, es necesario reconocer que la teoría clásica de la administración no se ocupa de la organización con una estructura dinámica y no limitada, sólo alcanza a reconocer a la organización en términos de estructura, forma y disposición de las partes que la componen y su interrelación, estableciendo que existe una jerarquía o línea de autoridad que articula las posiciones de la organización en la que la unidad de mando establece a quien debe reportar un empleado sus actividades, por lo que será necesario tomar elementos de otras teorías como complemento de ésta teoría clásica haciendo uso y referencia sólo a los elementos que nos permiten construir el modelo de interés. Es así como las organizaciones sociales han seguido la línea de estructuras jerárquicas donde la gestión se encuentra en los líderes creadores de la organización, con la colaboración de los asociados o voluntarios, la planeación a largo plazo es escasa y genera grandes conflictos entre los miembros de la organización y problemas para atender las necesidades de la comunidad a la que se atiende.

En consecuencia la organizaciones sociales deberían contar con una gestión basada en lo que se conoce en administración como el ciclo PODC (Planear, Organizar, Dirigir, Controlar) esquema que para las organizaciones sociales permitiría realizar planeación estratégica no sólo compartida sino ejecutar los planes de manera concertada paso a paso, con la participación de todos sus clientes internos en éste caso voluntarios y/o colaboradores, y clientes externos: comunidades vulnerables.

La Gestión: El Ciclo PODC

Figura 1. Ciclo PODC.

Fuente: VELEZ, Iris María.

El Ciclo PODC diseñado para las organizaciones sociales, es un ciclo con tres características básicas: la participación, el liderazgo, y el propósito social de toda organización que tiene como objetivo atender a una comunidad vulnerable; las características de la planeación, organización, dirección y control en la organización social cuentan con una serie de características y pautas a seguir que se describen a continuación. Para realizar el análisis de planeación, se pueden realizar las siguientes preguntas iniciales, intentando identificar áreas o situaciones problema de la organización por ejemplo, al momento de realizar planeación o de gestionar sus recursos.

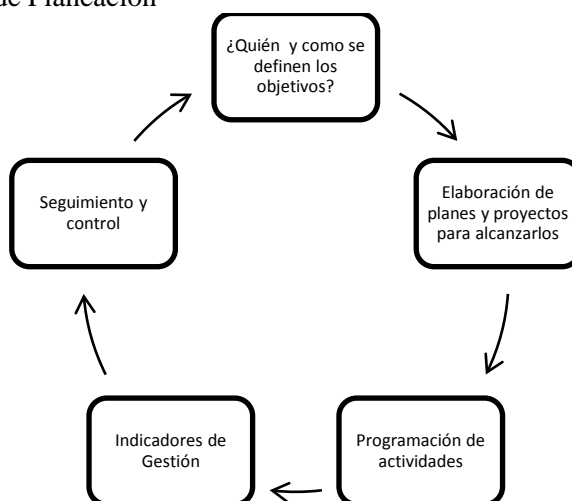

Identificar los siguientes elementos:

- ¿Cómo realizan planeación en la organización?
- ¿Se delegan actividades?
- ¿Existe una visión clara de todo el personal?
- ¿Cuáles son los indicadores de control?
- ¿Existe Autogestión en la organización?
- Se identifican áreas (estructura) problemáticas de la organización?
- ¿Cuál es el principal problema?

Posteriormente, identificado el problema de la organización debería tomarse la información y las posibles soluciones para la construcción de lo que se denomina un mapa de la situación, a diferencia de las organizaciones con ánimo de lucro, los recursos tienden a ser insuficientes por lo que las posibles respuestas a los problemas dependen de una buena planeación para la consecución de resultados a favor de la comunidad o grupo social que se desea atender, en consecuencia la organización social debe seguir el ciclo iniciando con la Planeación cuyo objetivo principal es definir objetivo para construir proyectos sociales.

Planeación

Figura 2. Componentes de Planeación

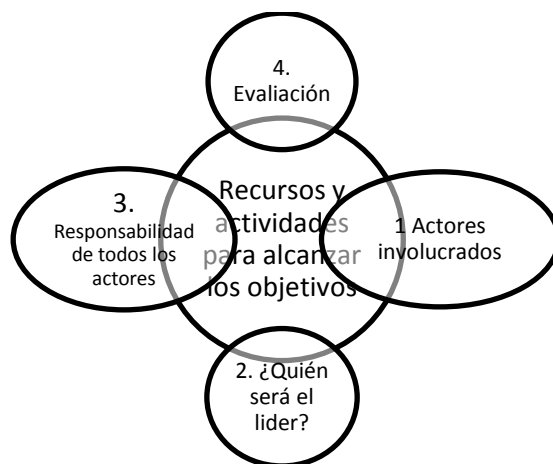

Fuente: VELEZ, Iris, adaptado de CHIAVENATO, Adalberto. Introducción a la Teoría General de la Administración. 1981.p. 301.

La planeación como elemento principal del ciclo requiere de los otros tres componentes organización, dirección y control, la planeación constituye el centro de trabajo de la organización social pero la función de organización es la que permite validar que los objetivos propuestos, los proyectos, las actividades trazadas y los indicadores cuenten con un sustento, es decir, la organización indicará quienes son los actores involucrados, cual de ellos será el líder de la gestión como hacer partícipes a todos y como autoevaluarse siendo éste uno de los elementos más importantes en la organización social por su componente social sin interés en el alcance económico, así como los recursos necesarios para la puesta en marcha de los proyectos propuesto en la fase de planeación.

Organización

Figura 3. Componentes de Organización

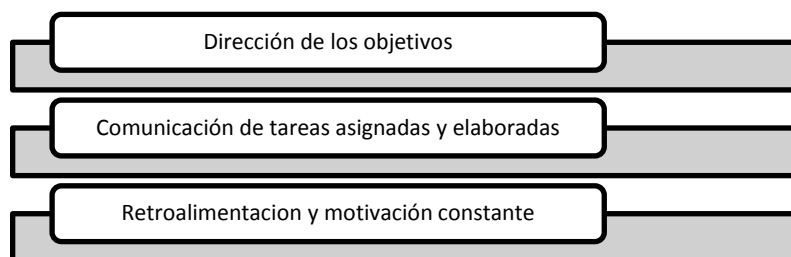

Fuente: VELEZ, Iris, adaptado de CHIAVENATO, Adalberto. *Introducción a la Teoría General de la Administración*. 1981.p. 301.

Las organizaciones sociales han tenido una gran dificultad en la ejecución de los proyectos y es como dirigir múltiples esfuerzos a un solo objetivo, una vez la organización social cuenta con la planeación y la organización para construir una gestión responsable y compartida, el líder de la organización distinto a un gerente como se conoce tradicionalmente en las organizaciones de carácter privado debe distribuir la capacidad de la toma de decisiones, creando trabajo en equipo con una comunicación abierta y motivación constante, ésta fase puede ser la más difícil para toda organización social porque aparecen muchos líderes a lo largo del trabajo diario, y pueden existir conflictos, en consecuencia se hace necesaria la aparición de lo que se conocen como comités dentro de las organizaciones sociales, serán ellas las encargadas de supervisar la gestión y de canalizar el liderazgo de múltiples actores hacia la consecución de la misión de la organización social.

Figura 4. Componentes de Dirección.

Dirección

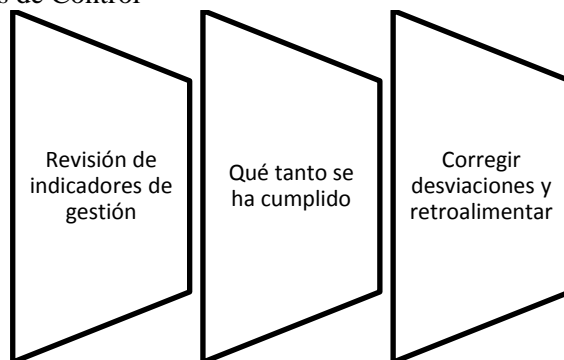

Fuente: VELEZ, Iris, adaptado de CHIAVENATO, Adalberto. *Introducción a la Teoría General de la Administración*. 1981.p. 301.

Finalmente, toda gestión requiere un control de lo planeado, es posible trabajar con indicadores mensuales o trimestrales según lo disponga la organización para contar con retroalimentación de los distintos procesos y proyecto en marcha, la diferencia radica en la manera en la que éstos indicadores se dan a conocer (en Comités) y los correctivos necesarios son aplicados a través de todos los participantes de la organización y no sólo a pequeñas áreas especializadas.

Control

Figura 5. Componentes de Control

Fuente: VELEZ, Iris, adaptado de CHIAVENATO, Adalberto. Introducción a la Teoría General de la Administración. 1981.p. 301.

El control en la planeación estratégica de una organización social constituye en la fase de cierre necesaria para la construcción de proyectos realizables y para sostenibilidad en el largo plazo de la organización social.

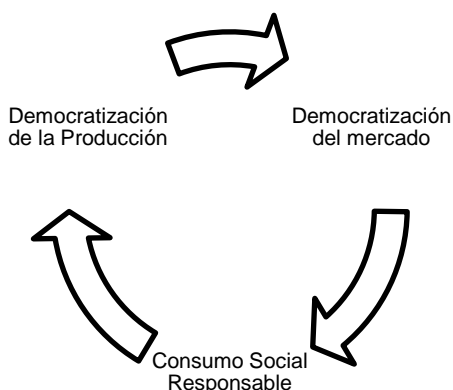

CONCLUSIONES

El proceso de planeación estratégica presentado para las organizaciones sociales constituye una aproximación a lo que debería hacerse en una organización cuyo objetivo es la sociedad en general por encima de sus intereses particulares, éste tipo de organizaciones como se explicó cuentan con elementos distintos a los de una organización del sector privado que sí bien requiere de un desempeño eficiente no pueden realizar planeación estratégica con los mismos objetivos de una entidad con ánimo de lucro; las organizaciones sociales a partir de su planeación deberían promover al menos tres elementos indispensables de la construcción de desarrollo social: planeación para la democratización de la producción, organización para la democratización del mercado, dirección para la organización social como promotora de cambio y control para el consumo responsable de la organización en sí misma y la sociedad.

La idea de una organización social no debe implicar poca planeación o elaboración de planes sin definiciones claras de metas, al contrario su característica social las compromete aún más con la planeación tanto para el manejo de recursos como la atención de la comunidad vulnerable y la construcción de mejoramiento en la calidad de vida de sus asociados y/o colaboradores.

DIAGNÓSTICO DE LA EDUCACIÓN CONTINUA EN LAS INSTITUCIONES DE EDUCACIÓN SUPERIOR DE MÉXICO

María de Jesús Ramírez Domínguez, Benemérita Universidad Autónoma de Puebla
Sara Morales García, Benemérita Universidad Autónoma de Puebla
Blanca H. Morales Vázquez, Benemérita Universidad Autónoma de Puebla

RESUMEN

Esta investigación presenta un estudio a cerca de la situación actual de la gestión de la Educación Continua en las Instituciones de Educación Superior (IES) de México a fin de conocer cuáles son los factores de su éxito en las universidades líderes. Se analizaron documentos a cerca de la conceptualización, importancia y el estado del arte de la gestión de la Educación Continua, para posteriormente aplicar un cuestionario a gestores de esta modalidad educativa en las IES que son consideradas líderes, la muestra que se tomó constituyó el 25% del total de 56 afiliadas a la Asociación Mexicana de Educación Continua y a Distancia. Se encontraron resultados importantes como: elementos comunes para garantizar el éxito de esta modalidad educativa, así como los desafíos que enfrenta; el nivel de importancia que se le da para el desarrollo y consolidación de la Educación superior en México, el cual ha sido asumido de manera desigual por las instituciones mencionadas. El objetivo es compartir los resultados obtenidos y la propuesta de estrategias para mejorar su gestión en las IES que no son consideradas líderes.

PALABRAS CLAVE: educación continua, gestión, desarrollo, Instituciones de Educación Superior

CONTINUE EDUCATION DIAGNOSTIC IN THE EDUCATION INSTITUTES OG MÉXICO

ABSTRACT

This research presents a study about the recent situation of Continue Education management in the (HEI) in Mexico with the porpoise to know the keys of success in the top universities. It was analyzed papers about the conceptualization, importance and the condition of the art of management in the Continue Education, for later to apply a questioner to managers of this educative modality in the HEI that are considered the best, the sample who was taken constituted the 25% of the total of 56 affiliated to the Asociación Mexicana de Educación Continua y a Distancia. Important results were founded like: common elements to assure the success in this educative modality, as well as the challenges that affront; the level of importance given for the development and consolidation of the High Education in México, who has taken in unequal way for the named institutions. The goal is to share the results obtained and the proposals of strategies to improve its management in the HEI who aren't considered as top.

KEYWORDS: Continue Education, management, development, High Education Institutions

INTRODUCCIÓN

Las Instituciones de Educación Superior, como las instituciones especializadas en la producción de conocimientos avanzados, tienen un rol importante en la sociedad para propiciar mejores condiciones en los ámbitos educativos, laborales, productivos y sociales. La mejora de la gestión de la Educación Continua (EC) en las Instituciones de Educación Superior (IES) es muy importante porque capacita y actualiza los conocimientos de las personas que están en el mercado laboral, quienes deben estar en un

proceso de formación permanente, donde cada individuo debe ser capaz de determinar que conocimientos requiere para su actualización profesional, laboral y adaptarse fácilmente a los cambios; de igual forma, propicia el desarrollo integral de todas las personas a lo largo de la vida.

Debido al surgimiento acelerado de nuevos conocimientos imprescindibles en todas las profesiones, se crea la necesidad impostergable de realizar investigaciones que permitan conocer otros sistemas modernos de oferta educativa que respondan oportunamente a la actualización de los profesionistas y de todas aquellas personas insertas en el medio laboral que requieran aumentar sus destrezas y habilidades para el mejor desempeño de su trabajo. Lo anterior es motivo fundamental para que las Instituciones de Educación Superior, en cumplimiento de sus funciones, interactúen de manera más intensa con su entorno, es decir con el mundo de la cultura, del desarrollo social y económico, para que su personal docente, sus egresados y la misma sociedad logren actualizarse y capacitarse para enfrentar sus funciones con mayor eficiencia. Sin embargo a pesar de su importancia no siempre es considerada dentro del marco de la planeación y gestión universitaria, lo que ha impedido su debida articulación con el plan institucional y obstaculizando el desarrollo de un programa estratégico que oriente el desarrollo de actividades de Educación Continua. La gestión adecuada de la EC permite optimizar los recursos disponibles en cumplimiento de sus objetivos prefijados de la manera más eficaz posible.

REVISIÓN LITERARIA

Concepto de Educación Continua: La Educación Continua, es concebida por la Asociación Nacional de Universidades y Escuelas Superiores [ANUIES,1988], como “Una actividad académica de extensión universitaria con cierto grado de organización técnico-pedagógica, ubicada fuera de la estructura del sistema formal de educación, la cual tiene requisitos de ingreso y acreditación, que no lleva a la obtención de un grado académico, y está dirigida a profesionales o a personas con práctica técnica profesional que en uno u otro caso se encuentran insertos en el medio laboral, por lo cual requieren actualización de conocimientos, adquisición de destrezas y habilidades, cambios de hábito y actitudes para el mejor desempeño de su trabajo”. “La educación continua, sustentada en el principio de educación permanente y como expresión del aprendizaje a lo largo de la vida, se constituye como un proceso educativamente diferenciado y específico, planeado, sistematizado y evaluado, esencial e ineludiblemente para la socialización de los conocimientos que se han generado en todas las áreas. Es una actividad académica cuyo objeto es satisfacer las necesidades de actualización, renovación y perfeccionamiento de conocimientos, aptitudes, destrezas, actitudes y prácticas de individuos o Instituciones, con la finalidad de mejorar y optimizar comportamientos y desempeños” (Benemérita Universidad Autónoma de Puebla, Reglamento de Educación Continua, 2008)

La Educación Continua se ubica en la educación no formal, e incluye los conceptos de:

- a) Capacitación, cuando el individuo adquiere conocimientos que le permiten incidir tanto en su actitud laboral como personal.
- b) Adiestramiento, se considera cuando la persona adquiere habilidades físicas para manejar adecuadamente equipos y materiales.
- c) Desarrollo, es la formación permanente a lo largo de la vida de la persona y que trasciende a la planeación de la vida laboral.

Concepto de Gestión de la Educación Continua: Es el conjunto de funciones y procesos que realiza una institución para cumplir con su misión, visión, fines y objetivos que le dan razón de ser. Implica la manera como se estructura, organiza, conduce, planea, evalúa su desarrollo, distribuye y maneja sus recursos humanos, financieros y materiales (ANUIES, 2010).

Situación Actual

La ANUIES afirma que “El desarrollo de la educación continua (EC) no ha sido homogéneo en las distintas instituciones y dependencias del nivel superior debido entre otras causas a la insuficiente asignación y disponibilidad de recursos, a pesar de que en la mayoría de los casos la actividad es autofinanciable y aporta recursos adicionales a las instituciones” La EC significa para la sociedad el elemento fundamental para que las personas adquieran a lo largo de su ciclo vital de vida, conocimientos y competencias multifuncionales, tales como:

- a) Capacidades académicas (desarrollo del pensamiento crítico para la solución de problemas y aprender a aprender a lo largo de la vida)
- b) Habilidades personales y sociales (motivación, valores, compromiso ético, comprensión de la sociedad y el mundo).
- c) Habilidades empresariales (liderazgo, trabajo en equipos, dominio de las tecnologías de información y comunicación (TIC), y desempeño orientado a la productividad).

Con respecto a la aportación de la EC en la integralidad del ser humano se parte de uno de los conceptos de “educar”, citado por López Calva “Es fomentar por un proceso social la actuación por la que el hombre, como agente de su propio desarrollo tiende a lograr la más cabal realización de sus potencialidades” (López Calva J. Martín (2002), y que en consideración a este implica poner los medios para su desarrollo integral, porque la educación va más allá de la transmisión de conocimientos y entra en el mundo de las habilidades para hacer y pensar, y de los valores para decidir y vivir, involucrándolo en su totalidad. En el contexto global de la educación como proceso de formación a lo largo de la vida, incluye no solo a los contextos educativos formales, sino también a los no formales e informales; la exclusión social y la pobreza ponen de manifiesto la necesidad de una educación a lo largo de la vida como inversión en capital humano y principio activo para la economía; y la inclusión social y laboral de las personas.

El desarrollo económico exige la creación del conocimiento desde los puestos básicos, técnicos o especializados, sin los cuales es imposible llevar a cabo una actividad económica cada vez más compleja y avanzada para ocupar puestos de mayor nivel, o simplemente para obtener ventajas competitivas a través de la gente. Las personas que ocupan estos puestos requieren de una continua capacitación y actualización, desde los niveles operativos hasta los niveles directivos en todos los sectores económicos. André Page, en Domínguez considera que una de las finalidades de la educación es la económica, le asigna un valor motor en la vida económica, entendiendo que la enseñanza prepara al individuo en un oficio para la vida profesional, adapta la formación de los hombres a las necesidades de la economía, es decir prepara para un trabajo más productivo. (Dominguez, 2010) Esto obliga a reflexionar sobre la importancia de esta modalidad educativa no solo para la actualización profesional de las diferentes disciplinas, sino también en la certificación profesional y sus refrendos, tan necesarios para estar vigentes en el mercado de trabajo, en virtud de que deben adquirir nuevas competencias para ejercer su profesión según lo establecen los organismos evaluadores externos como son los Colegios, Asociaciones y Gremios de Profesionistas. Tal es el caso de los médicos, que según la Ley General de Profesiones cada tres años termina su vigencia; los Contadores Públicos, que deben certificarse cada tres años para poder ejercer la Auditoría Externa cumpliendo con la Norma de Educación Profesional Continua; los maestros del nivel básico, nivel medio con la carrera magisterial y nivel medio superior, y las reformas educativas enmarcadas en el Reglamento de Instituciones de Educación Media (RIEM) y el Reglamento de Instituciones de Educación Media Superior (RIEMS). Por lo que respecta a los docentes del nivel superior, existen también instituciones evaluadoras externas que otorgan la Certificación Académica como el Consejo de Acreditación en la Enseñanza de la Contaduría y Administración A.C. (CACECA).

La Educación Continua en su modelo más amplio tiene entre sus funciones principales: la actualización profesional, la vinculación-sociedad-empresa, la capacitación laboral, la formación y actualización de sus docentes, la difusión de las nuevas tecnologías y conocimientos de punta de las disciplinas o especialidades y, con ello la retroalimentación de los planes de estudio del sistema escolarizado y abierto, la vinculación con los egresados. Además abarca la educación permanente dirigida al público en general, capacitándolo para las cambiantes necesidades en el ámbito laboral, para el autoempleo, para la reconversión ocupacional y para su desarrollo personal. Con respecto a la gestión de esta modalidad educativa, se puede expresar, según lo manifiestan los expertos en diferentes foros es que se da de manera desigual en las IES de México, ya que en algunas como lo expresa la ANUIES, si se realizan diagnósticos de necesidades para el diseño de su oferta, pero no se caracterizan por su corto alcance, lo que ha impedido lograr un mayor grado de diversificación, pertinencia y calidad. También manifiesta la carencia de indicadores que evalúen la pertinencia; falta de metodologías rigurosas y sistemáticas para elaborar diagnósticos de necesidades en los sectores productivo y social; desarticulación entre la oferta de cursos y los requerimientos de los diferentes sectores, así como los avances científicos-tecnológicos de las disciplinas, saturación en el mercado de cursos aislados e impartidos con técnicas tradicionales en las IES, carencia de una estructura organizativa propia, flexible y articulada a las necesidades del entorno y ausencia de relación de la EC con el modelo educativo y pedagógico de las IES(ANUIES, 2006).

La mayoría de las IES no ha corregido esta situación en el país; existen algunas que tratando de hacer eficiente su Educación Continua han establecido en su estructura orgánica un departamento que se encarga de esta actividad, sin profesionalizar a los administradores de esta actividad, y sin realizar una administración integral desde el punto de vista sistémico. (ANUIES (2010) Por su parte Paredes, considera que parte de estos factores de desarrollo desigual se encuentran entre otros los siguientes:

- a) *Falta de una adecuada conceptualización de la EC que limita la determinación de criterios de evaluación de calidad, créditos académicos y modalidades, generando confusión de objetivos y metas dentro de las mismas instituciones al implementarla.*
- b) *Falta de organismos nacionales que la acrediten y certifiquen, generando una indiscriminada oferta de instituciones, que a veces no cuentan con los requisitos que debe cumplir un programa académico de esta modalidad.*
- c) *Carencia de indicadores que evalúen la pertinencia de la EC, al no existir metodologías rigurosas y sistemáticas para elaborar diagnósticos de necesidades de los sectores productivos y sociales.*
- d) *Inexistencia de un marco jurídico legal que la regule a nivel nacional, y que verifique su instrumentación y alcance de sus programas con criterios éticos que garanticen su adecuada implementación(Perez Parades).*
- e) *Falta de asignación de presupuesto para su fortalecimiento dentro de las IES, ya que se considera que debe ser autofinanciable, y a veces los recursos son muy escasos.*

Las Mejores Experiencias De Educación Continua En Las IES

Indudablemente, se tienen identificadas por las asociaciones de educación continua en el mundo, aunque no oficialmente, solo de manera implícita, algunas IES que han desarrollado con mayor éxito la gestión de esta modalidad educativa. En la actualidad no existe un modelo para la gestión de la EC continua que permita su adaptación a las diferentes características de las IES. Las acciones estratégicas que se llevan a cabo no están fundamentadas desde el punto de vista científico. Para el desarrollo de esta investigación se realizó la tarea de realizar un diagnóstico factico o inicial para conocer lo que expresan las organizaciones que regulan la EC en donde a partir del análisis documental se revisaron los informes siguientes:

1. Proyecto Global de Educación Permanente para todos. La UNESCO en su carácter de Organismo Internacional, recomienda que las IES consideren las tendencias del mundo laboral, con el fin de crear modalidades de aprendizaje que diversifiquen los modelos educativos y generen programas de transición, formación, actualización y reconocimiento de los conocimientos adquiridos, a través de la evaluación. Además que estos programas integran la teoría y la formación en el empleo con métodos educativos innovadores que estimulen el pensamiento crítico y la creatividad, impartidos en centros educativos de excelencia que propicien incorporarse en redes regionales e internacionales (UNESCO, 1998)

2. Importancia de la Educación Continua. ANUIES (2006)

La gestión permite organizar y administrar recursos de manera que se pueda culminar la misión, la visión, los objetivos y las metas que se dan razón de ser al programa en cuestión, considerando tiempos y costos. Sin embargo la carencia de políticas institucionales que impulsen la EC, la insuficiencia de recursos financieros, materiales e infraestructura asignados a la función, y en ocasiones el insuficiente desarrollo de competencias por parte del personal a su cargo impide el desenvolvimiento óptimo de estas actividades. De manera general, se describen las mejores experiencias de los centros de EC en la gestión de la misma.

- Las Tics constituyen un valor agregado y medio de representación de la información a los grupos de interés; su aplicación en las IES líderes ha sido a través de la creación e implementación portales, que por medio del acceso a una Base de Datos vía WEB, los usuarios realicen las tareas primordiales referentes a la administración de programas de la oferta institucional de EC, comunicación instantánea entre los participantes en su administración, redes institucionales e interinstitucionales, generación automática de información para la toma de decisiones y publicación de la oferta académica.

- La transferencia e intercambio de tecnologías aumenta los niveles de competitividad de la oferta educativa cualificada y con menores costos en la EC, este intercambio se da a través de la implementación de redes y alianzas entre instituciones, desde las que se implementan estrategias y esfuerzos coordinados de programas diversificados

- Los indicadores de calidad constituyen un elemento fundamental para responder eficientemente a la demanda; en algunas instituciones líderes ya tienen contemplado dentro de las oportunidades de mejora trabajar en ellos para estos formen parte de su modelo de actuación. Mientras tanto trabajan en un esquema de ISO 9000, y las normas técnicas de competencia laboral (CONOCER) en el diseño e impartición de los actos de educación continua.

- Otra experiencia exitosa vivenciada por los centros de EC ha sido la su sistema ágil de vinculación con los diferentes sectores productivos y sociales como profesionistas en ejercicio, padrón de egresados, microempresas, medianas empresas y empresas grandes, calidad de vida laboral universitaria, público en general, adultos mayores, etc. a través de programas específicos, cuya característica principal es la disminución del tiempo de respuesta en sus necesidades sentidas.

De acuerdo con el estudio del objeto y campo de la investigación, se ha podido revelar que el proceso de EC debe caracterizarse por la gestión de los siguientes aspectos:

Oferta- demanda: Es indispensable acortar la brecha entre la oferta y demanda de los programas de EC, es decir responder de manera oportuna y flexible a los diferentes sectores de la sociedad en sus requerimientos a través del fortalecimiento de mecanismos de vinculación.

Cambios de la sociedad en el desarrollo de la ciencia y la tecnología: Es importante mantener una metodología para identificar de manera prospectiva los adelantos científicos y tecnológicos para ofertar programas útiles para enfrentar dichos cambios.

Autoevaluación de la gestión de la Educación Continua: Sera necesario incluir dentro del modelo de EC a seguir, mecanismo que permitan autoevaluar programas, contenidos, procesos, infraestructura, grado de satisfacción del usuario, impacto en su desempeño laboral o desarrollo humano, entre otros para implementar procesos de mejora.

Validación de contenidos de los programas propuestos: En este rubro es indispensable que exista un comité académico que revise y valide los contenidos con base a los objetivos de aprendizaje.

Enfoque a competencias: Es necesario que los programas que se oferten tengan un enfoque que coadyuve al desarrollo de competencias personales (capacidad para aprender y absorber nuevos conocimientos y distintas habilidades); competencias tecnológicas (capacidad para asimilar el conocimiento de las distintas técnicas que se necesitan para el desempeño general y la funcionalidad); competencias metodológicas (capacidad para emprender y la iniciativa para resolver problemas de diversa índole) y competencia social (capacidad para relacionarse eficazmente con distintas personas y grupos, así como para desarrollar trabajos en equipo)(Chiavenato, Idalberto, (2007).

Calidad de los servicios: Además de la calidad en la información que se proporciona sobre la oferta de un centro de EC, es fundamental la atención a los clientes o usuarios. Proporcionar un servicio de calidad implica identificar, dar respuesta y satisfacer de manera eficaz las necesidades aparentes y encubiertas de los usuarios, cumpliendo con los requisitos y compromisos desde la primera vez, de tal manera que se lleve una experiencia general satisfactoria; por lo tanto es fundamental contar con instrumentos de evaluación de la calidad de los servicios. Además es necesario proporcionar un “valor agregado” que incida para que el usuario decida regresar.

Pertinencia: Es importante que los contenidos temáticos de los actos académicos se determinen no solo en soluciones a necesidades aparentes, sino en razón de necesidades profesionales de acuerdo a descripciones precisas para una incidencia eficaz en problemáticas específicas, de tal manera que los conocimientos y habilidades adquiridas puedan aplicarlas en la planeación, instrumentación y evaluación de situaciones que demanda el mercado de trabajo, en particular en situaciones nuevas, o también en la formación integral de las personas.

Evaluación de la satisfacción del usuario: Esta podrá medirse a través de instrumentos aplicados al finalizar el proceso de los actos de EC, donde evalué de manera personal el cumplimiento de sus expectativas.

METODOLOGÍA

Para realizar el diagnóstico causal, se utilizó los métodos de análisis y síntesis para los referentes teóricos y los métodos empíricos para el trabajo de campo, específicamente la técnica de encuesta y su posterior medición, la que contempló dos aspectos específicos, el primero relacionado con la Educación Continua (objeto de investigación), y el segundo relativo al campo de acción, es decir la Gestión de la Educación Continua. Para el tamaño de la muestra se utilizó debido al gran tamaño del universo de las IES de México y tomando en consideración las diferencias en el nivel de desarrollo de la EC, para efectos de tomar las más representativas, se tomó como referencia a la Asociación Mexicana de Educación Continua y a Distancia (AMECYD), la cual agrupa a 56 IES de diversos Estados de la República Mexicana. La totalidad de estas instituciones constituyen el universo y se ha tomado una muestra de 14, que representan el 25% del total, calculadas por medio del procedimiento de selección de la muestra "STATS". La encuesta referida fue aplicada a los directivos de los Centros de Educación Continua más desarrollados, los cuales se mencionan a continuación:

1. Benemérita Universidad Autónoma de Puebla
2. Universidad Autónoma de Guadalajara.
3. Universidad Nacional Autónoma de México.
4. Universidad de la Sallé, Bajío
5. Universidad Madero (campus Puebla)
6. Universidad de las Américas (Puebla).
7. Universidad Iberoamericana (campus Puebla).
8. Instituto Tecnológico de Estudios Superiores de Monterrey.
9. Universidad Autónoma de Colima.
10. Universidad Autónoma del Estado de México.
11. Universidad Autónoma del Estado de Chiapas.
12. Universidad Autónoma de Aguascalientes
13. Universidad Autónoma de Baja California
14. Universidad Popular Autónoma del Estado de Puebla.

RESULTADOS

De la muestra estudiada a las catorce instituciones mencionadas, se encontró el siguiente diagnóstico del proceso de Gestión de la Educación Continua. Con relación a las características de la Educación Continua, expresaron lo siguiente:

1. *De las 14 Instituciones, 12 (86%) afirman estar totalmente de acuerdo en que los actos de educación continua que ofertan, responden a necesidades sociales; y solo 2 (14%) expresaron estar en desacuerdo, es decir debido en parte a que no se realiza un diagnóstico de necesidades, estas dos instituciones consideran que sus programas ofertados no siempre empatan con las demandas de la sociedad.*
2. *Según los datos proporcionados por las Instituciones a través del instrumento aplicado, 11 (79%) consideran estar totalmente de acuerdo en que los actos de educación continua que se ofertan son pertinentes a la demanda de los usuarios, 2 (14%) expresan estar de acuerdo y una (7%) estar en desacuerdo. Como se puede observar la mayoría de estas IES califican sus programas como pertinentes también porque estos se diseñan acordes a las necesidades de los usuarios y de manera oportuna, acortando el tiempo de respuesta a estas necesidades.*
3. *Con respecto a que si los actos de EC ofertados están enfocados a competencias, 11(79%) responden estar completamente de acuerdo y 3 (21%) de acuerdo. Se debe destacar que estos programas en su mayoría están enfocados a mejorar el desempeño laboral.*

4. *En lo referente al cuestionamiento de que si se desarrolla un diseño académico de los actos de EC para necesidades de los clientes, 13 (93%) expresan estar completamente de acuerdo y solo una (7%) estar en completo desacuerdo. Con este resultado se puede interpretar que en la mayoría de estas IES existe una adecuada planeación académica para asegurar, cubrir con los objetivos de los educandos, inclusive en algunos programas se diseñan de manera particular a las necesidades de los organismos solicitantes.*
5. *13 (93%) de los administradores encuestados afirman estar completamente de acuerdo en que los contenidos de los actos de EC que ofertan se someten a una actualización permanente, y solo 1 estar de acuerdo. Estas afirmaciones indican la eficacia de los programas, porque como se ha expresado en la parte teórica, esta modalidad educativa debe ser eficiente y eficaz.*

De manera general, según lo expresados por las Instituciones encuestadas, se detectó que las características de la Educación Continua impartida es acorde a las necesidades sociales, planeada adecuadamente, pertinente, actualizada y enfocada a competencias.

En el apartado de cómo operan la Gestión de la EC, expresaron lo siguiente:

En 10 (72%) de las encuestas reportan estar completamente de acuerdo en que cuentan con un plan estratégico de actualización de la EC, 2 (14%) están en desacuerdo y 2 (14%) en completo desacuerdo. Este porcentaje es adecuado, hay que mencionar que las que si realizan la planeación estratégica es porque tienen un área específica dentro de su estructura orgánica y de le dan la importancia suficiente en su plan de desarrollo institucional.

Solo 3 (21%) de los usuarios manifiestan estar completamente de acuerdo en que la dirección de su centro de EC comunica las estrategias y políticas definidas en la planeación estratégica, 4 (29%) están de acuerdo, 4 (29%) en desacuerdo y 3 (21%) en completo desacuerdo. Este resultado no es muy exitoso, por lo que se considera como un área de oportunidad para involucrar no solo al personal directivo en la EC, sino al personal de nivel medio y operativo y aumenten su compromiso con los objetivos estratégicos.

De las Instituciones encuestadas, 13 (93%) afirman estar completamente de acuerdo en que si se planifica la gestión de los recursos económicos de los centro de EC, y solo uno (7%) expresa no estar de acuerdo. Este resultado se puede considerar como una fortaleza en las IES encuestadas puesto que consideran como un indicador de éxito el que los programas sean por lo menos autofinanciables, y en la mayoría de los casos que generen utilidades.

Por otro lado, 10 (71%) de los encuestados expresan que realizan estudios de detección de necesidades y expectativas de los grupos de interés, 3 (22%) están simplemente de acuerdo y 1 (7%) en desacuerdo. Este resultado también se considera aceptable y en gran parte se debe a que aunque no lo hacen metodológicamente, muchos programas como diplomados, cursos y talleres se realizan de acuerdo a requerimientos específicos de los organismos públicos y privados con los que tienen convenios.

Según lo manifiestan, de las Instituciones encuestadas, 8 (57%) si realizan alianzas con otras instituciones para fortalecer su acción, 2 (14%) expresan estar de acuerdo, 3 (22%) en desacuerdo y 1(7%) en completo desacuerdo. Como se puede observar un poco más de la mitad realizan plenamente estas alianzas, la otra parte hasta la fecha admite que no lo ha considerado importante, o porque desconoce la gestión para hacerlo, aquí también es un área de oportunidad que hay que fortalecer para obtener los beneficios que conlleva.

Dos (14%) de los encuestados, manifiesta estar de acuerdo en que los responsables de los centros de EC establecen una comunicación sistemática con alumnos, profesores y personal administrativo para

concertar intereses mutuos, 3 (22%) están de acuerdo 9 (64%) en desacuerdo. Se puede observar que este rubro constituye una debilidad, la causa puede ser a que el interés de su gestión está enfocada más hacia los sectores a quienes brindan sus servicios, descuidando la competitividad de su personal, por lo que se recomienda fortalecer al interior de la Institución el personal para competir en el mercado.

De las encuestas, 10 (67%) reportan estar completamente de acuerdo en que los mecanismos de evaluación del personal administrativo y operativo permiten identificar sus aportaciones para asumir adecuadamente sus responsabilidades, 3 (22%) están de acuerdo y 1(1%) en desacuerdo. Estas prácticas de evaluación son efectivas para la buena administración de las Instituciones porque parte de la estrategia competitiva es a través de sus miembros.

Con respecto a la pregunta de que si cuentan con indicadores y utilización de estos para medir la satisfacción de los usuarios de la EC, 6 (43%) afirman estar completamente de acuerdo, 6 (43%) en desacuerdo y 2 (14%) en completo desacuerdo. También falta trabajar con la identificación y puesta en práctica de este puesto que también constituyen factores de éxito de la EC.

De los resultados, se reporta que 10 (71%) de los administradores consideran que la Educación Continua esta en un proceso de mejora continua de sus procesos, 4 (29%) consideran estar de acuerdo. Cabe destacar que gracias a la intervención de los organismos reguladores como RECLA; ANUIES, AMECYD, etc. y a los diferentes foros que se organizan, coadyuvan a impulsar y promover esta mejora.

En relación al cuestionamiento de que si cuentan con un portal o tecnología adecuada para el manejo de la información que permite al usuario agilizar sus trámites y conocer su situación académica, 9 (65%) instituciones afirman estar completamente de acuerdo, 2 (14%) estar de acuerdo, 2 (14%) en desacuerdo y 1 (7%) en total desacuerdo. Este indicador también falta por mejorar, puesto que algunas IES no cuentan con esta plataforma, en la que además sería necesario identificar el impacto real que tiene en la población a la que se dirige.

De las 14 Instituciones, 9 (65%) expresan estar completamente de acuerdo en que si realizan un análisis de la competencia para conocer sus productos, los actores que participan y que se puede ofertar concurrentemente con ellos, 2 (14%) están de acuerdo, 2 (14%) en desacuerdo y 1 (7%) en completo desacuerdo. Este análisis es necesario para fortalecer el marketing estratégico.

En lo referente a la pregunta de que si el centro de EC utiliza herramientas de comunicación y marketing adecuados para una efectiva difusión de sus actos de EC, 13 (93%) expresan estar completamente de acuerdo, y 1 de acuerdo.

En relación a que si el centro de EC cuenta con una logística de infraestructura, ya sea propia o a través de convenios con otros centros para la optimización de recursos, 13 (93%) manifiestan estar completamente de acuerdo, y 1 (7%) de acuerdo.

Por lo que se refiere a que si el centro de EC evalúa la satisfacción del alumno en relación a docencia, infraestructura, servicios administrativos asociados al curso, utilidad final, etc., las 14 (100%) Instituciones manifestó estar completamente de acuerdo; este resultado indica que al haber evaluación de dichos eventos, se da también la retroalimentación correspondiente y por tanto la mejora continua.

: Con relación al cuestionamiento de que si se presentan en la unidad académica directorio de participantes, evaluación de profesores, listas de asistencias, etc., 12 (86%) centros expresaron estar completamente de acuerdo y 2 (14%) estar de acuerdo.

CONCLUSIONES

Los resultados de las encuestas realizadas reportan de manera general, que la mayoría de los centros de EC investigados están pendientes a responder asertivamente a la demanda de los usuarios, investigando sus necesidades, actualizándolos, y enfocándolos a las competencias demandadas por los empleadores y el mundo globalizado. En cuanto a la gestión, se puede observar que también la mayoría expresa realizar una planeación estratégica, solo que esta debilitada en la comunicación de las estrategias y políticas a los actores administrativos, en lo referente a la vinculación, la mayoría expresan desarrollarla, sin embargo se detecta poco trabajada la identificación de indicadores de calidad. En relación al uso de las TIC'S, se aprecia que si es utilizado para el manejo de información y difusión, mas sin embargo no hay suficiente investigación de mercados relacionando contenidos y modalidades cambiantes con procesos cambiantes, así como el análisis de la competencia. También se observa un adecuado desarrollo en la difusión de los eventos, organización de la información escolar, evaluación del impacto en los usuarios en lo referente a su grado de satisfacción con lo aprendido, pero se aprecia pobre investigación en el impacto de esta importante modalidad educativa con los mismos usuarios respecto a su desarrollo humano integral, empleadores y sociedad en general, retos para futuras investigaciones.

De manera general, se pudieron identificar como elementos comunes para garantizar el éxito en la Educación Continua los siguientes: Articulación de la oferta de los programas con la demanda de los usuarios y una respuesta rápida a esta, planeación prospectiva estratégica de su gestión a través de un comité, vinculación con el sector productivo, convenios de colaboración con otras Instituciones identificación exacta de su mercado (que, como y donde) y una adecuada difusión de los actos de Educación Continua que oferta. También es importante mencionar que las Instituciones exitosas manifestaron que trabajan en base a la intuición, experiencias empíricas y documentadas de sus antecesores en la administración de la EC. Los desafíos que enfrentan son: La falta de comunicación al interior de sus centros, falta de indicadores de calidad tanto en los programas educativos como en la gestión institucional, y la medición del impacto en el desempeño laboral de los usuarios. Por otro lado el nivel de importancia de esta para el desarrollo y consolidación de la Educación Superior en México ha sido asumido de manera desigual por las IES, puesto que:

- *En algunas IES es considerada únicamente como una **generación de recursos económicos***
- *Poca inclusión en la planeación institucional*
- *Insuficiente infraestructura al interior de las IES, teniendo que resolverlo con convenios de colaboración o instalaciones prestadas o rentadas.*

Los resultados obtenidos, constituyen un punto de partida para proponer un Sistema de Gestión de la EC que contribuya al perfeccionamiento de su trabajo e incrementar el desarrollo de las IES que no son líderes en esta modalidad educativa, con vistas a que sean candidatas a los procesos externos de acreditación de sus programas y certificación de sus procesos.

MASIFICACION DE LAS TARJETAS DE CREDITO PROPIAS. CASO ALMACENES ÉXITO EN CARTAGENA DE INDIAS - COLOMBIA

Emperatriz Londoño Aldana, Universidad De Cartagena

Maria Eugenia Navas Rios, Universidad De Cartagena

Claudia Esther Torres Herrera, Universidad De Cartagena

RESUMEN

La tarjeta de crédito se ha convertido en el habitual medio de pago nacional e internacional en los países desarrollados en vías de desarrollo; dicho medio de pago es fundamental para los cibercompradores toda vez que los billetes o monedas no tienen validez en la red. En Colombia dentro de las tarjetas de pago vigentes, toma fuerza la tarjeta de crédito propia de los diferentes almacenes de cadena existentes en el país. Masificar la tarjeta de crédito propia forma parte de las estrategias de marketing de los grandes minoristas quienes buscan ganar y aumentar su cobertura en la población de estratos medios bajos y bajos de la población. Dado que durante el proceso de colocación de la tarjeta de crédito propia, no se analizó el peso de la variable preparación del nuevo tarjetahabiente para asumir su nuevo rol de comprador, los resultados no han sido los esperados tanto para los emisores como para los usuarios. La investigación busca analizar la forma en que los tarjetahabientes utilizan la tarjeta de crédito de marca propia y en función de ello establecer grupos similares mediante de un análisis de clúster y el uso del algoritmo de Howard Harris.

Palabras clave: Tarjetas de crédito, precios, promociones, cuota de manejo.

MASSIFICATION OF THE OWN BRAND CREDITS CARDS. THE CASE OD THE "EXITO" STORES IN CARTAGENA – COLOMBIA

ABSTRACT

The credit card has become the usual means of national and international payments in developing and developed countries, this method of payment is critical for online buyers whenever the hard cash is not valid on the network. In Colombia among the existing payment cards, the own brand credit cards of different chain stores are gaining strenght. The massification of the own brand credit cards is part of the marketing strategies of large retailers who seek to gain and increase the population coverage in the low and lower middle strata of the population. Since during the process of placing the own brand credit card, it was not analyzed the importance of the preparation of the new cardholder to assume his role as a credit buyer, the results were not as expected for both issuers and users. This research aims to analyze the way in which cardholders use the own brand credit card, and accordingly, to establish similar groups by means of the cluster analysis and of the algorithm of Howard Harris.

KEYWORDS: Credit cards, prices, promotions, handling fee.

METODOLOGÍA

La presente investigación es de tipo descriptivo en el que se ha utilizado el método transversal de encuestas, complementadas con observación directa como mecanismos de control.

Se aplicó una encuesta estructurada con objetivo encubierto a una muestra de 136 personas propietarias de la tarjeta de crédito Éxito y con cupo no superior a trescientos mil pesos (150 dólares) Se trabajó con preguntas categóricas y mixtas; para estas últimas se utilizó una escala de Likert con valoración de uno a cinco puntos para medir grados de acuerdo/ desacuerdo; la validez fue comprobada con el coeficiente Alpha de Cronbach (Peterson, 1994): 0,79.

Para el tratamiento de los datos se utilizó el software Dyane: diseño y análisis de encuestas de Miguel Santesmases Mestre; fueron realizadas tabulaciones simples y cruzadas con aplicación de las pruebas J^2 (Ji cuadrado) y F de Snedecor según el caso. Finalmente para establecer asociaciones entre variables múltiples se hizo un análisis factorial de correspondencias –AFC- tomando como variable criterio la ocupación oficio del tarjetahabiente.

Tarjeta de crédito Éxito

Dentro de las estrategias de marketing para atraer el comprador de los estratos socioeconómicos bajos se encuentra la masificación de su tarjeta de crédito propia; por ello se ha focalizado en los estratos 1 y 2 de la población atendiendo a la filosofía del diseño de la tarjeta que consiste en propender por la financiación las compras de personas que si bien pueden acceder a productos ofertados por los supermercados, en su mayoría se encuentran alejadas del sistema financiero ; así, el 80% de sus actuales tarjetahabientes son de bajos recursos y para muchos de ellos la adquisición de la tarjeta Éxito constituye el primer contacto crediticio financiero.

La masificación de la tarjeta de crédito propia ha llevado a Almacenes Exito a convertirse en el tercer mayor emisor de tarjetas de crédito del país después de los bancos Davivienda y Colpatria. Con el 20% del mercado, por franquicia e igualmente el tercero por entidad

Beneficios y condiciones para el tarjetahabiente Éxito.

Los beneficios para el tarjetahabiente se encuentran asociados con los descuentos, promociones, financiación, reconocimiento, entrada al sector financiero, utilización de la tarjeta en otros establecimientos, facilidades de pago y medios de consulta entre otros y los mismos beneficios financieros de las tarjetas tradicionales. Igualmente existen condiciones que de una u otra forma afectan el manejo dado a la tarjeta para quienes dichas condiciones no son claras o existe un desconocimiento de ellas.

Al momento de recibir la información el usuario solamente tiende a retener, básicamente dos aspectos: beneficio de poder *diferir el crédito hasta en 48 meses* (89,71%) y *no cobro de la cuota de manejo* (77.94%).

Si bien el 92.65% de las personas expresa saber que deben *asumir una cuota de manejo mientras el crédito se encuentre vigente* e igualmente más de la tercera parte de las personas manifiesta conocer los costos en los que ha de incurrir (tabla 4), a la mayoría les toma por sorpresa el total a pagar, cuando reciben la primera factura; ésta incluye: fracción del crédito más \$19.000 (US\$10) de cuota de manejo, más 2,05% por concepto de intereses, más \$870 + IVA por Audio Respuesta en Línea (SAC), si ha realizado tres llamadas durante el mismo mes. De otra parte, si ha realizado avances en efectivo, por cada uno de ellos debe asumir un costo de \$6.500 (US\$3).

CONCLUSIONES

La masificación de las tarjetas de crédito propias, de grandes minoristas y en este caso la de la cadena de Almacenes Éxito, les ha permitido llegar a los segmentos socioeconómicos más bajos de la población en Colombia. Con esta estrategia los empresarios buscan ganar el mercado que se encuentra en manos del pequeño comercio, especialmente las tiendas de barrio. Si bien no se conocen los positivos o negativos resultados económicos de la estrategia en mención, para los minoristas, quienes en algunos casos, necesariamente afrontan una cartera en parte morosa o incobrable, es un hecho que para los tarjetahabientes, especialmente los de cupos más bajos ha contribuido a que su nivel de endeudamiento *no su capacidad de endeudamiento* aumente. El desconocimiento del manejo financiero por una parte y la oportunidad de comprar a crédito y poder acceder a productos que para el consumidor no era posible, hace que el tarjetahabiente compre los productos a precios muy por encima de la usura, con la consecuente afectación del restringido presupuesto familiar.

COMPETITIVIDAD Y GESTIÓN DE LAS PYMES

Sandra Julieta Saldivar González, Universidad Autónoma de Baja California

Blanca Rosa García Rivera, Universidad Autónoma de Baja California

Nicolasa Valenciana Moreno, Universidad Autónoma de Baja California

Raquel Olivia Roa Rivera, Universidad Autónoma de Baja California

RESUMEN

La competitividad de las Pymes es tema transcendental en la economía de los países y en México no es diferente. En México representan 72% del empleo en el país (INEGI, 2010). El estudio de la problemática de la competitividad de las Pymes se ha asumido desde dos enfoques, el externo y el interno. El externo se refiere al entorno macroeconómico, donde las Pymes tienen poca influencia en la solución de la problemática que enfrentan; en tanto que el interno son problemas derivados de la propia gestión de la empresa y del sector económico al que pertenecen. Tal como afirma la Asociación Argentina: "En el 97% de los casos, el fracaso se debe a una mala gestión". El éxito de una micro, pequeña o mediana empresa está fuertemente condicionado por los conocimientos de su dueño (Soriano, 2005). La presente investigación tiene como propósito describir si el éxito competitivo de las Pymes está positivamente relacionado con las capacidades directivas de la empresa en relación a la innovación de la misma.

PALABRAS CLAVE: Competitividad, Gestión y Pequeñas y Medianas Empresas.

COMPETITIVENESS AND MANAGEMENT OF SMES

RESUME

The competitiveness of SMEs is transcendental subject in the economy of countries and Mexico is no different. In Mexico, representing 72% of employment in the country (INEGI, 2010). The study of the problems of competitiveness of SMEs has been taken from two approaches, the external and internal. Refers to the external macroeconomic environment where SMEs have little influence to solve the problems they face, while the internal are problems resulting from its own management company and the industry they belong to. As stated by the Argentina Association: "In 97% of cases, the failure is due to mismanagement." The success of micro, small and medium enterprises is strongly conditioned by the knowledge of its owner (Soriano, 2005). This research aims to describe whether the competitive success of SMEs is positively related to the management skills of the company in relation to the innovation of them.

KEYWORDS: Competitiveness, Management and Small Business

INTRODUCCIÓN

La competitividad ha sido objeto de muchos estudios. Esta investigación solo se enfoca a las capacidades directivas del dueño o gerente de la Pyme. En muchas investigaciones referentes a las Pymes, claramente se observa cómo es una variable recurrente el empresario o dueño, puesto que en él, descansan la mayoría de las decisiones de la empresa y el rumbo de la misma (Luk, 1996, Viedma, 1992, Yusuf, 1995). El objetivo de esta investigación es identificar la percepción de los empresarios de acuerdo a la innovación y las tecnologías de la información y con ello describir la visión de los mismos referente a estos rubros. Actualmente existen muchos programas de apoyo a las Pymes, sin embargo pocos son los empresarios que se atreven a incursionar en la innovación, dado que consideran, que los costos son altos para el tiempo en que verán retribuida su inversión.

REVISIÓN LITERARIA

La importancia de las Pymes radica en la enorme contribución económica que aportan en todos los países. En México no es diferente, según datos del Instituto Nacional de Estadística y Geografía, en México existen aproximadamente 4 millones 15 mil unidades empresariales, de las cuales 99.8% son MIPYMES que generan 52% del Producto Interno Bruto (PIB) y 72% del empleo en el país (2010). Por ello es importante buscar elementos que mantengan la competitividad de las Pymes, De acuerdo con el Instituto para el fomento a la calidad total, A.C., la competitividad es: “La habilidad de una organización para ofrecer productos y/o servicios que responden a los requerimientos de calidad y precio que demandan los mercados locales y globales, logrando un rendimiento adecuado sobre la inversión. Se fundamenta en la innovación de sus estrategias, en el incremento sostenido de su productividad, la creación de valor, en la capacidad para establecer sinergia con otras organizaciones e instituciones y en el profundo conocimiento del entorno competitivo determinado por los mercados y consumidores”.

A nivel mundial las características generales de las Pymes no son semejantes, según Cota (2008) no existe una clasificación única para designar a las pequeñas y medianas empresas, puesto que cada país hace la propia y, por ende, no asumen los mismos criterios. Por ejemplo, en Estados Unidos es considerada como pequeña y mediana empresa aquella que tenga hasta 500 trabajadores, en Japón menos de 300, en México menos de 250 de igual forma la Unión Europea ha definido a las Pymes aquellas que empleen menos de 250 empleados y que posean un balance general inferior a los 43 millones de euros, entre otros aspectos. No obstante de acuerdo con Schollhammer y Kuriloff, citados por Carson (1990), son cinco características generales de las Pyme a nivel global y tres de estas apuntan a la persona quien las dirige:

- ✓ Propiedad: Pertenecen a una sola persona o un grupo pequeño de inversionistas.
- ✓ Independencia: El dueño o administrador tiene total control sobre el negocio, aunque su independencia es limitada hasta cierto punto por las obligaciones con instituciones financieras. Además se les considera independientes por no formar parte de un complejo sistema administrativo, tales como las sucursales o pequeñas divisiones de grandes consorcios.
- ✓ Estilo de administración: Son administradas de forma personalizada, por lo cual los dueños conocen a todos los trabajadores y participan en todos los aspectos de la administración y no comparten la toma de decisiones.

Así la capacidad directiva para gestionar se convierte en aspecto trascendental para la vida de las empresas. Es conveniente resaltar que las Pymes de éxito suelen estar dirigidas por líderes que se caracterizan por ser grandes profesionales con experiencia y por poseer reconocimiento y conocimiento del mercado, del entorno, de los recursos humanos y los recursos tecnológicos Argón & Rubio (2002). En relación a esto Jiménez (2006) destaca la gestión gerencial, como factor predominante para determinar entre la diferencia de una empresa a otra; porque la capacidad de los líderes, a la hora de tomar decisiones asertivas, la habilidad para responder de forma creativa y flexible a las nuevas oportunidades que se presenten, así como la visión general que tenga de la propia empresa, logran mejores ventajas competitivas para la organización. Por otra parte la Innovación y las Tecnologías de la información van de la mano, las tecnologías son definidas por Gradados (2004), como son todos aquellos dispositivos, herramientas, equipos y componentes electrónicos capaces de manipular información que soporten el desarrollo y crecimiento económico de cualquier tipo de organización. El avance tecnológica constituye una garantía de competitividad en las empresas: TIC's, son un elemento importante de las políticas para apoyar la innovación e incrementar la competencia empresarial; ello está cambiando fundamental y rápidamente la manera de conducir los negocios. (Storey y Tether, 1998).

Dado lo anterior, es importante que los empresarios vean las tecnologías como una oportunidad de hacer las cosas diferentes y elevar la competitividad de las empresas. En este sentido Sarmiento, Sánchez, & Cruz (2009) mencionan que es necesario fomentar una cultura de cambio, mejora continua e innovación como factor de competitividad en la Pymes. En otras palabras para que los empresarios transiten de una fase de crecimiento de confort a una etapa de desarrollo dinámico, competitivo y próspero es necesario que realicen innovaciones en sus negocios.

METODOLOGÍA

Para efectos de esta investigación se aplicó un instrumento de medición (encuesta) de 25 reactivos, a 62 empresarios en la ciudad de Mexicali. Es una investigación cualitativa porque recaba la percepción de los empresarios y es cuantitativa por que se utiliza un cuestionario cerrado en donde se mide la frecuencia de las respuestas de los mismos. Los indicadores que se utilizaron para esta investigación fueron: uso de la tecnología por parte del empresario, perfil del empresario, innovación, seguridad de las tecnologías y costo de las mismas. Para los fines de esta investigación, se utilizó la escala de Likert para describir las percepciones de los encuestados.

Escala Likert	
En total desacuerdo	1
En desacuerdo	2
Ni de acuerdo ni en desacuerdo	3
De acuerdo	4
En total acuerdo	5

RESULTADOS

Perfil del empresario: Respecto a la edad el 11% de los entrevistados tiene entre 25 y 30 años el 68% tienen entre 31 y 45 años y el 21% más de 46 años, con lo que respecta al sexo el 67% de los entrevistados son hombres mientras que el 33% son mujeres. Respecto a la formación profesional el 53% tienen licenciatura terminada, el 21% tienen algún tipo de posgrado, el 2% no tiene formación, 2% tiene primaria terminada, el 9% secundaria terminada y el 13% preparatoria terminada.

Uso de las tecnologías: Los encuestados manifiestan que manejan las herramientas integradas al celular como agenda, cámara, internet en apoyo a las actividades de la empresa: el 9.3 % en total desacuerdo, el 6.5% en desacuerdo, el 14.5 % ni acuerdo ni desacuerdo, el 21 % acuerdo, y el 48.4% en total acuerdo. En este mismo sentido en relación a la pregunta; utilizo y manejo los equipos como fax, cámara, computadora, internet en apoyo a mi negocio: el 9.7 % contesto en total desacuerdo, 12.9% en desacuerdo, el 19.4 % ni de acuerdo ni en desacuerdo, 32.3 % de acuerdo y el 25.8 % en total acuerdo.

Seguridad de las tecnologías: En relación a la seguridad del uso de la banca electrónica: el 46% considera que es seguro utilizarla, el 16% no está ni de acuerdo ni en desacuerdo y el 38% no considera seguro el uso de la banca. En este mismo sentido el 62% considera seguro hacer compras, el 12% ni de acuerdo ni en desacuerdo y el 26% consideran que no es seguro hacer compras por internet.

Costo de las tecnologías: El 69% consideran aceptable el costo de un sitio en internet, el 16% están en desacuerdo y en total desacuerdo referente al costo y un 15% contesto ni acuerdo ni en desacuerdo. En contraste 68% está totalmente de acuerdo en que el costo de los programas es alto, el 11% contesto que no está ni de acuerdo ni en desacuerdo y el 21% está en total desacuerdo en que el costo es alto.

Innovación

Respecto de la innovación o nuevas formas de hacer negocios: el 32.26% está en total acuerdo en un futuro incursionar en el comercio electrónico, el 33.86% manifestó estar de acuerdo, un 21% se mostro indiferente y 13% contesto que no está de acuerdo o está en total desacuerdo. En este mismo sentido de la pregunta; soy una persona abierta al cambio y me interesa utilizar las tecnologías para este negocio en un futuro próximo: el 40.32% manifestó estar en total acuerdo, el 27.42% de acuerdo, el 11.29% se mostro indiferente y 12.90% y 9.06% contesto en total desacuerdo y en desacuerdo respectivamente.

CONCLUSIONES

La mayoría de los empresarios son hombres y también la mayoría tienen 31 y 45 años, cuentan con licenciatura y algún tipo de postgrado. Consideran seguro utilizar la banca y hacer compras a través de internet. Además se logró observar que en relación a los costos de un sitio web la mayoría los considera aceptables, no así un gran porcentaje, que piensa que los programas de aplicación para la contabilidad e inventarios aún tienen altos costos. De igual forma se hizo un cruce entre la pregunta de incursionar al comercio y la formación del empresario, donde se alcanzó a observar, que a mayor educación mayor interés por participar en el comercio electrónico. De igual forma al cruzar la pregunta de costo de un sitio Web, se captó que a mayor formación del empresario considera más la aceptación de los costos, es decir lo visualiza más como una inversión a las tecnologías, que como un gasto. Al cruzar las preguntas de uso de las tecnologías con el interés en incursionar en el comercio electrónico, resalto, que los empresarios que usan la tecnología independientemente de su formación, tienen mayor interés por aceptar nuevas formas de negocios, en este caso el comercio electrónico. Se puede concluir que la formación del gerente o empresario juega un papel trascendental en la adopción de las tecnologías de la información como innovación para la competitividad de las empresas. Pero además el hecho de que el empresario use estas tecnologías cotidianamente permite visualizar el potencial de estas, en otras palabras mientras más utilice las tecnologías mayor grado de aceptación de la mismas independientemente de su formación profesional.

LA GESTIÓN INTEGRAL, UN NUEVO MODELO ORGANIZACIONAL PARA LA EDUCACIÓN SUPERIOR EN COLOMBIA

Víctor Quesada Ibarquien, Universidad de Cartagena

Ingrid Blanco Hernández, Universidad de Cartagena

RESUMEN

Un modelo de Gestión Integral para la educación superior, permite una mirada holística a las Instituciones de Educación Superior (IES), lo que facilita la generación de resultados que orienten la toma de decisiones conducentes a la mejora en la eficacia de los procesos organizacionales y la calidad de las organizaciones, conducentes a la prestación del servicio educativo de acuerdo con las exigencias de los usuarios y partes interesadas (Stakeholders). En este trabajo se propone un modelo que recoge los factores fundamentales que actúan como agentes y procesos generadores de la calidad de un programa académico y los que se asimilan a resultados provenientes de aquéllos, mediados por la gestión de la innovación y el aprendizaje organizacional. Para estructurar el modelo se consultó la opinión de un grupo de expertos en los procesos de calidad de las Instituciones de Educación Superior de Colombia, utilizando el método Delphi. La implementación del modelo que se propone, conlleva a una transformación en materia de evaluación de la calidad de las Instituciones de Educación Superior, en tanto que enfatiza en la calidad de la gestión, como proceso, cuyo producto ha de ser la calidad del programa evaluado.

PALABRAS CLAVES: Gestión integral, Modelo organizacional, Educación superior

INTEGRATED MANAGEMENT, A NEW ORGANIZATIONAL MODEL FOR HIGHER EDUCATION IN COLOMBIA ABSTRACT

ABSTRACT

An Integrated Model for higher education allows a holistic view to the Higher Education Institutions (HEI), which facilitates the generation of results to guide decision making leading to improved efficiency of organizational processes and quality of organizations, leading to the provision of educational services in accordance with the requirements of users and stakeholders. In this paper we propose a model that captures the key factors that act as agents and processes generating the quality of an academic program and those who are assimilated to income from those mediated by the management of innovation and organizational learning. To structure the model consulted the opinion of a group of experts in the processes of quality of higher education institutions in Colombia, using the Delphi method. The implementation of the proposed model, leads to a transformation in evaluation of the quality of higher education institutions, while emphasizing on the quality of management as a process whose product must be evaluated program quality.

KEYWORDS: Integrated management, Organizational model, Higher Education.

INTRODUCCIÓN

La principal ventaja competitiva de las organizaciones exitosas, no sólo radica en los modelos de gestión de calidad que estén implementando, sino en la calidad de su gestión, la cual involucra además de la gestión de la calidad, la de sus áreas claves: talento humano, financiera, comercial, tecnológica entre otras. Tal apreciación motivó a los autores a emprender esta investigación con el propósito de diseñar un Modelo de Gestión Integral, para las Instituciones de Educación Superior (IES), basado en los lineamientos de autoevaluación con fines de acreditación del Consejo Nacional de Acreditación (CNA), que permita evaluar la calidad de su gestión. El documento está organizado de la siguiente manera: en la revisión de la literatura se explica qué es la gestión integral, se describen algunos modelos de excelencia que se han venido aplicando a nivel mundial y se explica el sistema de aseguramiento de la calidad en la educación superior colombiana. Posteriormente se describe el proceso metodológico, destacando la selección de los enfoques cualitativo y cuantitativo y el uso de la técnica Delphi como estrategia metodológica; igualmente se presentan las variables del estudio y el proceso de selección y tratamiento de los datos. En la tercera sección se tratan los resultados consistentes en la ubicación de las características de los lineamientos del CNA en los siete criterios del modelo propuesto, la ponderación de los criterios y un análisis de las relaciones de causalidad entre los agentes, los procesos y los resultados. Finalmente, en las conclusiones se señalan los puntos relevantes de la investigación.

REVISIÓN DE LITERATURA

Proponer un Modelo de Gestión Integral para la Educación Superior Colombiana, implica hacer una revisión de los Modelos de Excelencia en la gestión, que se han desarrollado en diversas partes del mundo, como instrumento para el logro de la competitividad organizacional, lo que se evidencia en el Modelo Malcom Baldrige de los Estados Unidos, en tanto que en Europa se han destacado los Modelos EFQM, el Modelo RUECA y el Modelo Iberoamericano.

El Modelo de mayor aplicación en el continente asiático es el Deming; por otra parte, en América Latina se resalta el Modelo para una Gestión Empresarial de Excelencia de Argentina, el Modelo de Excelencia en la Gestión de Brasil, el Modelo Chileno de Gestión de Excelencia y el Modelo del Premio Nacional a la Excelencia y la Innovación en la Gestión de Colombia, éstos en su mayoría se han derivado en premios a la excelencia en la gestión educativa. Conocer como está integrado el Sistema de Aseguramiento de la Calidad en la Educación Superior Colombiana, es otro aspecto importante en la revisión de la literatura, en este aparte se detalla lo relacionado con la evaluación de la calidad en la educación superior en cuanto a los lineamientos para la autoevaluación con fines de acreditación establecidos por el Consejo Nacional de Acreditación CNA, los cuales constituyen la base teórica para la construcción del modelo de gestión integral, acogiendo el Modelo de Excelencia en la Gestión Universitaria, propuesto por la Corporación Calidad.

METODOLOGÍA

El estudio se realizó mediante una investigación por encuesta, con la técnica del cuestionario como instrumento de recogida de la información; ésta se desarrolló en todo el ámbito colombiano, a través de contactos con una muestra de IES que en algún momento han aplicado a la acreditación de calidad de sus programas y la han logrado, seleccionada de la base de datos del CNA. De 46 programas que cumplían los criterios de inclusión se seleccionaron 25, y de éstos respondieron 19 expertos, representados como se muestra en la tabla 1.

Tabla 1: Información Muestra Seleccionada

Tipo de Institución y Origen	No. de encuestados	Región del país
Universidad oficial	10	Norte
Universidad privada	2	Norte
Institución tecnológica privada	2	Norte
Colegio Mayor oficial	1	Norte
Universidad privada	2	Centro
Universidad privada	1	Oriente
Institución tecnológica oficial	1	Occidente

Instituciones, número de expertos consultados y región del país en que se ubica la Universidad. Fuente: autores

La recolección de la información, se realizó mediante cuestionario dirigido a los directivos y responsables de los procesos de calidad de las IES seleccionadas, para identificar qué características de los lineamientos de autoevaluación con fines de acreditación del CNA, ejercen de agentes (entradas y procesos) y las que apuntan a resultados, y establecer sus niveles de interrelación; haciendo uso de criterios cualitativos y cuantitativos, se analizó la información obtenida, para posteriormente derivar un modelo que integrara sistémicamente los lineamientos de autoevaluación del CNA y la ponderación de cada uno de sus criterios. Se empleó la Técnica. A los expertos se les solicitó su opinión en cuanto a la correspondencia de las características de los lineamientos de autoevaluación del CNA con los criterios del modelo de excelencia en la gestión universitaria, propuesto por la Corporación Calidad, y la ponderación que asignaría a cada uno de los criterios del modelo.

La validez de la técnica del juicio de expertos viene determinada fundamentalmente por dos aspectos: los expertos seleccionados y los instrumentos utilizados para la recogida de la información. Para el análisis de los datos se utilizaron técnicas estadísticas univariadas y multivariadas. De las técnicas univariadas, se utilizó la tabulación simple; de las multivariadas se utilizó el análisis de conglomerados (cluster).

RESULTADOS

La participación de los expertos permitió identificar los acuerdos a que llegaron en cuanto a la ubicación de un número determinado de características de los lineamientos del CNA, en los criterios del modelo de gestión integral propuesto. En aquellas situaciones en las que no hubo un acuerdo al 100%, fue necesario recurrir al fundamento teórico para decidir la ubicación de las características en conflicto en el criterio correspondiente. Los resultados de la ponderación de los criterios del modelo de gestión integral de acuerdo a la opinión de los expertos, sobre una base de 1000 puntos, fueron: Gestión se Estratégica (160), Gestión Académica (193), Gestión Administrativa (106), Gestión de la Innovación y el Aprendizaje (179), Gestión Humana (145), Responsabilidad Institucional (99), y resultados (118), con lo que se reconoce que no todos los criterios del modelo contribuyen en igual forma a la calidad de los programas. Así mismo, el estudio muestra cómo se relacionan los criterios para contribuir a la calidad de la IES evaluada

CONCLUSIONES

A través de la investigación y teniendo como base los conceptos de los expertos consultados, se llega a establecer la ubicación de las cuarenta y dos características que contemplan los lineamientos para la autoevaluación con fines de acreditación establecidos por el Consejo Nacional de Acreditación para las instituciones de educación superior en Colombia, distribuidas en los siete criterios del modelo propuestos, así como la ponderación de cada uno de estos criterios, según la opinión de los mismos expertos. La ponderación atribuida a los criterios es una reafirmación de que no todas las características (y por tanto los criterios) contribuyen de igual manera a la generación de la calidad del programa sometido a evaluación, permitiendo con ello establecer prioridades a la hora de aplicar correctivos para cerrar brechas identificadas en el proceso de autoevaluación. De igual manera, la forma como se relacionan los criterios

insinúa el nivel de influencia de unos sobre otros, permitiendo, de alguna manera, predecir la magnitud del impacto que sobre un criterio “efecto” se produce por los resultados de un criterio “causa”.

PROBLEMA SOCIAL DEL MOTOTAXISMO Y SU IMPACTO EN LA GENERACIÓN DE EMPLEO EN MONTERÍA, CÓRDOBA Y OTROS DEPARTAMENTOS DE COLOMBIA

Angela María Flórez Alvarez, Universidad Cooperativa de Colombia
Benjamín Castillo Osorio, Universidad del Sinú- sede Montería

RESUMEN

El fenómeno del Mototaxismo, nació por un simple favor que el señor Carlos Petro le prestó a una señora de nombre Juana Galeano quien se encontraba esperando transporte en las horas de la noche en la entrada del antiguo corregimiento de Cotorra perteneciente al Municipio de Lorica, departamento de Córdoba y luego elevado a la categoría de Municipio, este hecho fue el pilar fundamental que más tarde pasara a generar una de las problemáticas sociales, políticas y económicas de las dos (2) últimas décadas en la ciudad de Montería y en todo el Departamento, hace muchos años, la gente que vivía aledaña a la capital de Córdoba, en veredas, pueblos y municipios, les era difícil el acceso a las carreteras principales de Montería, ya sea por la falta de transporte público municipal e intermunicipal, o porque las carreteras no eran las más adecuadas para la movilidad de vehículos de cuatro ruedas. Las personas que en ese entonces tenían motocicletas, comenzaron a movilizar a la gente a un costo mucho más bajo, y a medida que el tiempo fue pasando, el problema del Mototaxismo fue creciendo en forma insostenible; de esta manera, ya no sólo era en las estribaciones alrededor de la capital, sino también en la misma área urbana ya que el Mototaxismo he venido imponiéndose, como medio de transporte público alterno en conjunto con los servicios del transporte legalizado. A partir de entonces la ciudad ha estructurado nuevas formas de movilidad urbana, reguladas por el Mototaxismo. Siguiendo este orden de ideas, el trabajo de investigación que ahora es la preocupación de mucha gente, todo el mundo opina pero nadie propone solución viable a este grave problema.

INTRODUCCIÓN

El Mototaxismo se ha constituido en una práctica de transporte público informal que empezó hace más de 10 años en muchos municipios de Córdoba, y que se ha ido extendiendo a 26 de los 32 departamentos del país, se convirtió en una encrucijada social que actualmente tiene repercusiones insospechadas, si no se da una pronta solución a este grave problema socio económico y que cada día se está incrementando en la medida que aumenta el desempleo en las diferentes regiones del país, ya que muchas personas que han perdido su empleo lo han tomado como una alternativa de solución frente a las necesidades básicas insatisfechas ya que muchos de los Mototaxismo son cabeza de familia. Se ha detectado que muchos de los nuevos trabajadores de este informal oficio son en cierto modo profesionales de todo orden que han perdido su puesto de trabajo y no han logrado emplearse nuevamente; entre los meses de “Agosto de 2008 y Abril de 2009, la cifra de moto taxistas en Montería pasó de 3.750 censados a cerca de 8.000 de acuerdo con informes preparados por (M. Celis 2009), representante de este gremio informal”, Montería no ha sido ajena a la crisis mundial y aunque el Gobierno anuncia que acabará con el moto taxismo, no hay forma de darle empleo a tanta gente varada.

Los nuevos trabajadores de las motos son muchos profesores de escuelas, e incluso conductores de carro que han perdido su empleo o no han logrado ubicarse en un puesto después de haber tenido su trabajo o los que nunca han podido contar con suerte para obtener tener un empleo digno.

REVISIÓN LITERARIA

El fenómeno del Mototaxismo, nació por un simple favor que el señor Carlos Petro le prestó a una señora de nombre Juana Galeano quien se encontraba esperando transporte en las horas de la noche en la entrada del antiguo corregimiento de Cotorra perteneciente al Municipio de Lórica, departamento de Córdoba y luego elevado a la categoría de Municipio, este hecho fue el pilar fundamental que más tarde pasara a generar una de las problemáticas sociales, políticas y económicas de las dos (2) últimas décadas en la ciudad de Montería y en todo el Departamento, hace muchos años, la gente que vivía alejada a la capital de Córdoba, en veredas, pueblos y municipios, les era difícil el acceso a las carreteras principales de Montería, ya sea por la falta de transporte público municipal e intermunicipal, o porque las carreteras no eran las más adecuadas para la movilidad de vehículos de cuatro ruedas. Las personas que en ese entonces tenían motocicletas, comenzaron a movilizar a la gente a un costo mucho más bajo, y a medida que el tiempo fue pasando, el problema del Mototaxismo fue creciendo en forma insostenible; de esta manera, ya no sólo era en las estribaciones alrededor de la capital, sino también en la misma área urbana ya que el Mototaxismo he venido imponiéndose, como medio de transporte público alternativo en conjunto con los servicios del transporte legalizado. A partir de entonces la ciudad ha estructurado nuevas formas de movilidad urbana, reguladas por el Mototaxismo. Siguiendo este orden de ideas, el trabajo de investigación que ahora es la preocupación de mucha gente, todo el mundo opina pero nadie propone solución viable a este grave problema.

Este trabajo se desarrolla con el fin de determinar las principales causas del Mototaxismo en el departamento de Córdoba, como lo son el desempleo y la falta de normatividad rigurosa y oportuna, razones que explican este fenómeno, y como consecuencia ha originado el auge de la economía emergente o “rebusque” por tal razón es necesario implementar medidas y alternativas de solución de este problema considerado como un mal necesario de la misma sociedad ya que las normas restrictivas empleadas para mejorar este problema no han sido efectivas y eficientes, por esto es importante conocer sus causas para buscar respuestas que sirvan en primera instancia al Estado en los niveles Departamental y Municipal en Córdoba, luego a los Trabajadores del sector en mención. La investigación se justifica porque le permite a la Universidad del Sinú orientar las acciones de la actividad económica (Moto laxismo) desde el punto de vista jurídico al interior del Departamento e insertarse en la triada, academia-sector productivo-gobierno, asumiendo el reto que caracteriza al nuevo orden económico mundial.

DISEÑO METODOLÓGICO

El método utilizado en la Investigación. es de tipo cuantitativo y cualitativo por consiguiente, la investigación se desarrolla teniendo en cuenta dos aspectos fundamentales como son: 1°. La revisión de la literatura en una primera fase, y 2°.- La aplicación del instrumento de una encuesta, cuya muestra es de 223 sobre el total de los Moto taxistas inscritos en el Tránsito Municipal de Montería, tomando como marco de referencia el espacio temporal comprendido entre 2007 y 2009, de otro lado la aplicación de la encuesta reporta la información de fuente primaria concordante con el período objeto de la investigación y la aplicación de técnicas en el proceso de producción de ésta.

De acuerdo con la información que se deriva del trabajo de campo materializado en la encuesta, se puede afirmar que las personas que realizan mayor número de carreras durante el día se presentan el siguiente comportamiento: el 30% del total de los encuestados hace un promedio de 67 carreras diarias, le sigue en su orden los que hacen 33 carreras y representan 14.8%, luego están los que alcanzan hacer un total de 25 carreras diarias y reportan un 11.2%, a renglón seguido están los que respondieron hacer un total de 23 carreras y representan el 10.3%, todo ello indica que en la medida que el trabajador dedique mayor tiempo a esta actividad su rendimiento es cada vez mayor, muchos de ellos dicen levantarse a las 3:00 AM con destino a su trabajo, pero es importante resaltar que los que representan los niveles superiores de

porcentajes son los que tienen su nicho de clientes asegurados, los restantes los buscan en el resto del día. (ver tabla N° 1)

RESULTADOS

Figura 1: Promedio Diario de Carreras

Fuente: Trabajo de Campo cálculos del Investigador Benjamín Castillo Osorio Noviembre de 2010

Figura 2: Hora Produce Mas

Fuente: Trabajo de Campo cálculos del Investigador Benjamín Castillo Osorio Noviembre de 2010

En lo concerniente con la producción o generación de ingresos, el 37.7% responde que le rinde más en el horario comprendido entre 4:00 AM de la madrugada y 10:00 de la mañana, y dicen que esto se da por que no los está molestando el sol, hay menos tráfico vehicular y ya tienen muchas personas que los esperan para ser transportadas a su lugar de trabajo o a la búsqueda de mercancías al mercado. Los que respondieron en horas contrarias están los que derivan mas ingresos entre las 3:00 PM y las 8:00 PM, representan el 26.9% del total de los encuestados, no argumentan razones pero afirman que ya en ese

tiempo es donde mejor les va, y en 3° lugar se encuentran los que dicen que de las 10:00 AM hasta las 3:00 PM, producen mucho más que en cualquier otras horas del día, esto reporta un 20.6%, y afirman que se sienten bien trabajando en estas horas, aunque el sol los agobia puesto que en Córdoba las altas temperaturas oscilan entre los 32° y 39° grados centígrados, dentro del contexto general son los más representativos estos tres niveles de producción o generación de ingresos diarios. (ver tabla N° 2)

Figura 3: ¿Qué día de la semana que le permiten trabajar le va mejor?

Fuente: Trabajo de Campo cálculos del Investigador Benjamín Castillo Osorio Noviembre de 2010.

Observando un poco el panorama, se encuentra que el día de la semana que se le permite trabajar al moto taxista, y que mejor le va se tiene lo siguiente: el día sábado con un 34.5% y el día Lunes un 31.4%, en tercer lugar se encuentran los que responden que el día viernes les va bien y representan un 19.3% del total, lo antes expuesto se explica porque los días martes y jueves los Moto taxistas no están autorizados para trabajar, pero el jueves pueden andar sus motos sin parrillero sólo para hacer diligencias personales o familiares.

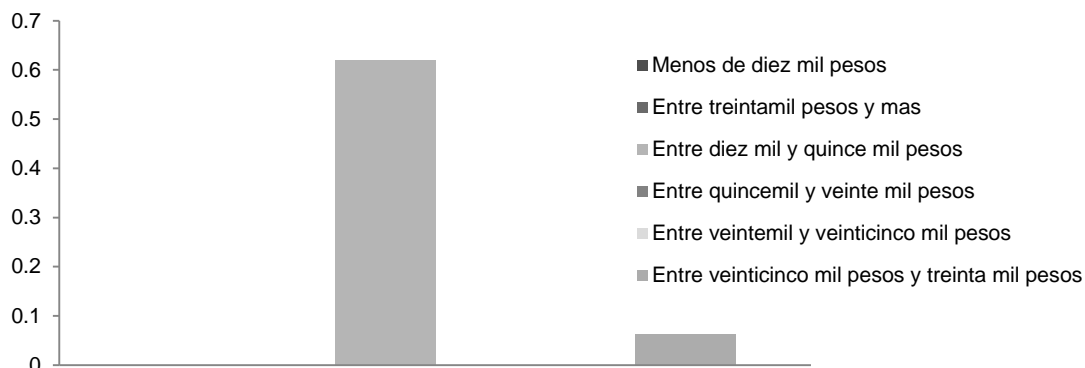

La información analizada refleja que los moto taxistas ellos mismos se han organizado en bahías donde los usuarios se han acostumbrado a buscar el servicio reflejando que dicho transporte se está organizando paulatinamente como lo vemos en la gráfica un 21,1% se ubica en la bahía de la Unisinú, seguida de la bahía del Barrio La Pradera y un 15,7 % no está en una bahía específica sino circulante buscando al usuario, es un servicio que se encuentra en cualquier lado.

Figura 4: Bahía a la que Pertenece

Fuente: Trabajo de Campo cálculos del Investigador Noviembre de 2010

Figura 5: ¿CUÁNTO LE QUEDA LIQUIDADO A USTED DIARIAMENTE

Fuente: Trabajo de Campo cálculos del Investigador Benjamín Castillo Osorio Noviembre de 2010

Como puede observarse, el 61.9% respondió que le quedan en su haber entre \$10.000 y \$15.000 diarios, después de entregarle al dueño de la moto, o lo que es lo mismo decir en promedio mensual está alcanzando unos \$450.000, con lo cual no llega siquiera al salario mínimo vigente, y de esta forma logra mantener su familia, esto indica que sus ingresos le alcanzan para medio subsistir.

Figura 6: ¿cuándo no esta trabajando a que otra actividad se dedica?

Fuente: Trabajo de Campo cálculos del Investigador Benjamín Castillo Osorio Noviembre de 2010

Es importante resaltar que a pesar de tocarles un fuerte trabajo cuando no les toca trabajar el tiempo libre se lo dedican a la familia, en este caso un 43% dice hacer lo propio, lo antes expuesto permite afirmar que este sector de población tiene un alto sentido de amor filial al dedicarle tiempo a su familia.

CONCLUSIONES

El moto taxismo es un fenómeno derivado de las faltas de oportunidades para un gran grueso de la población del Municipio de Montería y del departamento de Córdoba, considerado como una “bomba social” donde los desempleados buscan satisfacer sus necesidades y llevar a cabo una vida digna ejerciendo esta actividad no muy halagadora para quienes la ejecutan, de lo antes expuesto se puede concluir parcialmente a que ello obedece fundamentalmente a que el gobierno no ha establecido reglas del juego claras que permitan buscar solución de alternativas de trabajo o fuentes genera

El Mototaxismo, una práctica de transporte público que empezó hace más de 10 años en muchos municipios de Córdoba, y que se ha ido extendiendo a 26 de los 32 departamentos del país, se convirtió en una encrucijada social que podría tener repercusiones insospechadas si no se logra darle pronta solución a este grave problema que cada día se incrementa más. Los nuevos trabajadores de este informal oficio muchos son profesionales que han perdido su puesto o no han logrado emplearse; Entre los meses de agosto de 2008 y abril de 2010, la cifra de moto taxistas en Montería pasó de 3.750 censados a cerca de 8.000 según Miguel Celis Cabeza, representante de este gremio informal "Montería no ha sido ajena a la crisis mundial y aunque el Gobierno anuncia que acabará con el Mototaxismo, no hay forma de darle empleo a tanta gente varada."

Los nuevos trabajadores de las motos son abogados, profesores, contadores e incluso médicos que han perdido su empleo o no han logrado ubicarse en un puesto después de graduarse en la universidad. Defiende la labor del alcalde de esa ciudad, Marcos Daniel Pineda, quien ha ofrecido micro créditos a quienes estén interesados en dejar la moto para montar su propio negocio, pero sostiene que este hecho es insuficiente ante el descontrol en el crecimiento de la población de moto taxis.

Los micro créditos van entre 300 mil y 2 millones de pesos, según el tipo de negocio que plantee el interesado. No va a resultar la entrega de créditos para desmontar el Mototaxismo y es lógico, entregamos diez créditos en esta asamblea y la población ya está en cerca de 8.000. Criticó la postura del Gobierno Nacional de delegar en los alcaldes y gobernadores la solución al problema, al considerar que es un mal nacional.

Es importante reconocer que el problema del Moto laxismo en Córdoba, ha generado una serie de controversias y discusiones entre los protagonistas y los que directamente tienen que ver con las decisiones del Estado en esta materia e inclusive los miembros del Congreso de la República; tal es así que desde un principio el ex ministro de Transporte, Andrés Uriel Gallego, reconoció la gravedad del fenómeno del Mototaxismo en Colombia y en declaraciones a la prensa que cubre la versión 32 de la Convención Nacional de Asotrans, en el Centro de Convenciones del Hotel Las América, precisó que "realmente hemos tenido problemas gravísimos con el Mototaxismo, particularmente en Sincelejo, Montería, Barranquilla, Palmira y amenaza a otras regiones.

Sin embargo, el ex Ministro responsabilizó de las soluciones a este problema a los alcaldes. "Los alcaldes tienen la obligación de controlar ese fenómeno que es irregular, de impedir la proliferación. Nosotros le hemos dado instrumentos para que controlen el tránsito que es competencia constitucional de ellos, el transporte sí es de nosotros. Algunas acciones se han venido viendo, pero son absolutamente insuficientes".

En administraciones anteriores este problema se le ha buscado solución con el fin de controlar y restringir el Mototaxismo pero esto ha ocasionado fuertes disturbios y manifestaciones callejeras en Montería, Córdoba. Cerca de 13 mil moto taxistas se ubicaron en distintas zonas de la ciudad hasta terminar en un fuerte enfrentamiento contra la Fuerza Pública. ¿La razón? Manifestarse en contra de la determinación del alcalde León Fidel Ojeda de ampliar el cerco al centro de la ciudad que incluye la prohibición de ingresar con parrilleros. El ex alcalde de Montería impuso esta medida, que se suma al día sin moto y el día sin parrillero con el argumento de que los moto taxistas continúan ingresando al centro de la ciudad en una clara violación a las normas vigentes. Pese a los disturbios que se presentaron en esa época el otrora alcalde Ojeda afirmó que mantendría su determinación.

Para ilustrar un poco más la discusión, sobre la normativa, hay que decir que el decreto impuesto solo autoriza a los moto taxistas a circular con parrillero por fuera de la avenida circunvalar. "Así no hay

negocio que funcione”, argumentan los moto taxistas, todo esto va en contra del derecho al trabajo afirman los dirigentes de este medio de transporte. Por eso, su airado rechazo lo que provocó que se presentaran choques entre agentes del orden y manifestantes en siete puntos distintos de la ciudad.

Pero no es un caso aislado. Este negocio informal que ha crecido como la espuma se está convirtiendo en un asunto de orden público. Por ejemplo, en Barranquilla, donde se calcula que hay 10 mil moto taxis, se han registrado también masivas protestas encabezadas por moto taxistas, mensajeros, comerciantes de repuestos y hasta por vendedores de motos. Todos marcharon hacia la Alcaldía en protesta por el decreto restrictivo que presentó el ex alcalde Guillermo Hoenigsberg, el cual prohíbe a las motos circular entre la avenida Murillo y el Paseo Bolívar. Los mensajeros y comerciantes, de la mano de los moto taxistas, manifiestan que es imposible desarrollar su trabajo impidiéndoles el ingreso al centro administrativo en donde funcionan notarías, oficinas y agencias a las que tienen que ir diariamente. Además de Barranquilla y Montería, foco de la protesta, el Mototaxismo está presente en Cartagena, Sincelejo, Soledad, Córdoba y Sucre. El desempleo y el auge de la economía emergente o rebusque, y la falta de una normatividad rigurosa y oportuna, son razones que explican este fenómeno. Pero no es un problema exclusivo de la Costa. En otras ciudades intermedias de diferentes regiones del país también como es el caso del Valle del Cauca.

Lo que ocurre es que desde que el Mototaxismo apareció en los barrios y zonas marginales de Córdoba y Sucre en el imaginario colectivo se asocia que es un problema costeño. Este fenómeno apareció en la época de la crisis económica de hace unos cinco años. Y no solo surgió como una alternativa de transporte sino de salida al desempleo, que se expandió a la misma velocidad con la que los usuarios llegaban a sus sitios de trabajo más oportunamente sin tanta complicación que se presentaban por los trancones entre otros.

El problema es que creció tan rápido, que el gobierno no supo cómo enfrentar este fenómeno. Por si fuera poco, el crecimiento del Mototaxismo estuvo íntimamente ligado a la caída de precios de las motos, especialmente de bajo cilindraje, y a las facilidades de financiación. En el país pasaron de venderse 89.000 motos en el año 2003 a venderse 248.741 el año 2009, (L- Garzón-2009), derivado de un estudio del Fondo de Prevención Vial. Un ejemplo de este crecimiento desproporcionado es la propia Bogotá.

A este desaforado auge se sumó la falta de atención por parte del gobierno. Ahora que el fenómeno es masivo y toca distintas problemáticas sociales como el desempleo y la contaminación, la improvisación es la respuesta del gobierno. Esto es evidente en las señales contradictorias enviadas desde el propio Presidente de la República. Para atender el problema solo ha ideado tardías normas restrictivas como el pico y placa, la prohibición de parrillero, el día sin moto y las zonas de circulación prohibida, todo ello acompañado de amenazas de multa, retención del vehículo o la cancelación de la licencia de conducción. Las contradicciones del gobierno respecto al Mototaxismo han sido no menos que preocupantes. Desde hace dos años el ex ministro de Transporte, Andrés Uriel Gallego, anunció la reglamentación del Mototaxismo, pero en vista de la amenaza que este medio de transporte implica para los pasajeros y las empresas de transporte tradicionales, declinó en su iniciativa. Respecto a la problemática de contaminación que agudiza el Mototaxismo, de tiempo atrás algunos sectores y expertos denunciaron los peligros de la llegada de la peste asiática a Colombia, pero el gobierno nacional prefirió hacerse el de la vista gorda. El ex presidente Uribe sorprendió al país al anunciar que había que reglamentarlo. En una clara alusión a que había que ayudar a todas esas personas que viven del negocio. Su mensaje generó optimismo. Sin embargo, el ex ministro del Transporte, Andrés Uriel Gallego, se mostró escéptico y se sintió que había sido cogido fuera de base. Y solo lo prohibió, algo que debió hacer hace cuatro años, cuando aún el fenómeno era controlable.

Ocasiona grandes disturbios entre la fuerza pública y los moto taxistas- Preocupación por la falta de seguridad no solo de los accidentes de tránsito sino también porque se han denunciado lazos entre los moto taxis y delitos como el robo, el sicariato y la violación.

Ha generado impacto de este medio de transporte informal sobre empresas del transporte público formal o legal porque debido a este fenómeno muchas de ellas han llegado a la quiebra Por eso, es hora de actuar; en ese sentido el gobierno tendrá que gastarse parte de su popularidad y autoridad, pues en juego está el modelo de transporte que el país quiere tener. El fenómeno no baja y se ha convertido en una papa caliente para los alcaldes, que deben enfrentar constantes protestas tanto de los 'moto taxistas' -por las medidas restrictivas- como de los conductores formales, que rechazan la disminución de sus ingresos.

El tema es tan importante para el país que hoy está sobre la mesa de los grandes debates nacionales en calidad de problema social. y a la vez, es materia de estudio y análisis por parte del Congreso de la República, el Programa de las Naciones Unidas para el Desarrollo (PNUD), las universidades y el propio Gobierno, que desde 2002 está tratando de buscarle salidas sin que hasta el momento las haya encontrado.

RESUMEN

El presente trabajo es el resultado de una investigación realizada para conocer los programas y apoyos públicos que el Gobierno Federal en México y el Gobierno Estatal en Baja California han establecido dentro de su política pública para las micros, pequeñas y medianas empresas (MIPyMEs), con el objetivo de promover el desarrollo y consolidación de las mismas, logrando con ello una economía competitiva y generadora de empleos, en virtud de que este tipo de empresas tienen un impacto directo en la economía. El método utilizado fue de tipo descriptivo, obteniendo como resultado que más del 80% de estas empresas desconozcan los programas y apoyos públicos a los que pueden acceder, ya sea para obtener financiamiento, asesoría o capacitación. Asimismo estos programas son principalmente de apoyos económicos, sin embargo la principal fuente de financiamiento para este tipo de empresas siguen siendo sus proveedores. Se concluye que este tipo de empresas no solo requieren de apoyos económicos que es principalmente en lo que se ha enfocado la política pública nacional y estatal, si no que ocupan de asesorías y capacitación para manejar de manera óptima los recursos humanos, monetarios y tecnológicos y poder mantenerse en operación.

PALABRAS CLAVE: programas y apoyos de gobierno, políticas públicas, MIPyMEs

PROGRAMS AND PUBLIC SUPPORT TO PROMOTE THE DEVELOPMENT OF MSMEs IN BAJA CALIFORNIA

ABSTRACT

This work is the result of an investigation to find public support programs and the federal government in Mexico and the Baja California State Government have established within their public policy for micro, small and medium enterprises (MSMEs) with to promote the development and consolidation of the same, thereby achieving a competitive economy and generating jobs, considering that these businesses have a direct impact on the economy. The method used was descriptive, resulting in more than 80% of them unaware of the programs and public support to those who have access either to obtain funding, advice or training. Also these programs are primarily economic support; however the main sources of financing for these enterprises remain its suppliers. We conclude that these businesses not only require financial support that is mainly what has focused the national and state public policy, but will deal with consultancy and training to optimally manage human resources, monetary and technological can stay in operation.

KEYWORDS: government programs and supports, public policies, MSMEs

INTRODUCCIÓN

Las tendencias mundiales actuales en el campo empresarial reconocen en las micro, pequeñas y medianas empresas una parte fundamental de la economía de cualquier nación. Más del 98% del total de empresas formales e informales en los distintos países del mundo se ubican en este grupo. De acuerdo a cifras de la Organización para la Cooperación y Desarrollo Económico (OCDE) el 95% de las empresas pertenecen a estos estratos, mientras que en América Latina la cifra oscila entre 95% y 99%. Es indudable la participación de estas empresas en las ventas totales, las exportaciones, el Producto Interno Bruto (PIB) y el empleo en los países. Por tanto cualquier dificultad en estas organizaciones repercute desfavorablemente en los indicadores macroeconómicos y sociales del País de que se trate.

Al igual que en el resto del mundo la participación de estas empresas en México es similar, ya que en base a los censos económicos 2009 del Instituto Nacional de Estadística Geografía e Informática (INEGI) el 99% de los establecimientos son micro, pequeños y medianos, por lo que representan un rubro muy importante de la economía, además son generadoras del 79% de empleo de la población y generan ingresos equivalentes al 50% del (PIB). Por tanto, constituyen una fuente significativa de empleo y un medio para avanzar hacia una mejor calidad de vida de los empresarios y la comunidad en la que se establecen, sin embargo estas empresas requieren acciones que coadyuven a su permanencia.

(INEGI, 2009) Estas empresas constituyen hoy en día el centro del sistema económico de nuestro País, por tanto, es necesario superar algunas dificultades internas de las empresas, relacionadas con los métodos de operación, selección de tecnologías y toma de decisiones no adecuadas, que en algunos casos han propiciado la quiebra de las mismas, y que además se han reflejado en la pérdida de recursos financieros y esfuerzos. Por tanto, es fundamental fortalecer a las MIPyMEs como parte de la estrategia para aumentar los niveles de productividad del país y generar empleos. En base a lo anterior y debido a la importancia de estas empresas en la economía es que los gobiernos en sus políticas públicas contemplan y establecen leyes y estrategias encaminadas a fortalecerlas, en el caso de México estas políticas se encuentran en el Plan Nacional de Desarrollo (PND). Así como en el resto del País, las microempresas juegan un importante papel en el crecimiento económico de Baja California y más aún, cuando se han modificado las reglas de juego en los negocios, donde el medio ambiente actual exige empresas ágiles e innovadoras, que mantengan un estrecho contacto con el cliente, debiendo reaccionar con rapidez y ajustarse a los cambios con facilidad y prontitud. Asimismo, las decisiones tendrán un impacto interno sobre los costos, productividad, inversión, liquidez y la rentabilidad, donde los factores de éxito o estrategias a seguir, serán las relacionadas con: precio competitivo, calidad de acuerdo a las exigencias del mercado meta, la destreza financiera y la globalización de los mercados. Por ello también a nivel estatal los gobiernos deben establecer sus políticas públicas en congruencia con los objetivos del PND, en este sentido el gobierno de Baja California dentro del Plan Estatal de Desarrollo ha establecido políticas y programas de apoyo para este tipo de empresas.

REVISIÓN LITERARIA

Micro, pequeñas y medianas empresas (MIPYME), de acuerdo con el artículo 3 de la ley para el desarrollo de la competitividad de la Micro, pequeña y mediana empresa, publicada en el diario oficial de la federación el 30 de diciembre de 2002, se clasifican con base en los siguientes criterios:

Plan Nacional De Desarrollo

El Plan Nacional de Desarrollo 2007-2012, se presenta, en cumplimiento al Artículo 26 de la Constitución Política de los Estados Unidos Mexicanos y se elabora de acuerdo a lo establecido en la Ley de Planeación. El Plan establece los objetivos y estrategias nacionales que serán la base para los programas

sectoriales, especiales, institucionales y regionales que emanan de éste. Los problemas sociales, políticos y económicos del país están íntimamente relacionados. Por ello, los grandes grupos de políticas públicas propuestos en este plan son complementarios para contribuir a la superación de los retos en materia de pobreza, marginación y falta de oportunidades en todos los ámbitos.

Tabla 1: Estratificación de empresas por tamaño (clasificación oficial de la Secretaría de Economía, 2002)

Sector Tamaño	Manufacturero	Comercio	Servicios
Micro	0-10	0-10	0-10
Pequeña	11-50	11-30	11-50
Mediana	51-250	31-100	51-100
Grande	251 en adelante	101 en adelante	101 en adelante

Fuente: Clasificación oficial de la Secretaría de Economía. Diario oficial de la Federación, 30 de diciembre de 2002.

El plan consta de cinco capítulos que corresponden a los cinco ejes de política pública del gobierno, cada eje de acción está interrelacionado con el crecimiento y el empleo, estos son: 1) Estado de Derecho y seguridad, 2) Economía competitiva y generadora de empleos, 3) Igualdad de oportunidades, 4) Sustentabilidad ambiental y 5) Democracia efectiva y política exterior responsable. El eje que contempla las políticas y estrategias para el fomento y fortalecimiento de las micro, pequeñas y medianas empresas (MIPyMEs), es el eje de una economía competitiva y generadora de empleos. El PND 2007-2012 señala que a pesar de que se han conseguido avances importantes en este eje, es necesario continuar con una política integral de apoyo para el desarrollo de las MIPyMEs; con énfasis en las de menor tamaño, con el propósito de establecer las condiciones que contribuyan a su creación, desarrollo y consolidación. Pues si bien los diferentes costos de hacer negocios afectan a todas las empresas, son particularmente onerosos para las micro, pequeñas y medianas empresas. Mientras que el mismo costo administrativo puede ser una proporción muy reducida de los ingresos de una empresa de gran envergadura, puede implicar que una cantidad elevada de las ventas de una pequeña empresa tenga que destinarse a cubrir costos de transacción. Asimismo al contar con una menor cantidad de colateral y tener un historial crediticio más limitado, es más difícil el acceso al financiamiento para las empresas de menor tamaño. En cuanto a los problemas en infraestructura estos pueden ser resueltos directa o indirectamente por las empresas grandes mediante la reubicación territorial o la auto-provisión de algunos bienes y servicios, lo cual es permitido por su escala. Sin embargo las MIPyMEs carecen de semejantes opciones y están sujetas a mayor riesgo, ya que su ámbito de acción predominantemente local implica que tienen una mayor sensibilidad a las condiciones en la región específica donde estén ubicadas. (PND, 2007)

Para dar respuestas a estos problemas y deficiencias de estas empresas el gobierno federal ha establecido como objetivo de su política pública el promover la creación, desarrollo y consolidación de las MIPyMEs. Dentro de este objetivo se contempla favorecer el aumento de la productividad de estas empresas e incrementar el desarrollo de productos acordes a sus necesidades. Para ello se ha realizado una clasificación de las empresas en 5 segmentos:

1. Emprendedores: que se encuentran en proceso de crear, desarrollar o consolidar una empresa.
2. Micro empresas: que necesitan convertirse en negocios que generen riqueza.
3. Pequeñas y medianas empresas: para facilitar su integración a las cadenas productivas, el impulso a las regiones y el fortalecimiento de su capacidad competitiva.
4. Empresas gacela: pequeñas y mediana empresas con mayor dinamismo y posibilidades de crecer detonando la creación de empleos y el desarrollo de tecnologías, entre otros.

5. Empresas tractoras: grandes empresas que estructuran las cadenas productivas, para potenciar el desarrollo de proveedores, el crecimiento regional, agrupamientos industriales y exportaciones.

Plan Estatal De Desarrollo De Baja California

A nivel estatal existen también políticas públicas y programas encaminados a contribuir de manera primordial al logro de los objetivos de competitividad, crecimiento y generación de empleos plasmados en el PND 2007-2012, las cuales se encuentran establecidas en el Plan Estatal de Desarrollo de Baja California (PED) 2008-2013 el cual tiene como objetivo estratégico principal el fomento sustentable de una competitividad sectorial y regional que genere empleos calificados y mejor remunerados.

El eje de economía competitiva se estructura a partir de los siguientes cinco subejos: política económica para la competitividad y el empleo; empleo y trabajo; campo, pesca y desarrollo rural; desarrollo de las actividades industriales, y desarrollo del comercio y los servicios. (PED, 2008) Dentro de la política económica para la competitividad y el empleo se encuentran las siguientes políticas: de atracción de inversiones y generación de empleos; de desarrollo empresarial; de promoción a las MIPyMEs; de financiamiento para el desarrollo, y de innovación y desarrollo tecnológico. La Política de Desarrollo Empresarial (PDE) de Baja California, se encuentra integrada principalmente por dos estrategias básicas: el estímulo de las vocaciones productivas y el fomento y desarrollo de clusters.

La PDE plantea mecanismos para fomentar la competitividad y el desarrollo económico a través del fortalecimiento y promoción de las vocaciones regionales, con base en la asignación de prioridades y la generación de criterios de selección, para detectar y aprovechar al máximo las inversiones productivas presentes y futuras en las regiones de la entidad. Constituye además, un conjunto articulado de políticas, estrategias, acciones e instrumentos de corto, mediano y largo plazo que apoyan a las empresas y a los emprendedores bajacalifornianos en las diversas regiones del estado, dentro de un marco participativo en el que se encuentran involucrados principalmente, organismos empresariales, instituciones de gobierno e instituciones educativas y de investigación. Un estrato empresarial que requiere especial impulso a través de la PDE son las MIPyMEs, en virtud de que es importante impulsar el desarrollo de estas como alternativa para acelerar el desarrollo económico de la región, ofreciéndoles condiciones favorables para que se consoliden y crezcan como fuentes productivas formales. En virtud de su potencial e importancia, las cuales deberán recibir atención prioritaria para integrarlas a los beneficios institucionales y encauzarlas hacia un mayor crecimiento. En este contexto, la PDE plantea al menos dos grandes retos: en primer término, avanzar de manera más decidida en la transformación competitiva de las empresas más rezagadas, sobre todo de las MIPyMEs, de modo que puedan desarrollar capacidades para su inserción competitiva en el mercado nacional e internacional; en segundo lugar, el seguir identificando las oportunidades de desarrollo productivo con potencial, en regiones y sectores, a fin de reposicionar la vocaciones productivas de la entidad. Para mantener y elevar la competitividad del estado y de la actividad empresarial, con especial apoyo a las MIPyMEs se han establecido las siguientes estrategias a nivel estatal:

Subtemas Y Estrategias Del Plan Estatal De Desarrollo

Política De Desarrollo Empresarial

1. Promover un mayor aprovechamiento entre las empresas de los estímulos y apoyos que ofrece la Ley de Fomento a la Competitividad y Desarrollo Económico.
2. Revisar la legislación aplicable para incentivar el otorgamiento de estímulos a inversionistas y empleadores en la entidad.

3. Promover en el ámbito empresarial la mejora regulatoria, la coordinación interinstitucional y la gestión para la eficiencia.
4. Impulsar el fortalecimiento de agrupamientos empresariales.
5. Promover proyectos de alta tecnología.
6. Promover proyectos productivos, formación de emprendedores y cultura empresarial.
7. Fortalecer sistemas de información para la toma de decisiones.

Promoción De Mipymes

Ampliar el número de trámites que se gestionan por Internet, incluyendo el pago de servicios en línea.

1. Incrementar la participación de las MIPyMEs regionales en la proveeduría de los sectores público y privado.
2. Ampliar la cobertura de los Centros de Atención Empresarial.
3. Promover la creación de la Ley Estatal para el Desarrollo y Fomento de la Micro y Pequeña Empresa para el estado.
4. Restablecer la red de Consultoría Empresarial Integral Especializada en MIPyMEs (CRECE).
5. Impulsar la integración de las MIPyMEs a cadenas productivas y a la política de desarrollo empresarial y tecnológico.
6. Promover la capacitación y asistencia técnica para las MIPyMEs.
7. Crear el Consejo Estatal para la Competitividad de las MIPyMEs.

Programas de Apoyo Federales: Para dar cumplimiento a la política pública de competitividad y generación de empleos a través de apoyos a las MIPyMEs, el gobierno federal ha establecido programas para tal objetivo, los avances y resultados de estos programas al periodo de 2010, fueron presentados en el cuarto informe del gobierno federal. En virtud de lo anterior se tiene que en 2010 se ha continuado con la aplicación de la política de desarrollo empresarial y con la ejecución de la estrategia México Emprende, otorgando apoyos específicos de acuerdo al potencial de los cinco segmentos empresariales: emprendedores, microempresas, pequeñas y medianas empresas, empresas gacela y empresas tractoras. Para cada segmento se ha orientado un programa de promoción integral con mecanismos que cubren cinco áreas necesarias en el desarrollo de las unidades productivas: financiamiento, comercialización, capacitación y consultoría, gestión e innovación, y desarrollo tecnológico.

Primer Segmento: Nuevos Emprendedores: A través del Programa de Jóvenes Emprendedores se promovió y fomentó la cultura y desarrollo empresarial entre las unidades productivas de este segmento. Para ello se ha continuado con la caravana del Programa Nacional Emprendedor, con lo cual se asesoró y vinculó a los nuevos emprendedores con los programas del Gobierno Federal para detonar sus ideas productivas en el desarrollo de un negocio.

Segundo Segmento: Microempresas: El Programa Nacional de Microempresas atiende a unidades productivas de menor tamaño tradicionales, mediante programas de modernización integral que fortalecen

sus capacidades y competencias empresariales y emprendedoras, mediante mejoras en la calidad en los productos y en el servicio, reducción de costos y el encadenamiento cliente-proveedor.

Tercer Segmento: Pequeñas y Medianas Empresas: El Programa Nacional de Promoción y Acceso al Financiamiento para Pequeñas y Medianas Empresas se desarrolla a través del Sistema Nacional de Garantías, Fideicomiso México Emprende, Asesoría Financiera, Intermediarios Financieros Especializados, Programa de Proyectos Productivos y Programa de Apoyo a Empresas Afectadas por Desastres Naturales. En Baja California se aportaron 9.3 millones de pesos para el otorgamiento de apoyos directos y financiamiento para 662 MIPyMEs de Mexicali y Tecate, afectadas por el sismo del 4 de abril de 2010.

Cuarto Segmento: Empresas Gacela: El Programa Nacional de Empresas Gacela apoyó a las empresas con mayor capacidad y potencial de crecimiento, creación de empleos y generación de alto valor agregado. Asimismo en 2010 con el Fondo de Innovación Tecnológica (FIT), la Secretaría de Economía en coordinación con el Consejo Nacional de Ciencia y Tecnología (CONACYT) promovió en las MIPyMEs del sector industrial la adopción de proyectos de innovación y desarrollo tecnológico. A través de los siguientes programas: 1) Programa de Aceleración de Negocios Nacionales e Internacionales (TechBA), 2) Programa para el Desarrollo de la Industria del Software (PROSOFT), 3) Programa de Competitividad en Logística y Centrales de Abasto (PROLOGYCA) y 4) Programa Nacional de Franquicias (PNF).

Quinto Segmento: Empresas Tractoras: Durante 2010 se contribuyó al fortalecimiento de las relaciones comerciales entre grandes empresas y PyMEs, así como a la coordinación entre el sector gubernamental y el privado, con el establecimiento de los siguientes programas: 1) Programa de Desarrollo de Proveedores, 2) Programa de Empresas Integradoras para el fomento de agrupamientos empresariales e impulsar el desarrollo regional, 3) Programa de Oferta Exportable para apoyo a la competitividad internacional de las MIPyMEs. Otra estrategia de esta política es consolidar los esquemas de apoyo a estas empresas en una sola instancia y promover su competitividad en el marco de los compromisos establecidos en el acuerdo nacional a favor de la economía nacional y el empleo. Por otra parte se han modificado los reglamentos de adquisiciones en las dependencias de gobierno para que este tipo de empresas se conviertan en proveedores del gobierno federal, estatal y municipal.

METODOLOGÍA

La investigación realizada es de tipo descriptivo obteniendo la información presentada a través de diversas fuentes literarias como son planes de gobierno, libros, páginas de internet, artículos de revistas y bases de datos relacionados con el tema, los cuáles una vez recabados fueron sujetos de un análisis para la presentación de los principales resultados y la elaboración de las conclusiones de esta investigación.

RESULTADOS

En base a la revisión documental realizada y la información presentada se puede observar que son muchos los programas, instituciones u organismos que existen para apoyar a estas empresas, según investigaciones de la SE y CIPI las micro y pequeñas empresas tienen una alta tasa de mortalidad del 65% y tienden a desaparecer en un periodo de 2 años de operación. (Mercado, 2007) Lo anterior es resultado del desconocimiento que existe principalmente de la existencia de estos programas. De acuerdo a los datos obtenidos por el CIPI (Comisión intersecretarial de política industrial) a través del observatorio de la PyMEs estas empresas en su mayoría no conocen los programas y apoyos públicos, ya que el 86 por ciento de las mismas señala, no conocer los programas de apoyo federales, estatales, y/o municipales; y tan sólo el 12.65 por ciento de éstas los conoce, pero no los ha utilizado. El 1.8 por ciento de las PyMEs los conoce y ha utilizado. (CIPI, 2003). La Tabla 2 muestra el bajo grado de conocimiento y uso de los programas públicos por parte de este tipo de empresas:

Tabla 2: Utilización de programas públicos

Programas	Conoce y ha utilizado	Conoce y no ha utilizado	No conoce
A) FEDERALES			
Centro de Asesoría Empresarial Primer Contacto (SE)	1,04	5,84	93,12

B) ESTATALES	1,19	1,23	97,58
C) MUNICIPALES	0,14	0,34	99,52

Fuente: *CIFI Aunado a lo anterior, estas empresas consideran que los programas públicos deberían enfocarse principalmente a tres temas específicos:*

- Adquisición de bienes de capital (maquinaria, edificios y herramientas).
- Integración de capital de trabajo.
- Contratación de consultores expertos en organización productiva y dirección de empresas.

Este desconocimiento de los programas de apoyo no es privativo de México, pues en Colombia desde mediados de los años noventa, el gobierno colombiano empezó a establecer leyes para promover la creación de organismos y programas a los cuales los potenciales empresarios pudieran acudir para concretar su idea de negocio. Sin embargo en la actualidad, existen normas generales y específicas así como leyes y medidas de apoyo a la creación de empresas que por estar tan dispersas son pocas conocidas. (Gómez & Martínez, 2006).

Apoyos Económicos

Este tipo de empresas se enfrentan a las grandes empresas internacionales que tienen acceso al financiamiento, invierten en investigación y desarrollo, cuentan con métodos modernos de administración y desarrollo laboral, experiencia en los mercados nacionales e internacionales, desarrollo en sistemas de logística y una orientación al cliente, los cuales son factores determinantes para el desarrollo de las empresas. Ante esto el gobierno en sus diferentes niveles ha establecido programas con apoyos económicos principalmente. En la Figura 1, se muestran los apoyos económicos otorgados durante el periodo 2007-2009.

Figura 1: Apoyos económicos

Elaboración propia Fuente: Cuarto informe de gobierno federal

Concepto	2007	2008	2009
Aportación de la SE (Millones de pesos)1/	1219,7	1798,4	4086,6
Número de MIPyMEs	101,064	84,353	146,138

En relación a los apoyos económicos se tiene que en mayo de 2011, la Secretaría de Desarrollo Económico del Estado de Baja California entregó 7 millones de pesos a 29 incubadoras de negocios, siendo un monto histórico y darán nacimiento a 1,927 nuevas empresas y lo que es más importante, generar 6 mil 740 nuevas plazas de trabajo. Éste crecimiento económico ha estado sustentado en gran parte en las MIPyMEs las cuales siguen siendo el principal sustento del empleo en Baja California, ya que durante 2010 generaron el 67 por ciento del empleo en la entidad, por lo que para 2011 se prevé sigan contribuyendo en la reactivación económica de la región. Algunas de las incubadoras beneficiadas son: Empreser, Cetys Intermedia, UABC, Emprender, CIENUTT, Tijuana, Plancrecer, UNIMOS, TEC de Mexicali y Escomex. (SEDECO, 2011) Mungaray, Ramírez, Aguilar y Beltrán (2007) señalan que el gobierno en materia de desarrollo comunitario para impulsar el bienestar de la región y sus agentes económicos, debe contar con apoyos económicos flexibles para este tipo de empresas, creando un fondo de financiamiento para empresas pobres en el cual no arriesguen su patrimonio en caso de que las condiciones del entorno no las favorezcan con un préstamo para la inversión.

A pesar de que existen un gran número de programas con apoyos económicos se tiene que en los últimos años la mayoría de las MIPyMEs se han financiado a través de sus proveedores los cuales les otorgan diferentes plazos de pago, ante lo caro y escaso que se ha mantenido el crédito bancario. Barragán (2009) señala que los proveedores ocupan más del sesenta por ciento como medio de financiamiento en este tipo de empresas (Barragán, 2009). En otros casos los futuros empresarios prefieren los fondos procedentes de amigos, parientes, o inversionistas, que no siempre resultan los mejores ya que pueden llegar a presentar una fuente de conflicto para la empresa al mezclarse emociones y sentimientos que obstaculizan su labor, aparte de las altas tasas impositivas de éste tipo de recursos. Estas fuentes de financiamiento resultan ser las que no tienen un costo para las empresas o bien tienen un costo menor que el resto de las formas en que éstas pueden financiarse. Por tanto aun cuando el gobierno ha establecido tasas de interés bajas en relación a la banca comercial por financiamientos o apoyos económicos a estas empresas, siguen teniendo un costo financiero, esto sin considerar que existe un desconocimiento de estos programas y apoyos, como ya se ha mencionado anteriormente, además de que en algunos casos son las cámaras a través de las cuales se bajan estos recursos a las empresas y son pocas las empresas afiliadas a estos organismos y cámaras. De acuerdo con datos del INEGI de 2009, únicamente el 13% de las MIPyMEs han solicitado algún tipo de crédito bancario; de este porcentaje, el 76% ha recibido dicho crédito de los cuales el 88 por ciento lo otorgó la Banca Comercial, mientras que el 1.4 por ciento de las mismas lo obtuvieron a través

de la Banca de Desarrollo. Siendo las principales causas por las cuales se les niega el crédito: el desinterés del banco hacia el sector, la falta de garantías, y la indiscutible falta de información en esta materia.

(INEGI, 2009) Sin embargo no son la falta de apoyo los principales problemas de estas empresas, pues se han realizado estudios para evaluar la competitividad de estas empresas desde la perspectiva empresarial, como el “Latin American Business Monitor” en el año 2006. Obteniendo como resultado que los principales obstáculos que los empresarios mexicanos consideran que frenan su competitividad se encuentran, en primer lugar la falta de apoyo del gobierno 84%, y el limitado acceso al financiamiento y al capital de trabajo, le sigue la afirmación del 83% de los empresarios de que la falta de innovación es una limitante, como se muestra en la Figura 2. Además la mayoría de los empresarios mexicanos no consideran que aspectos como el tipo de cambio y la economía de mercado sean factores que limitan la competitividad de sus empresas.

Figura 2: Obstáculos para la competitividad de las PyMEs (2006)

Otros de los factores que afectan a estas empresas es el que no aplican métodos modernos de administración y gestión empresarial, tienen un bajo nivel de capacitación y desarrollo de habilidades de los trabajadores, un marco regulatorio e institucional, desfavorable, poca inversión en innovación y desarrollo tecnológico en productos y procesos, limitada participación en los mercados de exportación, por restricciones técnicas y financieras, así como la falta de desarrollo de la cultura de asociatividad y cooperación interempresarial. (Anzola, 2010) Mercado (2007) señala que más del 90% del fracaso de estas empresas es debido a su mala administración, dentro de la cual las finanzas ocupan un lugar especial. Tanto la operación financiera como su administración son factores muy importantes para el trabajo diario de la toma de decisiones del pequeño empresario, que garantizan que una empresa tenga éxito en una economía de crecimiento y desarrollo continuo. Por otra parte, Rodríguez (2010) señala que la falta de conocimientos en administración y finanzas, así como la desorganización del empresario mexicano, son los principales factores que inciden en el fracaso de las unidades de negocio de menor tamaño en México.

Para dar respuesta a estas deficiencias que presentan las MIPyMEs y en atención a lo establecido en el PND y el PED de Baja California existen organismos que brindan asesoría a aquellas personas que desean

iniciar su propia empresa. En donde se les ayuda a planearla y en algunos casos se les proporciona capacitación; tales son los ejemplos de la Cámara Nacional de Comercio (CANACO), CANACINTRA y EMPRESER. Algunas de las instituciones que brindan apoyos económicos, asesoría técnica o legal a estas empresas son: CRECE (Centros Regionales de Competitividad Empresarial), NAFIN (Nacional Financiera), CONACYT (Consejo Nacional de Ciencia y Tecnología), SE (Secretaría de Economía), CANACO (Cámara Nacional de Comercio), COPARMEX (Confederación Patronal de la República Mexicana) y El Programa Nacional de Financiamiento al Microempresario (PRONAFIM).

Sin embargo como se mencionó anteriormente la mayoría de estas empresas no se encuentran afiliadas, por tanto al no estar inscritas a algún organismo están dejando pasar la oportunidad de capacitarse y recibir asesoría, lo cual puede convertirse en una desventaja ante otras empresas que si lo hacen o bien llevar una mala administración de sus empresas llevándolas al cese de sus operaciones. Ante esta situación los gobiernos cada vez ponen mayor énfasis en la educación y entrenamiento de los empresarios, lo cual es una tarea complicada, ya que no existe un modelo educativo para el desarrollo empresarial. Actualmente, se considera que en los EE.UU. se ha logrado un avance mayor en la educación universitaria para los negocios, los países europeos por su parte están haciendo esfuerzos para incrementar la capacitación en áreas de negocios y administración. En México, también se han empezado a implementar estrategias a partir de los programas de emprendedores que se promueven principalmente en las universidades, iniciando con ello una nueva cultura empresarial.

CONCLUSIONES

En conclusión, las microempresas tienen el gran reto de adecuarse a un mundo globalizado, ya no se deben conformar con los mercados internos, ya no es más su ventaja comparativa. Por su gran volumen, es indudable la importancia de estas empresas en la innovación y su rol en el enfrentamiento de los retos de la competitividad de cada País, dado que estas organizaciones cubren un alto porcentaje del empleo y del PIB. Estas empresas necesitarán adecuar sus estrategias competitivas, de recursos humanos y organizativos, su tecnología y productos, para mantener e incluso elevar su competitividad ante un entorno cada vez más dinámico y complejo. Debido a la importancia de estas empresas en la economía el gobierno las ha colocado como una prioridad dentro de la política pública para potenciar su contribución al desarrollo económico nacional e innovar, así como para incrementar el empleo y la productividad.

Sin embargo la supra estructura del Estado está diseñada proteger los intereses de las grandes empresas, un ejemplo de ellos son las disposiciones fiscales a su favor, lo cual a través de una planeación fiscal estas empresas pagan una cantidad de impuestos mínimas en relación a las MIPyMEs. Por otra parte su desarrollo es lento, ya que los sistemas de apertura, registro, fiscalización y reglamentación son una carga pesada para este tipo de empresas. Asimismo las grandes empresas poseen economías de escala que les permite mantenerse como líderes en el mercado y ser competitivas a diferencia de las MIPyMEs que tienen altos costos y precios de venta más altos, debido a que sus volúmenes de compra no les permiten competir con ese tipo de empresas. Por otra parte actualmente si existen muchos programas de apoyos económicos, sin embargo en la mayoría de los casos solo se hace una evaluación sobre el monto que se va a destinar a estas empresas, no sobre si las personas a cargo de estas empresas poseen la capacitación para su administración, por lo cual en muchos de los casos estas empresas terminan cerrando y quedan con las deudas, que si no tienen la capacidad de pago y el gobierno no puede recuperarlas se irán a fondo perdido. Además las instituciones no dan un seguimiento a las empresas que reciben apoyos económicos, para ver su evolución y poder conocer si estos apoyos son los adecuados o bien si son utilizados eficientemente.

Otro punto importante es el que estas empresas en su mayoría no se encuentran afiliadas a ningún organismo o cámara, por lo cual no conocen y ni tienen acceso a los programas y apoyos que otorga el gobierno, los cuales buscan elevar su competitividad y convertirlas en un pilar del desarrollo económico. Hay mucha tarea por hacer en apoyo a estas empresas que como se ha analizado representan un motor para la economía nacional, estatal y municipal. Pues si bien se han conseguido avances importantes es necesario continuar con una política integral de apoyo para el desarrollo de las MIPyMEs,

en donde se establezca un método de registro y tramites sencillo, así como un régimen tributario competitivo, simple y estable. Asimismo las universidades tienen un gran compromiso con la sociedad y con este tipo de empresas, por tanto las escuelas administrativas y de negocios deben participar en la asesoría y capacitación de estas empresas, con el propósito de establecer las condiciones que contribuyan a su creación, desarrollo y consolidación.

EVALUACIÓN DEL IMPACTO DE LA CERTIFICACIÓN BASC EN LOS INDICADORES DE LIQUIDEZ Y RENTABILIDAD DE LAS EMPRESAS DE BOGOTÁ - COLOMBIA

Tomás Fontalvo Herrera, Universidad de Cartagena
José Morelos Gómez, Universidad de Cartagena
Juan Carlos Vergara Schmalbach, Universidad de Cartagena

RESUMEN

En éste artículo de investigación se presentan los resultados obtenidos durante el desarrollo del proyecto evaluación del impacto de la certificación BASC en la liquidez y rentabilidad de las empresas de Bogotá, en este se realiza inicialmente una descripción detallada de la evaluación de los sistemas organizacionales, la certificación BASC, los indicadores de liquidez, indicadores de rentabilidad, los criterios para la evaluación del impacto de la certificación BASC en la liquidez y rentabilidad de las empresas de Bogotá y la utilización de la técnica análisis discriminante para diferenciar dos periodos establecidos 2008 y 2010, y su relación con la certificación BASC. Lo anterior a través de una perspectiva cualitativa, descriptiva propositiva y cuantitativa. De la función discriminante obtenida y de los estadísticos analizados se puede concluir que la certificación BASC en la función discriminante, incide positivamente a los indicadores financieros Prueba Acida (PA), Capital Neto (CN), Margen Operacional (MO) y Margen Neto (MN).

PALABRAS CLAVES: certificación BASC, indicador, liquidez, rentabilidad, análisis discriminante.

ABSTRACT

In this research paper presents the results obtained during the project's development impact assessment of the BASC certification in liquidity and profitability of companies in Bogota, this is initially a detailed description of the evaluation of organizational systems, the BASC certification, liquidity ratios, profitability ratios, the criteria for assessing the impact of the BASC certification in liquidity and profitability of companies in Bogota and the use of discriminant analysis technique to distinguish two periods established 2008 and 2010, and its relationship with the BASC certification. This perspective through qualitative and quantitative descriptive purposeful. Discriminant function obtained and analyzed the statistics we can conclude that the BASC certification in the discriminant function, positively affects the financial indicators Acid Test (PA), Net Capital (NC), Operating Margin (OM) and operating income (MN).

KEYWORDS: BASC certification, indicator, liquidity, profitability, discriminant analysis.

INTRODUCCIÓN

Un estudio de esta naturaleza implica la revisión conceptual y teórica sobre los sistemas organizacionales, la certificación BASC, los indicadores de liquidez, indicadores de rentabilidad, los criterios para evaluar el impacto de la certificación BASC, la técnica análisis discriminante, la distancia D^2 de Mahalanobis y las pruebas de validez. A partir del marco teórico se estructuró un modelo que sirvió de fundamento para la evaluación del impacto de la certificación BASC en la liquidez y rentabilidad de las empresas de Bogotá. Seguidamente se expone la metodología de investigación empírica y se presentan los resultados

por medio de la contrastación de hipótesis de las variables asociadas. Por último, se aportan las conclusiones asociadas a la precisión del modelo y a la evaluación de los indicadores seleccionados.

REVISIÓN LITERARIA

Evaluación de Sistemas Organizacionales

Criado y Calvo (2008), Señala que la valuación de organizaciones supone un cuerpo de conocimientos teóricos y metodológicos, así como un conjunto de habilidades aplicadas. Para esta Investigación este cuerpo de conocimientos los constituye los fundamentos de Análisis Discriminante Multivariado (DMA), que permiten analizar la incidencia del impacto de la certificación BASC en la liquidez y rentabilidad de las empresas de Bogotá certificadas en BASC.

Certificación BASC

Prado (2011), define el BASC (Business Anti-Smuggling Coalition o Coalición Empresarial Anticontrabando) como un programa de cooperación entre el sector privado y organismos nacionales y extranjeros, creado para fomentar un comercio internacional seguro.

BASC es programa de carácter voluntario, que otorga una certificación que confirma el trabajo de control en todos los procesos productivos, empaque, embarque y de transporte de la carga que va con destino al exterior. En esencia esta certificación se centra en mejorar los procesos internos de las organizaciones que los implementen.

Indicadores financieros

Para analizar la incidencia de cómo la certificación BASC afecta en los indicadores de liquidez y rentabilidad en esta investigación se seleccionaron una serie de indicadores que se presentan en la metodología.

Los indicadores financieros son el producto de establecer resultados numéricos basados en relacionar dos cifras o cuentas bien sea del Balance General y/o del Estado de Pérdidas y Ganancias; Vásquez, Guerra y Ahmed (2008), plantea que los resultados así obtenidos por si solos no tienen mayor significado; sólo cuando los relacionamos unos con otros y los comparamos con los de años anteriores o con los de empresas del mismo sector y a su vez el analista se preocupa por conocer a fondo la operación de la compañía, podemos obtener resultados significativos y sacar conclusiones sobre la situación financiera de una empresa, que en nuestro objeto de estudio son las empresas certificadas en BASC en Bogotá.

Análisis discriminante

Con el fin de evaluar el impacto de la certificación BASC, en ésta investigación se utilizó el análisis discriminante la cual es una técnica de Análisis Multivariante que procura encontrar relaciones lineales entre las variables continuas que mejor discriminen en los grupos categóricos previamente definidos. Mylonakis y Diacogiannis (2010), señalan que el Análisis Discriminante es una técnica estadística multivariante, fue introducido por R. A. Fisher 1936 en el primer tratamiento moderno de problemas separatorios, cuya finalidad es analizar si existen diferencias significativas entre grupos de objetos respecto a un conjunto de variables medidas sobre los mismos en el caso de que existan, explicar en qué sentido se dan y proporcionar procedimientos de clasificación sistemática de nuevas observaciones de origen desconocido en uno de los grupos analizados.

METODOLOGÍA

Esta es una Investigación en donde se utiliza un análisis cualitativo, descriptivo propositivo y cuantitativo, soportada en un análisis Discriminante Multivariado (DMA), para contrastar si en dos periodos distintos se puede evidenciar la evolución de los estado financieros como resultado de la evaluación del impacto de la certificación BASC en la liquidez y rentabilidad en el sector analizado (Vuran, 2009). Para lo que se estudiaron los rubros requeridos de los estados financieros de las empresas de Medellín.

Para la realización de esta investigación se utilizaron los indicadores presentados a continuación, como se muestra en la tabla 1.

Tabla 1: Variable e indicadores utilizados para realizar el análisis de discriminante.

Variable	Indicador
RC	Razón corriente
PA	Prueba acida
CN	Capital neto
MB	Margen bruto
MO	Margen operacional
MN	Margen neto
UO	Utilidad operacional

Esta tabla muestra la relación de variables e indicadores para realizar la evaluación del impacto de La certificación BASC en la liquidez y rentabilidad de las empresas de Bogotá – Colombia.

RESULTADO

Selección de las variables que mejor discriminan

Para determinar que variables independientemente discriminan entre el grupo de “2008” y “2010” se estima la distancia D^2 de Mahalanobis y el Lambda Wilks para cada una de ellas, su correspondiente razón F y nivel de significancia para rechazar la hipótesis nula que las observaciones provienen de la misma población. Se va a considerar un nivel de significación de 0,05 para los estadísticos F para entrar y F para eliminar. Como se mencionó anteriormente el criterio de selección de las variables es el de la distancia D^2 de Mahalanobis, se utilizaron todas las variables seleccionadas presentadas en la metodología. El resultado final del modelo se muestra en la tabla 2 y las ecuaciones (11) y (12).

Tabla 2: Coeficientes de la funciones de clasificación.

	AÑO	
	2008	2010
RC	2,522	2,121
PA	-,738	-,372
CN	-3,324E-8	-2,838E-8
MB	1,435E-9	-2,089E-9
MO	4,434E-6	4,570E-6
MN	3,358E-7	3,909E-6
UO	5,466E-8	4,774E-8
K	-2,298	-2,178

Esta tabla muestra los coeficientes de clasificación para el año 2008 y 2008.

Con base en los resultados anteriores se procedió a calcular la función discriminante de las empresas para evaluar el impacto de la certificación BASC en la liquidez y rentabilidad.

$$Z_1 = PA (-0,0738) + RC (2,522) + CN (-3,324E-8) + MB (1,435E-9) + MO (4,434E-6) + MN (3,358E-7) + UO (5,466E-8) + (-2,298).$$

(11)

$$Z_2 = PA (-3,72) + RC (2,121) + CN (-2,838E-8) + MB (-2,089E-9) + MO (4,570E-6) + MN (3,909E-6) + UO (4,774E-8) + (-2,178). \quad (12)$$

De este modo, según los resultados del modelo la capacidad de clasificación no fue muy buena dando como resultado un error Tipo 1 de 5,9 % y un error Tipo 2 de 88,2 % para una efectividad de clasificación de 52,9 %, de los casos agrupados correctamente, como se muestra en la tabla 3.

Tabla 3: Resultados de la clasificación.

Original	Recuento	AÑO	Grupo de pertenencia pronosticado		Total
		2008	2008	2010	
		2008	112	7	119
		2010	105	14	119
	%	2008	94,1	5,9	100,0
		2010	88,2	11,8	100,0

Esta tabla muestra el resultado de la clasificación del modelo para los años 2008 y 2010.

Evaluación de los Indicadores seleccionados en las empresas certificadas en BASC en Bogotá

Por otro lado, cuando se revisan los estadísticos (Media) de los indicadores seleccionados de las empresas en Bogotá, podemos observar que existe un impacto de la certificación BASC en los indicadores Capital Neto (CN), Margen Operacional (MO) y Margen Neto (MN), lo que no ocurre para los indicadores de Razón Corriente (RC), Prueba Acida (PA), Margen Bruto (MB) y Utilidad Operacional (UO), como se muestra en la tabla 4.

Tabla 4: Medias de los indicadores financieros.

AÑO		Media	Desv. típ.
2008	RC	1,6627	1,07753
	PA	1,3349	,97343
	CN	7686929,8319	29940987,85371
	MB	4773945,6191	52065864,55038
	MO	1356,8011	28413,12004
	MN	2371,8750	25227,24366
	UO	4441748,0588	14881385,15113
2010	RC	1,6057	,91362
	PA	1,3322	,86748
	CN	8288111,1765	26489944,90734
	MB	458,1276	1685,18614
	MO	1778,1713	13103,12695
	MN	23957,8208	105555,47254
	UO	4061696,6050	13430675,45609

Esta tabla muestra la relación de las medias de los indicadores financieros seleccionados en los años 2008 y 2010.

DISCUSIÓN

Al analizar las funciones discriminantes generadas en la tabla 8 se puede analizar que indicadores como Prueba acida (PA), Capital Neto (CN), Margen Operacional (MO) y Margen Neto (MN), Discriminan bien mejorando de un periodo a otro. Sin embargo para el caso, de la Razón Corriente (RC), Margen Bruto (MB) y Utilidad Operacional (UO), se puede observar que estos indicadores no evidencian el mismo comportamiento, en el transcurso del 2008 al 2010. Esto último sustenta la hipótesis de la poca capacidad de predicción del modelo obtenido.

En lo que respecta a las medias presentadas en la tabla 10 de los indicadores seleccionados se pudo analizar que los indicadores Capital Neto (CN), Margen Operacional (MO) y Margen Neto (MN) mejoraron de forma mínima de un periodo a otro, por lo que podemos concluir que la certificación BASC impacta en estos indicadores.

CONCLUSIÓN

En el Análisis Discriminante desarrollado en este artículo para la construcción del modelo se utilizaron 127 empresas de Bogotá, el modelo presentó una baja efectividad en la clasificación. En la muestra original la precisión del modelo en el 2008 es 94,8% y en el 2010 es del 11,8 %, para un promedio total de clasificación del 52,9% de las empresas. Lo que demuestra la poca confiabilidad para predecir el comportamiento de los indicadores financieros en el sector a futuro.

De la función discriminante obtenida y de los estadísticos analizados. A pesar de la poca capacidad de predicción del modelo; como resultado del análisis de la función discriminante y los estadísticos utilizados se puede concluir que la certificación BASC, incide positivamente en los indicadores financieros Capital Neto (CN), Margen Operacional (MO) y Margen Neto (MN) del sector.

EL PROCESO DE REINserCIÓN, EL NARCOTRÁFICO, LA VIOLENCIA, EL DESPLAZAMIENTO Y SU IMPACTO SOCIOECONÓMICO EN EL DEPARTAMENTO DE CÓRDOBA

Benjamín Castillo Osorio, Universidad Cooperativa de Colombia
Angela María Flórez Alvarez, Universidad Cooperativa de Colombia

RESUMEN

El problema de desmovilizados a afectado seriamente a toda la población debido a que este proceso ha aumentado las tasas de homicidio de los excombatientes, desplazamiento a las ciudades de las personas afectadas (campesinos) abandonando así sus propiedades y propiciando desordenes urbanos como las invasiones, falta de empleo, educación, nivel de vida bajo, ha sido origen de mucha violencia y de toma de decisiones que afectan con la integridad y la violación de los derechos humanos de las personas. La gran mayoría de los combatientes de estos grupos fueron y son pobres, jóvenes de ambos sexos del campo y la ciudad que no tienen aseguradas las opciones y oportunidades necesarias para mejorar sus condiciones de vida ni las de sus familias y comunidades. En estos grupos, están campesinos, adolescentes y jóvenes de asentamientos subnormales y barrios populares, desertores de colegios de secundaria y universidades, subempleados y desocupados, entre otros, al lado de algunos profesionales, líderes e ideólogos. Las bases de estos grupos son de gente humilde, provenientes de comunidades necesitadas que actúan por lo general en pueblos y áreas de pobreza permanente. A nivel nacional unas 47.000 personas se han desmovilizado en los últimos cinco años, de ellos personas 870 han sido asesinadas.

Palabras Claves: Reinserción, Población, Desplazados, desmovilizados, pobreza, paramilitarismo, guerrilla, narcotráfico. BACRIM-

THE PROCESS OF REINTEGRATION, THE DRUG TRAFFICKING, VIOLENCE, DISPLACEMENT AND SOCIO-ECONOMIC IMPACT IN THE DEPARTMENT OF CÓRDOBA

ABSTRACT

The problem of demobilized to seriously affected the entire population due to the fact that this process has increased rates of homicide in the combatants, travel to the cities of the people affected (peasant) thus abandoning their properties and fostering urban riots such as the invasions, lack of employment, education, low standard of living, has been a source of great violence, and decision-making processes which affect with the integrity and the violation of human rights of the people.

KEYWORDS: Reintegration, population, demobilized, poverty, Displaced, paramilitaries, guerrillas, drugtrafficking, bacrim

INTRODUCCIÓN

Con esta investigación se pretende analizar el comportamiento socioeconómico del proceso de reinserción en el Municipio de Montería, las variables económicas, sociales, políticas y culturales que inciden en el conflicto armado, son las causas que dan como resultado la falta de empleos de los actores involucrados

en éste y con respecto al entorno que los rodea, se deben orientar para obtener mejores condiciones de vida y ser aceptados como personas civiles.

Los principales ejes temáticos se basan en las circunstancias en que las personas desmovilizadas han transcurrido después de la inserción en la sociedad, identificando su participación en proyectos micro empresariales, en las asesorías prestadas por el Ente Territorial, el gobierno Departamental y Nacional, los éxitos, fracasos y conflictos surgidos en el desarrollo de este proceso; para efectos de precisar las causas de las políticas de generación de empleo.

REVISIÓN LITERARIA

En la literatura económica y social de Colombia y América Latina, se manejan conceptos y teorías relacionadas con la violencia y los grupos armados además de ser parte de la cotidianeidad en Colombia, hacen parte de la realidad política, económica, social y cultural de nuestro país. Aparecieron los grupos guerrilleros en zonas montañosas y apartadas. Debido a la presión que ejercían estos grupos desestabilizadores, se estableció entonces una dictadura militar con el fin de hacer posible el control en las zonas de conflicto. A partir de 1960 bajo la influencia comunista miles de familias abandonaron sus tierras y organizaron grupos armados, con el propósito de cambiar un orden social que consideraban injusto. Esto condujo a la formación de grupos al margen de la ley como son: FARC, ELN, EPL entre otros. Al final del frente nacional surgió el M-19, cuyo interés era alcanzar un lugar en la política democrática, como recientemente lo han logrado.

En general diversos estudios empíricos e investigaciones que se encuentran relacionados con este proceso ha afectado considerablemente el ámbito de la justicia disciplinaria entre las que está la Procuraduría General de la Nación (PGN), donde se registra una importante disminución de procesos por graves violaciones a los Derechos Humanos y al Derecho Internacional Humanitario por parte de servidores públicos, incrementando fallos condenatorios, durante los últimos 4 años la PGN impuso 152 sanciones a servidores públicos, 39 por desaparición forzada, 109 por tortura y 4 por desplazamiento forzado. En esta perspectiva, Colombia necesita con urgencia iniciar realmente un proceso de paz, con todos los actores armados al margen de la ley y la sociedad civil, de ahí la pertinencia de las propuestas de desmovilización y reinserción de dichos grupos como las que impulsa el actual gobierno nacional.

La dinámica del conflicto armado en el departamento de Córdoba y en consecuencia su situación en materia de derechos humanos y DIH, ha estado estrechamente ligada a sus condiciones socioeconómicas y geográficas. Es así como en Córdoba se ha hecho visible el enfrentamiento entre las autodefensas y los grupos guerrilleros por obtener el dominio de las tierras y de los recursos naturales y donde la fuerza pública ha sido marginalmente protagonista.

Sin embargo, a finales de los ochenta los grupos de autodefensa ligados a algunos hacendados y ganaderos, comandados por los hermanos Fidel y Carlos Castaño, incursionaron en la zona, donde en ese momento se estaban presentando combates entre los grupos guerrilleros (EPL, ELN, ERP y FARC), los cuales se prolongaron hasta los años noventa. Tras la desmovilización del EPL, en 1991, la acción de las FARC y de las autodefensas de los hermanos Castaño se extendió a la zona del PNNP (Parque Natural Nudo del Paramillo). Durante el periodo de 1993 a 1995, la guerrilla de las FARC actuaba en los municipios de Tierralta, Montelibano, Planeta Rica, Valencia y Puerto Libertador. Sin embargo, en el año de 1996, las FARC fueron desplazadas de Córdoba por la acción de las ACCU, razón por la cual fortalecieron su presencia en Sucre con el frente 35, mientras que el frente 18 que operaba en Córdoba estaba replegándose hacia el norte y bajo Cauca antioqueño. Al tornarse vulnerable el control de las ACCU, desde 1999 éstas emprendieron una operación tipo “tenaza” para repeler las hostilidades de las FARC logrando mantener control sobre algunos cascos urbanos de Antioquia (Toledo, Cañas gordas, Ituango y Buriticá) y de Córdoba (Tierralta, Puerto Libertador y Montelibano). En el marco del proceso de desmovilización contemplado en estos diálogos de paz, se están considerando los territorios del sur del departamento, todavía en disputa con las FARC, como posibles “zonas de concentración” de los grupos

de autodefensas. Esta situación permitiría prever que por las lógicas cambiantes y el interés de los actores armados por recuperar el control territorial perdido, las FARC emprenderán acciones bélicas en este territorio haciendo presión desde los municipios aledaños a Tierralta tal como empezó a hacerse evidente con la irrupción el 15 de marzo de 2003 de las FARC en la periferia del Nudo de Paramillo. EPL. Sin embargo, hasta 1987 y 1988, las autodefensas orientaron la conducción de sus hostilidades hacia este grupo insurgente en Córdoba. Estas acciones dieron como resultado contundentes victorias militares, que según algunos analistas, fueron un factor fundamental para que este grupo entrara en proceso de negociación política con el Gobierno.

FARC. Tras la VII Conferencia de las FARC en 1982, este grupo replanteó sus objetivos políticos orientándose hacia una nueva estrategia operacional y directrices básicas. Bajo esta nueva lógica, las FARC se ubican en la zona del Nudo de Paramillo. Para la segunda mitad de los años ochenta, en la región del Paramillo antioqueño se constituye una zona de descanso de las FARC con ocasionales actividades armadas. Entre 1993 y 1995, tras el debilitamiento en los años noventa del EPL y su posterior desmovilización, las FARC empiezan a incursionar en la zona cordobesa del PNNP desdoblado unos frentes del bloque José María Córdoba, creando los frentes 57 y 58, pero concentran un mayor trabajo en el frente 18 y a aplicar en la zona su nueva estrategia militar de “columnas móviles”. La acción militar de las FARC se enmarca, tal como ha sido la dinámica del conflicto en Córdoba, dentro de una lucha constante de posiciones con las ACCU por el control de la zona del PNNP y el acceso al Urabá antioqueño.

Grupos de autodefensa: AUC y las ACCU. La instalación del EPL en las montañas del Nudo de Paramillo se convirtió durante la década de los años 70s en un factor de presión en la zona bananera del Urabá antioqueño y en la ganadera del sur de Bolívar y Córdoba. Esta junta se convirtió en el primer antecedente de las Autodefensas Campesinas de Córdoba y Urabá comandados por Fidel y Carlos Castaño conocidos entonces como Los Magníficos, que aparecieron en la primera mitad de la década de los 80s. A partir de 1988, las autodefensas comienzan su expansión desde el Magdalena Medio, nordeste de Antioquia y sur de Córdoba, hacia otras regiones, como Sucre, Urabá y el bajo Cauca antioqueño. En Tierralta, municipio de Córdoba, las ACCU comienzan a perfilarse como la nueva estructura preponderante dentro de las autodefensas. La consolidación de esta zona y el repliegue de las FARC sin dar mayor combate, fortalece el fenómeno y lo presenta a amplios sectores de ganaderos y propietarios de tierras, legales e ilegales, de la Costa Atlántica como la solución a problemas de presencia guerrillera. En abril de 1997, las ACCU convocaron a dirigentes y comandantes de diferentes organizaciones de autodefensa para la creación de las Autodefensas Unidas de Colombia, como una federación de grupos independientes del mando central, integrado por siete miembros del estado mayor liderados por Carlos Castaño y repartidos en frentes localizados en Antioquia, Chocó y Córdoba, el Magdalena Medio, Cesar y Santanderes, Casanare, Meta, Cundinamarca, Tolima, Huila, Caquetá, Guaviare y Putumayo. En la actualidad el Comando del AUC y las ACCU se encuentran todavía asentados en el departamento de Córdoba.

Desde 1999, el desplazamiento forzado se ha localizado principalmente en el sur del departamento, asumiéndose como municipios expulsores Montelibano y, Puerto Libertador y Tierralta (a su vez son municipios receptores), donde los indígenas Embera Katíos están asentados en Córdoba y se proyectan como el grupo más afectado por esta infracción al Derecho Internacional Humanitario. Durante el 2001 y 2002, se presentaron algunos casos de retornos masivos de población en Tierralta y de reubicaciones en Montería, Valencia y Montelíbano.

En el departamento de Córdoba se han presentado registros de accidentes e incidentes por cuenta de minas antipersonal y municiones abandonadas sin explotar, principalmente en el área rural, municipios de Tierralta y Valencia, en donde se han presentado intensos enfrentamientos entre los grupos armados.

METODOLOGÍA.

En este tipo de investigación se utiliza una muestra representativa de la población objeto de estudio que se enmarca dentro del tipo de metodología cualitativo-cuantitativo, ya que se aplica una herramienta encuesta y el análisis de la información de fuentes secundaria o sea la revisión de literatura de textos revistas artículos y otros, en el que se busca observar las diferentes variables que afectan el comportamiento socioeconómico del proceso de reinserción de los desmovilizados, la intención es conocer la estructura socioeconómica generada por este conflicto.

RESULTADOS.

De acuerdo con la metodología descrita anteriormente, se puede observar con claridad absoluta algunos de los resultados que a continuación se describen, derivados de la aplicación de la encuesta a 55 miembros de la población objeto de estudio, en consecuencia se encuentran diversas variables que contribuyen a reafirmar lo expuesto al interior del proceso de la investigación, veamos:

Sexo de los participantes

Tabla 14: Sexo

¿CUAL ES SU SEXO?	%	N°
Masculino	100%	55
Femenino	0%	0
TOTAL		55

Fuente: Trabajo de campo, cálculo del investigador(a)- Ángela Flórez - octubre 2011

Figura 1.

Fuente: Trabajo de campo, cálculo del investigador(a)- Ángela Flórez - octubre 2011

De acuerdo con los resultados de la encuesta nos arroja que el 100% de las personas encuestadas - reinsertadas pertenecen al género masculino.

Tabla 15. Rango de edades de los participantes

¿CUAL ES SU EDAD?	CANT.	%
20-25	5	9.1
26-30	24	43.6
31-35	14	25.5
36-40	5	9.1
41-45	5	9.1
46-50	2	3.6
TOTALES	55	

Fuente: Trabajo de campo, cálculo del investigador(a)- Angela Flórez - octubre 2011

Figura 2: Edad

Fuente: Trabajo de campo, cálculo del investigador(a)- Angela Flórez - octubre 2011

Si se observa cuidadosamente la figura No 2 se encuentra que el 43.6% del total de la población representan el rango de las edades comprendidas entre los 26 y los 30 años, lo que indica que esta es una población relativamente joven, los que están inmersos en esta problemática, siguiendo esta orden de idea los que alcanzan un 25.5%, cuyas edades oscilan entre los 31 y los 35 años. Por otro lado se encuentra un caso muy particular de las edades comprendidas entre los 36 y 45 años, que sumados alcanzan el 18.2%, cifra representativa para una población de mayor edad, todo esto indica que en la medida que va aumentando la edad de los actores del problema va disminuyendo la participación porcentual al interior del proceso, esto se afirma observando la figura No 2, lo cual se refleja en un reducido porcentaje equivalente al 3.6% del total de la población; contrariamente se encuentra un caso patético y es de que la población más joven que es aquella comprendida entre los 20 -25 años, alcanzan a participar con un 9.1%, dentro del contexto total de la población objeto de estudio; dejando entrever que este grupo ha sido motivado por diversas razones a vincularse a los grupos ilegales o al margen de la ley.

CONCLUSIONES

Esta investigación parte de la observación en donde establecimos las variables que afectan al proceso social y económico de los reinsertados e identificamos las condiciones actuales de estos.

Con relación a los resultados obtenidos se puede observar que las personas desmovilizadas pertenecen a los estratos más bajos (I y II) y en su mayoría se encuentran ubicados en el sector sur y barrios subnormales del Municipio, no poseen condiciones de vida digna y el debido respaldo por el gobierno Municipal a pesar de lo anotado en sus planes de gobiernos. Estas personas en un 78% se encuentra trabajando, aprovechando así la oportunidad que le ha brindado el estado y empresas privadas a través de los programas destinados para tal fin, permitiendo la creación de nuevos empleos con sueldos que oscilan entre 1 y 2 salarios mínimos, cabe señalar que estas personas han buscado el apoyo del gobierno debido a un mejor bienestar propio y de su familia desempeñándose en diferentes oficios, entre las cuales los reguladores de tránsito (23%), auxiliar cívico (14.5%) y la oportunidad de estudio (14.5%) suman mayor cantidad. Existen pocas oportunidades de acceso a empleos que satisfagan sus necesidades básicas.

El 66% de estos individuos no tienen ideas de emprendimiento, sin embargo el 25% tienen pensamientos de crear microempresas y estudiar, debido a que manifiestan no tener de parte del gobierno ningún apoyo. Sin embargo observamos que el 53% de ellos manifiestan que aun tienen compañeros en las filas y en un 45% reinsertados. De igual forma afirmaron que los problemas económicos, es decir que el municipio posee pocas fuentes de empleo que permitan que personas de escasos recursos accedan a mejores condiciones de vida; conllevándolos a que pertenezcan a grupos al margen de la ley, ya que hacen parte de un núcleo familiar numeroso, además el 5.5% de estos individuos pertenecieron gran tiempo a grupos armados y extraordinariamente declararon las malas condiciones de convivencia y bastante temerosos de los nuevos cambios y a la reinsertación como lo muestra en el Figura 24. Los problemas económicos son los causantes en un 96% de que este fenómeno se originara en nuestra sociedad. A pesar de los beneficios brindados por parte del gobierno estas personas anotan la poca ayuda que este les ha brindado, pero el 71% ha sido favorecido en Salud, Educación y económicamente en menor cantidad. El 91% expresaron que no volverían a las filas y el 71% han tenido buena reacción del entorno social cotidiano frente a su decisión a la reinsertación.

En la Formación Académica, las personas encuestadas tienen un bajo grado de escolaridad, desfavoreciéndolos en cuanto a la opción de tener empleo, obstaculizándolos para la aspiración de buenos empleos. El gobierno a implementados programas de alfabetización y un conjunto de mecanismos de intervención enmarcados en los escenarios de reintegración enfocada en individuos y reintegración, de los cuales el 18% de estos se encuentra participando de una serie de facilitadores que intervienen en aras de crear un ambiente propicio para que este proceso fluya de la mejor manera posible a través del ACR. El 25% tienen pensamientos de crear microempresas y estudiar.

POLÍTICA DE DESARROLLO EMPRESARIAL DE BAJA CALIFORNIA (PDE).

Alejandro Mungaray Lagarda, Universidad Autónoma de Baja California.
Stephanie Gleason González

RESUMEN

En el contexto de competitividad y desarrollo económico las regiones buscan definir, impulsar y consolidar los sectores que son base para su desenvolvimiento económico. El desarrollo endógeno es una interpretación para la acción, y la política de desarrollo local incide sobre estos procesos. Lo que permite a las ciudades y regiones responder a los desafíos de la globalización creando lo que se conoce como desenvolvimiento económico. Así gobierno, academia y el sector privado se unen para determinar el conjunto de acciones estratégicas que guían la elaboración de la PDE (Política de Desarrollo Empresarial de Baja California). La PDE de Baja California realizada desde el marco de Vocaciones Productivas ve a "la empresa" como la más valiosa institución capaz de producir riqueza y bienestar para la comunidad. El objetivo de la presente investigación es evaluar la Política de Desarrollo Empresarial de Baja California (PDE) a través del estudio de los logros alcanzados por los sectores a los cuales ha ido dirigida la política. Se apoya en la economía evolutiva e institucional, para explicar la relevancia y el papel de las políticas como la institucionalización de la acción humana, terminando con un análisis comparativo de las vocaciones productivas del estado.

PALABRAS CLAVE. Política industrial, PDE, tecnologías sociales y evaluación.

BUSINESS DEVELOPMENT POLICY OF BAJA CALIFORNIA (PDE)

ABSTRACT

In the context of competitiveness and economic development regions seek to define, promote and consolidate areas that are the basis for proper economic development. For these reasons, government, academia and the private sector together to determine the set of strategic actions that guide the development of a plan in acts as a policy, the PDE (Business Development Policy of Baja California). PDE on Baja California from the frame of Vocations Productive sees "the firm" as the most valuable institution capable of producing wealth and welfare for the community. The objective of this research is to evaluate the Business Development Policy Baja California (PDE) through the study of the achievements of the sectors to which policy has been directed. It relies on evolutionary and institutional economics to explain the relevance and role of policy and the institutionalization of human action, ending with a comparative analysis of the productive potential of the state.

INTRODUCCIÓN

¿Por qué es importante el análisis y evaluación de las políticas industriales, en específico la Política de Desarrollo Empresarial de Baja California? ¿Qué impacto o logros ha tenido en el campo de su aplicación?

En el contexto de un mundo globalizado, de liberalización de mercados y de la información como clave para la toma de decisiones. Se necesitan herramientas para el logro de los objetivos planteados por los

agentes económicos. Una de las herramientas fundamentales para marcar rumbo y dirección son las políticas, en este caso la PDE de Baja California, que realizada por expertos especifica una serie de elementos necesarios para un desarrollo y crecimiento económico, por ello es indispensable el análisis de la PDE, en el sentido de conocerla y reconocer sus puntos de acción y metas, cuando esto se tiene dominado lo que sigue es hacer una evaluación de los logros de la PDE.

Es de suma importancia la evaluación de dicha política ya que sin esta información no podremos hacer de nuestro interés y del de todos los resultados, que si bien suponemos en algunos sectores alcanzaron sus metas en formas más que excelentes, en otros los logros podrían tender a ser menores, por esto una evaluación precisa y oportuna nos dirá sin lugar a dudas el resultado concreto de la aplicación de la PDE y con ello las decisiones por seguir. El documento está compuesto de la siguiente manera, en la revisión literaria se expone la importancia de las políticas industriales y de la misma PDE, así como revisión de la teoría institucionalista y evolutiva, para poder darle consistencia y forma a nuestra investigación. En la sección metodológica tenemos la revisión de las cifras encontradas en las Vocaciones Productivas del estado de Baja California conforme la implementación de la PDE. Por último tendremos los resultados y las conclusiones pertinentes.

REVISIÓN DE LITERATURA

La PDE está orientada sobre el Plan Nacional de Desarrollo y sobre el Plan Estatal de Desarrollo. Bajo la premisa del nuevo orden mundial y de una visión más allá de la global se elabora la PDE, teniendo como premisa base a “la empresa” como la más valiosa institución capaz de producir riqueza y bienestar para la comunidad. La PDE es una estrategia estatal que ve como clave el sector empresarial y el consenso de este. La PDE busca garantizar un crecimiento acelerado, prospero y un desarrollo sustentable integral. La base de la política está sustentada en un estudio definiendo las vocaciones productivas del estado, su evolución y objetivos. Con el estudio y análisis de las vocaciones productivas se busca propiciar el desarrollo en comunidades, regiones, sectores y empresas, conceptualizando las prioridades de inversión y promoción adecuada. “La PDE busca las siguientes líneas: A) Incrementar la competitividad empresarial de acuerdo a la Política Industrial Federal. Con lo que se persigue mayor generación de riqueza. B) Elevar la calidad de vida buscando abatir la pobreza. C) Promoción de valores sociales éticos, en las empresas y en la sociedad en general, con lo que intenta lograr discutir conductas antisociales y mejoramiento de la seguridad pública. D) Rediseño de la cadena de valor. Desarrollar un encadenamiento productivo, lograr beneficios de escala y alcance. E) Incremento del valor agregado de los productos elaborados. Mayor utilidad y beneficio social (PDE de Baja California)” (Mungaray A., 2005). Las Vocaciones productivas de una entidad de acuerdo a la PDE son aquellas que han crecido a su nivel de empleo por arriba de la media nacional, las que constituyen la identidad de un estado, aquellas que requieren de una incubación y representan un área importante de desarrollo para la entidad. Estas vocaciones se clasifican de la siguiente forma: a) Vocaciones razonables.

Estas han crecido por arriba de la media nacional. b) Vocaciones por impulsar. Tienen baja participación en el valor agregado censal de la entidad, pero tienen un gran potencial de desarrollo en la entidad. Por otra parte la investigación se apoya en las ideas centrales del institucionalismo concernientes a instituciones, hábitos, reglas y su evolución. El objeto del institucionalismo es partir de ideas generales respecto a la medición humana, las instituciones, la naturaleza evolutiva de los procesos económicos, hacia ideas y teorías específicas relativas a las instituciones económicas. Los institucionalistas tempranos ubicaron al hábito como la base de la acción y la creencia humana. Entre ellos Veblen (1899-1919), (M. Hodgson, Geoffrey) y el evolucionismo económico, también se revisan las contribuciones de (Dussel, 1997), (Ayala Espino J., 2000), (R. Nelson Richard., 2003:131).

METODOLOGÍA

Se analiza las tasas de crecimiento de actividades primordiales, determinadas como vocaciones productivas, también se revisa los niveles de empleo y su crecimiento.

Tabla 1: Vocaciones Razonables.

No.	Rama con crecimiento relevante en el estado.	1999			2009		
		UE %	PO %	VACB %	UE	PO	VACB
	TOTALES	100%	100%	100%	100%	100%	100%
3832	Fabricación y/o ensamble de equipo electrónico de radio, televisión, comunicación y uso médico.	.25%	12.2%	8.2%	.33%	15.7%	15%
6120	Comercio de productos no alimenticios al por mayor (incluye alimentos para animales).	2.7%	2.7%	6.3%	2.94%	2.8%	4.1%
6140	Comercio de productos alimenticios, bebidas y tabacos al por mayor.	1.13%	2.5%	4.5%	.51%	1.78%	3.3%
3814	Fabricación de otros productos no metálicos (incluye maquinaria y equipo).	.25%	2.9%	4%	.40%	.91%	1.53%
9310	Restaurantes, bares y centros nocturnos.	8.2%	5.5%	2.5%	9%	5.7%	2.33%
3130	Industria de las bebidas.	.22%	.9%	2.5%	.6%	.8%	2.13%
3560	Elaboración de productos de plástico.	.22%	3.7%	2.5%	.16%	2.7%	3.5%
3841	Industria automotriz.	.06%	1.4%	2.3%	.08%	2.1%	4.7%
	TOTAL VOCACIONES RAZONABLES	13.02%	31.7%	32.8%	14.03%	32.59%	39.7%

Esta tabla nos muestra el cambio crecimiento durante el periodo 1999 a 2009 de las vocaciones productivas del estado de Baja California.

Hay que observar que el mayor VACB al igual que la PO de 12.2% se concentra en la rama 3832 pero solo el .25% de las unidades económicas alberga este sector. Servicios de restaurantes, bares y centros nocturnos es el segundo con mayor PO y de igual manera concentra el mayor numero de UE con 5.5% y 8.2%. La industria del plástico ocupa un porcentaje importante de trabajadores con 3.7% pero solo una presencia de .22% de UE. Al hacer un poco de análisis en estas cifras vemos que la industria de la maquila concentra gran parte de la población ocupada pero son pocas las unidades productivas, de forma contraria el sector de los servicios posee gran cantidad de UE y se encuentra en segundo lugar en generación de puestos de trabajo. A

hora si nos fijamos en los valores para 2009 vemos que el VACB de fabricación de y/o ensamble de equipo electrónico de radio, televisión, comunicación y uso médico continua aportando la mayor parte de VACB con un 15%, seguido de la industria automotriz, que repunta con un 4.7%, hay que hacer notar que estos dos sectores casi duplicaron sus porcentajes en comparación con el periodo pasado y que la industria automotriz se encontraba hasta el final de la lista por ser el de menor VACB, continuando con comercio de productos no alimenticios al por mayor es el siguiente rubro con un 4.1% y después la industria de plástico le sigue con un 3.5%. Fabricación y/o ensamble de equipo electrónico de radio, televisión, comunicación y uso médico se posiciona como el sector con mayor PO con 15.7%, continuando con restaurantes, bares y centros nocturnos con 5.7%, este sector conjunta el mayor numero de UE de las vocaciones productivas del estado de baja california con 9%.

Tabla 2:

Periodo	TCA DEL PIB	Par. PIB. ¹	TCA del PIB.
	Baja California	Baja California	Nacional
2000	10.82%	3.37%	6.59%
2001	-3.17%	3.26%	-0.03%
2002	-2.25%	3.16%	0.77%
2003	2.75%	3.21%	1.39%
2004	8.89%	3.35%	4.16%
2005	4.65%	3.41%	2.76%
2006	5.74%	3.44%	4.81%
2007	2.40%	3.41%	3.38%
2008	-0.13%	3.36%	1.44%
PROMEDIO	3.30%	3.33%	2.81%

Muestra el crecimiento del PIB de Baja California.

CONCLUSIONES

Los planes se institucionalizan en lo que son las políticas, en este trabajo en específico la PDE de Baja California que pionera en la realización de una política industrial, basa sus expectativas de crecimiento y desarrollo económico en áreas denominadas como vocaciones productivas. La política debe verse como el plan que institucionaliza la acción de esta forma incrustarse en los hábitos de la sociedad que la creo y que busca ciertos efectos en su campo de aplicación. Baja California distinguida por su localización y que hace uso del factor zona libre y con ya una tradición en el sector manufacturero sustenta su economía en estas fortalezas que a la vez marcan sus puntos débiles, como un gran número de empleo con poco valor agregado y la dependencia a capitales de origen extranjero. La PDE que hace un esfuerzo al detectar las actividades económicas relevantes y tradicionales marca una serie de planes estratégicos y claves, profundamente estudiados y determinados por los agentes económicos activos y presentes en el ámbito regional conocedores de las necesidades de la entidad, con una visión clara de desarrollo, estas acciones que descritas en el documento de la PDE motivan el crecimiento de sectores específicos y supone un efecto positivo sobre algunos otros, por esta parte la PDE intenciona metas claras y definidas, pero que están restringidas a presupuestos y planes de gobierno de los ejecutivos locales, que si bien la PDE es considerada en la formulación de obras y proyectos, los proyectos particulares de las autoridades en turno regirán la real ejecución de la política.

Por otra parte al documentarnos y saber más de la PDE vemos que no hay un presupuesto directamente asignado para ella, los programas en los que ella se apoya contiene recursos tanto federales como estatales para el buen fin del programa, pero no en sí de la PDE o debiéramos preguntarnos ¿Que si estos programas y apoyos se cumplen por ende el objetivo de la PDE se realizaría? Un punto muy importante, pero abandonado y no mencionado explícitamente en la PDE es con referencia a las micro y pequeñas empresas, se da por hecho que con el desarrollo en determinadas áreas se hará surgir como por efecto de arrastre una dinámica que empapara y cubrirá a las pequeñas entidades dotando de los recursos necesarios para su buen funcionamiento, que esto se decidirá por fuerzas indirectas, no por planes de acción directos y concretos. La PDE es una institución vigente y que ha servido para estructurar y organizar el sector productivo del Estado de Baja California, pero de la misma forma el plan de la PDE realizado en el 2002, debe reformarse y adaptarse a los tiempos actuales, incorporando las nuevas tendencias que demandan tanto gobierno y sociedad.

ABSTRACT

Today, the issue of poverty ranks as one of the first order problems nationally and globally. Problem despite the implementation and promotion of government policies has not been enough and that far from fading appears to be a factor that worsens more and only in some cases have been meager economic growth and without this being reflected in an improvement economic conditions of the population characterized by high deprivation. In this regard, the issue of microfinance has been promoted globally as a mechanism that seeks to reduce poverty, under the principles of the democratization of credit and savings are factors that will trigger the production activities of the region, which would lead to a growth and development of communities and institutions of countries with high poverty rates. Despite the importance of the issue of microfinance institutions in Mexico has not yet been extensively studied, so it lacks a pure theoretical and conceptual support to address the issue and only takes a microeconomic approach of the financial and banking system. In this regard, this study's main objective is to make a field study in three municipalities in southern Mexico State in order to analyze the existence of a correlation between growth and development of multiple microfinance to economic development in the region. This study focuses on an analysis of the profile of microfinance institutions, its operations and the types of clients and services. Some of the questions that guide our work are: Rural Microfinance institutions contribute positively to the rural economy? Can microfinance reduce poverty? Does the lack of funding is the problem of micro? What financial services are needed to boost regional development: agriculture and rural?

Keywords: Microfinancieras, development, poverty, region.

LA IMPORTANCIA DE LAS INSTITUCIONES MICRO FINANCIERAS RURALES EN EL DESARROLLO ECONÓMICO DE TRES MUNICIPIOS DEL SUR DEL ESTADO DE MÉXICO. CASO; TENANCINGO, VILLA GUERRERO E IXTAPAN DE LA SAL

INTRODUCCIÓN

A lo largo de los últimos treinta años, las microfinanzas se han convertido en una herramienta útil y novedosa frente al fracaso de las acciones puestas de ayuda oficial al desarrollo. Más aún, este sector ha tenido un crecimiento constante en cuanto a número de actores que han decidido apostar por la idea de que si los pobres se quedan atrapados en el círculo vicioso de la pobreza no es porque no tienen capacidad para trabajar y para ahorrar, sino porque no tienen acceso al crédito. La historia del crédito y ahorro popular se remonta al siglo XVIII en Alemania. La primera caja de ahorro surgió en 1749, tiempo después aparecieron otras cajas en ciudades como Hamburgo, Oldenburgo y Kiel. El crecimiento en este

sector fue exponencial ya que para principios de siglo XX existían más de mil trescientas cajas por toda Alemania, con el objetivo de brindar apoyo a la población más necesitada.

Durante los años veintes hubo un proceso de modernización en cuanto a los servicios ofertados; seguros, cajas en el sector de la construcción, promotoras de ahorro y sistemas de manejo de efectivo para la realización de transacciones. El gran número de cajas de ahorro existentes provocó que el sector requiriera de un proceso de consolidación durante los años noventas lo que redujo considerablemente el número de dichas instituciones. En España la caja de ahorro más antigua se fundó en 1834 en Jerez de la Frontera por el Conde de Villacreces, según se menciona en la Real Orden de 3 de abril de 1835. Como consecuencia de esta iniciativa oficial del año 1835 se crearon las de Madrid, Granada, Santander, Sagunt, Valladolid, Sevilla, La Coruña, Barcelona y Valencia

En Norteamérica la primera caja popular aparece en Lévis, Québec Canadá, en 1900 por Alphonse Desjardins. Para 1908 se abre la Sociedad de Préstamos y Ahorros del Servicio Civil de Ottawa establecida por empleados del servicio público. Mientras que en la provincia de Atlantic, las Uniones de Crédito aparecieron entre los años de 1930 y 1940 en atención a las necesidades de pescadores, granjeros y mineros. En la actualidad las cajas populares y uniones de crédito han madurado dentro de un movimiento cooperativo el cual es uno de los más activos en el mundo y tiene la membrecía per cápita más alta del mundo. Existen alrededor de 1,600 uniones de crédito y cajas de ahorro en Canadá con alrededor de 10 millones de socios.

En América Latina, particularmente el caso de Bolivia, Perú, Ecuador y Colombia son las experiencias sobre microcréditos mediante instituciones como el Banco Solidario, Bancosol, Mibanco y Oportunidad Internacional. En México las cooperativas de ahorro y préstamo o cajas populares aparecieron en 1951, por iniciativa de un grupo de personas ligadas al clero, cuyos fines eran fomentar el ahorro, suprimir la usura, generar empleos y activar la economía del país a través del ahorro, crédito y educación a un segmento de la población no atendida por los bancos. Sin embargo, no es sino hasta la década de 1960 cuando se desarrolla el concepto de microcréditos, para Alpízar (2006), las microfinanzas mexicanas se originan a finales de la década de 1980, a partir de un enfoque preponderantemente altruista han desarrollado un sistema de ahorro y crédito popular con servicios financieros orientados al desarrollo individual, familiar y comunitario combinando los beneficios sociales con la rentabilidad económica, surgido así bancos tales como Compartamos Banco, Finamigo, CAME, Fin Común, entre otros.

Paralelamente a estas instituciones se han venido desarrollado una gran cantidad de casas de empeño, instituciones que operan preponderantemente prestamos prendarios sobre alhajas y autos, electrodomésticos y prestando según el valor de las prendas. Fundamentalmente la importancia de las casas de empeño consiste en ser una alternativa viable para personas sin acceso a créditos de los bancos u otras instituciones, y de que exigen pocos requisitos para prestar. El objetivo es aportar elementos que propicien una discusión y análisis que conduzca a evaluar la situación actual y las acciones las finanzas populares y microfinanzas rurales, como un factor de impacto en el desarrollo económico de los tres municipios de la región del sur del Estado de México y conocer el impacto de las microfinanzas en las condiciones de vida de los usuarios y sus respectivas familias, a partir de una relación de instituciones establecidas en la región.

METODOLOGÍA

El planteamiento metodológico de la investigación y de la encuesta tiene una connotación de modos mixtos (enfoque cuantitativo y cualitativo) basado en la observación directa y descripción de hechos concretos de los actores principales lo que permitió un ejercicio menos oneroso en la obtención de la información de igual manera se redujo la no respuesta. Así se considera una investigación transversal descriptiva, ya que establece relaciones entre las condiciones de clientes e instituciones lo que conlleva a

identificar relaciones entre factores en su papel de clientes de las instituciones microfinancieras. Uno de los principales desafíos fue obtener información fiel y confiable, ya que las autoridades municipales no cuentan con el registro de las instituciones dedicadas al microcrédito establecidas en la región, de igual manera la Secretaría de Hacienda y Crédito Público o la Comisión Nacional de Valores carece de información a este nivel.

Ante esta situación se optó por levantar un padrón de las instituciones dedicadas al servicio de microfinanzas populares, lo que no resultó problemático debido a que dichas instituciones son identificables a simple vista. Una segunda tarea importante fue diseñar una estrategia para obtener información sobre las características y perfil de las instituciones, para ello se realizaron entrevistas con los responsables administrativos de la institución, así como de una cuota de clientes, para el primer caso se gestionó la entrevista directa con el encargado de la institución. El tamaño de la muestra total fue de 241 clientes entrevistados, realizándose un muestreo aleatorio estratificado con asignación óptima, seleccionando los tamaños muestrales (n_i) para cada estrato (E_i) bajo el principio de la minimización de la varianza dado el costo de obtención de la información. Método que permitió asignar una mayor cantidad de elementos muestrales a los estratos más grandes, además, con el objeto de minimizar costos, se optó por aquellas instituciones donde se tuvo una mayor disposición y colaboración para realizar las entrevistas a los clientes y también por la homogeneidad de la población atendida por las instituciones microfinancieras. El estudio de campo fue realizado en tres municipios del sur del estado de México; Tenancingo de Degollado, Villa Guerrero e Ixtapan de la Sal, la elección obedece a la representatividad y su ubicación geográfica dentro de la entidad mexiquense.

MARCO TEÓRICO Y CONCEPTUAL

El concepto de finanzas es utilizado comúnmente para referirse a las actividades relacionadas con los flujos de capital y dinero entre agentes económicos; así como al análisis de las transacciones, administración del dinero, valores, títulos, bonos certificados, pago de intereses etc. Para Días Coelho (2004) las finanzas son la ciencia que trata la utilización del dinero, su costo, su rendimiento, protección y control, captación y reciclaje de sus distintos productos. Créditos, ahorro, cambio de divisas, transferencias, pago de servicios, seguros, cajas de ahorro y en algunos casos créditos prendarios, destinados principalmente a micro pequeños y en general a la población que ha emprendido alguna actividad económica.

Por lo tanto, al emplear el concepto de *microfinanzas* se busca definir aquellas instituciones y actividades financieras dirigidas a las personas en situación de pobreza o clientes de bajos ingresos, incluyendo consumidores y autoempleados (Ledgerwood, 2000). El origen del concepto se le atribuye a *Muhammad Yunus* al crear el Banco Grameen en Bangladesh cuya encomienda fue impulsar el microcrédito a nivel mundial a mediados de la década de 1970. Las ideas neoclásica, keynesiana y monetarista que hacen referencia a las teorías del dinero y crédito, acumulación de activos así como las teorías de desarrollo local y polos de desarrollo y de la teoría economía solidaria, principios todos ellos, que explican la función del crédito como factor de desarrollo de los individuos como de las empresas, se consideran como los fundamentos de las microfinanzas y a su vez considerándolas como instrumento eficaz para combatir la pobreza, principalmente mediante el crédito que al emplearse eficientemente en actividades productivas permitirá mejorar las condiciones de vida de la población al tiempo de contrarrestar la aguda asimetría entre las personas de mayores ingresos con el resto de la población. Para efectos de este estudio, entendemos que una institución microfinanciera es una entidad enfocada primordialmente a atender al segmento microempresarial y se identifican dentro del sector de finanzas populares, que para otorgar créditos, utiliza metodologías especializadas para analizar el riesgo de crédito de la población con ingresos bajos e informales, conocidas a nivel de la industria de la región como “metodologías de microcrédito”.

Panorama actual de las microfinanzas en la región de estudio

En México no obstante el desarrollo y crecimiento del sistema financiero las microfinancieras que se han caracterizado por haber incursionado en el sector rural y de atender un nicho importante de la población de menores ingresos, carecen de una figura jurídica específica y de una clara regulación de sus actividades y servicios. En cuanto a la cobertura se estima que en México solo el 26% de la población tiene acceso a algún servicio financiero en institución formalmente establecida y reconocida por la Secretaría de Hacienda y Crédito Público (SHyCP) o por la Comisión Nacional de Valores (CNV), mientras que para la población rural solo el 6% tiene la posibilidad de acceder a servicios financieros formales. Lo anterior significa que el nivel de bancarización en México es muy inferior comparado con otros países, en 2004 se ubican a México con 25% de su población usuario de servicios financieros, a diferencia de Colombia con 41%, China 42%, Brasil 43%, Chile 60%, República de Corea 63%, USA 91%, España 95%, Canadá 96%.

Gráfica 1

Según cifras del Banco del Ahorro Nacional y Servicios Financieros (BANSEFI). En 2006, México tenía el 26% de su Población Económicamente Activa sin acceso a servicios financieros, lo que significaba que aproximadamente 12 millones de personas no contaban con algún servicio proporcionado por instituciones financieras formalmente establecidas.

De la población con acceso a servicios financieros, el 56% lo realizaba con la banca comercial y solo el 14% empleaba las Cajas de ahorro y préstamo o bien alguna microfinanciera.

Gráfica 2. Población bancarizada en 2006

(Millones de personas)

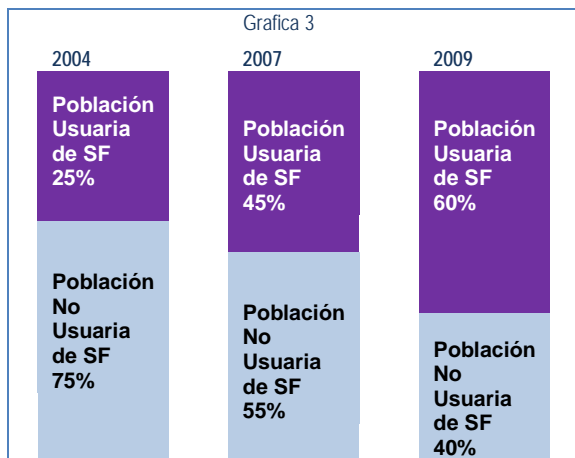

Fuente: Bansefi. 2006, "Población con acceso a servicios financieros en México"

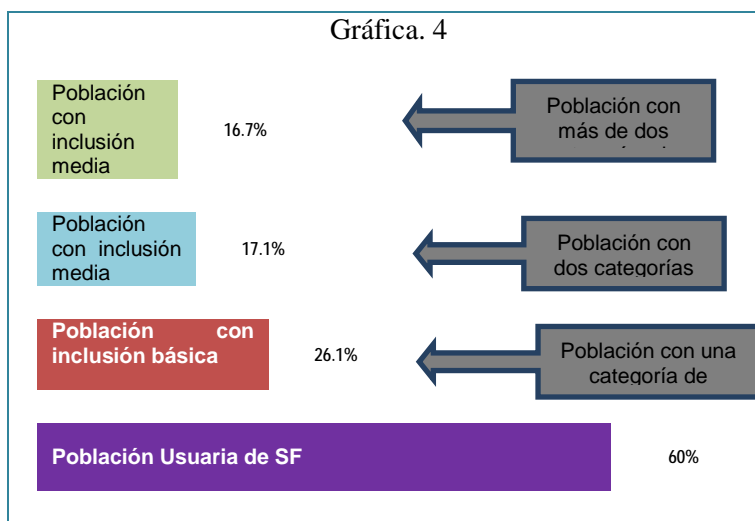

A pesar de los esfuerzos por incrementar la disposición de servicios financieros a la población que no cuenta con ellos, los resultados aún son insuficientes, según el Banco Mundial (BM), el país se encuentra ocupando el lugar número 98 en el mundo y el antepenúltimo en América Latina.

En cuanto a lo que se refiere al Sector de Ahorro y Crédito Popular (SACP), se observa que no se ha crecido de manera significativa, ya que una gran proporción de la población está sin ser atendida por el sistema financiero formal y continúan demandando formas y servicios populares tales como cajas de ahorro, tandas, préstamos de proveedores, préstamos de amigos y familiares, casas de empeño y los menos en alguna institución microfinanciera. Al referimos al mismo tema pero a nivel regional o rural se la situación es mucha más crítica, ya que en 2006 el 74% de los municipios (donde habita el 22% de la población), no existe ninguna sucursal bancaria, y cuando se tenía presencia de los grandes grupos se

ofrecen servicios y productos que no están orientados a la población de zonas urbanas y dedicadas a actividades ligadas al campo o son de autoempleo.

Inclusión financiera en México. En un estudio realizado por la SHyCP en 2009 se percibe una mejoría en el porcentaje de inclusión financiera en México, toda vez que de 2004 a 2009 la población usuaria de servicios financieros (USF) pasó de 25% a 60% en 2009, lo que muestra un crecimiento del 33% en cuanto a la cobertura de los servicios financieros.

Nivel de inclusión financiera. El estudio también demuestra del porcentaje de los USF el 26% maneja solo una categoría de productos, mientras que la población con dos categorías de productos es de 17%, prácticamente el mismo nivel de la población que maneja más de dos categorías de productos (17.3%).

Entre los años 2000 a 2006, el sector de las microfinanzas evolucionó desde un pequeño grupo de instituciones (en su mayor parte sin fines de lucro), a un grupo mayor en número y tipo, en el que se comenzaron a destacar instituciones inversiones privadas y con fines de lucro. Gráfica 5

Número de IMF. En una década el número de instituciones microfinancieras, creció aproximadamente en un 5 veces el número originalmente registrado, ya que en el año 2000 se registran cerca de 42 instituciones para el año de 2009, se 240 de ellas. (Marulanda Consultores, 2009)

El diagnóstico muestra un déficit de atención financiera al segmento de la población con nivel de pobreza alto, y ello se debe a que dicha población carece entre otras cosas de garantías reales o aval, solicitud de montos reducidos de crédito, cultura financiera lo que representa altos costos en el manejo de cuentas a las instituciones bancarias.

Análisis de información y resultados

En este apartado se presentan los resultados de 30 entrevistas y encuestas realizadas durante el mes de enero a marzo de 2012 a los encargados de las instituciones microfinancieras asentadas en los municipios de Tenancingo, Villa Guerrero e Ixtapan de la Sal.

Gráfica 6. Instituciones financieras. El universo de instituciones que se compone por 26 microfinancieras, 34 casas de cambio y 2 cajas de ahorro, en virtud de que dichas instituciones están plenamente identificadas en la parte central de cada una de las poblaciones (una en el municipio de Tenancingo y la otra en Villa Guerrero).

En cuanto a los servicios y productos financieros que ofrece las microfinancieras, se identifica principalmente aquellas que ofrecen microcréditos y el servicio de ahorro y en una menor proporción aquellas dedicadas a la venta de seguros de vida, para automóviles, y en una menor cantidad seguros agropecuarios, recepción o cambio de divisas.

Gráfica 7. Servicios financieros

Se encuentra que el uso del crédito solicitado a las microfinancieras el 26% de los usuarios lo destinan para la compra de mercancía y con un porcentaje similar del 25% indicó que el préstamo estaría destinado a “mejorar y apuntalar el negocio”, sin embargo, al preguntar sobre el giro de la empresa o negocio se identifica que la principal actividad económica es el comercio (pequeñas tiendas de abarrotes, verduras, papelería, regalos y estéticas).

Gráfica 8

El resto de los usos del crédito o préstamo son destinados a cubrir gastos de imprevistos, pagar deudas, o consumo personal y en el menor de los casos a mejorar su vivienda.

Se encuentra que la cantidad mínima promedio solicitada por los clientes es de \$4,000 pesos (aproximadamente 350 usd) y las solicitudes de créditos máximos asciende a los \$60,000 en promedio (4,500 usd), al cotejar la demanda con la oferta por crédito, se observa una ligera diferencia entre lo que solicita y lo que realmente se presta, esto es, cuando uno persona solicita \$4,000 pesos la institución solo autoriza \$2,600 (un 65% del monto solicitado) , mientras que cuando se trata de montos máximos, el cliente suele buscar créditos que oscilan entre los \$60,000 y aquí las instituciones están interesadas en prestar en promedio cerca de los \$110,000 pesos. En lo que se refiere al nivel de las tasas de interés a las que se enfrentan los clientes se encuentra tasas anualizadas en el rango del 65% es decir que al mes los clientes estarán pagando una tasa del 5.5 por ciento sin considerar las comisiones, y penalizaciones a las que se pueden hacer acreedores por retrasos en sus pagos, por lo que mejor buena referencia podría ser el comparar el Costo Anual Total (CAT). Bajo estas condiciones una persona que solicita \$2,500 pesos como crédito estará pagando al año \$4,125, casi dos veces la deuda original adquirida. Los montos máximos tienen una tasa de interés relativamente más baja, que aquellos créditos con montos mínimos, sin embargo la mayoría de las instituciones, manejan una tasa única que ronda los 4.5% al mes.

Monto mínimo

ti mensual

Monto máximo

ti mensual

Cabe hacer mención que se observó que una proporción importante de la población a migrado a solicitar recursos a las casas de empeños e instituciones, un 76% indicó que por lo menos una vez ha participado en una tanda para poder cubrir la necesidad de un crédito o préstamo, no obstante que solo el 18% declaró que actualmente participa en una tanda.

Gráfica. 9

¿Cuántas veces al año solicita un préstamo en estas instituciones?

¿Cuándo tiene la necesidad de un préstamo normalmente a quien recurre?

La dinámica o frecuencia con la asisten las personas solicitar un préstamo o crédito en alguna institución microfinanciera, se observa que un 52% de ellas asiste por lo menos una vez al año, mientras que el 30% en dos ocasiones. Se observa también que la gente sigue teniendo una resistencia en acudir a solicitar un préstamo o microcrédito a dichas instituciones, ya que el 50% las personas que tienen la necesidad de un préstamo, fija como primera opción a los amigos y familiares. Seguido en segundo lugar las microfinancieras con 21%, superior a los bancos comerciales, caja de ahorros y casas de empeño.

En cuanto a retrasos en los pagos, la gran mayoría de los clientes pagan y finiquitan sus créditos totalmente en los tiempos contratados, ya que si bien el porcentaje de ellos que se han retrasado en sus pagos por lo menos una vez es del 40%, los clientes que declararon haber estado en estatus de mora fue tan solo del 15%, un porcentaje relativamente bajo, lo que demuestra que la gente usuaria de estos servicios tiene un alto sentido de responsabilidad. Los principales motivos o razones que tuvieron los clientes al retrasarse en no pagar su crédito son; la *falta de coordinación del grupo* participante en el crédito grupal, y en el segundo lugar porque *el negocio no genera los ingresos suficientes* para poder realizar los pagos semanales y en tercer lugar porque *no cuentan con recursos* para pagar.

Gráfica. 10

El 50% de las personas acuden a una microfinanciera lo hace en el último bimestre del año, ello se logra entender porque en esta temporada la población busca emprender un negocio para aprovechar las fiestas decembrinas. Pequeños prestamos para comprar mercancía y revenderla, ya que percibe una buena temporada para obtener una ganancia de temporada. Mientras que el 27% de la demanda por crédito se da en temporadas de inicio a clase o vacaciones.

El caso de las personas que buscan un préstamo en casas de empeño, la asistencia se caracteriza por tener una mayor demanda al inicio del año (cuesta de enero). El 90 por ciento de la gente que empeña algún artículo lo recupera antes de finalizar el año, ya sea porque en su mayoría los artículos forman parte de sus instrumentos de trabajo (herramientas de carpintería, computadoras), aparatos electrodomésticos, o joyas de oro con un gran valor sentimental para ello. Es interesante identificar que la gente que asiste a solicitar un servicio financiero a institución microfinanciera declara estar medianamente satisfecho (56%) y muy satisfecho el 26%, las razones que mencionaron para que estuvieran plenamente satisfechos fue que las no son atentas con los clientes y que no tienen el suficiente conocimiento para atenderles en sus necesidades, carecen de información sobre alguna situación en particular y que no es muy clara la forma de cómo acceder a un crédito individual.

Gráfica 11

¿Qué tan satisfecho se encuentra Usted con el servicio? Conjuntamente con el grado de satisfacción con los servicios de las microfinancieras, los clientes indicaron que las cuotas semanales eran "adecuadas", sin embargo al indicarles que el monto total a pagar sería casi el doble de lo solicitado si lo hubieran realizado con la banca comercial, solo indicaron que es "costoso" ya que un banco en sus condiciones no le prestarían dicho monto.

No obstante que la metodología empleada por la banca comunal es la más costosa por peso superior a un 40% prestado, la percepción de los clientes es distinta. Mientras que la percepción de las microfinancieras la utilización de esta metodología de crédito es adecuada para el segmento de la población que solo tiene capacidad de pagar un crédito de menor valor entre \$2,500 y \$6,500 pesos (\$200 a \$500 usd).

CONCLUSIONES

El presente estudio estuvo motivado por la necesidad de identificar y caracterizar el papel de las instituciones microfinancieras establecidas en tres municipios de la región del sur del estado de México, a partir de un análisis de los servicios y de la percepción de la población usuaria de dichos servicios, se encuentra observa un significativo crecimiento del número de instituciones y personas usuarias de estos

servicios, los cuales se enfrentan a una serie de limitaciones y riesgos debido a que la mayoría de las instituciones funcionan sin una regulación por parte de las autoridades. Las principales conclusiones que se obtuvieron en el presente estudio se enumeran a continuación:

1. Parece prematuro concluir que el débil desarrollo económico que se observa en la región obedezca a la presencia de dichas instituciones, más bien podríamos decir que este se debe más a los apoyos y programas oficiales que desde hace más de cuatro décadas a la actividad más importante de la región que es la floricultura y la presencia de microfinancieras obedece a la oportunidad de aprovechar la dinámica en esta actividad.
2. El diagnóstico muestra un déficit de atención por las instituciones financieras formales (banca comercial) al segmento de menores ingresos, tampoco han sido una opción atractiva a los microempresarios de la región, debido principalmente a que dicha población carece entre otras cosas de garantías reales o aval, solicitud de montos reducidos de crédito, numerosos trámites y documentos para avalar la calidad del cliente y una cultura financiera lo que representa altos costos en el manejo de cuentas a las instituciones bancarias.
3. La presencia de un número importante de instituciones microfinancieras en la región desde hace aproximadamente ofrecen servicios de ahorro y crédito popular principalmente, tampoco se han enfocado atender las necesidades financieras de los pequeños agricultores y empresarios. Toda vez que el porcentaje de clientes de los clientes que poseen dichas instituciones microfinancieras apenas el 1% está relacionado con actividades económicas ligadas al campo, floricultura, turismo, artesanías o agroindustrias y pequeños talleres.
4. La microfinancieras funcionan mediante una metodología caracterizado por prestamos pequeños fundamentalmente para capital de trabajo, compra de mercancía, apoyo a su actividad comercial, en donde predomina una pobre evaluación de los solicitantes de crédito, las garantías personales han sido suplidas por garantías grupales, con prestamos subsecuentes donde el historial del cliente es determinante para promoverlo a un mayor monto y mejores tasas de interés por parte de la institución.
5. Se percibe un alto nivel comercial y de lucro frente a lo social por parte de las instituciones establecidas, con altas tasas de interés reales, buscando siempre grandes retornos a corto plazo como único objetivo, los que redundan en una pobre atención a la población de menores ingresos, y no obstante los altas tasa de intereses, el cliente observa mucho mejor este servicio, comparado con el que ofrece la banca comercial, ya que las microfinancieras les brindan facilidades pagando montos fijos semanales.
6. Se aprecia por un lado como algunas de las instituciones han alcanzado un posicionamiento exitoso en el mercado, principalmente aquellas que están ligadas o pertenecen a cadenas comerciales, la estrategia de negocio es la de otorgar crédito de consumo a los segmentos de bajos ingresos principalmente para autoconsumo o para salir de una eventualidad y no para la creación o fortalecimiento de una microempresa.
7. En México no existe una figura jurídica específica de una microfinanciera de la estructura del sistema financiero, ni tampoco hay una asignación regulatoria de las actividades microfinancieras, entendidas como la prestación de servicios financieros integrales a las poblaciones de bajos ingresos o a un tipo de entidad específica.
8. La banca comunal, presenta el costo por peso prestado más alto, aunado a la dispersión geográfica que impide a la mayoría lograr economías de escala, acceso a mayores recursos de capital, fortalecer la educación financiera son algunas de las principales debilidades que enfrenta el sector.

9. Definir claramente el objetivo de los “anexos” de la banca comercial (Banco Azteca, BanCoppel, Wal Mart, Crédito Familiar) con las instituciones microfinancieras dedicadas al impulso y desarrollo de microempresarios, ya que las primeras se promocionan como un esfuerzo por acercar los servicios bancarios a zonas rurales y con poca densidad de población, mientras que la segundas deberían estar enfocadas en esfuerzos, recursos y estrategias en impulsar decididamente programas económicamente sustentables.
10. Finalmente, las condiciones económicas de crisis recurrentes han sido un factor que ha permitido que las casas de empeño se hayan convertido en una fuente alterna de financiamiento rápido y con mínimos requisito, cuyo perfil de cliente son personas con necesidades de liquidez inmediata, gente que requiere dinero para completar el gasto familiar o hacer frente a imprevistos como enfermedades, pago de deudas.

RESUMEN

Uno de los problemas de la educación en México, y por ende en Sonora, es que nuestros estudiantes presentan severas deficiencias en la formación de sus hábitos de lectura y escritura, y por lo mismo tienen grandes dificultades en aspectos como la adquisición de los conocimientos. En México se lee por esparcimiento un libro al año, y si a eso le añadimos que gran parte de nuestra población no comprende bien lo poco que lee, más grave aún. Esta problemática nos concierne a todos, a los profesores que tenemos el poder de hacer cambios significativos en nuestros estudiantes y en nuestro sistema educativo. La problemática que analizaremos son las causas por las cuales los estudiantes del CESUES manifiestan poco hábito por la lectura y una expresión escrita pobre y deficiente, además de relacionar los aspectos de la lectoescritura con la formación académica y profesional de los estudiantes.

PALABRAS CLAVES: Docentes, estudiantes, enseñanza aprendizaje, lectoescritura, formación profesional.

ABSTRACT

One of the problems of education in Mexico, and therefore in Sonora, is that our students have severe flaws in the formation of reading and writing habits and therefore have great difficulty in aspect such as the acquisition of knowledge. In Mexico, one book a year is read in their leisure time, and if we add that the majority of our population doesn't understand what they read there's. This problem concerns all of us teachers, who have the power to make significant changes to our students and to our educational system. The issues to be discussed are the reasons why CESUES students show little habit of reading and poor and deficient writing expression, and in addition relate aspects of literacy with student's vocational training and education.

KEY WORDS: Teachers, students, teaching, learning, literacy, vocational training.

PRESENTACIÓN

“En México hace falta dedicar tiempo, talento, imaginación y recursos en la formación de lectores. En nuestro país, por muchos años, los sistemas educativos se han dedicado a alfabetizar o a instruir a los estudiantes, pero no a la formación de lectores, con lo que estaríamos trabajando el desarrollo intelectual de la población, pues el lenguaje y la literatura son instrumentos o herramientas para el desarrollo del intelecto”.

Felipe Garrido

Dentro de las habilidades de mayor exigencia para los profesionistas actuales están el dominio de la lectura y la escritura, procesos inherentes entre sí y que conducen a la adquisición, procesamiento y producción de conocimiento. Los docentes dedicados a la enseñanza pueden expresar que dichas destrezas constituyen una preocupación, un temor, una fuente de inseguridad para estudiantes y profesionales de las diferentes áreas. La experiencia cotidiana en las aulas, pone de manifiesto que los

alumnos tienen dificultades para desarrollar sus habilidades de lectura y por ende de escritura. Gran parte de los estudiantes leen muy poco, su expresión oral y escrita no tiene la calidad que demanda el nivel universitario que cursan. Esto se evidencia en sus trabajos escritos como ensayos, monografías, tareas, también en las exposiciones orales y con la sola conversación con ellos.

La problemática de la lectura en la universidad es heredada, pues casi de manera general los estudiantes universitarios provienen de sistemas educativos oficiales, centrados en la enseñanza y en los profesores; sistemas que en términos generales han impactado poco en el desarrollo de las habilidades comunicativas: leer, escribir, hablar y escuchar. De hecho, gran parte de la limitada formación de los estudiantes se puede adjudicar a fallas de los sistemas educativos, en los programas, libros y formación docente. Como profesores e integrantes del sistema educativo es factible observar que en lo relacionado a lectoescritura la tarea está inconclusa, ¿la evidencia?, los alumnos. Pero aunque la universidad no es la causa raíz de dicho problema deberá atacarlo de manera decidida.

La investigación cuyos resultados se presentan en este documento se realizó con la finalidad de conocer las diferentes aristas que tiene problemática de la lectura y su relación con la escritura en el Centro de Estudios Superiores del Estado de Sonora (CESUES). Los resultados, aunque poco satisfactorios constituyen un gran reto para quienes realizamos la investigación y con nuestro trabajo cotidiano queremos contribuir a mejorar la educación, la capacidad de aprender de los jóvenes y con ello la sociedad en la que vivimos. El inicio para que se den cambios estructurales en las prácticas de lectoescritura en una institución, es identificar las causas o raíz de dicha problemática y abatirlas de manera frontal y sistemática. Esta investigación pretende indagar precisamente en dichas causas.

REVISIÓN LITERARIA

El marco teórico que sustenta esta investigación parte de observar la problemática de la lectura como un proceso de adquisición del lenguaje y de conocimientos en un contexto educativo universitario constructivista, desde el punto de vista social y cognitivo. Desde el año 2007 el modelo educativo del CESUES cambió a ser un modelo por competencias y constructivista. El primer semestre para todas las carreras que se ofrecen en la institución está integrado por cinco asignaturas encaminadas a desarrollar las competencias genéricas de los estudiantes y una para introducirlo al campo profesional específico de su programa educativo. En esta institución los alumnos pueden desarrollar sus habilidades para la lectura en todas las asignaturas que cursan, pero de manera especial en las materias de comunicación oral y escrita y en la de aprendizaje y gestión del conocimiento, las cuales se imparten durante el primer semestre. En un modelo por competencias se da el ambiente propicio para que el estudiante desarrolle sus conocimientos, habilidades y actitudes que le hacen capaz, competente, para construir su aprendizaje primero como alumno y posteriormente como profesional.

En un contexto educativo constructivista el profesor es un guía para el estudiante y es este último quien realiza una construcción propia, que se va produciendo como resultado de la interacción de sus disposiciones internas y su medio ambiente. Dicha construcción resulta de la representación inicial de la información y de la actividad, externa o interna, que se desarrolla al respecto (Chadwick, Clifton B. 2006) Esta investigación se llevó a cabo utilizando como sustento teórico las ideas de Lev Vygotsky, Jerome Bruner y David Paul Ausubel. Los procesos educativos son sociales, en este sentido Lev Vygotsky desarrolló una amplia teoría denominada el constructivismo social (Chadwick, Clifton B. 2006) y en ella sostiene que conocimiento se adquiere en un ámbito social, se aprende por el contacto, por la interacción con las personas, primero en el entorno familiar, escolar y después se convierte en un hecho personal, interno, cognitivo. Según Vygotsky en los seres humanos se pueden generar dos tipos de funciones mentales: las inferiores y las superiores. Las funciones inferiores son aquellas con las que nacemos, son naturales como llorar, alimentarse, reaccionar ante diferentes estímulos. El comportamiento de las funciones mentales inferiores es delimitado a lo que físicamente podemos hacer, nos limitan en nuestro

comportamiento a una reacción o respuesta al ambiente. Por su parte, las funciones mentales superiores se adquieren y desarrollan a través de la interacción social. Puesto que el individuo se encuentra en una sociedad y forma parte de una cultura concreta, las funciones mentales superiores están mediadas culturalmente, es decir, los procesos educativos, tanto formales como informales constituyen una mediación en la que se da el aprendizaje. Por esto según Vygotsky, el conocimiento es el resultado de la interacción con los demás, el ser humano adquiere conciencia de sí mismo, aprende el uso de símbolos, que a su vez le permiten pensar en formas cada vez más complejas o estructuradas. Según este teórico a mayor interacción social, mayor conocimiento, más posibilidades de actuar, mayor fortalecimiento de las funciones mentales. En este sentido la mediación es la intervención que se ejerce en una dinámica educativa. El ser humano es concebido como un ser social y cultural que formula sus conceptos en este ambiente y con ello desarrolla sus habilidades de pensamiento (Díaz Barriga, 1998).

Según Vygotsky, el lenguaje como tal constituye una herramienta psicológica y estas habilidades comunicativas y de pensamiento del ser humano le permiten en un contexto educativo aprender y desarrollar sus capacidades de pensamiento. Se aborda también la teoría cognitiva de Jerome Bruner, en la cual se visualiza el lenguaje como hecho o producto de la interacción de las personas en un contexto social y como un medio para el desarrollo del pensamiento crítico y para el aprendizaje, que faculta al individuo para la resolución de problemas. Para este planteamiento es importante el aprendizaje por descubrimiento, la motivación y el rol activo del estudiante. (Moreno, 2006). Se considera fundamental el aprendizaje significativo ya que produce una retención más duradera a la sola información, facilita adquirir nuevos conocimientos relacionados con los anteriormente obtenidos de forma significativa. Los aprendizajes al estar claros en la estructura cognitiva facilitan la retención de nueva información y al ser relacionada con la anterior, es guardada en la memoria a largo plazo, es un conocimiento perdurable. El aprendizaje significativo es también un aprendizaje activo, pues depende de la asimilación de las actividades de aprendizaje por parte del alumno. Es personal, ya que la significación de aprendizaje depende los recursos cognitivos del estudiante. Entonces la tarea de los profesores es diseñar estrategias que propicien en el estudiante ese interés por aprender.

Las ideas de Vygotsky y Bruner se complementan con el pensamiento de David Paul Ausubel que sostiene que los conocimientos se deben incorporar o estructurar de manera sustantiva y que esa significación lleva a una retención de lo aprendido, y más aún si se dan en un ambiente afectivo (Bara, 2005). Los factores afectivos son: la motivación, el impulso cognoscitivo, la motivación de logro, las recompensas, los valores y actitudes. Dentro de la motivación podemos encerrar a la curiosidad, la exploración, la competencia. El impulso cognoscitivo se refiere a la necesidad que tienen los seres humanos de adquirir conocimientos para solucionar problemas y en esa medida es que logra la motivación. Las teorías anteriormente descritas constituyen un contexto en el cual la lectura cobra un papel preponderante en el lenguaje y en el aprendizaje. Alumnos desinteresados en la lectura difícilmente desarrollarán habilidades para escribir y para allegarse de conocimientos nuevos e interesantes para ellos. Para comprender y mejorar los procesos de lectura y escritura, es relevante conocer sobre cuáles planteamientos se ha dado la enseñanza de la lengua, desde los enfoques gramaticales tradicionales propios de la primera mitad del siglo XX hasta los actuales enfoques comunicativos (Cassany, 2003). De manera general Cassany ubica que en la adquisición y dominio de la lengua escrita hay cuatro niveles que se integran entre sí y cita el esquema de Colomer y Camps. (Ver esquema) En el cual el nivel ejecutivo es el más básico como un hecho comunicativo, en el nivel funcional se concibe a la lengua como un instrumento que permite resolver exigencias cotidianas redacción de cartas, currículos y otros textos sencillos. En el nivel instrumental el lenguaje es un medio para la búsqueda y registro de la información y el más completo y complejo es el epistémico. Este último nivel es el ideal para un estudiante universitario, que le permite no sólo comprender la información escrita sino también apropiarse de ella para ampliar su aprendizaje y porqué no, compartir ese aprendizaje por medio de la escritura.

(Esquema de Colomer y Camps en Cassany, 2003)

También es importante destacar que existe una estrecha relación entre la lectura y su comprensión con los procesos de aprendizaje, pues la práctica de la lectura en lugar, forma y situación que se dé constituye indudablemente un medio para el aprendizaje (en papel, en electrónico; lectura de comprensión, crítica, analítica y hasta la involuntaria). Las teorías de Vygotsky, Bruner y Ausubel proporcionan una plataforma teórica sobre la cual los profesores, las instituciones, organizaciones públicas y privadas así como y los diferentes actores de los sistemas educativos, deben de considerar para mejorar de manera sustancial la educación que se brinda a los estudiantes, desde el nivel de preescolar hasta la universidad, en donde se contemple la educación como un sistema en el que se deben priorizar los recursos y las condiciones que conduzcan a la transformación del individuo y de la sociedad. Por lo anterior resulta fundamental mejorar el desarrollo de hábitos de lectura de los estudiantes en los diferentes contextos sociales, en los familiares y educativos en las asignaturas entendiendo la dimensión e impacto social y cognitivo personal que dicha práctica tiene en el aprendizaje.

METODOLOGÍA

La realidad del desarrollo de las habilidades de lectura y por ende escritura en el CESUES, constituye una labor de aproximación, de interpretación para tratar de conocer el impacto que tienen estas prácticas en la formación de los estudiantes de esta institución. También implica introducirse en la definición del entorno y en la conceptualización que tienen los actores en relación a la lectura, la escritura, el conocimiento, de sus profesores, de sus alumnos y de sí mismos; incluso tiene que ver con la interpretación que hace quien realiza la investigación. El propósito de este análisis es destacar que pese al importante desarrollo de la ciencia y la tecnología, la lectura y la escritura siguen siendo pilares fundamentales en la formación de los estudiantes universitarios. A la vez que son la columna vertebral, también constituyen un lugar común, donde se comparten conocimientos o confluyen ideas.

Esta investigación es una interpretación real de la dinámica de lectoescritura en el universo de los estudiantes en una muestra aleatoria de 60 estudiantes de octavo semestre de Licenciados en Administración de Empresas Turísticas de la Unidad Académica Hermosillo del CESUES, y se eligió esta temática por la relevancia que tiene en la formación integral de los mismos, por su impacto en los nuevos modelos educativos y la importancia social que ha cobrado la comunicación en los contextos educativos y laborales. La metodología de investigación que se utilizó en este proyecto es preponderantemente cualitativa. Se dice que es un análisis cualitativo, pues según lo expresa Gunter L. Huber (2003) citando a Miles y Huberman una investigación cualitativa se da cuando el investigador está en contacto con el campo o las situaciones a investigar en contextos cotidianos, que reflejan la vida de los grupos a estudiar y como resultado de ella se proporciona una explicación a la problemática analizada. También se utilizaron como herramientas de análisis cuantitativos para lograr una aproximación al problema a investigar, pues era necesario generar estadísticas para ubicar tendencias y opiniones que se procesaron mediante un software para estadística social, pero la interpretación final fue eminentemente cualitativa, se

utilizaron básicamente las siguientes herramientas de investigación: la encuesta y el análisis de ejercicio de la escritura.

RESULTADOS

El análisis de los resultados de la aplicación de los dos instrumentos: La encuesta y el ejercicio de escritura aplicadas a los estudiantes durante el semestre 2009-1. Específicamente se consideran cuatro temas estructurales: lectura, escritura, enseñanza y aprendizaje; todos estos conceptos relacionados entre sí y en el contexto cultural de los estudiantes del CESUES. Para hacer una aproximación a la realidad académica de los estudiantes del CESUES, es importante verla en el contexto de su entorno, en las condiciones sociales, económicas y culturales que media el desarrollo de sus habilidades cognitivas.

De los alumnos de esta institución, se puede decir que son jóvenes de los cuales gran parte provienen de otros municipios, principalmente del estado de Sonora, incluso de otras entidades, que llegaron a la ciudad de Hermosillo a realizar sus estudios de educación superior. Al provenir de otras localidades más pequeñas que la capital, tienen acceso a una cultura suburbana, traen consigo una gran riqueza cultural, familiar y de tradiciones de sus comunidades; manifiestas en sus expresiones, en sus actitudes y ante la concepción misma que tienen de la realidad. Asimismo, en su mayoría vienen de instituciones de educación públicas, en las cuales está visto que no logran el desarrollo de las potencialidades de lectoescritura de los estudiantes. Al revisar y analizar los resultados de las encuestas aplicadas a los estudiantes de manera general, ellos expresan en forma abierta que la lectura es un tema importante, el 97% de los encuestados piensa que es importante que los estudiantes universitarios lean por cultura general y para obtener conocimiento. El 82% de los alumnos encuestados manifestó que les gustaba leer, pero sólo el 35% afirmó tener el hábito de la lectura.

Esto conduce a pensar que hay aproximadamente un 50% de alumnos que gustan de leer, pero no han llegado a hacer de esa práctica un hábito. En este sentido se pueden derivar varias reflexiones: 1) En realidad no consideran tan importante la lectura como lo expresan y su respuesta es como un eco de la sociedad, más un “deber ser, que el ser en realidad”, esta afirmación se puede reforzar con el hecho de que el 62% de los encuestados únicamente leen a la semana de 1 a 3 horas, 15% lee de 4 a 6 horas y sólo un 5% de los encuestados lee entre 10 y 20 horas semanales. 2) Otra interpretación que podemos realizar es que los alumnos no están habituados a leer sólo por gusto, más bien es una actividad que ellos relacionan con la escuela, el alumno asume que debe leer lo que los profesores le solicitan para cumplir con un requisito académico. 3) También se puede interpretar que los jóvenes leen más de lo que ellos mismos piensan, ante el uso constante de las tecnologías de la información y la comunicación pero esa pregunta no se formuló, pero resultaría interesante para posteriores estudios, como tal sólo se indagó de cuáles fuentes utilizaban para hacer sus tareas escolares a lo que el 87% respondió que utilizaban el internet y sólo 13% utilizaban libros. Lo anterior puede generar como resultado, alumnos más sensibles a la tecnología e insensibles a las actividades que demanden atención y/o concentración en un objeto inanimado como es un libro. Asimismo en el análisis de la encuesta ubicaron a los estudiantes como poco afectos a la lectura y que perciben esta actividad sólo para “pasar exámenes escritos”, más que para aprender, como un esparcimiento o para obtener cultura general.

Si a lo anterior se le añade que el 70% de los encuestados declaran que la actividad que más realizan en su tiempo libre es ver televisión, en segundo lugar, un 50% afirma que escucha música y un 40% conversa por el mensajero (chatea). Si a ello se le suma que en la entidad y la ciudad los eventos y lugares para la difusión de la cultura son pocos, el panorama se torna más crítico. Otro aspecto considerado en los resultados refleja que el 83% expresó que los profesores sí le solicitan que lea, con muy pocos resultados por lo visto, y el 85% de los profesores demandan trabajos académicos con buena puntuación y ortografía. Esto nos lleva a pensar que aunque los maestros piden trabajos bien escritos, si aceptan que los estudiantes presenten textos mal elaborados. Es pertinente analizar cómo es que los alumnos pueden llegar a obtener calificaciones “promedio” por así decirlo, sin tener la costumbre de leer, por ello no es

raro que al concluir sus estudios universitarios no tengan ese hábito. La reflexión que debemos hacer es cómo se puede cursar y concluir una carrera universitaria sin mejorar hábitos de lectura y con severas deficiencias en la expresión escrita. Además de la encuesta que se aplicó a los estudiantes, se les pidió que escribieran en una cuartilla un pequeño ensayo sobre algunas temáticas propuestas. Se evaluaron los siguientes aspectos por considerar, que es lo mínimo que debe evaluarse al analizar un texto:

1) Profundidad en la redacción, 2) extensión, 3) recurrencia temática, 4) representación social, 5) estructura del texto, 6) ortografía, 7) puntuación y 8) habilidad expresiva. Es importante mencionar que los criterios de revisión no fueron demasiado estrictos, se tomó en consideración que era un tema libre, que tenían sólo una hora para escribir y que no contaban con apoyos como diccionarios o correctores de computadora; por lo mismo se considera que los resultados son representativos de la redacción que efectivamente pueden tener los estudiantes. Aunque el 52% de los alumnos encuestados dijo no tener dificultades para escribir textos, por medio del ejercicio de escritura se pudo detectar que no era así, que sí tenían severos problemas para expresarse mediante la escritura. Por su parte, los alumnos que admitieron tener dificultades para escribir son el 38%, un índice muy alto para ser estudiantes universitarios. Si se analizan las razones que los estudiantes mencionan como causa de sus dificultades para escribir, se encontró que 23% respondió que se le dificulta estructurar los textos, el 12% mencionó que le faltan ideas, el 5% señaló que su vocabulario es muy limitado, un 3% dice que no les gusta escribir y un 2% que tiene mala ortografía. También resulta interesante analizar que el 43% no contestó esta pregunta. La profundidad en la redacción se relaciona con el léxico, la estructuración de las ideas, incluso se puede afirmar que muestra si quien escribe tiene destreza y agilidad mental para organizar las ideas en un texto, habilidades que se adquieren con la lectura, por ello durante muchos años se ha visto a la lectura y la escritura como un solo proceso, el de la lectoescritura.

Una de los problemas más comunes en la escritura de los estudiantes que hicieron el ejercicio de redacción y de los que se perciben tradicionalmente en los textos y tareas que entregan, es la ortografía, 78% de los estudiantes escribió con bastantes faltas de ortografía. Si se analizan las causas se puede ver que es el desconocimiento de las normas o reglas para la ortografía y sobre todo, la falta de hábito por la lectura. La capacidad del cerebro es tan poderosa que graba la información de la ortografía con sólo verla, se puede decir que hay una memoria visual. Así que mientras más lecturas se realicen mejor ortografía se tendrá. La habilidad expresiva de los estudiantes sólo en un 52% fue aceptable; es decir, pese a tener problemas con la ortografía, puntuación, estructura; lograron comunicar sus ideas. El resultado es bastante crítico, sobre todo si se considera que estos jóvenes cursaron por lo menos 9 años la materia de español en la educación básica, por lo menos un semestre de redacción en la preparatoria y un semestre más ya en esta institución, cursaron y aprobaron la asignatura de taller de comunicación oral y escrita. Si se realiza una sumatoria, se puede ver y reflexionar en el hecho de que estos estudiantes invirtieron 10 años de sus vidas en materias encaminadas a mejorar su capacidad de lectura y escritura, con mucho esfuerzo y pocos resultados. Lo más graves aún si se entiende que la formación de los hábitos de lectura y escritura impactan en aspectos cognitivos y metacognitivos de los estudiantes, es decir, que influyen directamente en el aprendizaje de los alumnos y en la forma como ellos se aseguran de aprender. ¿Cómo va a construir su aprendizaje una persona que no entiende lo que lee o no se puede expresar por medio del lenguaje escrito? El lenguaje es un medio de aprender y de demostrar el aprendizaje.

Propuestas

Grandes problemas requieren soluciones de la misma magnitud, tal es el caso de la problemática de la lectura y la escritura en el CESUES. Se requiere realizar cambios estructurales en el diseño curricular, generar más investigación educativa al respecto, que proporcione indicadores y estrategias específicas. Para abatir este problema se requiere como apoyo fundamental de profesores actualizados, capacitados y con el perfil adecuado para las asignaturas de comunicación oral y escrita y la de aprendizaje y gestión del conocimiento. Es vital también la participación de profesores y directivos de todas las disciplinas para que hagan de su ejercicio docente y profesional una motivación a la lectura que se evidencie en planes de desarrollo, recursos financieros y humanos pertinentes e indispensables para tal fin; de no ser así

continuará siendo la gran tarea pendiente no abordada. Por lo anterior, y con base a los resultados de los instrumentos aplicados, se proponen las siguientes acciones: 1) Que se establezcan líneas de investigación en materia de lectura y de escritura por un cuerpo académico de docentes que tengan el perfil y el interés en esta temática, 2) Que en los diseños y rediseños curriculares se contemple que en todos los programas de cursos se desarrollen estrategias para difundir la lectura, 3) Que se incorpore a la malla curricular una asignatura para la formación de lectores y que constituya una materia sello de la institución, 4) Fomentar el desarrollo de un programa institucional de difusión de la lectura, 5) Promover la alfabetización académica en cada una de las disciplinas, 6) Que se apliquen evaluaciones de trayecto para que se puedan reforzar el aprendizaje de la lectoescritura desde varios programas remediales.

CONCLUSIÓN

Los resultados de la investigación concluyen que la problemática de la lectoescritura en el CESUES no difiere de la que se presenta en el resto del país y que la situación es compleja, estructural y multifactorial. Asimismo, el trabajo realizado en la Unidad Académica Hermosillo del CESUES, revela la ausencia del hábito de la lectura y problemas en la escritura que afectan a la comunicación oral y escrita de los estudiantes, lo que nos lleva a pensar que el problema más importante está dentro de las instituciones que en México forman a los niños y jóvenes, la familia y la escuela. Además permitió conocer la realidad de la lectoescritura de los estudiantes de octavo semestre, de la Licenciatura en Administración de Empresas Turísticas. Este tipo de estudio sobre la lectoescritura debe de ser el parteaguas para cambiar la percepción constante de que el estudiante no sabe leer y escribir adecuadamente, para verlo como un saber en desarrollo, para asumir la tarea que nos corresponde como universidad que es la alfabetización académica, desde los diferentes disciplinas de los programas educativos en los que se forman los estudiantes de la institución.

COMERCIO AL POR MAYOR: NODO DE ATRACCIÓN DE MANO DE OBRA

Karina Concepción González Herrera. Universidad Tecnológica Metropolitana
Héctor Cortez Yacila. El Colegio de Tlaxcala A.C.

RESUMEN

El comercio al por mayor es la tercera actividad económica de mayor representatividad del sector terciario, convirtiéndose en un nodo de atracción para la mano de obra, en la ciudad de Mérida y Umán, Yucatán. El presente documento genera resultados finales del análisis de la movilidad de mano de obra hacia la capital del estado, siendo ésta Mérida. Se identifica de manera clara los beneficios de las personas que se trasladan y desempeñan actividades inherentes al comercio al por mayor. El territorio Yucateco integra a la delimitada Zona Metropolitana de Mérida (ZMCM), en donde se ubica las ciudades objeto de estudio. Mérida concentra a 1582 unidades económicas (UE) y el municipio de Umán a 80 UE, dedicadas al comercio al por mayor, las cuales integran laboralmente a 16952 personas, que provienen del mismo municipio y/o de otros municipios del estado. El objetivo del estudio fue determinar los factores económicos que propician la movilidad laboral a la ciudad de Mérida y Umán. Se puede concluir señalando que existen municipios que expulsan fuertemente mano de obra debido a que no se encuentra en el/los municipios, oportunidades laborales que propicien la permanencia y absorción laboral de las personas en edad productiva. Convirtiendo de esta manera a Mérida y el municipio de Umán nodos de atracción y a las ramas económicas, en especial el comercio al por mayor, objeto del presente estudio.

PALABRAS CLAVE: Comercio al por mayor, mano de obra.

ABSTRACT

Wholesale trade is the third economic activity most representative of the tertiary sector, becoming a node of attraction for labor in the city of Merida and Uman, Yucatan. This paper generates final results of the analysis of the mobility of labor to the state capital, and this is Mérida. It clearly identifies the benefits of people who move and perform activities related to the wholesale trade. The Yucatecan territory bounded integrates Merida Metropolitan Area (MCMA), where is located the cities under study. 1582 Merida concentrated economic units (EU) and the town of Uman to 80 EU, engaged in wholesale trade, which up to 16,952 people occupationally, coming from the same municipality and / or other municipalities in the state. The aim of this study was to determine the economic factors that encourage labor mobility to the city of Merida and Uman. We conclude by noting that there are municipalities that expel highly labor because that is not found in / municipalities, job opportunities that promote job retention and absorption of people of working age. Turning this way to Merida and the town of Uman nodes of attraction and economic sectors, particularly wholesale trade, in the present study.

KEY WORDS: Wholesale, labor

INTRODUCCIÓN

El estudio de municipios que integran la Zona Metropolitana de la Ciudad de Mérida (ZMCM), tiene como fundamento principal, el conocer la importancia que tiene el municipio principal, para las empresas y la mano de obra, en el Estado de Yucatán. Las empresas hoy en día son base de las economías no únicamente a nivel macroeconómico, sino a nivel microeconómico, es decir, lo local se vuelve preponderante para el flujo de efectivo positivo, de los individuos, familias y por ende de las Unidades Económicas y/o Empresas.

REVISIÓN LITERARIA

La extensión de la Zona Metropolitana de la Ciudad de Mérida (ZMCM) ha sido delimitada por el Ayuntamiento de Mérida (2001) como la región comprendida por los municipios de Mérida, Kanasín, Conkal, Ucú, Umán, Tixpéhuil y Progreso, pues estos municipios en torno a la capital reportaron la mayor concentración de población residente en el estado en el año 2000 (CINVESTAV 2005). Estos municipios se encontraban ubicados en la región VI de nombre Influencia Metropolitana, según la regionalización vigente al 2005 del INAFED.

Figura 1. Municipios que integran la Zona Metropolitana de Mérida

En 2004 de manera conjunta, la Secretaría de Desarrollo Social (SEDESOL), el Consejo Nacional de Población (CONAPO) y el Instituto Nacional de Estadística Geografía e Informática (INEGI), conceptualizan a la ZMCM como el territorio comprendido por los municipios de Conkal, Kanasín, Mérida, Ucú y Umán (CINVESTAV 2005). Y de acuerdo a la reestructuración de la delimitación geográfica regional del Estado de Yucatán en Octubre de 2008, dichos municipios se ubican en la región II Occidente (COPLADE 2008).

Para efectos de este estudio, se define a la ZMCM como el territorio comprendido por los municipios de Conkal, Kanasín, Mérida, Ucú y Umán, lo cual no niega la evidente relación funcional entre la ciudad de Mérida y dichos municipios, ya que es en éstos donde se han registrado los cambios demográficos, económicos y urbanísticos más significativos del estado de Yucatán en los últimos 25 años.

Esta situación provoca movimientos diarios o semanales de grupos que ejercen presión sobre los servicios que han marcado cambios en los estilos de vida y modificado las maneras de convivencia entre los pobladores y al interior de las familias, según afirma Bolio, citado en CINVESTAV (2005).

Objetivo

Identificar los factores económicos que inciden de manera directa en la movilidad territorial, laboral hacia empresas ubicadas en los municipios de Mérida y Umán pertenecientes a la Zona Metropolitana de Mérida, en el Estado de Yucatán.

METODOLOGÍA

Para el desarrollo del proyecto se contará con los siguientes elementos metodológicos:

El presente estudio de investigación es empírica, sin embargo la investigación es descriptiva y correlacional, debido a que las variables contenidas en el instrumento, se tratan de manera independiente y se podrán relacionar unas con respecto a otras, es decir, se identificará la forma en cómo es y cómo se manifiesta el fenómeno de interés con respecto a la actividad económica de Yucatán, los factores de localización de las empresas y la dinámica espacial del trabajo a la Zona Metropolitana.

Población objeto del estudio

La población objeto de estudio fueron los empleados, así como los directivos o gerentes que laboran en las unidades económicas, los que dieron respuesta al instrumento de investigación, que se encuentran localizadas en la ciudad de Mérida y Umán, de la Zona Metropolitana, cuya condición fue que cuenten con empleados o trabajadores que provengan del interior del estado de Yucatán.

El instrumento fue aplicado a los empleados siempre y cuando se tuvieran en la empresa a una persona proveniente del interior del estado de Yucatán laborando formalmente en ella. Los empleados identificados en las empresas que se encuentran incorporados en los tres sectores económicos del estado (Agropecuario, industrial y de servicios) e inmersos en los municipios de Mérida y Umán.

Determinación de la muestra

Para determinar el tamaño de la muestra, se consideró un nivel de confianza del 98%, con un margen de error del 0.02, tomando como base a la población Económicamente activa ocupada, en las empresas establecidas en Mérida y Umán de los tres sectores que integran la economía y con respecto a las Unidades Económicas el nivel de confianza considerada fue del 95% y margen de error del 0.05.

Fue una muestra probabilística, para su distribución se consideraron estratos de confiabilidad con base al porcentaje establecido en el cálculo.

Se entrevistó a un directivo de la empresa que arrojó la información necesaria y requerida para el estudio que se propone. Considerando al Promedio de trabajadores por empresa, para identificar el total de unidades económicas a encuestar.

Para el establecimiento del tamaño de la muestra se consideró información proveniente de fuentes secundarias, información generada por el INEGI, por medio de la publicación del Directorio Estadístico Nacional de Unidades Económicas (DENUE, 2010).

Los empleados y/o trabajadores identificados en las unidades económicas que cumplen la condición fueron encuestados, considerando de igual forma a los empleados que provienen de otros estados y que son de la misma localidad estudiada. Debido a que en la empresa se encontraron a trabajadores del mismo municipio, de otros estados y de municipios del interior del estado de Yucatán.

Es por ello que se dividió a la población en empleados del mismo municipio, del interior del estado y de otros estados, para estudiar a precisión nuestra población, integrando de esta manera, en el estudio a los demás grupos identificados de empleados, en cada empresa.

El criterio considerado para identificar a los móviles laborales fueron las siguientes. 1. Que provenga del interior del estado de Yucatán. 2. Que formalmente labore en la Unidad económica.

Los criterios que se siguieron para identificar a las unidades económicas fueron las siguientes: 1. Que se encuentren dentro del listado de Directorio Estadístico Nacional de Unidades Económicas. 2. Contar con empleados que provengan del interior del estado de Yucatán. 3. Considerar al promedio de personas que trabajan en los diferentes tamaños identificados en la economía (Micro, pequeña, mediana, grande, macro).

Tipo de muestra probabilística

Se utilizó el muestreo tipo probabilístico por estrato para identificar la cantidad de Población Económicamente Activa Ocupada, a la que se le aplicó el instrumento, una vez determinada la muestra, se establecerá la proporción que por rama económica corresponda. Para determinar el tamaño de la muestra se realizó el siguiente procedimiento:

Los datos utilizados son: un margen de error del 0.02, con un nivel de confianza del 98% (empleados) y para las UE el 95% de confiabilidad, considerándole un 0.05 de error.

$$n' = \frac{s^2}{V^2} = \frac{p(1-p)}{V^2}$$

$$n = \frac{n'}{\frac{n'}{N'}} = 3,339 \text{ Muestra para los empleados}$$

$$n = \frac{n'}{\frac{n'}{N'}} = 382 \text{ Muestra para Unidades Económicas}$$

En donde:

n' = Tamaño de la muestra sin ajustar.

n = Tamaño de la muestra

V^2 = Varianza de la población al cuadrado. Su definición se^2 (cuadrado del error estándar).

s^2 = Varianza de la muestra, la cual podrá determinarse en términos de probabilidad donde $s^2 = p(1-p)$.

p = Porcentaje estimado de la muestra. Probabilidad de ocurrencia p de que si ocurra y q de que no ocurra.

N = Tamaño de la población.

Datos que fueron arrojados en el programa STATS®

Al aumentar la precisión de la muestra se determinó para cada rama económica un estrato, con la fórmula que a continuación se detalla:

$$ksh (\text{Empleados}) = \frac{n'}{N'} = \frac{3,339}{258,646} = 0.012909537$$

$$ksh (\text{Empleados}) = \frac{n'}{N'} = \frac{382}{46,870} = 0.0081502$$

En donde:

n = Tamaño de la muestra

N = Tamaño de la población.

ksh = Tamaño por municipio.

A continuación en la tabla 1, se presentan el total de UE y de personal ocupado en los municipios objeto de estudio, Mérida y Umán.

La tabla 2, registra los resultados del cálculo para poder ser establecida el tamaño de la muestra por municipio y por rama de actividad económica.

Tabla 1. Total Unidades Económicas y Personal Ocupado en Mérida y Umán.

<i>Código</i>	<i>UE*</i>	<i>Personal Ocupado Mérida</i>	<i>UE*</i>	<i>Personal Ocupado Umán</i>	<i>Total UE</i>	<i>Total personal ocupado</i>

RESULTADOS

En relación a los factores sociales de los sujetos de estudio, se logró identificar que el 33% de los móviles posee un nivel académico de secundaria, el 24% tiene la preparatoria y el 13% la primaria. Con respecto a los no móviles el 31% tiene como nivel académico la preparatoria, el 26% una licenciatura o una ingeniería y el 19% la secundaria. Como se puede observar la formación académica de los móviles con respecto a los no móviles es menor. Finalmente se puede señalar que el estado civil que primeramente es identificado es de soltero en el caso de los móviles con el 51% y el 48%, para no móviles es de casado (Tabla 4).

En relación al género las mujeres móviles representan el 32% y las mujeres no móviles con el 41% de los encuestados, en esta rama las mujeres que se trasladan por cuestión de trabajo es en menor medida, con respecto a los hombres. Sin embargo como se observa en la tabla 3, la mayor fuerza laboral de esta rama se encuentra en los hombres.

Movilidad laboral /movilidad espacial

En base a las 276 encuestas aplicadas, se identificaron 148 móviles y 128 no móviles (Gráfica 1).

Gráfica 1. Sujetos de estudio según condición de movilidad

Fuente: Elaboración propia con base al trabajo de campo efectuado de mayo a diciembre de 2012.

Los principales municipios expulsores a la ciudad de Mérida son: Kanasín y Umán que son los municipios con mayor porcentaje de mano de obra encontrada en la rama de otros servicios excepto actividades gubernamentales. Cabe destacar que debido a la distancia del municipio de Mérida, la frecuencia de retorno oscila primeramente diario o todos los días con el 61%, siendo los municipios antes citados los que arrojan mayor frecuencia en ese retorno (tabla 6).

Entre los motivos que destacan para que el individuo se traslade a la ciudad de Mérida, se encuentran principalmente el contar con un empleo por el 34.5% y mejorar los ingresos por el 77.7%.

Dentro de los factores económicos de mayor índole que se identificaron, destacan las siguientes:

Con respecto al tipo de empleo se identifica que es fijo en un 89% de los empleados móviles encuestados. En relación al puesto desempeñado es operativo para el 65%, es administrativo para el 7%, se dedica a la actividad de intendencia el 18% y 6% otro.

Finalmente los sueldos según el puesto que se ocupa oscilan de hasta 2 salarios mínimos (SM) vigente en el 2011 de \$1723.69 a \$3,447.36 para el puesto operativo que se ocupan en la empresa, con una distribución porcentual del 30%. Como lo muestra la tabla 7.

Derivado de lo anterior podemos señalar que los ingresos para la rama de comercio al por mayor se encuentra en más del 30% de los casos entre 2 SM, vigentes en el 2011. Lo anterior indica que si bien se tiene una buena remuneración por el esfuerzo laboral y esto hace que se traslade más gente a la ZM debido a la carencia de una actividad en el municipio expulsor.

Al aplicar el procedimiento para el cálculo del índice de Gini, señala que los ingresos se distribuyen uniformemente en la población estudiada con el 0.1485, en este caso la rama de transportes, correos y almacenamiento (tabla 8).

Tabla 8. Procedimiento del cálculo del índice de Gini

CONCLUSIONES

Se puede concluir señalando que dentro de las economías se requiere la participación directa de la mano de obra para el logro de los objetivos de las Unidades Económicas, sin embargo cada día, esta mano de obra se requiere especializar en los procesos que le competen, interviniendo para ello el manejo y utilización de las tecnologías involucradas en los resultados de las organizaciones para fortalecer los mecanismos necesarios para lograr el incremento de utilidades, o el crecimiento de las empresas en donde los empleados se encuentren involucrados.

Los salarios vigentes para el área geográfica "C", son los más bajo, con respecto a las otras 2 áreas de la república mexicana. El área C es donde se encuentra inmerso nuestro estudio y es precisamente, la ubicación que tiene Yucatán. Se logró identificar mediante este estudio, que los sujetos de investigación perciben por el desempeño laboral hasta 2 salarios mínimos, siendo ingresos de hasta \$3447,36 de manera mensual. Esta cantidad es baja y únicamente les da la oportunidad de adquirir bienes de consumo básico para la familia, disminuyendo las posibilidades que dirijan un monto restante para la diversión, lo anterior se presenta cuando su estado civil es casado. Cuando la situación sentimental del individuo se lo permite (soltero), podrá darse el lujo de contar con distractores, sacrificando otros bienes de consumo, adicionando la vestimenta del mismo.

Lo antes mencionado no quiere decir que los empleados perciban únicamente ese ingreso, pero en su mayor proporción es la cantidad que tienen por sueldo de manera mensual. Sin embargo tienen una ocupación, se encuentran inmersos en el ámbito laboral, lo que les genera prestaciones que propician en un futuro cercano disponga de un crédito para una vivienda propia.

La mano de obra que se traslada a los municipios estudiados, retorna a su lugar de origen a la semana, generando que la mayor parte de sus ingresos se destinen en la ciudad en donde laboran, y sea en menor cantidad en el municipio expulsor o de donde provienen. Por ello el municipio que se presenta como nodo de atracción tiene mayores beneficios en su economía, debido a la existencia de mayor flujo de efectivo

en relación a los municipios expulsos. Los municipios expulsos no únicamente pierden mano de obra en edad productiva, sino que se demerita su flujo de efectivo, y se le resta la posibilidad de ser atractivo para la inserción de nuevas inversiones económicas, es decir atracción de nuevas empresas.

RECONOCIMIENTO

Los autores agradecen financiero de los Fondos Mixtos del Gobierno del Estado de Yucatán (FOMIX), al Consejo Nacional de Ciencia y Tecnología (CONACYT) en convocatoria 2009-C07, con número de proyecto 136388 y a la Coordinación Metropolitana del Estado de Yucatán (COMET). Que destinaron recursos al proyecto de nombre “Factores económicos que inciden en la movilidad territorial labora a la ciudad de Mérida y Umán de la Zona metropolitana, en el Estado de Yucatán”, proyecto del cual se desglosa el presente artículo para su divulgación científica. Asimismo, se agradecen los comentarios de los árbitros y editores del IBFR. Los cuales contribuyeron a mejorar la calidad del presente documento.

BIOGRAFÍA

Karina Concepción González Herrera tiene el grado de Maestra en Ciencias en Planificación de Empresas y Desarrollo Regional, que obtuvo en el Instituto Tecnológico de Mérida. Actualmente es profesora de Tiempo Completo de la Universidad Tecnológica Metropolitana. se desempeña laboralmente de forma adicional es profesor de asignatura en el Instituto de Estudios Universitarios, en los estado de Campeche y Ciudad del Carmen, en el nivel Maestría. Forma parte del Colegio de Posgraduados en Planificación y Desarrollo A.C., desempeñando el papel de tesorera, en la estructura directiva. Estudiante de Doctorado en Desarrollo Regional, en el Colegio de Tlaxcala A.C.

Héctor Cortez Yacila es Profesor Investigador de Tiempo Completo de El Colegio de Tlaxcala A.C., pertenece al Sistema Nacional de Investigadores, nivel I.

REALMENTE LOS INCENTIVOS FINANCIEROS IMPULSAN LA CALIDAD EN EL SERVICIO. ESTUDIO DE CASO:

ABSTRACT

El presente trabajo es un estudio cuantitativo no experimental longitudinal tipo correlacional – causal. Se analizan cambios ocurridos en la variable independiente incentivos financieros en relación con la variable dependiente calidad. La empresa investigada en este estudio de caso fue una empresa transnacional y su giro son servicios relacionados con procesamiento de datos, centro de llamadas, escaneo de documentos, y opera en más de 100 países. El objetivo de nuestra investigación es determinar si los incentivos financieros inducen al trabajador a mejorar la calidad del servicio y si el sistema de incentivos financieros garantizará que el cliente obtenga el servicio deseado. Por el contrario si el sistema no está vinculado a la calidad, entonces la empresa deberá renovar su sistema que propicie de manera directa a la orientación del empleado hacia la calidad del servicio. Se tomo una muestra de 28 empleados de un universo de 110 con un error estándar de .05, los cuales fueron elegidos mediante una tabla de números aleatorios, tomando en consideración exclusivamente a los empleados que estuvieron bajo el mismo sistema de incentivos a lo largo de un período de un año. En el estudio se aplicaron pruebas de bondad y ajuste e independencia. Los resultados obtenidos demostraron que los incentivos financieros influyeron directamente en el mantenimiento de la calidad del servicio prestado, pero no lograron incrementarla ya que solo un 14% de la muestra mantuvo o incremento la máxima calidad requerida y el 54% disminuyo sus estándares de calidad en el servicio, sin llegar a la mínima calidad contractual.

PALABRAS CLAVE: incentivos financieros, calidad, empresas de servicios.

Financial incentives really improve the quality of service. Case Study

ABSTRACT

This paper is a quantitative study, non- experimental, longitudinal correlational- causal. Are analyzed changes in the independent variable financial incentives relative with the dependent variable quality. This company researched was a multinational company dedicated to date processing, call center, document scanning and operates in over 100 countries. The purpose of our research is to determine if financial incentives induce workers to improve the quality of service and if The system of financial incentives will ensure that customer obtain the desired service. By contrast if the system is not linked to quality, then must renew the system. In this Case took into consideration only the employees that were under the same incentive system along a period of one year. The results showed that financial incentives had a direct impact on maintaining the quality of the service, but failed to increase it and only 14% of the employees maintained or increased the maximum required quality and 54% decrease in quality standards service, without reaching the minimum quality.

KEYWORDS: financial incentives, quality, service

INTRODUCCIÓN

En este estudio trataremos la importancia de los incentivos de calidad que se interrelacionan de manera directa con el actuar de las empresas y sus empleados. Para este fin se incluye información detallada de los incentivos a través del tiempo desde Frederick Winslow Taylor padre de la administración científica hasta los más actuales estudios de los incentivos orientados a la calidad en nuestros días. Para entender este tema será necesario desmembrar sus partes básicas para luego integrarlas y darles un sentido práctico. El tema es importante debido a la problemática de décadas de lograr que el empleado desarrolle su potencial con ayuda externa a través de los incentivos y poder dar a los clientes la calidad esperada. Lograr esta meta requiere de saber cómo, cuando, donde y en qué forma se debe motivar a los empleados para ajustar sus expectativas a los de la empresa de la manera más efectiva.

El desarrollo de metas comunes del empleado y la empresa, el trabajo en equipo, el incentivo a los excedentes de productividad, la recompensa a las mejoras o al logro de objetivos dan lugar a desarrollar planes de recompensa que impulsarán al empleado a enfocarse al logro de objetivos o metas y a su vez para obtener mejores salarios y recompensaciones. Uno de estos factores está direccionado al empleado como punto principal de motivación que mantiene en ocasiones tanta importancia como la compensación salarial: Los incentivos y la recompensación. Este factor motivacional tiene que ver con un incentivo o recompensa intrínseca y/o extrínseca que cumpla no solo con el afán de obtener un mejor rendimiento del empleado si no con la posibilidad de hacer crecer el interés del empleado por las metas de la organización. El estudio se realizó en una empresa dedicada a la captura de información y procesamiento de datos, la cual adoptó desde hace muchos años la recompensa a empleados por medio de tarifas o sueldo a destajo. El empleado se esfuerza por un tiempo en lograr los estándares de producción y calidad y una vez logrados, su motivación se demerita y no aumenta su interés en hacer de estos 2 puntos su constante mejoramiento. Los límites de este sistema de incentivación están trazados por su propio concepto de tarifa por pieza, en donde el empleado al lograr su meta personal puede decir “hasta aquí me interesa ganar” y no se interesa más por mejorar ya que no está por debajo de los estándares de calidad y producción permisibles. El empleado entonces presenta cierta apatía a mantener un mejoramiento continuo ya que representaría hacer un mayor esfuerzo sin recompensa monetaria. Comúnmente se mantiene por encima del límite, pero no mejora los pequeños detalles a pesar de haber sido notificado en varias ocasiones por sus supervisores y a su vez estos por los clientes y gerentes.

Las gráficas de calidad y productividad presentan una constante variable y sus diagramas de Pareto muestran un sin número de dispersiones en las que se ve plasmado la apatía o desinterés por mejorar en los pequeños detalles a pesar de la constante retroalimentación que se les proporciona diariamente a los empleados. Un ejemplo básico de esta problemática está en las recurrentes notificaciones del cliente con respecto a un documento no identificado correctamente, que aunque no representa una baja considerable en el nivel de aceptación, se considera que no se oyó “la voz del cliente” pues al pasar del tiempo se vuelve a recibir la misma falla aunque no necesariamente hecha por el mismo empleado. Esta falta de compromiso se puede deber a varias causas:

- La falta de Incentivos orientados a la mejora continúa.
- La falta de una cultura organizacional orientada al cliente y a la mejora continúa.
- La falta de un sistema integrado de calidad que involucre a todos los empleados del departamento.
- La incentivación como punto principal de motivación y no la recompensa según las expectativas del cliente y la mejora continúa.

Se teme que con el pasar del tiempo este proceso de incentivación no pueda contener soluciones determinantes para satisfacer y mantener a los clientes que constantemente buscan mejoras en la calidad y precio. Resolver este problema debe constituir en todos los empleados un acto meritorio, un reto que hay que lograr haciendo cambios hacia la mentalidad de cada uno, y reorientando la motivación, y en este caso la incentivación y la recompensa hacia la satisfacción del cliente mejorando continuamente los sistemas integrados de calidad y la cultura de servicio. Este cambio representaría una mejoría no solo en los procesos de producción y calidad si no en la solidez en las relaciones futuras con nuestros clientes.

Actualmente se invierte tiempo, dinero y esfuerzo en la retroalimentación que proviene de un proceso de inspección aleatoria posterior al proceso productivo. La inversión debe ampliarse para intensificar el cambio de mentalidad como punto principal para el desarrollo de las actividades globales del empleado en su entorno. *“El cumplir con los rangos mínimos de aceptación de calidad del cliente evita en gran medida la aceptación de un proceso de mejora continua*
